After the death of Muḥammad b. al-Ḥanafiyya in 81/700 many of his supporters believed that he was alive and concealed in the Raḍwā mountains west of Medina, from where he would reappear as the Mahdī. Their beliefs are reflected in the poetry of Kuthayyir [*q.v.*] and later of al-Sayyid al-Ḥimyarī [*q.v.*]. They are usually called Karibiyya or Kuraybiyya [*q.v.*]

after their leader Abū Karib (Kurayb) al-Ḍarīr, though al-Nawbakhtī mentions the Karibiyya as a separate group who stated that they did not know the whereabouts of Muḥammad b. al-Ḥanafiyya. According to al-Nawbakhtī, Ḥamza b. ʿUmāra al-Barbarī in Medina was an extremist originally belonging to the Karibiyya. He then claimed to be an *imām* and prophet, asserted the divinity of Ibn al-Ḥanafiyya and taught antinomianism. Ḥamza's activity cannot, however, have begun until long after the death of Ibn al-Ḥanafiyya if he is identical with the homonymous secretary of ʿAbd Allāh b. Muʿāwiya *ca.* 128/748. Abū 'l-Ḳāsim al-Balkhī mentions as a separate group the followers of Ḥayyān al-Sarrādj, who maintained that Ibn al-Ḥanafiyya had died in the Raḍwā mountains but he and his *shīʿa* would return to life. With their aid he would rule and establish justice on earth. They thus held the doctrine of *radjʿa* [*q.v.*], the return to life of some of the dead before the resurrection. This account is in conflict with Imāmī reports in which Ḥayyan al-Sarrādj appears as a prominent Kaysānī denying the death of Ibn al-Ḥanafiyya in the time of Imām Djaʿfar al-Ṣādiḳ. One group of the Kaysāniyya asserted that Ibn al-Ḥanafiyya had been condemned by God to stay in the mountains of Raḍwā as a punishment for his submission to the caliph ʿAbd al-Malik. He surrendered the imāmate as a "deposit" (*wadīʿa*) to his son Abū Hāshim ʿAbd Allāh since he knew that the latter would die childless. Abū Hāshim thus became the silent (*ṣāmit*) *imām* during the absence of the speaking (*nāṭiḳ*) *imām* who must eventually return to rule the world.

Another group affirmed that Muḥammad b. al-Ḥanafiyya had died and that the *imām* after him was his son Abū Hāshim [*q.v.*], whom he had appointed as his successor. Abū Hāshim provided his followers with a more active leadership than his father had done. When he died childless *ca.* 98/717-8, his party, known as the Hāshimiyya [*q.v.*], split into several groups. One group claimed that Abū Hāshim was the Mahdī and that he was alive hiding in the mountains of Raḍwā. Another group maintained that he had appointed his brother ʿAlī as his successor. They later continued the imāmate through ʿAlī's son al-Ḥasan, the latter's son ʿAlī, to the latter's son al-Ḥasan, affirming that the imāmate belonged exclusively to the descendants of Muḥammad b. al-Ḥanafiyya, one of whom would be the Mahdī. Some of them then cut the line of *imām*s after al-Ḥasan, claiming that he had not appointed a successor, and they then looked forward to the return of Muḥammad b. al-Ḥanafiyya.

The bulk of the Hāshimiyya, however, recognised Muḥammad b. ʿAlī b. ʿAbd Allāh b. al-ʿAbbās as the *imām* after Abū Hāshim, asserting that before his death Abū Hāshim had handed the appointment to his father ʿAlī b. ʿAbd Allāh in trust for him since Muḥammad was still a minor. The appointment of Muḥammad b. ʿAlī was disputed by a group claiming that Abū Hāshim had appointed as his successor ʿAbd Allāh b. Muʿāwiya [*q.v.*] b. ʿAbd Allāh b. Djaʿfar b. Abī Ṭālib, who also was still a minor, and had handed the appointment to Ṣāliḥ b. Mudrik. The two parties agreed on the arbitration of the dispute by one of their chiefs, Abū Riyāḥ, who decided in favour of Muḥammad b. ʿAlī. The mass of the supporters of ʿAbd Allāh b. Muʿāwiya therefore joined the party of Muḥammad b. ʿAlī and were known as the Riyāḥiyya.

Among the *ghulāt* [*q.v.*] were regularly classed the Bayāniyya, the followers of Bayān b. Samʿān [*q.v.*]. Bayān and Ṣā'id al-Nahdī were at first supporters of Ḥamza b. ʿUmāra in Kūfa. After the death of Abū Hāshim the Bayāniyya affirmed that he would return as the Mahdī. They adopted extremist views concerning Abū Hāshim and asserted that he had conferred prophethood on Bayān on behalf of God. Bayān is accused in particular of a crude anthropomorphism. He and some supporters were executed in Kūfa in 119/736.

A prominent rôle in the introduction of the theory of metempsychosis and other extremist ideas is ascribed in the sources to a group called Ḥarbiyya (more rarely Kharibiyya) or Ḥārithiyya after their leader, whose name is given with much variation as ʿAbd Allāh (b. ʿAmr) b. (al-)Ḥarb (al-Kharib) or al-Ḥārith al-Kindī al-Kūfī or al-Madā'inī or al-Shāmī. The variations in the name may indicate the fusion of more than one person into a single identity. After the death of Abū Hāshim, Ibn Ḥarb taught the transmigration of souls, and held that the Divine Spirit (*rūḥ Allāh*) had been present in the Prophet Muḥammad and had successively been transferred to ʿAlī, al-Ḥasan, al-Ḥusayn, Ibn al-Ḥanafiyya, Abū Hāshim and finally to Ibn Ḥarb, who thus had become the *imām* until the reappearance of Muḥammad b. al-Ḥanafiyya. When his followers discovered, however, that his claim of omniscience was spurious, the bulk of them renounced him and accepted ʿAbd Allāh b. Muʿāwiya as their *imām* in succession to Abū Hāshim. According to some sources, Ibn Ḥarb was converted to Ṣufrī Khāridjism and died holding Ṣufrī beliefs.

The party tracing the imāmate through the ʿAbbāsid Muḥammad b. ʿAlī and his son Ibrāhīm to the ʿAbbāsid caliphs is commonly called the Rāwandiyya [*q.v.*], though some heresiographers restrict the name to those who asserted that the first *imām* after the death of the Prophet was his uncle al-ʿAbbās and that the imāmate continued among his descendants. This doctrine, however, probably originated only during the reign of the caliph al-Mahdī (158-69/775-85), while the name Rāwandiyya already appears in historical reports of events before the year 120/738. According to al-Nawbakhtī the name is derived from a sectarian leader named ʿAbd Allāh al-Rāwandī, while other sources, probably less reliably, derive it from one al-Ḳāsim b. Rāwand or Abu 'l-ʿAbās al-Rāwandī. ʿAbd Allāh al-Rāwandī is mentioned in a list of the *dāʿī*s of the ʿAbbāsid Muḥammad b. ʿAlī. His son Ḥarb (d. 147/764) and his grandson Naṣr b. Ḥarb were prominent leaders of the Rāwandiyya in the caliphal army in Mesopotamia during the reigns of al-Manṣūr and al-Mahdī. The name evidently referred at first merely to a faction within the ʿAbbāsid movement in Khurāsān, composed chiefly of *mawālī* and holding extremist views, and was then extended to mean the whole ʿAbbāsid *shīʿa*.

As sects within the early ʿAbbāsid movement, al-Nāshi' mentions the Bukayriyya and the Khidāshiyya. The former were named after Bukayr b. Māhān (d. 127/744-5), the Kūfan *dāʿī* chiefly responsible for the organisation of the ʿAbbāsid movement in Khurāsān. The Khidāshiyya were the followers of ʿAmmār b. Yazīd, nicknamed Khidāsh, a *dāʿī* active in the area of Naysābūr and Marw. When he was disowned by the *imām* Muḥammad b. ʿAlī for doctrinal deviation, his supporters held that Muḥammad b. ʿAlī had forfeited the imāmate and that it had passed to Khidāsh. After the execution of Khidāsh in 118/736 they affirmed that he was alive and had been raised to heaven by God.

After the execution of Abū Muslim [*q.v.*], the leader of the ʿAbbāsid movement in Khurāsān, by the caliph al-Manṣūr in 137/755, some of his supporters maintained that the imāmate had been transferred from the caliph al-Saffāḥ, al-Manṣūr's predecessor, to Abū Muslim and that Abū Muslim was alive. They were called the (Abū) Muslimiyya. Opposed to them were the Rizāmiyya, named after their chief Rizām b. Sābiḳ, who upheld the succession of al-Manṣūr to the imāmate, though they refused to repudiate Abū Muslim, and affirmed that the imāmate would remain in the ʿAbbāsid family until the resurrection, when a descendant of al-ʿAbbās would be the Mahdī. Rizām is mentioned as a leader of the Rāwandī extremists in 141/758 when a riot by a group of them in the court of the palace of al-Manṣūr was bloodily suppressed. In the ensuing persecution of the extremists, Rizām sought refuge with the caliph's son Djaʿfar and was granted amnesty.

A further schism in the ʿAbbāsid *shīʿa* occurred in 147/764 when al-Manṣūr deferred the succession of his nephew ʿĪsā b. Mūsā, who had been named by al-Saffāḥ to succeed al-Manṣūr, and appointed his own son Muḥammad al-Mahdī as his immediate successor. One party considered the action of al-Manṣūr as illegal and recognized ʿĪsā b. Mūsā and later some of his descendants as their *imāms*. The other party asserted that the action of al-Manṣūr was legal, since the order of the living *imām* should supersede that of a dead *imām* and since ʿĪsā had agreed to sell his rights. They recognized al-Mahdī as the *imām* after al-Manṣūr.

After his accession (158/775) al-Mahdī induced the ʿAbbāsid *shīʿa* to repudiate the imāmate of ʿAlī and his descendants and to embrace a purely ʿAbbāsid imāmate beginning with al-ʿAbbās and based on the right of inheritance. The partisans of this doctrine were known as the Hurayriyya after their leader Abū Hurayra al-Rāwandī (rarely al-Dimashḳī). By denying the imāmate of Muḥammad b. al-Ḥanafiyya and Abū Hāshim this group left the fold of the Kaysāniyya. Extremist doctrines, such as deification of the *imāms*, or belief in their omniscience, and dispensation from the religious law for those knowing the *imām*, are ascribed to most of the sects of the ʿAbbāsid *shīʿa*.

The party supporting the imāmate of ʿAbd Allāh b. Muʿāwiya, consisting mainly of the former Ḥarbiyya, is commonly known as the Djanāḥiyya [*q.v.*]. ʿAbd Allāh b. Muʿāwiya is reported to have encouraged their extremist beliefs, claiming that the Divine Spirit had devolved through the prophets and *imāms* to him and that he was able to resurrect the dead. After he had died in the prison of Abū Muslim in 131/748-9, a group of his followers claimed that he was alive and hiding in the mountains of Iṣfahān. Some said he would return as the Mahdī, while others held that he would surrender the leadership to a descendant of ʿAlī before his death. Another group of his supporters admitted that he was dead and that they were left without an *imām*. Al-Shahrastānī mentions a sect which asserted that his spirit had passed to Isḥāḳ b. Zayd b. al-Ḥārith and calls it the Ḥārithiyya, distinguishing it from the earlier Ḥarbiyya. This Isḥāḳ is perhaps to be identified with the Isḥāḳ b. ʿAmr named by Muḥammad b. Aḥmad al-Khwārizmī as the chief of a sect of the Kaysāniyya which he calls the Isḥāḳiyya. Other sources, evidently erroneously, describe ʿAbd Allāh b. Ḥarb (or al-Ḥārith) as still active among the followers of ʿAbd Allāh b. Muʿāwiya after the latter's death. To this group in particular is attributed the elaboration of extremist theories on the transmigration of souls, their pre-existence as shadows (*aẓilla*), the denial of the resurrection, of the judgment, and of paradise and hell in their conventional sense, and the cyclical history of recurrent eras (*adwār*) and aeons (*akwār*) initiated by seven Adams. They related these doctrines on the authority of the Companion Djābir b. ʿAbd Allāh al-Anṣārī and of Djābir al-Djuʿfī (d. 128/745-6).

During the Umayyad period the Kaysāniyya in its various branches constituted the bulk of the radical wing of the *shīʿa*. By the middle of the 2nd/8th century (767) the movement was rapidly disintegrating. There is no evidence of any Kaysānī groups surviving into the 3rd/9th century. Towards the end of this century some Ḳarmaṭī groups are reported to have temporarily acknowledged a son, Aḥmad, or a grandson, Muḥammad b. ʿAbd Allāh, of Muḥammad b. al-Ḥanafiyya as the expected Mahdī. Neither name refers to a historical person or is mentioned in the accounts of the Kaysāniyya movement. Their adoption by these Ḳarmaṭī groups evidently reflects a spontaneous development in the Ismāʿīlī movement rather than a survival of Kaysānī beliefs.

In ʿIrāḳ the mass of the adherents of the Kaysāniyya was absorbed by the rising tide of Imāmī Shīʿism. A substantial part of the religious doctrine first elaborated in the Kaysāniyya, *e.g.*, on *badāʾ* [*q.v.*], *radjʿa* and important aspects of the theory of the imāmate, was adopted by orthodox Imāmism. Other Kaysānī doctrines were passed on among the *ghulāt* adhering to Imāmī lines of *imāms*. In Persia and Transoxania the Rāwandiyya and the Djanāḥiyya-Ḥarbiyya groups were largely merged into various syncretist sects often generically termed Khurramiyya [*q.v.*].

(W. MADELUNG)

ḲAYṢAR.

1. In early Islam. — The usual name in Arabic for the Roman and Byzantine emperor. The word represents the Greek Καῖσαρ and came to the Arabic through the intermediary of the Aramaic (see Fraenkel, *Die aramäischen Fremdwörter im Arabischen*, Leiden 1886, 278 f.). The borrowing must have taken place at quite an early period, as the word in Syriac later appears almost in the form *Ḳesar* (see Payne Smith, *Thesaurus Syriacus*, s.v.). The Arabs, centuries before Muḥammad, had relations with Roman and to a greater extent with Byzantine emperors. As early as the Περίπλους, a Roman Καῖσαρ is mentioned as conqueror of Εὐδαίμων Ἀραβία (probably Caracalla, from 198 A.D. co-regent of Septimius Severus, see F. Altheim-R. Stiehl, *Die Araber in der alten Welt*, i, Berlin 1964, 44). In A.D. 244 an Arab from Ḥawrān reigned for five years under the name Dareus Julius Philippus. In Syria at the beginning of the 6th century A.D., the Banū Ghassān replaced the Banū Salīḥ as Arab allies, σύμμαχοι, of Byzantium. The chief Ghassānid phylarch was accorded high honours and a title like *patricius* (*biṭrīḳ*) and allowed to wear the crown of a client king of the Byzantine emperor [see GHASSĀN]. For the Ghassānids and all the inhabitants of north-western Arabia, Ḳayṣar, the Byzantine emperor, was of course the highest ruler, as was Kisrā, the king of the Persians, for the Lakhmids and all the inhabitants of north-eastern Arabia. Among the old Arabic poets, Imraʾ al-Ḳays [*q.v.*] more than once mentions Ḳayṣar, who, indeed, played a great part in his life. For later poets also, Ḳayṣar—alongside Kisrā—is still a current symbol of power and wealth.

The word Ḳayṣar is not found in the Ḳurʾān, but it occurs quite frequently in the biography of Muḥammad, in Ḥadīth collections, in commentaries on the Ḳurʾān and in general historical works. It is always used without the article, like a proper name, and cannot be followed directly by a genitive, from which too it is clear that the word was considered as a proper name. Heraclius, the famous Byzantine emperor of the time of Muḥammad, Abū Bakr and ʿUmar, is therefore called *Hiraḳl* or *Ḳayṣar ʿaẓīm* (or *malik*) *al-Rūm*. The word *Ḳayṣar* is often omitted for example in a list of "the kings of the Romans/Byzantines" (*mulūk al-Rūm*) from Augustus to Heraclius (Ṭabarī, i, 1741-1744), in a report of the capture of Amorium (838 A.D., Ṭabarī, iii, 1234: *Tūfīl ibn Mīkhāʾīl, ṣāḥib/malik al-Rūm*), and in a report of the battle of Malāzgerd (1071, Ibn al-Athīr, x, 44-46: *Armānūs* [= *Romanus*], *malik al-Rūm*).

According to Ibn Saʿd (i/1, 43, 45 f.), Hishām b. ʿAbd Manāf, great-grandfather of Muḥammad, received from Ḳayṣar a letter of safe conduct for merchants from Mecca visiting Syria (see M. J. Kister, in *JESHO*, viii (1965), 116 f.). A great number of texts mention the letter which is said to have been sent by Muḥammad through Diḥya [*q.v.*] to the governor of Boṣrā and through him to the emperor Heraclius. In many versions, the emperor interrogates Abū Sufyān regarding the new prophet, and (in contrast to Kisrā) appears to be inclined to Islām; only fear of his subjects prevents him from openly professing the new religion (for references see below). ʿUmar contrasts the neediness of the Prophet's existence with the luxurious living of Kisrā and Ḳayṣar (Bukhārī, *Tafsīr*, 66, 2; Ibn Madja, *Zuhd*, 11). During the affair of Ḥudaybiyya, ʿUrwa ibn Masʿūd, having visited the Prophet in his camp, tells his Meccan compatriots that though he has travelled as an envoy to the kings, to Ḳayṣar, to Kisrā and to al-Nadjāshī, he has never seen any king so greatly honoured as Muḥammad is by his Companions (Bukhārī, *Shurūṭ*, 15; cf. Ibn Hishām, 745). The following utterance of Muḥammad is reported as a kind of prophecy: "If Kisrā perishes (variant: Kisrā has died), there will be no Kisrā after him. And if Ḳayṣar perishes, there will be no Ḳayṣar after him. By Him in whose hand my soul lies, you will spend their treasures in the way of God" (Bukhārī, *Farḍ al-Khums*, 8, *Aymān*, 3, *Djihād*, 157; Muslim, *Fitan*, 75; Wāḳidī, 460). Cf. the critical remark of Muʿattib ibn Ḳushayr during the siege of Medina by the "Allies", "Muḥammad promises us the treasures of Kisrā and Ḳayṣar, whereas it is not safe for one of us to go to the privy" (Wāḳidī, 459 f.; Ibn Hishām, 357). Another prophetical utterance ascribed to Muḥammad is: "The first troops of my community who will assault the city of Ḳayṣar (*i.e.*, Constantinople) shall be forgiven [their sins]" (Bukhārī, *Djihād*, 93).

2. In Islamic history.—In the Meccan period, Muḥammad's sympathies were with Heraclius against Kisrā and echoes of the struggle between the two are recorded in *Sūrat al-Rūm* (Ḳurʾān, XXX). But in the Medinan period this attitude was reversed, the basis of the reversal being religious: since Islam is the true religion of the "straight path" and has universalistic claims, Byzantium and its Ḳayṣar become the enemy of Islam and the Islamic state, which must eventually triumph and capture Constantinople itself. On this is based the new Muslim conception of Ḳayṣar. His dominion is part of *Dār al-Ḥarb* (the Abode of War), he is an infidel, and war against him is *djihād* (holy war). This hostile and contemptuous attitude towards Ḳayṣar was strengthened by the military victories of the Arabs over the Byzantines. Thus, the religious and military bases on which Arab respect for Ḳayṣar had rested in pre-Islamic times disappeared in the first century of the Muslim era; the new attitude was reflected in such designations for Ḳayṣar as *ṭāghiya*, "tyrant", or such expressions as *kalb al-Rūm*, "the dog of the Romans", used by Hārūn al-Rashīd in addressing Nicephorus.

The image of Ḳayṣar among the Arabs in the four centuries or so after the battle of al-Yarmūk in 15/636 naturally fluctuated with the military fortunes of the two states over which Caliph and Ḳayṣar ruled. The first part of this period, Umayyad and early ʿAbbāsid, was, generally speaking, one of Arab successes against the Byzantines; but the tide turned against the Arabs with the coming of the Macedonian dynasty, and the striking successes of the Ḥamdānids proved ephemeral.

The Turks opened a new chapter in the relations between Islam and Byzantium, one that lasted for some four centuries from their victory at Manzikert in 463/1071, until their capture of Constantinople in 857/1453. Under the impact of Turkish military victories, the image of the Byzantine Ķayṣar reverted to what it had been before the period of the Macedonians. The basic factor was the conquest and turkification of the Byzantine heartland, Anatolia, and the diminution of the dominion of the Ķayṣars. The Saldjūķ sultan Alp Arslan defeated the Byzantine emperor Romanus Diogenes at Manzikert and took him captive in 463/1071, setting the tone for two centuries in Saldjūķ relations with, and attitude towards, Ķayṣars of the Comneni, the Angeli and the Lascarids.

The Ottomans presided over the last phase of Ķayṣar's humiliation; their attitude to him and his dominion was the classical Islamic one, confirmed by their series of astounding victories in the Balkans. The final chapter in this drama of the Muslim-Byzantine conflict, which had lasted for some eight centuries, was written by the sultan's victory over the last of the Palaeologi, Constantine XI. Muḥammad the Conqueror captured Constantinople, and added to his titles of Ghāzī and Khān that of Ķayṣar itself, which he was able to do, since he was not caliph but sultan; the title proved valuable for his imperial designs for the reconquest of the Byzantine territories lost by the Ķayṣars in Europe and Asia.

(Irfan Shahid)

ĶAYSĀRIYYA (also ĶAYṢĀRIYYA), plur. *ķayāsīr*, the name of a large system of public buildings laid out in the form of cloisters with shops, workshops, warehouses and frequently also living-rooms. According to de Sacy, *Relation de l'Égypte par Abd Allatif*, Paris 1810, 303-4, the *ķaysāriyya* was originally distinguished from the *sūķ* probably only by its greater extent, and by having several covered galleries around an open court, while the *sūķ* consists only of a single gallery. At the present day in any case, the term *ķaysāriyya* is not infrequently quite or almost identical in meaning with the Persian word *kārwānsarāy*, which first came into use in western Asia in the 16th century, or the likewise modern analogous names, *khān*, *wakāla* (okella), *funduķ* [*q.v.*] and *bezistān*.

Origin. The word *ķaysāriyya* is certainly of Greek origin: καισάρεια ("imperial", an abbreviation for ἡ καισάρεια ἀγορά "the imperial market". As H. Thiersch has shown, the old quadrangular court (with or without cells around it) of the *agora* inspired the *ķaysāriyya*, which was used on the one hand as a warehouse for goods (whence developed the market-place) and on the other hand, without any doubt, usually also as lodgings. The expression ἡ καισάρεια recalls the fact that the oldest of these public buildings were imperial, *i.e.*, state institutions, while in the Muslim period they were mainly due to private initiative (foundations of rich merchants, members of royal families or high officials). Thiersch thinks (*Pharos* ..., 233) that the place where the idea of these buildings originated—like many other things in the new Muslim period—seems to have been Alexandria, which was especially rich in covered market-places and halls. Whether we should actually consider the Καισάριον (Caesareum), the temple of Caesar in Alexandria, to which the market-place and warehouses were attached (Strabo, xvii, 794), as the original in name and fact of the *ķaysāriyya* (as does Vollers in *ZDMG*, li, 302), is uncertain. A derivation of the word *ķaysāriyya* from the name of the Palestine town of Ķaysāriyya [*q.v.*], which de Sacy (*op. cit.*) upheld, can hardly be supported with sound arguments. The word in any case was originally used only in those districts which, like Syria, Palestine and parts of North Africa had been under Byzantine rule. The idea was only transferred later to other lands, especially to Spain and the east. In Spanish, *alcaiceria* (*cayceria*, *caeceria*), and in Portuguese, *alcaçarias*, are loanwords (cf. Dozy-Engelmann, *Glossaire des mots espagnols et portugais dérivés de l'arabe*[2], Leiden 1869, 73, 79; D. Leopoldo de Eguilaz, *Glos. etim. de las palabras españolas* ... *de origen oriental*, Granada 1886, 126).

On the usage of the word in the Islamic world, the following references may be given. In Egypt we have especially good evidence of its use in Cairo. Al-Maķrīzī (d. 845/1441) in his description of the city gives a large number of *ķaysāriyyas* (cf. *al-Khiṭaṭ*, Būlāķ 1270, ii, 86-91; E. Reitemeyer, *Die Städtegründungen der Araber im Islam*, 1912, 117). Later its place was gradually taken by the word *wakāla* (*okäle*, *okelle*) and in Niebuhr's time (1761) only the market-place in the suburb of Būlāķ was still called Kissarie. In Fās by *ķaysāriyya* one understands the central market (for cloth, carpets, jewels, etc.) shut off by gates and walls from the other parts of the town, and at night occupied only by watchmen (see Dozy, *op. cit.*, ii, 432; R. Le Tourneau, *Fès*, 374-5). Moreover, the word is currently used in Morocco to denote the courtyards, whether covered or not, surrounded by shops whose main commodity is cloth. In Spain, the *ķaysāriyya* was, as in Morocco, the centre for trade in luxury articles and cloth (see L. Torres Balbás, *Alcaicerias*, in *al-And.*, xiv (1949), 431-55. P. Chalmeta, *El señor del zoco*, index; E. Lévy-Provençal, *Hist. Esp. Mus.*, index). In Syria and Lebanon we have evidence of the use of the word *ķaysāriyya* as the "name of the shops of the wholesale dealers" in Beirūt (see Niebuhr, *op. cit.*, ii, 469, and K. Müller, *Die Karawanserai*, 7), in Damascus (see Ibn Djubayr, *Riḥla*[2], ed. Wright and de Goeje, 288, and Seetzen, *Reisen durch Syrien* etc., Leipzig 1854-9, i, 269) and also in Aleppo (see Ibn Djubayr, 252; Yāķūt, ii, 307; Ibn Baṭṭūṭa, i, 151; J. Sauvaget, *Alep*, 79-80, 221-2). In al-Ḥasā in Eastern Arabia, the quarter of the town that contains the shops is called el-Gayṣariyye (see *Der Islām*, viii, 32). In ʿIrāķ we find a square called *Ķaysāriyya* in Mōṣul (see Ibn Djubayr, 235); in al-Salāmiyya near Mōṣul (Yāķūt, iii, 113); in Irbil (Yāķūt, i, 186); in Baghdād (see Massignon, *Mission*, 92 (the present bazaar centre); in Karbalā' (see Massignon, *op. cit.*). In Persia, in Iṣfāhān (see Ritter, ix, 49; Vullers, *Lexic. Persico-Lat.*, ii, 753a, and cf. also (Ispahan) Pietro della Vale, *Viaggi* (Brighton 1843), ii, 8, German tr. (Ghent 1674), iii, 5; [Dupré], *Voyage en Perse*,

Paris 1819, ii, 125, and W. Ouseley, *Travels in Various Countries of the East*, iii, 1819, 16); in Tabrīz (see Ritter, ix, 856); in Khwārazm (Urgandj) (Ibn Baṭṭūṭa, iii, 4).

We may further note that, according to a reference in Niebuhr, *op. cit.*, about the middle of the 18th century, large public buildings in the Barbary States were called casseries. In Algiers at the present day *ḳaysāriyya* means barracks (see Dozy, *op. cit.*); after the first half of the 17th century it was used to denote the Janissaries' barracks (Père Dan, *Hist. de Barbarie et ses corsairs*[1], 1637, 2nd edn. 1649, 88: *Casseries ou Funduques*). In the ruined cities of Ḥawrān the palaces of the erstwhile Roman or Byzantine governors are now also called *ḳaysāriyya*; see Wetzstein, *Reisebericht über Hauran* etc., Berlin 1860, 55. In general, it appears that in modern times the use of the word *ḳaysāriyya* as market-place and suchlike has to a great extent given way to newer words like *khān*, *wakāla*, *funduḳ* and *bezestān*. For the economic functioning of the *ḳaysāriyya*, see SŪḲ.

ḲAYṢARIYYA, ḲAYṢĀRIYYA, Caesarea, a name bestowed during the reigns of the Roman emperors of Augustus and Tiberius on at least seventeen places in the Roman territories of the Near East and North Africa (Pauly-Wissowa, v, 1288-9). The Arab sources know only of two places with this name, however, cf. Yāḳūt, *Buldān*, s.v. Ḳaysāriyya.

1. A town on the Palestine coast, classical Caesarea Maritima, some 25 miles (40 km) south of Haifa or Ḥayfā.

Originally a 4th century B.C. Sidonian settlement known as Strato's Tower, apparently after its founder, the town was erected into an imperial city by Herod in 13/12 or 10/9 B.C. and given the name of Caesarea in honour of Herod's suzerain Augustus, the old name speedily falling into oblivion. The city now flourished, in part because of its fine harbour, as the main port of Sebastia or Samaria. Although it had a Jewish population, with traditions of Jewish learning so that a portion of the Palestinian Talmud was edited there, it was essentially a stronghold of Roman power and Hellenism, and until the Arab conquest served as the capital of the Roman and then Byzantine province of Palestine. It was further an important centre of Christian learning, with its bishopric the metropolitan seat for the whole province, and in the 4th century A.D. Eusebius was its bishop.

The accounts of the conquest of Caesarea in the Muslim sources are greatly influenced by the fact that this heavily-defended and well-protected city symbolised in the eyes of the Muslims the whole might of Christian and Byzantine power in Palestine, and it was the last place there to fall to the Arabs. Since its capture was thus regarded as the summit of Muslim military success in Palestine, the early accounts of its conquest exceed in number and detail those relating to Jerusalem. The numbers of its defenders were highly exaggerated in order to magnify the achievement, and one tradition goes as far as to put the figure at 930,000 of the besieged as against only 17,000 Muslim besiegers (Balādhurī, *Futūḥ*, 141, but see Barhebraeus, *Chronographia*, ed. Budge, 37 v, who puts the number of defenders at 7,000). The siege was begun by ʿAmr b. al-ʿĀṣ, till he left for Egypt, and by ʿIyāḍ b. Ghanm, who was probably the original commander on the spot, but whose rôle was later minimised by tradition, seeking to glorify either ʿAmr or Muʿāwiya. The latter eventually took over from his sick brother Yazīd and captured the city in Shawwāl 19/Sept.-Oct. 640 after a siege of probably seven months, inflated in most of the Arabic sources to seven years, calculating the beginning of the siege from the opening of the Syrian campaign as a whole; 4,000 captives were taken (cf. Balādhurī, *Futūḥ*, 140-1, 212; Ibn ʿAbd al-Ḥakam, *Futūḥ Miṣr*, 57-8; Yaʿḳūbī, *Taʾrīkh*, 172-3; idem, *Buldān*, 329; Ṭabarī, i, 2396-7, 2399, 2579; Ibn ʿAbd Rabbihi, *ʿIḳd*, ed. Amin *et alii*, i, 124; Bakrī, *Muʿdjam*, 757; Ibn ʿAsākir, *Taʾrīkh*, iv, 395; de Goeje, *Mem. sur la conquête de la Syrie*[2], 166 ff.; Caetani, *Annali*, iv, 31-2, 156-62).

In face of the normal control of the eastern Mediterranean by the Byzantine fleet (despite periodic Umayyad successes there), Islamic Ḳayṣariyya was held essentially as a defensive position against Byzantine descents on the coastland. During the revolt of ʿAbd Allāh b. al-Zubayr, the Byzantines seized the opportunity of Umayyad distraction to attack both Ḳayṣariyya and ʿAsḳalān (Ascalon) and damage them; but once secure in power, ʿAbd al-Malik rebuilt and refortified the two places, along with other coastal points such as Acre and Tyre (Balādhurī, 142). But on the whole, the Arab disinclination towards seafaring (cf. Ibn al-Djawzī, *Mawḍūʿāt*, Medina 1966, *ii*, 227) made it difficult for the Umayyad caliphs to persuade Arab warriors to settle in the coastal towns.

Ḳayṣariyya went through a period of deterioration under the ʿAbbāsids, who tended to neglect Syria in favour of their eastern provinces. Aḥmad b. Ṭūlūn (254-70/868-83) fortified again the Palestinian shore, but nothing is mentioned in the sources specifically about Ḳayṣariyya, whose harbour had by this time filled up with sand. The Arab geographers in the 3rd/9th and 4th/10th centuries, as well as Nāṣir-i-Khusraw in the 5th/11th, describe its fertile district and the abundance of its agricultural products, but make no mention of its harbour (Muḳaddasī, 35, 154; Nāṣir-i Khusraw, *Safar-nāma*, ed. Schefer, 18; Idrīsī, in *ZDPV*, viii (1885), 11; Le Strange, *Palestine under the Moslems*, 474, 475). In 364/975, the Byzantine offensive launched a year previously against the Islamic territories by the Emperor John Tzimisces reached as far south as Ḳayṣariyya (Runciman, *A history of the Crusades*, i, 31). The renewed Byzantine rule, however, was short-lived. But the old danger to the wealth of the city came at that time from the Bedouins of Banū Djarrāḥ (a clan of Ṭayyiʾ), led by their chief Mufarridj b. Daghfal, who succeeded around 360/971, during the disturbances which marked the end of the Ikhshīdids, in establishing himself in the coastal plain mainly around Ramla. Bedouin power continued to grow throughout the first half-century of the Fāṭimid rule. Between 402/1012 and 404/1014, Mufarridj laid siege to the coastal towns and even installed in Palestine an anti-Caliph of his own (Yaḥyā b. Saʿīd

al-Anṭakī, ed. Cheikho, 160, 201). In 414/1024, the Fāṭimid Caliph al-Ẓāhir nominated Muntak̲h̲ab al-Dawla, governor of Ḳayṣariyya, as governor of Palestine with the special assignment of ridding the country of Ḥassān b. Mufarrid̲j̲, who had succeeded his father as the leader of Banū D̲j̲arrāḥ (Maḳrīzī, *K̲h̲iṭaṭ*, Cairo 1270, i, 354). Although Ḳayṣariyya was never famous as a great Islamic centre of learning, some names of *ʿulamāʾ* who lived or studied there can be found in the sources (Yāḳūt, *Buldān*, iv, 214, 778; Ibn Tag̲h̲rī Birdī, *Nud̲j̲ūm*, ii, 204; Ibn ʿAsākir, iv, 185, 232, 460, vi, 212).

The First Crusade did not threaten Ḳayṣariyya seriously. Only in 494/1101, after Baldwin I had established himself as king of Jerusalem, did the Crusaders attack the city, with the help of a Genoese naval force. After the fall of Arsūf on 27 D̲j̲umādā II/29 April, Ḳayṣariyya was besieged and fell on May 17. The male population was almost completely wiped out, and the women, the *ḳāḍī* of the town and its governor were taken prisoners. Among the booty the Genoese found a green vessel which they decided was the Holy Grail; later, they brought it to Genoa, where it is still preserved in the Cathedral of San Lorenzo. As a prize for their participation in the conquest, the Genoese received a third of the town with permission to call the second cathedral of the city after their patron San Lorenzo. (On this conquest, see Ibn K̲h̲aldūn, *ʿIbar*, v, 186, and Runciman, ii, 73-4). After the conquest Ḳayṣariyya became an independent Signoria (which belonged to the Garnier family), one of the first to be established in the country (Runciman, ii, 93, 191).

The Crusaders built in Ḳayṣariyya a small harbour within the borders of the large ancient one, and its Frankish population grew to about 5,000 people, a considerable size in terms of Crusader towns.

In 583/1187, after the battle of Ḥaṭṭīn [*q.v.*] and the occupation of Acre, Ḳayṣariyya was easily conquered by Ṣalāḥ ad-Dīn's generals, Badr al-Dīn Daldirim and G̲h̲aras al-Dīn Ḳilid̲j̲ (Abu Shāma, *K. al-Rawḍatayn*, ii, 87; Ibn al-At̲h̲īr, xi, 356; al-Kātib al-Iṣfahānī, *al-Fatḥ al-Ḳussī*, 33).

With the appearance of the armies of the Third Crusade, Ṣalāḥ al-Dīn, knowing his weakness on the sea and anxious to deny the Crusaders a foothold on the coast, ordered in 586/1190 the demolition of the fortifications of Caesarea (Maḳrīzī, *Sulūk*, i/1, 104, Mud̲j̲īr ad-Dīn, *al-Uns al-d̲j̲alīl*, 324). Richard-Coeur-de-Lion recaptured Caesarea in 587/1191 (al-Kātib al-Iṣfahānī, *op. cit.*, 377-83), after which a strong garrison was established there, but the city fortifications were not rebuilt until 615/1218, with the main effort concentrated on the rebuilding of the citadel on the southern pier of the harbour. In 617/1220, the Ayyūbid al-Malik al-Muʿaẓẓam ʿĪsā managed to occupy the city while the main Crusader forces were besieging Dimyāṭ (Damietta); he found it completely empty, the Genoese navy having evacuated the population from its citadel (Ibn Tag̲h̲rībirdī, *op. cit.*, vi, 239).

The city remained nominally in Muslim hands until 625/1228 when al-Malik al-Kāmil of Egypt ceded it to the Emperor Frederick II, together with Jerusalem and other territories in Palestine. When Louis IX arrived in the Holy Land in 648/1250-1, new fortifications, completed in April or May 1252, were begun, and were hailed as the finest building enterprise ever undertaken in Palestine (Joinville, *Chronicle*, London 1908, 253). This time the work comprised the building of the whole city, including a mighty wall which protected it from both sea and land and its ancient moat was excavated, cleaned and deepened, thus giving the city wall a maximum height of 70 ft. (22 m.).

But even these mighty fortifications could not save Ḳayṣariyya when the Mamlūks resolved on destroying the remnant of the Crusader strongholds along the Syrian littoral, once they had checked the Mongol invasion in 658/1260. In 662/1264 the first Mamlūk attacks on the districts of Ḳayṣariyya and ʿAt̲h̲līt̲h̲ began under the Amīr Nāṣir al-Dīn al-Kaymarī (Maḳrīzī, *Sulūk*, i/1, 513), but the final campaign headed by Baybars took place in 663/1265. A fierce frontal attack by the Mamlūks forced the defenders to retreat to the citadel (called *al-khaḍrāʾ* in the Muslim sources). Under the heavy bombardment of Baybars' ballistas, the Crusaders had to enter into negotiations. On 5th March 1265 they were evacuated by ship and the sultan ordered the destruction of the fortress.

The occupation of Ḳayṣariyya enabled the Mamlūks to move both southwards against Jaffa and Arsūf and northwards against ʿAt̲h̲līt̲h̲ and Acre (Yāfiʿī, *Mirʾāt*, iv, 161; Maḳrīzī, *op. cit.*, i/1 526-8; Ḳalḳas̲h̲andī, *Ṣubḥ*, iii, 434; Mufaḍḍal b. Abī 'l-Faḍāʾil, in *Patr. or.*, xii, Paris 1918, 132-3; Ibn Ḥabīb, *Durrat al-Aslāk*, in *Orientalia*, ii, 250; Ibn K̲h̲aldūn, *op. cit.*, v, 385).

Instead of the coastal line of fortifications, which were ultimately completely demolished, Barbars resolved upon establishing a new line of defence along the foothills deep in the country, more defensible by the Muslim forces. The fortress of Ḳāḳūn was, therefore, rebuilt to replace Ḳayṣariyya and Arsūf (Maḳrīzī, *op. cit.*, i/1, 557).

The site of Ḳayṣariyya remained deserted for about four centuries, cf. Ḳalḳas̲h̲andī, iii, 237. In the 11th/17th century, some fishermen briefly tried to settle there. Its ruins became a source for building material, especially when D̲j̲azzār Pās̲h̲ā built his mosque in Acre at the end of the 12th/18th century.

In 1884, in the wake of the Austrian occupation of Bosnia, the Ottoman government brought Muslim refugees from there and settled them in Ḳayṣariyya, but the endemic malaria reduced them to a miserable condition, and during the Arab-Israelī war of 1948 the place was deserted.

The first archaeological survey of the site was carried out in 1873 by the Palestine Exploration Fund, but systematic excavations were made during the 1950s and 1960s by Italian and Israeli archaeologists. Parts of the town have been reconstructed, notably part of the Crusaders' wall and the Roman theatre, which is used today for musical performances.

SHARON)

ḲAYṢARIYYA, or Kayseri, a town in central Anatolia, at an elevation of 3,300 feet, at the northern base of the Erd̲j̲iyas Dag̲h̲ī. The Roman imperial

name Caesarea for this town was rendered Ḳayṣariyya in Arabic, Ḳayseriye in Ottoman, and Kayseri in modern Turkish.

1. *History*. Even before the Hittite empire, the area was a mercantile centre with a thriving Assyrian trading colony named Kanesh. As Mazaka, the site was the capital of the kingdom of Cappadocia, later of the Roman province of Cappadocia. Caesarea was first in precedence among the Christian bishoprics of Asia Minor, and as the seat of the Cappadocian fathers, Basil, Gregory of Nyssa and Gregory of Nazianzus, a centre of Christian thought and monasticism. Pillaged and devastated by the Sasanids and then rescued by Heraclius in A.D. 611, the town was again beautiful and wealthy when Muʿāwiya forced it to pay tribute in 26/647. (Michael the Syrian, tr. Chabot, ii, 400, 441; Abu 'l-Faradj, tr. Budge, i, 97). In the reign of Hishām (105-25/724-43) Maslama led two raids on Ḳayṣariyya and perhaps occupied the town temporarily; two of Hishām's sons also led campaigns there. In the 5th/11th century Byzantine policies and the Turkish invasions precipitated a migration of Armenian Gregorians into this Greek Orthodox area (Michael the Syrian, iii, 133).

Ḳayṣariyya was sacked by Turkmens in 459/1067 (see Cahen, *Le premier penetration turque*... in *Byzantion*, xviii (1948), 25). Some time after the battle of Manzikert the town, perhaps then in ruins, became part of the Dānishmend state (Michael the Syrian, iii, 173; Abu 'l-Faradj, i, 229). Chroniclers of the First Crusade who passed through Ḳayṣariyya do not describe it. Malik Muḥammad, the son of its conqueror Ghāzī Dānishmend, finally restored the town (Michael the Syrian, iii, 237; Abū 'l-Faradj, i, 258). In 563/1168 Ḳilidj Arslān II took it from the Dānishmendids (Abu 'l-Faradj, i, 293). Frequently a royal residence for the Saldjūḳs. Ḳayṣariyya again became a leading centre of trade and culture. In 641/1243 Mongol armies under Baygu massacred thousands, carried off the young into captivity, and plundered and destroyed the royal treasury and many splendid houses and buildings (Abū 'l-Faradj, i, 407; Ibn Bībī, tr. Duda, 230 f.). In 675/1277 Baybars occupied the town without resistance, but he withdrew south of the Taurus when his appearance failed to produce the anticipated uprising of Turkmens against their Mongol rulers; the Mongols then took vengeance on the city (Abū 'l-Faradj, i, 457).

From 744/1343 to 783/1381 Ḳayṣariyya was under the Eretna dynasty, and eventually became their capital; Ibn Baṭṭūṭa calls the town one of the largest in Anatolia. The Eretna were overthrown by a native of Ḳayṣariyya, Ḳāḍī Burhān al-Dīn, who ruled from Sivas. The Ottoman sultan Bāyazīd took the city in 800/1398, but after Tīmūr defeated him, Ḳayṣariyya fell to the Ḳarāmān dynasty. For almost a century, the Turkmens of Ḳarāmān and the Dhu 'l-Ḳadrids contested for this prize. The Mamlūks helped the Dhu 'l-Ḳadrids to take the city from the Ḳarāmānids in 827/1419; in 839/1436 the Ottomans helped the Dhu 'l-Ḳadrids to regain it once more. Although the Ḳarāmānids recovered the town in 869/1465, Meḥemmed II restored it to the Dhu 'l-Ḳadrids in 871/1467. The Ottomans finally brought Ḳayṣariyya under direct rule some time after they took Ḳara Ḥiṣār Develi in 879/1474, but before the Mamlūk-Dhu 'l-Ḳadrid attack on the city on 895/1490. The town lay exposed to Mamlūk and Ṣafawid ambitions until Selīm I removed the threat from both these powers.

In the early 11th/17th century the region of Ḳayṣariyya was infested by *Djalālī* rebels; Ḳara Yazīdjī won a victory over an Ottoman army on the plain of Ḳayṣariyya in 1008/1600, and twice shortly thereafter, brigands dared to besiege the walled town. The urban population suffered considerably; many villagers were killed or abandoned their lands in fear, temporarily dislocating the system of land taxation. In 1027/1618 Simeon of Poland found the town quite ruined in appearance because its people so feared the *Djalālīs* that they would not do any reconstruction work (Polonyali Simeon, tr. H. Andreasyan, 158 f.). In 1034/1624 the rebel forces of Ābāza Ḥasan were scattered near Ḳayṣariyya by the vizier Čerkes Meḥmed. In 1059/1649 Ewliyā Čelebi found the town prosperous, but no longer any more so than Sivas or Maraš. After half a century under the rule of Čapanoghlu derebeys, Ḳayṣariyya returned to direct Ottoman rule in 1814.

In the Ottoman Empire Ḳayṣariyya was a *liwā* or *sandjaḳ* of the Ḳaramān *eyālet* until 1864, when it was transferred to the *wilāyet* of Anḳara. In the 10th/16th and 11th/17th centuries, Ḳara Ḥiṣār Develi, the only *ḳaḍāʾ* in the *sandjaḳ*, was more than once claimed by the *ḳāḍī* of Nigde. At the end of the 19th century, there were two *ḳaḍā*'s, Incesu and Develi. Under the republic, Ḳayṣariyya became a *vilayet* or *il*.

2. *Commerce, Industry, and Agriculture*. Ḳayṣariyya's continuing importance as a commercial centre comes from its location on well-defined north-south and east-west trade routes. Perhaps more important, it is the centre of a small, densely populated, fertile, well-watered area between the Ḳïzïlïrmaḳ river on the north and the Erdjiyas Daghl on the south, which can provide the agricultural surplus necessary to support a town (for density, see Bartsch, 130 f.; Tanoğlu *et al.*, *Türkiye Atlasi*, map no. 67). The agricultural wealth of Ḳayṣariyya comes from two sources: wheat and barley from the plain (Kayseri ovası) extending from the Ḳïzïlïrmaḳ to the salt lake of Pelas; and fruits and vegetables cultivated by skilful use of terracing and irrigation on the lower slopes of Erdjiyas and its foothills. During the prosperous times of the Rūm Saldjūḳs, Sivas, Ḳonya, and Ḳayṣariyya were the mercantile centres of Anatolia, yielding only gradually to Ottoman Bursa in the 8th/14th century.

The 16th-century tax registers (*daftar-i khāḳānī*) refer to dye houses, tanneries, slaughterhouses, mills and linseed oil presses, and to the manufacture of boza, wine and candles. Vineyards, orchards and gardens were dotted about the town, while wheat and barley were grown on its outskirts. The neighbouring villages produced grains and an array of fruits and vegetables, particularly grapes (used for raisins, *pekmez* and wine). Cotton and honey were important; and walnut trees and rice were cultivated (see Barkan, *Kanun-nameler*, "Kayseri", in index; Beldiceanu, *Karaman*, 45 f., 70 f., and *passim*).

Simeon of Poland compared Ḳayṣariyya's gardens and vineyards to those of Edirne (p. 160). Ewliyā Čelebi stated that its wheat and barley were famous and praised the abundant and varied fruits and vegetables (iii, 184). Kinneir extolled the "extraordinarily abundant vegetables", the fruits unrivalled in all Anatolia for abundance and variety, and the abundant pasturage (pp. 103 f.). Barkley admired the rich plain of wheat, barley, rice, and cotton, with the hills full of vineyards, plums, apples and quinces (p. 156). Hamilton cited gallnuts and yellow berries (buckthorn berries) sold to Izmir, and

tragacanth, madder, blue dye made from lees of wine and sultana raisins (ii, 267, 255, 263; cf. Ainsworth, 307). Mordtmann added to these potatoes and anise, as well as wine, brandy and beer (p. 142, 145).

From Saldjūḳ times onwards, cotton and coarse cotton cloth were among the most important industrial products of Ḳayṣariyya. Kinneir found merchants from all over Syria and Anatolia gathered there to buy cloth and raw cotton (p. 100; cf. Lucas, 173). Ḳayṣariyya horses were famous; sheep, cattle, and water buffalo were raised for the sausage and pastirma industry for which Ḳayṣariyya was famous; in Ewliyā Čelebi's time these meats were so much in demand in Istanbul that they could not be procured even in Ḳayṣariyya itself. Hides, used particularly for the yellow morocco leather (*sarî sahtiyan*), which was prized throughout the empire, and for the local footwear industry, were an equally famous product. Up to the present day, Ḳayṣariyya produces large numbers of its unique carpets and kelims.

Simeon mentioned extensive caravanserais, bedestāns, shops and bazaars, and numerous goldsmiths and jewellers (p. 158). Ewliyā Čelebi noted that, like Bursa and Edirne, the town had two bedestāns and that tradesmen made excellent profits (iii, 180 f., 184). Inciciyan reported that goods from Istanbul and India were sold in its bazaars, and Kinneir called it the trade emporium for Anatolia and Syria (Simeon, 159 n.; Kinneir, 100). Lucas called the bazaars extensive, especially the ones for cotton (i, 173) and Hamilton reported them to be extensive and rich, and full of cheap imports (ii, 267 f.). Von Schweinitz, admiring the fine bazaars, judged Ḳayṣariyya to be the most important town in inner Anatolia (pp. 116 f.) and Mordtmann called it one of the most important trading places in Anatolia (p. 492); he says that trade *ca.* 1850 was completely in the hands of local "Cappadocian Christians". However, in the 11th/17th century, Muslims were also active in trade in Kayseri.

The salt lake at Pelas and salt mines at Ḥādjdjī Bektāsh kept the town amply supplied with salt; and gypsum was available (Hamilton, ii, 246; Ainsworth, 311; Moltke, 329; Mordtmann, 147). In the 19th century a big saltpetre works was located near the lake, at Sarloghlan (Hamilton, ii, 259; Mordtmann, 147). Volcanic tufa everywhere provides excellent, cheap, building material.

The railway line from Ankara reached Ḳayṣariyya in 1927, and connexions to Samsun in 1930 and to Ulukişla in 1933 made the city a major rail centre. Of late there have also been constructed good road connexions.

In 1935 a huge state textile mill (currently employing nearly 2,500 people) was set up, financed largely by a Soviet loan. Ḳayṣariyya also became the site of an aeroplane assembly plant. In 1965 the city had 16 factories with more than 50 employees (5 state factories and 11 built with private capital). Another 100 factories have more than 5 employees, and there are 500 factories with 1 to 5 employees (*Kayseri il yıllığı*, 202). Machine works, wood and metal products, rubber products, pressure cookers and milk pasteurization are among the leading industries. Cotton and wool manufactures, carpets and kelims, hides and leather, grains, wool, livestock, fodder and pastirma continue to be among the leading products. As a result, Ḳayṣariyya is more highly industrialised and has a noticeably higher standard of living than most Turkish towns.

3. *Demography*. Records of the population of the town are available from 1500 to 1583, 1813 to 1907, and 1927 to 1970.

Four Ottoman tax registers (*daftar-i khāḳānī*) have preserved 10th/16th-century population statistics. In 905/1500, the town had 2287 *nefer* (tax-paying males), of whom 86 % were Muslims and 14 % were *dhimmīs* (1961/326). Early in Sulaymān's reign there were 2367 *nefer*, of whom 81 % were Muslims and 19 % were *dhimmīs* (1907/457). Later in Sulaymān's reign there were 3530 *nefer*, 81 % Muslims and 19 % *dhimmīs* (2870/660). In 991/1583 the town had 8251 *nefer*, 78 % Muslims and 22 % *dhimmīs* (6435/1816). The urban population practically quadrupled in less than a century and the rural population also grew rapidly. The anarchy of the 9th/15th century helps explain both the small population of 1500 and the capacity for rapid growth once security was restored (*Başbakanlık arşivi tapu defter* nos. 33, 387 and 976; cf. no. 38; *Ankara tapu kadastro dairesi*, no. 136). In 991/1583 the city had 6015 *khānes* or households at 5.5 persons per *khāne* or 33,082 inhabitants (4 × 8251 is 33,004, so perhaps multiplying the *nefer* by 4 gives the numerical population of the town). The proportion of non-Muslims increased from 14 % in 1500 to 22 % in 991/1583. Armenians, who made up 82 % of the non-Muslim population in 905/1500, rose to 89 % in 991/1583, increasing at a much faster rate than the Greeks. No Jews are registered in these surveys but in 1059/1649 Ewliyā Čelebi mentions a synagogue (iii, 183).

Official statistics cease in 991/1583. Simeon of Poland estimated that there were 500 Armenian *khānes* in 1026/1618; either he underestimated or the *Djalālī* uprisings had brought about a catastrophic population decline (p. 158). Ewliyā Čelebi mentioned 600 *khānes* within the walls, but most of the urban population lived outside the walls in the 10th/16th century (iii, 177).

The census of 1831 recorded 13,466 males in the town (7,903 adult males, 5,317 males under 12, 215 from the military class, and 31 disabled), a population of about 26,932; alternatively, 5,184 *khānes* are mentioned (at 5 people per *khāne* 25,920) (Karal, *Ilk nüfüs sayımı, 1831*, 113). These figures are consistent with Kinneir's population estimate in 1813 of 25,000, including 1,500 Armenians, 300 Greeks and 150 Jews (p. 100). Texier asserted that the official population in 1834 was 60,000, *i.e.*, 11,900 houses (10,000 Turkish, 1,500 Armenian, 400 Greek); and Hamilton estimated 10,000 houses in 1837. Their figures seem to have a single, erroneous, source, or possibly they refer to the *ḳaḍā'* of Ḳayṣariyya (Texier, 544; Hamilton, ii, 267). Poujoulat, also in 1837, reported 9,000 Turks, 6,000 Armenians and 4,000 Greeks, a total of 19,000 (a gross overestimate of the proportion of Christians, i, 213). On the basis of information provided by a local notable or *aʿyān* in 1839, Ainsworth reported (p. 308) 18,522 inhabitants (12,176 Muslims, 5,237 Armenians and 1,109 Greeks. Any decline might be attributed to the severe earthquake of 1835, which destroyed many homes and killed 665 people (Poujoulat claims 4,000 dead, which must be an exaggerated estimate or else a figure for the whole province). However, Mordtmann plausibly asserts that the population figure given by Ainsworth was for "males", not "inhabitants", *i.e.*, there was a population of about 37,000 (Ainsworth, 310; Hamilton, 258, Poujoulat, i, 210 f.).

Cholera killed some 3,000 people in 1848; in 1849 Mordtmann gave the population as 18,413 males (12,344 Muslims, 5,002 Armenians and 1,067 Greeks), presumably 36,826 inhabitants, a reliable figure (pp. 141, 143). In 1858 Barth estimated 8,000 inhabited

houses (of 10,000 in the city), *i.e.*, *ca.* 40,000 people, a substantial increase in the decade (p. 58). Cuinet in 1892 estimated the population of the Ḳayṣariyya *ḳaḍā'* at 72,000 (45,000 Muslims, 9,000 Armenian Gregorians, 14,400 Greek Orthodox, 800 Armenian Catholics and 1,200 Protestants), but the *ḳaḍā'* included numerous villages around Ḳayṣariyya (i, 307). Townshend estimated 50,000 inhabitants in 1904 (including 20,000 Christians, of whom three-quarters were Armenians (p. 119). The Anḳara *wilāyet sālnāme* of 1907 records a population of 54,011 for the town (17,536 Muslim men, 17,168 Muslim women, 9,521 non-Muslim men, 9,786 non-Muslim women (p. 209). The population apparently doubled between 1813 and 1907.

The 10th/16th-century Muslim population of Ḳayṣariyya included nomadic, settled and sedentarising Yürüks, Turkmens and Kurds. Afs̲h̲ār nomads were numerous on the rich pastures of Uzun Yayla; in the mid-19th century they were joined by a large immigrant group of Čerkes. Kurds and Afs̲h̲ārs are still numerous, and Uzun Yayla constitutes one of the main preserves of Čerkes in Turkey.

Since the earliest tax records of the late 9th/15th century, the majority of the population of both the town and province of Ḳayṣariyya have been Muslims. Large numbers of Orthodox and Gregorian Christians have inhabited the town and the neighbouring villages, often intermixed with Muslims and with one another. In the town Ḳayṣariyya, Gregorians outnumbered Orthodox by three or four times in both the 10th/16th and 19th centuries. Greek and Armenian were spoken only in a few villages; most Christians were turcophone even after efforts towards hellenisation and armenisation began under outside stimulus in the 19th century (see R. M. Dawkins, *Modern Greek in Asia Minor*; Inciciyan, quoted in Simeon, 161 n; Simeon, 158 and n; and Ewliyā, iii, 183: "Kurdče" presumably is an error for "Ermenice". See also the periodical *Mikrasiatika Kronika*). In 1922 a congress of Orthodox Christians of Anatolia, meeting in Ḳayṣariyya, asserted that they were Anatolian Christians of Turkish nationality, repudiated the "Greek" hierarchy, and established a Turkish patriarchate; their effort miscarried, however, because Orthodox Christians of Anatolia were included in the compulsory Greek-Turkish population exchanges (Teoman Ergene, *Istiklal harbinde türk ortodokslarɪ*, 18 ff., 23-42).

After the Armenian débâcle and the Greek population exchanges, the first republican census revealed that Ḳayṣariyya's population had declined to 39,544; only 1277 Armenian Gregorians and 6 Greek Orthodox remained in the town. The population increased to 46,181 in 1935 (up 23 %), 52,467 in 1940 (up 21 %), 57,863 in 1945 (up 15 %), 65,488 in 1950 (up 34 %), 82,405 in 1955 (up 26 %), 102,596 in 1960 (up 25 %), 126,653 in 1965 (up 22 %), and 167,696 in 1970 (up 33 %). The population of the town has increased four-fold in less than half a century, a rate of growth faster even than that of the 10th/16th century (*Kayseri il yɪllɪğɪ*, 122, 124-7).

4. *Culture.* A Library made *waḳf* in 1210/1796 by the *Re'īs ül-kuttāb* Rās̲h̲id Efendi preserves the original collection of 943 works (926 manuscripts, 17 printed volumes), and additions have been made (see Ahmed Okutan, *Kayseri Umumi Kütüphanesi Raşit Efendi kismi Usul-i hadis ve hadis ilmine ait arapça elyazma eserler katalogu*, Istanbul 1964). The town also has an İl Halk Kütüphanesi and a small museum, filled mostly with pre-Islamic artifacts.

The ancient site of the town (Eski S̲h̲ehir) is located on the southern edge of the city, near the Baṭṭāl G̲h̲āzī tomb, where the plain meets the lowest foothills of the Erd̲j̲iyas. Ḳayṣariyya is rich in architectural monuments, which have been well listed by H. Edhem and A. Gabriel. The inner castle and a large section of the former wall have been preserved, as well as several *madrasas*, mosques, tombs, and *k̲h̲āns* dating from as early as the Sald̲j̲ūḳ period. Most notable of these are the Ulu Cami, Çifte madrasa, Huand Hatun mosque-*madrasa*-baths complex, Ḥād̲j̲d̲j̲ī Kilič mosque, Döner Kumbet, Ḳurs̲h̲unlu mosque (built from a plan of Sinān), and the Vizier *k̲h̲ān*. A vigorous programme of preservation and restoration is under way.

A reputed tomb of Baṭṭāl G̲h̲āzī, located beneath the courtyard of the recently rebuilt Baṭṭāl G̲h̲āzī mosque, is visited by local pilgrims. The tomb of D̲j̲alāl al-Dīn Rūmī's teacher, Sayyid Burhān al-Dīn, is also noteworthy. For other Muslim, Christian and mixed places of pilgrimage, see Ewliyā, iii, 186-9, and Carnoy-Nicolaides, *passim*. Seven *madrasas* were reported in Ḳayṣariyya in Sald̲j̲ūḳ times, as many as in Ḳonya and more than twice as many as in any other Anatolian town (see A. Kuran, *Anadolu medreseleri*, i). In Sulaymān's time, the city had 3 Friday mosques, 20 *masd̲j̲ids*, 10 *madrasas*, 17 *zāwiyas*, 3 baths, and 107 shops.

The living pattern of winter in the town and summer in vineyards on the foothills of Erd̲j̲iyas plays a significant rôle even today in the economic and social life of Ḳayṣariyya. It has frequently been a theme in local poetry (see A. Satoğlu, *Kayseri Şairleri*, and also *Erciyes halkevi dergisi*). The climate was considered healthy (Ewliyā, iii, 182; Hamilton, ii, 268; Mordtmann, 141; and Kinneir, 104). Several 19th-century travellers called Ḳayṣariyya filthy, and a town containing slaughtering, meat processing, leather and tanning industries could hardly have been otherwise. Some travellers called the stone houses of the town tasteful, and Moltke and von Schweinitz considered it beautiful. The beauties of Erd̲j̲iyas, with its luxurious gardens and clear streams, were obvious to those who saw them.

The people of Ḳayṣariyya have been noted for their religious orthodoxy and for their business acumen. Hasluck maintained that the town had a "black Sunnī" tradition (513, 23n.). Carnoy-Nicolaides related a legend that no Jew could live in Ḳayṣariyya, a reference to the supposed commercial acumen of its inhabitants (226-6). Ewliyā Čelebi explained that the local people were hardworking because of the cold climate (iii, 182). Simeon of Poland was aware that they were considered "dyers of asses" (160; Carnoy, 247 f.). It is widely believed in Turkey today that the people of Ḳayṣariyya have a special propensity for business and are hardworking and diligent.

KAYSERI [see ḲAYṢARIYYA].

ḲAYTAḲ (self designation, Kaydaḳlan, pl. Kaydaḳ: Russ. Khaydaki, Kaytagi, Kaytaki, Karakaytaki; other forms, Khaytaḳ, Ḳaytakh, ḲaraḲaytakh), a small Dāghistān [*q.v.*] group, which forms with Ḳubači [*q.v.*] and Dargin [*q.v.*] the Dargin division of the Dargino-Lak group of the Ibero-Caucasian languages.

According to the census of 1926, ethnically there were 14,430 Ḳaytaḳs, and 14,469 claiming Ḳaytaḳ as their mother tongue: in 1930 (estimation by Grande) there were 14,470 Ḳaytaḳs. The Ḳaytaḳs inhabit ten *aul*s in the Kaytak district, and the southern (mountainous) part of the Dakhadaev district, in the valley of the Ulu-Chai, in the Dāghistān A.S.S.R. Ḳaytaḳ territory lies between the Dargin and Tabasaran areas.

The first mention of the Ḳaytaḳ was in the 4th/10th century, by Arab authors. According to Muḥammad-Rafi, the Ḳaytaḳs paid tribute to the *shamkhal* of Ḳaziḳumukh in the Laḳ [*q.v.*] country. At the end of the 8th/14th century the Mongols penetrated Ḳaytaḳ territory and there is evidence that there was a strong Mongol influence on the Ḳaytaḳs. A large proportion of the Ḳaytaḳ population was destroyed by Tīmūr.

With the fall of the Golden Horde, the feudal principality of the *utsmiyat* of Ḳaytaḳ arose as a major power in northern Dāghistān (dubious etymology of the word *utsmi* from *isim*, "the renowned"). Its territory was larger than the area inhabited today by the Ḳaytaḳs and its population was composed of many tribes besides the Ḳaytaḳs—Laḳs, Dargins and Southern Ḳumyḳs. As legend has it, the *utsmi* descended from the Arab governors of Ḳala' Ḳuraysh, who had islamicised the area in the 2nd/8th century, and Ḳaytaḳ was one of the first regions of central Dāghistān to be islamicised. The Ḳaytaḳ are Sunnīs of the Shāfiʿī School. In the 10th/16th century the *utsmi* was one of the strongest rulers in Dāghistān, and in the 12th/18th century was economically and politically very significant, carrying on complex foreign policies, supporting at different times Turkey and Persia.

In 1802 a Russian protectorate was imposed on the *utsmi* ʿĀdil Khān. Direct Russian administration came to the lower Ḳaytaḳ in the pre-Caspian area in 1820, and to the Ḳara-Ḳaytaḳ in the mountain area in 1862. In 1844 the *utsmiyat* was suppressed.

The social structure of Ḳaytaḳ *utsmiyat* was similar to the structure of the Avar [*q.v.*] society: a rather complicated feudal hierarchy—*begs*, *čanka*, *uzden* (free peasants), and non-free classes: *čagar* (peasants submitted to servitude), *rayat*s (serfs), and *ḳul*, which coexisted beside the system of the "free societies" based on the joint family (*tukhum*). There existed an endogamic marriage system.

The *ʿādāt* of Ḳaytaḳ were collected in written form in the 17th century by the *utsmi* Rustam Khān. The Arabic text was translated into Russian in 1868 (*Sbornik Svedenii o Kavkazskikh Gortsakh*, Tiflis 1868).

Due to the lack of good agricultural land, agriculture played a minor role in the traditional economy. Sheep and goat raising, with some horses and cattle, was the predominant economic activity. Handicrafts were well developed, especially the weaving of wool and silk. Ḳaytaḳ women from Barshamai and Čabakhni were renowned for their embroideries. The present economy still stresses sheep raising (with a transhumance system) in the mountainous areas, and the raising of cattle and horses in the lower mountains and foothills.

Ḳaytaḳ is a vernacular language, consisting of two dialects: Mağalis-Ḳaytaḳ (in the north) and Ḳara-Ḳaytaḳ (in the south). Dargin is used as the first literary language and second (sometimes first) spoken language. Russian is the second written language. The Ḳaytaḳ are being culturally and linguistically assimilated by the Dargin.

AL-**KAYYĀL** (also ibn al-kayyāl), aḥmad b. zakariyyā', S̲h̲ī'ī gnostic from Daskarat Bayt al-Nār near Bayhaḳ active around the turn of the 3rd/9th century. According to al-S̲h̲ahrastānī, he was originally a *dā'ī* of some Ismā'īlī *imāms*. Having been disowned by the *imām* for his heretical views, he first claimed the imāmate for himself and then asserted that he was the *ḳā'im* [*q.v.*]. He gained some adherents and left writings in Arabic and Persian which were still extant in the time of al-S̲h̲ahrastānī (d. 548/1153). Abū 'l-Ma'ālī states that al-Kayyāl "appeared" in the year 295/907-8, perhaps referring to his arrival in Transoxania. He claimed that he was entrusted with abrogating the law of Islam and proclaiming a new law. He composed a scripture in Persian which he called his Ḳur'ān and invented a secret alphabet which only he could read. At the Sāmānid court in Buk̲h̲ārā he gained the favour of the vizier Muḥammad b. Muḥammad al-D̲j̲ayhānī [*q.v.*]. If the name is correctly given, al-Kayyāl was still alive after 326/938 when this al-D̲j̲ayhānī became vizier. There may be, however, a confusion with the latter's father, Muḥammad b. Aḥmad al-D̲j̲ayhānī, who was vizier from 302/914-5 to 310/922-3. Al-D̲j̲ayhānī at first encouraged him to propagate his doctrine in Kis̲h̲s̲h̲. When he failed to win adherents there, the vizier directed him to the countryside of Marw, where he gained a numerous following. He died after appointing a butcher as his successor. When al-D̲j̲ayhānī died (Muḥammad b. Muḥammad died in 330/941-2), the movement disintegrated. Ibn Funduḳ al-Bayhaḳī (d. 565/1169-70) states, however, that in Samarḳand neophytes (*murîdān*) and adherents of the school of al-Kayyāl were in evidence in his day and his books were available there.

Al-Kayyāl's gnostic doctrine as described by al-S̲h̲ahrastānī elaborated correspondences between a higher, spiritual world, a lower, corporeal world, and the human body and relied on *ḥurūf* [*q.v.*] and allegorical interpretation of the Ḳur'ān. It shows distinct affinities with Ismā'īlī gnosis, though no traces of the Neoplatonic cosmology introduced in Ismā'īlism about the beginning of the 4th/10th century [cf. ismā'īliyya, Doctrine]. Indian as well as Manichaean influences on his thought have been suggested. His doctrine on the imāmate was refuted by the philosopher Muḥammad b. Zakariyyā' al-Rāzī (d. 313/925 or 320/932-3).

The assumption by some modern scholars that he may be identical with Aḥmad, the son of the alleged founder of Ismā'īlism 'Abd Allāh b. Maymūn al-Ḳaddāḥ [*q.v.*], is no longer tenable. The account of the late Ismā'īlī author Idrīs b. al-Ḥasan (d. 872/1468), according to whom al-Kayyāl was a *dā'ī* of the Ismā'īlī *imām* 'Abd Allāh b. Muḥammad b. Ismā'īl, is fictitious and based solely on the statements of al-S̲h̲ahrastānī.

ḲAYYIM (a.), originally: "he who stands upright", then (with *bi*, *'alā*, *li* or the genitive alone), he who takes something upon himself, takes care of something or someone and hence also has authority over them. Thus we find the pre-Islamic poet al-Ḳuṭāmī (*Dīwān*, ed. Barth, Leiden 1902, no. 26) already speaking of a "*ḳayyim* of water", *i.e.* apparently the man in charge of it, the supervisor, and the poet Bā'it̲h̲ b. Ṣuraym (*Ḥamāsa* of Abū Tammām, ed. Freytag, 269, verse 2) speaks of the *ḳayyim* of a woman, *i.e.* he who provides for her, her husband. The first mentioned meaning, (supervisor etc.), is then found in all possible applications, administrator of a pious foundation, of baths, superintendent of a temple, caretaker of a saint's grave, etc.; indeed, in al-Buk̲h̲ārī, *Ṣaḥīḥ*, *Da'awāt*, *bāb* 10 (ed. Krehl-Juynboll, iv, 189), in Muḥammad's night prayer, the expression is even applied to God as the director of heaven and earth, and this application seems also to be present in 'Umar b. Abī Rabī'a, ed. P. Schwarz, no. 91, where the poet swears by the "religion of the Ḳayyim". Here, of course, it is most probably a question of an inversion (perhaps caused by the metre) of the Ḳur'ānic expression *al-dīn al-ḳayyim* (see below) on the model of *Bayt al-Muḳaddas*, etc. (cf. Wright, *Grammar*[3] ii, §§ 95-6, and al-Ḳasṭallānī, comm. on Buk̲h̲ārī, *Ṣawm*, *bāb* 67, end).

The meaning "provider, husband" of a woman is frequently found in the eschatological traditions, in which it is said that with the approach of the last day the number of women will increase in proportion to men, so much that there will only be one *ḳayyim* for every 50 women.

The adjectival meaning "commanding" (a branch of knowledge) perhaps arises out of the same sphere of conceptions as "provider", "master"; it is found in a biographical notice of a scholar in Yāḳūt, *Mu'd̲j̲am*, ii, 225. On the other hand, *ḳayyim*, also an adjective meaning "correct, right", repeatedly found in the Ḳur'ān in the expression *al-dīn al-ḳayyim* and similar combinations, may have to be semasiologically separated from the former meaning.

Bibliography: *Ḳayyim* = administrator: al-Buk̲h̲ārī, *al-Ṣaḥīḥ*, *Waṣāyā*, *bāb* 32 (ed. Krehl-Juynboll ii, 196), and al-Ḳasṭallānī, s.v.; Yāḳūt, iii, 856; al-Maḳḳarī, ii, 547; al-Ṭabarī, i, 814;

al-Ḳazwīnī, *Āthār al-Bilād*, ed. Wüstenfeld, ii, 125. *Ḳayyim* = husband: al-Bukhārī, *op. cit.*, *Nikāḥ*, *bāb* 110 (ed. Kr.-J. iii, 453), and *passim*; ʿUmar b. Abī Rabīʿa, *op. cit.*, no. 269; *Ḳayyim* = correct, orthodox: Sūra IX, 36, and *passim*; XCVIII, 4 and thereon, al-Ḳasṭallānī's note on the quotation of this passage from the Ḳurʾān in al-Bukhārī, *op. cit.*, *Īmān*, *bāb* 34 (Kr.-J., 19).

(A. Schaade*)

ḲAYYŪM NĀṢIRĪ (1825-1902), born in the village of Yukarī Shīrdanī in the canton of Sviazsk in the government of Ḳāzān, was one of the first and greatest modernist reformers amongst the Tatars of the Volga. After studying at the *madrasa* of Ḳāzān, where he learnt Arabic, Persian and Russian, Nāṣirī founded at Ḳāzān his own school where, for the first time, such secular subjects as history, arithmetic, geography and Russian language were taught—these being at this time novelties and innovations which bordered on heresy.

Ḳayyūm Nāṣirī wrote over 50 works in Tatar, Turkish, Arabic and Persian; as the possessor of an encyclopaedic mind, he combined the skills of the philologist, folklorist, historian, geographer and ethnologist. His supreme merit was to have created a Tatar literary language, based on the dialect spoken in Ḳāzān, which replaced the Čaghatay or Eastern Turkish previously used by Tatar writers and which now permitted the extraordinary flowering of Tatar literature towards the end of the 19th century.

His most famous works are the *Fevākih ul-djulesā* (Ḳāzān 1884), the *Enmūzedj* (Ḳāzān 1895, on the syntax of the Tatar language), the *Lehče-i tātārī* (Ḳāzān 1895-6, 2 vols.) and above all, his famous *Ḳāzān kālīndārī*, an annual publication which appeared from 1870 to 1897 and which represents the best source of information on the origins of *djadīd* reformism amongst the Muslims of the Russian empire.

In Russian language, his two basic works are *Obraztsī narodnoy literaturi Kazanskikh Tatar* ("Examples of the popular literature of the Tatars of Ḳāzān"), in collaboration with N. F. Katanov, in *Izvestiya Obshčestva Arkheologii, Istorii i Etnografii*, xiii/5 (Ḳāzān 1896), 374-427, and *Pover'ya i Obryadī Kazanskikh Tatar obrazovavshiesya pomimo Vliyaniya na nikh sunitskogo Magometanstva* ("The beliefs and rites of the Tatars of Ḳāzān formed outside the influence of Sunnī Islam"), in *Zapiski Imperatorskogo Russkogo Geografičeskogo Obshčestva*, vi (Moscow 1880), 243-70.

Bibliography: There have been numerous books and articles dealing with Ḳayyūm Nāṣir in Ḳāzān Tatar, Turkish, Russian and French. In Russian, the most important is *Kayyum Nasiri (1825-1945). Materialy naučnoy sessii posvyashčennoy 120 letiyu so dnya roždeniya* ("Materials of the scientific session devoted to the 120th anniversary of his birth"), Acad. of Sciences, Ḳāzān Division, Ḳāzān 1948, pp. 136 (also published in Tatar). In Turkish, there is the important study of Saadet Çagatay, *Abd-ül-Kayyum Nasiri*, in *AÜDTCFD*, x/3-4 (Ankara 1952), 147-60. Finally, in French there is Ch. Lemercier-Quelquejay, *Un reformateur Tatar du XIX siècle, ʿAbdul Qayyum al-Nasyri*, in *Cahiers du Monde Russe et Sovietique*, iv/1-2 (Paris 19), 117-42 (with a complete bibliography). (Ch. Lemercier-Quelquejay)

KĀZ [see ḳabḳ].

KAZA [see ḳaḍāʾ].

ḲAZAḲ. The word *ḳazaḳ* in the Turkic language can be first documented in the 8th/14th century in the meaning "independent; vagabond". These and similar meanings, such as "free and independent man, vagabond, adventurer, etc." are known in the modern Turkic languages too. During the turmoils under the Tīmūrids, the word signified the pretenders in contrast to the actual rulers, and also their supporters, who led the life of an adventurer or a robber at the head of their men. At the same time, the word began also to be applied to nomad groups which separated from their prince and kinsmen and so came into conflict with the state; later it had also the meaning "nomad", in contrast to the sedentary *Sart* population in Central Asia. The status of *ḳazaḳ* is also regarded as a very old social institution of the nomad Turkic peoples. The word became the name of a political unit and later an ethnic designation by having been applied in the former meanings to those groups of the Özbek tribal confederacy that had abandoned the Khān Abu'l-Khayr and migrated to the north-east steppes of Turkistān. These ethnic groups formed the core of the population of the present *Ḳazaḳistān* (Kazakhstan), retaining later this name. However, it is probable that other Turkic, and probably Mongol, elements were also involved in the ethnogenesis of the modern Ḳazaḳ people. The struggles with the Kalmuks in the 11th/17th century forced the three Ḳazaḳ hordes to make an approach to Russia and to accept the Russian supremacy. Until the beginning of the 20th century, this took the form of a very loose and nominal connection. According to the former Russian tradition, *i.e.* to distinguish the Turkic Ḳazaḳs from the Slavic Kazaks or Kozaks (*Cossacks*), the Ḳazaḳs in Central Asia were also called Ḳazaḳ-Ḳīrghīz in learned and correct parlance. The word *kazak*—borrowed from the Turkic languages—appears in the Russian linguistic records first at the end of the 14th century with a wide range of meanings. The military meaning came later into predominance by applying the word to those military groups which played an eminent role in medieval Russian history. The form *kozak* (Cossack) used in western European languages goes back to the Ukrainian and Polish pronunciations. No certain etymology of the word *ḳazaḳ* has yet been given. The generally known inner-Turkic etymology, from *ḳaz-* "to flee, to escape" + suffix (nom. act.) *aḳ*, is not well documented in the linguistic sources and does not find universal acceptance. The recent etymology of the Turkic ethnic name *ḳaz* (< *az*) + the Iranian ethnic name *sak*, *i.e.*, *saka*, is a vague hypothesis which can hardly be confirmed by historical facts.

Bibliography: The relevant linguistic and historic data (with a critical survey of the various etymological approaches) are brought together by G. Doerfer, *Türkische und mongolische Elemente im Neupersischen*, iii, Wiesbaden 1967, 462 ff. An analysis of these facts from a historico-ethnological aspect is given by L. Krader, *Ethnonymy of Kazakh*, in *American Studies in Altaic Linguistics*, Bloomington-The Hague 1962, 123 ff. A. von Gabain analyses the social status of *ḳazaḳ* elements in the history of the Turkic peoples in her article *Kasakentum, eine soziologisch-philologische Studie*, in *Acta Orient, Hung.* xi, 161 ff. The Russian linguistic and historic relations are described by G. Stökl, *Die Entstehung des Kosakentums*, Munich 1953, and G. F. Blagova, *Istoričeskie vzaimootnosheniya slov* kazak *i* kazah (*The mutual historic relations of the words* kazak *and* kazah), in *Etnonimī*, Moscow 1970, 143 ff.

(with a lengthy bibliography on the linguistic and historical background of the ethnonymy).

(W. Barthold-[G. Hazai])

ḲĀZĀN, ḳazān, a town on the middle Volga, now the capital of the Autonomous Republic of Tatarstan in the USSR, and in the 15th and 16th centuries capital of the Khānate of the same name.

According to legendary accounts, the town was founded by Batu Khān in a Turkish and Muslim region which had been part of the ancient kingdom of Bulghār [*q.v.*] before the Mongol invasions.

The Khānate of Ḳāzān was founded in the first half of the 15th century by a Čingizid descendant, Ulu Muḥammad, son of Djalāl al-Dīn and grandson of Toḳtamïsh, at the time when the Golden Horde was breaking up. From the start, the Khānate took an active part in the internecine wars of the Russian principalities. In 1438 Muḥammad besieged Moscow and destroyed Kolomna. In 1445, his son Maḥmūdek defeated and took captive the Grand Prince of Moscow Vasili II, whom he released shortly afterwards. In the same year, Maḥmūdek seized the town of Ḳāzān, where a prince called ʿAlī Beg was ruling. In the following year, Ulu Muḥammad was put to death by Maḥmūdek, and at the same time, two of his sons, Ḳāsim and Yaʿḳūb b. Ulu Muḥammad, took refuge in Russia. Ḳāsim received from the Grand Prince of Moscow as an apanage the town of Gorodok, which in his honour assumed the name of Ḳāsimov and became the capital of a vassal Khānate of Moscow [see ḳāsimov] whose rulers were the aides of Russian policy. Maḥmūdek reigned till 1462; his successors were then his sons Khalīl (1462-7) and Ibrāhīm (1467-79). The latter waged war against Muscovy, at first with success, and in 1468 succeeded in temporarily capturing Viatka, but in 1469 the Russians went over to the offensive and came to besiege Ḳāzān. They compelled Ibrāhīm to set free all the Russian prisoners in Ḳāzān, without however managing to place their protégé Ḳāsim on the throne there. After his death in 1479, Ibrāhīm was succeeded by his son ʿAlī (according to certain sources, Ilhām). In 1487, the brother of this last, Muḥammad Amīn, sought refuge in Russia and then appeared before Ḳāzān at the head of a Russian army. After a three-weeks' siege, the town surrendered; ʿAlī was exiled to Vologda and Muḥammad Amīn installed as Khān. In 1495 he was expelled from the town by an incursion of Tatars from the Khānate of Sibir, led by their Khān Mamūḳ b. Ibāḳ, who ruled in Ḳāzān for a year, until in 1496, defeated by the Russians and at the wish of the local populace, he made over the throne to ʿAbd al-Laṭīf, younger brother of Muḥammad Amīn. In 1502 ʿAbd al-Laṭīf was summoned to Russia and the throne given back to Muḥammad Amīn. The latter was at first faithful to the Russian alliance, but soon rebelled against the tutelage of the Grand Prince of Moscow, and put to death and confiscated the goods of the Russian merchants who had come to the annual fair at Ḳāzān. He carried on the war against Muscovy with success, and in 1506 the Khān even defeated a Russian army near Nižniy Novgorod. A peace agreement made in 1507 established a state of equilibrium between the two rival principalities.

Muḥammad Amīn died in 1518, and with him the line founded by Ulu Muḥammad became extinct, ʿAbd al-Laṭīf having died in the previous year.

The Khānate now entered upon a period of anarchy marked by unceasing warfare between the partisans of an orientation towards Russia and those of a "nationalist" policy backed by the Crimean Khānate and the Noghay Horde. For more than thirty years, various Russian-supported candidates succeeded to the throne—the Khāns of Ḳāsimov Shāh ʿAlī and his brother Djān ʿAlī (sons of Awliyār Khān of Astrakhan)—and the Girāy princes Ṣāḥib and Ṣafāʾ, supported by their cousins of the Crimea.

The Russians were the first to take advantage of the unsettled conditions in Ḳāzān. In 1519 the Grand Prince Vasili III placed on the throne Shāh ʿAlī (first reign, 1519-21). The latter was expelled in 1521 by the Tatar nobles who asked the Crimean Khān Muḥammad Girāy to appoint his brother Ṣāḥib (half-brother through his mother of the last Khān Muḥammad Amīn) over Ḳāzān. In this same year, the two Tatar princes led a grand expedition against Muscovy and advanced right to the walls of the Russian capital. The regions of Moscow, Nižniy Novgorod and Riazan were totally laid waste, and hundreds of thousands of prisoners were taken and sold at Kefe in the Crimea, but the Tatars, victorious in open warfare, failed in their attacks against Moscow and Riazan, and their great expedition ended in a half-success.

In 1524, on the death of his brother Muḥammad, Ṣāḥib Girāy returned to the Crimea as Khān there, leaving in Ḳāzān his thirteen-year old nephew Ṣafāʾ Girāy. From now onwards, the Russian pressure became more acute, not in the shape or reprisal raids, but in that of a slow and systematic advance. In order to ruin his rivals, the Grand Prince of Moscow forbade Russian merchants to trade in the Tatar capital and founded an annual fair at the monastery of St. Makarii which soon became the successive rival of that at Ḳāzān. Also, with the beginning of the construction of the fortress of Vasilsursk at the confluence of the Volga and Sura in 1523, there began the occupation of the Middle Volga region by the Russians.

Ṣafāʾ Girāy was chased out in 1530 by the pro-Russian party and replaced by Djān ʿAlī, but the latter perished in 1535 in a rising stirred up by the partisans of the Girāys. Ṣafāʾ Girāy was recalled and maintained himself in Ḳāzān till 1546, defying Russian efforts to re-assert their suzerainty, until in that year he was once more driven out and briefly replaced by Shāh ʿAlī. As soon as the Russian forces accompanying Shāh ʿAlī withdrew, Ṣafāʾ Girāy returned to Ḳāzān and retained the throne till his death in 1549. His successor was his twelve-year old son Ötemish, who in 1551 was deported to Russia, where he was baptised under the name of Alexander and lived till 1566. Shāh ʿAlī was reinstalled in Ḳāzān for the third time. In 1552 he was overthrown by a popular revolt, and the Tatars summoned to the throne Yādigār Muḥammad, of the line of Khāns of Astrakhan. But shortly afterwards, the Russian armies of Tsar Ivan IV appeared before Ḳāzān and took it by assault on 2 October 1552. The Khānate was then annexed to Muscovy.

The conquest was followed by the systematic occupation of the whole country by the Russians. The Tatars were expelled from Ḳāzān. The best lands in the river valleys and round the towns were confiscated and distributed to the Russian nobles and the monasteries. Colonies of Russian peasants were settled in the most fertile areas, and, in order to prevent popular risings and incursions of the Crimean Tatars, the land was covered by a network of Russian fortresses. Because of this, from the 17th century onwards, the population of the ancient Khānate became very mixed, the Tatars forming only 40% of the people there.

Christian evangelism was actively pursued. After 1555, Ḳāzān was the seat of an archbishopric and then a metropolitan see. Already by the end of the 16th century there was an important group of indigenous converts, Tatars, but above all, Finnic peoples, the Kryas͟hens (in Tatar, Kryas͟h), who although Christian conserved their usage of the Tatar language.

The Russian conquest led to a profound upheaval in Tatar society. The ancient nobility was stripped of its lands, and in order to survive, had to transform itself to a merchant oligarchy, which in turn gave rise in the 17th century to a mercantile bourgeoisie. From the time of Catherine II onwards, this class became the guiding one amongst the Tatar nation, and in the second half of the 19th century, out of all the Turkish and Muslim peoples of the Russian empire, it was from the Tatars of Ḳāzān that the intellectual and political leaders of the Pan-Turkish movement in Russia arose.

The modern town of Ḳāzān retains little from the time of the ancient K͟hānate. One of the towers in the citadel still today has the name of the Princess Sūyūmbigi, wife of Ṣafā' Girāy (she had previously been the wife of D͟jān ʿAlī and was later to be that of S͟hāh ʿAlī), but the manner and date by which her name was applied to this tower is unknown, and it is equally difficult to decide what is Tatar and what is Russian in the fabric of the tower.

From the 18th century, Ḳāzān no longer had any military importance, and was occupied without any difficulty (with the exception of the citadel) by Pugačev in July 1774; at that time, the town had 2,867 houses. Even at this date, it was of more importance as an administrative and cultural centre than Nižniy Novgorod. Ḳāzān's university, founded in 1804, became famous above all for its Oriental Faculty (more exactly, the oriental section of the Historico-Philological Faculty). In 1855, as a result of the opening of the Oriental Faculty of the University of St. Petersburg, teaching of oriental languages was stopped at Ḳāzān, and the library and other teaching equipment largely transferred to the capital. After 1861, the teaching of oriental languages began again at the University of Ḳāzān. According to the 1897 census, the town had 131,508 inhabitants, and in 1911, 182,477 of whom 30,781 were Tatars.

Today, Ḳāzān is the capital of the Tatarstan ASSR, with a population in 1970 for the republic of 3,131,238 of whom 1,536,431 were Tatars, 1,328,738 Russians, 153,496 Čuvas͟h, 30,963 Mordvins and 24,533 Udmurts. The urban population is largely Russian: 934,387 Russians against 593,665 Tatars.

The Tatars [*q.v.*] of Ḳāzān now represent a people of the diaspora; 75% of a total population of 5,930,670 live outside their national territory.

The most recent and the most complete study on the K͟hānate of Ḳāzān is by R. R. Arat, *İA* art. *Kazan*. (W. BARTHOLD [A. BENNIGSEN])

KĀZARŪN (Kāzirūn; lat. 29° 37′ N., long. 51° 38′ E.), town and district (*s͟hahristān*) of Fārs (7th *ustān* of Iran), bordered by the *s͟hahristāns* of Behbahān, S͟hīrāz [*q.v.*], Fīrūzabād [*q.v.*], and Būs͟hahr [*q.v.*]. Situated on the edge of the Southern Zagros (orientation N.—S.E.; alt. of 2 to 3,000 m. to the north, of the River Fahliyān; below 2,000 m. to the South), the *s͟hahristān* has, due to its altitude and the proximity of the Persian Gulf, a warm to very warm climate in summer, temperate to cold in the other seasons, the variations being largely due to altitude. The town is situated in a vast plain, at about 800 m. altitude, among chalky ridges, on the route of famous vertiginous passes (Kutal-i pīr-zan, Kutal-i duk͟htar, in the direction of S͟hīrāz, about 120 km. to the E.; and those of K͟his͟ht and Kumārid͟j, in the direction of Būs͟hahr, about 180 km. to the S.W.). With its palm and orange groves, the *bak͟hsh* of Kāzarūn is particularly verdant and fertile (cereals, rice, dried fruits, citrus fruit, tobacco, opium, sesame, cotton, flax, products of stock-farming, etc.); the water comes from *ḳanāts* [*q.v.*], cisterns and wells; its horsebreeding was renowned, as well as its green pasturage covered with narcissi in spring time. The tribes (Ḳas͟hḳā'ī, Mamasanī) wander in the region and its peripheries.

According to the legend, Kāzarūn was founded by the mythical king Ṭahmurāt͟h and results from the union of three villages, Nūrd, Darīst (Darbast), Rāhbān (Rāhs͟hān), built in the *ḳanāts* of the same names which supply the town with water (Ibn al-Balk͟hī, *Fārs-Nāma*; Ḥamd Allāh Musṭawfī, *Nuzha*). A dependency of Bis͟hāpūr [S͟hāpūr *q.v.*] at the end of the reign of S͟hāpūr I (241-72), Fīrūz (459-84) made it a town, and Kavād/Ḳubād͟h (488-531) enlarged it (Fasā'ī, *Fārs-Nāma-i Nāṣirī*, 248). The region abounds in Sāsānid remains, including the *čahār ṭāḳ* said to be from Kāzarūn discovered by M. Siroux (see Mustawfī, *Iḳlīm-i Fārs*, 111, and index; on the inscription of Sar Mas͟hhad, Ph. Gignoux in *JA* (1968), 387-418). The ruin of S͟hāpūr, towards the end of the 4th/10th century, made Kāzarūn the principal town of the ancient S͟hāpūr K͟hurra. Al-Muḳaddasī, 433, also designates it "the Damietta of Persia", famous for its linens and cotton fabrics; the Būyid Prince ʿAḍud al-Dawla [*q.v.*] had had an exchange built there for the textile merchants; the houses were sumptuous, adorned with gardens; built on a height, the mosque dominated the bazar. At the beginning of the 6th/12th century, the Sald͟jūḳid Atabeg Čāvlī, governor of Fārs, had the town rebuilt after it had been ravaged by the S͟habānkāra chief Abū Saʿd (Zarkub-i S͟hīrāzī, *S͟hīrāz-Nāma*, 29-30); but only the fortified farms in the environs were then prosperous; the brokers were fraudulent, and dishonesty had become general (Ibn al-Balk͟hī, *Fārs-Nāma*). According to Amīn Rāzī, Kāzarūn "was always a source of scholars and mine of theologians" (lists in *S͟hīrāz-Nāma*, 131 ff.; *Haft Iḳlīm*, i, 208 ff.; *Fārs-Nāma-i Nāṣirī*, 249 ff.), of whom the most eminent were S͟hayk͟h Abū Isḥāḳ Kāzarūnī [*q.v.*], founder of a *ṭarīḳa* (4th-5th/10th-11th century), his reviver Amīn al-Dīn Balyānī (7th-8th/13th-14th century) and D͟jalāl al-Dīn Dawānī (9th/15th century [*q.v.*]). The *Kāzarūnī* (or *Isḥāḳī* or, more often, *Murs͟hidī*)

ṭarīḳa—which had ramifications as far as India and China, played a great role in the Ottoman empire in the 9th/15th century and in pre-Ṣafawid Iran—was rich and influential (protection of sailors and merchants in the Indian Ocean; political and economic role). Because of its Sunnī obedience, the order was persecuted by the Ṣafawid Shāh Ismāʿīl [*q.v.*].

Despite having suffered dissensions between Zand pretenders at the end of the 12th/18th century, the town profited from the development of the port of Būshahr, which assured an outlet for its exports in the 19th century (Curzon, *Fārs-Nāma-i Nāṣirī*, 247). Ouseley estimates its population at 4-5,000 inhabitants in 1811, Curzon at 2-2,500 inhabitants (1892); reports and later censuses indicate an increase (12,000 in 1913; 25,328 in *ca.* 1950; 36,659 in 1956; 39,902 in 1966). Apart from the Sāsānid remains and a Ḳādjār bas-relief, one may see in the region and the town numerous Islamic mausoleums and tombs of descendants of Salmān-i Fārsī (*Iḳlīm-i Pārs*, 108, 110; *Fārs-Nāma-i Nāsirī*, 249). The plain is adorned with the small lake of Fāmūr, full of fish, to the east of the town, and with the orange groves of Bāgh-i Naẓar (*Fārs-Nāma-i Nāṣirī*, *Iḳlīm-i Fārs*, 110). Apart from its mausoleums, the town has no remarkable historical remains. It is divided into four quarters (*maḥalla*); Bāzār, Bālā, Gunbad, Muṣallā or Suflā. There is still an industry there for the shoes of canvas and leather (*gīva*) that MacGregor recommended for the Indian Army (Curzon). The present economic recession of the region is linked with the decline of the port of Būshahr, which has removed from Kāzarūn its role of principal stage on the route from Shīrāz and deprived it of outlets for its products.

KĀZARŪNĪ, Shaykh Abū Isḥāḳ Ibrāhīm b. Shahriyār, founder of a Ṣūfī order variously known as the Murshidiyya, Isḥāḳiyya and Kāzarūniyya. He was born in Kāzarūn, near Shīrāz in Fārs, in 352/963, and died there in 426/1033. He left his birthplace only once, in 388/998, to study *ḥadīth* and to perform the *ḥadjdj*. His initiation into the Ṣūfī path was at the hands either of Ibn Khafīf of Shīrāz (d. 371/981), or of one of his disciples, Ḥusayn Akkār. Several features give a distinctive aspect to Kāzarūnī's life and work, among them his proselytisation among the unconverted population of Kāzarūn and its environs: he is reputed to have converted no fewer than 24,000 Zoroastrians and Jews to Islam, thus establishing the Muslims as the majority in the area (Farīd al-Dīn ʿAṭṭār, *Tadhkirat al-awliyāʾ*, 244-54; Maḥmūd b. ʿUthmān, *Firdaws al-murshidiyya fī asrār al-ṣamadiyya*, 416). In this endeavour, he faced and vanquished the hostility of Khūrshīd, the Zoroastrian governor of Kāzarūn. He was also concerned with extending the frontiers of Islam, and organized the annual dispatch of *ghāzī*s to fight on the Byzantine frontier, an activity that earned him the title of *Shaykh-i ghāzī*. The *khānaḳāh* that he established in Kāzarūn had an important social function, and provided regular charity for the poor and for travellers. Sixty-five similar *khānaḳāh*s were established elsewhere in Fārs by Kāzarūnī's disciples during his lifetime, and formed the nucleus for the later expansion of the order.

All the branches of the order were to show the same charitable concern for the poor that had marked Kāzarūnī's life, and the distribution of soup at one Isḥāḳī *khānaḳāh*, that at Bursa, continued sporadically into fairly recent times (Meḥmed Shems el-Dīn, *Yādigār-ı Shemsī*, 220). By the 8th/14th century, the order had spread westwards into Anatolia and eastwards as far as China. In Anatolia, the followers of Kāzarūnī were known as Isḥāḳīs: they had centres in Erzurum, Amasya, Konya (founded 821/1418: Abdülbâki Gölpınarlı, *Mevlânâ'dan sonra Mevlevilik*, Istanbul 1953, 11) and Bursa (founded 884/1479: H. Adnan Erzi, *Bursa'da İshaki dervişlerine mahsus zaviyenin vakfiyesi*, in *Vakıflar Dergisi*, ii (1942), 423). It may be presumed that, drawing upon the example of their founder, they played a great part in the conquest and Islamisation of Anatolia. From Anatolia, the Isḥāḳiyya spread into Rumelia (there was a *tekke* at Edirne: see Ewliyā Čelebi, iii, 454) and south to Aleppo (W. Caskel, in *Isl.*, xix, 284 f.). The eastward expansion of the order to India and China seems to have been seaborne, and connected with the protection afforded to voyagers by Kāzarūnī's *baraka*, and, after his death, by the soil from his grave. A gift of money would be vowed to the Kāzarūn *khānaḳāh* as guarantee of safe passage, and the sum was then collected by agents in foreign ports: Ibn Baṭṭūṭa, ii, 88-92; iv, 10,3 mentions Calicut, Cambay and Kolam in India, and Zaytun (Canton). This system appears to have been formalised by ʿUmar b. Abi 'l-Faradj al-Kāzarūnī (d. 704/1304). The soil from Kāzarūnī's grave was reputed to be able to calm stormy waters when cast into the sea, as well as having the properties of a panacea and a talisman. The central *khānaḳāh* at Kāzarūn was suppressed by the Ṣafawids at the beginning of the 10th/16th century (Mīrzā Ḥasan Fasāʾī, *Fārsnāma-yi Nāṣirī*, Tehran 1314/1896, 249), and the Anatolian branch of the order appears to have faded out in the following century, although traces of it persisted much later. Mention may also be made of a derivative of Kāzarūnī's order, the Rūzbihāniyya, founded by Rūzbihān Baḳlī of Shīrāz (d. 606/1209): this was restricted to Fārs and did not last for much more than a century.

ḲĀZBÊGĪ [see SIKKA].

KAZBEK [see ḲABḲ].

ḲĀZDUGHLIYYA, the third of the great neo-Mamlūk households of Ottoman Egypt. The Ḳāzdughliyya differed from the Dhu'l-Faḳāriyya and the Ḳāsimiyya [*qq.v.*] in that it was founded and maintained in its first decades by officers of the Seven Corps of the Ottoman garrison, not by beys. Its eponym, Muṣṭafā al-Ḳāzdughlī, is described by Djabartī as being *Rūmī* by origin, *i.e.*, he was *Rūm ūshāghi*, hence free-born and not a *mamlūk* (cf. Stanford J. Shaw (ed.), *Ottoman Egypt in the eighteenth century: The* Niẓâmnâme-i Mıṣır *of Cezzâr Aḥmed Pasha*, Cambridge, Mass. 1962; 23-6 of English text, 7-8 of Turkish text). He took service as a bodyguard (*sarrādj*) to Ḥasan Balfiyya (the reading B. Ighīh occurring in the printed text of Djabartī is not sound), who was *āghā* of the ʿAzebān corps in 1085/1674-5 and of the Gönüllüyān in 1093/1682, and rose under his patronage to be *kahyā* of the Janissaries. In this position he clashed with Küčük Meḥmed, a Janissary *bāshōdābāshī* who dominated the corps between 1087/1676 and 1106/1694. Returning to Egypt after two years of exile in the Ḥidjāz, he procured the assassination of Küčük Meḥmed, and thereafter held considerable political power until his own death in 1115/1703-4. Ḥasan Balfiyya was allied to the Dhu'l-Faḳāriyya (the head of which faction, Ismāʿīl Bey al-Kabīr al-Faḳārī, had married his daughter), and this political connexion was continued by Muṣṭafā al-Ḳāzdughlī and the household that he founded.

The factional struggles of the early 12th/18th century resulted ultimately in the victory of the Dhu'l-Faḳāriyya and Ḳāzdughliyya over the Ḳāsimiyya (1142/1730). This did not mean that henceforward a united Mamlūk group controlled Egypt. Rival households continued to dispute for power. Among these, the most important was the Ḳāzdughliyya, of whom the leading *amīr* was Ibrāhīm al-Ḳāzdughlī, later briefly *kahyā* of the Janissaries. He had been emancipated in 1148/1735-6, and his first important post was that of *serdār* in the Pilgrimage of 1151/1739. On his return, his influence grew in Cairo, and he began to build up a party against ʿUthmān Bey Dhu'l-Faḳār, who had been commander of the Pilgrimage. Essentially the rivalry between the two was a struggle for the *riyāsa* (*ri'āsa*), the supreme position among the Mamlūk *amīrs*. An attempt by the leading *amīr* of the Djulfiyya household, Riḍwān, *kahyā* of the ʿAzebān Corps, to mediate was unsuccessful, and he became a supporter of Ibrāhīm. Ibrāhīm's faction attempted to assassinate ʿUthmān. He was only wounded, but the houses of his party were attacked and plundered. ʿUthmān fled to Upper Egypt, where the governor of Djirdjā was a *mamlūk* of his household. They made their headquarters at Asyūṭ, where they were joined by remnants of the Ḳāsimiyya and others. Defeated there, and in a second battle in the Sinai peninsula, ʿUthmān made his way to Istanbul, where he was well received at court (*ca.* 1157/1744-45). He never returned to Egypt, but died in Istanbul in 1190/1776.

The allied *amīrs*, Ibrāhīm *Kâhyā* al-Ḳāzdughlī and Riḍwān *Kahyā* al-Djulfī, proceeded to place their followers in key positions. For some years there were troubles with rival Mamlūk groups, but these ceased by 1161/1748. Ibrāhīm thus attained the *riyāsa*, nominally in association with Riḍwān, but the latter had no further interest in affairs of state. He occupied himself with magnificent buildings, luxurious living and the patronage of poets. Both Ibrāhīm and Riḍwān appointed three of their *mamlūks* to the beylicate—the first entry of the Ḳāzdughliyya into this order, which they were subsequently to monopolise. Ibrāhīm laid his hands on the revenues of Egypt and purchased numerous *mamlūks*, some of whom he provided with establishments and fortunes by marrying them to the widows of former *amīrs*. For about seven years he held unprecedented authority, during which time Cairo was quiet and free from revolts, while there was public security in the provinces. He died in his bed in Ṣafar 1168/Nov.-Dec. 1754. Riḍwān survived his colleague, but his power soon crumbled. The senior Ḳāzdughlī *amīr*, ʿAbd al-Raḥmān *Kahyā*, stirred up the household of Ibrāhīm against him. One of Riḍwān's own *mamlūks*, in league with the Ḳāzdughliyya, tried to assassinate him, and Riḍwān died of the wound while fleeing from his enemies. This event, about six months after the death of Ibrāhīm, marked the end of the Djulfiyya as a political force.

The Ḳāzdughliyya now controlled Cairo and appointed ʿUthmān al-Djirdjāwī, the senior bey of Ibrāhīm's household, to the *riyāsa*. About this time two others of their number were promoted to the beylicate, Ḥusayn al-Ṣābūndjī and *Bulūṭ Ḳāpān* ʿAlī (generally known as ʿAlī Bey al-Kabīr [*q.v.*]). ʿUthmān Bey soon offended his colleagues by his harsh behaviour, and in 1170/1756-57 he was removed from the *riyāsa*, which was conferred on al-Ṣābūndjī. The new *shaykh al-balad* (*i.e.*, holder of the *riyāsa*) now sought to attain plenary power with the support of Niṣf Ḥarām, the section of the populace traditionally allied with the Ḳāsimiyya. He set to work to weaken and disperse his *khushdāshiyya*, but his plan miscarried, and he was assassinated in Ṣafar 1171/Oct.-Nov. 1757. The *riyāsa* was now conferred upon another of Ibrāhīm *Kahyā*'s former *mamlūks*, ʿAlī Bey al-Ghazzāwī, sometimes called (rather confusingly) ʿAlī Bey al-Kabīr, either because of his seniority, or because the terms *kabīr al-balad* and *kabīr al-ḳawm* were used as synonyms for *shaykh al-balad*. In 1173/1760 al-Ghazzāwī went to the Ḥidjāz as commander of the Pilgrimage. Before leaving, he had set on foot a plot to dispose of ʿAbd al-Raḥmān *Kahyā*, who was still a power among the Ḳāzdughliyya. ʿAbd al-Raḥmān learnt of this and made an alliance with *Bulūṭ Ḳāpān* ʿAlī Bey. At a meeting of the grandees, ʿAbd al-Raḥmān reminded them of his position as head of the Ḳāzdughliyya household, and nominated ʿAlī Bey as *shaykh al-balad*, himself taking the lead in promising to obey him. Hearing of this, al-Ghazzāwī handed over the command of the Pilgrimage caravan, and fled to Gaza. Three months later he

returned to Cairo, where he died shortly afterwards.

ʿAlī Bey was now in control. ʿAbd al-Raḥmān *Kahyā*, who had hoped to use him as a compliant tool, was soon undeceived. He was banished to the Ḥidjāz in Dhu 'l-Ḳaʿda 1178/April 1765, and only returned to Egypt, a dying man, in 1190/1776, after the death of ʿAlī Bey. The despotic ascendancy of the *shaykh al-balad* and his dubious loyalty to the Ottoman sultan are reflected in his inscription in the mausoleum of al-Shāfiʿī, where he assumes the ambiguous but challenging style of *ʿAzīz Miṣr* [*q.v.*]. ʿAlī was ousted from Egypt (Muḥarram 1186/Apr. 1772) by his own *mamlūk*, Muḥammad Bey Abu'l-Dhahab, who succeeded to the position of *shaykh al-balad*, but who himself died during an expedition against Shaykh Ẓāhir al-ʿUmar (Rabīʿ II 1189/June 1775).

Thereafter no single Ḳāzdughlī *amīr* dominated, but three grandees competed for power: Ismāʿīl Bey, the *khushdāsh* of ʿAlī Bey, and two of Abu'l-Dhahab's *mamlūks*, Ibrāhīm Bey al-Kabīr [*q.v.*] and Murād Bey. In 1200-1/1786-87 the presence in Egypt of an Ottoman force under Djezāʾirli Ghāzī Ḥasan Pasha [*q.v.*] temporarily reinforced the position of Ismāʿīl Bey, who was appointed *shaykh al-balad*. He died of plague in 1205/1791, whereupon Ibrāhīm and Murād established an uneasy duumvirate. The disorders of the period produced a new political development—risings of the civilians of Cairo, supported and even led by members of the *ʿulamāʾ*. The French occupation of Egypt (1798-1801) struck a fatal blow at the Ḳāzdughliyya, as at the entire neo-Mamlūk regime. Murād Bey died during the occupation (4 Dhū 'l-Ḥidjdja 1215/18 April 1801), while Ibrāhīm Bey never regained power after his flight to Syria in 1798. For a few years after the evacuation of the French, two of Murād's *mamlūks*, ʿUthmān Bey al-Bardīsī and Muḥammad Bey al-Alfī (the latter a protégé of Britain), were among the contenders for power, but they died in November 1806 and January 1807 respectively, and their factious *mamlūk* households were incapable of resisting the growing strength of Muḥammad ʿAlī Pasha. The handful of *mamlūks* who fled with Ibrāhīm Bey to Dongola in 1811 were the last organised remnant of the Ḳāzdughliyya.

Bibliography: Djabartī, *ʿAdjāʾib al-āthār* (Būlāḳ ed.), especially the obituaries, of which the following are chiefly important: Muṣṭafā al-Ḳāzdughlī (i, 91-2); Ibrāhīm al-Ḳāzdughlī (i, 191-92); ʿUthmān Bey Dhu'l-Faḳār (i, 178-85); Riḍwān al-Djulfī (i, 192-204); ʿAbd al-Raḥmān al-Ḳāzdughlī (ii, 5-8); Muḥammad Abu'l-Dhahab (i, 417-20); Ismāʿīl Bey (ii, 219-20); Murād Bey (iii, 167-71); ʿUthmān al-Bardīsī (iv, 42-44); Muḥammad al-Alfī (iv, 26-43). For ʿAlī Bey al-Kabīr and Ibrāhīm Bey al-Kabīr, see the articles (above, I, 391-2; III, 992). See further P. M. Holt, *The career of Küçük Muḥammad (1676-74)*, in *Studies in the history of the Near East*, London 1973, 231-51; W. Livingston, *The rise of Shaykh al-balad ʿAlī Bey al-Kabīr: a study in the accuracy of the chronicle of al-Jabartī*, in *BSOAS*, xxxiii (1970), 283-94. (P. M. HOLT)

KAZI-ASKER [see ḲĀḌĪ ʿASKAR].

ḲAZI-KUMUKH [see KÜMÜK].

AL-**KĀẒIM** [see MŪSĀ AL-KĀẒIM].

KĀẒIM ḲADRĪ, ḤUSAYN (in modern Turkish HUSEYİN KÂZIM KADRİ), 1870-1934, Turkish writer and lexicographer. His father, Ḳadrī Bey, the son of the vizier Edhem Pasha, was a civil servant and the unpopular but colourful governor of Trabzon for ten years (1892-1902) under ʿAbd al-Ḥamīd II. After attending various schools, Ḥusayn Kāẓim graduated from the English School of Commerce in Izmir. He taught in schools, briefly tried journalism after the promulgation of the Constitution of 1908 and later served as a governor in the provinces, notably in Aleppo (1910) and Salonika (1911). He was elected to the Ottoman Parliament in 1912. During World War I, he retired to Beirut, where he compiled his great Turkish dictionary. He was again elected to the Ottoman Parliament in 1920 and served successively as Minister of Agriculture, of Commerce and of *Waḳf*s, and in the same year joined Aḥmed ʿIzzet Pasha's unsuccessful mission to the nationalist government in Ankara. Ḥusayn Kāẓim is the author of a great number of works of uneven value, whose topics range from language, literature, religion and politics to law, commerce and agriculture. During the ideological struggle of the post-constitutional period, he joined the "Islamists" and made remarkable contributions to the movement, *i.e.* *Istiḳbāle doghru*, Istanbul 1329, *Felāḥa doghru*, Istanbul 1331, *Yirmindji ʿaṣırda islāmiyyet*, Istanbul 1339, *10 temmūz inḳılābınıñ netāʾidji*, Istanbul 1336. He published, for the first time in Turkey, the poems of the Turkoman poet Makhdūm Ḳuli: *Makhdūm Ḳuli Dīvānı*, Istanbul 1340. An interesting contribution on the linguistic and literary problems of the Turkish-speaking peoples is his series of articles *Türk lisānlarınıñ tevḥīdi* ("The unification of the Turkish languages"; *Idjtihād*, nos. 31-35, September-November 1327 *rūmī*/1911), where he points out the growing influence of Ottoman Turkish on the Āzerī and Ḳazan written languages and suggests that an academy should work out a *lingua franca* for all the Turkish-speaking peoples based on Ottoman Turkish. Ḥusayn Kāẓım published a number of booklets and articles on improving the methods of agriculture in Turkey. Of particular importance is his series of 17 articles published in *Idjtihād* (nos. 155-174, July 1923-February 1925), where he expounded his theories of land reform and agricultural education in Turkey.

Ḥusayn Kāẓım's major contribution, however, is his comprehensive Turkish dictionary, *Büyük Türk Lughatı*, in four large volumes (vols. i and ii, Istanbul 1927 and 1928, in Arabic script, vols, iii and iv, Istanbul 1943 and 1945, in Roman script: transcribed from the compiler's manuscript by his daughter Rikkat Kunt). In the introduction the author gives a survey of the development of "classical" Turkish written languages such as Uyghur, Čaghatāy, Ottoman, Ḳazan and Āzerī, with the elements of grammar. The dictionary itself covers the vocabulary of the main Turkish written languages and "words of the Ḳoybal, Yaḳut, Čuvash and Kirghiz dialects with supporting examples" as stated in the sub-title. Completed during World War I, Ḥusayn Kāẓım's dictionary, which reflects the contemporary state of research in the field, was a landmark in turcological studies in Turkey up to the period of the 1930s, when more up-to-date research in the universities and by the Turkish Philological Society (Türk Dil Kurumu) superseded it, although the "Turkish Radloff", as it is sometimes called, can still be at times a useful work of reference.

Bibliography: given in the article. (F. İz)

KĀẒİM KARABEKIR, Turkish general and statesman, born in Istanbul in 1882, the son of Meḥmed Emīn Pasha. He was educated at military

schools in Istanbul, graduating first in his class from the *Ḥarb Akademisi* in 1905, one year after Muṣṭafā Kemāl (Atatürk). He served in several important actions in Thrace, and took part in the movement to crush the counter-revolution of Sultan ʿAbd al-Ḥamīd in 1909. Later he worked in the intelligence section of the German Advisory Group, and in World War I served as Chief of Staff to General von der Goltz on the ʿIrāḳ front. He then became commander of the 2nd Corps in the Caucasus, and fought successful battles at Erzurum and Erzincan. At the end of the war he commanded the 14th Corps in Tekirdagh. Early in 1919 he was appointed by the sultan's government to command the 5th Corps in Erzurum, but soon became instrumental in organising Turkish nationalist forces to fight the War of Independence, becoming one of the first important figures to espouse the nationalist cause. He was quickly appointed commander of the eastern front by the nationalist leadership under Muṣṭafā Kemāl, and invitations to the Erzurum Congress of the Association for the Defence of Rights of Eastern Anatolia were sent out over Karabekir's name. One of his major military successes was the defeat of the Armenians at Kars and Gömrü in late 1920. In the same year he took a seat in the first Grand National Assembly as deputy for Edirne.

He resigned from the army in October 1924, when Atatürk insisted that all officers choose either a military or a political career, and the next month became a chief founder of the Republican Progressive Party (*Teraḳḳīperver Djümhūriyyet Fïrḳasï*). The Progressives generally advocated slower and less drastic reform and secularisation than did Atatürk's Republican People's Party, and differed from Atatürk on a number of matters of political organisation, although the Progressives' programme resembled that of Atatürk in many aspects of economic, financial and foreign policy. Karabekir played an important role in it because he was considered one of the major potential rivals of Kemāl, and the Progressives were opposed to the principle of an Assembly without an organised opposition. The party was dissolved in June 1925 coincidentally with the uprising of Kurdish tribes in the eastern provinces. The Progressives' urging of moderate treatment for the rebels was one factor which led to Karabekir and several others being brought before an Independence Tribunal in 1926. He was acquitted, but retired from politics and public life till after Atatürk's death in 1938. In 1939 he came out of retirement and entered the 6th Assembly as an R.P.P. deputy for Istanbul. In 1946 he was elected President of the Assembly, an office which he held until his death in 1948.

(W. F. WEIKER)

KĀẒIM RASHTĪ, SAYYID, leader of the Shaykhī sect after the death of its founder, Shaykh Aḥmad Aḥsāʾī, in 1242/1826. Born in 1213/1798, Sayyid Kāẓim Rashtī evinced deep religious feelings while still a child, and claimed to behold the *imāms* in a series of visions of increasing intensity. In the course of one such vision, at the age of fifteen, he was instructed to seek out Shaykh Aḥmad Aḥsāʾī, then resident in Yazd, and to become his pupil. Having reached the presence of the *shaykh*, he soon became his most favoured disciple, and Aḥsāʾī is reputed to have said to him, "No one understands me but you". After Ahsāʾī had been declared a *kāfir* by the *ʿulamāʾ* of Ḳazwīn, he went to Kirmānshāh and then left for Arab ʿIrāḳ. Kāẓim Rashtī followed him, settling in Karbalāʾ, where he spent the rest of his life. He fell heir not only to the following of Aḥsāʾī, but also to the polemics and hostility that certain of the *shaykh*'s doctrines had aroused. Much of his activity was devoted to the defence and further elaboration of these doctrines, in particular the resurrection of the "Hurḳalyan body" (*djism-i hūrḳalyāʾī*), the denial of the corporeal ascension of the Prophet, and the description of the *imāms* as the efficient cause (*ʿillat-i ghāʾi*) of creation. Although in the course of oral debate with the *ʿulamāʾ* of Karbalāʾ, led by Sayyid Ibrāhīm Ḳazwīnī, he was obliged to admit that the apparent meaning of Aḥsāʾī's teachings was contrary to the faith, he vigorously defended Shaykhī doctrine and denounced its opponents in his many writings, *Dalīl al-mutaḥayyirīn* being the most notable. He enjoyed good relations with Nadjīb Pāshā, governor of Baghdād, and his house was spared when an Ottoman army sacked Karbalāʾ in 1259/1843. After his death later in the same year, he was succeeded as Shaykhī leader by Ḥādjdjī Muḥammad Karīm Khān Kirmānī. Another pupil of Kāẓim Rashtī, Sayyid ʿAlī Muḥammad Shīrāzī, declared himself to be the "Bāb" and had his claim accepted by many former Shaykhīs.

(H. ALGAR)

KĀẒIMAYN, a town and one of the most celebrated Shīʿī places of pilgrimage in ʿIrāḳ. It is a little over one km. from the right bank of the Tigris, which here describes a loop, being separated from the river by a series of gardens. Kāẓimayn itself is prettily situated among palm-groves. It is connected with the west side of Baghdād, about three miles away, by regular bus and taxi services, replacing the horse-tramway laid down by the governor Midḥat Pāshā (1869-72), who did a great deal for Baghdād. Kāẓimayn is now also a station on the Baghdād-Samarrāʾ railway, which runs along the right bank of the Tigris. It forms a *ḳaḍāʾ* belonging to the *muḥāfaẓa* of Baghdād and administered by a *ḳāʾim-maḳām*. Its population grew rapidly from 169,993 in 1947 to 235,745 in 1957; most are Shīʿīs. Unfortunately there are no official figures for the number of Persians among them. However, according to the 1957 census the number of Persians in Baghdād was 5,156, and in ʿIrāḳ as a whole 23,783. Access to the sanctuaries is strictly forbidden to non-Muslims as well as to all unveiled women.

The name Kāẓimayn, *i.e.* "the two Kāẓims", refers to the two ʿAlids buried here, the *Imām* Mūsā

b. Dja'far al-Ṣādiḳ, nicknamed al-Kāẓim (d. 186/802) and his grandson the *Imām* Muḥammad al-Djawād (d. 219/834), the seventh and ninth *Imāms* of the twelver Shī'a (Ithnā 'Ashariyya [*q.v.*]). The town is also called Kāẓimiyya in reference to the nickname of the *Imām* Mūsā b. Dja'far al-Ṣādiḳ. It is also known among the common people as al-Kāẓim, *i.e.* the city of al-Kāẓim. Finally, the name *Imām* Mūsā is also found. However, all these names have come into use only recently, for the town was originally called al-Mashhad al-Kāẓimī and Mashhad Mūsā b. Dja'far.

There is evidence of pilgrimage to these 'Alid tombs as early as the 7th/13th century (Ibn Khallikān, iv, 395). At the present day Kāẓimayn is one of the four greatest sanctuaries of the Shī'a. Its favourable position at the junction of the road to the three other Shī'i places of pilgrimage, Samarrā' in the north and Karbalā' [*q.v.*] and Nadjaf [*q.v.*] in the south, accounts for the fact that many thousands of pilgrims pass through it annually, especially during the first ten days of the month of Muḥarram (*'Ashrat Muḥarram*), which are exclusively dedicated to the memory of the martyrdom of al-Ḥusayn b. 'Alī and his family. One of the four *mudjtahids*, the principal spiritual leaders of the Shī'a, lives in Kāẓimayn.

The present city of Kāẓimayn was originally a part of the Kassite Empire during the reign of Kurigalzu; he built a new capital called after him Dūr-Kurigalzu, whose remains are still in existence at 'Akār Ḳūf, about ten km. to the west of Kāẓimayn. During the Sasanian period the name Ṭassūdj Ḳuṭrabbul is mentioned as denoting what was later called Maḳābir Ḳuraysh. Prior to the building of Baghdād by the 'Abbāsid caliph al-Manṣūr (136-58/754-75) [*q.v.*], the place was called al-Shūnīzī. When Baghdād was built, al-Manṣūr detached the cemetery of al-Shūnīzī al-Ṣaghīr and made it a private cemetery for his family (though later non-Ḳurashīs were also buried there), calling it Maḳābir Ḳuraysh. This cemetery is also called Maḳābir Bāb al-Tibn, because of its proximity to that gate. His son Dja'far al-Akbar (d. 150/767) was the first to be buried there. It was only when the "two Kāẓims" were buried there that the name Maḳābir Ḳuraysh was changed in later times to al-Mashhad al-Kāẓimī and Kāẓimayn. In Yāḳūt's time (623/1226), Maḳābir Ḳuraysh was a fairly populous suburb surrounded by a wall. About a century later, Ḥamd Allāh Mustawfī found that this place, formerly reckoned a suburb of Baghdād, was now an independent township.

The sanctuary of Kāẓimayn is one of the exceedingly splendid and rich monuments which 'Irāḳ owes to the Shī'a, and for which Persia and the Shī'a of India supplied the necessary funds. With its domes and the pinnacles of its minarets covered with gold, it is visible to the traveller from a long way off. Who first built the 'Ālid sanctuary at Kāẓimayn is unknown. All we know is that in 336/947, by the order of the Buwayhīd Mu'izz al-Dawla [*q.v.*], two wooden boxes were put over the two graves, two wooden domes were erected above them, and a surrounding wall was built. The present faience-covered building is due to the Ṣafawīd Ismā'īl I (908-30/1502-24), whose family claimed descent from the *Imām* Mūsā al-Kāẓim (see above). The inscription published by Massignon (*Mission*, 99) of the year 926/1519, refers to the complete transformation of the old building by the shāh. The restauration not quite completed by Ismā'īl was finished by the Ottoman sultan Sulaymān I, who occupied Baghdād in 941/1534. The covering of the domes with golden tiles was done, according to the inscription, in 1211/1796 by the command and at the expense of Shāh Agha Muḥammad Khān [*q.v.*], the founder of the Ḳādjār dynasty. On the occasion of his pilgrimage in 1870, Shāh Nāṣir al-Dīn had the gold plating on the principal dome and on the roofs of the minarets renewed (cf. Cuinet). The double cupola flanked by four minarets shows that two saints are buried beneath it. Close to this mausoleum stands an isolated pavilion under which are shown the graves of Dja'far (formerly supposed to be that of Ismā'īl) and Ibrāhīm, sons of the *imām* Mūsā. The cupola of the building is modern and a gift of Salīm Pasha (cf. Massignon, *op. cit.*, 100). It may be noted here that there is at Ḥadītha on the Euphrates (between 'Āna and Hīt) a small sanctuary which is said to contain the tomb of Muḥammad, son of Mūsā al-Kāẓim (see Herzfeld, in Sarre-Herzfeld, ii, 321). On the tomb of a certain Ḥamza b. Mūsā al-Kāẓim in Ḳaryat al-Bāshiya (in 'Irāḳ), cf. Massignon, *op. cit.*, 60. In the vicinity of Astarābādh [*q.v.*] there is also an *imāmzāde* (tomb chapel) where a descendant of the *Imām* Mūsā named *Imām* Kāẓim is said to be buried (cf. Melgunof in *ZDMG*, xxi, 325, and in *Das südliche Ufer des kaspischen Meeres*, Leipzig 1868, 119-20).

Like the sepulchral mosques of other places of pilgrimage, that of Kāẓimayn is surrounded by a very broad court-yard (*ṣaḥn*) enclosed by a wall. This latter was rebuilt in 1298/1880, with the permission of the Turkish government, by a wealthy Persian named Farhād Mīrzā and adorned with ceramic work and inscriptions containing whole *sūra*s of the Ḳur'ān; (cf. Massignon, *op. cit.*, 110). In the great court, in the course of time, extensive buildings for the housing of the numerous pilgrims have grown up, especially along the enclosing wall. At the present time the area of the sanctuary is full of shopping centres, markets, modern hotels and many travel agencies.

At various periods, especially during the frequent fighting in the capital between Sunnīs and Shī'īs, the sanctuary area was repeatedly burnt and plundered, notably in the years 443/1051 and 622/1225. On the conquest of Baghdād by Hūlāgū in 656/1258 it was again reduced to ashes. To these disasters must be added the frequent floods, as for example in the years 367/977, 466/1073 and 614/1217. It may be mentioned that in 1216/1801, on the occasion of the Wahhābī invasion, the treasures of the sanctuary of Karbalā' were removed to Kāẓimayn (see Jacob in A. Nöldeke, *cited below*, 48, n. 1).

Adjoining the wall of the courtyard is a Sunnī mosque with the tomb of the famous Ḥanafī lawyer Abū Yūsuf (d. 182/789) [*q.v.*]; cf. Massignon, *op. cit.*, 57, 100). Le Strange (*Baghdad*, 161 f., 350 f.), is mistaken in locating the grave of Zubayda, the wife of Hārūn al-Rashīd, in or near this Kāẓimayn (cf. against this Massignon, *op. cit.*, 110 f., and Herzfeld, *op. cit.*, ii, 111, and also the article AL-KARKH).

Opposite Kāẓimayn on the left bank of the Tigris, connected with by a modern bridge which replaced one of boats, is the suburb of Mu'aẓẓam. In this place is the highly-venerated sepulchral mosque of Abū Ḥanīfa (d. 150/767) [*q.v.*], the founder of one of the four Sunnī schools of Islamic law (on this tomb cf. M. von Oppenheim, ii, 241, Streck, i, 162; Le Strange, *Baghdad*, 190-2; Langenegger, 61-2; Massignon, *op. cit.*, 78-9). It is from the epithet of Abū Ḥanīfa al-Imām al-A'ẓam or al-Mu'aẓẓam (the "highly venerated" *imām*) that this suburb of Baghdād takes its name.

(M. Streck-A. A. Dixon)

KĀẒIMĪ [see sikka].

al-**KĀẒIMĪ**, ʿAbd al-Muḥsin b. Muḥammad, Shīʿī poet of ʿIrāḳ, born in Baghdād in 1282/1865 (but according to his daughter Rabāb al-Kāẓimī, in 1289/1872), who died in Cairo on 1 May 1935. He received elementary instruction in Arabic and Persian and then continued to study Arabic literature on his own initiative. In 1308/1890 he met Djamāl al-Dīn al-Afghānī [*q.v.*] in ʿIrāḳ and was influenced by his revolutionary ideas. Soon afterwards he left ʿIrāḳ, but whether for reasons of political, business or poetic ambition is unclear. He travelled to Persia, India (1897) and finally to Egypt (1899), where he was welcomed by the leading literati. He became a close friend of and received financial aid from Muḥammad ʿAbduh [*q.v.*] and Saʿd Zaghlūl [*q.v.*], and dedicated panegyrics to them during their lives and elegies after their deaths. For some time al-Kāẓimī tried in vain to obtain a pension from the Khedive ʿAbbās Ḥilmī II [*q.v.*]; this apparently was foiled by the jealousy of Aḥmad Shawḳī [*q.v.*]. From 1919 onwards al-Kāẓimī dedicated many poems to the Central Committee of the Syrian Unity Party, and panegyrics both to Saʿd Zaghlūl and to the Hāshimite kings in Transjordan. He was an avid supporter of Arab national unity and consequently became best known as *Shāʿir al-ʿArab* (the poet of the Arabs).

The poetic diction, images and metaphors of al-Kāẓimī's poems are derived from Bedouin life, while their structure is throughly rooted in classical poetic models. His panegyrics reveal him to have had a proud and forceful personality as well as being a talented poet. He tends to boast of these qualities in his poetry at times, stressing his ʿAlawī descent and asking for donations. Many of al-Kāẓimī's poems deal with fortitude, vaingloriousness and love, while others touch upon social and political aspects of Arab life or express nostalgia for ʿIrāḳ. He embellished his poetry with maxims and proverbs, complaints about life, the calamities of the times and his own sickness. He was noted for his poetic improvisations (*irtidjāl*), although the ʿIrāḳī scholar Yousif Izzidien claims that al-Kāẓimī memorised them beforehand. Al-Kāẓimī's printed works are: *ʿAwāṭif waṭaniyya... [wa] taḥiyyat al-shāʿir al-ʿArabī ilā djanāb al-duktūr Wilsūn...*, Cairo 1919, 30 pp.; *Dīwān al-Kāẓimī*, vol. i, Damascus 1939, 361 pp.; *Dīwān al-Kāẓimī shāʿir al-ʿArab*, ed. Ḥikmat al-Djādirdjī, vol. ii, Cairo 1367/1948, 336 pp.; and *Muʿallaḳāt al-Kāẓimī fī Saʿd Zaghlūl*, ed. Khayr al-Dīn al-Ziriklī, Cairo 1924.

Bibliography: Brockelmann, S III, 489; Yousif ʿIzzidien, *Fi 'l-adab al-ʿArabī al-ḥadīth*, Baghdad 1967, 201-20; idem, *Shuʿarāʾ al-ʿIrāḳ fi 'l-ḳarn al-ʿishrīn*, Baghdad 1969, 33-55. See also the comprehensive bibliography in J. A. Dagher, *Maṣādir al-Dirāsa al-Adabiyya*, ii/I: *al-Rāḥilūn (1800-1955)*, Beirut 1956, 676-8.

(S. Moreh)

al-**KĀẒIMĪ**, ʿAbd al-Nabī b. ʿAlī, an Imāmite *faḳīh* and traditionist whose life spanned two of the chief areas of Shīʿī concentration, the *ʿatabāt* of ʿIrāḳ and the Djabal ʿĀmil in Syria. He was born in Kāẓimayn in 1198/1784 to a father of Medinan origin, and studied there under a number of prominent *ʿulamāʾ*, the most important being Sayyid Muḥammad Riḍā and his son Sayyid ʿAbd Allāh al-Shibrī. He was appointed treasurer at the shrine of Kāẓimayn, but in 1244/1828 migrated to the Djabal ʿĀmil, settling in the village of Djūyā. Initially unknown, he soon became the most influential *ʿālim* in the area, enjoying the patronage of the *amīr* Ḥamad, ruler of the Djabal ʿĀmil. He died in Djūyā in 1256/1840. The most important of his numerous works are *Takmilat al-ridjāl*, a biographical dictionary of transmitters of Shīʿī *ḥadīth*, based on al-Amīr Muṣṭafā al-Tadjrīshī's *Naḳd al-ridjāl*; an abbreviation of a work on the *sunna*, *al-Iḳbāl* by Aḥmad b. Ṭāʾūs; and *al-Ḥaḳḳ al-ḥaḳīḳ*, a refutation of teachings of the Akhbārī school concerning *ḥadīth*. Only the first of these has been printed, and manuscripts of al-Kāẓimī's other writings are rare. Two of his sons, Shaykh Djaʿfar al-Kāẓimī and Muḥammad ʿAlī al-Kāẓimī, were also *ʿulamāʾ* of some note.

Bibliography: Introduction by Muḥammad Ṣādiḳ Baḥr al-ʿUlūm to his edition of *Takmilat al-ridjāl*, Nadjaf n.d., i, 56-70; Muḥsin al-Amīn al-ʿĀmilī, *Aʿyān al-shīʿa*, Nadjaf 1382/1962, xxxix, 172; Āghā Buzurg al-Ṭihrānī, *al-Dharīʿa ilā taṣānīf al-shīʿa*, Nadjaf 1384/1964, iv, 417.

(H. Algar)

al-**KĀẒIMĪ**, Ḥaydar b. Ibrāhīm, an Imāmī *ʿālim* of the early 19th century. Born in Kāẓimayn

in 1205/1790, he spent his entire life there, dying in 1265/1849. He was the ancestor of the Āl Ḥaydar, a celebrated learned family of Kāẓimayn. Among his works may be mentioned *al-Bāriḳa al-Ḥaydariyya*, concerning *uṣūl* (the principles of jurisprudence), and *al-Madjālis al-Ḥaydariyya*, consisting of scenarios for the *taʿziya*, the so-called Shīʿī passion play.

Bibliography: Muḥammad Mahdī al-Kāẓimī, *Aḥsan al-wadīʿa*, Baghdad 1347/1929, ii, 21; Āghā Buzurg al-Ṭihrānī, *al-Dharīʿa ilā taṣānīf al-shīʿa*, Nadjaf 1384/1964, ix, 3. (H. ALGAR)

AL-KĀẒIMĪ, MEḤMED SĀLIM (1868-1914), a Turkish political journalist of the late Ḥamīdian and early constitutional period. Better known by his *nom de plume* ʿAwn Allāh Kāẓimī, he was born in Istanbul in 1868. He was the son of Hüseyn Ḥüsnī Beg, who was private secretary (*mabeyin kātibi*) to the sultan. His family came from Erzurum in eastern Anatolia where al-Kāẓimī's grandfather, ʿAlī Beg, had been a *derebey* [*q.v.*]. He was given a traditional education, though he learned French as well as Arabic and Persian. Finding no suitable position in the stratified bureaucracy of the period, like many well-to-do, educated young men of his day he turned to journalism. In 1889 he and his brother Sulaymān Tawfīḳ began to publish *Mürüwwet*, which they described as "an Ottoman newspaper dedicated to the benefits of property and in the service of the state" (*menāfiʿ-i mülk we dewlete khādim ʿOthmānlī gazetesidir*). He left the country, fearing that he was about to be arrested for an article he had written, and returned to Istanbul some time later using the alias ʿAwn Allāh Kāẓimī. He was arrested in 1901 on account of his alleged involvement in the *Müshīr* Fuʾād Pasha incident, in which ʿAbd al-Ḥamīd II's secret police, suspecting Fuʾād Pasha of conspiracy, clashed with the general's men. Meḥmed Sālim was sentenced to penal servitude for life and exiled to the town of Sivas. He was caught attempting to escape, and transferred to the fortress at Sinop.

Meḥmed Sālim returned to Istanbul after the Young Turk revolution of July 1908 and became the president of the *Fedākārān-ī Millet Djemʿiyyeti*, one of the many ephemeral political clubs which sprang up following the revolution. On 16 September 1908 he began publishing the *Ḥuḳūḳ-ī ʿUmūmiyye* as the organ of this association. The stated aim of this paper was "to serve the constitutional administration and national unity" (*idāre-i -meshrūṭaya ve ittiḥād-ī millete khidmet etmek*). The association seems to have been composed of much the same elements as the *Ittiḥād we Teraḳḳī Djemʿiyyeti* [*q.v.*], that is to say people who had opposed the old régime, but who, feeling that their earlier sufferings had gone unrecompensed, now turned against the government. They are alleged even to have indulged in the blackmail of some members of the old régime.

The government suspected Meḥmed Sālim's organisation of illegal activities, so that on 14 January 1909 the premises of the *Ḥuḳūḳ-ī ʿUmūmiyye* were raided by the police. Meḥmed Sālim was arrested, and the *Fedākārān-ī Millet Djemʿiyyeti* was disbanded. He was acquitted by the court, and appointed *mutaṣarrif* of Kirkūk (ʿIrāḳ). When the counter-revolution of 31 March 1325 (o.s.)/13 April 1909 broke out he was suspected of involvement and arrested. A court martial found him innocent, and he was again acquitted. Soon afterwards he left for Kirkūk and died there in 1914.

Apart from his journalistic writings, Meḥmed Sālim wrote about his adventures in *Soñ Müdāfaʿa* (Istanbul 1326/1910), and *Dīwān-ī ḥarbī ʿörfī we ʿAwn Allāh al-Kāẓimī* (Istanbul 1327/1911).

Bibliography: Three brief and almost identical biographies are to be found in Ī. Alaettin Gövsa, *Türk meşhurları ansiklopedisi*, Istanbul 1946, *Türkiye ansiklopedisi*, Ankara 1957 (where he is recorded as Mehmed Selim) and *Türk ve dünya meşhurları ansiklopedisi*, Ankara 1957-8, where he is listed under Kâzımî (Gövsa). Tarık Zafer Tunaya, *Türkiyede Siyasî Partiler*, Istanbul 1952, 233-9, is invaluable for the activities of the *Fedākārān-ī Millet Djemʿiyyeti*. See also Ahmet Cevat Emre, *Iki neslin tarihi*, Istanbul 1960, 130-1. A study of the press of the period, especially Meḥmed Sālim's papers *Mürüwwet* and *Ḥuḳūḳ-ī ʿUmūmiyye* (incomplete collections of both available in Millet Kütüphanesi, Istanbul and Türk İnkilâp Tarihi Enstitüsü Kütüphanesi, Ankara), is essential for a better understanding of the man and his ideas. (F. AHMAD)

KAZIMOV [see ḲĀSIMOV].

ḲAZWĪN, a town and district north-west of Tehran and south of Gīlān. The town is situated in 36° 15 N. and 50° E., at a height of 4,165 ft. above sea level, about 90 miles from Tehran, on the edge of a wide alluvial plain with mountains about five miles to the north. It stands on the site of an ancient city built by Shāpūr II, which according to tradition was in turn on the site of a city built by Shāpūr b. Ardashīr (Ḥamd Allāh Mustawfī, *Taʾrīkh-i guzīda*, ed. E. G. Browne and R. A. Nicholson, 1910-13, 830, French tr. Barbier de Meynard, *Description historique de la ville de Kazvin*, in *JA* (1857)). Its population according to the census of 1966 was 81,000.

i. GEOGRAPHY and HISTORY

Ḳazwīn guards the passes to the north leading through Ṭabaristān to Rasht and the Caspian Sea, and is situated at the junction of the roads from Rasht to Tehran and Tabrīz to Tehran. From Ḳazwīn roads also lead off to Hamadān and Ḳumm. In the 19th century there were four roads leading from Ḳazwīn to Tehran, three used by muleteers and the other by those riding *čāpār* (*Safarnāma-i Mīrzā Ḥusayn Farāhānī*, ed. H. Farma-Farmaian, 1964, 9-10). The climate is temperate with a mean maximum temperature in summer of 34.5 C. and a mean minimum temperature in winter of -5.4 C. The annual rainfall in 339.1 mm. with frequent snowfalls in January and February. In spite of its favourable situation as regards communications, Ḳazwīn never rivalled Ray, Nīshāpūr or Iṣfahān in the Middle Ages. The reason is partly to be found in lack of water, which placed a severe limitation on its growth. Iṣṭakhrī states that Ḳazwīn had enough water for drinking purposes only; this was provided by rainfall and the water of one *ḳanāt* (*Masālik al-mamālik*, Leiden 1927, 201). Until recently the plain of Ḳazwīn was irrigated entirely by *ḳanāt*s and four small streams (see further Muḥammad ʿAlī Gulrīz, *Mīnūdar yā bāb al-djannati Ḳazwīn*, Tehran 1961, 259 ff. and *Safarnāma-i Mīrzā Ḥusayn Farāhānī*). Ḥamd Allāh Mustawfī states that these streams flowed in spring; in a good year their water reached the gardens of Ḳazwīn, but rarely flowed into the town in summer, the water being used by the estates situated upstream (*Nuzha*, Persian text, 222). In 1963 the Ḳazwīn Development Authority was set up to develop the water resources and agriculture of the area (see further A. K. S. Lambton, *The Persian land reform 1962-1966*, Oxford 1969, 281).

Ḳazwīn lies in the earthquake belt and has been

damaged by earthquakes on several occasions. Earthquakes in the town were recorded in 249/863-4, 360/970-1, 513/1119-20 (Gulrīz, 872-3), 514/1120 (N. N. Ambraseys, *On the seismicity of south-west Asia, data from a XV century Arabic manuscript*, in *Rev. pour l'étude des calamités*, xxxvii (Geneva 1961), 10), and 562/1169 (Chardin, *The travels of Sir John Chardin*, London 1691, 382); and when James Morier passed through the town in 1809 he states that the city was largely in ruins as a result of a fairly recent earthquake (*A journey through Persia, Armenia, and Asia Minor to Constantinople*, London 1812, 254). Extensive damage from earthquakes was suffered by Ṭāliķān in 889/1484-5, Rūdbār in 956/1549-50 (Gulrīz, 873), and the southern part of the Ķazwīn plain in 1962 (N. N. Ambraseys, *The Buyin-zara (Iran) earthquake of September 1962, a field report*, in *Bull. of the seismological society of America*, liii/4 (July 1963), 705-40). Floods severely damaged the town in 965/1557-8 and again in 1267/1850-1 (Gulrīz, 874). Outbreaks of plague (*ṭāʿūn*) are recorded in 1045/1635-6 and several outbreaks of cholera (*wabā*) in the 19th and 20th centuries (Gulrīz, 876).

Ḥamd Allāh Mustawfī states that the town was surrounded by extensive gardens, orchards and vineyards, which produced excellent grapes, almonds and pistachio nuts in abundance. Large quantities of raisins were exported. Melons and water melons were cultivated after the land had been flooded once and fruited well without another watering. Much grain was also grown. Good pastures existed in the neighbourhood. These, he alleges, were better for camels than in other provinces, and the Ķazwīnī camel more expensive than others (*Nuzha*, 58, 222). At the present day good quality sheep are bred at Sh̲āl, a village to the south-west of the town of Ķazwīn, and in its neighbourhood. Textiles were woven in Ķazwīn from the early centuries of Islam down to modern times, but did not compare in excellence with those from more famous centres such as Iṣfahān, Kās̲h̲ān or Kirmān.

The boundaries of Ķazwīn have varied from time to time. In Islamic times it was first made into a province (*s̲h̲ahr*) by Hārūn al-Ras̲h̲īd, who gave to it the districts of Bas̲h̲āriyyāt and part of Das̲h̲tbī (which formerly belonged to Hamadān), Abharrūd and part of Ķāķazān (*Taʾrīk̲h̲-i guzīda*, 833). In 284/897-8 K̲h̲araķān became part of Ķazwīn, which then comprised 765 villages (Ibn al-Faķīh, *Kitāb al-buldān*, Leiden 1885, Fr. tr. H. Massé, *Abregé du livre des pays*, Damascus 1973, 289), and in the reign of al-Muʿtaṣim Nasā and Salķānrūd were also transferred to it from Hamadān (*ibid.*, 280). In the 8th/14th century Ķazwīn comprised only 300 villages, and was divided into 8 districts or *nāḥiya*s (*Nuzha*, 59); Don Juan writing in 1602-3 states that there were 20 walled towns in the province of Ķazwīn and 1,000 open villages (*Don Juan of Persia*, tr. and ed. G. Le Strange, London 1926, 40). In 1884 it consisted of eleven *bulūk*s, K̲h̲arrūd (Dūdānga), Ķuhpāya (Kūhpāya), Abharrūd, Bas̲h̲āriyyat, Iķbāl, Fis̲h̲kildarra (Pis̲h̲kildarra), Das̲h̲tābī (Das̲h̲tbī), Ķāķazān, Rāmand, and Afs̲h̲āriyya; while Rūdbār (in which Alamūt is situated) was one of its dependencies (*Safarnāma-i Mīrzā Ḥusayn Farāhānī*, 24-5). In modern times Ķazwīn constitutes a *s̲h̲ahristān* consisting of 6 districts (*bak̲h̲sh*), namely, a central district consisting of the town, Āb Yak (comprising the subdistricts or *dihistān*s of Fis̲h̲kildarra, Kūhpāya, and Bas̲h̲āriyyāt); Muʿallim Kalāya (sub-districts Rūdbār and Alamūt); Ḍiyāʿābād (sub-districts Ķāķazān and Dūdānga); Āvid̲j̲ (sub-districts East and West K̲h̲araķān and Afs̲h̲āriyya); and Būʾin (sub-districts Zahrā, Das̲h̲tābī and Rāmand).

The population of Ķazwīn at the present day is mainly Turkī-speaking, large influxes of Turkish tribes into the district having taken place in Mongol times (see further below). In the Zahrā district the people speak Tātī (D̲j̲alāl Āl-Aḥmad, *Tātnis̲h̲īnhā-yi bulūk-i Zahrā*, Tehran 1959). Various tribes, many of which were semi-nomadic until recent times, are to be found in the different districts. Among them are the Īnānlū and Bag̲h̲dādī S̲h̲āhsivān, who apparently came to K̲h̲araķān and Sāva towards the end of the 18th century and were settled by Āķā Muḥammad K̲h̲ān Ķād̲j̲ār in their present location. The winter quarters of the Īnānlū were between Sawd̲j̲ Bulāg̲h̲, Zarand, and Zahrā, and their summer quarters in K̲h̲araķān. The Bag̲h̲dādī S̲h̲āhsivān wintered in the neighbourhood of Tehran and in the district between Ķumm, Sulṭānābād (Arāk), Sāva and Tehran, and summered in K̲h̲araķān and K̲h̲alad̲j̲istān (Hamadān) up to the frontiers of K̲h̲amsa. Other tribes in the Ķazwīn district include the Lak, Čiginī, G̲h̲iyāt̲h̲vand, Ķākāvand, D̲j̲alīlāvand, Ras̲h̲vand, Māfī Bahtūʾī, Čumus̲h̲gazak, and Kalhūr. In about 1932 Riḍā S̲h̲āh forbade migration, but it was resumed after his abdication (Gulrīz, 853 ff., Parvīz Vard̲j̲āvand, *Sarzamīn-i Ķazvīn*, Tehran 1970, 460 ff.). Some of the S̲h̲āhsivan are now settled in Rāmand, Zahrā, K̲h̲araķān and Afs̲h̲āriyya, where they are engaged in stockraising and agriculture (*Sarzamīn-i Ķazvīn*, 463).

Under the Sasanians Ķazwīn was a frontier town, whose garrison was engaged in repelling the attacks of the Daylamites. This situation continued, or was repeated, in the early centuries of Islam. This, too, probably militated to some extent against its becoming a commercial and cultural centre, though Muķaddasī speaks of it as being a mine of *fiķh* and *ḥikma* (*Aḥsan al-taķāsīm*, ed. de Goeje, Leiden 1906, 392). It was conquered for the Muslims by al-Barāʾ b. ʿĀzib and Zayd b. al-D̲j̲abal al-Ṭāʾī in 24/644 during the caliphate of ʿUmar b. al-K̲h̲aṭṭāb. When al-Barāʾ besieged the fortress of Ķazwīn, the people sued for a *ṣulḥ* agreement and were offered the same terms as had been given to the people of Abhar. Unwilling, however, to pay *d̲j̲izya*, they accepted Islam. Al-Barāʾ subsequently assigned pensions in the district to Ṭulayḥa al-Asadī for the upkeep of his men. They multiplied and transmitted the estates which they held to their descendants who, according to Ibn al-Faķīh, still held them some two hundred years later and had title deeds for them from the government. From Ķazwīn al-Barāʾ carried out raids into Daylam and Gīlān and also took Zand̲j̲ān. Saʿd b. al-ʿĀs, who succeeded al-Walīd b. ʿUķba as governor of Kūfa, also made raids into Daylam, and built a town at Ķazwīn, Ḥād̲j̲d̲j̲ād̲j̲, after he became governor of most of Persia on behalf of the Umayyads, appointed his son Muḥammad governor of the frontier regions. Yazīd b. Muhallab, Ķutayba b. Muslim, and Naṣr b. Sayyār also appointed governors over Ķazwīn, as did the early ʿAbbāsids.

A second town at Ķazwīn was built by Mūsā al-Hādī beside the one built by Saʿīd b. al-ʿĀṣ and called Madīna Mūsā. He bought the nearby Rustamābād and constituted it a *waķf* for the benefit of the town. Mubārak the Turk, a freedman of al-Hādī, also built another town at Ķazwīn in 176/792-3 and called it after himself.

When Hārūn al-Ras̲h̲īd passed through Ķazwīn on his way to K̲h̲urāsān, he was impressed by both the

tribulations which the local people suffered on account of the Daylamites and their efforts to combat them. Accordingly, he remitted the *k͟harād͟j* of the town and substituted instead an annual payment of 10,000 *dirhams*, and ordered a wall to be built round Madīna Mūsā and Mubārakābād. This was not, however, completed until the caliphate of al-Muʿtazz, when Mūsā b. Bug͟hā finished it in 254/868 (see also Gulrīz, 105 ff., who quotes a manuscript history of Ḳazwīn, the *Kitāb al-tadwīn fi ak͟hbār Ḳazwīn* by Rāfiʿī, who died in 623/1226, on further details concerning the walls of Ḳazwīn). Hārūn al-Ras͟hīd also built a Friday mosque in Ḳazwīn and constituted various *k͟hān*s and other buildings into a *waḳf* for its benefit. During al-Ḳāsim b. al-Ras͟hīd's governorship of Ḳazwīn, D͟jurd͟jān and Ṭabaristān, it appears that there was an increase in the land held by the government, a number of local landowners placing their estates under al-Ḳāsim's protection by a *tald͟jiʾa* contract, by which they paid *ʿus͟hr* to the public treasury and a second *ʿus͟hr* to him for his protection. In this way they retained possession of their estates, while the ownership passed to the government (Balād͟hurī, *Futūḥ*, 310-11, Ibn al-Faḳīh, 282-3, *Taʾrīk͟h-i guzīda*, 830 ff., *Nuzha*, 58). The anonymous *Mud͟jmal al-tawārīk͟h* mentions a rebellion by Kawkabī, an ʿAlid, which was put down by Mūsā b. Bug͟hā during the reign of al-Muʿtazz (ed. Malik al-S͟huʿarā, Tehran 1940-1, 363).

The population of the town at this time appears to have been mainly Arab. After Mūsā b. Būḳā completed the town wall, the population increased. It consisted of various tribes or families, most of whom traced their origin back to the first Arab settlers. Among them were the *Sādāt*, the majority of whom, according to Ḥamd Allāh Mustawfī, were characterised by their humility, knowledge, piety and courtesy. He states that they supported themselves by their own work and did not demand pensions, thus implying that they held aloof from the temporal power and retained their independence. K͟hʷāndamīr, writing later, states that the people of Kazwīn were noted for their chivalry (*muruwwat*) and humanity (*insāniyyat*) (*Taʾrik͟h-i ḥabīb al-siyar*, Tehran 1954-5, iv, 654).

Ḳazwīn retained its importance as a frontier town during the struggles between the caliphate and the ʿAlids in the Caspian provinces. When al-Muʿtaṣim became caliph he determined to bring the Daylamīs into subjection. Fak͟hr al-Dawla (thus in Mustawfī) Abū Manṣūr Kūfī, whom he sent to Ḳazwīn as governor, together with his sons occupied himself against the Daylamis for nearly twenty years from 223/838. In all, Fak͟hr al-Dawla appears to have held the post of governor for some forty years on behalf of the caliphs, except for two years when he governed on behalf of Ḥasan b. al-Bākir, the ʿAlid, who took possession of Ḳazwīn in 251/865-6. For a brief period Ḳazwīn came under Sāmānid rule when Ilyās b. Aḥmad became governor in 293/905-6. In the following year, however, Fak͟hr al-Dawla Abū ʿAlī, Ḥamd Allāh Mustawfī's forefather, became governor on behalf of the caliph and held the town for twenty-seven years, though in 301/913-14 it was placed together with Ray, Dīnawar, Zand͟jān, Abhar and Ṭārum, under the general charge of ʿAlī b. Muḳtadir (*The eclipse of the ʿAbbasid caliphate*, ed. H. F. Amedroz and D. S. Margoliouth, Oxford 1921, i, 33). In 304/916-17 Yūsuf b. Abi 'l Sād͟j [see SĀD͟JIDS] made an abortive attempt to claim Ḳazwīn (*ibid.*, i, 45 ff.), but was put to flight by Asfār b. S͟hīrūya [see ASFĀR B. S͟HĪRAWAYHĪ], who made himself master of Ḳazwīn and of an area stretching from Ṭabaristān and Gurgān to Ḳumm and Hamadān. In 315/927-8 Asfār routed an army sent against him by al-Muḳtadir outside Ḳazwīn, although it was aided by the people of the city. Asfār then seized the citadel, killed many of the inhabitants, did much damage to the city, and imposed a vast contribution of money on the inhabitants. He was later dispossessed by Mardāwīd͟j and killed (*ibid.*, i, 161-2; Masʿūdī, *Murūd͟j al-d͟hahab* ed. C. Barbier de Meynard, repr. Tehran 1970, ix, 6, 9 ff.). Ḳazwīn subsequently fell to Rukn al-Dawla, and the district remained in Būyid hands for upwards of a hundred years. In 358/968-9 there was an outbreak of disorder in the town and Abu 'l Fatḥ ʿAlī b. Muḥammad b. Ḥusayn, Rukn al-Dawla's *wazīr*, who was sent to put it down, imposed a fine of 1,200,000 *dirhams* on the people (*Taʾrīk͟h-i guzīda*, 837).

In 421/1030, Ḳazwīn passed into G͟haznavid hands. Up to this time Ḥamd Allāh Mustawfī's forefathers were apparently still governors of the town, but at this point no suitable member of the family was available for the post of governor and they became instead *mustawfīs*. About 424/1033-4 Abū ʿAlī Muḥammad D͟jaʿfarī succeeded to the government, which he and his sons held for about sixty years. The last of the line, Fak͟hr al-Maʿālī Abū ʿAlī S͟haraf͟shāh b. D͟jaʿfarī, was very wealthy and he and his followers held much property in the neighbourhood. He died in 484/1091-2 and was survived by one daughter (*Taʾrīk͟h-i guzīda*, 837 ff.).

The first contact between Ḳazwīn and the G͟huzz appears to have been in 430/1038-9 when the inhabitants, with a payment of 7,000 *dīnārs*, bought off the G͟huzz and Fanā K͟husraw, the Daylamī, who had taken Ray in 428/1037, slaughtering many of its inhabitants (Ibn al-At͟hīr, *al-Kāmil*, ix, 269-71). Nāṣir-i K͟husraw visited Ḳazwīn in 438/1046, and describes it as follows: "It had many gardens, without walls or thorn hedges or any obstacle to prevent entry into them. I saw it to be a good city. It had a strong wall and embattlements. It had good bazaars, except that it had only a little water from one *kārīz*. . . The *raʾīs* of the town was an ʿAlid. Of all the crafts in the town, the shoe-makers (*kafs͟hgar*) were the most numerous" (*Safarnāma*, ed. C. Schefer, Paris 1881, Persian text, 4).

In spite of the proximity of Ḳazwīn to the Ismāʿīlī stronghold Alamūt [*q.v.*], the Sald͟jūḳs do not appear to have regarded it as an important governorship to be given to a powerful *amīr* or *malik*. Soon after the Ismāʿīlīs were established in Alamūt, Abu'l Maḥāsin Rūyānī persuaded the Ḳazwīnīs to decree death to anyone coming from the direction of Alamūt lest mingling with the Ismāʿīlīs should give rise to disaffection within Ḳazwīn (M. G. Hodgson, *The Order of the Assassins*, The Hague 1955, 123). There were also many fortresses in the mountains of Rūdbār held by the Ismāʿīlīs, whence they were able from time to time to molest and trouble the Ḳazwīnīs, as they did in 523/1129 when they killed some 400 persons in revenge for an Ismāʿīlī envoy who had been lynched in Iṣfahān whither he had gone to see Maḥmūd b. Muḥammad (*ibid.*, 102). During the period when Muḥammad b. Buzurg Umīd was grandmaster (532-57/1138-62) there were raids and counter raids against Ḳazwīn from Ismāʿīlī strongholds (*ibid.*, 145). Somewhat later, in 560/1165, the Ismāʿīlīs of Rūdbār built a fortress outside Ḳazwīn, whence they were able almost to lay siege to the town (*ibid.*, 158).

During the late Saldjūḳ period Ḳazwīn was disputed by various *maliks* and *amīrs*, including Ṭughril b. Muḥammad, to whom it was assigned by Sandjar (Bundārī, *Zubdat al-nuṣra wa-nukhbat al-ʿuṣra*, ed. M. Th. Houtsma, Leiden 1889, 134). Under the Khwārazmshāhs, renewed attacks were made from Ḳazwīn on the Ismāʿīlīs. When Djalāl al-Dīn Ḥasan succeeded his father Muḥammad as grandmaster of the Ismāʿīlīs in 607/1210 he professed Islam and was known as Djalāl al-Dīn Naw-Musalmān. The people of Ḳazwīn, knowing all too well the dissimulations and tricks of the Ismāʿīlīs, were reluctant to accept his claims and demanded proof. He went to great lengths to win them over and induced them to send some of the leading men of Ḳazwīn to Alamūt and burnt Ismāʿīlī works in their presence (Djuwaynī, *Taʾrīkh-i Djahāngushā*, ed. Mīrzā Muḥammad Ḳazwīnī, GMS, London 1916, iii, 243-4).

During the struggle between the Khwārazmshāhs and the Mongols, Ḳazwīn from time to time changed hands, until finally the Khwārazmshāhs were defeated. In 617/1220 the Mongols are alleged to have carried out a massacre of the people of Ḳazwīn (Ḥamd Allāh Mustawfī, *Ẓafarnāma*, quoted by Browne, iii, 96-8). Mangū Ḳāʾān appointed Iftikhār al-Dīn Muḥammad al-Bukhārī governor in 651/1253-4. He and his brother Imām al-Dīn Yaḥyā held office until 677/1278-9. Iftikhār al-Dīn is said to have learnt Mongolian and to have translated *Kalīla wa-Dimna* into it. In the disorders which preceded the reign of Ghāzān Khān (694-703/1295-1304) Ḳazwīn, like other parts of the Ilkhān empire, suffered decay because of the extortion of *ilčīs* and others. Many people left the town, so much so that Ḥamd Allāh Mustawfī alleges that the Friday prayers could not be performed (*Taʾrīkh-i guzīda*, 592-3). He also mentions the usurpation of *waḳf* land by Mongols in Pishkildarra (*Nuzha*, 67). At the end of the reign of Uldjāytū (703-16/1304-16) the government of Ḳazwīn passed to Ḥusām al-Dīn Amīr ʿUmar Shīrāzī and Ḥādjdjī Fakhr al-Dīn Aḥmad the *mustawfī*. Abū Saʿīd Bahādur (716-36/1316-35), at the beginning of his reign, assigned Ḳazwīn to the expenses (*ikhrādjāt*) of the establishment or household (*urdū*) of his mother (*Taʾrīkh-i guzīda*, 842).

It was in Mongol rather than Saldjūḳ times that the population of the Ḳazwīn province was profoundly modified by the introduction of a considerable number of Turkish tribes, though some were no doubt already settled there under the Saldjūḳs. In spite of this, it seems that many of the great families of Ḳazwīn, when Ḥamd Allāh Mustawfī was writing, still traced their origins to an Arab ancestor, and many of them held large estates. One family mentioned by him, the Shīrzādiyān, came from "the middle classes" (*awsāṭ al-nās*), their ancestor having been a shepherd. Certain changes were, however, taking place and a number of Turkish families had established themselves. One, the Ḳarāvulān, had bought many estates, but had already lost its position when Ḥamd Allāh Mustawfī was writing. Another was the Būlātmūriyān, the first of whom, Amīr Takash, came to Ḳazwīn as *shiḥna* in the time of Ögedey (*Taʾrīkh-i guzīda*, 842 ff.). The dominant rite was the Shāfiʿī. There were also a few Ḥanafīs and Shīʿīs (*Nuzha*, 57).

After the break-up of the Ilkhān empire, Ḳazwīn, which had long since lost its character as a frontier town, seems to have had an uneventful history until Ṣafawid times. Already under Ismāʿīl Ṣafawī (907-30/1502-24), who was faced with the problem of holding both the Ottoman and the Uzbeg frontier, Ḳazwīn, situated on the main route from Ādharbāydjān to Khurāsān, acquired a new importance. When Tabrīz was temporarily lost to the Ottomans during the reign of Ṭahmāsp (930-84/1524-76), Ḳazwīn, less vulnerable to attack and holding a central position between the vitally important provinces of Ādharbāydjān and Khurāsān, became the capital in 962/1555, hence its *laḳab dār al-salṭana*. It continued to hold this position until Shāh ʿAbbās built a new capital in Iṣfahān [*q.v.*]. Although Ḳazwīn ceased to be the capital, it did not become an independent province but was administered by a *wazīr*, *dārūgha*, *kalāntar* and *mustawfī* appointed by the central government. Towards the end of the reign of Shāh Sulṭān Ḥusayn it was made into a province, under a *beglarbegī*, and a certain Ṭahmāsp Khān, a military slave (*ghulām*), was appointed over its A sum was allocated for his remuneration (*mudākhil*) on the taxes (*wudjūhāt*) of the surrounding districts and Rānkūh, and in return he was required to keep 300 soldiers (Mīrzā Rafīʿā, *Dastūr al-Mulūk*, ed. M. T. Dānishpazhūh in *Rev. de la fac. des lettres et des sciences humaines*, Tehran University, xvi/1-2 (Nov. 1968, 75). From the size of this contingent, it would seem that Ḳazwīn was not one of the more important provinces.

Like various other towns, Ḳazwīn became divided in Ṣafawid times into two factions, the Ḥaydarī and the Niʿmatī. Alessandri, who visited Ḳazwīn during the reign of Ṭahmāsp, mentions them, and states that four districts belonged to one faction and five to the other, and that enmity and frequent bloodshed had prevailed between them for over thirty years (*Narrative of the most noble Vincento d'Alessandri*, Hakluyt, first series, xlix, 224). The participation of these factions in the Muḥarram and Ṣafar ceremonies in the early 20th century is also recorded (Gulrīz, 386-7).

In the Mongol and pre-Mongol period Ḳazwīn had been a centre of orthodoxy, in spite of, or perhaps because of, its proximity to Daylam and later Alamūt. Nevertheless, there was a Shīʿī quarter in Ḳazwīn in Saldjūḳ times (Ḥusayn Karīmān, *Tabarsī va madjmaʿ al-bayān*, Tehran 1962, i, 149), and, as stated above, there were some Shīʿīs in Ḳazwīn when Ḥamd Allāh Mustawfī was writing (cf. *Nuzha*, 58, *Taʾrīkh-i guzīda*, 843). Widespread conversion to Shīʿism probably did not take place until the early Ṣafawid period, and even after this crypto-Sunnīs as, for example, Mīrzā Makhdūm Sharīfī, who was associated with Ismāʿīl II's conversion to Sunnism, were to be found among prominent local families (Iskandar Munshī, *ʿĀlamārā-yi ʿAbbāsī*, Iṣfahān 1956, i, 148, 213 ff. See also E. Eberhard, *Osmanische Polemik gegen die Safaviden in 16. Jahrhundert nach arabischen Handschriften*, Freiburg 1970). During the reign of Ṭahmāsp the Nuḳḳawī heresy spread to Ḳazwīn, where it was led by a certain Darvīsh Khusrāw. According to Iskandar Munshī (a hostile witness), he was "a low-class fellow" from the Darb-i Kūshk quarter. He abandoned the craft of his fore-fathers, who had been *muḳannīs*, and became a *ḳalandar*. After a period of travel and association with Nuḳḳawīs, he returned to Ḳazwīn, where a following gathered round him. The *ʿulamāʾ*, apprehensive at his growing popularity, charged him with heresy and he was forbidden to sit in the mosque where he had taken up his quarters. After the death of Ṭahmāsp he resumed his activities and people again assembled round him. He was

eventually put to death as a heretic in 1002/1593-4 (*ʿĀlamārā*, i, 473-6; see also Gulrīz, 444 ff.).

The death of Ṭahmāsp was followed by disorders in Ḳazwīn. Rebellious Turkomans seized Ṭahmāsp Mīrzā, one of the late shah's younger sons, set him up as a puppet, and occupied the city for a brief period. In the spring of 994/1596 Ḥamza Mīrzā, who had been besieging Tabrīz, then in Ottoman hands, marched on Ḳazwīn, routed the Turkomans, took Ṭahmāsp Mīrzā prisoner, and overthrew the rebellion. Little damage appears to have been done in the town. Don Juan, who was there shortly afterwards, describes Ḳazwīn as follows: "The country round is most fertile: it has great orchards and extensive gardens. Its population numbers above 100,000 householders [or 450,000 souls], and, that one may know its greatness, I have for curiosity, counted many times over its mosques, and of these there are more than 500. The royal quarter and the palace both are most sumptuous, and so extensive that you may go in a straight line through the purlieus for over a quarter of a league". (*Don Juan of Persia*, 40). The account given by a gentleman in Sir Antony Sherley's suite, who arrived in Ḳazwīn in December 1598, when it was still the capital, is rather less favourable. He states that there was nothing remarkable about the town except a few mosques and the doorway of the palace of the king, which was well built. According to him the town was a little smaller than London (*Sir Antony Sherley and his Persian adventure*, ed. E. D. Ross, London 1933, 153). Antony Sherley's brother, Robert, died in Ḳazwīn in 1627, as also did Sir Dodmore Cotton.

Father Paul Simon, the first superior of the Discalced Carmelites in Persia, writing in 1607, states that Ḳazwīn, which was by this time no longer the capital, was a very large city, not smaller than Iṣfahān. There were good buildings and an abundance of commodities for subsistence and entertainment, and "everything to be found as in any of these our [Italian] cities" (*A chronicle of the Carmelites in Persia*, London 1939, i, 119). Pietro della Valle, who was in Ḳazwīn in 1618, found in it "nothing to satisfy the expectations of a royal residence, and only two things worthy of observation, the gate of the king's palace, and the grand maidan or square". Sir Thomas Herbert, on the other hand, reported of Ḳazwīn in 1627 that it was "equal for grandeur to any other city in the Persian Empire, Spahawn excepted". He states that its walls were seven miles in circuit and estimates its population at 200,000 (see Curzon, i, 36). Olearius, however, some ten years later put the population at only 100,000 (*The travels of Antony Jenkinson*, in *Early Voyages and Travels to Russia and Persia*, Hakluyt, first series, lxxii, 1886, repr. New York n.d., i, 134 n. 1), while Chardin, who was there in 1674, describes its walls in ruins, and the town as having "lost all those perquisites that set forth the pomp and grandeur of a sumptuous court". It contained, according to his account, 12,000 houses, and 100,000 inhabitants, its chief feature being the palaces of the grandees, which, he alleged, had passed for generations from father to son (see further Curzon, i, 35-6).

Ḳazwīn's importance in Ṣafawid times was due not only to its becoming, for a period, the capital but also the attempts to increase trade with Europe through southern Russia. Antony Jenkinson mentions the presence in Ḳazwīn of merchants from India in 1561 (*The travels of Antony Jenkinson*, i, 149). Arthur Edwards, who made several voyages to Persia on behalf of the Muscovy Company, wrote in 1567 that velvets and other wares were made in Ḳazwīn but not of as good quality as could be obtained in Europe, and, in 1569, that many spices were to be found in Ḳazwīn but in goodness they were "nothing like to such as be brought into England out of other places, and the price is so high, that small gain will be had in buying of them" (*Early voyages and travels to Russia and Persia*, ii, 405). In the account of the mission of Sir Antony Sherley it is stated that there were a great many merchants in Ḳazwīn, but not many rich ones, also several artisans, such as gold-smiths and cobblers, who made the best shoes in the whole country out of segrin [shagreen], in green, white and other colours. There were also some master craftsmen who made gilded and coloured bows with arrows to match, and others who made richly gilded horse-saddles with gilded and coloured saddlebows (*Sir Antony Sherley and his Persian adventure*, 153). Father Paul Simon records that Ḳazwīn was much frequented for trade, because there was an abundance there of silks, carpets and brocades (*A chronicle of the Carmelites in Persia*, i, 119).

The disorders which took place at the end of the Ṣafawid period brought a temporary halt to Ḳazwīn's prosperity, and there appears to have been a considerable decrease in the population, due in part, presumably, to the decline in trade. Maḥmūd the Afghan, after he had taken Iṣfahān, detached a force of some 6,000 men under Amān Allāh K͟hān to take Ḳazwīn, which surrendered in 1722. In January 1723, however, there was a popular uprising (*lūṭībāzār*) led by the *kalāntar*s [*q.v.*] of the city against the Afghans. They were attacked in every quarter and retreated to Iṣfahān. They are reported to have lost some 2,000 men (Sir John Malcolm, *History of Persia*, London 1829, i, 443-4; J. Hanway, *An historical account of the British trade over the Caspian Sea*, London 1762, ii, 188). In 1726 Ḳazwīn submitted to the Ottomans on condition that the governor sent to the city was not accompanied by troops. The agreement was not kept; 12,000 men under ʿAlī Pās͟hā were sent, only to be driven out shortly afterwards. Ḳazwīn then declared for As͟hraf (Hanway, ii, 245; Malcolm, i, 443-4). Hanway, writing in 1744, quotes a Persian merchant as saying that whereas formerly Ḳazwīn had had 12,000 houses, it had then only 1,100 (i, 156).

At the beginning of the 19th century Ḳazwīn still manufactured velvets, brocades, and cotton cloth (J. Morier, *A second journey through Persia, Armenia, and Asia Minor to Constantinople in the years 1810-1816*, London 1818, 203) and was beginning once more to flourish. One of the royal princes, Muḥammad ʿAlī Mīrzā, then still a boy, was appointed governor by Fatḥ ʿAlī S͟hāh in 1213/1798-9, and retained this post until 1221/1806-7 (Bāmdād, *S͟harḥ-i ḥāl-i rid͟jāl-i Īrān*, Tehran 1966, iii, 430). Ḳazwīn's position, at the juncture of roads from the new capital Tehran, Tabrīz, the second city of the empire, and Enzeli on the Caspian Sea, gave it a new importance, both strategic and commercial. Fatḥ ʿAlī S͟hāh recognized the first when he placed its governor under the orders of ʿAbbās Mīrzā [*q.v.*] in 1818 with a view to facilitating his march on Tehran from Ād͟harbāyd͟jān in the event of his accession to the throne (Great Britain, Public Records Office, F.O. 60/13, Willock to Castlereagh, no. 9, Tehran, 7 May 1818). The main reason for the revival of Ḳazwīn, however, was the growing importance of the trade routes through Trebizond and over the Caspian Sea. Malcolm notes its prosperity in 1801 as "the mart of all the commerce

of the Caspian" (quoted by C. Issawi, *The economic history of Iran, 1800-1914*, University of Chicago 1971, 262) and Consul Abbott, reporting on the trade in Persia in 1841, states that Ḳazwīn ranked equally with Tehran in the extent of its commerce and contained perhaps as many thriving and wealthy merchants from all parts of the country as any other city in Persia (Great Britain, Public Record Office, F.O. 60/92, Report on trade for 1841. Document (with omissions) in Issawi, *op. cit.*, 118). Mīrzā Ḥusayn Farāhānī, who passed through Ḳazwīn in 1884, states that it had 600 shops, 8 caravansarais, 40 mosques, 9 *madrasas* and 12 ice-pits (*yakhčāl*) (*Safarnāma*, 14 ff.). The importance of Ḳazwīn as an entrepôt for trade is also shown by the fact that in 1890 the Imperial Bank of Persia opened a branch there, taking over the agency of the New Oriental Banking Corporation (Issawi, 346). Communications were meanwhile improved. By the 1880s single wire lines belonging to the Persian government connected Ḳazwīn to Tehran (*ibid.*, 153-4). Metalled roads from Ḳazwīn to Tehran in 1899 and from Ḳazwīn to Hamadān in 1906 were completed under a concession granted to a Russian company in July 1893, and in 1913 a contract for a service of motors till the end of 1919 on the roads from Ḳazwīn to Rasht, Tehran and Hamadān was obtained by a Russian subject, and some cars were put into service (*ibid.*, 201).

In spite of the commercial importance of Ḳazwīn in the 19th century, there does not appear to have been any appreciable growth in population, though it is difficult to compare the figures given for different periods since the estimates are not necessary based upon the same criteria. Morier, writing in the early part of the century, puts the population at 25,000 (*A second journey*, 203), as also does William Ouseley (*Travels in various countries of the East, particularly Persia*, London 1819, iii, 377. Cf. also G. A. Olivier, *Voyage dans l'Empire Ottoman, l'Égypte et la Perse*, Paris 1801, iii, 49). A later report dated 1868, gives the same figure (United Kingdom, Parliament, Accounts and papers 1867-68, Thomson to Allison, Tehran, 20th April 1868, "Report on Persia". Document (with omissions) in Issawi, 28), but the census taken in 1298/1880-1 and 1299/1881-2 puts the population at 64,362 (Gulrīz, 391 ff.). Mīrzā Ḥusayn Farāhānī on the other hand states that it was 7,000 families or some 30,000 persons. The town was then divided into 17 districts (*maḥalla*). Its walls were mainly in ruins, but 12 gates were still standing (*Safarnāma*, 14-15). According to Curzon, the population was reputed to be 40,000 in 1889, but the actual figure was probably not more than two-thirds of this (*Persia and the Persian question*, London, i, 35). Various estimates for the early part of the 20th century, possibly following Curzon, also put the population at 40,000 (*Gazeteer of Persia*, Simla 1905, ii, 314; Sobotsinski, *Persiya: statistiko-ekonomičeskii očerke*, St. Petersburg 1913, quoted by Issawi, 34).

Ḳazwīn played little part in the events leading up to the grant of the constitution. In the first National Consultative Assembly it was represented by two deputies, and a provincial council (*andjuman-i vilāyatī*) was elected. Popular *andjumans* were also set up and established contact with the Tehran *andjumans*, but were dissolved after Muḥammad ʿAlī attacked the Assembly in 1908. After resistance to Muḥammad ʿAlī had been organized in Tabrīz and Iṣfahān and the nationalist movement had spread to Gīlān, the supporters of the constitution in Ḳazwīn, having taken *bast* in the Turkish *shāhbandarī*, established contact with the nationalists in Gīlān. The latter under Yeprim Khān took Ḳazwīn in 1909 and advanced from there on Tehran (Gulrīz, 861 ff.). In July, with a view to exerting pressure on the nationalists, Russia sent troops to Ḳazwīn. Most of these were withdrawn in March 1911, but in December more Russian troops were sent (*Gazeteer of Persia*, Simla 1914, ii, 310). In the troubled years after the suspension of the Assembly in 1911 and during World War I there was a general break-down of law and order in the province of Ḳazwīn as elsewhere. In June 1918 the headquarters of the "Dunsterforce" was established in Ḳazwīn, whence operations were undertaken against the Djangalīs. During the reign of Riḍā Shāh Ḳazwīn declined. As communications improved it ceased to be an important entrepôt and many of the merchant community and considerable numbers of the population in general moved to Tehran.

ii. Monuments

Most of Ḳazwīn's mediaeval mosques have disappeared, including the early mosque of Rabīʿ b. Khuthaym (possibly identical to the Djāmiʿ al-Thawr or Djāmiʿ al-Tūt of Muḥammad b. al-Ḥadjdjādj), the Great Mosque founded by Hārūn al-Rashīd, and four others mentioned by Zakariyyā al-Ḳazwīnī. In the 4th/10th century Ḳazwīn consisted of an inner and outer city with two Friday mosques. The town walls, begun by Hārūn al-Rashīd, eventually comprised 206 towers and 12 gates. They were rebuilt in 572/1176 by the vizier Ṣadr al-Dīn al-Marāghī; mud brick was used throughout except for the battlements and the huge gates.

The earliest surviving Islamic building yet identified in Ḳazwīn is the dome chamber of the Masdjid-i Djāmiʿ, which possibly rests on a pre-Islamic structure. Its long *awḳāf* inscriptions (a rarity in Iranian architecture) date it to between 500/1106 and 508/1114, and mention the patron, the *amīr* Abū Manṣūr Khumartāsh b. ʿAbd Allāh al-ʿImādī. This dome chamber adjoined a pre-existing *madrasa* built in the 4th/10th century by the Ṣāḥib Ismāʿīl b. ʿAbbād. According to Zakariyyā al-Ḳazwīnī, the size of this dome was unparalleled anywhere. He relates how the masons despaired of vaulting such a huge space until a passing boy suggested that they fill the interior with straw. Although the dome chamber's ground plan, with its double openings on all sides but the *ḳibla*, resembles those of major Saldjūḳ mosques in central Iran, the elevation is markedly different. The model may perhaps have been a large-scale fire temple. The internal zone of transition avoids the complex trilobed squinches of central Iran in favour of a broad simple squinch with a superposed hexadecagon of similar form. The ratio of width to height is less than in other Saldjūḳ dome chambers. Ḥamd Allāh Mustawfī records that the mosque was given two *īwāns* in 548/1153; if the north *īwān* dates from this time (its decoration is certainly Saldjūḳ) one would expect a matching southern *īwān* preceding the dome. Possibly the Saldjūḳ mosque even had four *īwāns*. The present mosque is unusually large; among religious buildings in Iran, only the

shrine of the Imām Riḍā at Mas̲h̲had and the Iṣfahān Ḏj̲āmiʿ are more extensive. It is mostly of Ṣafawīd and Ḳād̲j̲ār date; the south *īwān*, for example, bears an inscription of S̲h̲āh ʿAbbās II dated 1069/1658-9.

The Ḥaydariyya mosque or *madrasa* (its original function is uncertain) has close stylistic links with K̲h̲umartās̲h̲'s dome and could be dated a few years later. Its square dome chamber stands to the south of a courtyard surrounded by Ḳād̲j̲ār structures. The damaged squinch zone develops from that of K̲h̲umartās̲h̲'s dome, for the arches of the hexadecagon have tapering bases which fill the spandrels between the arches of the octagon, an imaginative integration of the two levels. The exquisite decoration, mainly in brick and plaster, is notable both for a masterly floriated Kufic inscription and for a very early use of glazed ornament. A distinctive architectural and decorative style was developed in Ḳazwīn during the Sald̲j̲ūḳ period and influenced buildings in the surrounding areas, such as the mosques of Ḳurwa and Sud̲j̲ās.

The so-called mausoleum of Ḥamd Allāh Mustawfī, which was recently restored, is of Mongol date. It has a square base, a square zone of transition with bevelled corners and a conical roof over an internal dome. Similar tomb towers abound in Māzandarān. The only completely Ṣafawīd monument in Ḳazwīn is the much-ruined palace of S̲h̲āh Ṭahmāsp, now a museum; a heavily restored *pīs̲h̲ṭāḳ* and a kiosk with some faded wall paintings survive. The last two centuries are represented by the Masd̲j̲id-i S̲h̲āh, the S̲h̲āhzāda Ḥusayn and an extremely rich and varied network of vaulted bazaars and caravansarais now being demolished.

(R. M. HILLENBRAND)

AL-ḲAZWĪNĪ, ABŪ ḤĀTIM MAḤMŪD B. AL-ḤASAN AL-ṬABARĪ, a S̲h̲āfiʿī jurist, teacher of al-S̲h̲īrāzī. He belonged to Āmul in Ṭabaristān where he began his studies. In Bag̲h̲dād he studied under Abū Ḥāmid al-Isfarāʾinī d. 406/1015-16, the law of inheritance under Ibn al-Labbān (d. 402/1011-12) and the *uṣūl* under Ibn al Bāḳillānī (d. 403/1012-13). He taught in Bag̲h̲dād and Āmul in 440/1048-9. Al-S̲h̲īrāzī describes him as his best teacher. Of his works the following are mentioned: 1) *Kitāb Tad̲j̲rīd al-Tad̲j̲rīd*, a synopsis of the legal work of the same name by al-Maḥāmilī (d. 415/1024-25); 2) *Rawnaḳ*, a synopsis of the *Lubāb al-Fiḳh* of al-Maḥāmilī (Ḥād̲j̲d̲j̲ī K̲h̲alīfa, *Kas̲h̲f al-Zunūn*, no. 5702); 3) the *Kitāb al-Ḥiyal fi'l-Fiḳh* (ed. J. Schacht, Hanover 1924), the only one that has survived and one of the oldest works of the scanty S̲h̲āfiʿī literature on legal quibbles (*ḥiyal*). The book, unlike the Ḥanafī works of the same name by al-S̲h̲aybānī, al-K̲h̲aṣṣāf etc., was very little used for the practical purpose of getting round the S̲h̲arīʿa, but was rather primarily intended to point out legal quibbles which were forbidden or disapproved of, in keeping with the stricter S̲h̲āfiʿī standpoint, which regards the *ḥiyal* used by the Ḥanafīs as contemptible.

(W. HEFFENING)

AL-ḲAZWĪNĪ (K̲H̲AṬĪB DIMAS̲H̲Ḳ), D̲J̲ALĀL AL-DĪN ABŪ ʿABD ALLĀH MUḤAMMAD B. ʿABD AL-RAḤMĀN B. ʿUMAR (666-739/1268-1338), Chief *Ḳāḍī* in Syria and Egypt and author of two famous compendiums on rhetoric. Almost nothing is known about his early life. Most biographers mention that he was born in Mosul and that his elder brother, Imām al-Dīn ʿUmar, was born in Tabrīz in 653/1255. If it is true that the two brothers were related to ʿAbd al-Karīm al-Rāfiʿī (d. 623/1266; see Brockelmann, I, 393, S I, 678), as is reported by Abu 'l-Fidāʾ, *al-Muk̲h̲taṣar fī ak̲h̲bār al-bas̲h̲ar* (Cairo 1325?), iv, 129 (cf. a quotation from al-Rāfiʿī by Ḳazwīnī in Subkī, *Ṭabaḳāt al-s̲h̲āfiʿiyya*, Cairo 1324/1906, v, 124, and a note on the *nisba* al-Rāfiʿī in al-Asnawī, *Ṭabaḳāt al-s̲h̲āfiʿiyya*, Bag̲h̲dād 1390/1970, i, 572), the *nisba* al-Ḳazwīnī is explained. Ḳazwīnī himself claimed descent from Abū Dulaf al-ʿId̲j̲lī [*q.v.*] (cf. Ṣafadī, *al-Wāfī bi-'l-wafayāt*, ed. Dedering, iii, Damascus 1953, 243; Ṣafadī probably knew Ḳazwīnī personally, since he held an *id̲j̲āza* from him and praised him in a poem quoted by Subkī, *Ṭabaḳāt*, v, 239) and this claim is often reported in biographies, either explicitly or as part of the genealogy of Ḳazwīnī, though it cannot be proved (see Maṭlūb, 99-101). Unfortunately, these biographies do not mention when and under what circumstances Ḳazwīnī's family left their native town and give no details on the intellectual background of Ḳazwīnī's father, who was his first teacher (Yāfiʿī, *Mirʾāt al-zamān*, Hyderabad 1337/1918-9, iv, 301, asserts that both his father and his grandfather held the rank of Chief *Ḳāḍī*; cf. also Ibn Ṭūlūn, *Ḳuḍāt Dimas̲h̲ḳ*, ed. Ṣ. Munad̲j̲d̲j̲id, Damascus 1956, 82, ll. 8-10, 87, ll. 14-16), or the studies of rhetoric he might have pursued at an early age. Since the *Asrār al-balāg̲h̲a* and the *Dalāʾil al-iʿd̲j̲āz* of ʿAbd al-Ḳāhir al-D̲j̲urd̲j̲ānī (d. 471/1078) were inaccessible to some scholars even in the Middle Ages, it would be interesting to know where Ḳazwīnī studied these two books, and whether he might possibly have composed the *Talk̲h̲īṣ* and the *Īḍāḥ* before coming to Damascus.

Some biographers assert that Ḳazwīnī held a position as *ḳāḍī* in a district of Anatolia when he was about twenty years old (this prompts Ibn Tag̲h̲rībirdī to raise the question whether Ḳazwīnī originally followed the S̲h̲āfiʿī *mad̲h̲hab*; see Maṭlūb, 107-8) and that he was already an accomplished scholar when he and his brother came to Damascus in or before 689/1290 (the date "after 690" given by Ibn Kat̲h̲īr, *al-Bidāya*, Cairo 1351/1932, xiv, 185, cannot be correct; see Maṭlūb, 108). His teachers, the most important of whom was ʿAlam al-Dīn al-Birzālī [*q.v.*], appear to have been interested mostly in *fiḳh*, *ḥadīt̲h̲*, logic, and the *ʿilm al-awāʾil*, and there are no indications that Ḳazwīnī owed his interest in rhetoric to any of them (Maṭlūb, 114-16). Apart from the two books he wrote on this subject, there is some further evidence of his talents as a man of letters: he is reported to have encouraged the study of *adab* through his lectures and to have composed an anthology of the poetry of Arrad̲j̲ānī [*q.v.*]. Ibn al-Ḳāḍī (*Durrat al-ḥid̲j̲āl*, Cairo 1390/1970, ii, 115) mentions a commentary on the *Tāʾiyya* of Ibn al-Fāriḍ by him, and Ḳalḳas̲h̲andī (*Ṣubḥ al-aʿs̲h̲ā*, i, 469) cites a commentary on a didactic poem on prosody by Sāwī (d. 749/1348; see Brockelmann, S II, 258). Bahāʾ al-Dīn al-Subkī [*q.v.*] held an *id̲j̲āza* for the *Talk̲h̲īṣ al-miftāḥ* from Ḳazwīnī (see Nuʿaymī, *al-Dāris fī taʾrīk̲h̲ al-madāris*, Damascus 1367/1948, i, 38-9) and Suyūṭī prided himself on possessing an autograph of this book (Ḳazwīnī's

handwriting was famous), on which he based his *urdjūza* (the *ʿUḳūd al-djumān*; see the ed. published in Cairo in 1358/1939, 3, and Suyūṭī, *Bughya*, Cairo 1326/1908-9, 66). Other indications of his literary talents come from a *taḳrīḍ* by him on a work by Djamāl al-Dīn b. Nubāta [*q.v.*] and the praise bestowed by biographers and poets on his eloquence (see Maṭlūb, 116-8, 139-52), which may have earned him the title Khaṭīb Dimashḳ (Taftāzānī, *al-Sharḥ al-muṭawwal*, Istanbul 1330/1911-2, 3; Ḥadjdjī Khalīfa, i, 210; Mehren, 7; this title does not appear as part of his name in any of the biographies known to the author of this article though the fact that he held the office of *Khaṭīb* is mentioned). Some assert that Ḳazwīnī knew Persian and Turkish in addition to Arabic. His competence in *fiḳh* was, according to Ibn al-ʿImād (*Shadharāt*, vi, 123), reflected in a work on the *uṣūl*.

In sharp contrast to the scarcity of information on Ḳazwīnī's early career, and the isolated data on his activities as a man of letters, are the many details on his official career, the most important of which are the following: He held various teaching positions and deputised for his brother (who had been appointed *ḳāḍī* in 696/1297) and Nadjm al-Dīn b. Ṣaṣrā [*q.v.*] in 705/1305, and became *khaṭīb* and *imām* of the Mosque of the Umayyads in 706/1307, and Chief *Ḳāḍī* and *Ḳāḍī* of the Army of Syria in 724/1324, having received the appointment in person from the Mamlūk sultan al-Nāṣir during a visit to Cairo (in 711/1311 he had distinguished himself by his personal courage in resisting the imposition of heavy taxes by one of al-Nāṣir's lieutenants, but this opposition had apparently not met with disfavour from al-Nāṣir, who had his lieutenant imprisoned; see Ibn Ḥadjar, *al-Durar al-kāmina*, iii, Hyderabad 1373/1954, 235-6). Soon afterwards, in 727/1327, he was appointed Chief *Ḳāḍī* in Cairo, succeeding Badr al-Dīn Ibn Djamāʿa [*q.v.*]. This appointment marked the height of his career. No *ḳāḍī* was said to have gained an influence over a Turkish ruler comparable to Ḳazwīnī's. Unfortunately Ḳazwīnī's position was adversely influenced by the dissolute life of his sons, who were charged with corruption. In the end al-Nāṣir was unable to ignore the numerous complaints (Maḳrīzī, *Sulūk*, ed. M. Ziyāda, Cairo 1941, ii/2, 439-42; according to Ibn Ḥadjar, *al-Durar*, iv, Hyderabad 1350/1931, 4, he had been advised of these complaints as early as 724) and felt himself compelled to dismiss Ḳazwīnī and appoint him to his former position in Damascus, where he died soon afterwards on 15 Djumādā I 739/30 November 1338.

Of Ḳazwīnī's writings only the *Talkhīṣ al-miftāḥ* and the *Īḍāḥ fī ʿulūm al-balāgha* appear to have survived. The *Talkhīṣ* is a digest of the third section of the *Miftāḥ al-ʿulūm* by Sakkākī [*q.v.*], which in turn is based on the *Asrār al-balāgha* and the *Dalāʾil al-iʿdjāz* of ʿAbd al-Ḳāhir al-Djurdjānī [see ISTIʿĀRA]. The *Īḍāḥ* is an enlarged version of the *Talkhīṣ*. Both works, though not free from dryness and some casuistry, gained wide circulation, as is evidenced by the numerous manuscripts and commentaries that have come down to us; and their popularity to this day is shown by the existence of various printed editions (lists of manuscripts, printed editions, and commentaries in manuscript or in print in Ḥādjdjī Khalīfa, 210-11, 473-9; Brockelmann, II, 22, S II, 15; Maṭlūb, 169-82; 184-90). They completely superseded not only the two books by Djurdjānī, but also the work by Sakkākī. At the same time, however, they secured a firm place for the methodical approach that had been initiated by these two authors and influenced the older, unsystematic method of discussing literary theory in collections of chapters on the figures of speech (*badīʿ*) which continued to be practised. The main differences between the presentation of Ḳazwīnī and that of Sakkākī are: (a) Ḳazwīnī's classification of the *madjāz ʿaḳlī* as part of the *ʿilm al-maʿānī* (see Mehren, 30; Sakkākī classifies this group of figures under the *ʿilm al-bayān*); (b) the addition of a section on the *badīʿ* clearly distinguished from the sections on the *ʿilm al-maʿānī* (based on Djurdjānī's *Dalāʾil*) and the *ʿilm al-bayān* (based on Djurdjānī's *Asrār*; Sakkākī in dealing with these figures only speaks of "special methods frequently used for the purpose of embellishing a literary composition"); (c) the addition of chapters on *sariḳa*, *ibtidāʾ*, *takhalluṣ*, and *intihāʾ* [*qq.v.*]. Ḳazwīnī also consulted and discussed the two books by ʿAbd al-Ḳāhir al-Djurdjānī and the *Kashshāf* of Zamakhsharī, and borrowed from some of his other predecessors, often without acknowledging his borrowings (Maṭlūb, 191-243). The oldest manuscript of the *Talkhīṣ* carried the date 724 (Maṭlūb, 164). The *Īḍāḥ*, which was intended as a supplement to the *Talkhīṣ*, cannot have been written before the *Talkhīṣ*, but nothing further is known about the date of composition of these books or the circumstances under which they were written.

Bibliography: Biographies appear in all the chronicles and collections of biographies dealing with the end of the 7th/13th and the 8th/14th centuries. The most important have been quoted in the article, but reference should also be made to Ṭashköprüzāde, *Miftāḥ al-saʿāda*, Cairo 1968, i, 209-10. Abstracts from the *Talkhīṣ* in A. F. Mehren, *Die Rhetorik der Araber*, Copenhagen-Vienna 1853; commentaries in *Shurūḥ al-talkhīṣ*, Cairo 1937. The only detailed study of Ḳazwīnī and his work is A. Maṭlūb, *al-Ḳazwīnī wa-shurūḥ al-talkhīṣ*, Baghdad 1387/1967; see also the introduction to H. Ritter's ed. of Djurdjānī's *Asrār al-balāgha*, Istanbul 1954, 6-7.

(S. A. BONEBAKKER)

ḲAZWĪNĪ, ḤAMD ALLĀH [see ḤAMD ALLĀH MUSTAWFĪ].

AL-ḲAZWĪNĪ, NADJM AL-DĪN ʿABD AL-GHAFFĀR B. ʿABD AL-KARĪM, a Shāfiʿī jurist and Ṣūfī who died in Muḥarram 665/October 1266. The most important of his writings was a work known either as *al-Ḥāwī fi 'l-furūʿ* or *al-Ḥāwī fi 'l-fatāwī*, or simply as *al-Ḥāwī*, which became a widely used textbook of Shāfiʿī *fiḳh*, and was the subject of numerous commentaries and glosses: seventeen are listed by Ḥādjdjī Khalīfa (*Kashf al-ẓunūn*, ed. Yaltkaya and Bilge, i, cols. 625-7). A versified paraphrase of the work, *al-Bahdjat al-wardiyya*, by Zayn al-Dīn ʿUmar b. Muẓaffar al-Wardī (d. 749/1348) became especially popular. Al-Ḳazwīnī also wrote *al-Lubāb fi 'l-fiḳh*, a briefer work than *al-Ḥāwī*, and himself composed a commentary on it, *al-ʿIdjāb fī sharḥ al-lubāb*; and a book on mathematics is also attributed to him. In addition to his accomplishments as a jurist, he was celebrated as a Ṣūfī possessed of wondrous powers. While travelling to Mecca for the *ḥadjdj*, he was seen to be working on *al-Ḥāwī* in the depth of the night, with the paper illumined by a mysterious light from his fingers. During this journey, he is related to have met Abū Ḥafṣ ʿUmar al-Suhrawardī (d. 632/1234), founder of the Suhrawardī order or *ṭarīḳa*, who encouraged him to complete the writing of *al-Ḥāwī*. He spent most of his life in Ḳazwīn, where he was celebrated for his luminous fingers as well as other *karāmāt*.

(H. ALGAR)

AL-ḲAZWĪNĪ, ZAKARIYYĀʾ B. MUḤAMMAD B. MAḤMŪD Abū Yaḥyā (Ḥādjdji Khalīfa, iv, 188-9: Muḥammad b. Maḥmūd al-Kūfī al-Ḳazwīnī), famous Arab cosmographer and geographer. He drew his origin from an Arab family (his ancestor, Shaykh Abu 'l-Ḳāsim b. Hibat Allāh al-Ḳazwīnī, was probably descended from Anas b. Malik [*q.v.*]), who had been Persianised after settling at Ḳazwīn in Persia. Judging from certain solecisms to be found in al-Ḳazwīnī's works, Arabic does not seem to have been his mother tongue.

He was born at Ḳazwīn, probably towards 600/1203 and seems to have received there his legal education. At a moment difficult to establish he left his native town, went to Baghdād and stayed also some time in Damascus where he met, probably towards 630/1233, the well-known philosopher and mystic Ibn al-ʿArabī (d. 638/1240 [*q.v.*]). It was apparently at this period that he visited al-Mawṣil where he met Ḍiyāʾ al-Dīn Ibn al-Athīr (d. 637/1239 [see IBN AL-ATHĪR], and perhaps also the town of Sindjār. Al-Ḳazwīnī travelled also in Persia and paid a visit to the town of Djannāba. According to Ibn Taghrībirdī, he stayed for a long time in al-Wāsiṭ and al-Ḥilla, where he fulfilled the function of *ḳāḍī* under the reign of the last ʿAbbāsid caliph al-Mustaʿṣim (640-56/1240-58). We do not know where he met the Arab philologist and geographer Ibn Saʿīd al-Gharnāṭī [*q.v.*] who went to the East in 648/1250. From al-Kūfī, one of his *nisbas*, it would follow that he lived for a certain time in Kūfa. After Baghdād had taken by the Mongols in 656/1258, he retired from public life to devote himself entirely to scientific activities. It is quite probable that he found a Maecenas in the Persian historian and statesman al-Djuwaynī (d. 682/1283 [*q.v.*]), from 661/1262 governor of Baghdād on behalf of Hūlāgū and his successor Abāḳā. It is perhaps because of his presumed protection that he dedicated his cosmographical work to al-Djuwaynī. He died in 682/1283. (On his name and life, see his *Cosmography*, ii; *Āthār al-bilād*, ed. F. Wüstenfeld, Göttingen 1848, 121, 232, 263, 293, 310, 334, 349, 367-8 and *ʿAdjāʾib al-makhlūḳāt*, in margins of al-Damīrī, *Ḥāyat al-Ḥayawān*, Cairo 1319/1901-2, 3; S. de Sacy, *Chrestomathie arabe*[2], iii, 447, 448 ff.; F. Wüstenfeld, in *Göttinger Gelehrte Anzeigen*, i (1848), 349 ff.; M. Reinaud, *Géographie d'Aboulféda*, tr. i, Paris 1848, pp. cxliii-cl; Brockelmann, *GAL* I, 481; M. Streck, *al-Ḳazwīnī*, in *EI*[1]; I. Yu. Kračkovsky, *Arabskaya geografičeskaya literatura*, in *idem*, *Izbrannye sočineniya*, iv, Moscow-Leningrad 1957, 359-60.)

Al-Ḳazwīnī is the author of two works, a cosmographical one and a geographical one. The first, commonly named *Cosmography*, has the title *ʿAdjāʾib al-makhlūḳāt wa-gharāʾib al-mawdjūdāt* "Prodigies of things created and miraculous aspects of things existing". This work is divided into two parts, the first of which treats of supraterrestrial things, and the second of terrestrial ones. In the first part the author describes the celestial phenomena, i.e. the moon, the sun, the stars, and speaks then of the inhabitants of heaven, the angels. At the end of this part he explains the problems of chronology and of the Arabic and Syrian calendars. The second part begins with a treatise on the four elements, the meteors and the winds. The author then describes the division of the earth into seven climates and gives a description of all the known seas and rivers. Having explained the causes of earthquakes and of the formation of mountains and wells, he passes in review the three kingdoms of nature: the mineral, the vegetable and the animal. The description of the animal kingdom is preceded by that of man, his character and anatomy, and by a characteristic of human tribes. The other living beings are discussed after *djinns* and *ghūls* have been dealt with.

Al-Ḳazwīnī's *Cosmography*, the first systematic exposition of cosmography in Muslim literature, enjoyed great popularity in the whole of the Islamic world, as is attested by a great number of manuscripts representing several Arabic versions, by Persian and Turkish translations and by the revisions of the work. J. Ruska (*Ḳazwīnī-Studien*, in *Isl.*, iv (1913), 14-66, and 236-62) has shown against Wüstenfeld (see the latter's edition of the *ʿAdjāʾib, Kosmographie i.* Göttingen 1849, pp. vii-xii) that there were four different Arabic versions of the *Cosmography*, the second of which, represented by Cod. Monac. 464, the oldest manuscript known so far, and by many others, seems to be the best. Wüstenfeld however, for his edition of the *ʿAdjāʾib*, has chosen the most recent version (iv) which is only an 18th century recast of al-Ḳazwīnī's original work. This recast is represented by ms. Gotha 1508. Besides, Wüstenfeld has greatly complicated his edition by rejecting several fragments of version (iv) and replacing them with fragments taken from manuscripts belonging to other versions of the *ʿAdjāʾib*. Thus he has fabricated a completely new text which does not represent any of the existing versions of the work. Besides Wüstenfeld's edition, there is also a Cairo edition (n.d., 8°, 416 pp.), based on a manuscript related to Cod. Monac. 464 and analogous to the edition of the *Cosmography* published in the margins of the edition of al-Damīrī's *Ḥayāt al-Ḥayawān* (Cairo 1319/1901-2).

The manuscripts of the *Cosmography* are often illustrated with *i.a.* geometrical tables and miniatures representing plants, animals and various monsters, which have sometimes a high artistic value (on the Arabic versions, the Persian and Turkish translations and the manuscripts of these versions, see al-Ḳazwīnī, *Kosmographie*. i, ed. Wüstenfeld, iii-xii; Streck, *op. cit.*; ʿA.M. ʿAḳḳād, *al-Fuṣūl*, 123-7; Brockelmann, S I, 883; Kračkovsky, *op. cit.*, 362-5; M. Kowalska, *Eine unbekannte Handschrift al-Ḳazwīnīs Kitāb ʿAǧāʾib al-maḫlūḳāt*, in *Folia Orientalia*, i/2 (1959), 326-32).

The sources of the *ʿAdjāʾib al-makhlūḳāt* have not yet been studied (see on this problem Pertsch, *Kat. d. arab. Handschr. zu Gotha*, iii, 431). Going through Wüstenfeld's edition one can discover some twenty-odd authors whose works have been used, from al-Djāḥiẓ and Ibn al-Faḳīh down to Ibn al-Athīr, the most often-quoted being the one by Abū Ḥāmid al-Andalusī and the anonymous treatise entitled *Tuḥfat al-gharāʾib* (see M. Kowalska, *Remarks on the unidentified Cosmography Tuḥfat al-ġarāʾib*, in *Folia Orientalia*, ix (1967), 11-8). The connexions between the *Cosmography* and Yāḳūt's *Muʿdjam al-buldān* are still to be established.

From what has been said above, it is evident that there does not yet exist any critical edition of the *Cosmography*. Wüstenfeld's edition stimulated a translation by H. Ethé (Leipzig 1868) which

comprises, however, only the first part. At the beginning of the 19th century A. L. de Chézy translated the chapters on the minerals, the vegetables and the human being (see S. de Sacy, *op. cit.* iii, 385-516). In his *Über die Ursprung und die Bedeutung der Sternnamen* (Berlin 1809), L. Ideler published an annotated edition of the chapter on the stars. Of the partial editions, translations and studies of the *Cosmography* the following are mentioned here by way of example J. Ruska, *Das Steinbuch aus der Kosmographie des ... al-Ķazwīnī*, Heidelb. Prog. d. Oberrealschule, Kirchhain N.-L. 1896; *Über den falschen und den echten Ķazwīnī*, in *Mitt. Gesch. Naturwiss.*, xiii (1914), 183-8; S. J. Anbacher, *Die Abschnitte über die Geister u. die wunderbaren Geschöpfe aus Qazwīnī's Kosmographie...*, Kirchhain N.-L. 1905; F. Taeschner, *Die Psychologie Ķazwīnī*, thesis Kiel, Tübingen 1912; E. Wiedemann, *Über die Kriechtiere nach al-Qazwīnī*, dans *SB Phys.-med. Soc. Erlangen*, xlviii-xlix (1916-7), 222-85; *Übersetzung und Besprechung des Abschnittes über die Pflanzen von Qazwīnī*, *ibid.*, 286-321; G. Jacob, *Studien in arabischen Geographen*, Berlin 1892, iii, 94-124: *Ornithologisches zu Qazwīnī*; G. Ferrand, *La Tuḥfat al-albāb de Abū Ḥāmid al-Andalusī al-Ġarnāṭī*, dans *JA*, (Oct.-Dec. 1925), 230-35; A. Seippel, *Rerum normannicarum fontes arabici*, Oslo 1896-1928, 102-3 and 140-1 and *Adnotationes criticae*, pp. XLVI and LXVI-LXVII.

Al-Ķazwīnī's second work, commonly called *Geography*, is known from several manuscripts belonging to two different versions. The oldest, entitled *ʿAdjāʾib al-buldān* "Prodigies of the Countries" (see Ḥādjdjī Khalīfa, iv, 186) was composed in 661/1262-3 (see Reinaud, *op. cit.* cxliv). The second completely revised version dates from 674/1275-6. It carries the title *Āthār al-bilād wa-akhbār al-ʿibād* "Monuments of the Countries and History of their Inhabitants" (see Ḥādjdjī Khalīfa, i, 154). The four manuscripts of the second version served Wüstenfeld as the basis for his edition of the *Geography/Cosmography, ii: Āthār al-bilād*, Göttingen 1848. Another edition, Beirut 1380/1960-1, is in fact only a reproduction of Wüstenfeld's publication.

The description of the earth in the *Āthār al-bilād* follows the Ptolemaic division of the *oikoumene* into seven climates. The cities, countries, mountains, rivers etc. situated in each of these climates are described in alphabetical order. The description of each city or country contains geographical and historical facts and also biographical data on famous personalities originating from them. Thus the *Geography* resembles the *Muʿdjam al-buldān* of Yāķūt so far as the disposition of the material is concerned (except that in al-Ķazwīnī's work the material is distributed over seven different dictionaries according to the division in climates). Certain articles of the *Geography*, concerning e.g. various mountains, rivers etc. can also be found in the *Cosmography*, often with exactly the same tenor.

Besides the two Arabic versions, several Persian revisions and Turkish abridgements of the *Geography* are known. Towards 808/1403 al-Bākuwī gave a new version of it, which is independent of the two Arabic versions mentioned above (on the various versions and translations of the *Geography* and on the manuscripts of this work, see Wüstenfeld, *Kosmographie.* ii, pp. iii-x; Streck, *op. cit.*, Brockelman, S I, 882-3).

As opposed to the sources of the *Cosmography*, those of *Āthār al-bilād* have been object of some studies. Already F. Wüstenfeld had compiled a list (very incomplete, however) of the sources used by al-Ķazwīnī (*Gött. Gelehrte Anzeigen*, i, (1848), 351). He returned to this problem in his edition of Yāķūt's *Muʿdjam al-buldān* (Leipzig 1866-70, v, 46-7) where he propounded the opinion that al-Ķazwīnī made extensive use of this work, without mentioning this use. W. Jwaideh (*The Introductory Chapters of Yāqūt's Muʿjam al-Buldān*, Leiden 1959, 44, n. 1) has shown that al-Ķazwīnī borrowed from Yāķūt the preliminary descriptions of all seven climates. In 1967 M. Kowalska published the first serious study on the sources of the *Geography* in an article entitled *The Sources of al-Qazwīnī's Āthār al-Bilād*, in *Folia Orientalia*, viii (1966), 41-88, in which she gives a detailed analysis of those sources. From this it appears that nearly 360 articles out of the *ca.* 600 which form the total of al-Ķazwīnī's geographical dictionary contain data borrowed from the *Muʿdjam al-buldān*, and that a very considerable part (viz. 157) of these 360 articles contain nothing else but extracts from Yāķūt's work. Thus the *Muʿdjam al-buldān* forms the principal source of the *Āthār al-bilād*. M. Kowalska's study shows also that all quotations from al-Yaʿķūbī, Ibn al-Faķīh, Ibn Faḍlān, Ibn Ḥawķal, al-Muķaddasī and from the two *risāla*s of Abū Dulaf to be found in al-Ķazwīnī's *Geography*, have been borrowed by the latter not from the original works of the geographers in question but from the *Muʿdjam al-buldān*. She has also established an almost complete list of the fragments al-Ķazwīnī has extracted from other Arabic sources, from which are cited here the works of Ibrāhīm b. Aḥmad al-Ṭurṭūshī (= Ibrāhīm b. Yaʿķūb al-Ṭurṭūshī; see T. Kowalski, *Relatio Ibrahim ibn Jaʿkūb de itinere slavico*, Cracow 1946, 21-35), al-Bīrūnī, al-ʿUdhri, Abū Ḥāmid al-Andalusī and an anonymous cosmographical treatise of the 12th century entitled *Tuḥfat al-gharāʾib*. Finally, she has compiled a list of al-Ķazwīnī's oral informants. The author of the *Āthār al-bilād* owes his knowledge of West Africa to two of these informants (see M. Kowalska, *Zwei wenig bekannte muslimische Reisende in West-Sudan im 13. Jh.*, in *Folia Orientalia*, iii (1961), 231-4).

Although rather uncritical and lacking an index, Wüstenfeld's edition of the *Āthār al-bilād* became nevertheless the starting-point of several partial editions, translations and special studies on the various chapters of the work. These studies are: G. Jacob, *Studien in arabischen Geographen*, Berlin 1892, ii, 38-9, 60-1; idem, *Arabische Berichte von Gesandten an germanische Fürstenhöfe aus dem 9. und 10. Jarhhundert*, Berlin-Leipzig 1927, 21-33; A. Seippel, *Rerum normannicarum fontes arabici*, 24-5, 44 and *Adnot. crit.*, pp. XII-XIII, XX; G. Ferrand, *Le Tuḥfat al-albāb d'Abū Ḥāmid al-Andalusī al-Ġarnāṭī*, in *JA* (1925), 235-9; M. C. Lyons, *Some Aspects of Al-Qazwīnī's Āthār al-Bilād*, in *Glasgow Univ. Or. Soc. Trans.*, xx, (1963-4), 63-76; M. Kowalska, *Namensregister zu Ķazwīnī's Āṯār al-Bilād*, in *RO*, xxix/1, (1965), 99-115, xxx/1, (1966), 119-34; idem, *Al-Qazwīnī's Āthār al-Bilād and the quotations from Abū Dulaf's Narrative*, in *Atti del III Congresso di Studi Arabi e Islamici, Ravello 1966*, Naples 1967, 427-35.

Al-Ķazwīnī was the greatest of Arabic cosmographers. He was at the same time astronomer, geographer, geologist, mineralogist, botanist, zoologist and ethnographer. Like all his predecessors (who appeared already in the 6th/12th century), he was only a good compiler who neither produced a new fact nor created any new theory. Being, however, very learned and very cultivated at the same time, he succeeded in synthesizing all the facts known

in his time about the above-mentioned sciences. His principal merit lies in his having accomplished the raising of cosmography to a literary genre of extremely high level. He was also a talented vulgariser who knew to express himself clearly and realized that erudition should not exceed certain limits, in order not to discourage the general public. His language is clear, simple and varied, although he often does not give anything but a mosaic of extracts from sources, arranged nevertheless in a skilful way. Highly appreciated by certain modern Arabists who sometimes compare him to Herodotus and Pliny (Reinaud, *op. cit.* p. cxliv; see also Streck, *op. cit.* and Kračkovsky, *op. cit.* 358-9), al-Ḳazwīnī has been judged far too severely by other scholars. G. von Grunebaum (*Medieval Islam*, Chicago 1947, 301-2, 304) quotes two passages from the *ʿAdjāʾib al-makhlūḳāt* to illustrate the decline of critical science in the 7th/13th century, and G. Wiet (*Introduction à la littérature arabe*, Paris 1966, 210) looks upon al-Ḳazwīnī's *Cosmography* as a work "devoid of critical mind" and "lacking originality". Accordingly, M. Kowalska (*The Sources*, 87-8) calls him "an amateur geographer ... [who] selected the available data rather uncritically often in a quite accidental way". She also insists that he "has plagiarized the writing of the older geographers and historians". Indeed, the impression cannot be resisted that al-Ḳazwīnī surpassed all the other Arabic cosmographers and geographers in plagiarism. This results clearly from the way in which he unscrupulously plundered the *Muʿdjam al-buldān* without even mentioning the name of the author of his main source.

Al-Ḳazwīnī exerted a great influence on the Arabic cosmographers and geographers of later periods. His two works have been turned to account by authors like Shams al-Dīn al-Dimashḳī (d. 727/1327), Aḥmad b. Ḥamdān al-Ḥarrānī (writing *ca.* 732/1332), Ḥamd Allāh Ḳazwīnī (d. towards 750/1349), al-Damīrī (d. 808/1405), Ibn al-Wardī (d. 861/1457) and several others, down to Maḥmūd b. Saʿīd al-Safāḳusī (d. after 1233/1818). On this question, see *inter alia*, A. F. Mehren, *Manuel de la cosmographie du moyen âge*, Paris-Copenhagen-Leipzig 1874, 165, 168, 179, 186-91, 198 and *passim*; Kračkovsky, *op. cit.*, 365, 385-6, 493, 598, 618 and 748-9.

Bibliography: Given in the article.

(T. LEWICKI)

AL-ḲAZZĀZ, ABŪ ʿABD ALLĀH MUḤAMMAD B. DJAʿFAR AL-TAMĪMĪ, was born in Ḳayrawān and spent most of his life there. Attached to the Fāṭimid caliphs, who held him in high esteem and loaded him with gifts, he followed them—probably for a very brief time—to Egypt and then returned to Ḳayrawān, where he devoted himself to teaching the linguistic sciences until his death in 412/1021-2, aged about 90. Respected by the great and loved by the people for his powerful personality, his exemplary life and his great liberality, he was venerated by his students, most of whom became prominent men of letters, such as Ibn Rashīḳ, Ibn Sharaf and Ibn al-Barr, whose teaching of language and grammar was authoritative in Spain, and also al-Ḥātimī, the celebrated detractor of al-Mutanabbī.

Although considered by critics an excellent poet of verses "at once natural and studied" and often referred to by Ibn Rashīḳ for problems of literary criticism (see refs. to *al-ʿUmda* in the bibliography below), it is chiefly for his numerous and voluminous works on grammar and lexicography that al-Ḳazzāz seems to have commanded attention in his lifetime. The following titles are cited: (1) *Kitāb al-ḥurūf*, which seems to be the same as *al-Djāmiʿ*, is a vast compilation bringing together the meaning of each particle, *ḥarf*, its use, its value, and its role in the sentence; (2) *Kitāb al-ʿasharāt* (published Sidon 1344/1925-6), a lexicographic work on words carrying ten or more different meanings; (3) *Kitāb al-ḥulā wa 'l-shiyāt*, Sidon 1344/1925-6, on the anatomy of the human body, for the use of scribes and slave dealers; (4) *Kitāb al-muthallath*, on patterns with triple vocalisation; (5) *Kitāb al-ḍād wa 'l-ẓāʾ*; (6) *Kitāb al-taʿrīḍ wa 'l-taṣrīḥ*; (7) *Kitāb mā yadjūz li 'l-shāʿir fī 'l-ḍarūra*, on poetic licence; éd. M. Kaʿbī, Tunis 1971; (8) *Iʿrāb al-Duraydiyya*, a commentary on the poem called *al-Maḳṣūra* by Ibn Durayd; (9) *Sharḥ Risālat al-balāgha*, on a work of rhetoric; (10) *Kitāb abyāt al-maʿānī*, on the riddling verses of al-Mutanabbī; (11) *Kitāb mā ukhidha ʿan al-Mutanabbī min al-laḥn wa 'l-ghalaṭ*, on the criticisms arising from certain instructions in the poetry of al-Mutanabbī; (12) *Kitāb adab al-sulṭān wa-'l-taʾaddub lahu*, in 10 volumes, probably a work on the rules of conduct for princes and those to be observed towards them. (For the mss. of these works, see Brockelmann in the Bibliography below.)

By the nature and worth of his teaching and his writings, al-Ḳazzāz seems to have played a determining role in the philological orientation which characterises the "Literary School of Ḳayrawān" under the Zīrids.

KEČE. [see LIBĀS].

KEČEDJĪ-ZĀDE. [see FUʾĀD PASHA; ʿIZZET MOLLĀ].

KEČIBOYNUZU IBRĀHĪM ḤILMĪ PASHA (b. 1160/1747, d. 1240/1825) Ottoman Grand Vizier, November 1806-June 1807. The son of a Janissary officer, he rose through various posts in the corps to the chief command (hence he is sometimes referred to as Ibrāhīm "Agha"). Upon the dismissal of Ḥāfiẓ Ismāʿīl Pasha (14 November 1806), provoked by the attempt to use the troops of the Niẓām-i Djedīd [*q.v.*] in Rūmeli, he was appointed Grand Vizier. As *serdār* against Russia (war having been declared by the Porte on 22 December), he led a refractory army of Janissaries and volunteers to Silistre (May 1807), where, however, no military

activity ensued. When news of the final rising against Selīm III (the "Kabakčī waḳʿasī", 25 May) reached the camp, the Janissaries rose in sympathy and Ibrāhīm fled into hiding at Rusčuk. He was dismissed on 18 June. The various governorships he held thereafter are listed in *SʿO*, i, 154. For the context of these events and full bibliography, see S. J. Shaw, *Between old and new. The Ottoman Empire under Selim III, 1789-1807*, Harvard Middle Eastern Studies no. 15, 1971, and SELĪM III. (ED.)

KĔDAH. [see KALAH].

LE **KEF.** [see AL-KĀF].

KEFE, KAFA, KAFFA, the old name of the town of modern Theodosia (Russian Feodosia), on the southeastern coast of the Crimea. In classical times its name was Theodosia, and it was founded in the first half of the 7th century B.C. as a colony from Miletus in Ionia. It is first mentioned in 390 B.C., and according to the sources, the town derived great profit from exports to Greece, having a port with a capacity for 100 ships. However, the town's trade was harmed by attacks of the Scythian tribes living in the steppes to the north of Kefe. Kefe is recorded by Constantine Porphyrogenitus in the form *Kapha* as the place where the people of the Chersonese fought with the king of the Bosphorus. In the following centuries, Kefe was founded. This place was known as *Caphum* in Roman days, and the Byzantines erected a column which bears an inscription with the date 819 A.D. (E. H. Minns, *Scythians and Greeks in South Russia*, repr. New York 1965, ii, 555-8; Pauly-Wissowa, *Real-encyclopädie*, v, A, 2, cols. 1921-2; for the other accounts concerning the name Kefe, see J. Buchan Telfer, *The Crimea and Transcaucasia*, London 1876, i, 74). With one or two exceptions, the name Kefe is not mentioned in other sources before the 13th century.

Geographical conditions linked the Crimea, and naturally Kefe, to the Ḳīpčaḳ steppes, and also via the Black Sea to Anatolia, and especially to Istanbul. In the development of the East-West and South-North transit trade, Kefe played a great role. Like other Crimean ports, it was dependent on Byzantium, but autonomous in its internal affairs. When the Latins captured Constantinople in 1204, it became dependent on the Byzantine kingdom of Trebizond. From the 13th century onwards, the Saldjūḳs of Rūm became concerned with the Crimean peninsula; there were some Turkish traders active at that time in Kefe, and the Kefe-Sinope-Istanbul route was the most used in the Black Sea (G. I. Bratianu, *Recherches sur le commerce génois dans la Mer Noire au XIIIe siècle*, Paris 1929, 228). When Genoa and Venice obtained permission to trade in the Byzantine lands, the Genoese assumed the more active role in the Black Sea and in the region of Crimea. The Crimean ports benefited from the peace established within the steppes by the Mongols, and the Genoese, probably *ca.* 1266, received permission to trade and to live in Kefe with the consent of the Golden Horde Khān Mengü Tīmūr, as well as from Urān Tīmūr, grandson of Djoči, who was the ancestor of the Crimean Khāns and who had been granted the land as an appanage (Bratianu, 198 ff.; W. Heyd, *Histoire du Commerce du Levant au Moyen-âge*, repr. Leipzig 1939, ii, 163 ff.). The Genoese built city walls around Kefe and also founded some other trade colonies near it. At the time when Ibn Baṭṭūṭa visited Kefe, it could accommodate 200 ships (*Riḥla*, tr. Gibb, i, 142-3). Kefe had a cosmopolitan population, and was nominally dependent on the Golden Horde Khān (decree of Tīmūr Ḳutlugh dated 800/1398, cf. A. Nimet Kurat, *Topkapı Sarayı Müzesi Arşivindeki Altınordu, Kırım ve Türkistan hanlarına ait yarlık ve bitikler*, Istanbul 1940, 148-9). Apart from the many Muslims, there were also Genoese, Greeks and Armenians and it was estimated that in 823/1420 the population in the city was *ca.* 40,000 (Schiltberger, *Travels and Bondage*, London 1879, 49, 50). Pero Tafur says that the city was as big as Seville, but twice as crowded; and since the slave-trade was important there, there were agents of the Mamlūk state despatching slaves from the Caucasus to Egypt (*Travels and Adventures, 1435-1439*, London 1926, 132, 133 ff.). In Kefe there was a *tudun* whose task was to look after the Muslims on behalf of the Golden Horde Khān, and also a customs officer to collect the duties on commerce (Kurat, *op. cit.*, 64, 149; Heyd, *op. cit.*, ii, 370).

After the Giray Crimean Khānate came into existence, it began a continuous struggle with the Genoese. With the support of an Ottoman force, Ḥādjdjī Giray (d. 860/1456) besieged Kefe; the Genoese bought them off by agreeing to pay a tribute of 3,000 gold pieces (Heyd, ii, 383), although Ḥādjdjī Giray continued to exert pressure on the town.

Attempts by the Genoese to impede Ottoman trade in the Black Sea determined the Ottomans to move against Kefe. Gedik Aḥmed Pasha conquered Kefe with 300 ships of varying tonnage at the beginning of Ṣafar 880/June 1475 (ʿĀshīḳpashazāde, *Taʾrīkh*, Istanbul 1332, 213-15; Ibn Kemāl, *Tewārīkh-i Āl-i ʿOthmān*, ed. Şerafettin Turan, Ankara 1954, 421-3; Heyd, ii, 401 ff.). Kefe and other Genoese strongholds were now taken directly under Ottoman sovereignty, whilst the landward parts and high plateau of Crimea were left to the Crimean Khānate. In the time of Bāyezīd II (886-918/1481-1512), Kefe became a princely *sandjaḳ* and first the prince Meḥemmed, and then after his death, Süleymān son of Selīm I, became the governors of this *sandjaḳ*. During his struggle for the throne, Selīm had had to stay in Kefe for a while (Topkapı Sarayı Müzesi Arşivi, N.E. 98; Çagatay Uluçay, *Yavuz Sultan Selim nasıl padişah oldu*, in *TD*, ix (Istanbul 1954), 81, 89-90).

The trade of Kefe was now in the hands of Turkish Muslim traders, following the Kefe-Sinop-Istanbul and Kefe-Trebizond routes, and according to the Kefe customs record book, dated 892/1487, trade was brisker than before (see Başbakanlık Arşiv Genel Müdürlüğü, Kefe mukataası defteri, No. 5280 *mükerrer*).

The internal condition of the town is known from a *taḥrīr* register from the reign of Süleymān I; according to this, Kefe was divided into three sections, the Ič Ḳalʿe (Inner fortress), the Frenk Ḥiṣārī (the European castle) and the Ḳalʿe altī (the lower side of the castle); Muslims resided in Ič Ḳalʿe and Frenk Ḥiṣārī, and Christians (such as Greeks, Armenians, Russians), Jews and Circassians used to stay in Ḳalʿe altī (Khāk-ī-Ḳalʿe) (Başbakanlık Arşiv Genel Müdürlüğü; Tapu-Taḥrīr defteri, No. 370, pp. 481-3).

Muslims	*quarters*	*local groups*	*house-holds*	*single persons*
Frenk Ḥiṣārī	10	—	139	34
Ḳalʿe-i Bīrūn	11	—	176	52
non-Muslims				
Khāk-ī Ḳalʿe		26		
Greeks	—		519	27
Armenians	—		1338	74
Russians	—		34	1
Circassians	—		11	—
Jews	—		92	1
Totals	21	26	2309	189

In the quarters where Muslims lived, there were 17 small mosques and 2 large ones. The taxes collected from Muslims and Christians were assigned as personal revenues for the *sandjak beg*. Goods imported into Kefe included hemp, dyestuffs, various kinds of thread, cotton cloth, beeswax, oil, fat, rice, cheese, hardware, etc. (Kefe mukataası defteri, No. 5280 *mükerrer*). Exports included various kinds of fruits, olives, dried and fresh fruits, wheat, corn, barley, chickpeas, lentils, flour, honey, olive oil, horses, cattle, various kinds of leather, dried fish and caviare (*Ḳānūn-name-i iskele-yi Kefe*, Taputaḥrīr defteri, No. 370, p. 479). Above all, slaves captured in South Russia and the Ḳîpčaḳ steppes were sent to Kefe, which was a traditional centre of the slave-trade. The annual customs income of Kefe was 620,000 *aḳčas* (*Ḳānūn-nāme-yi iskele-i Kefe*, pp. 479, 483; for the *pendjik* duty (sc. that which used to be taken for each slave) in 1118/1706, see Kâmil Kepeci Tasnifi, No. 5277, p. 70b). In 1052/1642 there were 4,000 houses in Kefe; 3,200 of these were occupied by Muslims and the rest by the minorities, especially by Armenians and Greeks (Chardin, *Voyages*, Amsterdam 1701, i, 104). When Ewliyā Čelebi visited the city, the Muslims used to live in 80 districts, and Christians used to live as 120 local groups. Within and outside the town, there were 9,060 houses, 20 fountains, 105 *sebīls*, 9 inns for bachelors, 1,010 shops, 160 flour mills, 50 smaller mosques, 60 big mosques, 9 dervish *tekkes*, 45 schools, 10 public baths and 43 traders' caravanserais. Among the 167 different craftsmen, the most notable were tailors, jewellers, shoe makers, and prayer-rug weavers; most of the population in the second half of the 11th/17th century were involved in the slave trade or the oil and export of honey (*Seyāḥatnāme*, vii, 673 ff., 678-9, 682). In the town of Kefe, which now acquired a characteristic Turkish appearance, the most prominent buildings included the mosque of Sultan Selīm I; the mosque of Prince Süleymān; the Kule Kapisi mosque, built in 888/1483; the Sultan Süleymān public bath; the Kodja Ḳāsim Pasha Khān, built in 981/1573; the Wezīr Khān; the tomb of Muṣṭafā (d. 1070/1659-60); and the Shehīd Baba Ziyāreti (Ewliyā Čelebi, vii, 673 ff., 682; Başbakanlık Arşiv Genel Müdürlüğü, Ali Emiri Tasnifi, I. Mahmud kismi, No. 1522, III. Osman kismi, No. 563).

In the face of pressure from the Cossacks and Russians from the 11th/17th century onwards, the fortress of Kefe was strengthened in the second half of that century (*ibid.*, vii, 671 ff., viii, 31).

Kefe, though normally a *sandjaḳ*, was sometimes treated as an *eyālet* also (Başbakanlik Arsiv Genel Müdürlüğü, Kâmil Kepeci tasnifi, Ruus defteri, No. 262, p. 217, see also Mühimme defteri, No. VII, pp. 19, 22-3 and various other places). It was finally erected into an *eyālet* in 1010/1602 (C. Orhonlu, *Osmanlı tarihine ait belgeler*; *Telhisler (1595-1605)*, Istanbul 1970, 78), and it remained as such till 1191/1777. There was no organisation of *tīmārs* or *zeʿāmets* in the *eyālet*, but instead it had an administration which consisted of a *māl defterdāri* and the deputy clerks of the *Dīwān*; a customs superintendent with a staff of 50, an Agha of Janissaries, a *djebedji aghasî*, and a *Topdju aghasî*. There was a fleet of 5 ships under the command of the Admiral of Kefe (Ewliyā Čelebi, vii, 668). When the *beylerbeyi* of Kefe was occupied elsewhere, his deputy was the *sandjaḳ beyi* of Kefes (Fîndîḳlîlî Meḥmed Agha, *Nuṣretnāme*, simplified version by Ismet Parmaksızoğlu, Istanbul 1963-6, i, 145, 167, ii, 417). In the first half of the 11th/17th century the *eyālet* of Kefe consisted administratively of the *ḳaḍāʾs* of Kerč, Sughdāḳ and Menkūb, and there were 3,200 households paying the poll-tax or *djizya*. This last was collected by a *muḥaṣṣil* instead of the *defterdār*. Since the incoming Christian population of the province was increasing, the *djizya* land registers of the province had frequently to be brought up to date. Hence in 1042/1633 the *beylerbeyi* of Kefe was authorised to assume this responsibility as *muḥaṣṣil-i emwāl* and *muḥarrir-i Kefe* (Başbakanlık Arşiv Genel Müdürlüğü, Maliyeden Müdevver Defterler, No. 3722, pp. 51, 52). In the following century, the customs of the port of Kefe, plus the *ʿöshür* and other taxes coming from Gözleve, Taman, Balîklagî, Ḳalʿe-i Djedīd, Kerč and Ḳîzîltash in 1181/1767 produced 4,238,500 *aḳčas*. Trade was no longer in the hands of Muslims, but in the hands of traders looking to Russia (Başbakanlık Arşiv Genel Müdürlüğü, Kâmil Kepeci tasnifi, No. 199, p. 299, 343; for the state of the revenue of Kefe in 1118/1706, see Kâmil Kepeci Tasnifi, No. 5277, p. 14a). The Turks used to call Kefe "Istanbul the Lesser" or "Half of Istanbul", because of its ethnic diversity.

During the Ottoman-Russian War of 1149-51/1736-9, Kefe in Muḥarram 1149/May 1736 narrowly escaped attack by a Russian army (*Kırım tarihi veya Necati Efendi'nin Rusya sefaretnamesi*, ed. Faik Reşit Unat, in *Tarih Vesikaları*, xv (Istanbul 1949), 226). The military command (*Seraskerlik*) of Kefe was first instituted during the above-mentioned War, and later the *Seraskerlik* of the Crimea, with this office held by the *Beylerbeyi* of Kefe. The last *Beylerbeyi* of Kefe was Abaza Meḥmed Pasha who was appointed in Shawwāl 1184/February 1771 (for the *beylerbeyis* between 1168/1755 and 1185/1771, see Başbakanlık Arşiv Genel Müdürlüğü, Tahvil Defteri, No. 16, p. 42). At the end of the war beginning in 1182/1768, Kefe and the Crimea were both captured by the Russians. The Muslim Turkish population started even in the opening stages of the war to migrate into the interior of the Crimea and also left by ship to other Ottoman territories. At that time, the population of Kefe was 20,000 and included many Greeks and Armenians; it was recorded that there were about 50 small and big mosques and 56 churches (*Kırım tarihi veya Necati Efendi'nin Rusya sefaretnamesi*, in *Tarih Vesikalari*, xiv (Istanbul 1944), 139, 147, 225). The Russians attacked Kefe again in 1191/1777 and captured it. Despite the Ayvalîkavak order for the reduction of troops (1193/1779), the Russians continued to hold Kefe as well as some other strategically important parts of Crimea, and strengthened their defences.

When Kefe was finally captured by the Russians in 1197/1783, its port was mined, and there had been much destruction; according to the oldest Russian map of the town, there were in it 29 mosques, 13 Greek churches and 22 Armenian ones. Out of 813 houses, 694 belonged to Turks. (For the situation in 1782, see W. Eton, *A Survey of the Turkish Empire*, London 1799, 328-9, 333; cf. also P. Mines Bijiskyan, *Karadeniz kıyıları tarih coğrafyası*, tr. H. D. Andreasyan, Istanbul 1969, 97). Catherine II of Russia gave the city its old name of Theodosia (Russian Feodosia), but for a short time its name was still officially accepted as Kefe. Despite efforts at restoration, the town's position remained depressed, and in 1823 it still looked neglected. However, the direct trade with Istanbul revived somewhat. In that time the population of Kefe consisted of Greeks, Jews and Turks; some of the Jews were Karaite

Turks [see KARAITES ii] (G. Matthew Jones, *Travels in Norway, Sweden, Finland, Russia and Turkey, also on the Coasts of the Sea of Azof and of the Black Sea*, London 1827, ii, 219-20, 222; for the state of Kefe in 1836, see E. Spencer, *Travels in Circassia and Krim Tartary*, London 1837, ii, 234-5). Although the Russians called the city Feodosia, the name of the town was still Kefe to most of its population, even as late as 1836 (E. Spencer, *Travels in Circassia*, ii, 235). At this period, Kefe was in the transitional stage between being a Tatar and a Russian town, but gradually gained the characteristics of a summer resort, and in the latter part of the 19th century it was a city with a population of 10,000, with an additional 3,000 to 5,000 summer visitors every year (Telfer, *The Crimea and Transcaucasia*, ii, 142, 144 ff.). In 1897, only 3,200 of the whole population of 27,238 were Crimean Tatars.

KELEK, KELLEK, KELIK (Turkish-Arabic) is a curious raft made of bags of goat's hair, which is already known from the sculptures of Nineveh and has hardly changed in the course of centuries. It is the Akkadian *kalakku*, Syriac *kəlakkā*. The word, particularly mentioned by travellers in Mesopotamia and Persia, is said to be typical for the upper part of the Tigris. The *kelik* used between Diyārbekir and Baghdād is put together as follows. On a layer of 100 to 300, and sometimes even 400, inflated goatskins, each tied up with two strings one metre long and made of liquorice-fibre, are laid five bars of *kawak*-wood 6-10 cm. thick and about 7 m. long. On these are put diagonally, at intervals of 40 cm., 30 bundles of reeds each consisting of two parts. Seven bars, each 15 cm. thick, cover the bundles diagonally and over these are laid 8 cross-bars consisting of 2 parts. When persons are transported, reeds are spread plentifully on this construction and one or two small shelters, made of wood and covered with mats (*ʿarshe*), are erected on it for the travellers. Depending on its size, the *kelek* has two to six oars. On arrival at Baghdād, the cargo is unloaded, and the wooden construction removed: the bags are taken out, deflated and dried; they can then be kept for about 2 years. The *kelekči* then loads them up on a donkey and returns home. The journey down the river Tigris may be hampered by the wind, which drives the *kelek* to the bank, where the traveller may have to wait several days for better weather.

Several passages of the *Thousand and one nights* show that the *kelek* was not always such a complicated raft. Just like the *ṭawf* (pl. *aṭwāf*), it could be constructed of wood only; Sayf al-Mulūk builds a *kelek* of long trunks tied together with cords (ed. Habicht, iv, 245¹¹, 246³ ff., tr. Littmann, Wiesbaden. 1953, v, 265 f.). He even (*ibid.*, 264¹⁴, tr. v, 279) utilises doors of aloe and sandalwood, which he ties together with cords of silk. In the manuscripts of the *Thousand and one nights*, the word *kelek* has on the other hand not always been understood by the copyists, who have often substituted for it *fulk*, which graphically comes near to it, although the context requires the meaning "raft". The confounding of *kelek* with *fulk* "Noah's Ark" (in the Ḳurʾān) may have led to the assumption that *kelek* has the same meaning, even though this is as wrong as relating *ṭawf* (*ṭōf*) to *ṭūfān* "deluge".

(H. KINDERMANNN)

KEMĀKH, Armenian Gumukh or Ani, usual Syriac form Ḳamaḥ, modern Turkish Kemah, a small town in eastern Anatolia on the Ḳarā Ṣū or upper Euphrates, now the centre of a *kaza* of the same name within the *vilayet* of Erzincan, and a station on the railway connecting Sivas with Erzincan. The present form of the name derives from Greek κάμαχα. The Arabic geographers and historians usually refer to it as Kamkh (thus in Ibn Ḥawḳal², 192, 195, tr. Wiet, 188, 190-1; al-Yaʿḳūbī, *Historiae*, ii, 447), although Yāḳūt, iv, 479, confirms that Kamakh was the more usual form.

During the Umayyad and ʿAbbāsid periods, Kemākh was a frontier fortress, possession of which oscillated between the Arabs and the Byzantines. The first Arab attack under Ḥabīb b. Maslama [*q.v.*] was a failure. A second attempt by Ṣafwān b. Muʿaṭṭal was also unsuccessful, but he made another attack together with ʿUmar b. al-Ḥubāb al-Sulamī in 59/678-9, and this time the fortress capitulated; the occupation by the Muslims was, however, short-lived (al-Balādhurī, *Futūḥ*, 184 ff.). The Greeks lost it once again, this time to Maslama b. ʿAbd al-Malik [*q.v.*], and it continued to change hands between the two sides. In 149/766 the caliph

al-Manṣūr despatched against it a successful force under al-ʿAbbās b. Muḥammad and ordered its fortification as a frontier post against the Khazars (al-Yaʿkūbī, *loc. cit.*). The Byzantines recaptured it in 177/793-4, and apart from a period during the caliphate of al-Maʾmūn, it remained nominally subject to the Emperors until the Battle of Mantzikert.

The first Türkmen raids on Kemākh came in 449-50/1057-8, and shortly after the Battle of Mantzikert or Malāzgerd [*q.v.*] in 463/1071, it was in the hands of Mengüdjek Aḥmad, who apparently had received the area round Erzindjan, including Kemākh, as a grant from Alp Arslan. Inscriptions on the Great Mosque at Diwrīgī state that Mengüdjek Aḥmad had captured Kemākh from the infidels. He made it his capital and was buried there on his death in 512/1118. In 536/1142 the Mengüdjek principality was divided amongst three heirs, the capital falling to Malik Maḥmūd. In 622/1225, the Saldjūk sultan ʿAlāʾ al-Dīn Kaykubād [*q.v.*] annexed Erzindjan, and the last Mengüdjekid Dāwūd Shāh sought an alliance against him by offering Kemākh to the *amīr* of Erzurum al-Ashraf and to the Khwārazm-Shāh Djalāl al-Dīn Mankūbirtī. Both of these refused to intervene, and the Saldjūk ruler annexed the region including Kemākh (Ibn Bībī, *Tawārikh-i āl-i Saldjūk*, ed. Houtsma, in *Recueil de textes* . . ., Turkish text, iii, 387-8, Persian text, iv, 148-9). After the Mongol conquest of Anatolia in 641/1243, Kemākh came within the Il-Khānid dominions.

Political instability in this region consequent on the decline of the Il-Khānids makes it difficult to follow the fortunes of Kemākh in the 8th/14th century. It seems to have at first formed part of the domains of the Eretna dynasty [*q.v.*] and then to have enjoyed a semi-independence between the rival factions of Ḳāḍī Burhān al-Dīn [*q.v.*] and Muṭahharten, the *bey* of Erzurum. In 796/1394 the *wālī* of Kemākh submitted to Burhān al-Dīn and requested assistance against the agression of Muṭahharten. In 799/1396-7 Burhān al-Dīn placed Kemākh under his own direct rule (ʿAzīz b. Ardashīr Astarābādī, *Bazm u razm*, ed. M. F. Köprülü). Shortly after this, the town fell to the Ottoman sultan Bāyazīd I (Solak-zāde, *Taʾrīkh*, Istanbul 1298, 374).

However, in 804/1402 Tīmūr captured the town on his way to confront Bāyazīd at Ankara (Ibn ʿArabshāh, *ʿAdjāʾib al-maḳdūr*. Eng. tr. J. H. Sanders, London 1936, 174-5). After the battle, Tīmūr appointed a certain Mīrzā Shams al-Dīn as governor of Kemākh. Soon afterwards, it came under the rule of ʿUthmān Ḳarā Yülük, the founder of the Aḳ Ḳoyunlu dynasty [*q.v.*], and remained under their control, despite a siege by the Ḳarā Ḳoyunlu Pīr ʿUmar (Abū Bakr-i Ṭihrānī, *Kitāb-i Diyārbakriyya*, ed. Lugal and Sümer, 33, 35, 69-71). It was the Aḳ Ḳoyunlu Uzun Ḥasan who established the laws of Kemākh in the *Ḳānūn-i Ḥasan Pādishāh*, which the Ottomans adopted with little change.

After the fall of the Aḳ Ḳoyunlus in 908/1502, Kemākh passed briefly into the hands of the Ṣafawids, until in 921/1515 it fell to the Ottoman sultan Selīm I; henceforth, it remained part of the Ottoman empire till the collapse of the latter. The Ottoman *Ḳānūn-nāme* of 922/1516, based on the Aḳ Ḳoyunlu laws, gives the impression that the town derived much of its wealth from the transit trade through the Euphrates valley (Ö. L. Barkan, *XV ve XVI asırlarda Osmanlı imperatorluğunda ziraî ekonominin hukukî ve malî esasları*, Istanbul 1943, 184-5). In the mid-11th/17th century, according to Ewliyā Čelebi, there was a garrison in the Kemākh fortress of a Janissary chief and 500 soldiers, and the economy of the town depended mainly on the salt mined nearby and sold in the town and on a fine-quality cloth woven there (*Seyāḥat-nāme*, ii, 375-6). In 1830, J. Brant recorded a population there of 400 Turkish and 30 Armenian households (*Jnal. of the Geogr. Soc.*, 1836), and in 1892, V. Cuinet registered for the whole *ḳaḍāʾ* 14,547 Muslims, 3,692 Armenians and 633 Greeks (*La Turquie d'Asie*, Paris 1892, i, 220 ff.). After its definitive incorporation into the dominions of Selīm I, Kemākh was well within the Ottoman frontiers and hence lost much of its earlier strategic importance; however, during the First World War it again became an important defensive position in the fighting against the Russians.

KEMAL [see atatürk].

KEMĀL, ʿalī (1867-1922), Turkish writer, journalist and politician. His father Ḥādjdjī Aḥmed Efendi had come as a young man from a village near Çankırı in Central Anatolia to the capital and had made a fortune as a wax-maker and had become the warden of his gild. ʿAlī Riḍā (as ʿAlī Kemāl was called until his student days, see below) was born in 1867 in the Süleymāniye district of Istanbul, to his father's second (Circassian) wife and grew up in a traditional conservative family atmosphere. After attending the local schools, he entered the School of Political Science (*Mekteb-i Mülkiye*), where he particularly enjoyed the courses of Murād Bey (known as Mīzāndji Murād, 1853-1914, the future Young Turk leader in exile, who later made his peace with ʿAbd al-Ḥamīd II, see B. Lewis, *The emergence of modern Turkey*, index). The *Terdjüman-ı Ḥaḳīḳat* was his favourite newspaper, where he admired the poems and articles of Muʿallim Nādjī, the leader of the literary opposition against the modernists, particularly against ʿAbd al-Ḥaḳḳ Ḥāmid and Redjāʾī-zāde Ekrem. He also began to contribute to a student magazine *Gülshen* under the pen-name ʿAlī Kemāl, which gradually replaced that of ʿAlī Riḍā. While a student at the *Mülkiye*, he in 1886 went to Europe, where he spent over a year in Paris and Geneva and improved his French. On his father's death in 1888, he returned to Istanbul to attend to family affairs and complete his studies. Inspired by what he saw in European universities, he attempted to set up, together with a number of his university friends, a students' association (for details see his article *Mekātib-i ʿāliye makhṣūṣ djemʿiyyetler*, in *Iḳdām*, 20 August, 1908). The authorities became suspicious and the *ḳonaḳ* where they held their meetings was raided by the police. The students were rounded up and ʿAlī Kemāl and four others (including ʿAbd al-Ḥalīm Memdūḥ, a future Young Turk writer) were sent to prison where they spent several months. Eventually ʿAlī Kemāl and a poet friend of his (Fakhrī of

Ḳastamonu) were banished to Aleppo. He spent five years there, where he was officially attached to the office of the *vālī* with a salary and was also allowed to teach literature and French in the local high school (*mekteb-i iʿdādī*). Interesting details of his life and literary activities in Aleppo are given in his autobiography (see below). In 1894 he managed to escape to Paris and became a regular correspondent of the Istanbul daily *Iḳdām*, in which he published a highly popular series of letters and articles (for the controversy over the doubtful originality of some of his letters, see Ḥüseyn Djāhid, *Ghawghālarïm*, Istanbul 1326 *rūmī*/1910, 37-92). This occurred at a time when no political refugee could get anything published in Istanbul under his own name, and this privilege has been taken as an indication that ʿAlī Kemāl was by no means *persona non grata* in the capital. While in Europe he was in regular contact with the Young Turks, but never became one of them; he disagreed with most of their ideas, and his sympathies lay rather with ʿAbd al-Ḥamīd to whom, as later evidence showed, he offered his services as adviser and informer (copies of his reports (*zhurnals*) and letters to the Sultan and his agents, some in facsimile, have been published; see Ahmet Bedevi Kuran, *Osmanlı imperatorluğunda inkılap hareketleri ve milli mücadele*, Istanbul 1959, 302-9, and Asaf Tugay, *İbret, Abdülhamid'e verilen jurnaller ve jurnalciler*, Istanbul n.d., 200-17). In 1897 he was appointed second secretary in the Brussels Embassy, reportedly as a reward for his rôle in Murād Bey's defection (Yahya Kemal [Beyatlı], *Siyasi ve edebi portreler*, Istanbul 1968, 78), but the Ambassador, Munīr Pasha, who disliked him, never let him take up his appointment However, ʿAlī Kemāl was allowed to use the title and to draw his salary for several years (*Ṭanīn* of 20 July 1324 *rūmī*/2 August 1908 and Süleyman Nazif's biographical notes used by Ibnülemin M. K. İnal, see Bibliography). From Paris he moved to Egypt and became the superintendent of the estates of two Egyptian princesses, Aḥmed Djelāl ed-Dīn Pasha's step-daughter and Maḥmūd Mukhtār Pasha's wife. He contributed to local Young Turk papers and founded the newspaper *Türk* (which was Ottomanist, in spite of its title). He made a fortune by speculating on the stock exchange, but went bankrupt following a crash in the market. When he returned to Paris in 1908, the revolutionary officers in Macedonia, in contact with the Young Turk organisation in Europe, had begun to prepare their move against the Sultan. ʿAlī Kemāl corresponded with the Palace and arrived in Istanbul a few days before the revolution of 23 July 1908. He was in the Sultan's presence when the crisis was being discussed (Yahya Kemal, *op. cit.*, 79). ʿAbd al-Ḥamīd rewarded his advisory services with a purse containing 450 gold pieces (*Ṭanīn*, 25 July 1324 *rūmī*/7 August 1908; ʿAlī Kemāl admitted this, but corrected the sum to 260 pieces, *Iḳdām*, 27 July 1324 *rūmī*/9 August 1908). The conservative journalist Aḥmed Djewdet (1862-1935), who had no sympathy for the committee of Union and Progress (CUP) now getting ready to seize power, invited ʿAlī Kemāl to be the leader-writer of his *Iḳdām*. His first article *Māḍīden Ātīye* ("From the Past to the Future") appeared on July 30 1908, one week after the Revolution. A flood of articles followed daily on politics, history, education, literature, language, etc. After an absence of twenty years from the country, he wrote with great zeal and enthusiasm, in a somewhat didactic but entertaining and very personal style which soon made him one of the most popular journalists of the period. At the same time he taught diplomatic history in the Faculty of Letters and at the *Mülkiye*. His dislike of the CUP, which in the meantime employed everything (including political assassination) to influence and control the new régime, soon developed into a bitter hatred, and he began to attack daily the Committee's policy and methods. On 12 March 1909 ʿAlī Kemāl handed over his column to Dr. Riḍā Nūr, deputy for Sinop, who published his famous article of warning which was greeted as a manifesto interpreting all the grievances of the opposition: the CUP was accused of oligarchic tendencies, *ḳomitadji* tactics, bribery, favouritism, intolerance of opposition, etc. ʿAlī Kemāl was a candidate of the Ottoman Liberal Party (*ʿOthmānlï Aḥrār Fïrkasï*) in the by-election of April 1909, but was defeated by the CUP candidate. He became more violent in his accusations. Outstanding Unionists such as Ḥüseyn Djāhid and Bahāʾ ed-Dīn Shākir attacked him in equally violent terms in CUP organs like *Ṭanīn* and *Shurā-yï Ümmet* and exposed his ambiguous relations with ʿAbd al-Ḥamīd. The disturbing atmosphere created by the relentless campaign of the opposition press like *Iḳdām*, *Mīzān*, *Serbesti*, *ʿOthmānlï* and particularly *Volḳan*, led on 13 April to a mutiny of the soldiers, incited by fanatical and disgruntled elements (for a good analysis of the mutiny and its background see Sina Akşin, 31 *Mart Olayı*[2], Istanbul 1970). ʿAlī Kemāl hid in the house of an English friend and fled to Europe as the army sent by Young Turk headquarters in Salonika (*Ḥareket ordusu*, originally *Ḥarekāt Ordusu* "Operations Army") marched on the capital. In Paris he contacted unionist leaders like Fetḥī (Okyar) and Djāwīd in the hope of a compromise with the CUP. When this failed, he contributed articles to *Meshrūṭiyyet*, Sherīf Pasha's anti-Unionist organ abroad. He had already become a member of the Liberal Union (*Ḥurriyet ve İʾtilāf Fïrḳasï*) founded in November 1911. In July 1912 the group of "Saviour Officers" (*Khalāṣkār Ḍābiṭān Grupu*) brought down the Unionist government, and the Liberals assumed Power. ʿAlī Kemāl returned to Istanbul and resumed his leaders in the *Iḳdām*. But on 23 January 1913, the Unionists carried out a violent *coup d'état* (*Bāb-ï ʿĀli Baskïnï*) and ʿAlī Kemāl was arrested. Djemāl Bey (later Pasha and a member of the Unionists triumvirate), the military governor of Istanbul, visited him in prison and bribed him into leaving the country; hence ʿAlī Kemāl went to Vienna on a government allowance (see Djemal Pasha, *Memoirs of a Turkish statesman, 1913-1916*, London 1922, 16; revised Turkish edition, *Hatiralar*, edited by his son Behçet Cemal, Istanbul 1959, 22-26). He returned to Istanbul in May 1913. The assassination of the grand vizier Maḥmūd Shewket Pasha on June 11 1913 gave the CUP the opportunity to crush the opposition completely. ʿAlī Kemāl, who had promised Djemāl Pasha to keep out of politics, was however safe. With his support, he was allowed to publish the same year a daily paper, the *Peyām*, to which some leading young writers contributed (Refik Halit Karay, *Minelbab İlelmihrab*, Istanbul 1964, 63-64) but which was suppressed on the outbreak of the World War I.

ʿAlī Kemāl spent the war years completely secluded from public life on the island resort of Büyükada and along the Bosphorus shores. He collected manuscripts and rare books and concentrated on the study of classical literature and history. After the signing of the armistice of Mudros (30 October 1918), which sealed the fate of the Unionist régime, Mihran Efendi, the editor of the daily *Ṣabāḥ* invited ʿAlī Kemāl to

be a leader-writer of his paper, and he eagerly accepted. By this time the three CUP Leaders Enwer, Ṭalʿat and Djemāl had fled the country. He immediately began his violent attacks against the Unionists, daily enumerating the mistakes and misdeeds they had perpetrated before and during the War. The Allied fleet reached Istanbul on 13 November; the whole city was put under allied control, and hundreds of Unionists were arrested. The Greeks, supported by the Allies, had landed in Izmir and were advancing towards the interior. ʿAlī Kemāl joined the first cabinet of Dāmād Ferīd Pasha as Minister of Education (4 March 1919). He acted with moderation for a while, and resisted the partisan pressures of the Liberal Union (Yahya Kemal, *op. cit.*, 87-8). In the meantime, the nuclei of the national resistance movement were being set up all over the country and the first guerillas began to combat the Greek invaders on the Aegean coast. ʿAlī Kemāl, who became Minister of the Interior in the second Dāmād Ferīd Pasha cabinet on May 19 1919 (the very day of Muṣṭafā Kemāl's landing at Samsun), soon completely espoused the polity and strategy of Sultan Meḥemmed VI, his Grand Vizier and their associates: sc. to ignore the violations of the armistice terms; to follow the instructions of the Allies and in the hopes of winning lenient peace terms, to offer no resistance to invading foreign armies, although this amounted, in the eyes of the nationalists, to collaborationism. ʿAlī Kemāl was convinced that Muṣṭafā Kemāl's movement in Anatolia was nothing but a resurgence of Unionist ambitions, organized and supported by the survivors of the CUP (see particularly his article *Ittiḥād we Teraḳḳī öldü, yashasın Ittiḥād we Teraḳḳī!* "The CUP is dead, long live the CUP!", in *Peyām*, 20 December 1919). This fundamental misjudgment of the national ferment in Anatolia caused him to mislead many of his readers and eventually sealed his own fate. On 18 June 1919, ʿAlī Kemāl, as Minister of the Interior, sent out to the provinces a circular against the formation of militia units and preparations for national defence, and assured the British authorities that every officer and government official obeying Muṣṭafā Kemāl's orders would be court-martialled (G. Jaeschke, *Türk kurtuluş savaşı kronolojisi*, Ankara 1970, 43-45). On 23 June he issued his famous secret circular in which he announced that "Muṣṭafā Kemāl Pasha had entirely failed in his new mission, and that he had been recalled in accordance with the demands of the English High Commissioner, and that orders issued by him should not be obeyed (Ghāzī Muṣṭafā Kemāl, *Nuṭuḳ*, Ankara 1927, 22, English tr.[2], *A Speech ...*, Istanbul 1963, 26-27). ʿAlī Kemāl was forced to resign (June 26) under the pressure of some of his colleagues in the cabinet who were sympathetic to the resistance movement (for the circumstances of his resignation, see his statement in *ʿAlemdār*, 3 July 1919; R. H. Karay, *op. cit.*, 138-143; and Jaeschke, *Türk kurtuluş savaşı ile ilgili ingiliz belgeleri*, Ankara 1971, 130-32). He complained of these colleagues to the Sultan who answered: "Your loyalty has been a great consolation and a source of great hope to me. The Palace will always be open to you at any time" (Ghāzī Muṣṭafā Kemāl, *op. cit.*, 22-5, English tr. 28). On 3 August 1919, ʿAlī Kemāl revived his *Peyām* and continued his campaign, with daily attacks on the leaders of the resistance movement in Anatolia and their supporters in Istanbul. Later *Peyām* was amalgamated with Mihrān Efendi's *Ṣabāḥ*, becoming *Peyām-ı Ṣabāḥ* (1st January 1920), with ʿAlī Kemāl as permanent leader-writer. ʿAlī Kemāl's activities and writings unified and strengthened the Liberal Union which had shown signs of disintegration. He became one of the two most enthusiastic supporters (the other being Refīʿ Djewād of the *ʿAlemdār*) of the collaborationist policy of the Sultan and of Dāmād Ferīd Pasha, which was to obey the instructions of the occupying forces and to try to suppress the resistance movement. Following this line of policy, ʿAlī Kemāl welcomed the reinforced allied occupation of Istanbul (16 March 1920), praised the successes of the Sultan's "disciplinary" troops dispatched to fight the Nationalists, and wrote a jubilant leader (25 May 1920) on the publication of the famous *fetwā* (11 April), followed by the death sentences *in absentia* on Muṣṭafā Kemāl and his associates. News of the Nationalists' successes made him vacillate occasionally; he would praise the bravery of the Turkish soldiers, but soon would relapse into his usual tirades with the *leitmotiv* of "false nationalism and the dangers of ignoring world opinion", etc. His vitriolic articles continued till as late as the end of August and early September 1922, when the Nationalists won a decisive victory and the routed Greek army was heading back towards Izmir. Only in his last three articles (8, 9, 10 September), when the Nationalist armies had reached the Aegean, did he admit his error and greeted "the great victory of the Turk" and claimed that "the goals had always been the same". But it was now too late. The Nationalist government had already decided to bring all those who had collaborated with the enemy to Ankara for trial. But as this proved difficult in occupied Istanbul, one man was chosen as a test case, and this was to be ʿAlī Kemāl, as the most prominent representative of the collaborators (see Dr. Riḍā Nūr, *Ḥayātım we Khāṭıratım*, British Museum, Or. 12591, 486b). Upon instructions from Ankara, Colonel Esʿad (later Pasha, 1875-1932), military governor and director of police of Istanbul, who was a trusted man of the Nationalists, took the necessary measures; on November 18 ʿAlī Kemāl was arrested by two plain-clothed policemen in a barber's shop in Beyoğlu (Péra) and taken by motor-boat to Izmid en route for Ankara and his trial. Nūr ed-Dīn Pasha, commander of the first army, interrogated him briefly in his headquarters. A big crowd was waiting outside. ʿAlī Kemāl met his death in the square when he was being taken away. The circumstances of his death, a mob lynching according to the received version, are variously reported in the sources. According to some, his death was arranged or precipitated by Nūr ed-Dīn Pasha for reasons of personal prestige (see Falih Rıfkı Atay, *Çankaya*[2], Istanbul 1969, 341-42; Yahya Kemal, *op. cit.*, 94-99; Riḍā Nūr, *op. cit.*, 487b; *Istanbul Ansiklopedisi*, Istanbul 1961, s.v.). ʿIṣmet Pasha (Inönü) then foreign minister, who with his party arrived on the very day of the incident at Izmid on his way to the Lausanne Peace Conference, publicly showed his strong disapproval of Nūr ed-Dīn Pasha for having ignored the government's instructions and having taken justice into his own hands.

ʿAlī Kemāl was primarily a journalist. His early articles in the *Iḳdām* (from 1894 onwards), which he forwarded from Paris as a "special correspondent", are mostly compilations from the French press, with occasional personal or autobiographical digressions (see below). Some of his articles published in Young Turk papers abroad throw light on contemporary ideological differences (e.g. his answer to Aḳčuraoghlu Yūsuf's famous essay, both published in the *Türk*, Nos. 24-34, Cairo 1904, reprinted later with the same essay, Aḳčuraoghlu Yūsuf, *Üč Ṭarz-ı*

Siyāset, 1327 *rūmī*/1911, 33-45). The thousands of articles which he published first in the *Iḳdām* and later in his own *Peyām* (which have not been collected) are of great documentary importance for understanding the atmosphere of the period and for following the development of political, social and cultural problems during the 1908-1914 period; but they should be read together with the articles of his great opponent Ḥüseyn Djāhid [Yalçin] in the *Ṭanīn*, the organ of the CUP. His articles of the last phrase, published in the revived *Peyām* (August-December 1919) and in the *Peyām-ı Ṣabāḥ* (1920-1922) typically reflect the frame of mind and the psychology of the Sultan's government and its supporters in occupied Istanbul during the time of the resistance movement in Anatolia. Apart from translations from the French, serialised in newspapers or published in book form and various minor publications, ʿAlī Kemāl is the author of the following works: (1) *Pāris muṣāḥabeleri* (a selection of his articles and letters published in the *Iḳdām* in the 1890s, 2 vols., Istanbul 1329, 1331 r./1913, 1915); (2) *Fetret* (written in England in 1895, published in Istanbul 1329/1913). Intended to be a novel, this book consists of a series of loosely-connected essays around its hero Fetret, the product of a mixed marriage, in which the author expounds his ideas on modernism, westernisation, literature, history and culture, and indirectly criticises his opponents of the *Therwet-i Fünūn* literary school, particularly his main adversary Ḥüseyn Djāhid; (3) *İki hemshīre* (Istanbul 1315/1899), a long short story, with much autobiographical material from the author's exile years in Aleppo; (4) *Čölde bir sergüzesht* (Istanbul 1316/1900; 2nd ed. of Nos. 3 and 4 published together under the title *Bir ṣafḥa-i shebāb*, Istanbul 1329/1913); (5) *Ridjāl-i İkhtilāl* (Istanbul 1329/1913), a study of the French Revolution and its impact on France and other European countries, consisting mainly of detailed biographies of Condorcet, Saint-Just, Danton and Robespierre; (6) *Edebiyyat-ı ḥaḳīḳiyye dersleri* (Istanbul 1330/1914), a collection of 12 essays, originally serialised in the *Iḳdām*, based on a course "Realism in Literature" given at the Sorbonne in the 1890s, with occasional remarks on contemporary Turkish literature; (7) *Rāshid müʾerrikh mi shāʿir mi ?* (Istanbul 1334/1918), an informal study on the 18th century chronicler Rāshid, prompted by Aḥmed Refīḳ's enthusiastic article on Aḥmed III and his grand vizier and son-in-law Ibrāhīm Pasha (*Sultan Ahmed-i Thālith we Dāmādı*, in *Yeñi Medjmuʿa*, No. 34 (1918), 149-53), in which ʿAlī Kemāl compares the method and techniques of oriental historiography with those of modern western history-writing, mercilessly condemning the former. After a long exposition on Oriental and particularly Ottoman classical poetry, he concludes that Rāshid was a mediocre historian but a remarkable poet of the Nabī school. This work is particularly interesting since it is, in a way, a recapitulation of the themes and *leitmotivs* which ʿAlī Kemāl elaborated and repeated in all his writings, adopting all the negative judgments passed on the Turks and the Ottoman Empire by European writers and observers, and thus developing a deep complex of inferiority *vis-à-vis* Europe and Europeans. Here we have the clues to his cosmopolitanism, his anti-nationalism and his feeling of helplessness in face of the West, his recurrent claim that it is futile to challenge the Great Powers (*Düwel-i Muʿaẓẓama*), and finally his constant advice for an acquiescent foreign policy and his *a priori* admission of the superiority of everything western (see also his articles of 12, 15, 17, 21, 23 January and 23 March 1909 in the *Iḳdām*); (8) *ʿÖmrüm*, ʿAlī Kemāl's memoirs about his early life, his school years and his exile period in Aleppo, were first serialised in the *Peyām* in 29 instalments from December 1329r.-/1913. A revised version was serialised in 32 instalments in the revived *Peyām* from 14 July 1335-r./1919. They have not been published in book form, but a critical edition in roman script was prepared by Berna Kazak in 1954 (Istanbul University Library, unpublished thesis, No. 2621).

When he was not involved in politics or in personal quarrels with his rivals, ʿAlī Kemāl wrote essays on *dīwān*-poetry, articles on contemporary literary problems, and occasionally poems which he published in the *Peyām-ı Edebī*, the literary supplement of his paper, to which many outstanding writers (Riḍā Tewfīḳ, Aḥmed Refīḳ, Yaḥyā Kemāl, Yaʿḳūb Ḳadrī, etc.) contributed. In poetry and literary criticism, ʿAlī Kemāl was a disciple of Muʿallim Nādjī (1850-93), a neo-classicist and an ardent opponent of the modernist school. He admired the *dīwān*-poetry, had a very low (and wrong) opinion of classical Turkish prose (about which, like most of his contemporaries, he knew very little), and utterly despised the three generations of literary modernists: the *Tanẓīmāt*, the *Therwet-i Fünūn* and the "National Literature" (*Millī Edebiyāt*) schools. He explained his views on Turkish literature in detail in a long letter which he sent in 1918 to Rūshen Eshref (Ünaydın), who had been interviewing the leading writers of the period (Rūshen Eshref, *Diyorlar ki*, Istanbul 1918, modern Turkish ed. by Şemsettin Kutlu, Istanbul 1971). In spite of the personal cachet of his style (surprisingly much praised by the purist poet Yaḥyā Kemāl, *op. cit.*, 71-2), ʿAlī Kemāl had an awkward, anachronistic way of writing. Following the tradition of the classical Ottoman *munshīs*, he filled his essays with copious *cliché* quotations from the Arabic, Persian and Turkish verse. Like a few "recalcitrant" contemporary writers (e.g., Djenāb ed-Dīn, Shihāb Süleymān Naẓīf, ʿAlī Ekrem, etc.) he took a hostile stand against the language reform movement of the post-1908 period and completely ignored the general trend towards the turkification of the written language. His hair-splitting concern with grammatical rules did not much help to improve his style, as stated by the great contemporary stylist (and his friend and colleague) Refīḳ Khālid (*op. cit.*, 63).

A prolific writer of great vitality, with a remarkable encyclopaedic knowledge, ʿAlī Kemāl lacked the sense of history and reality. He wasted his talents in endless futile arguments, and ruined his career and himself by following his unbounded ambition, his blind obstinacy and his violent partisanship to the very end.

(Fahir İz)

KEMĀL, MEḤMED, NĀMİḲ one of the most prominent figures of Turkish literature in the second half of the 19th century, whose fame is due to his works in various fields, including his patriotic and political life.

I. *Life*. Kemāl's mother was Fātima Zahrāʾ K͟hānīm, the daughter of ʿAbd al-Laṭīf Pas͟ha and Mak͟hdūme K͟hānīm. His father Muṣṭafā ʿĀṣim Bey, who was well versed in history, mysticism and especially in astrology, had many a poet, scholar and statesman among his ancestors. His ancestry goes back to S͟hehīd Ṭopal ʿOt͟hmān Pas͟ha of the Mora (Morea or Peloponese), who had been Ṣadr-i Aʿẓam in the 18th century and was famous for his acts of heroism; Kemāl was particularly proud of him. Kemāl was born on 26 S͟hawwāl 1256/21 December 1840 at Tekfūrdag͟hī (Tekirdag͟hī) and spent his early years with his grandfather. Together with his grandfather, who in Istanbul held the offices of *Mühürdār* and *Kesedār* (M. Ṣalāḥ al-Dīn, *Bir türk diplomatīnīñ evrāḳ-i siyāsiyyesi*, Istanbul 1306, 11) and in the provinces those of *mütesellim, muḥaṣṣīl* and *mutaṣarrīf*, he stayed in Gelibolu, Tīrk͟hala (Trikala), Afyon Ḳaraḥiṣārī (1846), Kütahya (1848), Ḳarṣ (March 1853-July 1854) and Ṣofya (May 1855-September 1856). When Kemāl was 8 years old he lost his mother in Afyon (30/31 August 1848), and he married in Ṣofya Nesīme K͟hanīm, the daughter of the *ḳāḍī* of Nīs͟h, when he had reached the age of 16. Shortly after that he returned to Istanbul in the company of his grandfather, who was dismissed from his office of Ḳaymaḳām of Ṣofya. Following the deaths of his grandfather and grandmother, Kemāl had to settle down in his step-mother Dürriyye K͟hānīm's house in K͟hūbyā, as the mansion of ʿAbd al-Laṭīf Pas͟ha had to be sold in order to pay his debts.

Since ʿAbd al-Laṭīf Pas͟ha was resident in Istanbul in between two appointments, Muṣṭafā ʿĀṣim was able to deal with the spiritual upbringing of Kemāl during these periods; another important influential factor was his grandfather, whose virtues are praised by the poets of Afyon and who was a member of the Mawlawī convent next to their house. It is probable that Kemāl was instructed in *samāʿ* and in Persian whilst resident in Afyon. All the sources seem to agree on the fact that he attended the *Dār al-Maʿārif* in Istanbul for about a year and a half when he was 12-13 years old (Maḥmūd Ojvād, *Maʿārif-i ʿUmūmiyye Naẓāreti tārīk͟hče-i tas͟hkīlāt ve idjrāʾāti*, Istanbul 1338, 40, 97; ʿOmar Fārūḳ Akün, *Namık Kemāl*, in *İA*, ix, 55b). Kemāl, whose spiritual life was nourished with poetry and music as well as with mystical knowledge, was schooled in the works of Muḥyī 'l-Dīn Ibn al-ʿArabī when he was apprenticed to the *müderris*-poet Sayyīd Meḥmed Ḥāmid (1779?-1854), under whose guidance he started reading Turkish *dīwān* poets such as Nābī and sections of the *Mat͟hnawī*, while resident in Ḳarṣ (Banı Çiçak Kırzioğlu, *Namık Kemal'ın Karstaki hocası müderrıs büyük Hâmid Efendi*, in *Türk Kültürü*, no. 2/22, August 1964; for this were used the works of M. F. Kırzioğlu, *1855 Ḳarṣ Ẓaferi* and *Ḳarṣ Tārīk͟hi*). During the time he spent in Ḳarṣ he was also busy with sports like hunting and horse-riding.

We are not able to trace back the exact date of the beginning of Kemāl's official career; however, we know that already in the year 1859 he was a secretary to the Bāb-i ʿĀlī. When Leskofčalī G͟hālib was appointed to be Chief Secretary of Customs (*Emtiʿa Gümrük'ü Taḥrīrāt Bas͟hkātibi*) (March 19 1860), Kemāl was his assistant, and following the former's appointment to Tripoli as the Director of Customs (*Gümrük Emīni*) in September 1861, Kemāl became a member of the Chamber of Translation of the Sublime Porte, where he stayed until March 20 1867, when he was appointed to be the Assistant Governor of Erzurum. Meanwhile, he was giving voluntary lessons in orthography and composition at the *Djemʿiyyet-i Tedrīsiyye-i Islāmiyye*, of which he was a founder; he kept up these lessons until his departure for Paris (M. Cevād, *op. cit.*, 97; ʿOt͟hmān Ergin, *Türkiye maarif tarihi*, Istanbul 1940, ii, 406; *Taṣwīr-i efkār*, nos. 208, 285, March 13 and 30 1865, nos. 365, 400, 402, 403, February 13, June 28, July 6 and 10 1866). The early years of Kemāl, who returned to Istanbul from Ṣofya at the age of sixteen, were the most exciting period of his life, on account of the reforms introduced during the *Tanẓīmāt* period. The programme of reforms was announced by the Imperial Edict of 18 Feb. 1856; on 22 Oct. 1860 Āgāh Efendi, together with S͟hināsī, started to publish the first non-official newspaper, the *Terdjümān-i aḥwāl* and later, on 28 June 1862, S͟hināsī started the *Taṣwīr-i efkār*. The new thoughts of patriotic and nationalist zeal, as found in the writings of S͟hināsī (such as his political and social articles and his stage-play *S͟hāʿir evlenmesi*), the starting of the publication of learned and literary journals, *Medjmūʿa-i funūn* in July 1862 and the *Mirʾāt* in March 1863, were all factors that played a role in the extension of Kemāl's intellectual horizon. He took lessons in French with the *k͟hulafāʾ* of the Office of Translations at the Porte (*Terdjeme Odasī*), Manṣūr Efendi; he moved in such literary and political circles as the *Endjümen-i ʿS͟huʿarāʾ* (1861), which comprised old and new style poets, the printing office of the *Taṣwīr-i efkār*, and the Ṣarafim *Ḳirāʾatk͟hānesi* (public reading room).

The alteration of the Succession Law for Egypt (*Miṣīr Werāt͟het Ḳānūnu*), which was decided upon at the beginning of May 1867, ordained that the Khedivate should pass from father to son and not to the eldest of the khedivial family. But before this, Muṣṭafa Fāḍil Pas͟ha, who was by this to lose his right of succession, was advised by the Porte to leave Istanbul for some time, and had left for Europe in April 1866. In his letter to ʿAbd al-ʿAzīz, which was printed in French and separately in Turkish (1866), he declares that in order to make possible the realisation of the reforms it was necessary to replace the Ministers, and in his answer to an article in the newspaper *Le Nord* of 1 Feb. 1867, he declares the persons having the new ideas (*efkār-i djedīde ṣāḥibleri*) to be of the same opinion. In addition to the Turkish translation of this answer, published in the *Taṣwīr-i efkār*, Kemāl makes the statement that the *Türkistan'līñ erbāb-i s͟habābi* ("Youth of Turkistān") who support M. Fāḍil, put the interest of the nation before personal interest and are ready to realise in the near future their ideals, will astound the Europeans, who accuse the Ottomans of backwardness (No. 461, 23 Feb. 1867). His article on the Eastern Question, his *Lāyiḥa*, because it made known to the people the weakness of the state, was regarded by the government as anti-patriotic, so he was forbidden to contribute to the *Taṣwīr-i efkār* and was appointed assistant governor of Erzūrum, with the rank of *Rutbe-i t͟hāniyye ṣinf-i evvel-i mütemāyizi* (*Ḥürriyyet*, no. 23, 3 November 1868; *Taṣwīr-i efkār*, no. 469, 24 March 1867). On the invitation of M. Fāḍil Pas͟ha, with whom he had come to an agreement, he did not go to Erzūrum. Together with other members of the

Society of Young Ottomans, like Ḍiyā', Suʿāwī, Āgāh and others, he fled to Paris. All these young men, who were, together with their families, supported in their daily needs by M. Fāḍil and partly by Prince Murād assembled in Paris on 30 May. Their aim was to strive for the rights of the people, as well as to make known to them their duties, for the opening of the National Assembly and the enthronement of the Shahzāde Murād. When on 30 June 1867 ʿAbd al-ʿAzīz came to Paris on a state visit, he proposed to M. Fāḍil that he should return to Istanbul; this he did, not in the company of the Sulṭān, but on 20 September. At that time, Kemāl and his colleagues started from 31 August onwards to publish the *Mukhbir*. But on account of the writings of Suʿāwī against M. Fāḍil and in favour of ʿAbd al-ʿAzīz, they announced by way of a letter, written in April or May 1868, that the *Mukhbir* did not represent the Society of Young Ottomans. In this way, the Society split into two. Beginning on 28th June 1868, Kemāl and his associates started to publish the *Ḥürriyyet* ("Freedom") as a counterweight to the *Mukhbir*. But they were threatened with the discontinuation of the financial support, and were told that an amnesty and permission to return to Istanbul would no longer be a possibility if they continued to write against ʿAbd al-ʿAzīz and ʿAlī Pasha. Thereupon Kemāl and some of his colleagues declared in a letter dated 7 Jan. 1870 that they had no share in the writings printed in the *Ḥürriyyet* and that they disassociated themselves from its contents. In a letter from the Ministry of Public Security dated 10 Aug. 1870, they were permitted to return to Istanbul. On October 25, Kemāl and his friends arrived back in Istanbul.

Since the articles which he published at the time of his return in the *Diyozhen* (whose first volume came out on 12 Nov. 1872) and in the newspaper *ʿIbret* (which began publication on 15 June 1872, and of which he found himself the editor-in-chief) were regarded as against common decency, first Kemāl was appointed *mutaṣarrif* of Gelibolu (Gallipoli) (11 July 1872), and a little later the newspaper was closed (19 July 1872). On 31 July Midḥat Pasha was appointed Grand Vizier and on 26 Sept. Kemāl set out for Gallipoli. When the suspension of the newspaper *ʿIbret* had been lifted, Kemāl, in a letter sent from there (No. 20, 30 July 1872), held forth on the unjustifiable suspension of this newspaper and the pressure which he and his friends had suffered to accept an office in the provinces. On 6 December came the news that ʿĀṣim Pasha had been appointed *mutaṣarrif* of Gallipoli (*Djerīde-i ḥawādith*, no. 2056), while Kemāl was discharged from office on 11 December (M. C. Ḳuntay, *Namık Kemal*, i, Istanbul 1944, 234; ii/1, Istanbul 1949, 126, 134). Returning to Istanbul (*Ḥadīḳa*, no. 28, 22 Dec. 1872), he continued his publications in the *ʿIbret*.

On 6 April 1873, the day on which the *ʿIbret* was closed because it supported the demonstrations at the first performance of his play *Waṭan yakhud Silistre* at the Gedik Pasha theatre on 1 April, Kemāl and his friends were arrested and by a *fermān* of 10 April sent into exile. After having been imprisoned in a narrow cell in the barracks of Maghosa at Famagusta in Cyprus, he was later transferred to a more spacious room, and, under the protection of the *mutaṣarrif* of Cyprus, he was enabled to communicate with the outside world through his visitors, whom he was free to meet. Through the help of his friends, and specially that of the Shahzāde Murād, he and his family in Istanbul could live a comfortable life. Being granted an amnesty soon after the accession to the throne of Murād V (31 May 1876), he and his friends set out for Istanbul on 14 June; whilst being guests in Izmir, they received the news about the event of Čerkes Ḥasan and on 20 June they arrived in Istanbul. His exile in Famagusta, which lasted 38 months, was in fact his most productive period.

On 11 Sept. ʿAbd al-Ḥamīd came to the throne, after having taken the oath on 31 August, because of Murād V's illness, and Kemāl was appointed firstly on 18 Sept. a member of the Council of State (*Shurā-yi dewlet*) and later, on 2 Nov., a member of the General Assembly (*Medjlis-i ʿumumī*), which was working on the framing of the Constitution (*Ḳānūn-i esāsī*). The *Terdjeme djemʿiyeti* was dissolved at its first meeting in November because it did not accept Suʿāwī, and the *ʿAsākir-i milliyye djemʿiyyeti*, because of the great increase in the number of its members, which worried the government. He opposed the article, added later to the Constitution, by which the Sultan was authorised to expel from the country anyone whom, as a result of a police investigation, he suspected. Shortly after the issue of the *fermān* dated 23 Dec. 1876, promulgating the Constitution, he was arrested on 12 Jan. 1877 on the pretext that he had disturbed the public order. From his letters, the real reason must have been the fact that he had written a verse making an allusion to the dethronement of ʿAbd al-Ḥamīd; there was also the search for evidence to justify the exile of Midḥat Pasha from Istanbul, and fear of his possibly lending himself to causing some disturbance or of his being elected a deputy. During his detention, the Parliament was opened (19 March 1877). The enquiry into his case was closed on 10 July and on the 19th of that same month he left for Midilli (Mytilene), where he was ordered to reside. He followed closely the phases of the Turco-Russian war that broke out on 23 April, the Treaty of San Stefano concluding this war on 3 March 1878, the event of Suʿāwī on the 20th May, the Congress of Berlin, which opened on 13 July and the discussions in the Ottoman Parliament, which was adjourned *sine die* in 1878. For the realisation of constitutional government, he gave instructions by letter to his close friends about which subjects they should speak during the debates in the Assembly; they accordingly made speeches and introduced bills (*lāyiḥas*). His exile on Mytilene continued for about two years and a half; then on 18 Dec., 1879 he was appointed *mutaṣarrif* of the island. His struggle against the Italian fishermen, who were causing injury to local fishermen in their sponge-fishing; the fact that the Greeks, who wanted autonomy, were not paying the tax levied in lieu of military service (*bedel-i askeri*) with impunity; and also opposition from his adversaries among the Turkish officials—all these were reasons for his temporary dismissal (Feb.-May 1881). Having been restored to office, he held it for more than four years, after which the newspapers dated of 17 Oct. 1884 brought the news that he was to change places with the *mutaṣarrif* of Rhodes, Āgāh Efendi (*Ṭarīḳ*, nos. 203, 207; *Djerīde-i ḥawādith*, no. 6822), and on 20 October it was made known that he had gone to Rhodes. By the continuous efforts of ʿĀrif Pasha, who was on 5 Nov. 1885 appointed governor of the province of the Aegean Islands (the *Djezāyir-i Baḥr-i Sefīd*), the seat of the provincial administration was transferred from Chios (Saḳīz) to Rhodes (Meḥmed Thüreyyā, *Sidjill-i ʿOthmānī*, iii, 297). So for that reason, Kemāl was transferred to Chios to be *mutaṣarrif* there. From one of his letters it appears that he took up his duties there on 6 Dec. 1887.

During his occupation of these posts as *mutaṣarrif*, his struggles against public disorder and administrative inefficiency, and the smuggling of tobacco and sponges, fatigued Kemāl heavily. He also spent much effort to strengthen the Muslim population, who were in a minority compared to the Christians. He recommended to ʿAbd al-Ḥamīd and to high officials, by his *lāyiḥa*s (memoranda), *ʿāriḍa*s (petitions) and letters, the means that had to be applied in order not to lose the Mediterranean islands. He was awarded the *Bālā rutbesi* and twice the *ʿOthmānlî nishāni* in 1881, 1883 and 1886. Kemāl, who was first taken ill with malaria and suffered later from pneumonia, was exhausted by his tiring official duties, and especially by the shock of the seizure of the first volume of his Ottoman History (*ʿOthmānlî tārīkhi*). He died from a combination of bronchitis and gastric and intestinal complaints, on 2 Dec. 1888 at Chios where he had lived alone, since he had sent his wife and son to Istanbul. By the time of the arrival of his wife, he was already buried. By an Imperial rescript his mortal remains were transported the next day to Bolayir, in accordance with his last injunction to Ebū ʾl-Ḍiyāʾ Tewfīḳ. The design of his tomb, which was erected on behalf of the *Khazīne-i khāṣṣa*, was by Tewfīḳ Fikret.

2. *Works*. Kemāl, like so many other personalities of the *Tanẓīmāt* literature, with their intentions of spreading new ideas and introducing new genres of writing, produced works in nearly every field.

(a) Poetry. Kemāl started his literary life with the writing of poetry. In one of the poetry magazines he wrote some 8 or 10 *ghazel*s while he was fourteen years old, and he wrote for another one until his return from Ṣofya; in the last-mentioned periodical, we find religious, mystical and moral poetry, or that concerning his surroundings, as well as a *ḳiṭʿa* which he wrote at the age of sixteen and in which he satirises the banknotes affair; this *ḳiṭʿa* was taken over by Ḍiyāʾ Pasha in his *Kharabāt*. Only a few of these works from his childhood were included in the six poetry collections compiled later, because he was dissatisfied with them. There exists also a collection of *naẓīre*s of his. His pseudonym of Nāmîḳ was given to him by Eshref Pasha, who highly praised his *merthiye*s and eulogised him as the *Kemāl iḳlîminiñ sulṭānî* (*Dīwān*, Istanbul 1279, 109, 200). When 20 years of age, on making acquaintance with Ḍiyāʾ Pasha, the latter praised his potential as a poet. He wrote *naẓīre*s or "parallels" to the verses of contemporaries and older poets; poems composed jointly with other contemporaries; *djülūsiyyes* (poems in praise of a royal accession to the throne); *medḥiyye*s (eulogies); *hidjviyye*s (satires); *fakhriyye*s (poems of self-glorification); *tārīkh ḳiṭʿasî*s (chronograms), *mutammaṭ ghazel*s in Persian, with undotted letters, and a *Sāḳī-nāme* ("Book of the Cupbearer") parallel (*naẓīre*) to the one of Nedīm. He has left specimens of *dīwān* poetry in nearly all forms and genres. In his articles in the *Taṣwīr-i efkār* are included many patriotic poems. He tried out syllabic metre in ten of his poems, the first of which he composed while in Europe; he composed poems in *mulammaʿ* fashion, half-Turkish, half-Arabic; letters in verse and *sharḳî*s, some of which were set to music; and further, he translated a poem of Edward Goen and the *Marseillaise*. This last, if we are not mistaken, was the first of his poems rhymed in the new style. He produced this kind of verse mainly after *Wāweylā* ("Alas"), which was composed as a *naẓīre* (parallel) to Ḥāmid's *Ṣaḥrāʾ* ("the country"). In his poetical works, the mind dominates strongly over feeling and imagination. Most of his patriotic poems, like *Pilevne sharḳîsî*, *Murabbaʿ*, *Bir muhādjir ḳîzînîn istimdādî*, were written whilst on Midilli, at the time of the Turco-Russian war. Among these poems, by which he acquired his fame, is the *Waṭan ḳaṣīdesi*, of which he published some *beyt*s whilst in Europe (1869) and before his exile to Maghosa (1872).

(b) Articles. Kemāl started his career in journalism, which he made his profession under the influence of Shināsī, with his writings in the *Taṣwīr-i efkār*. He continued his publications while in Europe in the *Ḥürriyyet* and after having returned to Istanbul he contributed to the newspapers *Diyozhen*, the *ʿIbret* and the *Ḥadīḳa*. The most splendid period of his journalistic career was that of the ten to eleven years before his exile to Famagusta. The greatest number of his articles were published in the *ʿIbret* newspaper, of which he was the editor-in-chief. Although he was prohibited from publishing while in exile at Famagusta and on Mytilene, we do come across a small number of articles of his in newspapers such as the *Saʿy*, *Muṣavver medeniyyet*, *Čanṭa*, *Muḥarrir*, *Istiḳbāl*, *Ṣadāḳat* and *Ittiḥād*. These writings are unsigned, unlike those poems of his which were published in the *Terdjemān-i ḥaḳīḳat* ("Interpreter of the Truth") under pseudonyms like Khitām-i ʿAdjemī and al-Dāʿī Kemāl. His articles concern all kinds of events taking place in his surroundings, with a rich variety of subjects. The most effective and influential were those with a political content. In these writings, remaining faithful to the principles of the *Yeñi ʿOthmānlîlar Djemʿiyyeti*, he put forward the ideas which were to become the cause of the Constitution, and he strove to show the defects of nearly every institution as well as the means for its improvement. His most severe criticisms can be found in the writings he produced and published in the *Taṣwīr-i efkār* and the *ʿIbret* at the time when he was contemplating fleeing to Europe and was in no need of an official post, but which were the cause of his being banished to Famagusta. Compared with his works in other genres, he achieved great fame by these various articles, especially those reflecting his political struggles.

(c) Historical works. His works in this field are monographs about the great men of Ottoman and Islamic history, the *Tārīkh-i ʿaskerī* and the *ʿOthmānlî tārīkhi*. — 1. *Bārîḳa-i ẓafer* ("The Sword of Victory") concerns the conquest of Istanbul by Meḥemmed II the Conqueror, and was written in one day. He used artistic prose here, and was convinced that no one adhering to the *dīwān* literature could write a "parallel" to it (Istanbul 1289, 1305). — 2. *Dewlet-i ʿAliyye'niñ devr-i istīlāsîna dāʾir bir maḳāledir*. In this work he treated of the conquests of the Ottoman empire since its establishment up to the end of the reign of Süleymān the Magnificent. Shortly after it was published in instalments in the *Taṣwīr-i efkār*, it was printed in book-form from Jan. 1867 onwards (Istanbul 1289, 1301, 1304). — 3. *Ṣalāḥ al-Dīn Eyyūbī*. This is a monograph about the life of the founder of the Ayyūbids and Muslim hero Ṣalāḥ al-Dīn (Saladin). It was printed, together with the *Devr-i istīlāʾ*, as the first volume of the *Evrāḳ-i perīshān* (Istanbul 1289/1872, 1964). — 4. *Silistre muḥāṣarasî*. He published this under the name of Aḥmed Nāfidh, a man who had himself taken part in the battle of 1853, and on whose mediation Kemāl relied for his communications with Istanbul while in exile in Famagusta (Istanbul 1290, 1946). — 5. *Ḳanizhe*: this was written to recall the praise-

worthy victories of the Turkish soldiers, and contains the conquest of Ḳanizhe during the reign of Meḥemmed III, as well as the acts of heroism of Tiryākī Ḥasan Pasha, and was published under the name of Aḥmed Nāfidh (Istanbul 1290, 1303, 1311, 1335, 1941). — 6. *Terdjeme-i ḥāl-i Emīr Nevrūz*. This contains the life and the struggles of Emīr Nevrūz, who, at the time of the Mongol conquests fought for the sake of Islam and humanity; it was first published under the abbreviation *nūn-ḳāf*, while he was in exile in Famagusta (Istanbul 1293; Arakel 1302; Maṭbaʿa-i Ebüżżiyā, 1302, 1305). Of the above-mentioned works, the *Devr-i istīlā'* and *Ṣalāh al-Dīn Eyyūbī*, to which were added the biographies of Meḥemmed the Conqueror and Sulṭān Selīm, were printed as one volume and published under the name *Evrāḳ-i perīshān* (Istanbul, n.d. [Istanbul 1301]). — 7. Apart from the works mentioned up to here, he prepared, while in Famagusta, his *Tārīkh-i ʿaskerī*, as his entry for a competition for a history-book for the lessons at the *Ḥarbiyye mektebi* or War Academy. Its first volume runs from Sulṭān ʿUthmān up to the end of the period of Sülaymān the Magnificent and the second volume starts with the reign of Sulṭān Selīm II and ends with the conquest of Bozdja-ada (Tenedos) and Limni (Lemnos) in 1657; it was never published, and its manuscript is preserved in the Türk Tarih Kurumu. — 8. In 1886 at Rhodes he started writing the *ʿOthmānlī tārīkhi*, in order to give a more comprehensive version of the *Tārīkh-i ʿaskerī*. When the introduction to this work, which comprises the history of the Roman Empire, and Islamic history up to the years 227-8 of the *hidjra*, was printed (Istanbul 1305/1887), it was denounced, due to certain expressions and phrases, and Kemāl was informed that the printing of this work was forbidden and that copies would be seized. Its manuscript treats the history up to the time of Selīm I; it is kept in the Türk Tarih Kurumu. From this *ʿOthmānlī tārīkhi*, which was written, like his monographs in general, in a narrative fashion, only a part—that up to the reign of Meḥemmed the Conqueror—was published in four volumes in the *Kulliyyāt-i Kemāl* series (Istanbul 1326-7).

(d) Plays. Kemāl, who regarded the drama as a school for the improvement of morals, held the view that, because the Turkish language was not yet simplified to a sufficient degree, it would be impossible to write dramas in syllabic metre; hence all his six plays are written in prose. — 1. *Waṭan yakhud Silistre*. The basic events of this were taken from the battle of Shumnu, during the reign of Maḥmūd II, but in order to make things more impressive, the play was set during the battle of Silistre in 1853. It was presented to the Russian press in 1876 by V. D. Smirnov and it was translated into German by H. Hartt and also by L. Pekotsch, and in Arabic by Muḥammad b. al-Khayyāṭ. Though it was sharply criticised by Murād Bey, it is nevertheless important because it was the first stage-play having as its subject the Ottoman national virtues. Its influence is found particularly in Manastirlï Rifʿat's drama *Yā ghāzī yā shahīd* (*Čanta*, iii, Istanbul 1291), and in his *naẓīre* called *Ṭuna yakhud ẓafer* (Istanbul 1301). It was printed more than ten times between 1873 and 1972, and has been presented a great many times since its first performance up to the present day. — 2. The subject of the story *Dānish Bey yakhud Fākhishe-i Nā'ibe* was thought up on the boat when he was sent into exile at Famagusta and was made into a play there and given the name of *ʿĀkif Bey* (Istanbul 1873, 1873, 1876 and 1966). It is inspired by the battle at the outset of the Crimean War, involving the setting on fire by the Russians of an Ottoman fleet anchored in the port of Sinope on 30 Nov. 1853. This tragedy, which describes the love-adventure of a woman, who takes into her head to marry, after having invented the death of her husband, the captain of a ship, vigorously displays patriotic feelings. — 3. His social-sentimental play is *Zavallï čodjuḳ* (Istanbul 1873, three times; 1874, 1940, 1947, 1960). It describes the tragedy caused by the pressure put on by the family in a question of marriage, and its influence is to be perceived in Ḥamīd's *Ičli ḳiz* and in the *Wuṣlat* of R. Ekrem. — 4. *Gülnihāl*, at first named *Rāz-i dil* ("Heart's secret"), was written at the time *Waṭan* was in rehearsal. In this work, like *Zavallï čodjuḳ* and *ʿĀkif Bey* published unsigned while he was in Famagusta, the conceptions of liberty, justice and oppression are analysed, while being brought to life through the characters by which they are symbolised (Istanbul 1873, 1876, ?1869). — 5. In his *Ḳara Belā*, again written in Famagusta, is described the passionate love of a *ḥarem āghāsï* for the daughter of one of the Indian sovereigns. This play, much appreciated by Kemāl himself, has been sharply criticised (Ist. 1911; Sh. Süleymān, *Tenḳīdāt-i edebiyye*, Istanbul 1911). — 6. The subject matter of his last play *Djelāl al-Dīn Khwārazmshāh*, in which the idea of the unity of Islam is defended, is set in the period of the Mongol invasions. It was finished in 1881 at Mytilene. The date of publication, Cairo 1292/1875, is false. In his lifetime it was partly published in the form of instalments (*Medjmūʿa-i Ebüżżiyā*, v, nos. 49, 50, 31 August and 14 September 1886). Although it was written to be read, it was staged after 1908 (*TOEM*, xxxvii/1, April 1332), 50; republished in simplified language, Istanbul 1969).

(e) Novels. Although Kemāl's novels have not become as famous as his dramas, and were not very successful in general, they still are of importance, because they were the first works in this genre. The novel he wrote while in Famagusta and in which he describes the ruin, materially and morally, of a young man who falls in love with a prostitute, was published shortly after his being granted pardon under the new name of *ʿAlī Bey'in sergüzeshtini ḥāwīdir*, since no permission was given for publishing under its original name *Ṣoñ pishmānlïḳ* (Istanbul 1876, 1969, 1971). This more or less romantic-social work of his was translated into French. His second novel, *Djezmī*, for which the subject matter was extracted from Ottoman, Crimean and Persian history of the 16th century, was written in parts at Mytilene and finished in 1881. Under the influence of Romanticism, Pan-Islamism is the leading idea, and is defended in *Djezmī* (Istanbul 1297, 1299, 1304, 1335 1969).

(f) Criticism. Most of his criticism, in general reflecting his ideas about *dīwān* and western literature, and the simplicity of the language, is composed in epistolary form, because it was written when he was in exile. — 1. In his foreword (*muḳaddime*) to the *Bahār-i dānish* he wrote that during the *Tanẓīmāt* period, people had refrained from translating works from Persian, because of the strong influence of Western literature, and he gave a translation of one of the famous stories written by Shaykh ʿInāyat Allāh in the Urdu language (Istanbul 1291, 1303, 1311). — 2. *Takhrīb-i kharābāt* is a criticism of the first volume of Ḍiyā' Pasha's anthology (publ. Istanbul 1874), including examples of the various kinds of poetry of Arabic, Persian and Turkish *dīwān* literature. It was first published as an article in instal-

ments (*Medjmūʿa-i Ebużżiyā*, nos. 11, 19, 24, 17 January, 15 May and 17 July 1882), and it was later printed in book-form (Istanbul 1301, 1304). — 3. His critical reviews of the second and third volumes of this same work were, after having been printed as magazine articles (*ibid.*, nos. 30-36, 24 January-23 April 1883), published separately also (Istanbul 1301, 1312). — 4. *ʿIrfān Pasha'ya mektūb* was written with reference to ʿIrfān Pasha's blaming the young generation, in the preface to his work *Medjmūʿa-i ʿIrfān Pasha* (Istanbul 1287), for not appreciating the *dīwān* literature (*ibid.*, no. 7, 18 Nov. 1880); as a book publ. Istanbul 1309, 1327). — 5. *Muṭālaʿa-nāme*, was written with reference to R. Ekrem's *Taʿlīm-i edebiyyāt*, and was printed according to a defective manuscript, which has been subsequently found (N. Halil Onat, *Namik Kemal'in tâlim-i edebiyat üzerine bir risalesi*, Ankara 1950); from his letters it seems that he wrote it at Mytilene in 1878. — 6. In his *Muḳaddime-i Djelāl*, finished at Mytilene in 1878, he expressed his opinion with regard to the new forms of literature, which had developed after the *Tanẓīmāt*, namely the political article, the novel and the drama, as well as his thoughts about whether some features of his play *Djelāl al-Dīn Khwārazmshāh* were in accordance with the historical facts or not, and about simplicity of the language (publ. as an article in *Sharḳ*, nos. 1 ff., 1297; *Medjmūʿa-i Ebużżiyā*, nos. 38-44, 4 Nov. 1884-12 Jan. 1885. Istanbul 1305, 1309). — 7. His *Renan müdāfaʿa-nāmesi*, which he finished at Mytilene in Sept. 1883, is his criticism of a lecture called *L'Islamisme et la science*, delivered by Ernest Renan at the Sorbonne on 29 March 1883 (Istanbul 1326; ed. Fu'ad Köprülü, Ankara 1962). — The information given by Aḥmed Midḥat in his *Uss-i inḳilāb* about his opinions on the Constitution was criticised by Kemāl (Istanbul 1295, 197, 220) in his letters dating 24 Aug. and 13 Sept. 1878 (*Edīb-i aʿẓam Nāmīḳ Kemāl Bey'iñ ghayr-i maṭbūʿ āthārīndan -Aḥmed Midḥat Efendi'ye yazdīghī iki mektūb*, Izmir 1324). — 9. Apart from these works of his, he wrote other pieces of criticism, which were published in magazines but were never printed in book-form; these include *Mes prisons muʿākhadhesi* about the Turkish translation (1874) by R. Ekrem of Silvio Pellico's *Le Mie Prigioni*. — 10. *Mukātebāt-i siyāsiyye*, being his criticism on K. P. Rifʿat's *Ḥuḳūḳ-i ʿumūmiye* (Istanbul 1290), which was the latter's translation of Pradié Fodéré's *Principes généraux de droit politique et de législation* (Paris 1869). — 11. The *Intibāh muḳaddimesi*. — 12. His *Laṭīfe* (anecdote), also called *Pilevne muʿākhadhesi*, relating to D. Ḥikmet's *Pilevne Ḳahramānī ʿOthmān Pasha shanīndadīr* (Istanbul 1878). — 13. The criticism he wrote of Maḥmūd Djelāl al-Dīn Pasha's *Sherḥ-i Shefīḳ-nāme* (Istanbul 1290), his *Shefiḳ-nāme* or *Rawḍat al-Kāmilīn mu'ākhadhesi*. — We may also include in this genre his *Lāyiḥa*s (memoranda) and *Taḳrīẓ*s (eulogies of books). But one finds his most sincere and objective criticisms in his private letters, some of them of book length, and containing his frank opinions about the work of his contemporaries and about various controversies during that period.

(g) Other works. Apart from the works mentioned above he produced certain other writings: *Tendhīr al-khinzīr* (Istanbul 1307); *Sergüzesht* (Istanbul 1327); *Ru'yā* (signed in abbreviation *nūn-ḳaf*, n.p.d., Egypt 1908, Istanbul 1326, 1932); *Imtizādj-i aḳvām - wafāy-i ʿahd* (Istanbul 1327); *Ḥikmet al-ḥuḳūḳ*, *Midilli risalesi* and *Medjmūʿa-i siyāset* were never published in bookform.

Bibliography: The above is mostly based on the following works: Fā'iḳ Reshād, *Edīb-i aʿẓam Kemāl*; Ebużżiyā, *Kemāl Bey'in terdjeme-i ḥāli* (Istanbul 1326) and *Yeñi ʿOthmānlīlar tārīkhi* published in the *TE*; ʿA. Ekrem Bolayır, *Namık Kemal* (Istanbul 1933).

Of other sources, his early life and his poetry are clarified by S. N. Erghun (*Namık Kemal hayatı ve şiirleri* Istanbul 1933; *Namık Kemal'in şiirleri* Istanbul 1941), while I. R. M. Kemal Inal has treated in his work of Kemāl's life as an official and his verses (*Son asir Türk sairleri*, v, Istanbul 1938, 819 ff.). For his childhood, see: E. ʿAlī Baḳī, *Namık Kemal'in annesi nerede yatar*, in *Cumhuriyet*, 24 Dec. 1940; *Ülkü*, no. 101, July 1941; *Namık Kemal Afyonda*, Ankara 1949. Some of his articles have been brought together and printed (Ebużżiyā, *Muntakhabat-i Taṣwīr-i efkār*, Istanbul 1304, 1311; A. Ekrem Bolayır, *Külliyyāt-i Kemāl*, Istanbul 1327; M. Nihad Özön, *Namık Kemal ve ʿIbret gazetesi*, Istanbul 1938). See also R. H. Davison, *Reform in the Ottoman empire 1856-1876*, Princeton 1963, index; A. Bombaci, *Storia della letteratura turca*, Milan 1956, index; *Enciclopedia Italiana*, art. s.v. Most of his works were published by others while he himself was in exile; hence because he was not able to correct them himself, they contain some mistakes and omissions. Among the works which the Türk Tarih Kurumu has bought from his family are manuscripts of some of his works, as well as some printed copies which he has corrected himself. The Society has also brought together about 744 letters, some of which were addressed to him, two books containing his official writings, and also two books with his collected poems. Apart from the poems, these works have not been consulted. His letters, amounting to about 1,000, together with those already available, are, together with a commentary on their contents and documentation, being prepared for the press by the Türk Tarih Kurumu (*Namık Kemal'ın mektupları*, i, *Istanbul, Avrupa ve Maghosa mektupları*; ii and iii, *Midilli mektupları*, Ankara 1967, 1969, 1973). Because of the availability of these volumes, only a basic bibliography is given here; see further the general index to these three volumes.

(F. A. Tansel)

KEMĀL PASHA-ZĀDE, or ibn(-i) kemāl, usual appellations of shams al-dīn aḥmad b. sulaymān b. kamāl pasha, Ottoman scholar and Shaykh al-Islām, b. ?873/1468-9, d. 940/1534.

Life. The identity of his grandfather is obscure. Kemālpashazāde mentions (*VII. Defter*, facs., 293, 325)—but with no hint that he is descended from him—a Kemāl Pasha who was appointed to the vizierate upon the dismissal of Maḥmūd Pasha [*q.v.*] in 872/1468 and died in 875/1470 (for a letter of congratulation, undated, from Prince Bāyezīd, see N. Lugal and A. Erzi, *Fâtih devrine âit münşeât mecmuası*, Istanbul 1956, no. 60); and a *ḳaṣīda* of Ḥāmidī (ed. İ. H. Ertaylan, Istanbul 1949, 306-8) is addressed to "Daftardār Kamāl Pasha" (for the autograph MS., containing a miniature of this Kemāl, see *Fâtih ve İstanbul*, i/1 (1953), 17). According to Ḥüseyn Ḥusāmeddīn, however (*Amasya Ta'rīkhi*, Istanbul 1329, iii, 227: as so often one does not know how seriously to take this work's undocumented assertions), the grandfather became *lālā* to Prince Bāyezīd at Amasya in 870/1465-6 and died there in 875/1470-1. That the grandfather was indeed at some time Bāyezīd's *lālā* is implied by ʿĀshiḳ Čelebi (ed. G. M. Meredith-Owens, f. 37a), but he certainly

died (ʿĀshiḳpashazāde, ed. Giese, p. 197) and was buried in Istanbul: his *türbe* (no longer extant) formed the nucleus of a *maḥalle* (Ö. L. Barkan and E. H. Ayverdi, *İstanbul vakıflari tahrîr defteri*, Istanbul 1970, 149), and Kemālpashazāde set up a *waḳf* in favour of its mosque (*op. cit.*, no. 864).

Kemālpashazāde's father Süleymān "Beg" and "Čelebi" (called by Ḳabūlī *wazīr ibn-i wazīrān* in the last of five *ḳaṣīdas*, cf. *Külliyyât*, ed. İ. H. Ertaylan, 206) is said to have been *muḥāfiẓ* of Amasya and *sandjaḳbegi* of Tokat from 879/1474-5 until after 896/1490-1 (*Amasya Taʾrīkhi*, iii, 230-2, 237-8); he was buried in his father's *türbe* at Istanbul (the date of his death is unknown). Kemālpashazāde's mother was the sister of Ibn Küpeli, *ḳāḍīʿasker* in the middle years of the reign of Meḥemmed II (Tashköprüzāde, *Shaḳāʾiḳ*, i, 303-4; Turkish tr. Medjdī, 215).

Kemālpashazāde began his adult life as a *sipāhī*; but upon noticing the respect paid to Mollā Luṭfī [*q.v.*], a relatively humble *müderris*, by prominent statesmen and soldiers, he decided to embrace the career of *ʿilm* (this incident, recorded by Tashköprüzāde from Kemālpashazāde himself, seems to have occurred in 897/1492, or perhaps even earlier). He began his studies under Mollā Luṭfī, at the Dār al-ḥadīth in Edirne. His first appointment, as *müderris* at the *medrese* of ʿAlī Beg in Edirne, was procured for him by Müʾeyyedzāde ʿAbd al-Raḥmān Efendi, then *ḳāḍī-ʿasker* of Anadolu (and probably an old acquaintance of his father at Amasya), who on the same occasion recommended him to Bāyezīd II as the only fit person to write a definitive History of the Ottomans as the Turkish counterpart of Idrīs Bidlisī's recently-commissioned *Hasht Bihisht*; this incident can be closely dated by the facts that the *Hasht Bihisht* was commissioned in 908/1502-3 [see BIDLĪSĪ] and that Kemālpashazāde was already installed in the *medrese* of ʿAlī Beg in Muḥarrem 909/July 1503 (M. T. Gökbilgin, *Edirne*, 479). He then progressed through a series of *medreses* (Üsküb, Edirne, one of the Ṣaḥn *medreses* at Istanbul, the *medrese* of Bāyezīd II at Edirne).

Presumably while still *müderris* at Edirne, he wrote a *risāla* (sometimes erroneously termed *fatwā*) *fī takfīr al-rawāfiḍ*, demonstrating war against Shāh Ismāʿīl to be *farḍ ʿayn* (Atsız [see *Bibl.*], no. 84; Brockelmann, no. 47b; text published by M. C. Şahabeddin Tekindağ in *TD*, xvii/22 (1968), 77-8 and cf. 55; German summary in Elke Eberhard, *Osmanische Polemik gegen die Safawiden . . .*, Freiburg i/B 1970, 164-5). On 10 Radjab 921/20 August 1515, i.e. shortly after Selīm's return to Istanbul from the Čāldirān [*q.v.*] campaign, he was appointed *ḳāḍī* of Edirne (Ferīdūn, *Munshaʾāt*², i, 467-8). On 14 Shaʿbān 922/12 September 1516, while Selīm was staying in Aleppo after the battle of Mardj Dābiḳ, he was promoted to *ḳāḍīʿasker* of Anadolu (Ferīdūn, i, 480). In Cairo, for some unknown reason (? a protest at the execution of Ṭūmān Bāy), the irascible Selīm dismissed him, but he re-appointed him a couple of weeks later (Rabīʿ I-II/April 1517; Ferīdūn, i, 454, 489). According to an anecdote recorded by Saʿdeddīn (ii, 614-6; cf. Hammer-Purgstall, ii, 519-20), Kemālpashazāde's influence with Selīm was such that the dignitaries, bored with the long stay in Egypt, asked him to convey the hint that the troops wished to return home. In the course of this campaign he gave a ruling in favour of the orthodoxy of Ibn al-ʿArabī [*q.v.*, at col. 708b] (Atsız, no. 85; Brockelmann, no. 47a).

In 924/1518 he acted as *emīn* for a land-survey (*taḥrīr*) of Ḳarāmān (Barkan, *Kanunlar*, 39; cf. N. and I. Beldiceanu, in *JESHO*, xi (1968), 7, 57). Upon being dismissed, or resigning, from the post of *ḳāḍīʿasker* (in 925/1519, according to Medjdī, 387), he again became a *müderris* at Edirne (Dār al-ḥadīth, then *medrese* of Bāyezīd II). Upon the death of "Zenbīlli" ʿAlī Efendi (932/1526) he was appointed Shaykh al-Islām, and held office until his death on 2 Shawwāl 940/16 April 1534. He was buried in the *zāwiye* of Maḥmūd Čelebi, outside Edirne Kapîsl.

Works. Kemālpashazāde was a most prolific writer, in Turkish, Persian and Arabic, in the fields of history, *belles-lettres*, grammar, theology and law. Over 200 works (many of them, admittedly, short *risālas*) are attributed to him. The most important are:

Turkish: (1) History of the Ottomans, begun in 908/1502-3 and composed originally in eight books (*defter*), one for each reign from ʿOthmān to Bāyezīd II. All survive in manuscript except Book 5 (Meḥemmed I) and the first part of Book 6 (Murād II). Book 1 (ʿOthmān), ed. Şerafettin Turan, Ankara (TTK) 1970; Book 7 (Meḥemmed II, largely based on Neshrī and Tursun [*qq.v.*] but containing important original data), ed. Ş. Turan in facsimile (from the autograph *MS*, Fatih 4205, see V. L. Ménage, in *BSOAS*, xxiii (1960), 250-64), Ankara 1954, and in transcription, Ankara 1957. Book 8 reaches to 916/1510. Later, Kemālpashazāde was asked to continue his History. Book 9 (Selīm I) resumes the last years of Bāyezīd II's reign but reaches only to 920/1514 (the apparent date of completion, 19 Ṣafar 926, is expressed by a *muʿammā* in fractions, a literary conceit which appears to be Kemālpashazāde's invention, see H. Ritter, in *Oriens*, i (1948), 237-47). (Two *mss.*—Hazine 1424, Revan 1277—sometimes referred to as a *Selīmnāme* of Kemālpashazāde are in fact by Saʿdī b. ʿAbd al-Mutaʿāl: abridged German tr. by M. T. Speiser, Zürich 1946; see M. C. Şehabeddin Tekindağ, in *Tarih Enstitüsü Dergisi*, i (1970), 217-8 and (incorrect) 208-10). Book 10, extending only to Süleymān's return from the Mohacz campaign in 933/1526, was for long regarded as a separate work (cf. Hammer-Purgstall, iii, p. vi) and was published, with French tr., by Pavet de Courteille as *Histoire de la campagne de Mohacz par Kemal Pachazadeh*, Paris 1859; that this text is the fragmentary Book 10 was shown by L. Forrer (*Isl.*, xxvi (1942), 187; see also, with important data on the *mss.*, Hüseyn Yurdaydın, in *Vakıflar Dergisi*, iii (1956), 107-15). It appears that Book 10 was never given final shape (and that Book 9 was never completed). Various portions of the work also exist in *ms.* under a variety of titles. In spite of its importance, especially for the writer's own times (H. İnalcik has called him "the greatest of all Ottoman historians"), it was very little used by later chroniclers. For the *mss.* in European libraries: Babinger, 61 ff.; in İstanbul: *İstanbul kütüphaneleri tarih-coğrafya yazmaları katalogları*, i/2, 1944, 120 ff., and Atsız, no. 1.

(2) *Dīvān*. Two *ḳaṣīdas* and about 300 *ghazals*, distinguished by having no *makhlaṣ*; partial ed. Istanbul (Iḳdām series no. 5) 1313; cf. E. J. W. Gibb, *HOP*, ii, 347-63. Atsız, no. 2. His famous elegy on Selīm I, appearing early in Book 10 of the History, has been published by M. ʿĀrif, in *TOEM*, part 22, 1411-6, and by F. İz, in *Eski Türk edebiyatında nazım*, i/1, Istanbul 1966, 505-8. (3) A verse translation of the famous *Burda* [*q.v.*] of al-Būṣīrī (Atsız, no. 3). (4) *Yūsuf u Zelīkhā*, a *mathnawī* in 7777 couplets, closely following Djāmī [*q.v.*], dedicated to Bāyezīd II. See Gibb, *HOP*, iii, 12-17; except in F. İz, *Nazım*, i/2, 1967, 786-90. Atsız, no. 4. (5) *Daḳāʾiḳ al-ḥaḳāʾiḳ*,

dedicated to Ibrāhīm Pas͟ha [*q.v.*], on the distinctions between apparent synonyms in Persian; to judge from the numerous *mss.*, the work was widely read. Atsız no. 8.

Persian: (6) *Nigāristān*, in prose and verse, in imitation of the *Gulistān* of Saʿdī [*q.v.*], completed in 939/1533; excerpts, with Latin translation, in *Mines de l'Orient*, i, 401-8; ii, 107-113. Atsız no. 20. (7) *Muḥīṭ al-lug͟hāt*, an Arabic-Persian dictionary composed in 926/1520. Atsız, no. 26.

Arabic: (8) *Tafsīr*, incomplete, the *mss.* comprising *sūra*s 1-38, 67, 78-9, 86, 89, 103: Atsız, no. 27; Brockelmann, nos. 6-10. (9) Four (or five?) distinct collections of *ḥadīt͟h*s (40, 30 and 24) with *s͟harḥ*: Atsız, nos. 39-42; Brockelmann, nos. 13-17 and 132. One collection was translated into Turkish by ʿĀs͟hiḳ Čelebi [*q.v.*] and printed, Istanbul 1316; see A. Karahan, *İslâm-Türk edebiyatında kırk hadis*, Istanbul 1954, 175-8; *BSOAS*, xxiii (1960), 253-4. (10) *Muhimmāt al-muftī*, a collection of *fatwās*: Atsız, no. 47; Brockelmann, no. 45. (11) A *ḥās͟hiya* on some sections of the *Hidāya* of al-Marg͟hīnānī [*q.v.*]: Atsız, no. 48; Brockelmann, no. 151 (?). (12) *Iṣlāḥ al-Wiḳāya*, corrections to the *Wiḳāya* of ʿUbayd al-Maḥbūbī, and (13) *Īḍāḥ al-Iṣlāḥ*, his own *s͟harḥ* to (12), both completed in 928/1522: Atsız, no. 49; Brockelmann, nos. 46, 170. (14) A *ḥās͟hiya* on the *Talwīḥ* of al-Taftāzānī [*q.v.*]: Atsız, no. 50; Brockelmann, no. 151 (?). (15) *Tag͟hyīr al-Tanḳīḥ*, corrections to the *Tanḳīḥ al-uṣūl* of ʿUbayd Allāh al-Maḥbūbī completed in 931/1525, printed Istanbul 1308: Atsız, no. 51 (add *ms.* Murad Molla 623, autograph, see *BSOAS*, xxiii, 253); Brockelmann, II², 278; S II, 301. (16) His own *s͟harḥ* to (15): Atsız, no. 52. (17) A *s͟harḥ* to *al-Farāʾiḍ al-Sirād͟jiyya*, of al-Sad͟jāwandī [*q.v.*], completed in 928/1522: Atsız, no. 53; Brockelmann, no. 42a. (18) A *ḥās͟hiya* to the commentary by al-D͟jurd͟jānī [*q.v.*] on the *Mawāḳif* of al-Īd͟jī [*q.v.*]: Atsız, no. 92; Brockelmann, no. 140. (19) A *ḥās͟hiya* to the *Tahāfut al-falāsifa* of K͟hʷād͟jazāde (for whom see İ. H. Uzunçarşılı, *Osmanlı tarihi*, ii, 649-52): Atsız, no. 93; Brockelmann, nos. 94, 161. (20) *Tag͟hyīr al-Miftāḥ*, corrections to and commentary on the *Miftāḥ al-ʿulūm* of al-Sakkākī [*q.v.*]: Atsız, no. 140; Brockelmann, no. 154. (21) A *s͟harḥ* to the *K͟hamriyya* of Ibn al-Fāriḍ [*q.v.*]: Atsız, no. 160; Brockelmann, no. 92. (22) *al-Risāla al-munīra*, printed Istanbul 1286, etc.: Atsız, no. 170; Brockelmann, no. 134 and cf. no. 17b. (23) *al-Falāḥ fī s͟harḥ al-Marāḥ*, a *s͟harḥ* to the *Marāḥ al-arwāḥ*, on grammar, of Aḥmad b. ʿAlī b. Masʿūd, printed Istanbul 1289, etc.; attribution doubtful: Atsız, no. 181; Brockelmann, II², 24; S II, 14. (24) *R. fī taḥḳīḳ taʿrīb al-kalimāt al-ʿarabiyya*, on various non-Arabic words used in Arabic, printed Cairo n.d. (according to Sarkis), Turkish tr. Istanbul 1290; described by Brunschvig [see *Bibl.*], 50-2: Atsız, no. 182; Brockelmann, no. 109. (25) *al-Tanbīh ʿalā g͟halaṭ al-k͟hāmil* (*sic*, not *al-d͟jāhil*) *wa'l-nabīh*, on Arabic words mispronounced, Turkish tr. Istanbul 1289: Atsız, no. 194; Brockelmann, no. 106 [and see G͟HALAṬĀT-I MES͟HHŪRE]. (26) *R. fī maziyyat al-lisān al-fārisī*, on the superiority of Persian over other languages, except Arabic, printed in *Rasāʾil*, Istanbul 1316, 210-6, and Tehran 1332 s.; see Brunschvig, 52-6: Atsız, no. 203; Brockelmann, no. 108.

According to Kātib Čelebi (*Kas͟hf al-ẓunūn*, Flügel no. 13617 = Yaltkaya-Bilge, ii, 1933), he translated for Selīm I, under the title *al-Kawākib al-bāhira, al-Nud͟jūm al-zāhira* of Ibn Tag͟hrībirdī [see ABU 'L-MAḤĀSIN], but no *ms.* is known.

Kemālpas͟hazāde is usually credited with the authorship of the somewhat notorious *Rud͟jūʿ al-s͟hayk͟h ilā ṣibāh fi 'l-ḳuwwa ʿala 'l-bāh*, rendered by R. F. Burton "Book of Age-rejuvenescence in the power of Concupiscence" (Brockelmann, no. 103, for Arabic *mss.* and printed texts and Persian trans.; anon. English trans. *The old man young again*, 2 vols., Paris 1898-9; and see D͟JINS at col. 552b). However, Kātib Čelebi records (*Kas͟hf*, Flügel no. 5878 = Yaltkaya-Bilge, i, 835) that Kemālpas͟hazāde translated it, presumably from Arabic into Turkish, for Selīm I (Atsız lists, no. 7, two Turkish *mss.*); the author is more probably Aḥmad b. Yūsuf al-Tīfās͟hī, d. 651/1253 (Brockelmann, I², 652; and see AL-TĪFĀS͟HĪ).

There seems to be no foundation for the assertion that Abu 'l-Suʿūd [*q.v.*] was the pupil of Kemālpas͟hazāde. Their names are significantly linked, however, by ʿAṭāʾī (p. 185), in the statement that it was they who, as *muʿallim-i evvel* and *muʿallim-i t͟hānī* of Süleymān I, succeeded (by their *id͟jtihād*) in reconciling the *s͟harīʿa* and the *ḳānūn*—an achievement sometimes attributed to Abu 'l-Suʿūd alone (see also Kātib Čelebi, *Mīzān al-ḥaḳḳ*, 116; Eng. tr. G. L. Lewis, 128). The extent of Kemālpas͟hazāde's contribution remains to be investigated (numerous MS collections of his *fatwās* survive: Atsız, no. 5; Brockelmann, no. 47). As regards other fields, however, his immense reputation rests rather on his industry and on the profundity and extent of his learning than on any originality of thought.

Bibliography: Life. The principal source is Tas͟hköprüzāde, *S͟haḳāʾiḳ*, i, 541-8 = Turkish trans. by Med͟jdī, 381-5 = German trans. by Rescher, 243-5. To cite here the numerous secondary works is superfluous, for they are superseded by three recent studies, all containing references to them and to unpublished sources: İsmet Parmaksızoğlu, art. *Kemâl Paşa-zâde*, in *İA*, fasc. 62 (1954); Ş. Turan, introductory chapter in *Tevârih-i Âl-i Osman: VII. defter*, Ankara 1957, pp. ix-xxviii; R. C. Repp, *The origins and development of the office of S͟haik͟h al-Islâm* ..., unpublished D. Phil. thesis. Oxford 1966, 277-96.

Works. The most recent attempt at a bibliography is by [Çiftçioglu Nihal] Atsız, *Kemalpaşaoğlu'nun eserleri*, in *Şarkiyat Mecmuası*, vi (1966), 71-112 (nos. 1-92) and vii (1972), 83-135 (nos. 93-209), listing 19 works in Turkish, 7 in Persian and 183 in Arabic, the last classified by subject (*tafsīr*, *ḥadīt͟h*, etc.); but valuable as it is, it is based only on the manuscript collections of Istanbul, so that it does not supersede D͟jamāl al-ʿAẓm, *ʿUḳūd al-d͟jawhar*, Beirut 1326, 217 f. (214 titles, with some duplications) or, for the Arabic works, Brockelmann: II², 597-602 = nos. 1-124; S II, 668-73 = nos. 125-70; S III, 1306 = nos. 171-9.

A number of his *risāla*s (more than the 28 noted by Atsız) were printed in the Iḳdām series, Istanbul 1316. Facsimiles of ten of his *fatwās* are given in *ʿIlmiyye sālnāmesi*, Istanbul 1334, 346-54; one of his letters, to Süleymān I, is published by S. Turan, in *Tarih Vesikaları*, new series no. 2/17 (1958), 221-4. See also R. Brunschvig, *Kemâl Pâshâzâde et le persan*, in *Mélanges H. Massé*, Tehran 1963, 48-64. (V. L. MÉNAGE)

KEMĀL REʾĪS (d. 917/1511), a Turkish corsair and admiral in the time of Bāyezīd II (886-918/1481-1512), and uncle of the celebrated Pīrī Reʾīs [*q.v.*]. Born in Gallipoli of a Turkish family originally from Ḳarāmān, he joined the campaign of Agriboz in 874/1470 under Maḥmūd Pas͟ha. Later he settled down in that island and was raised to the rank

of *ʿazablar āghāsi̊*. He gained great fame through his corsair activities in the western Mediterranean, so that in 900/1495 Bāyezīd II took him and his nephew Pīrī Re'īs into the Ottoman service at a salary of 20 *aḳčas* per day. In the following year, he conveyed to Alexandria the income of the *awḳāf* of Adana and Tarsus for the Holy Places of Arabia; on his return he was attacked by the Knights of Rhodes in the vicinity of the island, but defeated them (Kemāl Pashazāde, *Ta'rīkh-i Āl-i ʿOthmān*, Ali Emiri, VIII. Defter. No. 32, f. 76a). He took part in the Inebakhti (Aynabakhtī) campaign in 904/1499, and he and Burāḳ Re'īs commanded the two newly-built large battle ships (*küke*) which were among the Ottoman fleet at that battle under the supreme command of the Admiral or Küčük Dāwūd Pasha. Kemāl Re'īs's duties in this battle were to prevent the Venetians giving support by sea, and thus assist the *beylerbeyi* of Rumeli, Ḳodja Muṣṭafā Pasha, who was besieging the fortress of Inebakhti by land. During the sea battle near the island of Sapienza on 19th Dhu 'l-Ḥidjdja 1499/28th July 1499, the Venetians, thinking that they were attacking Kemāl Re'īs, mistakenly attacked Burāḳ Re'īs's ship, which also had on board the *sandjaḳbeyi* of Yeñishehir, Kemāl Bey; Burāḳ Re'īs managed to set the enemy ships on fire with naphtha, though he himself and his ship perished. The island of Sapienza was later renamed Burāḳ Re'īs island. Kemāl Re'īs, meanwhile, took up a position near the coast and prevented the Venetian fleet from landing troops behind the Ottoman forces. In the following month he secured several further victories over the Venetians, and played a great role in the capture of Inebakhti and later of Modon, Koron and Navarino by the Ottomans; for his activities in these battles see Ṣafā'ī, *Fetḥ-nāme-yi Inebakhti ve Modon*, Topkapı Sarayı Kütüphanesi, Revan 1271). He was busy with corsair activities in the western and central Mediterranean during the summer of 906-7/1501, and returned to Istanbul in the autumn of that year. Among the rich booty and prisoners taken was the Duke of Catanzaro, and for the ransom of this person 5,000 gold pieces were demanded (H. J. Kissling, *Sultan Bayezid II.'s Beziehungen zu Markgraf Francesco II. von Gonzaga*, in *Münchener Universitätsschriften*, Reihe der Philosophischen Fakültät, Munich 1965, i; for the emended Italian translation, see *Francesco II Gonzago ed il Sultano Bayezid II*, in *Archivio Storico Italiano*, 1967, i, 34-68; Kissling, *Betrachtungen über die Flottenpolitik Sultan Bayezids II 1481-1512*, in *Saeculum*, xx/1, 35-43). It was probably after this success that his daily allowance was increased to 50 *aḳčas*. (Kissling, *Zur Tätigkeit des Kemāl-Re'is im Westmittelmeer*, in *WZKM*, lxii (1969), 155. He died during a campaign in 917/1511 when his ship was caught in in a storm and sank; by that time, his daily allowance was 100 *aḳčas* (Topkapı Sarayı Müzesi Arşivi, E. 4661). Notable is his introduction of long-range cannon for the ships of the Ottoman navy.

(NEJAT GÖYÜNÇ)

KEMAL TAHİR (DEMİR), modern Turkish novelist (1910-1973). Born on 13 March 1910 in Istanbul, his father's family came originally from Alişar village of Şebinkarahisari (in north-eastern Anatolia), where most of their relatives still live. They were known as Demircioğulları, hence the family name Demir, which however Kemal Tahir never used in his writings. His father Ṭāhir Efendi (d. 1957), a naval officer risen from the ranks, was an *aide-de-camp* to the Sultan (*khünkār yāveri*), and also worked in the carpentry shop of the Yıldız Palace (a privileged position, as cabinet-making was ʿAbd al-Ḥamīd II's great hobby). He married Nūriyye Khanīm, a *sarāyli̊*, a Circassian girl from Adapazarı brought up in the Palace and attached to the Sultan's household. Ṭāhir Efendi was retired from the navy as lieutenant following the Revolution of 1908, but was called up again during the Balkan War of 1912 and again at the outbreak of World War I. Wounded at the Dardanelles (1915), he served, behind the front, in various military hospitals in Anatolia until he was retired in 1918, when he settled in Istanbul in his brother's home and made his living working as a carpenter on construction projects. Kemal Tahir attended various primary schools following his movements, and continued his education in Istanbul. In 1923 he entered Galatasaray (the leading high school modelled on the French *lycée*), but he had to give up his studies in 1926 when his mother died and he had to earn his own living. Between 1927-32 he worked as a clerk in lawyers' offices and in other odd jobs and eventually settled in journalism, working in various newspapers and magazines as proof-reader, translator, secretary and editor. In 1937 he married İrfan Hanım, a teacher.

His interest in socialist ideas and literature and his close friendship with the famous left-wing poet Nazim Hikmet, brought him into conflict with the government during the rigorous conformist period of the single-party régime. He was accused, together with his friends, of spreading subversive ideas and inciting to mutiny in the Navy (through his brother Nuri, who was a naval N.C.O.) and was sentenced by a naval court to 15 years imprisonment (1938). He spent the first two years of his term in an Istanbul prison; then he was transferred with Nazım Hikmet to Čankırı where they spent 16 months together. In the meantime, he was divorced from his wife. Kemal Tahir spent the years 1941-50 in the prisons of Malatya, Čorum (five years) and Nevşehir until his release following the general amnesty of 1950. He settled in Istanbul in the summer of the same year. He brought with him the drafts and sketches of half a dozen novels and several thousands of pages of notes as materials for further works.

The first five years in Istanbul were a bitter struggle for survival. Under a dozen pseudonyms, Kemal Tahir busily produced or translated a great number of detective stories and adventure novels which were serialized in various popular dailies. Semiha Hanım, his second wife, contributed to the family budget by working as a dressmaker. Following the anti-Greek riots of September 1955, Kemal Tahir was arrested with a number of left-wing suspects, as the incident was thought to be in some quarters a communist conspiracy. He was released after six months' detention. The year 1955 is a turning point in his career, as it saw the publication of two of his books (see below). The same year he set up, together with the humorist writer Aziz Nesin, the publishing house *Düşün*. Kemal Tahir spent the remaining years of his life revising and publishing his drafts and writing new novels and developing his controversial ideas and theories on historical, political,

literary and social problems. His health declined, and he died unexpectedly on 21 April 1973, leaving many incomplete works, particularly his pet project of a historical novel on the famous 15th century rebel Shaykh Bedr ed-Din.

Like most writers of his generation, Kemal Tahir started with poetry. His early experiments were published in Abdullah Cevdet's *Içtihad* and were, characteristically, poems on social themes (*Bardaki Kadınlar*, "Women at the Tavern", No. 318, April 1931; *Açın Türküsü*, "The song of the Hungry", No. 320, May 1931, etc.). These were followed in the early 1930s by poems of symbolist inspiration (then very popular) in the *avant-garde* literary review *Varlık*. Later, under Nazım Hikmet's influence, he returned to social themes and wrote poems in free verse which he published under the pseudonyms of Cemalettin Mahir and Ismail Kemalettin in the review *Ses* (1938-9).

In the meantime, he had been contributing popular short stories and novels to the weekly *Yedi Gün* (1935-40). But his short stories, which revealed his talent, were written in 1940 and serialised in the daily *Tan* in 1941 under the pseudonym Cemalettin Mahir (first edition in book form under his own name: *Göl İnsanları*, Istanbul 1955). These are powerful sketches of the life of peasants and working class people.

Kemal Tahir never returned to the short story, and he serialised his first novel *Sağırdere* (under the pseudonym Körduman) in 1950 (published in book form under his own name in 1955). In this first novel, he describes the everyday life, customs and manners of peasants in their own surroundings (a Central Anatolian village near Čorum) and in the city where they come to find work. This is a forerunner of his series of village novels and opens an important phase in the Turkish "peasant literature", which began to gather momentum in the 1930s. Then followed his *Esir Şehrin İnsanları* ("People of the Captive City"), which was serialised in the Istanbul daily *Yeni Istanbul* in 1952-3 and published in 1956. This work opens the series of "period novels" in Kemal Tahir's career. It is the story of Istanbul under the Allied occupation in 1920-2 and of the bitter struggle between the supporters of the Anatolian Nationalists and the men of the Sultan's government subservient to the occupying powers. The untypical hero of the novel is a young diplomat, Kâmil Bey, the son of a wealthy Hamidian Pasha, who has spent most of his life in Europe and who, on his return to Istanbul becomes a *millidji*, a supporter of the Nationalist cause, to the indignation of his wife who typifies the collaborationist, wealthy "society" women. The hero is in strong contrast with the type of "Westernising snob" frequently ridiculed by many earlier Turkish novelists, e.g. Huseyn Rahmi.

From 1956 until his death, Kemal Tahir produced a dozen novels in these two categories. Outstanding among them are: *Rahmet Yolları Kesti*, ("The Rain Blocked the Roads", 1957), written in answer to Yasar Kemal's best-seller *İnce Memed* (1955, Engl. tr. *Memed My Hawk*, 1961) where the brigand-hero is idealised, whereas Kemal Tahir tries to kill by ridicule the romantic-epic conception of brigands and rejects the idea that "these former deserters and criminals" can lead popular movements or can be real friends of the oppressed; and *Yorgun Savaşçı* ("The Tired Warrior", 1965), perhaps his best novel. It is, in a way, the epic of the generation of the officers who, after the restoration of the Constitution in 1908, went through a series of ordeals: the War in Tripoli with Italy, 1911; the Balkan Wars, 1912-13; and World War I, culminating in the collapse of the Empire, the Greek invasion of Western Anatolia and the occupation of Istanbul by the Allies. The novel tells the story how some of these "tired warriors" rushed to Anatolia to form the nucleus of resistance and fought desparately until Mustafa Kemal's organised movement, which gradually became the master of the situation, took over. *Devlet Ana* ("Mother State", 1967) is a historical novel which caused much controversy in the press. It explores the circumstances which, in the late 13th century, led to the birth of the Ottoman State between the declining Byzantium and the disintegrating Seljuk power. "The generous and just State" realized by the early Ottomans, "towards which Muslims and Christians alike flocked to seek security and welfare", as described in the early Ottoman chronicles, is the basis of the author's "Ottomanist" thesis. This version of "Ottoman revivalism" which he pioneered in literature, rejects everything alien and imposed on the Turkish culture and maintains that the secret of a regeneration is to be found in the "perfect" Ottoman system. In this novel, Kemal Tahir experimented, with unequal success, with a style which is mainly inspired by that of the 15th century chronicles and religious-epic folk stories. In other novels, important issues or episodes of contemporary Turkish history are discussed elaborately, with an approach which is usually different from the received or current versions. The village Institutes, an attempt to realize mass education of the peasantry (*Bozkırdaki Çekirdek*, "The Seed in the Steppe", 1967); the 1926 Unionist conspiracy against Mustafa Kemal (*Kurt Kanunu*, "Wolves' Law", 1969); the short-lived Liberal Party (*Serbest Fırka*) experiment of 1930 (*Yol Ayrımı*, "Cross-Roads", 1971); etc.

Kemal Tahir kept alive the interest and curiosity of his reading public by constantly dwelling on subjects and personalities which have always been a centre of heated controversy: East versus West, tradition versus innovation, the value of the Islamic and Ottoman heritage for Modern Turkey; responsibility for military, political and economic setbacks and cultural stagnation since the Tanzimat; ʿAbd al-Ḥamīd II and his policies; the Unionist leaders and the real nature of their party; and lastly, Atatürk, his companions, his reforms and the Republican era which he inaugurated.

Kemal Tahir's approach to all these matters is rather emotional and biased. His admiration for ʿAbd al-Ḥamīd II (already rehabilitated by some modern historians) and his reign, and his lack of enthusiasm for the 19th century reformers, for the Young Turks, and particularly for Atatürk, may perhaps be partly explained by his family background and his personal experiences. He never lived in Anatolia for any length of time, and his observations of peasantry are limited to his long years of association with the inmates of Central Anatolian prisons. His subjects of study were, by necessity, offenders of various types: bandits, murderers, thieves, forgers, sexual criminals, etc. This circumstance was bound to condition him when he judged and made generalisations on the way of life, problems and moral values of peasants and conditions in villages.

Kemal Tahir's language and style differ considerably from his contemporaries. His peasants do not speak a local dialect, as is the case with most "village novelists". Also, he almost ignores the language reform movement and avoids, most of the time, the

use of neologisms and prefers a "moderate" style close to that of the preceding generation. On the other hand, he has a repertory of colloquial or slang words and expressions, and his pet pseudo-archaic forms, which he likes to use indiscriminately on all occasions, and his many diverse characters have often disturbingly identical speech habits. In his novels the plot is often a pretext to put forward his ideas, and in every novel there are one of two characters who use every occasion to defend, at length, the author's familiar theses. Many of his novels consist consequently of loosely connected political arguments or didactic tirades.

There can be no doubt, however, that Kemal Tahir ranks among the leading and most remarkable writers of modern Turkey, a writer who invited his readers to re-think on vital issues of Turkish political and cultural life, who experimented in the use of elements of classical and popular Turkish prose, thought to be dead wood by many, and who left two or three novels which will always be considered among the best of his time.

KEMĀLIYYE. [see EĞİN]

KEMĀNKES̲H̲ ("Archer"), ʿALĪ PAS̲H̲A, Ottoman Grand Vizier. Born in the district of Ḥamīd-ili in Anatolia, he came to Istanbul and was trained in the palace service from which he emerged with an appointment as *beylerbeyi* of Diyār Bakr with the rank of vizier, probably in 1029/1620. Difficulties arising over his executing a well-known provincial official without reference to Istanbul caused his transfer to the governorship of Bag̲h̲dād, where he remained for about a year before being dismissed and retiring to the vicinity of Ḳaysāriyya. Returning to Istanbul following the death of ʿOt̲h̲mān II (Rad̲j̲ab 1031/May 1622), he was made a lesser (either fourth or third) vizier and subsequently replaced the Grand Vizier Mere Ḥusayn Pas̲h̲a, who was turned out of office in D̲h̲u ʾl-Ḳaʿda 1032/August 1623.

Though there were serious problems in various parts of the empire during ʿAlī Pas̲h̲a's vizierate (the rebellion of Ābāza Meḥmed Pas̲h̲a [*q.v.*] continued in Anatolia, for example, and Bag̲h̲dād fell to the Ṣafawid ruler S̲h̲āh ʿAbbās I), he appears to have concerned himself mainly with affairs in Istanbul. He played a leading role in the second deposition of the incompetent sultan Muṣṭafā I (D̲h̲u ʾl-Ḳaʿda 1032/September 1623), but is otherwise chiefly remembered in the sources for his attempts to secure his position, building a sizeable fortune through such means as bribery and the sale of offices and attempting to undermine those whom he felt to threaten him. With the encouragement of his father-in-law, the highranking scholar Bostān-zāde Meḥmed Efendi, he succeeded in bringing about the dismissal of the *S̲h̲ayk̲h̲ al-Islām* Zekeriyyā-zāde Yaḥyā Efendi, who had offended him by alluding in conversation to his susceptibility to bribery; he was unable, however, to obtain that post for his father-in-law, an aim which, had it been achieved, might have resulted in a dangerous concentration of power. He was less successful in his moves against two former Grand Viziers, Gürd̲j̲ü Meḥmed Pas̲h̲a and K̲h̲alīl Pas̲h̲a: having arrested them on the pretext of supposed subversive letters to Ābāza Pas̲h̲a, he refused to produce the letters for inspection when challenged and the two men were set free. The immediate cause for his dismissal and execution on 14 D̲j̲umādā II 1033/3 April 1624 is said to have been his attempt to conceal from Murād IV the news of the fall of Bag̲h̲dād. His considerable possessions were confiscated and his body buried in the grounds of the ʿAtīḳ ʿAlī Pas̲h̲a Mosque in Istanbul.

ḲENĀ. [see ḲUNĀ]

KENʿĀN PAS̲H̲A, also nicknamed Ṣarī ("pale-faced") and Ṭopal ("Lame"), High Admiral (*Ḳapudān Pas̲h̲a*, [*q.v.*]) under the Ottoman Sultan Meḥemmed IV, d. 1069/1659. He originated from the northeastern shores of the Black Sea (Russian or Circassian?) and came as a slave into the service of Baḳīrd̲j̲i Aḥmad Pas̲h̲a, Ottoman governor of Egypt. On the latter's execution he was taken by Sulṭān Murād IV into the Palace and educated there. He was promoted to be Ag̲h̲a of the stirrup-holders (*Rikāb-dār ag̲h̲asi*) (Chronicle of Wed̲j̲īhī, f. 91b of the Vienna MS.), became a favourite of Sulṭān Ibrāhīm after his accession (1049/1640) and married his daughter ʿĀtike Sulṭāne. He was at the same time appointed third vizier but banished soon after Ibrāhīm's death 1058/1648) to Crete. In S̲h̲awwāl 1062/Sept. 1652, he returned to Istanbul and was appointed to the charge of the defences of the Dardanelles. In S̲h̲awwāl 1063/Sept. 1653, he was given the governorship of Ofen, but deprived of it in D̲h̲u ʾl-Ḳaʿda 1065/Sept. 1655, and in Rabīʿ II 1066/Feb. 1656, appointed governor of Silistria. On 9 Rad̲j̲ab 1066/3 May 1656 he was appointed Grand Admiral. On 3 Ramaḍān 1066/26 June 1656, while in command of the Ottoman fleet sent out against the Venetians, he suffered a severe defeat in the Dardanelles, the greatest naval reverse inflicted on Turkey since the battle of Lepanto; the Venetians then occupied the islands commanding the Dardanelles and thus severed links with the Mediterranean for the Turks (cf. Kātib Čelebi, *Tuḥfat al-kibār fī asfār al-biḥār*, Istanbul 1329, 133-4; Naʿīmā, *Taʾrīk̲h̲*¹, vi, 183-5; Von Hammer, *GOR*, v, 649 ff.). The whole weight of the Sulṭān's wrath fell upon Kenʿān Pas̲h̲a who was immediately thrown into prison. He was finally released on the intercession of his Russian countrywoman, the Sulṭāna-mother (Kösem Wālide; [*q.v.*]) but was dismissed from the office of Grand Admiral almost immediately on 26 Ramaḍān 1066/18 July 1656. Two years later he was appointed *Ḳāʾim-maḳām* of the imperial stirrup (*riḳāb-i humāyūn*), but the very next month dismissed again and sent to Bursa as commander

of the garrison (*muḥāfiẓ*) to protect the city against the rebel Ābāza Ḥasan's possible attack (Naʿīmā, *Taʾrīkh*[1], ii, 660; Von Hammer, *GOR*, vi, 37). But he then left Bursa to join the rebel leader in Anatolia, possibly out of jealousy towards the Grand Vizier Köprülü Meḥmed Pas̲h̲a. However, he shared the fate of Ābāza Ḥasan and other rebel leaders, and was executed at Aleppo on 23rd D̲j̲umādā I 1069/16th February 1659 (cf. Naʿīmā, ii, 685). His head was shortly afterwards brought to the *Dīwān* in Istanbul and eventually buried at Üsküdar.

If this is the Kenʿān Pas̲h̲a mentioned by Ewliyā Čelebi, *Seyāḥat-nāma*, iii, 366 (and he certainly never was governor of Oczakov any more than was Ḳod̲j̲a Kenʿān Pas̲h̲a (d. 1062/1651) who is also often confused with the Grand Admiral, e.g. in the *Sid̲j̲ill-i ʿOt̲h̲mānī*, iv, 83), he was also an author and composed a *Ṣaltīḳ-nāma* in honour of Ṣarī Ṣaltīḳ Baba [*q.v.*]. His own warlike exploits, especially his military operations in the years 1036-8/1626-8 were celebrated in a rhymed *Pas̲h̲a-nāma* by the poet and judge Ṭulūʿī Ibrāhīm Efendi (of Ḳalḳandelen) of which there is a copy in the British Museum (Sloane MS. 3584); cf. Ch. Rieu, *Catalogue of the Turkish MSS*, 191 f., with detailed summary of contents. The possibility that it celebrates the above mentioned Ḳod̲j̲a Kenʿān Pas̲h̲a who had a very similar career to his namesake and contemporary (both were, for example, governors of Ofen), has always to be remembered. The biographical data regarding Ṣarī Kenʿān Pas̲h̲a are much confused, as the article in Rāmiz Pas̲h̲azāde Meḥmed, *K̲h̲arīta-i Ḳapudānān-i Deryā*, Istanbul 1285, 65-6, and Sāmī Bey Fras̲h̲erī, *Ḳāmūs al-Aʿlām*, 3900, who follows it, show. According to this authority,. Kenʿān Pas̲h̲a was buried beside the school not far from Ḳīrḳ Čes̲h̲me.

(F. BABINGER - [N. GÖYÜNÇ])

KENÈH [see ḲUNĀ]

KENYA, a state of East Africa bounded on the east by the Indian Ocean, on the north by Ethiopia and the Sudan, and in the south by Tanzania. It was formerly a colony of the British Empire, but became independent in December 1963. The Muslim population in the country formed about 6% of a total figure of 8,636,263 in 1962. Assuming that the number increased annually by the present rate of 3.4%, the Muslim population would number some 800,000 out of a total population of 10,942,705 in 1974. The Muslims themselves generally feel that their numbers have been under- estimated. A claim that they represent a quarter of the population has been advanced, although no special census has been made to determine the actual number of Muslims in the country. The Muslim communities in Kenya today comprise various races and tribes, together with all the major sects of Islam, with a definite predominance of the S̲h̲āfiʿī *madhhab*. A tribe like the Pokomo is 85% Muslim, whereas the Duruma is 25% only.

In the pre-Islamic period, the Kenya coastlands were visited by merchants from southwestern Arabia [see YAMAN, ZAND̲J̲], and some Arabs settled there. But it is difficult to fix a date for the earliest arrival and settlement of Muslims on the coast. Local traditions and chronicles of recent origin speak of Muslim settlement going back to the caliphate of ʿUmar b. al-K̲h̲aṭṭāb, but no reliable evidence, archaeological or other, has been advanced to support such claims. During some four centuries, between Ptolemy's *Geography* and the first Arabic sources, there are no reliable data on the coast. The first Arabic source of note is al-Masʿūdī, who relates in the 4th/10th century that the island of Ḳanbalū (taken to be Pemba or Zanzibar) was ruled by a Muslim family and that its population consisted of Muslims and non-Muslims. Excavations recently carried out at a site on Manda island indicate that a thriving town existed there by that time. "Some of the buildings were of coral stone set in mortar, though many were of mud and wattle, masonry walls built against the sea are of very large coral blocks, many weighing over a ton—a massive form of construction found nowhere else in Sub-Saharan Africa" (Neville Chittick, *Zamani*). The excavation unearthed vast quantities of Islamic pottery and some shards of Chinese porcelain which indicate direct contact with other Islamic regions. The contacts with China were probably only through intermediairies. By the 4th/10th century, commercial relations were being pursued not only with South Arabia, but also with the Persian Gulf. Immigrants from Persia, known as the Banādir, also seem to have come to settle on the Somali coastal towns. They intermarried with autochthonous Bantu-speaking groups and thus contributed to the foundation of Mogadishu which, by the 7th/13th century, had developed into the most important Muslim town on the whole coast. Many of these S̲h̲īrāzīs, as the Persian-African families became known, later moved south and settled at such places in Kenya as Shanga and Manda and became part of the ruling families in Malindi, Mombasa and Vumba Kuu. On Pate (Patta) island, an Arab family from ʿUmān, the Nabhānī, formed a ruling dynasty through a similar process of integration. The sultanate of Vumba Kuu, on Kenya's southern coast, was the result of S̲h̲īrāzī settlement and intermarriage between these Muslims and local Africans. In the 12th/18th century, an Arab family of S̲h̲arīfs from Ḥaḍramawt, the Bā ʿAlawī, established a dynasty which adopted the title of *Dīwānī* for the ruler, but maintained the custom of giving him a Bantu nickname—a symbol of cultural exchange and synthesis, which was also reflected in the investiture ceremonies of the *Dīwānī*, which included Bantu and Muslim rites. The Nabhānī rulers of Pate also adopted a Bantu throne-name, *Fumo* ("spear").

Such ethnic and culture integration renders inaccurate the description of these city-states as "Arab colonies". Their dominant feature was not their Arab nature but Islam, and they have been compared with some of the western Sudanese Muslim states.

Between the 7th/13th and 10th/16th centuries, sc. up to the arrival of the Portuguese, the Muslim city-states enjoyed their greatest days of cultural and material efflorescence. They were largely independent of one another, the so-called Zand̲j̲ empire being a myth; they quarrelled and fought one another many times (Mombasa's and Malindi's enmity towards each other became proverbial), but there was a great deal of commercial and cultural interdependence among them. At this time towns produced an abundance of sorghum, millet, rice and bananas,

largely for their own use, but obtained their wealth from ivory, ambergris, gold and slaves. Gold came from the Sofala region in Mozambique, and was largely responsible for the comparative greatness reached by Kilwa [*q.v.*] and possibly for the Banādir emigration to the South. In return for their exports, the Muslims of the coast imported household utensils and wares. As their wealth increased, Islamic goods were augmented by greater quantities of Chinese wares indirectly acquired, probably from Cambay in India [see KHAMBĀYAT]. Also from India came glass beads that were used for barter locally. Silk was imported by the wealthy. Some towns had local industries: Pate was known for its production of fine gaily-coloured woven fabrics. In short, when the Portuguese arrived they were astonished by the urban material culture and civilisation of the "Moors" they encountered.

Their exploitation of the Muslim rulers of Mombasa, Kilwa and other city-states was part of their policy to out-flank Islam. Mombasa was burnt down at least twice. The two-centuries long episode of this Portuguese presence certainly contributed to the economic decline and cultural stagnation of the Muslim city-states, although it was by no means the only factor. Disruptive human movements on the mainland, such as that of the Galla, were also a noteworthy factor, as was the general decline of the central regions of Islam during the 10th/16th and 11th/17th centuries.

Mombasa's Muslims had appealed to the *Imām* of ʿUmān for help to overthrow their Portuguese oppressors. Their call was answered, although the liberation took some decades to be achieved. By the third decade of the 18th century, the Portuguese had been driven south of the Ruvuma. During their presence on the coast, Islam had remained triumphant; and although there are references in Portuguese sources to some local people becoming Christian, none survived the Portuguese expulsion. Christianity had to be sown anew on the coast from the middle of the 19th century onwards.

The Portuguese were succeeded by ʿUmānī Arabs as nominal overlords of the coast, local chiefs and *shaykh*s enjoying a great deal of autonimy and real local authority. These ʿUmāni Arabs belonged to the Ibāḍiyya sect [*q.v.*]. However, by the time of their arrival the coast had evolved as a predominantly Shāfiʿī region. This may be ascribed to the influence of Ḥaḍramī *sayyid*s or *sharīf*s who had settled on the coast in large numbers during the 8th/14th and 9th/15th centuries. Through intermarriage with Africans, these *sharīf*s and their descendants came to determine not only the *madhhab* of East African Islam but also greatly influenced Swahili literature and culture generally. The legacy of this Ḥaḍramī Arab settlement and scholarship is to be seen in the methods of teaching Islām, the religious manuels used, the cult of saints, the veneration for *sharīf*s, the poetic verse form and content of the Swahili epic or *utenzi*, etc. The Lamu archipelago, Zanzibar and the Comoro islands, became the main centres from which radiated the influence of the *sharīfī* families. A notable religious intelligentsia developed on the coast which became, and remained, the point of reference for the whole of East African Islam. By the 19th century, cultural traffic linked South Arabia to the Banādir, to the coast southwards up to Mozambique, and to the offshore islands: the Lamu Archipelago, Zanzibar, Pemba, Mafia and the Comoro islands. Ḥaḍramī towns like ʿĪnāt and Tarīm, Mecca and Medina, sometimes Cairo and occasionally Istanbūl, helped to mould the minds of East African Muslim scholars. Students from the East African towns travelled to the Ḥidjāz, Ḥaḍramawt, and sometimes Egypt, to study under renowned scholars. The acquisition of an *idjāza* from one of these scholars established its recipient as a teacher in a mosque or in his own home, in the Arabic language, Ḳurʾānic exegesis, *ḥadīth*, *Sharīʿa*, etc. From this educational system there developed a strong body of *ʿulamāʾ*, from amongst whom the Bū Saʿīdī rulers appointed their *ḳāḍī*s.

Some of the most outstanding names among these *ʿulamāʾ* for the latter part of the 19th and early part of the 20th centuries, are Sayyid Aḥmad b. Ṣumayt and his son ʿUmar; Shaykh ʿAlī b. ʿAbd Allāh al-Mazrūʿī and his son al-Amīn; Shaykh ʿAbd Allāh b. Muḥammad Bā Kathīr, Sayyid Abū Bakr b. ʿAbd al-Raḥmān al-Ḥusaynī, the great Lamu scholar, better known as Sayyid Manṣab, and Sayyid ʿAbd al-Raḥmān bin Aḥmad, the first Chief *Ḳāḍī* or *Shaykh al-Islām* to be appointed in Kenya in 1897.

In addition to them there were and still are the Ḳurʾān teachers (*Waalimu*, sing. *Mwalimu*) and schools that abounded and still abound in every Muslim town and village. In the Ḳurʾānic school, the Muslim child learnt to recite the Ḳurʾān, and to write in Arabic characters, but rarely to write in that language. Overwhelming dependence on such a school led to the emergence of generations of coastal Muslims who were Ki-Swahili- rather than Arabic-speaking. During his visit to the coast, Ibn Baṭṭūṭa noted this trend, as the result of absorption and integration of Arabs within an African society. Ki-Swahili developed quite early as the *lingua franca*, though it relied heavily upon Arabic vocabulary. Arabic and Arabic culture enriched Ki-Swahili and enabled it to develop a significant literary tradition, sc. in the verse epic known as *utenzi* or *utendi* [see SWAHILI]. The most famous of such didactic epics is *al-Inkishāfi*, written *ca.* 1800 by Sayyid ʿAbd Allāh b. ʿAlī b. Nāṣir, which uses the decline of Pate as a moral to emphasise the transitoriness of material wealth and enjoins its readers to lead a virtuous life.

The ruins still standing in Pate, now a mere village, testify to a time of great prosperity. But this prosperity came much later than the local traditional source, the *Chronicle of Pate*, has indicated. N. Chittick's reappraisal of the *Chronicle*, in the light of archaeological work done by himself in the area, shows that the town was of a modest size before 700/1300, developing very gradually and not achieving its greatest period of efflorescence until the 11th/17th century. This is attested by the rich deposits of Chinese porcelain discovered from the 10th/16th century levels upwards. On the strength of these archaeological discoveries, Pate has been ranked with Kilwa in Tanzania as two of the three most prominent towns of Muslim civilization south of Somalia, the third being Lamu. It achieved prosperity and strength during the reign of the Bāṭāwī dynasty, which had acquired power through intermarriage with the indigenous Wasania, a hunter-gatherer group from whom the Muslims had been purchasing ivory on the mainland, and during the reign of the subsequent dynasty, the Nabhānis, its days of prosperity lasted well into the 12th/18th century.

The dates of the birth and death of Sayyid ʿAbd Allāh b. ʿAlī, the author of *al-Inkishāfī* are deduced, rather than factually known, from the internal evidence of the poem and from the inscription on the

tomb of his uncle, Ṭālib b. Nāṣir, who died in 1169/1755. Thus it is assumed that the poet was a youth by then and may have witnessed not only some of the glories of the mansions and life of Pate, but also evidence of the internecine fighting that contributed to its decline. It was subdued first by the Mazrūʿī rulers of Mombasa and later by the Bū Saʿīdī sultans of Zanzibar. By the time the poem was written Pate had fallen into ruin (see W. Hichens, *Sayyid Abdallah bin Ali bin Nasir*). The Ki-Swahili verses amply evoke a life of great luxury, when at least the ruling classes were familiar with porcelain wares and when furnishings were made from silk and brocade.

Another outstanding example of Ḥaḍrami contribution to Swahili religious culture is Sayyid ʿAbd Allāh. He was a descendant of the venerated *shaykh* Abū Bakr b. Sālim, the 11th/17th century *sharīf* of Ḥaḍramawt, renowned for his erudition, piety and poetry. According to the *Pate Chronicle*, the people of the town appealed to him to pray for their deliverance from their enemies. It is not certain whether these enemies were the Portuguese or the Galla. In any event, descendants of his two sons ʿAlī and Ḥusayn, settled on the coast and provided some of its most notable figures in the field of theology and literature. Sayyid ʿAbd Allāh was the son of ʿAlī's great-great-grandson; from Ḥusayn's line came Sayyid Manṣab (1828-1922), the renowned jurist of Lamu.

From the Lamu archipelago the poetic tradition spread south and ventured into new fields of comment. By the 19th century, a poet like Muyāka b. Ḥādjdjī al-Ghassānī of Mombasa was writing romantic poetry and patriotic verses in defence of Mombasa's independence, then under the rule of the Mazrūʿī dynasty, and against ʿUmānī attempts to impose their overlordship upon Mombasa and other towns on the coast. All those who appreciated this Ki-Swahili literary efflorescence became *wenyeji* "those who belonged" and *wastaarabu* (from Ar. *istaʿraba* "the civilised ones". These *wenyeji* differentiated themselves somewhat from the recent immigrants from Ḥaḍramawt or ʿUmān who, until they had integrated themselves, were considered alien to this local Muslim culture of the Swahili-speaking people of the coastal towns.

There is little evidence that this Swahili Muslim culture penetrated far beyond the littoral before the 19th century. However, there is evidence of some form of "diplomatic", commercial, and religious interaction with some African tribes in the immediate neighbourhood, notably the Miji Kenda groups: the Digo to the South of Mombasa, the Rabai, Ribe and Duruma to the west, the Giriama in the Malindi area, the Kambe, Chonyi, Kawna and Jibana, and the Segeju on the Kenyan-Tanzanian border. Before the 19th century expansion inland, a significant degree of intermarriage took place between the coastal Muslims and these groups. Duruma and Rabai acted as middlemen for goods exchanged between the Arab-Swahili people and interior peoples like the Kamba; diplomatic-cum-military "pacts" were made between groups of Miji Kenda people and coastal townspeople. The Segeju helped Malindi not only to ward off the danger from the mysterious cannibalistic Zimba, who literally ate their way northwards, but also to take Mombasa in 1592; African auxiliaries fought on Mombasa's side against Malindi. The so-called *Nyika* "people of the bush", or a section of them, helped in finally expelling the Portuguese from Mombasa in 1728 and in the restoration of Mazrūʿī rule in 1746 during the struggle for supremacy between the Mazrūʿī and the Bū Saʿīdīs; installation ceremonies of Mazrūʿī governors (*wālīs*), were attended by neighbouring African notables. After the defeat of the Mazrūʿī of Mombasa, their Bū Saʿīdī successors not only recognised the autonomous political status of the longer-established Muslim groups known as the *Ithnā-ʿashara ṭāʾifa*, the so-called Twelve Tribes, but also acknowledged the long established "pacts" that had been established between the various *ṭawāʾif* and neighbouring African groups, whereby the former acted as "agents" for the latter in relations with others. The vestiges of these bilateral relations lasted well into the early years of colonial rule.

To the south of Mombasa, in the area between Gasi and the northern areas of present-day Tanzania, a similar pattern of relationships developed between the Digo and the Segeju on the one hand and the leading Muslim families on the other, except that the politico-military relationships were reinforced by a significant religious impact. The Bā-ʿAlawī *sharīfī* families in this area, centred upon the *Dīwān*-ship of Vumba Kuu, were responsible for the Islamisation of the Digo and the Segeju. The Segeju had become wholly Islamised and the Digo on the coast had virtually all become Muslims by the time colonial rule arrived.

Islam expanded into the interior of Kenya or the rest of East Africa only in the 19th century, particularly after the Bū Saʿīdī ruler of ʿUmān, Sayyid Saʿīd b. Sulṭān, decided to move his capital to Zanzibar. He attracted a large number of compatriots, Indians, Ḥaḍramis and Balūčis, to serve in his garrisons, custom-houses, and civil administration. Others came to exploit the economic and commercial potentialities of these newly-acquired tropical dominions of ʿUmān. By this time, trade in ivory, rhinoceros horns and other inland products as well as slaves had already proved lucrative. Under Saʿīd this trade was now promoted to unprecedented heights. Caravans, financed by Indian credit, which was shrewdly wooed by Saʿīd, moved into the interior with goods such as cloth, beads, knives, axes, etc., to exchange for the inland products already cited. The slaves were not only exported, but used in large numbers to found a plantation system in Zanzibar and on the mainland coast; Malindi in Kenya is a unique example which demonstrates the success of this agrarian industry. As late as 1846, it had been found "deserted and ruined" by the Christian missionary J. L. Krapf as a result of Galla raids. It was Arab settlement and agrarian development that revived it. By the 1870s, vast acres of land around the town had come under cultivation of maize, millet and fruit of various kinds, and it was described as the granary of the coast and to some extent of Arabia through a thriving export trade.

The indigenous Shāfiʿī Arab-Swahili Muslims were now reinforced by Indian Muslims, among whom the Khodja or Shīʿa Nizārī Ismāʿīlīs, the Mustaʿlian Ismaʿīlīs (Bohorās) and the Ḥanafī Memons predominated. An 1875 census of the Indian population reveals that there were more Indian Muslims than Indian non-Muslims on the coast, particularly Ismāʿīlīs. In Kenya they were to be found in Mombasa, Malindi and Lamu, either as agents of firms having headquarters in Zanzibar, or as wholesale or retail merchants. Unlike the Hindus, the Indian Muslims generally arrived with their families and showed readiness to settle down on the isle and coast ruled by a fellow-Muslim.

However, from the outset they maintained a cer-

tain degree of social and religious aloofness. They began to build exclusive quarters, sectarian mosques and independent religious organisations, in fact forms of internal government or autonomy which were acknowledged or tolerated by the Sulṭān of Zanzibar as well as by the colonial government thereafter. Thus the Ismāʿīlīs looked and still look upon the person of the Āgā Khān as their spiritual and administrative head. Locally they appointed *mukhi*s (treasurers) and *kamadia*s (accountants) to run their religious and socio-economic affairs. Later, at the turn of the century, a council was formed at Zanzibar to supervise the local mosque (*djamāt Khāna*) and the congregations (*djamāt*s) on the mainland, when a split arose within the Ismāʿīlī community (1880-1910); secessionists protested against the Āgā Khān's claims to divinity and what was considered to be his excessive control over the local mosque. Later, Zanzibar lost this overall control as the community spread on the mainland and into the interior, and provincial councils were created to look after the spiritual affairs and general welfare of the community in various parts of East Africa.

The Bohorās [*q.v.*] formed and still form the second largest Asian Muslim community. The Bohorās who migrated to the East African coast belonged and still belong to the *Dāʾūdī* faction. By 1875 there were 543 Bohorās (as compared to 2725 Khodja Ismāʿīlīs and 116 Memons) at different places in Zanzibar and on the coast. As the supreme spiritual and administrative head of the Bohorās, *al-dāʿī al-muṭlaḳ* appointed representatives to attend to the welfare of his followers. Officials bearing the rank of *ʿāmil*, agent, were sent to Zanzibar and Mombasa towards the end of the 19th century. The *ʿāmil*, also known as *miyān ṣāḥib*, looked after every Bohra congregation of 50 families. He dealt with religious, social and economic problems. His permission was and is essential for every religious ceremony. Among the most important duties, he performed the collection of dues for the Summoner, the administering of the covenant (*mīthāḳ*) to the followers; and the instruction in religion and religious history through sermons. It was not until the 1920s that congregational or *djamāt* councils were formed by the Bohoras to look after their secular affairs.

The earliest Ithna-ʿasharīs, or Twelvers, arrived on the coast late in the 19th century during the split that occurred among the Ismāʿīlī Khodjas, late in the 19th century, over the claims of divinity by the Āghā Khān. Many Nizārī Ismāʿīlīs are said to have defected to the Twelvers. Like the other two Shīʿī sects, they organised themselves into *djamāt*s or congregations, each with its own council. In place of a *dāʿī*, the Ithna-ʿasharīs have *mudjtahid*s, the most scholarly among whom was appointed *ʿuẓma*, the interpreter of the faith to the community. No *mudjtahid* was appointed to East Africa. Instead, low-ranking *mulla*s performed religious functions within the *djamāt*s. Prayers were performed in the communal mosque whilst sermons, festivals and feasts were held in the *Imām-bārā* [*q.v.*]. Thus by the last quarter of the 19th century, the Muslim population of Kenya had begun to be variegated in a sectarian and ethnic way.

By that time, too, nuclei of Muslims had been created in the interior. It has often been observed how important the caravan trade and trade routes have been in the spread of Islam from early times in different parts of Africa. In Kenya, and East Africa generally, this phenomenon took place particularly during the second half of the 19th century. Until the 1850s trade movements had mostly been from the interior to the Muslim coast. Ivory in particular was brought down to the coast and sold to the Arabs and the Swahili by the Kamba, at first through Duruma and Giriama middlemen, later directly. Gradually, this virtual monopoly of the Kamba was broken. Arabs and Swahili began to move inland significantly after 1860, in order to acquire trade goods directly from inland African peoples. This trade by now had come to include the slave trade, although Kenya was not as affected by the ravages of the slave trade as Tanzania was. In Kenya slaves were secondary to ivory, cattle, rhinoceros horns and other goods.

The Arabs and Swahili in Kenya were not able to establish bases as important and permanent as their counterparts did at Tabora and Ujiji in Tanzania. (The Maasai plains were never entirely free from danger to permit that.) The Kikuyu only grudgingly permitted some trade on the edges of their country; on the whole, they discouraged close ties with the coastal Muslims. Trade was more successful with western Kenyan peoples, among whom a network of caravan routes was gradually spun. Although not as substantive and lucrative as the trade in Tanzania and Congo, it was of some importance. The Arab-Swahili penetration was dependent upon a series of stop-overs that were chosen for the friendliness of their inhabitants and the abundance of provisions.

Through these trade connections, nuclei of Muslim traders and Muslim influence were implanted in the interior of Kenya within the body politic of small chieftaincies. Many of these traders passed also as men of medicine, of a novel kind with which the African of the interior was not familiar. The new magico-medical powers, the weapons they used and could deliver and the luxury goods they bartered, made them welcome and assured them great prestige. Trade relations led to at least some seasonal settlement and intermarriage and thus the nuclei of Muslims grew in size and importance. As the caravan traffic increased during the 1870s, 1880s and 1890s, especially with the decline of the Maasai, the Muslim traders began to make their influence felt upon the internal politics of inland African societies. Centres of such influence were established at such places as that of Kitoto, at Sapei and at that of Mumias, the last being the important capital of the Wanga kingdom in Western Kenya, ruled by Mumia, who allied himself closely with the Swahili traders.

Another factor, that led to the infiltration of Muslim influence into Kenya was tribal movement. The Somalis had been pressing south from the Horn of Africa since the 6th/12th century. It was their expansion that forced the Galla to their south to press hard upon the Muslim coastal people and cause a significant degree of depopulation and abandonment of many towns. Both Malindi and its appanage, Gedi, suffered decline as a result of Galla raids. Malindi had been eclipsed by 1667, and, as we have seen, it was Arab settlement in the 19th century that led to its revival. By the middle of the century, Muslim Somalis began to move decisively against the Galla to their south. They crossed the Juba river in force about 1850, thus making contact with the Galla who dominated the region of the Tana. An uneasy coexistence of some 15 years was broken when the Somalis turned upon the Galla, decimated them and occupied their territory. Thus began the invasion and settlement of another part of Kenya by Muslims and the slow religious interaction between nomadic Muslims and their neighbours. It is this process that has slowly led to a practical islamisation of such groups as the Rendille, Boran, and the Galla them-

selves. Today each of these groups is at least 90% Muslim.

By the last quarter of the 19th century, much of East Africa as a whole had come to form a huge Muslim sphere of influence, inspired by Zanzibar and based upon trade, leading to the saying that "when they pipe in Zanzibar, people dance on the shores of the great lakes". European travellers, explorers and missionaries observed these trends, and some were perturbed by them for political or religious reasons or for both. Livingstone and Stanley, whose reports did so much to mobilise Christian missionary efforts, were as much concerned about the slave trade as about Islamic influence. The Muslim traders generally welcomed the European missionaries and explorers, giving them all the necessary help in their ventures inland, even in the foundation of mission stations. No hostility was engendered towards Christianity as a religion. It was only when attempts were made to interfere with their trade, particularly the slave trade, that the Arab-Swahilis reacted with hostility, as did the African peoples who were their partners in this trade. Only in Buganda a religious conflict arose when the Christian missionaries, Catholic and Protestant, regarded the influence established by Muslims at the *Kabaka*'s court as the basic enemy. This was the prelude to the religious wars that broke out late in the 19th century in that country, political power being the prize each side was fighting for: was Arab-Muslim power to be allowed to prevail over Christian-European power?

This was the most relevant and crucial question by the mid-1880s. The European scramble had begun. The extent of the suzerainty of the Muslim sultan of Zanzibar was being challenged by the Germans and the British. In 1884 the Germans declared protectorates over several areas in Tanzania. In 1885 they took advantage of local political and dynastic rivalries and declared a protectorate over the Witu Sultanate, founded *ca.* 1865 on the mainland of Lamu by a scion of the Nabhānī family, after their original centre of power, Pate, had been taken by Zanzibar. Since then the founder of the Witu Sultanate, Aḥmad Fūmolutī (nicknamed *Simba* "lion"), had warded off all diplomatic and military attempts to make him acknowledge Zanzibari overlordship. He took advantage of the European scramble to seek German protection from further Zanzibari pressures. In 1886 an Anglo-German agreement signalled the beginning of the dismemberment of the Zanzibari Bū Saʿīdī sultanate. The sultanate was restricted to a ten-mile coastal strip between the Mozambique border and Kipini (in Kenya), some offshore islands and a 5 to 10 miles' radius round the Banādir ports. The rest of East Africa came under British and German influence, the former including most of present-day Kenya and southern Somalia, the latter comprising the present-day Tanzanian mainland.

The period between 1886 and 1895 witnessed widespread Arab-Swahili reaction and resistance against the advancing colonial designs of the two European powers. This resistance was provoked by several factors: fear of loss of political influence or trade in the interior, European interference with the traditional administration and the social, cultural and religious way of life. The Germans 'determination to "Germanise" the Tanzanian coast and humiliate the sultan's representatives sparked off the Abu<u>sh</u>iri revolt in 1888, led by the Arabs but with widespread African backing. The blockade of the coast by European powers, whose aim was to strangle the revolt, was seen by the Muslims as a Christian alliance against them. In August 1890, after the revolt was over, the Germans and British sought to eradicate pin-pricks in each other's spheres by coming to another agreement, whereby Germany gave up her protectorate over Witu. This led to the first Witu uprising. Fumo Bakari, Simba's successor, feeling himself betrayed by Germany, ordered some German prospectors out of his Sultanate. When they resisted, a fight ensued in which nine of the Germans were killed. The British government, to whom Witu had been handed over, was forced to carry out a punitive expedition. Two other revolts broke out in Witu under the leadership of Fumo Bakari and Fumo ʿOmari. In 1894 Fumo ʿOmari was exiled to Zanzibar, by then another British protectorate, where he eventually died. The following year, the Mazrūʿī revolt was sparked off at Takaungu, a stronghold of the family lying to the north of their former centre of power, Mombasa. It was caused by British interference with the traditional method of choosing a *wālī*; Mbārak, who was regarded as the logical successor, was bypassed by a pro-British *wālī*. Mbārak renounced British authority and spear-headed the revolt which engulfed virtually the whole Kenyan coast from Malindi to the Tanzanian border. Mbārak was supported by his uncle, Mbārak b. Rā<u>sh</u>id, son of the last independent Mazrūʿī chief of Mombasa who was overthrown by the Bū Saʿīdī; in the past he had led several revolts aginst Zanzibari authority. Although this was basically a family revolt, it gained support from coast Africans long associated with the family as well as from Swahili chiefs, one of whom regarded it as a *<u>dj</u>ihād* and raised the flag of Islam. It was not until March 1896 that the revolt spent its force in the face of heavier odds. But rather than submit, the leaders and many followers chose to seek refuge in German territory in the south.

The suppression of the Mazrūʿī revolt meant the loss of any Arab or Muslim aspiration to maintain political independence not only in Kenya, but also the whole of East Africa.

However, in Kenya as in Zanzibar and the Tanzanian mainland under German rule, some semblance of Arab-Muslim administration was maintained. The first Commissioner of the East Africa Protectorate, which comprised most of Kenya (the western province being part of the Uganda Protectorate until 1902) was Arthur Hardinge, who had served in Muslim countries, such as Egypt and Turkey, an experience that had implanted in him some sympathy for Islam. Having vanquished Kenya's coastal Muslims, he granted them a special position in the administration of the Protectorate. Muslims were needed to establish a viable, new cadre in the administration, the judiciary, the military and the transport fields because they were the only literate indigenous people with some knowledge ot administration and a working relationship with the peoples of the interior. Thus an Arab-Muslim administrative hierarchy was established, composed of *liwālī*s (governors), *mudīr*s and *ḳāḍī*s, the first two being administrative officers in *liwālate*s and *mudīriyyet*s on the coast. Hardinge's plans to train more Arabs and "upper class" Swahili who could serve as officers beyond the coastal strip never materialised. In fact, as time passed, the number of *liwālī*s and *mudīr*s was reduced for reasons of economy or retrenchment.

In so far as Islam was concerned, the new European colonial era brought positive, if indirect results. If Muslim power had been shattered, the faith itself

spread inland with the extension of the *Pax Britannica*, despite the hostility of Christian missionaries and some officials who regarded Islam either as a rival to Christianity or as a threat to European rule. The spread of Islam during colonial rule was as haphazard as in pre-colonial times. Diverse factors account for this. The building of the Uganda Railway to join the two British Protectorates brought fresh Indian immigrants, many of whom were Muslims, some of whom stayed behind and encouraged others to come out from India. Thus the Indian Muslim population in Kenya increased in number and moved inland, employed either in the railway administration or privately employed as merchants, shop-keepers, hunters, etc. The medical officers, veterinary officers and clerks of the railway administration had amongst them the pioneer members of the Aḥmadiyya movement [*q.v.*] in Kenya. But the celebrated militant missionary activity began only in the 1930s. The railway also facilitated travel of local Muslims. Arabs and Swahili moved more easily inland to settle and trade and thus founded such Muslim "locations" as Pangani and Pumwani in Nairobi. Individual Muslim traders were soon to be found in other townships where they married, settled and created new nuclei of Muslims, e.g. at Kendu Bay, Kisumu, Fort Hall (now Muranga), and the Machakos district. Some local converts contributed to the growth of these nuclei.

A second noteworthy factor that facilitated the diffusion of Islam was the colonial administration's employment of Swahili, Somali and Sudanese Muslim troops in its punitive expeditions and in the manning of garrisons. On retirement or discharge, many of these soldiers settled in the interior and married local wives. Kibera, the Sudanese "colony" in Nairobi is one example of an ex-soldier settlement. The early administration also employed craftsmen, interpreters and tax-collectors of Swahili Muslim origin; domestic servants, in areas as far as Uganda, were often Swahili, as were many of the foremen of the first European settler farms. Thus the non-Muslim and non-Christian Africans were made conscious of the comparatively privileged position of the Muslim as a soldier, foreman, craftsman, official and domestic servant. Consequently some of them became admirers of, and converts to, to Islam.

This favourable feeling towards Islam was also to be found in neighbouring Tanzania, where the Germans had trained and employed Swahili officials known as *akidas* and *jumbes* on a significant scale, and in 1913 the German government was led also to subsidise Catholic and Protestant missions to train subordinate officials.

This reaction lends significance to the discovery by Smuts, a British military officer, of a secret German document, circulated to administrative officers, in which they were ordered to do everything in their power to curb the spread of Muslim influence; great publicity was given to this document on the Kenyan coast in order to portray the Germans as enemies of Islam and to counter German claims that they were the defenders of Islam by being allies of the Ottoman sultan-caliph. The British authorities countered the Ottoman sultan's proclamation of a *d̲j̲ihād* against Britain and a curse upon all Muslims who did not respond to his call, with a proclamation, signed by the sultan of Zanzibar, denouncing the German deception that the Kaiser had been converted to Islam and criticising the Ottoman Sulṭān for having lost his reputation as the defender of Islam by siding with the Germans. Copies of this declaration in Arabic and Ki-Swahili were distributed all along the coast. Equally widely distributed was the *S̲h̲arīf* Ḥusayn's proclamation of June 1916, renouncing his allegiance to the Turkish sultan and denouncing the heretical measures of the Turkish Committee of Union and Progress.

As it turned out, Britain need not have feared a large-scale *d̲j̲ihād* in the East Africa Protectorate. The Muslim population of the coast had never displayed active religious fanaticism on a significant scale. Two decades earlier (1895-6), they had been equally unenthusiastic in their response to Egyptian religious exhortation to rise against the Sulṭān of Zanzibar and his British mentors, who had begun to interfere with the lucrative slave trade. This was part of an Egyptian design to occupy the East African coast, from which they planned to forge a route to the inter-lacustrine regions of central Africa to supersede the one down the Nile, which was causing undue delay in obtaining men and equipment. The Egyptian expedition along the coast got no further than Lamu, and failed to exploit the religious sentiments and the economic motives of the coastal Muslims.

Even so, by the outbreak of the First World War, the indigenous Muslim population of the coast was smarting under a series of blows. Punitive expeditions had shattered all aspirations to political independence between 1890 and 1900. In 1907 the ordinance abolishing slavery was promulgated, which dealt a final, heavy blow to agriculture, the mainstay of the economy of the coast. Game regulations entailing the purchase of licences and competition from Europeans and Indians reduced Arab-Swahili participation in the ivory trade. In 1908 the Land Titles Ordinance was passed, and it led to vast acres of land being either alienated or declared crown land; some of these lands were leased or given freehold to European planters.

Thus at the turn of the century, the indigenous Muslims of Kenya found it essential to embark upon a drastic reappraisal of their status under the new colonial order, especially in regard to education. When the British authorities began in 1910 to take up responsibility for public education, there was at first no provision for the teaching of Arabic and the Ḳurʾān, and it was only in 1924 that the government introduced Ḳurʾānic lessons in the schools of Mombasa and Malindi.

Also, two very short-lived reform organizations came into being amongst the Arab-Swahilis of Mombasa—the Mohamadan Reform League and the Afro-Asian Association. The latter was basically a political association, but established a Muslim school in 1937. The most important Muslim Reformer in Kenya was undoubtedly S̲h̲ayk̲h̲ al-Amīn b. ʿAlī b. Nāfiʿī al-Mazrūʿī [see AL-MAZRŪʿĪ] who in his weekly *al-Iṣlāḥ* envisaged the creation of a body to defend Muslim interests. Other non-coastal, non-Arab, Muslims issued in 1931 a memorandum addressed to a Parliamentary Joint Select Committee on Closer Union of East Africa expressing their fears of the threats to Islam in Kenya, whereas Christianity was being encouraged by all means possible. In February 1935, a delegation of three Indian Muslims left Kenya for India to collect funds and personnel, in order to initiate a Muslim missionary movement in Kenya and thus counter-balance the Christian missionary endeavour by turning more Africans into Muslims; but its members returned without achieving any immediate results. Only the Aḥmadiyya movement showed interest in the initiation

of a missionary movement, but its offer was refused. A year before, in 1934, the *Taḥrīk-i-Djadīd* ("New Scheme") for intensive propagation of the Aḥmadiyya creed had been put into effect in East Africa when its first missionary Shaykh Mubārak Aḥmad arrived in Tabora, Tanzania. The Aḥmadiyya helped build or repair mosques and produced literature on Islam on a large scale, culminating in the production of a Ki-Swahili translation of the Ḳur'ān in 1953. They had about 1500 adherents in Kenya according to an authoritative estimate of 1974, compared with just over 1000 in Uganda and some 2,700 in Tanzania.

Despite Shaykh al-Amīn al-Mazrūʿī's efforts to provide practical guidance, none of his major proposals were implemented by the Muslims. They became more and more reconciled to the idea of living in separate groups, without organic links between African, Arab, Swahili and Indian Muslims. In Kenya the Indian Muslims were and still are the best-organised and the most prosperous. Hence they have been able to finance and build schools and, in the case of the Ismāʿīlīs, to build hospitals and contribute significantly to the educational and medical services in the country. The East African Muslim Welfare Society, founded in the 1930s, was a charitable Ismāʿīlī organisation aimed at raising the status of the most depressed members of the Muslim community, particularly the African.

A most noteworthy project of the Muslims in Kenya was launched after the Second World War. The colonial government, the Āgā Khān and the Sulṭān of Zanzibar jointly contributed towards the building of a Mombasa Institute of Muslim Education (MIOME), which encompassed a long-promised academic Secondary School for Arabs and Swahili. The Institute was to lay emphasis upon technical and vocational training, but Islamic studies were included to balance these secular studies. The Institute was seen as a precursor of a Muslim University, but within a few years of its opening in 1951, however, the Institute had to accept non-Muslims and changed its name first to "Mombasa Institute of Education", then to "Mombasa Technical Institute" and lately to 'Mombasa Polytechnic'.

AL-**KERAK.** [see KARAK]

KERASŪN. [see GIRESŪN]

KERBELA [see KARBALĀ']

KERBENESH, Ottoman name for Karpenésion (Karpenisi, Carpenitze), a small township in northern Aetolia. The district was probably occupied under Bāyezīd I [*q.v.*], when the adjacent regions of Salona, Domakia and [Neo-] Patras fell to the Turks (Hammer-Purgstall, i, 249-50, following Chalcocondyles); when it is first named in a published Ottoman source (the *djizya* returns of 894/1489, *Belgeler*, i/1 (1964), 100, n. 2), as K.rāb.n.sh, it is grouped with "Badra" (Neopatras, Badradjik), Dömeke, Čataldja (Pharsala) and Mundeniče (Bodonitsa). At this period it was presumably administered as part of the *sandjak* of Tirkhāla [*q.v.*]; it appears later as a *ḳaḍā'* of the *sandjak* of Aynabakhtī [*q.v.*] (see M. T. Gökbilgin, in *Bell.*, xx (1956), 277, n. 128, 278, n. 131). The locality is famous in modern Greek history as the scene of the victory of the Suliot leader Marco Botzaris (21 August 1823).

KERČ, a seaport at the eastern tip of the peninsula of that name at the eastern end of the Crimea [see ḲRĪM] in the modern Crimean *oblast* of the Ukrainian SSR.

The district was clearly a well-populated one in pre-historic, Cimmerian and Scythian times, since it contains a large number of *kurgans* or burial mounds, many of which have been excavated since the last century. In classical times, it was from the 6th century B.C. onwards the site of the flourishing Ionian Greek colony of Pantikapaion, later called Bosporos and the capital of the principality of Bosporus Cimmerius (see Pauly-Wissowa, xviii/3, 780-825, s.v. Panticapaeum). After coming under the control of Mithridates VI of Pontus (end of the 2nd century B.C.) and then, from the time of Augustus, of Rome, it suffered badly during the barbarian invasions of such steppe peoples as the Sarmatians, Huns and Goths. From the late 7th century A.D. it was held by the Khazars [*q.v.*] as the capital of their foothold in the eastern Crimea, with the residence of the *tudhun* or governor there.

The name Kerč first appears in Islamic sources under various forms, such as Karz, Kardj, al-Karsh, etc., and may derive from a Greek form Korizos/Kyrizos (see J. Marquart, *Osteuropäische und Ostasiatische Streifzüge*, Leipzig 1903, 162-3, 506-7). In Ibn Rusta, 143, tr. Wiet, 160, we have K.r.kh ~ *Kardj as the Byzantine port on the northern coastland of the Black Sea to which the Magyars then living there brought Slav captives for sale, and the *Ḥudūd al-ʿālam*, 158, cf. 182-3, mentions the *Daryā-yi K.r.z.* With the decline and break-up of the Khazar

confederation in the early years of the 11th century, Kerč fell to the Kiev Russians and for some decades the eastern Crimea formed part of the Russian principality of Tmutarakan in the Taman peninsula across the Straits of Kerč, under the patriarchate of Matrega in the Taman peninsula, whilst in 1332 it was to become a metropolitan sea itself (see Heyd, *Hist. de la commerce du Levant*, ii, 184-5). In the 12th century Kerč was in the hands of the Ķïpčaķ or Comans, and it may be the town of Rhōsia mentioned in a treaty of 1169 between the Byzantine Emperor Manuel Comnenos and the Genoese. In the 13th century, Crimea and South Russia became part of the vast territories of the Golden Horde. Ibn Baṭṭūṭa, travelling from Karsh/Kerč to Kafa, describes his meeting with Christian Comans (*Riḥla*, ii, 355-7, tr. Gibb, ii, 469-70, cf. Barthold, *Histoire des Turcs d'Asie Centrale*, Paris 1945, 137). From 1289 onwards there was a Venetian consul in Kerč (Heyd, *loc. cit.*), and by 1318 it was in the hands of the Genoese, who had established themselves on the southern littoral of the Crimea with their centre at Kafa/Kefe [see KEFE] or Theodosia; it was a consulate subordinate to Kafa under the name of Cerco or Cerchio. In *ca.* 1400 there are mentioned Alan or Gothic princes in Kerč, remnants of the waves of barbarian invasions through South Russia in the Dark Ages, who are described as *Domini Gothiae* or *Signori de la Tedoro* (B. Spuler, *Die Goldene Horde, die Mongolen in Russland 1223-1502*², Wiesbaden 1965, 314-15) and who presumably exercised theoretical jurisdiction over the town and its hinterland. In the 15th century there was pressure on the Genoese colonies in the Crimea from the Giray Khāns, and then later in the century, after the attacks of the Ottoman commander Aḥmed Pasha Gedik [*q.v.*], these settlements on the coastland fell into Ottoman hands. Henceforth, Ottoman trade with the Crimea and South Russia was channelled through Kafa rather than Kerč, and the latter's commercial prosperity went into a decline.

After the conquest of Azov in 1696, Peter the Great in the peace negotiations of 1698 sought the session of Kerč to Russia, but this was refused, and after the Peace of Carlowitz [see ĶARLOVČA], Kerč remained in Ottoman hands. Sultan Muṣṭafā III in 1114/1702 built the fortress of Yeñi Ķale near Kerč to protect it (see Von Hammer, *GOR*², iii, 909). Nevertheless, Kerč and Yeñi Ķale were occupied by Catherine the Great's troops in 1185/1771 without resistance, and their cession to Russia confirmed in the Treaty of Küčük Ķaynardja [*q.v.*] in 1188/1774 (*GOR*², iv, 622, 638). It remained of small importance, although in 1821 Tsar Alexander I raised it to the status of a town, and its main function was as a trans-shipment point to shallow-bottomed vessels crossing the Sea of Azov to the Don-Donets basin ports. During the Crimean War, it was in 1855 occupied by the invading Allies, and in the Second World War it was held by the Germans from the winter of 1941-2 till 1944 and was the scene of fierce fighting. Its economic and industrial importance today derives from iron ore deposits, exploited since the end of the 19th century and now sent to the Donbas industrial area, and limestone quarries in the vicinity of the town; it is furthermore the base for an important fishing fleet, and in 1970 had a population of 128,000 (see *BSE*², xx, 565-6).

(C. E. Bosworth)

KERIMBA ISLANDS, a group of islands lying in lat. 12° S. off Musambiķ (Mozambique) between the mouths of the Ruvuma and Lurio rivers, with administrative headquarters at St João de Ibo on Querimba Is. They were part of the sphere of influence of the mediaeval state of Kilwa, but with an independent ruler. They were islamised at an unknown period, possibly in the 12th century. They were seized by the Portuguese in 1522 because of their important ivory trade: many mosques and large houses were destroyed. João dos Santos went to convert them to Christianity in 1593: the upper class was Muslim, but the majority pagan. In 1769, when the ʿUmānī Arabs were developing the slave trade from Zanzibar, the Portuguese commander accused the Arab and Swahili traders "of depriving the Portuguese of their ivory trade, God of the souls of Africans who were being enslaved by the Muslims, and the King of his taxes." Regrettably, a recent account describes only the earlier Portuguese buildings: a systematic survey of the mosques and Muslim cemeteries has yet to be made.

KERMIYĀN. [see GERMIYĀN]

ĶERRĪ (conventional spelling, Gerri), a site on the east bank of the main Nile in the Sudan, lying at the southern end of the Sabalūķa gorge, about 44 miles north of the confluence of the Blue and White Niles. At the convergence of the route along the Nile and one across the Bayūḍa desert crossing the Nile at this point, Ķerrī was a settlement of political importance from the 10th/16th to the 12th/18th century as the seat of the ʿAbdallābī *shaykh*s, who levied tribute on the nomads during their annual migration-cycle, and, as the principal vassals of the Fundj [*q.v.*] of Sinnār, were regarded as the overlords of the Arab tribes. The first two ʿAbdallābī *shaykh*s derived prestige from their role as holy men and agents of islamisation in a fringe-region, rather than from purely tribal leadership. This is indicated by the ascription of a Sharīfī ancestry to the eponym, ʿAbd Allāh Djammāʿ al-Ķuraynātī al-Ķāsimī (fl. 10th/16th cent.), who is reputed to have overthrown Soba, the capital of the Nubian Christian kingdom of ʿAlwa [*q.v.*]. Tradition associates ʿAmāra Dūnķas, the founder of the Fundj dynasty, with him in this exploit, while another tradition (reported by James Bruce) speaks of a victory of the Fundj over the ʿAbdallābī chief (anachronistically styled "Wed Ageeb", i.e. Walad ʿAdjīb) near Arbadjī on the Blue Nile in 1504. The two traditions are not necessarily incompatible, and the second would explain the subordination of the ʿAbdallābī shaykhs to the Fundj rulers. A legend that Ķerrī was a Nubian stronghold captured by ʿAbd Allāh Djammāʿ so far lacks archaeological confirmation, while Bruce's statement that the

Fundj compelled the ʿAbdallāb to transfer their capital to Arbadjī is unsupported in other sources ʿAdjīb al-Kāfūta, the son of ʿAbd Allāh Djammāʿ by the daughter of a holy man, Ḥamad Abū Dunāna, is represented in ʿAbdallābī tradition as a pious Muslim, who enforced the Sharīʿa and made the Pilgrimage. He is distinguished by the title of *māndjilak*, held by the great vassals of the Fundj. He nevertheless fought against his suzerain, and temporarily extended his rule up the Blue Nile, but was subsequently defeated and killed by the Fundj ruler, ʿAdlān I b. Ūnsa I, at the battle of Karkōdj in 1016/1607-8. ʿAdjīb's tomb at Ḳerrī was surmounted by a dome (*ḳubba*), typical of the burial-place of a holy man but not of a tribal chief; it was a place of pilgrimage. Of the later *shaykhs* of Ḳerrī, Dhiyāb b. Bādī established in 1149/1736 a *waḳf* at Medina for the benefit of immigrants from the Fundj territories. His harshness resulted in the depopulation of Ḳerrī, and it was perhaps for this reason that his uncle and successor, ʿAbd Allāh III b. ʿAdjīb III (d. 1160/1747) transferred the capital to Ḥalfāyat al-Mulūk, further to the south on the main Nile. Crawford's assertion that this transfer took place in 1798 under ʿAbd Allāh IV is unjustified. Ḥalfāyat al-Mulūk remained the capital of the shaykhdom until the Turco-Egyptian invasion in 1821 ended the old régime.

Penn, *The traditional stories of the ʿAbdullab tribe*, in *Sudan Notes and Records*, xvii/1 (1934), 59-82. The oral traditions of the ʿAbdallāb have been published by Aḥmad ʿAbd al-Raḥīm Naṣr, *Taʾrīkh al-ʿAbdallāb*, Khartoum 1969; a useful preliminary study of ʿAbdallābī history is Sīd Ḥasan Muḥammad Khalīl, *Djawānib min taʾrīkh al-ʿAbdallāb* (unpublished dissertation, Khartoum 1969). A photograph of the *waḳfiyya* of Dhiyāb b. Bādī (a unique document) illustrates the article of Ṣalāḥ Muḥyī al-Dīn, *Makhṭūṭa taʾrīkhiyya ʿan mulūk al-ʿAbdallāb*, in *al-Khurṭūm*, Dec. 1967, 58.
(P. M. HOLT)

KESRIYE, Ottoman name for KASTORIÁ, a town in Macedonia, situated on the shores of a lake with the same name, at the northern most point of the upper reaches of the River Aliákmon.

An important centre of Christian art during the last centuries of the Byzantine era, it fell under the rule of Stephan Dušan (1331-55) and his successors, and in 1380 to the Albanians. Between 1385 and 1393 it came into Ottoman hands—by capitulation, according to tradition. It was the capital of the homonymous *ḳaḍāʾ* of the *pasha sandjaghī* in the *eyālet* of Rūmeli (Ḥādjdjī Khalīfa, *Rumeli und Bosna*, J. von Hammer, Vienna 1812, 96; M. T. Gökbilgin, in *Belleten* xx (1956)), and, after the administrative reorganisation of 1864, of a *ḳaḍāʾ* of the *sandjak* of Koritša in the *wilāyet* of Manastir. According to Ewliyā Čelebi, it was a *ḳaḍāʾ* of 150 *aḳčes* with 110 villages, and a *khāṣṣ* of Fāṭima Sulṭān. Outside its fortress (in the *varosh*), there were 20 *maḥalles*, 16 of which were Greek and one Jewish. The town had a *djizdār*, a *muḥtesib*, a *bādj-dār*, a *shehir ketkhudāsī* and a *kharādj aghasī*.

The fur industry flourished in this small town, especially from the beginning of the 11th/17th century. Fur merchants from Kastoriá distributed their products by caravan to important urban centres in regions north of Macedonia and set up commercial establishments in Istanbul, Vienna, Leipzig, Dresden and Moscow. Although the area was often unquiet because of the activities of the Klepths and the Albanians, the town's flourishing industry and economic prosperity contributed to the construction—especially in the 12th/18th and the 13th/19th centuries—of many Christian churches and its characteristic town houses, which are interesting examples of folk architecture. Greek schools were also established with funds supplied by wealthy emigrants. The Greeks were represented before the Turkish authorities by the *ḳodja bashīs*. After 1870, the district was the scene of rivalry between Greeks and Slavs, with its metropolitan, Germanos Karavanghelis (1900-7), playing a leading role. With the Balkan War it became part of the Greek state (11/24 November 1912).

KETĀMA. [see KUTĀMA]

KETKHUDĀ. This Persian term "master of the house, head of the family", Pahlavi *katak-xvatai*, acquired, in addition to the above meanings, those of husband, chief of a tribe, headman of a village and tithe-officer in a town (Chardin, *Voyages*, ed. 1811, iv, 77, "dixenier de quartier") responsible to the *kalāntar* [*q.v.*] (cf. M. Muʿīn, *Persian dictionary*, Tehran 1345, iii, 2921). In Ottoman Turkish, it evolved into the form *kᵛahya*, with the meanings "steward of a household", "head of an artisans' gild" (see below).

(i) IN OTTOMAN TURKISH ADMINISTRATIVE USAGE

Already in Il-Khānid Persia we find the *kadkhudā* acting as the representative of the village *vis-à-vis* the government, and under the Ṣafawids they were in charge of collecting taxes and responsible for the administration of a village or town (cf. A. K. S. Lambton, *Landlord and Peasant in Persia*, London 1953, 122, 144, 168, 175, 430 and *passim*). We find the form *kedkhudā* in Anatolian Saldjūḳ usage of the 7th/13th century (Osman Turan, *Türkiye Selçukları hakkında resmi vesikalar*, Ankara 1958, 13), and the form *kᵛahya* may have evolved during Ottoman times.

The term *ketkhudā* is used in the Ottoman state administration from the 9th/15th century onwards (*Ḳānūn-nāme-yi sulṭānī ber mūdjeb-i ʿorf-i ʿOthmānī*, ed. R. Anhegger-H. Inalcık, Ankara 1956, 17, 31-2), in the sense of someone who looks after the affairs of an important government official or influential person, i.e. the *ketkhudā* was an authorised deputy official. Hence there were *ketkhudās* below the *āghā* or *reʾīs* in charge, e.g. of the treasury, the dockyards, the police guard, the Janissaries, the taxation registers, the Grand Vizierate, the imperial pantry, the bodyguard of *čāwūshs*, of the artillery corps, etc. (see ʿAbdurraḥmān Vefīḳ, *Tekālīf ḳawāʿidi*, Istanbul 1328, i, 192-3). The office was conferred by a diploma (*berāt*), in which the respect and loyalty of those to be under him was enjoined (Başbakanlık Arsiv Genel Müdürlüğü, Kâmil Kepeci tasnifi, Ruus defteri, no.

217, pp. 14, 180, no. 216/a, p. 7). Provincial governors (*beylerbeyis*) and district governors (*sandjāḳbeyis*) had their *ketkhudās* (cf. Kātib Čelebi, *Fedhleke*, Istanbul 1286, i, 290; Başbakanlık A.G.M., Dīwān-ī Humāyūn Mühimme defteri, no. 2, p. 390). As in Persia, there were in Turkey *ketkhudās* of villages charged with administrative duties there. The most important of those officials bearing this title was, however, the *ketkhudā* of the Grand Vizier (*Ṣadāret ketkhudāsī*). In 1214/1799 it seems that this official was not only concerned with the affairs of the Grand Vizier in the *Dīwān-ī Humāyūn*, but of those of the other viziers also, hence it was decreed that he should concern himself with the affairs of the former only (Khaṭṭ-ī humāyūn tasnifi, no. 13283). The official supervising the *tīmār*-holders in the *eyālets* and *sandjaḳs* was called the *ketkhudā yeri* (see the Elaziğ judicial records, Diyarbekir Ziya Gökalp Müzesi, no. 362, p. 137), and the same title was found in the corps of Janissaries (see I. H. Uzunçarşılı, *Osmanlı devletinin teşkilâtından Kapıkulu Ocakları*, Ankara 1943, i, 211-13).

Provincial governors had their own *ketkhudās* stationed in the capital Istanbul to represent their interests; these were called *ḳapî ketkhudāsîs*. Similar representatives were allowed to trusted state servants, and in 1209/1795 there were six *ḳapî ketkhudālîḳs* pertaining to the viziers (Nūrī, *Taʾrīkh*, Süleymaniye, Âşir Efendi, no. 239, f. 88b). Dependent and tributary princes, such as those of Transylvania, Moldavia and Wallachia, and even the Khāns of the Crimean Tatars, had their representatives in Istanbul with this same title. We also find it used to denote the envoys or ambassadors of some foreign countries.

Finally, it should be mentioned that the *ketkhudās* of towns and cities were abolished by a decree of 1204/1790 (Khaṭṭ-ī Humāyūn tasnifi, no. 9500), and that the term was also used within the nomadic tribes. A tribal chief would appoint a *ketkhudā* for each of the subordinate clans in his tribe, and when hereditary chieftainship was abolished by the state, a person chosen by general consent of the tribesmen and from amongst themselves was appointed as *ketkhudā* (see C. Orhonlu, *Osmanlı imparatorluğunda aşiretleri iskân teşebbüsü, 1691-1669*, Istanbul 1963, 13-14).

(Cengiz Orhonlu)

(ii) In the Ottoman Turkish Gilds

In Turkey the *ketkhudā* was also the head of a gild who dealt with the material and administrative aspects of gild life (whereas in the earlier period of gild history, a *shaykh* fulfilled the ceremonial functions). He was usually chosen by the gild notables without formal election, and his appointment was then confirmed by the *ḳāḍī*. Recently published documents do not seem to bear out the theory of Gibb and Bowen (i/1, 289) that "until much later [than the middle of the 11th/17th century ?] *kâhyâs* continued in all cases [even in gilds with Christian members] to be Moslem; but eventually this office ... was granted in some instances to non-Moslems"; there were non-Muslim *ketkhudās* in the 10th/16th and 11th/17th centuries, as well as Muslim *ketkhudās* of non-Muslim gilds in the 12th/18th century.

The gild *ketkhudas* represented the gild *vis-à-vis* the authorities. They conveyed government orders and announcements to the gild members, and made certain that these instructions were carried out; for instance, it was their task to supervise the implementation of orders concerning the standards of production and of commodities sold. They provided the government with any services and labour which were required, and if necessary, they guaranteed the reliability and good character of the members of the gild.

The gild *ketkhudās* were also responsible for the supply of certain goods to the authorities and for distributing raw material needed by artisans and craftsmen; and it was the task of the heads of practically all Turkish gilds to arbitrate in disputes among their members, and the task of some of them to supervise a fund for mutual help.

In later times, individuals who were not members of the gild were frequently appointed *ketkhudās*, for instance, retired officials who thereupon agreed to renounce their pension. During the reign of ʿAbd al-Ḥamīd II, favoured courtiers were appointed by the Sultan, often because the gild members hoped thereby to further their own concerns.

Baer, *The administrative, economic and social functions of Turkish guilds*, in *IJMES*, i (1970), 28-50; idem, *The structure of Turkish guilds and its significance for Ottoman social history*, in *Proceedings of the Israel Academy of Sciences and Humanities*, iv (1971), 176-96.

(G. Baer)

(iii) In North Africa

The term *ketkhudā* was not used in North Africa in the period of Turkish domination, but the form *kāhiya* was current in Tunisia until recent times to designate the subordinates of the caïds or governors at the head of administrative divisions called *kihāya*. In a more general way, *kāhiya* was in general use with the sense of "assistant to a high official, president or director" (e.g. *kāhiyat raʾīs* = vice-president); the deputy of the Public Prosecutor of the Republic was called *kāhiyat al-muddaʿī ʾl-ʿumūmī*, and an under-secretary of state *kāhiya wazīrī*. In Algeria, the *kahya* was a bey's lieutenant, but also a police superintendent and even a simple corporal in the army of the *amīr* ʿAbd al-Ḳādir [*q.v.*]. The use of the term for a subordinate endowed it with the pejorative meaning of "inferior quality". (Ed.)

KHĀʾ, the seventh letter of the Arabic alphabet, here transcribed as kh. Its numerical value is 600, according to the eastern order [see abdjad].

Definition: voiceless post-velar fricative. According to the Arabic grammatical tradition: *rikhwa*, *mahmūsa*, *mustaʿliya*. For the *makhradj*: *min adnā ʾl-ḥalḳ* (from that part of the throat nearest to the mouth) (al-Zamakhsharī, *Mufaṣṣal*[2], ed. Broch, § 732); Ibn Yaʿīsh (*Sharḥ*, ed. G. Jahn, 1460, 1. 6) defines it thus: "the *khāʾ* is nearer to the mouth than the *ghayn*". The Arabs accordingly placed the *khāʾ* in the throat and considered it as a laryngeal (ac-

cording to the terminology of H. Fleisch, *Traité de philologie arabe*, i, 59), as with the *ghayn*. However, G. Krotkoff, in *WZKM*, lix-lx (1963-4), 242, 11. 4-5), puts forward "post-velar" as corresponding to *min adnā 'l-ḥalḳ* (cf. M. Bravmann, *Materialen und Untersuchungen zu den phonetischen Lehren der Araber*, 44, and H. Blanc, in *Procs. of the Internat. Conference on Semitic Studies*, Jerusalem 1965, 17). The text of the *Mufaṣṣal* is clear: *adnā 'l-ḥalḳ* is the upper part of the throat, as opposed to *awsaṭ al-ḥalḳ*, the middle part, and *aḳṣā 'l-ḥalḳ*, the lower part. Then there comes, as the first sound pronounced within the mouth, *al-kāf*.

The articulation described is phonemic; for the phonological oppositions which define this phoneme kh, see J. Cantineau, *Esquisse d'une phonologie de l'arabe classique = Mémorial J.C.*, Paris 1960, 175. According to him, its realisation is "fairly close to the German *ch* in *Nacht*", and it is its localisation which is relevant. For the incompatibilities of kh, see *ibid.*, 201. Kh (and gh) are by their nature *mufakhkhama* and prevent the occurence of *imāla* in most of the (eastern) Arabic dialects (Cantineau, *Les parlers arabes du Horan*, Paris 1946, 127). But this is not the case in Cairo (N. Tomiche, *Le parler arabe du Caire*, Paris-The Hague 1964, 32), nor in Maāsser Beit ed-Dine, Lebanon, where people say *khāf* "he was afraid" (Fleisch, in *MUSJ*, xxxi (1954), 298) and *khān* "he betrayed" (*ibid.*, 312).

Classical Ar. kh is the continuation of a voiceless velar fricative kh of common Semitic. It "becomes *ḥ* in Canaanitic Aramaic, in Tigre and Tigrinya (Ethiopic languages), and in Soqoṭrī (Modern South Arabian); it becomes zero in most of the other [modern] Ethiopic languages" (W. Leslau in *Manual of phonetics*, Amsterdam 1957, 329).

In Classical Ar., kh undergoes few non-conditioned alterations; see Cantineau, *Cours*, 71. As a conditioned alteration, one only need mention the possibility of assimilation of unvoicedness and voicedness, between kh and gh, when they are found in final or initial position of a word, thus: -gh kh > khkh- and -kh gh- > ghgh- (see Fleisch, *Traité*, i. § 12 p.). The same type of assimilation is found in some modern Arabic dialects, as at Tlemcen (W. Marçais, *Le dialecte arabe parlé à Tlemcen*, Paris 1902, 26); note also the special case of Baghdād (Blanc, *Communal dialects in Baghdad*, Harvard Middle Eastern Monographs, x (1964), 3, 24 (c)).

Bibliography: given in the article.

(H. Fleisch)

KHABAR (a.), plural akhbār, akhābir, report, piece of information. The word is not used in any special context in the Ḳurʾān. In the *ḥadīth* it occurs among other passages in the tradition which describes how the djinn by eavesdropping obtain information from heaven (*khabar min al-samāʾ*) and how they are pelted with fiery meteors to prevent them from doing so (al-Bukhārī, *Adhān*, *bāb* 105; Muslim, *Ṣalāt*, tr. 149); al-Tirmidhī, *Tafsīr*, Sūra lxxii, trad. 1).

In his collection al-Bukhāri has a chapter entitled *Akhbār al-āḥād*, which, as the *tardjama* indicates, deals with the validity of traditions regarding *adhān*, *ṣalāt*, fasting, the law of inheritance, and judicial procedure, and which are only given on the authority of one man [see ḥadīth].

Al-Ghazāli gives the name *akhbār* to the traditions that go back to Muḥammad. He distinguishes the sayings of the Companions by the term *āthār* (see his *Iḥyāʾ*, passim). On such and similar technical distinctions see Lane's *Lexicon* s.v., and *Dict. of Techn. Terms*, ed. Sprenger and Nassau Lees, s.v.

Akhbār is further often found in the titles of historical works (see Brockelmann, Index ii); in the singular, *khabar* denotes a piece of information of a historical, biographical or even anecdotal nature, and comes to correspond to *ḥikāya* [*q.v.*].

Ṣāḥib al-Khabar was the title of one of a ruler's officers in provincial capitals whose duty it was to report to his master all new happenings, the arrivals of strangers etc. This post was often given to the director of the postal service [see barīd].

(A. J. Wensinck)

KHABAR, in Arabic grammar, refers to the constituent parts of the nominal phrase, e.g. *Zaydun karīmun* "Zayd is noble"; here, *Zayd*, the first term, is *mubtadaʾ*, and *karīm*, the second one, is *khabar*. For the verbal phrase, the corresponding terms are *fāʿil* agent and *fiʿl* verb. The Arab grammarians, as can readily be seen, recognised two types of phrase, the nominal and the verbal, in their language. They also recognised clearly the necessity of the *ʿaḳd*, the nexus linking the two terms of these phrases, and they called it *isnād* "the act of leaning one thing against another", the linkage between *al-musnad ilayhi*, the first term, and *al-musnad*, the second one. But *musnad ilayhi* and *musnad* both remained terms of grammatical logic, used for the analysis of the nexus of the two types of phrase; *mubtadaʾ-khabar* and *fāʿil-fiʿl* are the only terms recognised in the formation of the nominal phrase in the first pair, and in that of the verbal phrase in the second pair. Each type of phrase was studied for itself; the idea of subject remained alien to the Arab grammarians (see Fleisch, *Études sur le verbe arabe*, in *Mélanges Massignon*, ii, 153-5).

The *khabar* is *marfūʿ*, i.e. in *rafʿ*, the nominative, as also the *mubtadaʾ*. For an Arab grammarian, it was necessary to determine the *ʿāmil*, here called *al-rāfiʿ* "that which puts it in *rafʿ*", the *khabar* and also the *mubtadaʾ*, for the question is connected. This was the subject of great discussions between the Kūfan and Baṣran grammarians, and even amongst the Baṣrans themselves; see the 5th Question discussed in Ibn al-Anbārī, *K. al-Inṣāf*, ed. G. Weil, 21-6, with a résumé in Ibn Yaʿīsh's *Sharḥ* of the *Mufaṣṣal of Zamakhsharī*, ed. G. Jahn, 101, ll. 15-16.

In dislocated phrases, which were outside normal analysis, of the type *Zaydun dhahaba abūhu* "Zayd, his father left", the Arab grammarians considered the phrase taken up after *Zayd* as *khabar* (Zamakhsharī, *Mufaṣṣal*[2], ed. Broch, § 26).

After *inna* and its "sisters" (*anna*, *lākinna*, *layta*, *laʿalla* and *kaʾanna*) the *khabar* is *marfūʿ*. The Baṣrans and Kūfans disputed over determination over the *ʿāmil* here, sc. about the *rāfiʿ* which puts the *khabar* here into *rafʿ* (see the 22nd Question discussed in the *K. al-Inṣāf*, 81-4, *Mufaṣṣal*, § 3, and Ibn Yaʿīsh, 124, l. 23-125, l. 17).

For the *khabar* of *kāna* and its "sisters", sc. verbs like *aṣbaḥa* "it took place in the morning" or *amsā* "it took place in the evening", the Arab grammarians had the task of explaining the *naṣb* or accusative of the *khabar*, as in *kāna ḥakīman* "he was wise". They solved this by referring to an analogy with the *fāʿil* and *mafʿūl* of a verb (*Mufaṣṣal*, § 97, and Ibn Yaʿīsh, 282). In fact, this accusative can be explained as a complement indicating state, a *ḥāl*; this explanation had already been given by the Kūfans against the Baṣrans (*K. al-Inṣāf*, Question under discussion, 348-51; see also Fleisch, *L'Arabe classique. Esquisse d'une structure linguistique*[2], 181). The *naṣb* is found after the negative *mā* (less usually after *lā*) when

this has the value of *laysa* (*Mufaṣṣal*, § 38, and Ibn Yaʿīsh, 132-4). This also involves the question of the *mā ḥidjāziyya* (*K. al-Inṣāf*, 19). See Question under discussion, 76-9, and Ibn Yaʿīsh, 132, ll. 24-5.

For the *khabar*'s place, see the Questions under discussion: *K. al-Inṣāf*, No. 9, pp. 34-6, No. 17, pp. 70-2, and No. 18, pp. 73-6. For the separation between *khabar* and *naʿt*, see Question No. 100.

(H. Fleisch)

KHABAR AL-WĀḤID. Literally, tradition or report going back to one single authority. Synonyms are *khabar al-āḥād*, *khabar al-infirād* and *khabar al-khāṣṣa*. According to the generally-accepted definition, a *khabar al-wāḥid* is a report which falls short of the predicate *mutawātir* [*q.v.*] (or, as certain scholars assert, *mashhūr* [*q.v.*]) in that it has only one or a few (from two to five) transmitters in every *ṭabaḳa* of its *isnād*. The first classical scholar who writes about the *khabar al-wāḥid* is, according to Nawawī (cf. *Sharḥ ṣaḥīḥ Muslim*, Cairo 1349, i, 131), Shāfiʿī (d. 204/820). In his *Risāla* he devotes two chapters to it. He argues that a *khabar al-wāḥid* constitutes an argument (*ḥudjdja*), if only there is at every stage of the *isnād* one reliable transmitter (*thiḳa* [*q.v.*]), his reliability being dependent on the following six conditions: (1) he should have a strong faith; (2) he should be known for his veracity in transmitting traditions; (3) he must be able to grasp the meaning of what he transmits; (4) he should pay heed to the exact wording; (5) he should transmit from memory, and (6) he should be free from *tadlīs* [*q.v.*]. The *khabar al-wāḥid* forms in itself an *aṣl* and can only in part be compared with juridical testimonies (*shahādāt*). It can only be invalidated by one or more other reports which present an opposing view and which, at the same time, meet the requirements of reliability more adequately.

Most Muslim scholars agree in that the *khabar al-wāḥid* can be considered as conveying a probability (*ẓann*), not definite knowledge (*ʿilm*), although various traditionists hold the opinion that those contained in the compilations of Bukhārī and Muslim also convey *ʿilm* to the exclusion of all others. The majority of orthodox Muslim scholars finally agreed on the fact that, inasmuch as a *khabar al-wāḥid* conveys at least a probability, every Muslim is bound by it and is obligated to live by it.

Among those who reject the *khabar al-wāḥid* as a valid criterion or an obligation are the *Ḳadariyya* [*q.v.*], the *Rāfiḍa* [*q.v.*], certain members of the *Ẓāhiriyya* [*q.v.*] (although Ibn Ḥazm lends full credit to them, cf. *al-Iḥkām fī uṣūl al-aḥkām*, ed. Shākir, Cairo 1345-7, i, 108) and the *Muʿtazila* [*q.v.*].

(G. H. A. Juynboll)

KHABBĀB B. AL-ARATT, ABŪ ʿABD ALLĀH or ABŪ YAḤYĀ or ABŪ MUḤAMMAD or ABŪ ʿABD RABBIHI, a Companion of the Prophet. Tradition is not unanimous about his origin. Some reports state that his father was captured in a raid launched by the Rabīʿa in the Sawād, sent to Mecca and sold as a slave to Sibāʿ b. ʿAbd al-ʿUzzā al-Khuzāʿī, a confederate (*ḥalīf*) of the Banū Zuhra; Sibāʿ (who was later killed by Ḥamza in the battle of Uḥud) gave him as a gift to his daughter Umm Anmār who freed him. In a tradition attributed to ʿAlī he is said to have been the first of the *Nabaṭ* to embrace Islam. Other traditions claim that the mother of Khabbāb, a professional circumciser, also gave birth to Sibāʿ; it is for this reason that Ḥamza when killing Sibāʿ, shouted to him "O son of the woman cutting the clitoris". By virtue of this kinship, Khabbāb claimed to be a confederate of the Zuhra in Mecca. Some reports say that this father was from Kaskar or from the vicinity of al-Kūfa. A quite different tradition states that al-Aratt was a Tamīmī, of the Banū Saʿd, who was captured in a raid and sold in Mecca to Umm Anmār al-Khuzāʿiyya, who freed him. This version, adopted by his descendants, gives his pedigree as follows: Khabbāb b. al-Aratt b. Djandala b. Saʿd b. Khuzayma b. Kaʿb b. Saʿd from Tamīm. Another account records that Khabbāb was a freed slave (*mawlā*) of Thābit b. Umm Anmār; Thābit, these sources claim, was a *mawlā* of al-Akhnas b. Sharīḳ al-Thaḳafī, who in his turn was a confederate of the Zuhra. These contradictory traditions do not help to establish exactly his origin and his position in Mecca, but he must have been of a very low status, as he was doubly dependent, being a *mawlā* of a family which was in turn in a relation of dependence as confederates of the tribal group of Zuhra. Khabbāb himself was a blacksmith, a profession regarded as base in Mecca and in the Arab peninsula in general. The tradition of his Sawādī origin seems preferable because of his father's incorrect Arabic speech, which is indicated by his nickname *al-Aratt*; this would seem to point to Arabic not being his native language, and he probably spoke Nabataean, sc. neo-Aramaic. Although a *mawlā*, Khabbāb apparently acquired some influence in the Khuzāʿī family of his master. It was he who promoted the plan that the family of Sibāʿ should join the Zuhrī ʿAwf b. ʿAbd ʿAwf (the family of ʿAbd al-Raḥmān b. ʿAwf) as confederates and he indeed succeded in carrying out his plan.

Khabbāb was one of the earliest converts to Islam. He is usually mentioned as the sixth or the seventh man who embraced Islam. A unique tradition granting him an usually high position in Islam says that he was the first man who embraced Islam.

Khabbāb is recorded as one of "the weak ones" in Mecca. Lacking any protection (*manaʿa*), he was exposed to persecution and cruel torture. The noble Ḳurashīs and leaders of tribes used to mock the Prophet when they saw him in the company of Khabbāb and other poor men, and some verses in the Ḳur'ān were revealed to the Prophet in this connection. It is said that Khabbāb was attached to the Prophet and heard some chapters of the Ḳur'ān from his mouth, and that he witnessed the conversion of ʿUmar to Islam when present in the house of ʿUmar's sister, reading chapters from the Ḳur'ān.

Having left Mecca as a *muhādjir*, Khabbāb dwelt in Medina, together with al-Miḳdād b. ʿAmr, in the house of Kulthūm b. Hidm; after the death of the latter they moved into the house of Saʿd b. ʿUbāda. In some sources, Khabbāb is included in the list of the *Aṣḥāb al-Ṣuffa* [see AHL AL-ṢUFFA]. The Prophet set up the relation of brotherhood between Khabbāb and Djabr b. ʿAtīk. Khabbāb participated in the battle of Badr and was entrusted with the division of the spoils. Tradition usually adds that he took part in all the other battles of the Prophet: he is, however, not mentioned in the list of warriors recorded in the stories of the battles.

No details are available about the vicissitudes of his life during the caliphates of Abū Bakr and ʿUmar. ʿUthmān granted him possession of Ṣaʿnabā or Istīniyā in the vicinity of al-Kūfa and he settled in al-Kūfa. Shīʿī tradition claim that he took part in the battle of Ṣiffīn and Nahrawān; some Shīʿī sources mention that he signed the document of arbitration at Ṣiffīn.

Khabbāb died in 37 AH (or 39) at the age of 63 (or 73) as a rich man, leaving about 40,000 dirhams in cash. He regretted before his death that he had accumulated wealth; he was afraid lest he might have forfeited his reward in the next world, as he had received it already in this world. Khabbāb gave orders that he should be buried outside al-Kūfa, thus initiating a change in the then custom of burying the dead in their own houses. ʿAlī is said to have prayed over his grave when he returned from the battle of Ṣiffīn. He transmitted 32 utterances of the Prophet, some of which were recorded in the canonical collections of *ḥadīth*, and some traditions of the Prophet were transmitted by his daughter. A son, ʿAbd Allāh, was cruelly killed by the Khawāridj.

KHABN. [see ʿARŪḌ]

KHABRĀʾ (pl. KHABĀRĪ), a silt flat, as the term is commonly used in the Syrian Desert. This desert, which comprises part of Syria, Jordan, and northern Saudi Arabia, is mostly composed of highly dissected terrain. The rainfall, which usually occurs in the form of sudden cloudbursts, picks up a large amount of material from the erosion remnants and carries it inland downstream at high velocities. When such a stream reaches a gently sloping and wide open area, the ensuing loss in the velocity of the water stream causes the silts to be deposited. A *khabrāʾ* is the resulting silt flat. In these parts of the Middle East, a *khabrāʾ* is very often of great archaeological significance. Along the edges of such a *khabrāʾ* people have built ring-shaped dams, with an up-stream opening, where after the central hollowed-out depression has been coated with silt, the water can be naturally stored for a long time, occasionally lasting throughout the entire dry summer season. Such an open, ring-shaped storage dam is locally called a *maḥfūr* (pl. *maḥāfīr*). The *maḥāfīr* vary in size, from *ca.* 10 to as much as 35 or 40 metres in diameter; the ring-shaped dam wall is from about one metre to two-and-a-half metres in height. Lithic remains in such sites, which are very common and appear to be very old but have not yet been properly dated, would tend to indicate that the builders were not only thinking of making available a few watering holes for their livestock, but were also planning to attract wild game, such as the then plentiful gazelles, to be easier targets. (F. S. VIDAL)

KHĀBŪR, the name of two rivers.

(i) The larger Khābūr is one of the chief affluents of the Euphrates, which it joins at Ḳarḳisiyya [*q.v.*].

It originates in the Northern Mesopotamian mountains, flows through the plain of Mesopotamia, passes

between Djabal ʿAbd al-ʿAzīz and the Sindjār mountains, where it takes a southern direction, which it changes in the last part of its course into a southwestern one.

Its springs, as well as those of its numerous tributaries, are chiefly connected with three important towns, Raʾs al-ʿAyn (Reshʿayna of the Syrians) in the northwest, Mārdīn in the north and Naṣībīn in the northeast. The springs at Raʾs al-ʿAyn are said to be three hundred in number; they were shut off by iron grills, in order to prevent people from being drowned in them.

Downstream from Raʾs al-ʿAyn the Khābūr is joined by the river of Mārdīn, which is called by the Arab geographers Ṣawr; on Sachau's map it bears the name of Nahr Zrgān. Just before passing between Djabal ʿAbd al-ʿAzīz and the Sindjār mountains it is joined by the river of Naṣībīn. The Arab geographers apparently mean this river when speaking of the Hirmās; on Sachau's map it is called Djaghdjagha. The course and the nomenclature of this and other tributaries are still uncertain.

The Arab geographers mention several more or less important places situated on the Khābūr between Djabal ʿAbd al-ʿAzīz and Ḳarḳisiyya, such as Shāʿā, Tunaynīr (upper and lower T.), Ṭābān (also on Sachau's map), ʿArbān or ʿArābān (also on Sachau's map), Sukayr, al-Shamsāniyya (probably Sachau's Shemisan), Mākisīn ("the customs-house"), al-Ghudayr ("the pool"), and Ṣuwar (Sachau's eṣ-Ṣawar). At Mākisīn there was a bridge of boats. Much cotton was grown here, and by it lay the small lake of deep blue water called al-Munkhariḳ, which was said to be unfathomable.

The whole region through which the Khābūr flows, and especially its lower course, was renowned for being fertile; its trees are mentioned in Arabic poetry, and its fruits were exported to the towns of al-ʿIrāḳ. However, when Sachau travelled in the area (1899) the large fertile valley was devoid of towns, villages and human beings in general.

(ii) The lesser Khābūr, one of the tributaries of the Tigris which flows past the mountains of southern Armenia, south of Lake Van and west of Lake Urmiya. It passes between the mountain ranges which are now called Djabal Harbāl (north) and Zākha Dagh (south). The latter mountains derive their name from the town of Zākhō. The Khābūr joins the Tigris between Maghāra and Mazra. The Arab geographers often call it Khābūr al-Ḥasaniyya, after the town of this name. Here the river was spanned by a magnificent stone bridge which was looked upon as a miraculous piece of mason's work. Al-Ḥasaniyya probably survives in the hamlet of Ḥasan Agha.

(J. Lassner)

KHADĪDJA, first wife of Muḥammad, daughter of Khuwaylid of the clan of Asad of the tribe of Ḳuraysh in Mecca. Before her marriage to Muḥammad she had been married twice, to Abū Hāla al-Tamīmī, a client of the Meccan clan of ʿAbd al-Dār, and to ʿUtayyiḳ (or ʿAtīḳ) b. ʿĀʾidh (incorrectly ʿĀbid) b. ʿAbd Allāh of the Meccan clan of Makhzūm. The order of these marriages is disputed, as is also the *ism* of Abū Hāla and his genealogy. To Abū Hāla she is mostly said to have borne two sons with the (usually feminine) names of Hind and Hāla, and to ʿUtayyiḳ a daughter, Hind. She was probably divorced from Abū Hāla (cf. Sprenger, *Leben*, i, 197), since divorce was common in Mecca (cf. Ibn Ḥabīb, *Muḥabbar*, 435-55), but ʿUtayyiḳ is said to have died, leaving her a widow. This gets some confirmation from the fact that his nephew al-Sāʾib b. Abī 'l-Sāʾib became Muḥammad's business partner (al-Azraḳī, 471). Before she married Muḥammad she owned property and was able to engage in trade (as did also Asmāʾ bint Mukharriba, mother of Abū Djahl). This independence is most probably due to the persistence of old practices based on matrilineal kinship (cf. the fact that Khadīdja's sister Ruḳayḳa had a daughter known as Umayma bint Ruḳayḳa). In 605 (or earlier) Khadīdja arranged for Muḥammad to go to Boṣrā in Syria as steward of her merchandise. He executed this commission satisfactorily, and after his return she offered him marriage. The tales that she was impressed by miracles connected with Muḥammad may be discounted, and likewise the story that she gained her father's consent when she had made him drunk. The contract of marriage is mostly said to have been made for her by her uncle ʿAmr b. Asad, while Ḥamza acted on behalf of his nephew Muḥammad. The couple apparently lived for a time in a *bayt* in the *dār* of Khadīdja's nephew, Ḥakīm b. Ḥizām b. Khuwaylid, in Mecca (al-Azraḳī, 463); but during the boycott Ḥakīm took food to his aunt who was then among the Banū Hāshim. It was from Ḥakīm that Khadīdja received Zayd b. Ḥāritha, who had been brought as a slave from Syria, or bought at Ukāẓ. At the time of the marriage Muḥammad is said to have been twenty-five (or twenty-three or twenty-one) and Khadīdja forty (or twenty-eight). At least five children were born to Khadīdja and Muḥammad: four girls (Zaynab, Umm Kulthūm, Fāṭima, Ruḳayya) and one or possibly two boys (al-Ḳāsim, ʿAbd Allāh; but these may be the same, and it is generally agreed that al-Ṭāhir and al-Ṭayyib are names of ʿAbd Allāh).

Marriage to Khadīdja was an important turning-point in Muḥammad's career, mainly because, as is explicitly stated, she supported and encouraged him, fostering his confidence in himself and his mission. After the experience of the call to prophethood, she reported it to her relative Waraḳa b. Nawfal, who was a Christian, and he declared it was an experience similar to that of Moses when he received the Law. This doubtless helped to confirm Muḥammad's belief in the genuineness of the experience. The marriage is probably referred to in the verse (XCIII, 8), 'Did he not find you needy and enrich you?', since Khadīdja's wealth would enable him to engage more extensively in commercial operations. Though there is no mention of further journeys to Syria, Muḥam-

mad seems to have been trading in partnership with al-Sā'ib, as already mentioned. Khadīdja is said to have died three days after Abū Ṭālib in the year 619 (sc. three years before the Hidjra).

(W. Montgomery Watt)

KHĀDIM, from Arabic KHADAMA "to serve (a master)", means properly "servant, domestic", but it has acquired the euphemistic sense, first in Arabic and then in the other Islamic languages, of "eunuch"; hence the word is often ambiguous. In this article, only servants of free status are covered; for slaves, see 'ABD and for eunuchs KHAṢĪ.

At the side of the slaves, there have always been free servants (coll. *khadam*, pl. *khuddām*). Anas b. Mālik [*q.v.*] entered Muḥammad's service as a youth (al-Bukhārī, *Djihād*, *bāb* 74 etc.) and he records it to his master's credit that the latter had never said a harsh word to him nor even ever asked him for an explanation of his doings (al-Bukhārī, *Waṣāyā*, *bāb* 25). Servants were used on journeys especially, and put up the tents, etc. These latter are called *farrāsh* (lit. spreaders of the carpets), a name which is, however, given to servants who look after the beds and the house generally (Lane, *The Thousand and One Nights*, London 1859, ii, 202, no. 16).

In Egypt in Lane's time there was an organisation of servants. They were under special *shaykh*s to whom anyone who required a domestic had to apply; these *shaykh*s were responsible for any dishonesty or breach of trust by their people (Lane, *Manners and Customs*, London 1899, 139). There were also free female servants who performed the lowest household duties (*op. cit.*, 147, 197) for a very small wage (168). Some of the male servants used to shave their beards (573).

In Ottoman Turkish houses of the upper classes, these people, who were usually addressed by their name followed by Agha, worked as cooks, gardeners, janitors, etc., and they had to avoid the women's apartments in the house with which they communicated by the swivel-box (*dolāb*). If they were married they did not live in their master's house.

The women servants in the konaks lived in the women's apartments and had very little personal freedom. They sometimes belonged to impoverished Turkish families or were the children of former servants and slaves. They were called *ḳalfa* (from *khalīfa*) or *halā'iḳ* (from *khalā'iḳ*) and the men *ushak*, *deftiyer*, *hizmetk'ar* (*khidmetkār*). The servant girls (*hidmetdji* = *khidmetdji*) were usually Greeks or Armenians.

Uniformed officials in the imperial and official services were divided into various corporations (chamberlains, janitors, musicians) and were included under the general name *hadama* = *khadama*. On such corporations see also Von Hammer, *Constantinopel und der Bosporus*, Pest 1822, ii, 395 ff.

In North Africa, *khādim* (dial. *khādəm*) has acquired the specialised meaning of "negress", and *khdīm* is used for a domestic servant. However, classical *khādim* retained an honourable usage in Morocco, where all letters sent out by the Sultan's chancery to his officials began with the formula *khadīmanā 'l-arḍā* "to our well-pleasing servant". In contemporary Moroccan usage, *ṣāḥəb*, pl. *ṣḥāb*, is more commonly found. Within the great families, there exists in effect a clientage of *ṣḥāb* who usually receive no regular salary but live on the bounty of their master. They accompany him on the road, look after his mount, and order illumination for trips at night, etc. If their master is a great *ḳā'id* or the head of a brotherhood, he appoints one of his *aṣḥāb* to accompany travellers who are passing through the areas over which his authority extends. This is a sign that they are under his protection. In Fez, there existed a corporation of female cooks who performed odd jobs within the household (Le Tourneau, *Fès*, 562) and were paid in kind.

In the *zāwiya*s servants form a guild to which is entrusted the care of pilgrims and of the buildings; cf. Depont and Coppolani, *Les confréries religieuses musulmanes*, Algiers 1897; Doutté, *l'Islam algérien en l'an 1900*.

The *Ḥadīth* has handed down various sayings of Muḥammad which endeavour to secure good treatment for servants; in these it is not always possible to distinguish whether the reference is to free men or slaves. The *khādim* is responsible for his master's possessions (al-Bukhārī, *Waṣāyā*, *bāb* 9); on the other hand alms which he bestows out of his master's property bring him a heavenly reward (al-Bukhārī, *Zakāt*, *bāb* 25). One should be ready to forgive one's servant (al-Tirmidhī, *Birr*, *bāb* 32); he should neither be beaten nor cursed (al-Tirmidhī, *bāb* 30, 31, 85); and the servant who has prepared a meal has a right to partake of it (al-Bukhārī, *Aṭ'ima*, *bāb* 55; al-Tirmidhī, *Aṭ'ima*, *bāb* 44, etc.

One may note finally that, amongst the titles of the Ottoman Sultans, was that of *Khādim al-Ḥaramayn* "Servant of the two sacred areas", and also that at Mecca, one could purchase the title of *khādim al-masdjid* (Dozy, *Supplément*, s.v.). The collective *khadam* is further used, often linked in paronomasia with *ḥasham*, to denote the partisans and entourage of a great man, above all, of a military leader or ruler. (A. J. Wensinck*)

KHĀDIM AL-ḤARAMAYN (A.), "servant of the two holy places" (sc. Mecca and Medina), a title used by a number of Muslim monarchs. Adopted by the Ottoman Sultan Selīm I after the conquest of Egypt in 922/1517 and used by some of his successors, it was regarded in late Ottoman times as a Caliphal title, and was said to have been taken over by Selīm from the last 'Abbāsid caliph in Cairo. This does not correspond with the evidence, and appears to be part of the mythology of the Ottoman caliphate. As far as can be ascertained, the title was never used by the 'Abbāsid caliphs, whether in 'Irāḳ or in Egypt. It was however used by several Mamlūk sultans, and it was from the sultans, not the caliphs, of Egypt that the Ottomans adopted this title along with other possessions and perquisites of the Sultanate. Al-Ḳalḳashandī (*Ṣubḥ*, vi, 46) is quite explicit, and lists it among the titles (*alḳāb*) of the Sultans. The first to use the title appears to have been Saladin, and the earliest known occurrence is in a restoration inscription in the Ḳubbat Yūsuf in Jerusalem, dated 587/1191 (*CIA*, *Jerusalem*, ii, no. 150 = *RCEA*, ix, no. 3447). The introduction of this new title was probably a move in the rivalry between Saladin and the caliph al-Nāṣir, over the leadership of the pilgrimage and related questions concerning the holy places in the Ḥidjāz (on this rivalry see E.

Sivan, *Saladin et le calife al-Nasir*, in *Scripta Hierosolymitana*, xxiii (1972), 126 ff., especially 139 ff.).

In the Jerusalem inscription of 587/1191 the words *al-ḥaramayn al-sharīfayn* are followed by *wa-hādha 'l-bayt al-muqaddas*, "and this sanctified house", i.e. Jerusalem. This formula recurs, without the *ḥaramayn*, in a Jerusalem inscription of 589/1193 (*CIA*, *Jerusalem*, i, no. 36 = *RCEA*, ix, no. 3464). In two inscriptions of Baybars, the title *khādim al-ḥaramayn* is followed or preceded by the words *Ṣāḥib* (or *Malik*) *al-Ḳiblatayn*", master (or king) of the two Ḳiblas", presumably Mecca and Jerusalem (Damascus, 659/1261, and Kara 664/1266; *RCEA*, xii, no. 4476 and no. 4554). The same formula is attested for other Mamlūk sultans, e.g. Ḳalāwūn (Cairo, 683-4/1284-5; *CIA*, *Egypt*, i, no. 82 = *RCEA*, xiii, no. 4852) and al-Ashraf Khalīl (Cairo, 687/1288; *CIA*, *Egypt*, i, no. 95 = *RCEA*, xiii, no. 4895).

Khādim al-ḥaramayn or some variant of it (e.g. *Khādim ḥaramay Allāh wa-rasūlihi* (Ḳā'it-bāy, Cairo, 885/1480; *CIA*, *Egypt*, i, no. 325) was used only intermittently by the Mamlūk sultans, and does not seem to have formed part of their standard titulary. An undated letter, purporting to have been sent by Tīmūr to Bāyazīd I, complains of the use by the Mamlūk sultan of the title "*Sulṭān* (sic) *al-ḥaramayn*". The writer regards this as presumptous, and considers it a sufficient honour to be the servant (*Khādim*) of the two holy places (Ferīdūn, *Münshe'āt*, i, 128, cf. T. W. Arnold, *The Caliphate*, Oxford 1924, repr. London 1965, 151). According to a Turkish chronicler, the Ottomans used to address the sultans of Egypt as *Sulṭān-ı ḥaramayn babam*, "my father the Sultan of the two holy places", but Meḥemmed II replaced this by the less deferential *Khādim-i ḥaramayn* and even *ḳarındashım Mıṣır Sulṭānı*, "my brother the Sultan of Egypt" (ʿĀshıḳpāshazāde, *Tewārīkh-i Āl-i ʿOthmān*, Istanbul 1332 anno 863, p. 209; the passage occurs among the anonymous addenda to ʿĀshıḳpāshazāde's chronicle. Cf. Selâhattin Tansel, *Osmanlı kaynaklarına göre Fatih Sultan Mehmed'in Siyası ve askeri faaliyeti*, Ankara 1953, 337-8).

According to Arabic sources Selīm I was hailed, during the conquest of Syria and Egypt, by the preachers in the mosques of Aleppo and later of Cairo (Arnold, *Caliphate*, 140-1 and 145, citing Ibn Iyās, *Ta'rīkh Miṣr*, iii, 98, and Ḳuṭb al-Dīn, *Chroniken der Staat Mekka*, iii, 278-9; cf. Von Hammer, *Histoire*, iv, 280 and 448). Ottoman sources attach some importance to this recognition by the Sharīf of Mecca, thus confirming his authority over the holy places, but significantly, without reference to the title (e.g. Saʿd al-Dīn, *Tādj al-tewārīkh*, ii, 371-2; Solaḳzāde, *Ta'rīkh*, 480; on some documents, see Selâhattin Tansel, *Yavuz Sultan Selim*, Ankara 1969, 215-7). In a letter to the ruler of Mecca, announcing his accession, Süleymān refers to his father Selīm as *Khādim bayt Allāh wa'l-ḥaram fātiḥ mamālik al-ʿArab wa'l-ʿAdjam*, "Servant of the house of God and the sanctuary, conquerer of the lands of the Arabs and Persians" (Ferīdūn, i, 448, cf. Arnold, 155). This appears, however, to be an honorific description rather than a title. In his own documents Süleymān, while listing Mecca and Medina among his possessions, does not seem to have used the title Khādim. It appears, however, on coins of Süleymān struck in Baghdād in 942/1535-6 (i.e., after its capture from the Persians), 985/1551, and 960/1553 (Khalīl Edhem, *Meskūkāt-ı ʿOthmāniyye*, Istanbul 1334, 250-2), and remained in occasional but not common use under later sultans. Thus in the treaty with Poland of 1016/1607, it figures among the titles of the sultan in the preamble (Hammer, *Histoire*, viii, 407, citing the *Destūr al-inshā'* of Ṣarī ʿAbdullāh). It occurs in the signature of Maḥmūd I (İ. H. Uzunçarşılı, *Osmanlı devletinin saray teşkilâtı*, Ankara 1945, 292-3), and reappears in some other documents of the 12th/18th century, in a somewhat modified form, as "servant and adjudicator (*ḥākim*)" of Mecca, Medina and Jerusalem (H. Scheel, *Die Schreiben der türkischen Sultane and die preussischen Könige in der Zeit von 1721 bis 1774*, in *MSOS*, xxxiii/II (1930), 30, 34, 37, 39, 62, 65, 67, 70). A similar formula is used in documents of Selīm III (M. Guboglu, *Paleografia şi diplomatica turco-osmana*, Bucarest 1958, 60).

(B. Lewis)

KHĀDİM ḤASAN PASHA ṢOḲOLLİ, Ottoman Grand-Vizier. We have no information about his origin, but he was brought as part of the *devshirme* [*q.v.*] to the Imperial Palace and given a post in the Ḥarem in the department of the white eunuchs; later, he became chief treasurer of the Inner Palace or Enderūn. In Djumādā I 988/June 1580, he was appointed governor of Egypt in place of Mesīḥ Pasha, but after complaints about him, dismissed in Rabīʿ II 991/May 1583, and on arrival in Istanbul imprisoned in Yedikule. However, he was pardoned and released after presenting valuable gifts to Nūrbānū Sulṭān, the mother of Murād III, and was appointed governor-general of Anatolia.

In Djumādā II/June 1585 he joined the Ottoman army at Sivas under Özdemir-Oghlu Pasha, en route for Persia. At the battle of Alivar he commanded the right wing of the Ottoman army, and continued campaigning against the Persians in Ramaḍān 993/September 1585 after the conquest of Tabrīz. In the spring of 995/1587 he was appointed governor of Anatolia by Ferhād Pasha, and in Dhu'l-Ḳaʿda 996/October 1588, governor of the province of Shirwān after the death of Djaʿfar Pasha. During the reign of Meḥemmed III he was called to the Palace in Istanbul in Dhu'l-Ḳaʿda 1003/July 1595 to be fourth vizier, and remained there as acting Grand Vizier when the young Sultan was absent campaigning at Egri. While in this office, and with the backing of the Wālide Sulṭān, he prevented Esʿad Efendi, son of the well-known Khōdja Saʿd al-Dīn Efendi and recently-appointed *ḳāḍī* of Istanbul by Meḥemmed III, from entering Istanbul, retaining Akhī-zāde ʿAbd al-Ḥalīm Efendi in this office.

In Djumādā I 1005/December 1596, as *Ḳā'immaḳām*, he welcomed Meḥemmed III back from the Egri campaign with a magnificent ceremony. In Rabīʿ I 1006/November 1597, he became Grand Vizier in place of the Bosnian Dāmād Ibrāhīm Pasha, the second vizier Djerrāḥ Meḥmed Pasha being passed over for this office by the young Sultan. However, Khādim Ḥasan Pasha's grand vizierate proved very short. When the *Shaykh al-Islām* Bostān-zāde Meḥmed Efendi died, he refused to confer the office of *Shaykh al-Islām* on the sultan's choice Khōdja Saʿd al-Dīn Efendi, but appointed either the poet Bāḳī Efendi or Ḳarā Čelebizāde Ḥusām al-Dīn Efendi, which caused the already existing enmity between him and Saʿd al-Dīn Efendi to become worse. Consequently, Khādim Ḥasan Pasha's old opponents, Ghazanfer Agha Saʿd al-Dīn Efendi and the commander-in-chief of the Janissaries, Tırnaḳdjı Ḥasan Agha, whose execution he had sought from the Sultan, banded together under the influence of the Wālide Sulṭān Ṣafiyye against him, and secured his downfall on charges of corruption. On 2nd Ramaḍān 1006/8th April 1598, during the ceremony of laying the foundation of the Wālide Sulṭān (Yeñi)

Mosque at Eminönü, Bostāndji-Bashī Ferhād Agha arrested Khādim Ḥasan Pasha and confined him in Yedikule; six days later he was executed. He was buried in a tomb beneath his *medrese*, after the confiscation of all his property at Eyüp by the state. Near the Çagaloğlu palace and opposite to the present day Emniyet Sandığı there were situated a mosque and a *medrese* which were built by him, and also a public fountain built after him in 1594/1002.

Another Soḳollī Khādim Ḥasan Pasha was the son of Soḳollī Meḥmed Pasha. He took part in the campaign of Egri [*q.v.*] of 1004-5/1596, was *beglerbegi* of Rumeli, and died later than the Grand Vizier of the same name.

KHĀDİM SÜLEYMĀN PASHA (? - 954/1547), Ottoman governor of Egypt, commander of the campaign of 945/1538 against the Portuguese in India and Grand Vizier. When Selīm I died in 926/1520, Süleymān Pasha was holding the office of *oda-bashī* at the Imperial Palace. In addition to this, on the accession to the throne of Ḳānūnī Sulṭan Süleymān, he was given the office of *khazīnedār-bashī* procured for him through the favour of the historian Saʿd al-Dīn (Saʿd al-Dīn, *Tādj al-tewārīkh*, Istanbul 1279, ii, 395; Koca Hüseyin, *Bedāyiʾü ʾl-weḳāyiʿ*, ed. Tveritinova, Moscow 1961, ii, fol. 501a). Later on he was sent to the Hungarian frontier to protect the border, and in 931/1524-25 was appointed governor (*beglerbegi*) of Shāni (*Wulāt Dimashḳ fī ʿahd Āl ʿUthmān*, ed. S. Munadjdjid, Cairo 1949, 8, 9). In the following year he was appointed governor of Egypt for the first time (22 Shaʿbān 931/13 June 1525 to 17 Shaʿbān 941/22 January 1535, see ʿAbd al-Karīm b. ʿAbd al-Raḥmān, *Taʾrīkh-i Mıṣır*, Süleymaniye Genel Kütüphanesi, Hekim-oğlu Ali Paşa, MS 705, fol. 8a). He then joined the Baghdād campaign of the Sulṭān, and afterwards became governor of Anatolia, acquiring the rank of vizier (Luṭfī Pasha, *Tewārīkh-i Āl-i ʿOthmān*, Istanbul 1341, 358). On 11 Radjab 943/25 October 1536 he was once more given the *beglerbeglik* of Egypt. He stayed in the office until the year 945/1538, when he organised his famous campaign against the Portuguese in India.

Süleymān Pasha had planned a campaign to Yemen during his first governorship of Egypt, and had persuaded the Istanbul authorities to agree to this. He could not, however, put it into action as he had to join the Baghdad campaign of 941/1534-5 (Pečevī, *Taʾrīkh*, Istanbul 1282, i, 219). Now the situation was favourable to his plans; the Muslims of Gudjarāt had been asking the Ottomans to help against the Portuguese, and the local ruler, Bāhādur Shāh, had sent a special envoy to Istanbul for this purpose. The Ottoman government determined on an expedition into the Indian Ocean (Luṭfī Pasha, 358; Ḳuṭb al-Dīn Makkī al-Nahrawālī, *al-Barḳ al-Yamānī fī fatḥ al-ʿUthmānī*, Riyāḍ 1967, 70). Süleymān Pasha's fleet consisting of 72 vessels with siege guns and about 6,500 soldiers, including 1500 Janissaries, left Suez on 24 Muḥarram 945/22 June 1538 (R. S. Whiteway, *The rise of Portuguese power in India, 1497-1550*², London 1967, 256; anon., *Rüstem Pasha Taʾrīkhi*, Istanbul Üniversite kütüphanesi, MS 2438, fol. 205b; cf. al-Nahrawālī, 71; Kātib Čelebi, *Tuḥfat al-kibār fī asfār al-biḥār*², Istanbul 1329, 57, 58). The Pasha sailed down the Red Sea, passing Djidda and the island of Kamarān and arrived at the straits of Bāb al-Mandab. From there, he proceeded to the harbour of Aden, where he had ʿĀmir b. Dāwūd, the ruler of the town, hanged from the yard-arm of his flagship. Aden now passed under Ottoman control and became a *sandjaḳ* dependent on Yemen (Topkapı Sarayı Müzesi Arşivi, N.E. 6454).

After 19 days sailing Süleymān Pasha appeared before the coast of Gudjarāt on 9 Rabī II 945/4 September 1538, having lost four ships of his fleet during this sail. Süleymān Pasha first attacked and took the fortress of Gogala (called by the Portuguese Villa des Rumos and by the Muslims Bandar-i Turkī) and then that of Kat, but failed to reduce the strong Portuguese fort of Diu. Maḥmūd III, the successor of Bāhādur Shāh of Gudjarāt, bearing in mind the fate of the *amīr* of Aden, failed to help the Ottomans (Ḥādjī al-Dabīr, *Ẓafar al-wālih bi-Muẓaffar wa-ālihi*, ed. as *An Arabic History of Gujarat*, Baroda 1970, i, 226-7). On arrival of the news that the Portuguese fleet was approaching, and despite the fall of the outer fortress of Diu, Süleymān Pasha withdrew his siege artillery and on 12 Djumāda I/6 October, sailed back to the Red Sea (*Particular relation of the expedition of Solyman Pacha from Suez to India against the Portuguese at Diu*, in Robert Kerr and F. A. Eden, *A General History and collection of Voyages and Travels*, Edinburgh 1812, vi, 258-87). On the way, he stopped at Shiḥr on the coast of Arabia, an important town for trade. There he aided Badr, the ruler of Shihr to extend his power as far as Ẓufār (Dhofar) on condition that he paid an annual tribute (for the letter of this ruler, sent to Istanbul and dated Shaʿbān 945/Jan. 1539, see Topkapı Sarayı Arşivi, N.E. 6704). On 8 Radjab 1538/30 November 1538 he proceeded towards Aden (Topkapı Sarayı Müzesi Arşivi, N.E. 6704;

R. B. Serjeant, *The Portuguese off the South Arabian coasts*, Oxford 1963, 76-7, 86, 95-6), passed the strait of Bāb al-Mandab and stopped at Djīzān, where he was given information about events in Yemen during his absence at Diu (Pečevī, i, 223-4). He now took strong measures to re-establish Ottoman authority there, appointing Muṣṭafā son of Bīyīklī Meḥmed Pasha over the *eyālet* of Yemen before returning to Suez (for his activities in Yemen, see Topkapı Sarayı Müzesi Arşivi, N.E. 9663, original report of Süleymān Pasha; for critics of his activities see al-Nahrawālī, 89-90, and Luṭfī Pasha, 381-2).

Süleymān Pasha was now invited to Istanbul and made the second vizier, while Luṭfī Pasha was the Grand Vizier (*Rüstem Pasha Ta'rīkhi*, fol. 218a). In Muḥarram 948/May 1541, when Luṭfī Pasha was dismissed from the Grand Vizierate, he took over this office and held it for three and a half years (Luṭfī Pasha, 386). Shortly afterwards he was sent to Artuḳābād in the Tokat region of Anatolia to guard it lest the Ṣafawīds cross the Ottoman border whilst the main Ottoman army was engaged in Hungary, and he stayed there until the campaign in Hungary was over (during this time Sulṭān Süleymān sent him a *fetḥ-nāme* for the capture of Isṭabor, dated Djumadā I 948, see Ferīdūn Beg, *Munsha'āt al-Salāṭīn*[2], Istanbul 1274, i, 551-4). On 13 Ramaḍān 951/28 November 1544, Süleymān Pasha was dismissed by the Sulṭān after an argument with a former governor of Egypt, Khusrew Pasha, over the income of the *eyālet* of Egypt. He was now retired and resided at Malkara (in Gelibolu) until the end of his life (Luṭfī Pasha, 433; *Rüstem Pasha Ta'rīkhi*, fol. 238a). He died there in Shaʿbān 954/September 1547, still under suspicion about the income of Egypt (*Rüstem Pasha Ta'rīkhi*, fol. 251; Süleymān Pasha tried to prove his innocence over his activities in Egypt, see Topkapı Sarayı Müzesi Arşivi, N.E. 2906).

Whilst governor of Egypt, Süleymān Pasha made improvements in the citadel district of Cairo and built a *zāwiya* and two mosques, one at Būlāḳ and the other in the citadel (Başbakanlık Arşiv Genel Müdürlüğü, Kâmil Kepeci tasnifi, Divan-i hümayun Ruus defterleri, No. 208, 2 Djumāda II, 954; R. Vesely, *Trois certificats délivrés pour les fondations pieuses en Egypte au XVI*[e] *siècle*, in *Oriens*, xxi-xxii (1968-69), 252-5, ff.). He also built another mosque, a *ribāt* and a bath in Yemen (ʿAṭā', *Ta'rīkh*, Istanbul 1292, ii, 21).

AL-KHAḌIR (AL-KHIḌR), the name of a popular figure, who plays a prominent part in legend and story. Al-Khaḍir is properly an epithet ("the green man"); this was in time forgotten and this explains the secondary form Khiḍr (approximately "the green"), which in many places has displaced the primary form.

(i) IN THE ḲUR'ĀN AND IN ORIENTAL LEGEND

Legends and stories regarding al-Khaḍir are primarily associated with the Ḳur'ānic story in Sūra XVIII, 59-81, the outline of which is as follows. Mūsā goes on a journey with his servant (*fatā*), the goal of which is the *madjmaʿ al-baḥrayn*. But when they reach this place, they find that as a result of the influence of Satan, they have forgotten the fish which they were taking with them. The fish had found its way into the water and had swum away. While looking for the fish the two travellers meet a servant of God. Mūsā says that he will follow him if he will teach him the right path (*rushd*). They come to an arrangement but the servant of God tells Mūsā at the beginning that he will not understand his doings, that he must not ask for explanations and as a result will not be able to bear with him. They set out on the journey, however, during which the servant of God does a number of apparently outrageous things, which causes Mūsā to lose patience so that he cannot refrain from asking for an explanation, whereupon the servant of God replies: "Did I not tell you that you would be lacking in patience with me?" He finally leaves Mūsā and on departing gives him the explanation of his actions, which had their good reasons.

This servant of God is called al-Khaḍir by the majority of the commentators. Others, however, identify him with Mūsā's servant (see below). Both interpretations have their roots in Oriental legends. The Ḳur'ānic story may be traced back to three main sources: the Gilgamesh epic, the Alexander romance and the Jewish legend of Elijah and Rabbi Joshua ben Levi. The two first are, of course, again closely related to one another; at the same time it should be noted that the fish episode is lacking in the epic and is only found in the romance (cf. R. Hartmann in the *ZA*, xxiv, 307 ff.).

The main features which the three sources have in common with the story in the Ḳur'ān are the following:

The Gilgamesh epic. Overcome with melancholy at the death of his friend Engidu, the hero Gilgamesh sets out on a series of travels to look for his ancestor Utnapishtim (Khasisatra, Xisouthros) who lives at the mouth of the rivers and who has been given eternal life. Gilgamesh wants to ask him about the plant of life which will save man from the power of death.

The Alexander romance. The fish episode (with which we are here concerned), which shows Alexander on the search for the spring of life, is found in greatest detail in Syriac literature, in the Lay of Alexander (cf. C. Hunnius, *Das syrische Alexanderlied*, in *ZDMG*, lx, 169 ff.). Alexander is accompanied by his cook Andreas (cf. the article IDRĪS). During the laborious journey through the land of darkness Andreas on one occasion was washing a salted fish in a spring; the contact with the water

made the fish live again and it swims away. Andreas jumped in after it and thus gained immortality. When he told Alexander his adventure, the latter at once realised that this was the well of life. All attempts to find it again failed: Alexander is denied the immortality which becomes the lot of the unfortunate cook, who does not know what to do with it.

The Jewish legend (printed in Jellinek, *Bet ha-Midrasch*, v, 133-5) tells how Rabbi Joshua ben Levi goes on a journey with Elijah under conditions laid down by Elijah, like those above of the servant of God in the Ḳur'ān. Like the latter, Elijah does a number of apparently outrageous things, which affects Joshua as it did Mūsā. Zunz, *Gesammelte Vorträge*, x, 130 first pointed out the similarity of this story to the Ḳur'ānic legend. A comparison of the main features of these three sources with Sūra XVIII, 59 ff. suggests the following conclusions, questions and hypotheses.

The chief figure in the Ḳur'ānic story is called Mūsā. Some commentators doubt his identity with the great prophet (see below). There is not, however, the slightest hint of another Mūsā anywhere in the Ḳur'ān. On the other hand, we have no legends of Moses, which make him, like Gilgamesh and Alexander, go on the great journey. We might suggest the following explanation of the difficulty. The figure of Joshua ben Levi, with which Muḥammad first became acquainted through the Jews and which does not again appear in Muslim legend, was identified, as we shall see, with Joshua b. Nūn. This identification may have resulted in a confusion of his master Elijah with Joshua b. Nūn's master Moses. Mūsā thus represents Gilgamesh and Alexander in the first part of the Ḳur'ānic story and Elijah in the second.

The figure of the travelling companion is not connected with the Gilgamesh epic where it is not found, but with the Alexander romance and the Jewish legend. It probably comes in the first place from the romance. This is suggested by the fact that the companion is called *fatā* (here meaning "servant"), a term that points to Alexander's cook rather than to Rabbi Joshua; the first episode, which also is only found in the Alexander romance, points in the same direction.

The *madjmaʿ al-baḥrayn* is given as the goal of the journey. The expression has no direct original either in the epic or the romance, although there are points of contact in both. Utnapishtim lives *ina pi narati*, i.e. at the mouth of the river. It is not quite certain what the expression means, but it is probable that the place in the extreme west is meant where the sources of all running water are. This, however, still leaves the dual in the Ḳur'ānic expression unexplained. This is still the case, if we attempt to trace it to the Alexander romance, where (i.e. in the Syriac Alexander legend; see Budge, *op. cit.*, 259) Alexander with his army crosses a strip of land between the eleven bright seas and the ocean. It is also possible that the expression goes back to none of these but to another story unknown to us, which perhaps never found its way into literature, in which there was mention of the meeting place of two seas. According to western Semitic cosmology, this is the end of the world where the oceans of earth and heaven meet.

We can likewise only guess at the origin of the rock (v. 62). It also belongs to cosmology (see A. J. Wensinck, *The ocean in the literature of the Western Semites*, in the *Verh. Ak. Amsterdam*, xix/2, 26 ff.). It is found neither in the epic nor in the romance, again an indication that the Ḳur'ānic story borrowed from other sources also.

The servant of God at the *madjmaʿ* recalls Utnapishtim-Khasisatra. He is called (v. 64) one to whom God's mercy had been shown, to whom divine wisdom had been granted. This sounds almost like a translation of the name Khasisatra and the granting of divine favour is perhaps an echo of Utnapishtim's immortality.

The test of patience to which he subjects the newcomer comes from the Jewish legend only; the servant of God in this respect thus represents Elijah.

(ii) Development in Islam

The commentators, *ḥadīth*, and historians have collected a mass of statements around the Ḳur'ānic story, additions which, like the story itself, came for the most part from the three sources already mentioned.

The first question discussed is whether the principal character is Mūsā b. ʿImrān or Mūsā b. Mishā (= Manasseh) b. Yūsuf b. Yaʿḳūb, i.e. a descendant of the patriarch Jacob (al-Rāzī, *Mafātīḥ al-ghayb*, iv, 333; al-Zamakhsharī, *Kashshāf*, on v. 59). Commentators are almost unanimous in favour of the former alternative and base their opinion on the following legend which is transmitted in several forms. When Mūsā, the famous prophet, was one day preaching to the children of Israel, he was asked if there was any man wiser than he. When he replied in the negative, Allāh revealed to him that his pious servant, al-Khaḍir, was wiser than he. He thereupon decided to visit this wise man. The story comes from Jewish legend; it is found in a considerable number of Arabic sources (al-Bukhārī, *ʿIlm, bāb* 16, 19, 44; *Anbiyā', bāb* 27; *Tafsīr*, Sūra XVIII, *bāb* 2-4; Muslim, *Faḍā'il*, tr. 170-4; al-Tirmidhī, *Tafsīr*, Sūra XVIII, *bāb* 1; al-Ṭabari, i, 417; *Tafsīr*, xv, 165 f; Fakhr al- Dīn al-Rāzi, *op. cit.*, iv, 333).

The (salted) fish serves as a guide to the route; the place where it is lost or revived by contact with water is the spring of life where al-Khaḍir lives (al-Ṭabarī, i, 417). A further indication of the spring of life is that is is marked by the rock, for it rises at its foot (al-Ṭabarī, *Tafsīr*, xv,. 167; al-Bukhārī, *Tafsīr*, Sūra XVIII, *bāb* 4). The rock is also located before the river of oil or the river of the wolf (al-Bayḍāwī and al-Zamakhsharī on Sūra XVIII, 61; al-Ṭabarī, *Tafsīr*, xv, 164). Some connection between a river of oil and the spring of life is in itself not impossible. According to many statements, oil is a feature of Paradise rivers. Then ذئب would be an error in writing زيت, which could easily arise. Vollers consider the reverse probable; he thinks that "river of the wolf" is a translation of the name Loukos, which is not uncommon in classical literature as a river-name. If this hypothesis is correct, one might think of the Lukkos in Morocco or the Lycus on the Syrian coast, two regions with which the idea of extreme west is associated, as we shall see directly.

The *madjmaʿ al-baḥrayn* is explained in various ways. Some regard it as "the place where the Persian Ocean unites with the Roman Sea, to the east" (al-Bayḍāwī on Sūra XVIII, 59; al-Ṭabarī, *Tafsīr*, xv, 163). This points to the isthmus of Suez and is an echo of the idea that the coast of Syria was the extreme west (see A. J. Wensinck, *Bird and tree as cosmological symbols in Western Asia*, in the *Verh. Ak. Amsterdam*, 1921, 17 ff.). Others say that it is the junction of the Roman Sea with

the Ocean (Ṭandja, Ifrīkīya; al-Ṭabarī, *Tafsīr*, xv, 163, and al-Zamakhsharī on the passage). This view reflects a later cosmological standpoint which regarded the Straits of Gibraltar as the extreme west. A farfetched explanation is that the union of the two seas means the meeting of Mūsā and al-Khaḍir, the two seas of wisdom (e.g. al-Damīrī, *Ḥayāt al-ḥayawān* i, 318).

When Mūsā first sees Khaḍir he is wrapped up in his cloak, as the Ḳur'ān says, "because he was sleeping", says al-Ṭabarī (i, 418). When he sees a bird drinking out of the sea he says to Mūsā: "Your wisdom is as insignificant compared with that of God as the amount the bird drinks is compared with the sea" (al-Ṭabarī, i, 418; al-Bukhāri, *Tafsīr*, Sūra XVIII, *bāb* 3; al-Rāzī, *Mafātiḥ al-ghayb*, iv, 333-4). Al-Khaḍir lives on an island (al-Ṭabarī, 1, 422), or on a green carpet (*ṭinfisa*) in the heart of the sea (*ʿalā kabid al-baḥr*; al-Bukhāri, *Tafsir*, Sūra, XVIII, *bāb* 3).

The test of patience is embellished by the commentators with a wealth of detail. It would take up too much space to go into them here; cf. the commentaries on Sūra XVIII, 59 ff., and the works on history and tradition mentioned in the *Bibliography*.

As may be expected from what we have said above, another branch of tradition lays particular emphasis on the connection between al-Khaḍir and Alexander's search for the spring of life. Friedländer, however, goes much too far when he says (*Die Chadhirlegende*, 108-9) "that originally Chadhir had nothing at all to do with the puzzling servant in verse 64—who belongs to quite a different cycle of stories—but with the servant of Moses (Alexander) who has charge of the fish in verse 59 ff., in other words, he is identical with Alexander's cook whom we know so well from Pseudo-Callisthenes and the Syriac homily". For Khaḍir is, as we have seen and will see further, connected with Utnapishtim as well as with Alexander's companion.

There is no translation of the Alexander romance in the Arabic literature known to us (cf. Weymann's book, in *Bibliography*). On the other hand, there are a number of, in part unedited, versions of the Alexander saga, which have been examined by Friedländer. It would take us too far to go into the differences between these versions with regard to our subject. These sources show their independence of the Ḳur'ān not only by the fact that they make Khaḍir the companion of Dhu 'l-Ḳarnayn, but also by the complete absence of any reference to the *fatā* of the Ḳur'ān. Al-Khaḍir usually appears as the commander of Alexander's vanguard on his march to the spring of life. In al-Ṣūrī's version he is called the king's vizier and has become the principal character, throwing the king himself into the background; in ʿUmāra he is Alexander's cousin, conceived and born in similar circumstances to him and at the same time. The usual account of the journey to the spring of life makes Alexander and al-Khaḍir go their ways separately; in some versions, the latter has the fish with him and discovers the miraculous well through the fish's becoming alive when it touches the water; in other stories, on the other hand, there is no mention of the fish and al-Khaḍir recognises the spring by other signs; in others again he dives into it without knowing its virtues (e.g. al-Ṭabarī, i, 414). In one version in Niẓāmī, al-Khaḍir does not go with Alexander but with Elijah to the spring, out of which both drink and both become immortal.

The descriptive character of the name al-Khaḍir is so obvious from its meaning that tradition could not but give the hero's real name, as well as his genealogy and date. We find him most frequently called Balyā b. Malkān. In al-Masʿūdī (*Murūdj*, iii, 144) the latter is called a brother of Ḳaḥṭān and thus given a place in the South Arabian genealogy. This makes it probable that Malkān is identical with Malkam (I Chronicles, viii, 9), who is also included among the South Arabian patriarchs. This genealogy is next traced back to Shem through Fālagh (Phaleg) and ʿĀbir (Eber) (e.g. al-Ṭabarī, i, 415; al-Masʿūdī, *Murūdj*, i, 92; al-Nawawī, on Muslim's *Ṣaḥīḥ*, v, 135). Is this Balyā (بليا) perhaps not a corruption of Elia (ايليا), which is identical with a Syriac form of the name Elijah? On the other hand, Elijah is also given in the Muslim form Ilyās as al-Khaḍir's proper name and also Elisha, Jeremiah (cf. God's words in *Iṣāba*, 887), Khaḍrūn (al-Ṭabarī, i, 415; al-Diyārbakrī, *Ta'rīkh al-khamīs*, i, 106, and Friedländer's *Chadhirlegende*, 333, under Chadhir).

Ibn Ḥadjar also gives the following genealogies (*Iṣāba*, 883-4): (1) He is a son of Adam (weak *isnād*); with this is connected the story (*Iṣāba*, 887-8; Abū Ḥātim al-Sidjistāni, *Kitāb al-Muʿammarīn*, 1) that al-Khaḍir took care of Adam's body and finally buried it after the flood; (2) He is a son of Ḳābil called Khaḍrūn; (3) He is al-Muʿammar ("the Long-lived") b. Mālik b. ʿAbd Allāh b. Naṣr b. al-Azd; (4) He is Ibn ʿAmā'il b. al-Nūr b. al-ʿĪṣ b. Isḥāḳ; (5) He is the son of Pharaoh's daughter; (6) He is a Persian, or his father was a Persian, his mother a Greek or vice versa; it is also said that he was born in a cave, fed there on the milk of wild beasts and finally entered the service of a king (al-Damīrī, i, 318; Ibn Ḥadjar, 891-2); cf. also his meeting "on the market-place of the Banū Isrā'īl" with the man who asks him for alms *bi-wadjh Allāh* (*Iṣāba*, 894-5).

This does not, however, exhaust the traditions about his names and genealogy. We shall only quote here the following from Maracci, *Prodromi* to Sūra xviii, 57; Alchedrus, quem fabulantur Moslemi eundem fuisse, ac Phineas filium Eleazari, filii Aaron; cujus anima per metempsychosin emigravit primo in Eliam, deinde ex Elia in S. Gregorium, quem propterea Mahumetani omnes summo honore prosequuntur. The latter identification is probably due to a confusion with St. George, with whom al-Khaḍir has certain points of resemblance; cf. thereon Clermont-Ganneau in *Revue archéologique*, xxxiii, and Friedländer *op. cit.*, 275. Clermont-Ganneau further pointed out the relationship between the consonants *kh-ḍ-r* and the North Semitic group *ḥ-ṣ-r*. The name has also been taken as a corruption of Khasisatra (Guyard in *RHR*, I, 344-5) or connected with Ahasuerus, the wandering Jew (Lidzbarski in *ZA*, vii, 116).

Very varying dates are given for al-Khaḍir's period. Sometimes he is called a contemporary of Abraham, who left Babel with him (al-Ṭabarī, i, 415); sometimes he is put in the period of Afrīdūn; he is a contemporary of Alexander and lived down to the time of Mūsā (Ibn Ḥadjar, *Iṣāba*, 886); according to others, he was born in the period of Nāshiyā b. Amūṣ (i.e. Isaiah b. Amos) (al-Ṭabarī, 415-6). The divergence in these statements is partly connected with his immortality (see below).

More important are the explanations of the name given in the oriental sources. He is said to have become green through diving into the spring of life and thus got his name (Ethiopic Alexander romance; cf. Friedländer, *op. cit.*, 235-6). As already

mentioned, he lives on an island (al-Damīrī, *op. cit.*, 317); he is also said to worship God on the islands (al-Ṣūrī, see Friedländer, *op. cit.*, 183; al-Thaʿlabī, 197). This may point to al-Khaḍir's having originally been a marine being. The following circumstances point in the same direction: he is frequently called the patron of seafaring people (e.g. *Taʾrīkh al-khamīs*, i, 107); he is said to be appealed to on the Syrian coast by sailors in stormy weather. In India he has become a regular river-god under the name Khwādja Khiḍr [*q.v.*], who is represented sitting on a fish. Clermont-Ganneau and Friedländer sought the origin of the figure mainly in this direction, the latter on the assumption that the Greek Glaukos legend reached the Muslims through a Syriac intermediary (*op. cit.*, 107 ff.). But apart from the fact that we know nothing of any such intermediary, a connection between al-Khaḍir and Glaukos would only explain one aspect of the former; nor would it tell us anything about the origin of the figure. Indeed, one may doubt whether it is right to seek for the origin of a figure so complicated as al-Khaḍir, who has characteristics in common with Utnapishtim, with Alexander's cook and other figures.

There are other things to be considered. In a number of Arabic explanations of the name, al-Khaḍir is conceived not as belonging to the sea but to the vegetable kingdom. "He sat on a white skin and it became green" (e.g. al-Nawawī on Muslim's *Ṣaḥīḥ*, v, 135; cf. al-Ṭabarī, *Tafsīr*, xv, 168). "The skin", adds al-Nawawī, "is the earth". Al-Diyārbakrī (i, 106) is still more definite. "The skin is the earth when it puts forth shoots and becomes green after having been bare". According to ʿUmāra, al-Khaḍir is told at the spring of life: "Thou art Chadhir and where thy feet touch it, the earth will become green" (Friedländer, *op. cit.*, 145). Wherever he stands or performs the *ṣalāt*, it will become green (al-Nawawī, *op. cit.*; al-Rāzī, *Mafātīḥ al-ghayb*, iv, 336). These are statements (especially the last) which remind us of a Messianic passage in the Old Testament: "Behold the man whose name is the branch and he shall grow up out of his place" (Zechariah, vi, 12). Al-Khaḍir is really connected with two Messianic figures—with Elijah [see ILYĀS] and with Jesus; these three form with Idrīs [*q.v.*] the quartette of those who have not tasted death (*Taʾrīkh al-khamīs*, i, 107).

The variations in the character of al-Khaḍir result in different views regarding his nature. If he is a prophet (see *Iṣāba*, 882 ff.), it remains doubtful whether he is to be included among the Apostles (al-Nawawī, *op. cit.*, 135). He is, however, also human, angelic, mundane and celestial (al-Ṭabarī, i, 544, 798). Popular piety as well as Ṣūfī circles readily regard him as a saint (*walī*). According to one Ṣūfī view, every age has its Khaḍir, in so far as the *Naḳīb al-awliyāʾ* for the time being is al-Khaḍir (*Iṣāba*, 891). As *walī*, if three times appealed to, he protects men against theft, drowning, burning, kings and devils, snakes and scorpions (*Taʾrīkh al-khamīs*, i, 107; *Iṣāba*, 903). Sky and sea and all quarters of the earth obey his sway; he is God's *khalīfa* on the sea and his *wakīl* on land; he can make himself invisible at will (ʿUmāra, in Friedländer, *op. cit.*, 145). He flies through the air, meets Elijah on the dam of Alexander and makes the pilgrimage to Mecca with him every year (cf. *Iṣāba*, 904 ff.). Every Friday he drinks from the Zamzam well, and Solomon's pond and washes in the well of Siloam (*Taʾrīkh al-khamīs*, i, 107; Friedländer, *op. cit.*, 148-9, 151); he can find water below the ground and talks the languages of all peoples (al-Ṣūrī, in Friedländer, 184).

His immortality is particularly emphasised (cf. Rückert's poem "Chidher"; ʿUmāra in Friedländer, *op. cit.*, 145; Abū Ḥātim al-Sidjistānī, *Kitāb al-Muʿammarīn*, 1; *Iṣāba*, 887 ff., 892, 895). According to the *Iṣāba*, 882, he was given immortality after a conversation with his friend, the angel Rafāʾīl, in order to establish the true worship of God on the earth and maintain it. Ibn Ḥadjar describes a meeting between al-Khaḍir and Muḥammad in various versions (*Iṣāba*, 899 ff.). On meetings with individuals who lived at a later date see *ibid.*, 908 ff.; on the table which was let down to him from heaven, see *ibid.*, 919; on his presence at the battle of Ḳādisiyya, see *Murūdj al-dhahab*, iv, 216.

He lives in Jerusalem and performs his *ṣalāt* every Friday in the mosques of Mecca, Medīna, Jerusalem, Ḳubāʾ and on the Mount of Olives; his food is *kamʾa* and water-parsley (*Taʾrīkh al-khamīs*, i, 107; *Iṣāba*, 889-90, 904).

On his marriages we have as early as classical *ḥadīth* (Ibn Mādja, *Zuhd*, *bāb* 23) a legend also mentioned by al-Thaʿlabī, *Ḳiṣaṣ*, 193 ff., which in its main features must have come from Christian sources. It is the motif of the pious youth who, married by his parents against his will, persuades his young wife to preserve her virginity (cf. the Syriac *Acts of Thomas*, 2nd Praxis). The story links up with that of Pharaoh's daughter's handmaid.

(A. J. WENSINCK*)

KHAḌĪR, BANŪ (sing. Khaḍīrī), a generic term in Nadjd [*q.v.*] for Arabs of dubious ancestry, i.e. not recognised as descendants of either ʿAdnān or Ḳaḥṭān [see DJAZĪRAT AL-ʿARAB. vi. Ethnography]. The derivation of the term is uncertain.

In any case, it is not to be taken as the name of a tribe, though there are sections of Banū Khaḍīr in various towns of Nadjd (see the tentative list in Lorimer, ii, 1004).

Many of Banū Khaḍīr are tillers of the soil for Arabs of pure descent who own the land they work. Rarely is a Khaḍīrī himself a landowner. Banū Khaḍīr as cultivators are numerous in the oases of al-Aflādj, Ḥawṭat Banī Tamīm and its neighbours, al-ʿĀriḍ, Sudayr, and al-Ḳaṣīm [*qq.v.*], as well as west of the Ṭuwayḳ escarpment in Ḍarmā and al-Ḳuwayʿiyya.

Men of Banū Khaḍīr, however, often rise above the rank of common labourer. When the British official and explorer Philby first became acquainted with the court of ʿAbd al-ʿAzīz b. ʿAbd al-Raḥmān Āl Suʿūd in 1336/1917-18, Khaḍīrīs were serving the Wahhābī ruler as treasurer and as master of ceremonies, while others, along with slaves, made up the bulk of his bodyguard. At least three of ʿAbd al-ʿAzīz's early secretaries were Khaḍīrīs, and the brother of one of these went on to become his powerful Minister of Finance.

In the old Arabia, Banū Khaḍīr were subjected to a strong tabu: no matter how high a station in life a Khaḍīrī held, any Arab of pure descent, humble though his circumstances might be, would flatly refuse to give him a daughter as his bride. In the new Arabia of the later 20th century, with great changes taking place in the economic and social structure, this tabu may be weakening.

Philby, *Arabia of the Wahhabis*, London 1928; idem, *The Heart of Arabia*, London 1922; M. v. Oppenheim and W. Caskel, *Die Beduinen*, iv/1, Wiesbaden 1967. (G. Rentz)

AL-KHAḌIR, DJAZĪRAT, a name given by the Arabs to Abbādān [*q.v.*], because al-Khaḍir [*q.v.*] is supposed to have appeared there. According to a legend, a ragged man appeared on the bank of the Bahmānshīr canal and asked the master of a passing sailing-boat to ferry him across. The master refused. Thereupon the stranger ordered the boat to come to the spot where he was standing, pulled it out of the water by the anchor chain, and left it high and dry. Then he disappeared. Farmers of the neighbourhood built a mud wall around the boat. The wall was repaired by a builder, called Usta Djumʾa, in 906/1501. In 953/1546, a shrine with a cupola was built and the alleged anchor of the boat hung up inside. The shrine is now an object of pilgrimage.

(V. Melkonian)

AL-KHAḌIR, MUḤAMMAD B. AL-ḤUSAYN (the name al-Khaḍir/al-Khiḍr being adopted during his stay in the east), scholar, poet and writer of Tunisian origin. He was born at Nefṭa in 26 Radjab 1293/21 July 1876, and studied first at a Ḳurʾānic school before coming with his family to Tunis in 1888. In 1889 he entered the Great Mosque for his secondary studies and followed the courses of ʿUmar b. Shaykh, Muḥammad Nadjdjār and Sālim Būḥādjib, who were known for their reformist ideas. He gained the *taṭwīʿ* or diploma of completion of secondary studies in 1989, and began to teach at the Zaytūna, interrupted his career to make a trip to the east, but halted at Tripoli and ended up by retracing his steps in 1889. He subsequently began his activities by founding the first Tunisian journal in Arabic, *al-Saʿāda al-ʿuẓmā*, in 1322/1904. He was appointed *ḳāḍī* of Bizerta in 1905 and continued to teach at the town's Great Mosque, then left his post and took up his teaching post at the Zaytūna in 1906. His first lecture during this year, at the council of the Association of Former Ṣādiḳians, was on the subject "Freedom in Islam". In 1907 he passed succesfully a competitive examination for the teaching qualification, and in the next year began to lecture at the Ṣādiḳī College. According to Mahdī ʿAllām, he refused a post as magistrate on the mixed tribunal, and entered the Khaldūniyya, completing three courses in the highest establishments of the capital. During this period, he gave lectures on "the evolution of the Arabic language", *iṣlāḥ* and Ibn Khaldūn, and encouraged his peoples at the Zaytūna to demand reforms in the teaching programmes. In 1902 he made a journey to Algiers and had made various contacts with his old pupils and with the local scholars.

In 1912 his uncle Muḥammad al-Makkī b. ʿAzzūz left for Istanbul, and this may have given him the notion of definitively leaving Tunisia for a new sphere of action, the east. Hence in this same year, he moved permanently to the Near East and toured through most of the Arab lands. At this time, he was appointed professor at the *Madrasa sulṭāniyya* in Damascus, but his political activities, envisaging a better Arab-Turkish understanding, irritated Djemāl Pasha, who imprisoned him for endangering the state's security. Six months later, on 29 January 1917, he was set free, probably on the intervention of the Sublime Porte, and summoned to Istanbul to work with the Arabic correspondence section of the Ministery of War. In the Ottoman capital he met various of his Tunisian compatriots, some of whom had been exiled for their "subversive" activities, sc. ʿAlī Bāsh Ḥanba, Muḥammad Bāsh Ḥanba, Ṣāliḥ Sharīf and Ismāʿīl Ṣfayhī.

Still believing that it was possible to save the caliphate, he and others of his compatriots put themselves at the service of the Ottomans and was given charge of a special mission to Berlin concerned with arranging the escape of North African soldiers serving in the French army; the Porte had promised its supporters in the Maghrib to help them with these deserters for a war of liberation in the Maghrib.

After the war, he returned to Damascus and taught at the military college, at the Ottoman school and at the *Madrasa sulṭāniyya*. In 1919 he was appointed as a member of the Damascus Academy, but soon left the Syrian capital in 1920 in order to escape from the French authorities, who would certainly have called him to account for his pro-Ottoman activities in Berlin. He only returned there in 1937, and then only for a two months' stay.

In 1920 al-Khaḍir settled in Cairo, and had excellent relations with the Taymūr family; and in 1923 he founded the Association of North African Colonies. The work of ʿAlī ʿAbd al-Rāziḳ, *al-Islām wa-uṣūl al-ḥukm*, which appeared in 1925 (tr. L. Bercher, in *REI* (1933), 353-90, and (1934), 163-222), and that of Ṭāhā Ḥusayn on pre-Islamic poetry (1926) drove the *shaykh* to reply in two *naḳḍs* which placed him in the public eye in Egypt when they appeared respectively in 1926 and 1927. The first work contains the same number of chapters (nine) as ʿAlī ʿAbd al-Rāziḳ's, and is dedicated to King Fuʾād, who was considered by certain *ʿulamāʾ*, including al-Khaḍir, as the best qualified person to assume the caliphate. In it, al-Khaḍir succinctly summarises each of the original author's chapters and then refutes his arguments; in his opinion, the caliphate is far from being a religious obligation, since Islam leaves to its adherents freedom to choose the form of government

most suitable for them. But to argue from this that Islam separates the temporal from the spiritual, and has no political traditions, is to misunderstand the very message of the Prophet.

According to him, Ṭāhā Ḥusayn's work is at fault because it denigrates the Arab-Muslim heritage, and even that of Islam. Again following the same plan as the original author, al-Khaḍir tries to show that the former, the follower of Descartes and Margoliouth, expressly passes over in silence the methodical spirit of an al-Ghazālī or Ibn Khaldūn, with the manifest aim of discrediting the great figures of Islamic civilisation. Did not the old *ruwāt* themselves express doubts about some pre-Islamic poetry?

In 1926, al-Khaḍir founded the *al-Hidāya al-Islāmiyya* society and became editor of its journal, bearing the same name. The editorship of the journal *Nūr al-Islām*, founded in 1929 and which in 1955 became the journal of the Azhar, *Madjallat al-Azhar*, was also entrusted to him. In 1932 he became an Egyptian subject and was made a member of the Cairo Academy, of which he remained a permanent member until his death. He began to lecture at the Azhar, and his career reached its culmination in 1952 when he became rector of this celebrated institution. He left this post in 1954, after the ejection from power of General Nadjīb (Neguib), and died in Cairo four years later, on 13 Radjab 1377/2 February 1958.

The list of his works is very long. Several articles and lectures, published in Tunis or the east in the form of epistles, have been collected together into books as part of a general edition under his nephew, ʿAlī Riḍā al-Tūnisī. One may cite here: *Khawāṭir al-ḥayāt* (*dīwān*); *Naḳd K. al-Islām wa-uṣūl al-ḥukm*; *Naḳd K. Fī 'l-shiʿr al-djāhilī*; *al-Sharīʿa al-islāmiyya*; *Balāghat al-Ḳurʾān*; *Tūnis wa-Djāmiʿ al-Zaytūna*; *Muḥammad Rasūl Allāh*; *al-Ḳiryās fi'l-lugha al-ʿarabiyya*; *al-Khiṭāba ʿind al-ʿArab*; *ʿUlamāʾ al-Islām fi 'l-Andalus*; *al-Khayāl fi 'l-shiʿr al-ʿarabī*.

Bibliography: Mahdī ʿAllām, *al-Madjmaʿiyyūn*, Cairo 1966, 158; Fāḍil b. ʿĀshūr, *Arkān al-nahḍa al-adabiyya*, 39; Ḥ.Ḥ. ʿAbd al-Wahhāb, *al-Mudjīl fi 'l-adab al-Tūnisī*, Tunis 1968, 333; Sh. Ghirbāl, *al-Mawsūʿa al-ʿarabiyya al-muyassara*, Cairo 1965; A. M. Kerrū, *Aʿlām mansiyyūn*, in *al-ʿAmal*, Tunis (supplement of 21.2.69 to 18.4.69).

(J. MAJED)

KHʷĀDJA (P.), a title used in many different senses in Islamic lands. In earlier times it was variously used of scholars, teachers, merchants, ministers and eunuchs. In mediaeval Egypt, according to Ḳalḳashandī, *Ṣubḥ*, vi, 13, it was a title for important Persian and other foreign merchants (cf. *CIA*, *Égypte*, i, no. 24). In Sāmānid times, with the epithet *buzurg* "great", it designated the head of the bureaucracy; later it was a title frequently accorded to wazirs, teachers, writers, rich men, and merchants. In the Ottoman Empire it was used of the *ulema*, and in the plural form *Khʷādjegān* [*q.v.*] designated certain classes of civilian officials. In modern Turkey, pronounced Hodja (modern orthography *hoca*) it designates the professional men of religion, but is used as a form of address for teachers in general. In Egypt and the Levant (pronounced Khawāga or Khawādja), it was used for merchants, then more particularly for non-Muslim merchants, and then as a more or less polite form of address for non-Muslims in general. In India it designates those Ismāʿīlīs who follow the Agha Khān.

Bibliography: Ḥasan al-Bāshā, *Alḳāb*, 229-30; Dozy, *Supplément*, i, 410.

(ED.)

KHʷĀDJA-I DJAHĀN, title of high dignitaries in various sultanates of India, notably the sultanate of Dihlī, the Bahmanids, and the sultanate of Madura. It seems to have first been used during the time of Muḥammad b. Tughluḳ (724-52/1324-51), gradually replacing *ṣadr-i ʿālī* as the honorific title of the *wazīr* (I. H. Qureshi, *The administration of the sultanate of Dehlī*[4], Karachi 1958, 85, with further references); the title was later accorded to other very high officials. Many such officials are known to history by this title (sometimes qualified by a *nisba* or *laḳab*) rather than by their personal names, of whom the most important are the following:

1. Khʷādja-i Djahān Aḥmad Ayāz (?668-752/?1270-1351), who early in the 8th/14th century had held office as *kōtwāl* of Sirī under ʿAlāʾ al-Dīn and the later Khaldjīs, received the title of Khʷādja-i Djahān on Muḥammad b. Tughluḳ's accession in 724/1324 (Yaḥyā Sirhindī, *Taʾrīkh-i Mubārak Shāhī*, ed. Bib. Ind., 98) and became his *wazīr*, inferior in dignity only to the sulṭān's nephew Fīrūz b. Radjab [see FĪRŪZ SHĀH TUGHLUḲ]; although effective power in the *dīwān-i wizārat* was exercised (according to Shams-i Sirādj ʿAfīf, *Taʾrīkh-i Fīrūz Shāhī*, ed. Bib. Ind., 394-6) by the *nāʾib wazīr*, Khān-i Djahān Tilangānī [*q.v.*]. His period of office is most remembered for his "rebellion", which seems rather to have been a grave indiscretion, at the time of Muḥammad b. Tughluḳ's death: the whereabouts of Fīrūz were not known, and it was rashly assumed that he had been killed by the Mongols; the Khʷādja placed a boy of six, of unknown paternity, on the throne, asserting that he was a son of sulṭān Muḥammad. When the delayed news of Fīrūz's accession, on his campaign in Sind, reached Dihlī, the Khʷādja-i Djahān panicked instead of submitting immediately and delivering up the puppet. The other nobles, seeing the 84-year-old Khʷādja-i Djahān as the highest representative of the despotic reign of sulṭān Muḥammad, demanded his execution; whereupon the old man, anticipating his destruction, caused a friend to decapitate him privately. (Discussion in M. Habib and Afsar Begam, *Political theory of the Delhi sultanat*, 159 ff.).

2. Malik Sarwar, who had been *shaḥna-i shahr* under Fīrūz b. Radjab and his successor Abū Bakr, supported Fīrūz's son Muḥammad against the latter and was given the title of Khʷādja-i Djahān, *ca.* 791/1389 (Sirhindī, *Taʾrīkh-i Mubārak Shāhī*, 146), although when Muḥammad succeeded to the throne in 792/1390 Khʷādja-i Djahān were merely *nāʾib wazīr*. He later succeeded to the wazīrate, and retained it under ʿAlāʾ al-Dīn Sikandar and Nāṣir al-Dīn Maḥmūd. The latter appointed him governor of Djawnpur in 796/1394, with the title of *sulṭān al-sharḳ*, and when Maḥmūd fled before Tīmūr's advance Sarwar had the *khuṭba* read in Djawnpur in his own name. For his subsequent history see SHARḲIDS.

3. Khʷādja Surūr, *ḳāʾid al-baḥr* in the Madura sultanate in *ca.* 745/1344, was appointed *wazīr* and entitled Khʷādja-i Djahān "after the fashion at Dihlī", according to Ibn Baṭṭūṭa (iv, 204), who adds that a fixed fine was prescribed for any who should address him differently.

4. The earliest instance of the title among the Bahmanids appears on the accession of Ismāʿīl Mukh as the first independent sultan of the Deccan in 747/1346, when it was bestowed on Nūr al-Dīn, one of the *amīrān-i ṣada* of Dawlatābād (ʿIsāmī, *Futūḥ al-salāṭīn*, 500 ff.). When Ismāʿīl Shāh abdicated in favour of ʿAlāʾ al-Dīn Ḥasan Bahman Shāh, the

first of the Bahmanids, the title of Khʷādja-i Djahān was given to:

5. Aʿẓam-i Humāyūn, son of the *wazīr* (and the sultan's father-in-law) Sayf al-Dīn Ghōrī [*q.v.*], who was appointed governor of the Bahmanids' Tilangānā province.

6. Khʷādja-i Djahān Astarābādī figures as the *wazīr* of the sultan's ʿAlāʾ al-Dīn Aḥmad II in 839/1436, the first clear instance of the title going to one of the foreign (Āfāḳī) faction whom the sultan favoured at the expense of the local Dakhnīs.

7. On his accession in 862/1458 Humāyūn Shāh also favoured the Āfāḳī faction, appointing Maḥmūd Gāwān [*q.v.*] *wazīr* and *wakīl-i sulṭana*, and Malik Shāh, said to be of Čingizid descent, *ṭarafdār* of Tilingānā with the title of Khʷādja-i Djahān; he is usually referred to as Khʷādja-i Djahān Turk. He was distinguished as a general in this reign and that of the minor Aḥmad III (865-7/1461-3), in which he was a member of the council of regency. The animosity of the dowager queen caused him to be murdered in 870/1465-6.

8. A "local" noble, Khʷādja-i Djahān Dakhnī, figures as the Bahmanids' governor of Pārendā *ca.* 900/1495, supporting the Bahmanids and their Barīdī ministers against the breakaway factions in Bīdjāpur and Aḥmadnagar.

Bibliography: given in the article. For the Bahmanī nobles see also H. K. Sherwani and P. M. Joshi (eds.), *History of medieval Deccan*, i Hyderabad 1973, index s.v. Khwāja-i Jahān.

(J. Burton-Page)

KHʷĀDJA KHIḌR (or khizr in India), is in many part of India identified with a river-god or spirit of wells and streams. He is mentioned in the *Sikandar-nāma* as the saint who presided over the well of immortality. The name was naturalised in India, and Hindūs as well as Muslims reverence him; it is sometimes converted by Hindūs into Rādja Ḳidār. On the Indus the saint is often identified with the river, and he is sometimes to be seen as an old man clothed in green. A man who escapes drowning is spoken of as evading Khʷādja Khizr (Temple, *Legends of the Panjāb*, i, 221). In a poem by a Balūč regarding a fight on the Indus, a boat is unloosed "to float on the Khʷādja's waves", and it is asserted "the Khʷādja himself will remember that battle". (*Popular poetry of the Baloches*, i, 74), and by one poet his name is substituted for that of Mīkāʾīl as one of the archangels. His principal shrine is on an island of the Indus near Bakhar, which is resorted to by devotees of both creeds (*Sind Revisited*, ii, 226). Manucci, who was present at the siege of Bakhar in 1069/1658, alludes to this shrine under the name of Coia Quitan. Burnes also mentions it in his *Travels into Bokhara*.

The saint is believed to ride upon a fish, which was adopted as a crest by the Kings of Oudh, and appears on their coins. Possibly in this case there is also a survival of the fish-avatār of Vishnu. Muslims offer prayers to Khʷādja Khiḍr at the first shaving of a boy, and a little boat is launched at the same time, as also at the close of the rainy season. See further al-khaḍir.

(M. Longworth Dames*)

KHʷĀDJA Muʿīn al-dīn Ḥasan Sidjzī. [see čishtī]

KHʷĀDJA-ZĀDE. [see khōdja-zāde]

KHʷĀDJEGĀN-i DĪWĀN-i HUMĀYŪN, a title given to the heads of the imperial chancery of the Ottomans. Although the date of its origin is uncertain, the title was certainly known in the 10th/16th century (Hüseyin Hezārfen, *Telkhīṣ ül-beyān fī ḳavānīn-i āl-i ʿOthmān*, 160a, 161a, 177a, etc.; Tevḳīʿī ʿAbdurraḥmān Pasha, *Ḳānūnnāmesi*, in *MTM*, iii (Istanbul 1331), 520; von Hammer, *Staatsverfassung*, repr. 1963, i, 93, ii, iii, ff. 127 ff.; A. H. Lybyer, *The government of the Ottoman empire*, Cambridge, Mass. 1913, 168 f.). Because the title of *khʷādjegān* was bestowed annually, the term *khʷādjegānlīḳ* became a synonym for *manṣab* ("high office", "rank") and *meʾmūriyyet* ("official duty"). Those officials who were subordinate to the chief clerks (*ḳalem reʾīsleri*), sc. the holders of *khʷādjegānlīḳ* posts, were called "assistants" (*khalīfe*) of the *khʷādjegān* or "pupils" (*shāgird*) of the *khʷādjegān*s. From the mid-11th/17th century onwards, the application of the term widened, and it was also given to various officials additional to the chief clerks of the *dīwān*. The conferment of the *khʷādjegān* rank and the retention of the *khʷādjegān*s in their offices always took place in the first half of the month of Shawwāl each year (Čelebi-Zāde Ismāʿīl ʿĀṣim, *Dheyl-i Rāshid*, Istanbul 1282, 169, 266, 379, 465; Česhmī-Zāde Muṣṭafā Reshīd, *Česhmī-Zāde Taʾrīkhi*, ed. Bekir Kütükoğlu, Istanbul 1959, 21; for a conferment made in Ṣafar, however, see Rāshid Meḥmed, *Taʾrīkh*, Istanbul 1282, v, 123). For this ceremony, the Grand Vizier would prepare a conferment list and present it to the sultan for approval; if it was desired to dismiss an official holding the title of *khʷādjegān*, he would write three names on the list, and because it was known that the last name was the name of the person preferred by the Grand Vizier, the sultan would appoint him. (For the 6th Shawwāl 1134/20th July 1722 list of *khʷādjegān* conferment, see İsmail Hakkı Uzunçarşılı, *Osmanlı devletinin merkez ve bahriye teşkilâtı*, Ankara 1948, 152, n. 1; for an undated conferment list of a later period, see Başbakanık Arşivi, A-TSF.).

In the 10th/16th century, there were 25 chief clerks forming the *khʷādjegān* group. In a document belonging to the first half of the 11th/17th century, they numbered 15: the chief finance officer *Defterdār*, the *Defterdār* of Rumelia, the *Defterdār* of Anatolia, the *Nishāndji*, the *Defterdār* of the Danube, Chief Secretary (*Reʾis ül-kuttāb*), the Senior *Rūznāmečedji* (Clerk in charge of financial transactions), the Junior *Rūznāmečedji*, the *Čawūshbashi*, the Chief Accountant (*Bash muḥāsebedji*), the Accountant of Anatolia, the Accountant of the *Kharādj*, the Accountant of the *Awḳāf*, the Chief tax farmer (*Muḳāṭaʿadjī*) and the Tax farmer of Istanbul (*Kemānkesh Ḳarā Muṣṭafā Pasha Lāyiḥasī*, ed. Faik Reşit Unat, in *TV*, 1/6 (Istanbul 1942), 454).

By the mid-12th/18th century, because the *khʷādjegānlīḳ* was also conferred on those who did not hold an official post, the numbers of people holding this rank grew to several times more than the holders of the actual office. Junior officials, besides the chief clerks, might now have the title, such as the clerk of a Pasha's treasury. Such a person thereby had the opportunity of being promoted to a higher post; when dismissed from this office his name would be

rubbed out from the register of *khʷādjegāns* (*khʷādjegī defteri*) in order to give an opportunity for other officials (cf. the procedure applied to Yūsuf Efendi, the Junior *Awkāf* Accountant, described in Aḥmed Wāṣif, *Maḥāsin ül-āthār we-ḥaḳā'iḳ ül-akhbār*, Istanbul Archaeology Museum Library, no. 355, f. 101). One notes the excessive number of those holding this rank. In 1180/1766 the officials included in the *khʷādjegān-i Dīwān-i Humāyūn* were as follows: the General Deputy to the Grand Vizier, the *Defterdār* of the *Shiḳḳ-i evvel* (the finance accounts of the first division of the Ottoman Empire relating to Turkey in Europe), the *Re'īs ül-kuttāb*, the *Čāwūshbashi*, the first secretary to the Grand Vizier (*Tedhkire-i evvel*), the Master of court ceremonies, the Secretary to the Grand Vizier, the head of the government chancery office (*Beylikdji*), the Secretary to the Ketkhudā Beg, the *Defterdār* of the *Shiḳḳ-i thānī* (the second financial division of the Ottoman Empire, comprising Anatolia), the *Defterdār* of the *Shiḳḳ-i thālith* (the third division of the Ottoman Empire, including Hungary, Iraq, Syria, Egypt and Arabia), the Master of the Mint, the Prefect of the City (*Shehr emīni*), the *Emīn* of the Register, the Second Secretary to the Grand Vizier, the Senior *Rūznāmečedji*, the Chief Accountant, the Accountant of Anatolia, the Secretary to the Janissaries, the Overseer of the Kitchen, the Collector of Documents for the Cavalry (*Atli muḳābeledjisi*), the Accountant of the *Ḥaramayn* (Mecca and Medina), the Accountant of the *djizya*, the *Arpa Emīni*, the *Māliyye tedhkiredjiliği*, the Controller of the Office of Suspended Payments (*Mevḳūfātdji*), the Overseer of Ṭopkhāne (*Ṭopkhāne nāẓiri*), the Secretary of the *Sipahis*, the Secretary of the *Silāḥdārs*, the Junior *Rūznāmečedji*, the Collector of Documents for the Infantry (*Piyāde muḳābeledjisi*), the Junior Accountant of the *Awḳāf*, the *Kalyonlar kātibi* (sc. the clerk who provided supplies for the galleons and kept the accounts), the Secretary for Expenditure, the Secretary of the *Djebedjis*, the Overseer of the Arsenal, the Chief Secretary of the Fortress (*Büyük ḳal'e tedhkiredjisi*), the Chief tax Farmer (*Bash Muḳāṭa'adji*), the Junior Secretary of the Fortress (*Küčük ḳal'e tedhkiredjisi*), the Tax Farmer of the *Ḥaramayn*, the Tax Farmer of Istanbul, the Tax Farmer of the *Khāṣṣ* revenues, the *Emīn* of the *Kāghid-i bīrūn*, the *Emīn* of the *Kāghid-i Enderūn*, the *Ta'rīkhdjilik*, the Tax Farmer of Bursa, the Tax Farmer of Avlonya and Egriboz, the Overseer of payments from the treasury (*Sergi nāẓiri*), the Secretary of the gun-carriage drivers, the Secretary of the *'ulūfedjiyān-i yemīn*, the Secretary of the *'ulūfedjiyān-i yesār*, the Secretary of the right wing of the *Ghürebā* cavalry, the Secretary of left wing of the *Ghürebā* cavalry, and the *Emīn* of the Istanbul powder-factory, in total 53 officials (Česhmi-Zāde Muṣṭafā Reshīd, *op. cit.*, 20-1, compare this list with the ones who were in the *Khʷādjegān-i Dīwān-i Humāyūn* in 1167/1754, in Aḥmed Wāṣif, *Ta'rīkh*, Istanbul 1219, 33-4. For their places in the state ceremonies, see Nā'ilī 'Abdullāh Pasha, *Dīwān-i Humāyūn'a 'ā'id teshrīfāt*, in *TTEM*, xciii (1926), 258 ff.).

The *Khʷādjegān* system continued in the same manner until 1249/1833. Thereafter the conferring of titles and appointments started to be made in Sha'bān, superfluous appointments were abolished, and civil servants were divided into four categories (Meḥmed Thüreyyā, *Nukhbet ül-weḳāyi'*, Istanbul n.d. 21-2). In 1250/1834, when the Ministry of the Civil Service (*Mülkiyye neẓāreti*) was established, part of the *Khʷādjegān* was incorporated in it, and thus a new scheme of rank and promotions was formed (Meḥmed Thüreyyā, *op. cit.*, 40-1; for the innovations in the field of administration after 1254/1838, see Luṭfī, *Ta'rīkh*, Istanbul 1302, v, 114). The rank no longer had any importance, since every clerk who could write and express himself well was given the title of *Khʷādjegān*; in 1254/1838 it was therefore decided that the rank of *Khʷādjegān* should be conferred on those who could qualify by examination (Luṭfī, *op. cit.*, v, 102, 126). But it had now lost almost all its prestige. It maintained its existence as a minor rank given to the office clerks (*Ḳalem āmirleri*) among the new ranks invented after the *Tanẓīmāt* reforms (Luṭfī, *Ta'rīkh*, Istanbul 1328, viii, 155-6. For the status of the rank in 1270/1854, see Meḥmed Thüreyyā, *op. cit.*, 280, and see also M. Zeki Pakalın, *Osmanlı tarih deyimleri ve terimleri sözlügü*, Istanbul 1946, i, 695).

Bibliography: given in the article.

(Cengiz Orhonlu)

KHʷĀDJŪ, Kamāl al-Dīn Abu 'l-'Aṭā' Maḥmūd b. 'Alī, a Persian poet.

1. Life. He was born, as stated in the epilogue of his *Gul u Nawrūz*, on 20 Dhu 'l-Ḥidjdja 689/24 Dec. 1290, in Kirmān (the date 15 Shawwāl 679/7 Feb. 1281, given by Browne, is erroneous). He spent a short part of his life in Kirmān where he received his education. Later he travelled widely and met several of his contemporaries amongst the poets, men of letters, and mystics, and became the disciple of Rukn al-Dīn 'Alā' al-Dawla of Simnān (d. 736/1345). He spent the latter part of his life in Shirāz, where *inter alios* he associated with his younger contemporary, the great Shams al-Dīn Muḥammad Ḥāfiẓ (d. 791/1389) [*q.v.*], and enjoyed the patronage of the Indjū'id ruler Abū Isḥāḳ Indjū (742-54/1341-53) [see Indjū]. Besides Shaykh Abū Isḥāḳ Indjū, his panegyrics were chiefly addressed to Sulṭān Abū Sa'īd Bahādur (716-36/1316-35), the Muẓaffarid ruler Mubāriz al-Dīn Muḥammad (713-59/1314-58) and their viziers. He died at Shīrāz in 753/1352 and is buried there. Browne, *LHP*, iii, 229, remarks that "... his verse, while graceful and pleasing, lacks any conspicuous distinction or excellence". However, contrary to Browne's remark, Khʷādjū ranks amongst the great Persian poets. Even in his lifetime, he attained celebrity throughout Persia, especially as an ingenious and skilful *ghazal-writer*, and Ḥāfiẓ himself took him for his model in several of his *ghazals* (Suhaylī, 47-54; Shafaḳ, 481).

2. Works. (a) His *Dīwān*, containing *ḳaṣīdas*, *ghazals*, *tarkībs*, *rubā'īs*, etc., in two parts, *Ṣanāyi' al-Kamāl* and *Badāyi' al-Djamāl* (in 10,736 and 4,340 *bayts* respectively), an edition of which was printed at Tehran by A. Suhaylī-Khʷānsārī in 1336/1957.

(b) His *Khamsa*, in imitation of Niẓāmī's poem, consisting of: 1. *Humāy u Humāyūn*, a romantic *mathnawī*, in the metre of the *Iskandar-nāma*, containing 4,407 *bayts*. In addition to having the *Iskandar-nāma* as a model, the poem seems to be an imitation of the *Shāh-nāma* of Firdawsī. The prologue contains the *madḥ* of Sulṭān Abū Sa'īd and his vizier Ghiyāth al-Dīn Muḥammad. Composed at Baghdād in 732/1331-2, the poem was printed at Bombay in 1289/1872.

2. *Gul u Nawrūz*, also a romantic poem, in the metre of *Khusraw u Shīrīn*, consisting of 2,615 *bayts*. It was composed, according to the epilogue, in 742/1341-2, and dedicated to Tādj al-Dīn Aḥmad 'Irāḳī. The poem, as stated in the text, is a translation from Hindī and definitely passes for the first poem of Khʷādjū's *Khamsa*.

3. *Kamāl-nāma*, a mystical *mathnawī* in the metre of *Haft Paykar*, composed in 744/1343-4. It is divided into twelve *bābs* and 1,849 *bayts*. In the prologue the poet praises Shaykh Abū Isḥāḳ Ibrāhīm of Kāzarūn (d. 426/1035), and in the epilogue addresses Shaykh Abū Isḥāḳ, the ruler of Shirāz.

4. *Rawḍāt al-Anwār*, also a mystical poem, in the metre of the *Makhzan al-Asrār*, consisting of 20 *maḳālas* and 2,224 *bayts*. Composed in 743/1342-3, the poem is addressed to Shams al-Dīn Maḥmūd Ṣāʿin, the vizier of Abū Isḥāḳ Indjū. This poem was printed at Tehran in 1307/1928.

5. *Gawhar-nāma*, on ethics and mysticism, in the metre of *Khusraw u Shīrīn*, composed in 746/1345-6, consisting of 1,032 *bayts*. The dedication is to Amīr Mubāriz al-Dīn Muḥammad and his vizier Bahāʾ al-Dīn Maḥmūd.

(c) Other compositions: *Sām-nāma*, a romantic *mathnawī* in *mutaḳārib* metre; *Mafātīḥ al-Ḳulūb wa Maṣābīḥ al-Ghuyūb*, a selection of Khʷādjū's poems; and three *riṣālas* in prose: *Risālat al-Bādiya*, *Sabʿ al-Mathānī*, and, *Munāẓara-i Shams wa Saḥāb*.

Bibliography: Dawlatshāh, *Tadhkira*, ed. Browne, 249 ff.; *Tārīkh-i Guzīda*, ed. Browne, i, 818; Browne, *LHP*, iii, 222-9; Khʷādjū-i Kirmānī, *Dīwān-i Ashʿār*, ed. Aḥmad Suhaylī Khʷānsārī, Tehran 1336/1957, introd., Ṣ. R. Z. Shafaḳ, *Tārīkh-i Adabiyyāt-i Īrān*, Shiraz 1352/1973, 479-88. (IRAJ DEHGHAN)

KHʷĀF, older orthography (e.g. in Ibn Rusta, 171) Khʷāb, a *rustāḳ* or rural district of Ḳūhistān in eastern Persia, lying between the district of Bākharz [*q.v.*] to the north and that of Ḳāʾin to the southwest, and adjacent to the modern Iran-Afghānistān border. The geographers of the 4th/10th century mention the towns there of Salūmak (*Ḥudūd al-ʿālam*, tr. 103, Salūmīdh), Fardjird and Kusūy(a), the latter being especially populous. Yāḳūt, *Buldān*, ed. Beirut 1374-6/1955-7, ii, 399, describes the district as having 200 villages and three significant towns, Sandjān, Sirāwand and Khardjird. Also reckoned by some authorities as belonging to the Khʷāf district was the important town of Zawzan; indeed, Ḥamdallāh Mustawfī includes this with Sandjān and Salāma as the three chief towns there. Topographically bounded on the northeast by the Kūh-i Khʷāf, which rises to 8,260 feet (2,517 metres), the comparatively sheltered and fertile Khʷāf plain is described by the Islamic geographers as populous and prosperous agriculturally, producing excellent fruits, the dyestuff madder, and cotton and silk textiles; Mustawfī additionally mentions iron workings there (*Nuzhat al-ḳulūb*, tr. 152, 194).

In the early Islamic period, this rather isolated region was one where Zoroastrianism survived tenaciously; the Zoroastrian rebel Bih-ʾāfrīd [*q.v.*] came from here, and a fire temple existed there well into Islamic times (Yāḳūt, *Buldān*, iii, 158). Subsequently, however, the region produced a good number of Islamic scholars and literary men, so that Zawzan was called "little Baṣra" from their numerousness. Hence Samʿānī and Yāḳūt list several scholars with the *nisbas* of "al-Khʷāfī" and "al-Zawzanī" (see Samʿānī, *Ansāb*, ed. Hyderabad 1382-6/1962-6, v, 219-21, vi, 342-5, and Yāḳūt, *loc. cit.*,) including Abū ʿAbd-Allāh al-Ḥusayn b. Aḥmad al-Zawzanī (d. 486/1093), author of a famous commentary on the *Muʿallaḳāt*, see *GAL*, I², 342-3, S I, 35, and Ziriklī, *Aʿlām*, ii, 249-50; and Abū Manṣūr ʿAbdallāh b. Saʿīd al-Khʷāfī (d. 480/1087), mathematician and scholar in Baghdād, author of a refutation of Abu 'l-ʿAlāʾ al-Maʿarrī called the *Radjmat al-ʿifrīt*, see Ziriklī, *Aʿlām*, iv, 222-3. Another native of the area was Faṣīḥ al-Dīn Aḥmad b. Muḥammad al-Khʷāfī, who was a protégé of the Tīmūrids of Harāt in the first half of the 9th/15th century and who wrote a well-known historical and biographical compendium, the *Mudjmal-i Faṣīḥī*, see Browne, *Literary history of Persia*, iii, 426-8, and Storey, i, 90-1.

In the course of the 6th/12th century, Ḳūhistān, and Khʷāf and Zawzan in particular, became centres of Ismāʿīlī activity, perhaps continuing the earlier traditions of heterodoxy there; hence in 654/1256 the Assassin stronghold of Khʷāf was stormed by Hülegü's Mongol hordes, with a general massacre of the adult inhabitants (Djuwaynī-Boyle, ii, 615-16; see also P. R. E. Willey, *The Assassins in Quhistan*, in *Jnal. of the Royal Central Asian Soc.*, lv (1968), 180-3). Not surprisingly, the succeeding period seems to have been one of economic and social regression for the district; whereas Yāḳūt had recorded 200 villages there, Ḥāfiẓ-i Abrū (early 9th/15th century), recorded only 30 (see I. P. Petrushevsky, in *Camb. hist. of Iran*, v, 496-7). It nevertheless retained some cultural vitality, and Mustawfī comments favourably on the devout Ḥanafī faith of the people of Khʷāf, who were much given to works of charity and to going on pilgrimage. One of the finest surviving monuments of the Khʷāf district dates from the Tīmūrid period, sc. the *madrasa* of Khargird, begun by the architect Ḳiwām al-Dīn Shīrāzī for two of Shāh Rukh's ministers, Aḥmad b. Isḥāḳ and Fakhr al-Dīn Muḥammad Khʷāfī (see Sir Percy Sykes, *Historical notes on Khurasan*, in *JRAS* (1910), 1148-51, and *Survey of Persian art*, iii, 1126-8).

In recent times, the name "Khʷāf" has been used both for the district and for its chief town, also called Rūy-i Khʷāf, near Khargird. Travellers such as C. E. Yate (1894) and Sykes (1705) visited it and described it during the late Ḳādjār period. Yate found the centre Rūy-i Khʷāf much decayed, with *ca.* 800 inhabited houses, all of whose denizens were Sunnīs, but over half the houses in ruins; the silk industry had died out and had been replaced by the cultivation of opium and tabacco (Yate, *Khurasan and Sistan*, Edinburgh-London 1900, 127-33; Sykes, *A fifth journey in Persia*, in *Geogr. Jnal.*, xxviii (1906), 580-2). At the present time, Khʷāf forms one of the five component *bakhshs* of the *shahrastān* of Turbat-i Ḥaydariyya in the *ustān* or province of Khurāsān, and this administrative subdivision also includes Zawzan; see *Farhang-i djughrāfiyā-yi Īrān*, ix, 153, 201.

Bibliography: given in the article, but for the information of classical Islamic geographers, see also Barbier de Meynard, *Dictionnaire géographique, historique et littéraire de la Perse*, 213-14, 190-1, and Le Strange, *Lands of the eastern Caliphate*, 357-8; and for the present century, *Admiralty handbook, Persia*, 385-7.

(C. E. BOSWORTH)

KHAFĀDJA, a subdivision of the Hawāzin tribe of ʿUḳail b. Kaʿb, which remained as powerful Bedouins longer than most of the other tribes which inhabited the Arabian Peninsula at the dawn of Islām. The genealogists give their affiliation to their kindred clans as Khafādja b. ʿAmr b. ʿUḳayl, and they were subdivided into eleven branches: Muʿāwiya Dhu'l-Ḳarḥ, Kaʿb Dhu'l-Nuwayra, al-Aḳraʿ, Kaʿb al-Aṣghar, ʿĀmir, Mālik, al-Haytham, al-Wāziʿ, ʿAmr, Ḥanz and Khālid. According to Ibn al-Kalbī, *Jamhara*, fol. 132b, the name of Khafādja is Muʿāwiya b. ʿAmr. However, al-Samʿānī, *Ansāb*, fol. 204b, is

probably wrong in saying that Khafādja is a name of a woman. Unfortunately, our early sources do not provide us with important information concerning their dwelling-places in pre-Islamic Arabia, presumably because of Khafādja's assimilation with Banū ʿUḳayl out of whom they had emerged. However, from the scattered information found in the late sources, we know that they had their territory to the south-east of Medina and owned some villages, among which Sarw Lubn, al-Sharāʾin, Tathlīth, Thaʿlab and Orāl are mentioned. Later, we find them further to the east at war with the B. Ḥanīfa in al-Yamāma. According to Aṣmaʿī, in Yaḳūt, *Buldān*, ii, 785, they had their dwellings in the 2nd/8th century in the desert near the Ruṣāfa settlement of the Umayyad Caliph Hishām b. ʿAbd al-Malik. It is probable that the Ḳarmaṭī movement in al-Yamāma in the early part of the 4th/10th century caused them to move further northwards towards the borders of ʿIrāḳ. Here we find them towards the end of that century as masters of Kūfa under their *amīr* Thumāl and his sons. About this time also, we find them around al-Shām, al-Raḥba, Ḥalab and Ḥims, whilst al-Ḳalḳashandī mentions that one of their branches had settled in Lower Egypt.

They may have been at first allies of their cousins the Banū Yuzīd (not Bozīd as in Wüstenfeld's *Tabellen*, or Yazīd as otherwise stated) who established themselves as rulers of Mawṣil and the surrounding country, but were rather in opposition to them. In the year 391/1000 the ʿUḳaylid Ḳarwāsh attacked them in Kūfa and they were compelled to leave the lands and move along the Euphrates towards Syria, where they remained only till the following year, when the ʿAbbāsīd general Abū Djaʿfar al-Ḥadjdjādj called them to his aid when the ʿUḳaylīds besieged al-Madāʾin. This brought them again back to their ancient dwelling-places and as the Baghdād government had probably supplied them with arms, they utilised these a few years later in 402/1011 in an attack upon the pilgrim caravan. Emboldened by this attack, they demanded the lands to the east of the Euphrates which had been in the hands of the ʿUḳaylīds, and marched under the command of Sulṭān, ʿUlwān and Radjab, the three sons of Thumāl, to al-Anbar, laying the whole neighbourhood waste and besieging the town. An army sent against them from Baghdād and supported by the ʿUḳaylīds drove them out and Sulṭān was actually captured, but released upon the intercession of Abu'l-Ḥasan b. Mazyad al-Asadī. No sooner had he been released than in the following year (403/1012), news was received at Baghdād that the Khafādja were plundering the country round Kūfa under Sulṭān. An army was sent against them with support from Abu'l-Ḥasan b. Mazyad, and they were surprised at the river al-Rummān. Sulṭān escaped, but his brother Muḥammad was made a prisoner; as a result, many of the pilgrims, who had been captured in the year 403/1012, were liberated and reached Baghdād. Meanwhile, the ʿUḳaylīd *amīr* Ḳarwāsh had been captured and released, and he now tried to make common cause with the Khafādja and to join Sulṭān b. Thūmāl; but after their junction they were attacked by troops sent from Baghdād and routed, though subsequently pardoned. This gave a few years of comparative peace, but in 417/1026 Dubays b. ʿAlī b. Mazyad al-Asadī and Abu'l-Fityān Manīʿ b. Ḥassān, now chief of the Khafādja, ravaged the lands of Ḳarwāsh in the Sawād [*q.v.*], assisted by troops from Baghdād, and encountered Ḳarwāsh near Kūfa. Ḳarwāsh fled northwards and was pursued by the combined tribes of Asad and Khafādja, who actually took possession of al-Anbār; but after this success the two tribes dispersed again to their pasture grounds. Manīʿ b. Ḥassān then marched, with his followers to al-Djāmiʿayn [see AL-ḤILLA], which belonged to Dubays b. Ṣadaḳa b. Mazyad, and plundered the lands round it; when pursued by Dubays, they turned northwards and attacked al-Anbār. The inhabitants defended themselves for a while, but as the town was not protected by walls, the Khafādja were able to plunder and burn it. On the approach of Ḳarwāsh, they abandoned the town, but soon returned and looted it for a second time. When finally Ḳarwāsh was able to drive them out, he spent the winter in the town and ordered protective walls to be built. Manīʿ now swore allegiance to the Buwayhīd ruler Abū Kālidjār and marched southwards to Kūfa, where he had the *khuṭba* pronounced in the name of Abū Kālīdjar. This had the result that in 420/1029 Dubays severed his allegiance to Abū Kālīdjār, being afraid of the depredations of the Khafādja.

In the following years, the Khafādja sided sometimes with one party and at another time with the other, and when in 425/1033 Dubays had a quarrel with his brother Thābit, they sided with the former; but other quarrels also arose within the Khafādja chiefs, during which ʿAlī b. Thumāl was killed and his nephew al-Ḥasan b. Abī'l-Barakāt became tribal chief. When in 428/1036 the Ḥādjib Bārs Ṭūghān rebelled in Baghdād, the Caliph's general al-Basāsīrī [*q.v.*] employed among others the Khafādjā to quell the revolt, as a result of which Bārs Ṭūghān was executed. We do not hear much about the Khafādja for some years, but in 446/1054 they again made an inroad upon Dubays's town of al-Djāmiʿayn, which they plundered; al-Basāsīrī came to his assistance, and the Khafādja retreated into the desert. They were pursued and their stronghold Khaffān was besieged and apart from its citadel, razed to the ground. When al-Basāsīrī rebelled against the caliph in the same year, he took al-Anbār after a prolonged siege, and we find that among the prisoners he took there were 100 men of Khafādja. There again followed a period of comparative peace, but when in 485/1092 the pilgrims from Baghdād had passed Kūfa they were attacked by Khafādja. When this news reached Baghdād, troops were sent who caused great slaughter among the Khafādja, reducing considerably their future power to do serious damage.

In 499/1105 the Khafādja came into conflict with the Ṭayyiʾ tribe ʿUbāda over some stolen camels, and while the latter could muster about 500 warriors, Khafādja were unable to place a similar number into the field. However, with assistance from the Asadī chief Ṣadaḳa b. Manṣūr they were victorious. This success was, however, of short duration, as in the following year the tribe of ʿUbāda, now assisted by Badrān b. Ṣadaḳa, utterly routed the Khafādja, who were compelled to forsake their pasture grounds and wander northwards towards Syria, while ʿUbāda in future was to occupy the lands adjoining the Sawād. Again in 536/1141 we hear of Khafādja making an inroad into ʿIrāḳ, but the troops sent against them easily drove them off, killing large numbers. How weak Khafādja had become is evident from the fact that in 556/1160 they assembled in the neighbourhood of Ḥilla and Kūfa, asking for the food relief and dates which had apparently been granted them. The governors of the two towns refused to grant their request and Ḳayṣar, the governor of Ḥilla, sent 250 soldiers to

drive them off, a similar force being sent by the governor of Kūfa. They pursued the fleeing Khafādja along the river Euphrates as far as Raḥbat al-Shām, where the Khafādja made a stand, and in the fight which ensued Ḳayṣar was slain while Arghash, the governor of Kūfa, took refuge with the governor of al-Raḥba. The Khafādja then pleaded for forgiveness, stating that they had been constrained to fight by their parlous condition. Their excuse was accepted, as the Vizier Ibn Hubayra, who had marched out against them, saw the futility of pursuing them into the desert. The last time we hear of the Khafādja is in 588/1192, when they came to the assistance of Baṣra when it was threatened by the tribe of ʿĀmir. In addition to the events narrated above in ʿIrāḳ, it is also mentioned that the Khafādja were among the Arab tribes who assisted in the siege of Tiberias in 507/1113 when the Crusader monarch Baldwin had taken refuge there after an unsuccessful raid upon Ḥalab.

Among the poets of this tribe in ancient time was Tawba b. al-Ḥumayyir, celebrated on account of his love for Laylā al-Akhyaliyya and on account of the elegies which the latter composed upon his death in battle.

(F. Krenkow-[A. A. A. Dixon])

AL-KHAFĀDJĪ, AḤMAD B. MUḤAMMAD B. ʿUMAR AL-KHAFĀDJĪ, called Shihāb al-Dīn al-Miṣrī al-Ḥanafī, was born near Cairo in *ca.* 979/1571 and received his earliest education from an uncle on his mother's side, Abū Bakr al-Shanawānī, whom he himself calls the Sībawayh of his age, and under him he studied both Ḥanafī and Shāfiʿī law; the biography of the Prophet entitled *al-Shifāʾ* by the *Ḳāḍī* ʿIyāḍ [*q.v.*] he read under Ibrāhīm al-Alḳamī, and he even studied medicine under Dāwūd al-Baṣīr. Later he made the pilgrimage in the company of his father and took the opportunity to hear the lectures of the learned men in the two holy cities. After his return from the pilgrimage, he made his first journey to Istanbul, where he found several teachers of outstanding merit, among whom he mentions Ibn ʿAbd al-Ghanī, Muṣṭafā b. ʿArabī and the Jewish Rabbi Dāwūd, under whom he studied mathematics and the books of Euclid. His principal master, however, was Saʿd al-Dīn b. Ḥasan, and when the latter died and his other teacher soon followed him in death, Istanbul became devoid of men of learning. He had meanwhile gained favour and received the post of *ḳāḍī* of the province of Rūmelī, and rising in rank he became *ḳāḍī* of Üsküb under Sulṭān Murād, who finally appointed him to the same office in Salonika. These offices enriched him considerably, and he was ultimately sent as *ḳāḍī-ʿasker* to Egypt. This post, however, he did not hold for long, as through intrigues at Istanbul he was dismissed. This decided him to make another journey to Istanbul, but his expectations here were not fulfilled and he gave vent to his anger in the literary outburst which he entitled *al-Maḳāmāt al-Rūmiyya*. This aroused the hatred of the Muftī Yaḥyā b. Zakāriyyā, and he was ordered to leave the city immediately. As an acknowledgement of his worth as a scholar he received the appointment of an ordinary *ḳāḍī* at Cairo, but he seems to have devoted his remaining years to study and the composition of his works. He died in Cairo on Tuesday 12 Ramaḍān 1069/3 June 1659.

Al-Khafādjī enumerates most of his works in his autobiography, many of them of considerable size, while he himself tells us that many of this treatises were never collected in book-form. His most extensive work is a commentary upon the *Tafsīr* of al-Bayḍāwī which he entitled *ʿInāyat al-ḳāḍī*, and which has been printed in Cairo in four large volumes. The work follows the usual tedious method of explaining almost every word and of reproducing the statements of a large number of other authors who have treated upon the same subject. The same is the case with his second largest work, a commentary upon the *Shifāʾ* of the Ḳāḍī ʿIyāḍ, entitled *Nasīm al-riyāḍ* (printed at Istanbul, 1267, in 4 vols.). His two biographical works, *Khabāya 'l-zawāyā fī mā fī 'l-ridjāl min al-baḳāyā* and *Rayḥānat al-alibba wa-nuzhat al-ḥayāt al-dunyā* give hardly any biographical details, and it is only the arrangement by region which gives us any information on where the persons cited lived. We get, however, a fair amount of contemporary poetry, which enables us to judge to what miserable depth the art of rhyming had sunk. While the first named work exists only in manuscript, the *Rayḥāna* has been printed three times in Cairo (1273, 1294 and 1306), which shows us that the work was appreciated in Egypt. The most valuable portion of this work is an autobiography of the author (in which he has omitted to state when and where he was born) and the *Maḳāmāt al-Rūmiyya*; the autobiography has furnished the material for the account of his life in the work of al-Muḥibbī. Of more value are his *Ṭirāz al-madjālis* and his *Shifāʾ al-ghalīl*. The former is a work of the class called *amālī* in 50 sessions (*madjlis*), whose value consists in having preserved extracts of older works now apparently lost or undiscovered. It is interesting to find him quoting from the *Kitāb al-Maʿānī* of al-Ushnāndānī (printed in Damascus, 1340), the *Fiṣal* of Ibn Ḥazm, the *Fihrist* of Ibn Nadīm or the *Ansāb* of al-Zubayr b. Bakkār, considering how rare manuscripts of these books are. The book is in fact a curious collection of odd information from all kinds of sources. Apparently there are two editions of this book, one Cairo, 1284 and a second without date printed in Ṭanṭa. The *Shifāʾ al-ghalīl fī mā fī kalām*

al-ʿarab min al-da<u>*kh*</u>*īl* is, as indicated by the title, a work dealing with words of foreign origin in the Arabic language. The author has used for this purpose the *Muʿarrab* of al-<u>D</u>jawālīḳī [*q.v.*] and similar works, but is not content with explaining words of foreign origin, as he also gives ample specimens of vulgar errors in correct Arabic speech. Closely resembling this book is a commentary on the *Durrat al-*<u>*gh*</u>*awwāṣ* of al-Ḥarīrī, which was printed together with the *Durra* at Istanbul in 1299; this work, together with his *Ṭirāz*, are probably the best of his compositions. His *Dīwān* is mentioned by al-Muḥibbī and is preserved in manuscript in Copenhagen.

Bibliography: al-Muḥibbī, <u>*Kh*</u>*ulāṣat al-a*<u>*th*</u>*ar*, i, 331-43; Brockelmann, II, 285, S. II, 396.

(F. Krenkow*)

<u>KH</u>AFĀRA (A.) "protection", is used, often together with *ḥimāya* [*q.v.*], to designate certain social practices. Originally, it primarily denoted the protection which Arab tribes extended to merchants, travellers and pilgrims crossing their territories, often in return for payment or as part of an agreement [see Īlāf]. Later, the word's usage became extended to the "protection" in return for an obligatory payment exacted by various social groups from other groups or from richer individuals (e.g., by the *ʿayyārūn* and *futuwwa* [*qq.v.*] in the towns). Once the military class had assumed essential power, military commanders exacted various <u>*kh*</u>*afārāt* from the rural estates, etc., but at the same time the state intervened to control them, to fix a tariff for them, or to revoke them for its own use. See further ḥimāya. (Cl. Cahen)

<u>KH</u>AFḌ or <u>Kh</u>ifāḍ (A.), female excision, corresponding to the circumcision of boys (<u>*kh*</u>*atn* or <u>*kh*</u>*itān* [*q.v.*], terms which may be applied equally to both sexes). There is no mention of it in the Ḳurʾān, but more or less authentic *ḥadīth*s attest to the practice in pre-Islamic Arabia and in a certain measure justify it. Tradition attributes to the Prophet the expression *muḳaṭṭiʿat al-buẓūr* "cutter of clitorises", and the following words addressed to Umm ʿAṭiyya, *i*<u>*dh*</u>*ā* <u>*kh*</u>*afaḍti* (<u>*kh*</u>*afatti*) *fa-ʾa*<u>*sh*</u>*immī wa-lā tanhakī* (i.e., do not excise everything), *fa-ʾinnahu adwāʾ li'l-wa*<u>*dj*</u>*h wa-aḥẓā ʿind al-zaw*<u>*dj*</u>, in which one can discern a somewhat curious aesthetic aspect, a display of masculine egoism and the authorisation to do the operation on condition of not going as far as total ablation of the external genital organs and even complete clitoridectomy. Although the texts and the dictionaries are not very explicit, the synonymy of <u>*kh*</u>*atn*/<u>*kh*</u>*itān* and <u>*kh*</u>*afḍ*/<u>*kh*</u>*ifāḍ* leads one to think that the minimal practice comprised excision of the prepuce of the clitoris.

In the Prophet's mouth, *muḳaṭṭiʿat al-buẓūr* had a pejorative sense; but other items in the ancient vocabulary for designating the operator, <u>*kh*</u>*ātina* and *mubaẓẓira*, formed from *baẓr* "clitoris", do not seem to have a contemptuous connotation. However, a woman is called *baẓrāʾ* when she is affected by clitorism, or believed to be so, and *la*<u>*kh*</u>*nāʾ* when she has not been circumcised; expressions meaning in effect "son of the uncircumcised woman", *ibn al-baẓrāʾ*, *ibn al-la*<u>*kh*</u>*nāʾ*, are considered injurious and synonymous with "son of a whore", the violence of sexual appetite in a woman being considered the result of absence of circumcision. These pieces of information seem to prove clearly that the practice was current among the Arabs (who carry it back, like the circumcision of boys, to Abraham and Hagar [al-<u>D</u>jāḥiẓ, *Ḥayawān*, vii, 27]), and remained so after the coming of Islam, excision becoming a characteristic trait amongst the Muslims. The *A*<u>*gh*</u>*ānī*, ed. Beirut, xxii, 22, tells, for example, that <u>Kh</u>ālid b. ʿAbd Allāh al-Ḳasrī [*q.v.*], who was the son of a Greek Christian mother, was as a result of this called Ibn al-Baẓrāʾ; in the end, he decided to have his mother circumcised in order to escape satires, examples of which are to be found in the verses attributed to Aʿ<u>sh</u>ā Hamdān (*A*<u>*gh*</u>*ānī*, *loc. cit.*) or to Ziyād al-Aʿ<u>dj</u>am (*LA*, √ *mṣṣ*; the word *maṣṣān*, interpreted by Ibn Manẓūr as meaning *ḥa*<u>*dj*</u><u>*dj*</u>*ām* "barber", "cupper", could well have here the sense of "one who sucks" and connected with such an insult as *yā māṣṣa baẓri ummihi*, which does not necessarily correspond to an actual practice).

Under Islam, the circumcision of girls has never been regarded as obligatory, but has been considered as recommended (e.g. see al-Ḳayrawānī, *Risāla*, 161, 305; Ibn Ḳudāma, *Mu*<u>*gh*</u>*nī*[3], 1947, i, 85); in fact, it is practiced very irregularly in the Muslim world, where whole populations are unaware of it or confine themselves to a symbolic pricking of the clitoris. In the same region, some tribes may perpetuate the custom, whilst their neighbours may have abandoned it, if they have ever known it anyway (see especially, H. Jaussen, *Coutumes des Arabes au pays de Moab*[2], Paris 1948, 35, 363). In Java, girls are not invariably circumcised; the operation, when performed, is done on girls from 2 to 8 years and is called *suna* (*sunna*), but parents following customary law (*ʿādat* [*q.v.*]) never practice it. The Malays call it *gusaran* "fact of filing down the teeth", because it is preceded, the evening before, by a fictitious filing-down of the teeth. In Atjeh [*q.v.*], female circumcision is done at an early age (see the references given under <u>kh</u>itān). In Persia and Kurdistan, travellers mention that it is done between the ages of 9 and 15 (H. Massé, *Croyances et coutumes persanes*, Paris 1938, 51); on the other hand, it is unknown in Af<u>gh</u>ānistān (C. M. Kieffer, *À propos de la circoncision* . . ., in *Festschrift für Wilhelm Eilers*, Wiesbaden 1967, 201, n. 37). This is likewise the situation in North Africa (G. H. Bouquet, *La morale de l'Islam* . . ., Paris 1953, 70), although the practice is attested for Mauretania, even though this is a Mālikī region (R. Arnaud, *Précis de politique musulmane. i. Pays maures*, Algiers 1906, 65-6), where the excision is done 7 or 8 days after birth. At all events, it would be extremely difficult to draw a map showing the extent of female circumcision, in view of the women's discretion and the men's ignorance, since the latter are not informed about the operation; this practice is unaccompanied by any celebration, and is even called *sirr* "secret" in Moab, according to Jaussen, *op. cit.*, 35, 363, and also *ṭahr*, by analogy with the circumcision of boys.

The only Islamic country, apart from some regions of black Africa (see Boris de Rachewiltz, *Eros noir, moeurs sexuelles de l'Afrique de la pré-histoire à nos jours*, Paris 1963), where any searching enquiries into this practice have been made is Egypt, where <u>*kh*</u>*afḍ* (which according to 18th and 19th century travellers was general and often sought by girls) is still practiced, even amongst certain Copts. Anthropologists and physicians have revealed various degrees in female circumcision, ranging from removal of the labia minora and the prepuce of the clitoris to that of the whole external genitalia ("Sudanese circumcision"), sc. the labia minora and majora together with the clitoris (see M. Karim and R. Ammar, *Female circumcision and sexual desire*, Cairo 1965). The very title of this latter work, based on an examination of 331 women in Cairo, is an indication

of the spirit in which the enquiry was conducted, sc. within a broad movement towards feminine liberation and towards a certain demythologisation which has found a favourable echo in the press (e.g. *al-Ahrām* of 27 January 1959). The Sudanese Republic has decided to abolish the practice, considered nasty and even barbarous, and similar measures have been envisaged to end it in Egypt.

Female circumcision is far from being a surgical operation meant to prevent abnormal deviations of the genitalia (Wilken, *Verspr. Geschriften*, iv, 238 ff.), but is rather a *rite de passage*. One can discern its origin in the primitive mythology of the Egyptians and other African peoples who believed in the bisexuality of the soul of their gods and of men. These bisexual souls project their physiological characteristics in their procreative organs; thus the feminine soul of the man is located in the prepuce, whilst the masculine soul of the woman is in the clitoris. Circumcision and excision accordingly make the boy and the girl respectively shed their feminine and masculine characteristics. Only in this way can the girl claim to be fully a woman capable of sexual life; Egyptian women still look down on an uncircumcised woman by saying "You are like a man".

In Egypt, the operation is carried out by the midwife either in complete secrecy or in the presence of a few invited women, and it is justified by the desire to maintain pre-marital chastity and virginity. It naturally presents serious dangers, of which the authorities are aware; apart from the complications which can sometimes be fatal, the cooling-down of the female temperament and desires, which the operation tends to bring about, causes on the men's part an abuse of drugs, especially of hashish—an unexpected aspect of the consequences of mutilation, whose abolition would produce a three-fold effect.

Bibliography: In addition to the works cited, see above all the extremely well-documented article of O. F. A. Meinardus, *Mythological, historical and sociological aspects of the practice of female circumcision among the Egyptians*, in *Acta ethnographica*, Budapest, xvi/3-4 (1967), 387-97, which has an extensive bibliography on the subject. (ED.)

KHʷĀFĪ KHĀN, MUḤAMMAD HĀSHIM NIẒĀM AL-MULKĪ, historian; his title of Khʷāfī Khān was given him by Muḥammad Shāh and is derived from a family connection with Khʷāf [*q.v.*], a district of eastern Persia, famous for its distinguished men. He was a son of Khʷādja Mīr, a confidential servant of Murād Bakhsh, youngest son of Shāh Djahān. The place and date of his birth are not known, but it seem probable that he was born in India, and a statement in his history (i, 739) implies that his birth took place about 1074/1664. The statement is that 74 years after the death of Shāh Djahān's minister, Saʿd Allāh, he was 52 plus the age of discretion (14?). In other words he was 66 Muslim years old in 1140/1728. His father was Khʷādja Mīr, a confidential servant of Shāh Djahān's youngest son, Murād Bakhsh, and was severely wounded at the battle of Samōgaṙh. Khʷāfī Khān, possibly like Bernier's friend Dānishmand, began life as a merchant, or as an official's clerk, and it was in one of these capacities that he visited Bombay in 1693-4 and had an interview with an English official (ii, 424, and Elliot-Dowson, vii, 350). He served under Awrangzēb, Bahādur Shāh and Muḥammad Shāh in the Deccan and in Gudjarāt, and was long stationed at Surāt. He also lived at Aḥmadābād, which he defends against the strictures of Djahāngīr, and at Rahurī, in Siwdjī's country, and in the beginning of Bahādur Shāh's reign he was governor of Čampānīr (i, 77). Probably he ended his days at Ḥaydarābād in the service of Āṣaf Djāh Niẓām al-Mulk (hence our author's title of Niẓām al-Mulkī) about 1732-33. He was an intimate friend of Shāh Nawāz, the author of *Maʾāthir al-umarāʾ* (who was also a Ḥaydarābādī officer) (see iii, 680 of the Bibl. Ind. edn. of that work, and Khʷāfī Khān, ii, 678).

Khʷāfī Khān wrote a history of the Indian branch of the Tīmūrid dynasties, and called it *Muntakhab al-lubāb* ("The quintessential selection"). It is a standard work and is much admired, especially in the east, for its style, and its accuracy and impartiality, though it is often too grandiloquent for western taste. Still, it is by far the most human and interesting of native histories of India, with the doubtful exception of Badāʾūnī. After an introduction beginning with Turk b. Yāfit, and describing the origins, etc., of the Tatars and Mongols, it gives short biographies of Tīmūr, his third son Mīrān Shāh, and the descendants of the latter, who were the emperor Bābur's ancestors. These are followed by a history of the emperors of Āgra and Dihlī, beginning with Bābur, of whom there is a tolerably full account, and ending with the beginning of the 14th year of Muḥammad Shāh. Bābur conquered India in 932/1526, and the 14th year of Muḥammad Shāh was 1140/1732, so that the history covers a period of over 200 years. The last ten years of the history are given in a very abridged form. The most valuable parts of the work are the accounts of Shāh Djahān and Awrangzēb, for both of whom the author had a high admiration. The history has been published in the *Bibliotheca Indica* (2 vols.), but the edition is not complete, for it wants the first part or volume. This last, however, is very rare, and perhaps does not exist in its entirety. There is only a portion of it in the British Museum. The author refers to it in vol. i, 49 of the printed edition. Khʷāfī Khān also wrote a history of the minor Islamic dynasties of India, but this too has disappeared, though a small portion is preserved in manuscript in the India Office Library (Ethé, *Cat.*, No. 407). It was apparently of little value, being mainly an abridgment of Firishta.

The charm of Khʷāfī Khān's history consists in his digressions and his frequent use of his own observations, and of information derived from his father and brother. He is a somewhat narrow Muslim, and he is too favourable to Shāh Djahān and Awrangzēb. Thus he slurs over Awrangzēb's treacherous capture and subsequent execution of his younger brother, Murād Bakhsh. The capture he represents as a clever manœuvre (it was certainly to the public advantage), but he is evidently half-ashamed of it, for he declines to give the particulars. In his account of Murād Bakhsh's attempt at escape, and his trial and execution, which he got from his father, he does not plainly set down Awrangzēb's responsibility, and continues to pay him a compliment for his generosity in rewarding the man who declined to prosecute Murād for the murder of his father. He also deals lightly with Shāh Djahān's conduct to Khusraw, and to his competitors for the throne, and says nothing about his debaucheries. Still, he is far more honest than Abu 'l-Faḍl ʿAllāmī [*q.v.*]. His accounts of Shēr Shāh and Djahāngir are very fair, and in the latter of them he has a very interesting account of Nūr Djahān. He says he got it at Sūrat in 1097/1695-6 from a very old man, who as a child had accompanied Nūr Djahān's father on his journey

from Persia to Afghānistān, and India. Khʷāfī Khān too, though like Tacitus, he may tell us too much about emperors and their wars, does not omit the more interesting subjects of plague, and famine, and of internal administration.

Bibliography: Elliot-Dowson, *History of India*, vii (which contains a very full abstract, by Dowson, of the 2nd volume of Khʷāfī Khān); Colonel Lees, *Materials for the history of India*, Hertford 1868, 57-8; there is a manuscript translation of vol. i by Major Gordon in the British Museum (Add. 26, 617). (H. BEVERIDGE*)

KHAFĪF. [see ʿARŪḌ]

KHĀʾIN AḤMED PASHA. [see AḤMED PASHA]

KHĀḲĀN, a title (originally KAGHAN or KHAGHAN) borrowed by the Turks from the Juan-juan and meaning "[supreme] ruler". It was applied by the heathen Turks themselves and the mediaeval Muslim geographers and historians not only to the heads of the various Turkish confederations but also to other non-Muslim rulers such as the Emperor of China. In the form *ḳaʾan* it was borne by the successors of Čingiz-Khān [*q.v.*], the Mongol Great Khāns in Ḳaraḳorum and Peking. Adopted by the Ottoman Sulṭāns, the title, first brought to Europe by the Avars in the 6th century A.D. (the *kaganus* etc. of the early mediaeval chroniclers), survived into the present age.

Bibliography: G. Doerfer, *Türkische und mongolische Elemente im Neupersischen*, iii, Wiesbaden 1967, 141-179 (no. 1161); Sir Gerard Clauson, *An etymological dictionary of pre-thirteenth century Turkish*, Oxford 1972, 611. (J. A. BOYLE)

KHĀḲĀN. [see FATḤ ʿALĪ SHĀH]

KHĀḲĀNĪ, AFḌAL AL-DĪN IBRĀHĪM (Badīl) B. ʿALĪ B. ʿUTHMĀN, outstanding Persian poet, born about 520/1126, d. 595/1199, who left a *dīwān*, the *mathnawī* called *Tuḥfat al-ʿIrāḳayn* and sixty letters.

Reliable material for Khāḳānī's biography is only to be found in his works. His poems and letters mirror both his external and internal life, and so they enable us not only to follow his poetical development, but provide us also with historical information.

Khāḳānī's life can be divided in two main periods. The first period Khāḳānī spent mainly in his home country of Sharwān as panegyrist at the local court. During the second period he led a retired life in Tabrīz. Already at an early time his wish to leave Sharwān and to abandon panegyric poetry was connected with a tendency towards mysticism and escape from the world. Born into a humble family of artisans, the young poet attached himself to the Sharwānshāh Manūčihr, from whose title *Khāḳān-i akbar* his own poetic name is derived. His relations with Manūčihr were changing. More than once he tried to find another patron and his first *ḥadjdj* (551/1156-7) should perhaps be regarded in this context. After Manūčihr's death (554/1159) he was imprisoned but was able to flee to Darband, his usual refuge when something went wrong in Sharwān. In the following years he seems to have established relations with several courts. In 559/1164 we find him in Persian ʿIrāḳ. After he had asked for an annual salary of 30,000 *dirham*s from Manūčihr's son Akhsatān he returned to Sharwān. However, the good relations between the poet and his patron did not last very long. In 566/1171 he undertook a second *ḥadjdj*, but the atmosphere did not improve after his return. The deaths of his son and his wife in 571/1175 caused the decisive turn. He undertook a third *ḥadjdj* with the intention to end his life as a *mudjāwir* in Mecca. He had to return, however, and settled in Tabrīz. Material need and the efforts of high personalities to gain his favour frustrated his hopes of achieving the calm he was longing for and obliged him once more to compose panegyrics now and then. In 578/1183 or 579/1184 he tried to reach Khurāsān, but in Ray the Atabeg prevented him from continuing his journey and he returned to Tabrīz severely ill. In 580/1185 he tried to achieve his aim in another way. After that date we have no more relevant data about his life, which ended in Tabrīz.

Khāḳānī's poetry is based on Persian *concettismo*. The notions at his disposal reached farther than those of other *poetae docti* of his time, especially his detailed knowledge of Christianity. Most of the elements of his poetical motifs are his own creation; this is all the more valid for complexes consisting of elements of motifs as well as of motifs (fantastic aetiology, congruity of images, causal hyperboles etc.). Not without reason he felt himself in this respect superior to his predecessors and contemporaries and he was convinced that future poets also would draw on his muse. During the last decade of his stay in Sharwān his inventiveness in devising new elements of motifs declined. His accent was now on developing and combining motifs. In his Tabrīz period he played with his enormous repertoire of elements of motifs and their combinations, while using his mastery of rhetorical representation in a more pointed manner than ever before.

In the field of formal devices, Khāḳānī created a new type of *ḳaṣīda*, characterised by a number of parts which are thematically mostly independent. In his later Sharwān period he preferred the *tarkīb-band* form. About half of his many *ghazal*s belong to this genre only as far as form is concerned; they do not treat of erotic subjects. Besides *rubāʿīs* and sometimes long *ḳiṭʿa*s, the *Dīwān* contains also a series of shorter and longer Arabic poems, the fruit of Khāḳānī's attempt to write Persian poetry in Arabic.

In the panegyrics, that is in his professional art, Khāḳānī celebrates not only rulers, generals, viziers and scholars, but also friends and relatives. But what he loved most was ascetic Ṣūfī poetry. This is indicated by his other pen-name Ḥaḳāʾiḳī and thereon also his close relationship with Sanāʾī was based. A kind of combination of panegyric and Ṣūfī poetry is to be found in the praise of the Prophet, to whom Khāḳānī dedicates a series of *ḳaṣīda*s, and he derives his honorary title of *Ḥassān al-ʿAdjam* from this fact. His erotic verses usually celebrate profane love, but mystical elements are present in the ghazal *bā ō dil-am ba-mihr u maḥabbat nishāna būdh*, where Iblīs speaks about his Ḥallādj-like love of God. The pangs of love are often mentioned, as Khāḳānī is generally eloquent and resourceful on lamentation. This subject is treated in a lot of his shorter poems and parts of poems, but as well as these in whole *ḳaṣīda*s and not only in the *ḥabsiyyāt* (prison poems). Special attention is given to the description of nature (sky, stars, seasons and landscapes), and his poetic picture of morning and the morning-draught together with its drinking-utensils became very popular. His *ḥadjdj*-travels were less imitated. His first *ḥadjdj* he describes in the *Tuḥfat al-ʿIrāḳayn*, where he addresses the sun in order to describe to her the way to Mecca. Around the sacred subject all kinds of profane praise are entwined. The often-posed question whether Khāḳānī's words represent real experience can probably be answered in the affirmative as far as the satires are

concerned, and perhaps also some elegies, laments, religious poems and ascetic verses. In general, however, the poetic transformation of reality seems to dominate.

Bibliography: The following bibliography is selective rather than exhaustive. Critical editions: *Dīwān*: ed. Sadjdjādī, Tehrān 1338; *Tuḥfat al-ʿIrāḳayn*: ed. Ḳarīb, Tehrān 1333; *Munshāʾāt*: ed. Rawshan, Tehrān 1349. See further: N. Khanikof, *Mémoire sur Khâcâni*, in *JA* (1863), 137-200; (1865), 296-367; B. Furūzānfar, *Sukhan u Sukhanwarān*, Tehrān 1312, ii, 300-52; V. Reinert, *Ḫāqānī, Poetische Logik und Phantasie*, Berlin 1972. (B. REINERT)

KHĀḲĀNĪ, also KHĀḲĀNĪ MEḤMED BEY (?-1015/?-1606), a minor Ottoman Turkish poet of the late 10th/16th century, was born in Istanbul. He was the son of Güzeldje Rüstem Pasha who was the son-in-law of Ayās Pasha [*q.v.*], a grand vizier of Süleymān the Magnificent. Very little is known about his life and the data in the sources are often conflicting. All we know is that he mainly lived in Istanbul except for a pilgrimage to Mecca, that he was a *müteferriḳa*, and that later he became a *sandjaḳ beyi* and *muḥāsebedji* in the Imperial *Dīwān* (Riyāḍī, *Tedhkire*, s.v.); he was already an old man in 1007/1598 and died in Istanbul, where he was buried at the cemetery of the Mihr-ü Mah mosque at Edirne Kapı. Khaḳānī is the author of the following works: (1) *Dīwān*. The manuscript copies of this small work, which has not been edited, vary in size and content (for a good copy, see Topkapı Palace Museum Library, No. 680). His *ghazal*s written in a comparatively simple and fluent style follow closely the traditional line without any personal touch; (2) *Miftāḥ-i Fütūḥāt*, completed in 1012/1603 and dedicated to Čighala-zāde Sinān Pasha [*q.v.*] is a commentary, in *mathnawī* form, of a popular *Ḥadīth-i Erbaʿin* version (for a good copy, see Topkapı Palace, Emanet Hazinesi Library, No. 670); and (3) *Ḥilyet ül-Nebewiyye*, better known as *Ḥilye-i Khaḳānī*, completed in 1007/1599, a *mathnawi* in *ramal* metre to which Khaḳānī owes his reputation. It is based on an Arabic traditional account of the Prophet's personal features (a calligraphically written version of which was hung as a "portrait" on the wall in many Turkish homes, until recently). Each feature or virtue is elaborately described in 12-20 *bayt*s. This didactic poem with no literary value became very popular and was often compared with Süleymān Čelebi's famous *Mewlid*, although it has none of the latter's merits. Strangely enough, even writers of usually balanced judgement like Ḍiyāʾ Pasha and Nādjī [*qq.v.*] overpraised the *Ḥilye* (see Bibliography), probably because of the sacred character of its subject. Copies of the *Ḥilye* abound in Turkish and European libraries (a good copy dated 1050/1640 is in the Nuru Osmaniye Library, No. 609-796); it was printed at Istanbul in 1264/1848.

KHĀḲĀNIDS. [see SHIRWĀN SHĀH]

KHĀKSĀR, a 20th century Indian movement for national regeneration, initiated in 1931 by a government servant called ʿInāyat Allāh Khān (better known under his honorific of al-Mashriḳī). As a result of wide-spread frustration and despondency, this leader—originally a mathematician who had enjoyed a brilliant career—publicised simplicity of life (*khāk-sār*, i.e., "humble as dust"), discipline and self-sacrifice for the benefit of the country. Under the spell of the results achieved by Fascist régimes, al-Mashriḳī avowed that India was in need of benevolent dictators (see *Asia*, Aug. 1939), and in its outward manifestations his movement in its first stage bore a marked resemblance to the Nazi S. A. organisation; its members wore a khaki dress with a badge of *ukhuwwa* or "brotherhood" stuck on the right upper arm, and carried a *belča* or spade symbolising both the importance of labour and a readiness to fight. Every day they had to report to the local commander about some sort of social service performed after sunset prayers, and each district unit had their drill for at least fifteen minutes. Al-Mashriḳī's followers were chiefly drawn from the petty bourgoisie and better-off labourers. Explicitly non-communal, the movement was open to every man who believed in his Creator, Muslims as well as Brahmo Samadjists, and it claimed to be "the only party in the country above all parties". In its heyday (i.e. *ca.* 1941), it is said to have secured a following of one-and-a-half million adherents, but in 1944 the all-India strength of the Khāksārs had already dwindled to 20,000. Because of provocative actions, they clashed regularly with the provincial authorities of Northern India. Bans on the movement were imposed, and from time to time al-Mashriḳī was imprisoned. After independence, the leader officially announced the disbandment of the movement. Although the master died on August 27, 1963, a small group of faithful Khāksārs are still to be found in the vicinity of the movement's former headquarters at Ičhra, a suburb of Lahore.

KHĀL (A.), pl. AKHWĀL, maternal uncle, whether a full, consanguineous or uterine one. In such a strongly patriarchal civilisation like that of Islam, the status of such an uncle necessarily entrained a certain degree of inferiority compared with that of the paternal uncle, *ʿamm* (pl. *aʿmām*).

The latter is considered as one of the *ʿaṣaba*, and is high up in their hierarchy; he has a right to the whole of the succession if there are no heirs entitled to fixed shares or *ʿaṣaba* with a prior claim to himself. The maternal uncle, on the other hand, never inherits in Mālikī law; even if there is no other heir, the Public Treasury is given preference. The position is similar in Shāfiʿī law, unless the Public Treasury is excessively mismanaged. According to the Ḥanafī and Ḥanbalī schools, the maternal uncles can inherit, but in their capacity as *dhawu 'l-arḥām*. Now it is well-known that this third class of heirs, the invention of these two law schools, can only

succeed to an inheritance in the total absence of any representative of the fixed-shares heirs and the *ʿaṣaba*; even the most favourably-placed are set aside in the presence of a single *ʿāṣib*, however distant in relationship he may be from the deceased.

The same discrimination is found in regard to guardianship (*walāya*) over a person. In the absence of the father, only an *ʿāṣib* can be called upon— this rôle often falls upon a paternal uncle, but never to a maternal one. This inferiority in legal status of the maternal uncle dates from pre-Islamic times, and is moreover characteristic of Sunnī Islam, mainly with regard to the various legal incapacities inherent in the maternal uncle. But even amongst the Shīʿīs, where there is no inequality on the legal plane between maternal and paternal uncle, reliable observers have noted that the populace generally displays more reference towards the paternal than the maternal uncle.

KHĀL, KHAYALĀN. [see firāsa].

KHALʿA. [see khilʿa].

KHALADJ, a people or tribe ostensibly of Turkish origin and living in western Turkistān and then in eastern Afghānistān during the pre-Mongol Islamic period.

1. *History*.

The Islamic geographers of the 3rd/9th and 4th/10th centuries place the Khaladj amongst the tribes of the Turks. Thus Ibn Khurradādhbih, 28, 31, includes them in a list of Turkish tribes in the Central Asian steppes; he states that their winter quarters were beyond the Syr Daryā in the Talas region, adjacent to the lands of the Ḳarluḳ, but also that they lived "on this side of the Oxus", i.e., to its south and west. The contradiction illustrates the haze of uncertainty which envelopes the history of the Khaladj in the pre-Ghaznawid period. A frequent cause of ambiguity is the similarity of the consonant ductus of Khaladj, خلج, to that of the name Khallukh, خلخ (= Ḳarluḳ), especially as the Ḳarluḳ also lived in the Talas region but at an early date infiltrated south of the upper Oxus into Ṭukhāristān [see karluḳ]. Kāshgharī, ed. Kilisli Rifʿat Bey, ii, 307 = tr. Atalay, iii, 415, in his long article on the Türkmen, says that the Khaladj originally comprised two of the 24 tribes of the Türkmen, but separated from them and were therefore no longer accounted part of them; and he gives a fanciful etymology for the name, that the two ancestors of the two Khaladj tribes were told by the rest of the Turkmen, *ḳal adj* "stay, remain behind!" (another explanation in the *Oghuz-nāma*, ed. W. Bang and G. R. Rachmati, *SBPr. Ak. W.*, Phil.-Hist. Kl. xxv (Berlin 1932), *ḳal ač* "stay and open!").

Hence there is some uncertainty about the original Turkishness of the Khaladj. Marquart, *Ērānšahr*, 251-4, connected the Khaladj with the *Kh.w.l.s.* (? *Kholas*) of a 6th century Syriac source discussing the Turkish tribes, and with the *Kholiatai* mentioned in the report of Zemarchos, Byzantine envoy to the Ḳaghan of the Turks in 568, and he opined that the Khaladj were remnants of the Hephthalite confederation, in which case there is the possibility that the Khaladj may have been originally an Indo-Iranian tribe, perhaps remnants of the Sakas subsequently Turkicised. In support of this view is the information of the Sāmānid official Khwārazmī in his *Mafātīḥ al-ʿulūm* (composed shortly after 366/977), ed. Van Vloten, 119-20, that the Khaladj and the Kandjīna Turks (the latter located in the mountains to the north of the upper Oxus, see kumīdjīs) were remnants of the Hephthalites (see C. E. Bosworth and Sir Gerard Clauson, *Al-Xwārazmī on the peoples of Central Asia*, in *JRAS* (1965), 8-9).

We only possess what seems to be unequivocal information on the location of the Khaladj from the second half of the 3rd/9th century onwards. Ibn al-Athīr, vii, 226, records in his notice of Yaʿḳūb b. Layth's death (265/879) that the Ṣaffārid Amīr, in the course of his conquests in eastern Afghānistān, had attacked the Zunbīl or local ruler in Zamīn-Dāwar and had subjugated the Khaladj (*al-Khaladjiyya*) and the people of Zābulistān, and this is confirmed by the *Taʾrīkh-i Sīstān*, 215, which mentions Yaʿḳūb's campaigns there against "the Khaladj and the Turks". In the next century, Iṣṭakhrī, 245, also locates the Khaladj in Zamīn-Dāwar, and states that they were ancient immigrants to the region, that they were pastoralists, and that they had retained their Turkish customs, external appearance and ? language (see Bosworth, *The Ghaznavids, their empire in Afghanistan and eastern Iran*, 36, 271: later sources dependent on Iṣṭakhrī have *libāsihim* "their clothing" for *lisānihim*, but Marquart thought that the reading "their language" was the original one). The *Ḥudūd al-ʿālam*, tr. Minorsky, 111, describes the Khaladj as sheep-herding pastoralists in the Ghazna-Zamīn-Dāwar region, but with outlying groups in Balkh and Ṭukhāristān, Gūzgān and the district of Bust.

Some form of suzerainty over these nomads of eastern Afghānistān was exercised by the Sāmānids, and this passed towards the end of the 4th/10th century to Sebüktigin, founder of the Ghaznawid amīrate. Niẓām al-Mulk in his *Siyāsat-nāma*, ch. xxvii, ed. Darke, 135, tr. idem, 108, says that Sebüktigin had already once been sent by his master Alptigin to "the Khaladj and Türkmen" in order to collect taxation due to the Sāmānid central government. The Ghaznawid historians ʿUtbī and Bayhaḳī mention the Khaladj at times, and describe how Maḥmūd recruited them on occasion for his armies; but his son Masʿūd had in 432/1040 to send out from Ghazna a punitive expedition against them. It is interesting that ʿUtbī tends now to link the Khaladj with the Afghāns, which is not surprising, since the Khaladj must have lived in close proximity to the Afghān tribal heartland of eastern Afghānistān.

It appears that there now begins a process of assimilation of the Khaladj to their Afghān environment, leading to what seems very probable, if not wholly proven, sc. the evolution of the Khaladj Turks (whatever their pre-Islamic ethnic origins may have been) into the Pashto-speaking Ghalzay or Ghilzay tribe of Afghāns [see ghalzay]. Minorsky cited a passage from the early 7th/13th century geographer Muḥammad b. Nadjīb Bakrān's *Djihān-nāma*, that the Khaladj Turks had migrated from the Ḳarluḳ region (sc. Turkistān) to Zābulistān, but had now become adapted to their new milieu in appearance and speech, their original language having changed (*Ḥudūd al-ʿālam*, 347-8, and *The Turkish dialect of the Khalaj*, in *BSOS*, x (1940-2), 432). Khaladj tribesmen from Zābulistān were utilised by the Ghūrids in their campaigns, and Sulṭān Ghiyāth al-Dīn Maḥmūd succeeded to power in Fīrūzkūh

in 602/1206 with the help of the Khaladj (Djūzdjānī, *Ṭabaḳāt-i Nāṣirī*, tr. Raverty, i, 397).

During the years of warfare between the Khʷārazm-Shāhs and the incoming Mongols (early 7th/13th century), Khaladj troops played a part in the confused fighting in eastern Afghānistān, the Kābul and the Peshawar regions, some of them entering the Mongol armies, others attempting, under the leadership of a Khaladj commander, one Sayf al-Dīn Ighraḳ, to make themselves an independent power in the Kābul River valley; see for details, Minorsky, *The Turkish dialect of the Khalaj*, 432 ff. This became indeed the power-base for Khaladj movements into northern India as far as Bengal, a process already begun under the Ghūrids and continued subsequently under their epigoni the Slave Kings of Delhi; various lines of Khaldjī (thus the Indian pronunciation) military adventurers attained hegemony in, e.g., Delhi and Mālwā, but these Khaldjīs were considered to be ethnically Afghāns. See for the history of these Khaldjīs of India, DIHLI SULTANATE, HIND. iv. HISTORY and KHALDJĪS.

The Mongol invasions created a melting-pot of peoples in Inner Asia and the Iranian world, and the tide of conquest seems to have swept Khaladj elements westwards. Already Muḥammad b. Nadjīb Bakrān (see above) speaks of Khaladj settlements near Bāwurd, sc. Abīward on the northern fringes of Khurāsān, doubtless brought thither during the long struggles of the Ghūrids and Khʷārazm-Shāhs for control of that province. An Özbeg tribe whose name in Russian transcription, Galači, may enshrine a memory of the Khaladj in this region, was registered for Russian Central Asia in the mid-19th century, see G. Jarring, *On the distribution of Turk tribes in Afghanistan*, Lund-Leipzig 1939, 53. Khaladj are mentioned in Kirmān and Fārs from late Saldjūḳ times onwards, and Köprülü in his *İA* article on the Khaladj lists several villages in Ādharbāydjān and Anatolia, and one even in the Crimea, which enshrine the name "Khaladj". But the best-known region of Khaladj settlement in the west is that one in western Persia still known today as Khaladjistān, the mountainous region lying to the south-west of Tehran in the Hamadān direction and to the west of Sāwa, and contained largely within the *shahristān*s of Sāwa and Arāk in the central *ustān* or province. Not only in this region, but also in adjacent ones, extending into the Bakhtiyārī country of the central Zagros, one finds villages with names like Khaladj, Khaladjābād, etc. attesting earlier settlements of the tribesmen (see *Farhang-i djughrāfiyā-yi Īrān*, i, 81, ii, 104, x, 79). These Khaladj may have been established in Mongol times or even earlier, for the *Ẓafar-nāma* of Sharaf al-Dīn Yazdī, Calcutta 1887-8, ii, 573, speaks of the Khaladj and Arab nomads of this region being summoned to Tīmūr's standard in 806/1403-4; it is the Turkish speech of these Khaladj remnants, who were visited by Minorsky in 1906 and 1917, which the latter describes in his article on their language, see below.

Bibliography: given substantially in the article, but add Barthold, *Histoire des Turcs d'Asie Centrale*, 79; the two main secondary studies are those of Minorsky, *The Turkish dialect of the Khalaj*, and M. Fuad Köprülü, *İA*, art. *Halaç*.

(C. E. BOSWORTH)

2. *Language.*

The Khaladj language ought to be called, more precisely, the Khaladj group of languages, because it is as independent a branch of the Turkish family of languages as, e.g. the south-western (or Oghuz) group or Chuvash, etc. It is spoken (by about 20,000 persons) in 47 villages, situated about 150 miles SW of Tehran. Whereas the linguistic differences from each village to each other village are small, the sum of these differences (sc. from the most remote points, Talkh-āb in the NW of the Khaladj area, and Vinarič, in the SE) is as considerable, or even more considerable, than the differences between Kazan Tatar and Bashkir, or between Ottoman Turkish and Azeri.

The first scholar to have studied the Khaladj language was Minorsky, in 1940 (see bibliography). Only a short time after him, the Iranian scholar Mughaddam, when investigating the Iranian local dialects around Āshtiyān, also gave a short survey of Khaladj. In 1968, the present writer described the peculiar features of Khaladj in an article based on the two older works. In 1968 and 1969 two expeditions to the territory of the Khaladj were undertaken, which produced a considerable amount of material (59 tapes, a vocabulary consisting of 60,000 words, numerous texts, etc.).

The Khaladj groups is characterised by its very outstanding archaisms. Thus it has preserved *-d-* (ancient Turk *adaḳ* "foot" = Ottoman Turkish *ayak* = Khaladj *hadāḳ*); the ancient Turkish *h-* (see bibliography, *Eine seltsame* ...); the proto-Turkish threefold vowel quantity (short, long, diphthongal), etc. Even in morphology, it has preserved many archaic features, such as the ablative in *-da*, the participle in *-gili* (= ancient Turkic *-igli*). Khaladj is especially important in the field of lexicography; there are many ancient Turkish *hapax legomena*, such as *qudghu* "fly", which survive only in Khaladj and in no other Turkish language.

(G. DOERFER)

KHALAF B. ʿABD AL-MALIK. [see IBN BASHKUWĀL].

KHALAF B. ḤAYYĀN AL-AḤMAR, ABŪ MUḤRIZ (*ca.* 115-80/*ca.* 733-96), famous *rāwiya* of Baṣra. His parents came originally from Farghāna and had been brought as captives to ʿIrāḳ, and then freed by Bilāl b. Abī Burda [see AL-ASHʿARĪ], whose *mawlā* Khalaf remained. He had a prodigious memory, and knew perfectly Bedouin life, their language, traditions and legends, and he gathered together all the poetic works set before him in order to transmit them to his successors. He is said to have been the pupil of ʿĪsā b. ʿUmar and Abū ʿAmr b. al-ʿAlāʾ [*q.vv.*], but did not pride himself on his knowledge of philology and was content with his perspicacity, which allowed him to distinguish easily between authentic and apocryphal verses. However, he became the transmitter of the poetic corpus gathered together by Ḥammād al-Rāwiya [*q.v.*], fully aware of his bad reputation, and brought about a change of tastes among the *ruwāt* of Basra by instructing them about the *nasīb* of the Bedouins (al-Djāḥiẓ, *Bayān*, iv, 23-4). His teaching was followed particularly by al-Aṣmaʿī and Abū Zayd al-Anṣārī [*q.vv.*], who had great faith in his judgment. Even so, his deep knowledge of archaic poetry, linked with a tendency which was quite frequent in his time, led him to compose poetry of Bedouin type which he attributed then to ancient poets, if at least his contemporaries are to be believed. He is especially accused of having fraudulently placed a number of verses under the name of Abū Duʾād al-Iyādī [*q.v.*], and above all, of being the author of the *Lāmiyyat al-ʿArab*, which al-Shanfarā [*q.v.*] did not in fact write; discussions about the authenticity of this poem have still not ended (see e.g. ʿAbd al-Munʿim al-Mallūḥī, *al-Lāmiyyatāni*, Damascus 1966, who attempts in his introduction to show that Khalaf was not the author). At the end of his life, he is said to have condemned his own forgeries, but nothing is known of this. According to al-Djāḥiẓ, *Ḥayawān*, iv, 181, numerous *radjaz* verses were attributed to him without permission.

He is said to have composed a *K. Djibāl al-ʿArab* of verses in which mountains are mentioned, and his works, of which a few verses are extant, have been gathered into a *Dīwān* transmitted by Abū Nuwās, who is himself said to have written within Khalaf's own lifetime his funeral oration, an elegy in *fāʾ* (*Dīwān*, ed. A. ʿA. al-Ghazālī, Cairo 1953, 574-5).

Bibliography: The suspicion which rests on Ḥammād and Khalaf throws doubt on the recension of archaic poetic texts, so that these two transmitters are frequently cited in the controversies over the authenticity of pre-Islamic poetry. Ahlwardt devoted a monograph to Khalaf, *Chalaf al-Ahmar's Qaside*, Greifswald 1859. See also Djāḥiẓ, *Bayān* and *Ḥayawān*, indices; Ibn Sallām, index; Ibn Ḳutayba, *Shiʿr*, index; *Fihrist*, 50, 162; *Aghānī*, index; Marzubānī, *Muwashshah*, index; Ḳifṭī, *Inbāh al-ruwāt*, Cairo 1950-5, i, 348-51; Zabīdī, *Ṭabaḳāt*, Cairo 1956, 177-81; Suyūṭī, *Bughya*, 242; Abū Ṭayyib al-Lughawī, *Marātib al-naḥwiyyīn*, Cairo 1955, 46-7; Yāḳūt, *Irshād*, iv, 179 ff. = *Udabāʾ*, xi, 66 ff.; G. Jacob, *Schanfarâ-Studien*, in *SB Bayr. Akad.* (1914-15); F. Gabrieli, in *RSO*, xv (1935), 358 ff.; idem, in *Atti ... Lincei* (1946); Blachère, *HLA*, index.

(CH. PELLAT)

KHALAF B. MULĀʿIB AL-ASHHABĪ, with the *laḳab* SAYF AL-DAWLA, ruler of Ḥimṣ and Afāmiya in the late 5th/11th century. He was accused of various misdeeds, including brigandage, and is said, during a siege of Salamiyya, to have thrown the Sharīf Ibrāhīm al-Hāshimī against the tower from a mangonel. In 483/1090, complaints were sent to the Sultan Malikshāh, who ordered his brother Tutush, the ruler of Damascus, and other rulers of Syrian cities to proceed against him. A joint expedition captured Ḥimṣ, and Khalaf was sent in an iron cage to the Sultan in Iṣfahān. He remained in captivity until the Sultan's death in 485/1092, whereupon he was released by the Sultan's widow and sought refuge with the Amīr al-Juyūsh al-Afḍal in Cairo. In 488/1095-6 a delegation from Afāmiya went to Egypt to request a new ruler, and accepted (or perhaps proposed) Khalaf, who returned to Syria, presumably in the Fāṭimid interest. He resumed his activities, and remained in control of Afāmiya until he was murdered by Ismāʿīlī Assassins in 499/1106.

Bibliography: A biography of Khalaf is included in the *Bughyat al-ṭalab* of Kamāl al-Dīn Ibn al-ʿAdīm (ed. from the Istanbul manuscript by B. Lewis in *Mélanges Fuad Köprülü*, Istanbul 1953, 332-6); other sources in Ibn al-Ḳalānisī, *Dhayl Taʾrīkh Dimashḳ*, 120-1, 149-50; ʿAẓīmī, 368, 371, 378; Ibn Muyassar, 466; Ibn al-ʿAdīm, *Zubda*, ii, index. The account in the *Bughya* is based on the (lost) fuller version of ʿAẓīmī, the chronicles of the Banū Munḳidh, and the North Syrian chronicle of Ibn Zurayḳ, as quoted by al-ʿUlaymī, known as Ḥawāʾidj Kash. (B. LEWIS)

AL-KHALAFIYYA, sub-sect (*firḳa*) of the Khāridjī sect of the Ibāḍiyya [*q.v.*] This sub-sect, whose origins were purely political, was founded in what is now Tripolitania around the beginning of the 3rd/9th century by Khalaf b. al-Samḥ, grandson of the Ibāḍī *imām* Abu 'l-Khaṭṭāb ʿAbd al-Aʿlā al-Maʿāfirī al-Yamānī [*q.v.*]. Al-Samḥ b. ʿAbd al-Aʿlā, Khalaf's father, was originally the vizier of the Rustamid *imām* ʿAbd al-Wahhāb b. ʿAbd al-Raḥmān [*q.v.*], who held him in high esteem, and then after ca. 196/811-12, he was governor of Tripolitania (*ḥayyiz Aṭrābulus*) on behalf of this *imām*. The new governor resided in the township of Tīmiya or Tīmtī in the extreme east of the Djabal Nafūsa [see AL-NAFŪSA, DJABAL] and was distinguished by his justice and his loyalty towards ʿAbd al-Wahhāb; he died before this last, i.e. before 208/823-4.

The Berber Ibāḍī notables of Tripolitania (sc. the deputy governors of particular tribes or of districts subordinate to al-Samḥ), influenced by the favourable impression left behind by his period of government, but showing themselves completely ignorant of the basic principles of the Ibāḍī doctrines, resolved to appoint his son Khalaf as their chief. This may also be considered as an attempt by the Berber Ibāḍī tribes of Tripolitania to claim for themselves a certain measure of independence of the Rustamid *imāms* in Tāhert. ʿAbd al-Wahhāb refused to confirm the election of Khalaf, but as Khalaf and his supporters refused to yield, and a schism followed, taking in the whole of Ibāḍī Tripolitania except for the western and central parts of the Djabal Nafūsa, whose population, under the governorship of Abu 'l-Ḥasan Ayyūb and then of his successor Abū ʿUbayda ʿAbd al-Ḥamīd al-Djanāwunī, remained Wahbīs and faithful to the Banū Rustam. Having been elected as *imām* by his partisans, Khalaf besieged Tīmiya, his father's old residence, and carried on continuous warfare against Abū ʿUbayda. This only ended when Abū ʿUbayda won a victory over his army in 221/835-6, during the imāmate of

al-Aflaḥ b. ʿAbd al-Wahhāb, after which Khalaf's principality began to disintegrate. Thus the eastern part of this principality, comprising the northeastern part of Tripolitania, to the east of the meridian of Tripoli, became independent, and according to Ibn Khurradādhbih [q.v.], in ca. 232/846-7 formed a Berber kingdom under Ibn Ṣaghīr al-Barbarī al-Maṣmūdī. Likewise, the Tripolitanian Djefāra, which had also been part of Khalaf's principality, fell at about the same time under the influence of the Nafūsa of the Djabal. Certainly, when the ruler of Egypt Aḥmad b. Ṭūlūn in 266/879-80 besieged the Aghlabid town of Tripoli, the people there received help from Abū Manṣūr Ilyās, governor of the Djabal Nafusa and from the *imām*s of Tāhert; he must therefore have been, at this time, in control of all the region between the Djabal and the Mediterranean.

It was apparently shortly after this that Ibn Khalaf, Khalaf b. al-Samḥ's son and successor, who had been expelled from his seat of Tīmiya, took refuge with the Berber tribe of Zawāgha, partisans of the Khalafiyya, in the Rīṣū or Rīṣō peninsula (Rīmū in al-Shammākhī, Ris in Muntaner, the 14th century Catalan chronicler, Rāzū in al-Bakrī, the modern district of al-ʿAkkāra opposite Djerba). Pursued by Abū Manṣūr Ilyās's army, Ibn Khalaf crossed over to Djerba, where he put himself under the protection of a section of the Zawāgha tribe who lived on the island, who nevertheless extradited him and sent him to Abū Manṣūr. According to the North African Ibāḍī historian Abū Zakariyyāʾ al-Wardjlānī [q.v.], this event took place towards the end of the Rustamids, apparently under the rule of the Rustamid *imām* Yūsuf b. Muḥammad b. al-Aflaḥ, who reigned from 281/894. Since Abū Manṣūr Ilyās was dead by 283/896-7, at the time of the battle of Mānū, it appears that the Khalafī principality in Tripolitania came to an end in 282/895-6. Ibn Khalaf became Abū Manṣūr's prisoner, and was deported to the Djabal Nafūsa, where he died at some unknown date, by then probably a convert to Wahbism.

Certain Khalafī groups persisted after the fall of their imāmate. Thus there were Khalafī splinter groups at Ghadamès and in the Fezzān in the 3rd/9th century, in the district of Rīṣū and on the island of Djerba in the 4th/10th century, in the town of Zawāgha on the Tripolitanian coast in the 5th/11th century, and in the districts of Yéfren, Bābil, Kikla and Tākbāl in the east of the Djabal Nafūsa, until the middle of the 7th/13th century. According to L. Massignon, there were still remnants of them amongst the inhabitants of the Djabal Nafūsa and the Gharyān in ca. 1925.

(T. Lewicki)

KHALDJĪS, an Indo-Muslim dynasty who ruled briefly in Dihlī 689-720/1290-1320.

The Khaldjīs were probably of Turkish origin [see khaladj, i, History] and the old view that they were Afghāns or Pathans probably arose from Baranī's statement (*Taʾrīkh-i Fīrūzshāhī*, Calcutta 1862, 171) that the relations of Djalāl al-Dīn Fīrūz Shāh, founder of the dynasty, with the Turks were strained because he belonged to another racial stock (*aṣl*). He was the son of Yughrush (Yaḥyā b. Aḥmad, *Taʾrīkh-i-Mubārakshāhī*, Calcutta 1931, 61), and seems to have entered the service of Sulṭān Balban, who is stated to have left him with his son Bughrā Khān when the latter was appointed to the government of Bengal after the suppression of Ṭughril Beg's rebellion in 678/1280 (ʿIṣāmī gives 670/1271, see *Futūḥ al-salāṭīn*, Madras 1948, 168). Eight years later Bughrā Khān passed him on to his own son Kayḳubād, who had succeeded Balban as Sulṭān of Dihlī, and he subsequently became governor of Sāmāna and then Baran, before being summoned to Dihlī to take charge of the important office of *ʿĀriḍ-i Mamālik*, receiving the title of Shāʾista Khān. As the health of the Sulṭān was deteriorating fast due to an attack of paralysis, the Turkish nobles, led by Itimar Kačan and Itimar Surkhā, deposed him and enthroned his three-year old son under the title of Shams al-Dīn Kayumarth. Fīrūz managed to dispose of his rivals Kačan and Itimar Surkhā, and had them killed, so that most of the Turkish *malik*s and *khān*s now came over to Fīrūz, and he ascended the throne on 3 Jumādā al-Ākhir 689/13 June 1290, according to Amīr Khusraw, *Miftāḥ al-futūḥ*, English tr. in Elliot and Dowson, iii, 536, but Rabīʿ al-Ākhir/April-May, according to the *Taʾrīkh-i-Mubārakshāhī*, 61, as Sulṭān Djalāl al-Dīn, Kayḳubad having already been killed by a person whose father had been put to death under his orders. As the people of Dihlī believed that the Khaldjīs were not Turks, there was opposition to the transfer of power to them; hence in the beginning, Djalāl al-Dīn stayed in Kayḳubād's palace at Kilūkheri, which was rebuilt and embellished and came to be known as Shahr-i-naw or New City.

Before formally crowning himself, the Sulṭān had made some promotions and transfers, the most important of which, besides the awards conferred on his sons and relations, was the appointment of Balban's nephew, Malik Čhadjdjū Kishlī Khān to the *iḳṭāʿ* of Karā-Manikpūr. However, he raised the standard of revolt in the second year of the reign and marched towards Dihlī. Djalāl al-Dīn, leaving the capital in the charge of his eldest son, Khān Khānān, also moved out of the capital and reached Badāyūn. His advance guard, led by his second son, Arkalī Khān, crossed the Ganges, attacked the rebels and completely worsted them. Kishlī Khān tried to escape, but he was soon surrendered by a Hindu *muḳaddam* or headman with whom he had taken refuge. The Sulṭān treated him mildly and sent him along with other captives to Multān, which had been assigned to Arkalī Khān. Another instance of his mild treatment of offenders was his decision about the murderous thugs who had been captured and brought to Dihlī, and who were simply deported to Bengal.

However, it is rather surprising that in the case

of a *darwīsh*, Sīdī Muwallih, Sulṭān Djalāl al-Dīn departed from his policy of leniency and allowed him to be killed barbarously under the orders of his son. Muwallih originally came from the northern territories (*wilāyat-i-mulk-i-bālā*, Baranī, 208), and is stated to have stayed for some days with Shaykh Farīd al-Dīn Gandjshakar who had advised him not to allow rich people to become associated with him. It appears that he paid no heed to this advice and threw open the door of his hospice (*khānaḳāh*) to men in all walks of life, regardless of their status. His growing popularity roused jealousy, and some of his enemies created a suspicion in the mind of the Sulṭān that Sīdī Muwallih was planning to capture the throne. Djalāl al-Dīn accordingly ordered his arrest, but unable to establish his guilt, the Sulṭān is said to have appealed to a party of Ḳalandar dervishes who were present to do him justice; one of them immediately attacked the Sīdī with a sharp razor, and at the order of Arkalī Khān he was trampled to death under the feet of an elephant. Most of the historians consider it as the murder of an innocent person; Baranī goes to the extent of remarking that after his murder the city was enveloped in the evening by total darkness due to a wind storm (*kālī āndhī*), and adds that in fact the decline of the Sulṭān's power began from that day.

Shortly after Sīdī Muwallih's execution, Djalāl al-Dīn led an unsuccessful expedition against Ranthambor. More determined was the Sulṭān's attitude in expelling the Mongols who had invaded his kingdom with a large army led by a grandson of Hulāgū. He met the invaders near Sunām and inflicted a heavy defeat on their advance guard, after which they accepted his terms and were allowed to go back unmolested. Another military exploit of the year 691/1292 was the invasion of Mālwā by the nephew of the Sulṭān, ʿAlī Garshāsp (later ʿAlāʾ al-Dīn Khaldjī). He captured Bhilsa and, laden with considerable booty, returned to Dihlī and was given the *iḳṭāʿ* of Awadh as a reward in addition to his original assignment of Karā-Manikpūr. Two years later ʿAlī left on a bigger adventure, his objective now being the conquest of Deogīr, the rich capital of the Yadava ruler Rama Čandra. With a force of 7,000-8,000 horse he marched to Elličpūr in Berar, where he gave out that he was a discontented noble of Dihlī and was going to the south to seek service with the ruler of Rajamundri in south Telingana. After resting for two days he marched on Deogīr, took the Rādjā by surprise, defeated him in a battle fought in the vicinity of the town and forced him to take refuge in the fortress. ʿAlī further defeated the eldest son of the Rādjā, Shankar (Singhanadev or Sankhdev, according to some authorities; see K. S. Lal, *History of the Khaljis*, Allahabad 1950, 52, and Elliot and Dowson, iii, 551). Father and son had no option but to beg for peace; the Rādjā had to cede the province of Elličpur and pay an indemnity in the form of hundreds of maunds of gold, silver and jewels, besides horses and elephants. Laden with enormous wealth, ʿAlāʾ al-Dīn safely returned to Kara, although the Sulṭān, who was on a hunting expedition in the neighbourhood of Gwalior could have easily intercepted him on his return march, since he had attacked Deogir without his permission.

After his arrival in Kara, ʿAlāʾ al-Dīn adopted an attitude of apprehensive penitence and ultimately succeeded in persuading the Sulṭān to visit him and forgive his misdemeanour. Despite the warning of his counsellors, Djalāl al-Dīn left Dihlī and reached the bank of the Ganges, where his nephew was encamping. Just at the moment when the aged Sulṭān was about to embrace him in affection, ʿAlāʾ al-Dīn had him murdered, proclaimed himself king (Ramaḍān 695/July 1296), and seized Dihlī.

During his reign of twenty years (695-715/1296-1316), the new Sulṭān not only made extensive conquests resulting in the annexation of the entire region of central and south India, but also established peace in the north by stopping the frequent raids of the Mongols and introducing a number of administrative and economic reforms; here only a brief reference can be made to his multifarious achievements.

ʿAlāʾ al-Dīn had not been on the throne even for a year when the first raid of the Mongols came. They were, however, defeated and pushed back by the Sulṭān's forces. This was soon followed by another raid under a Mongol chief, named Ṣaldī (Baranī 253; Sagdī and Saldī in *Futūḥ al-salāṭīn*, 251); as before ʿAlāʾ al-Dīn's brave commander, Ẓafar Khān defeated them capturing 2,000 prisoners. In 699/1299 came one of their greatest raids under the leadership of Kutlugh Khʷādja, when they reached the gates of Dihlī. Rejecting the advice of his counsellors to buy off the raiders, ʿAlāʾ al-Dīn assembled a large army, marched out of the city and encamped in the plain of Sīrī. After the death in battle of Ẓafar Khān, the Mongols nevertheless broke camp and retreated. The next Mongol invasion was led by Ṭarghī, who, knowing that the Sulṭān was busy in the siege of Chitor (702-3/1302-3), marched with an army of 120,000 horsemen right up to the Jamuna. ʿAlāʾ al-Dīn, who had in the meantime returned from Chitor, having suffered considerable losses in matériel, shut himself up in the fortress of Sīrī which was besieged by the Mongols. The Sulṭān is stated to have requested Niẓām al-Dīn Awliyāʾ, a pious Ṣūfī *shaykh*, living near Dihlī, to pray for his victory, and the sudden and unexpected retirement of the Mongols when they were in a clearly advantageous position was attributed by contemporary historians to his prayers. Nevertheless, ʿAlāʾ al-Dīn was shaken by this raid and decided to take effective measures to increase the strength of his army and repair and regarrison the old forts in the north-western region. It is not surprising, therefore, that when the next horde of the Mongols came in 705/1305 they found the Sulṭān's army fully prepared to meet them. They avoided the newly-repaired forts, and marching along the line of the Himalayas, reached Amrōha, about 80 miles to the east of Dihlī. The Sulṭān's army commanded by the *malik*s Tughluḳ and Kāfūr intercepted them on their return march and defeating them in battle captured their leaders, ʿAlī Beg and Tartāk, with 8,000 men besides a large number of horses (Baranī, 320; Tartāḳ in Amīr Khusraw, *Khazāʾin al-futūḥ*, 37). ʿAlāʾ al-Din ordered the prisoners to be killed and their skulls to be built into the walls of the fortress of Sīrī. In the following year, the Mongols again entered the subcontinent under Kabak and crossed the Indus near Multān, but Tughluḳ again defeated them on their return march. The last raid of the Mongols in this time (according to some authorities, an off-shoot of the previous one) was led by Iḳbālmand; he was also defeated and slain, and the Sulṭān ordered the captives to be crushed to death. Their successive defeats, the harsh treatment meted out to the captives and Tughluḳ's incursions into their own regions deterred them from raiding the territories of the Dihlī Sultanate as long as ʿAlāʾ al-Dīn occupied the throne. It appears that besides the major invasions mentioned

by the historians the Mongols frequently raided the frontier regions, for according to an inscription, which Ibn Baṭṭūṭa saw in the mosque of Multān, Tug̲h̲luḳ had encountered the Mongols on 29 occasions and it was for this reason that he had come to be known as G̲h̲āzī Malik.

Far more enduring than his victories over the Mongols were ʿAlāʾ al-Dīn's conquests in central and southern India. In 698/1299 the Sulṭān sent Ulug̲h̲ K̲h̲ān and Nuṣrat K̲h̲ān to conquer Gud̲j̲arāt. They captured its ancient capital Anhilwara (Paṭan), but its ruler Rād̲j̲ā Karan managed to escape towards Deogīr. Besides the booty, they also brought to Dihlī the idol that had been set up at Somnath in place of the one destroyed by Sulṭān Maḥmūd. ʿAlāʾ al-Dīn's successes during the first two or three years of the reign led him to entertain wild schemes of conquering the world and founding a new religion. Luckily one of his wise counsellors, ʿAlāʾ al-Mulk, cautiously advised him to abandon the idea of founding a new faith, and to undertake the conquest of Rajputana and other parts of the subcontinent. Accordingly in 699/1299 he sent an army to conquer Ranthambor and subsequently left the capital to supervise the operations in person. In the course of a hunting trip on his way to Ranthambor he was separated from the main party. One of his nephews, Akat K̲h̲ān, finding him unprotected, attacked the Sulṭān and seemingly shot him dead with an arrow. Then he rushed to the camp and proclaimed himself Sulṭān, but before he was able to fully control the situation ʿAlāʾ al-Dīn, who had only become unconscious for some time, returned with a party of his followers. Akat was overpowered and put to death, and ʿAlāʾ al-Dīn proceeded towards Ranthambor. During his absence from the capital, two other nephews of the Sulṭān unsuccessfully rose against the central government in their fiefs in Badāyūn and Awadh. More serious than these risings was the rebellion of Ḥād̲j̲d̲j̲ī Mawlā who seized the Red Palace at Dihlī and placed on the throne a *Sayyid* who was, through his mother, a descendant of Sulṭān S̲h̲ams al-Dīn Iltutmis̲h̲. Within a week however, the rebellion was suppressed by Malik Ḥamīd al-Dīn, called *Amīr-i-Kūh*. In the winter of D̲j̲umādā II 701/January 1303, ʿAlāʾ al-Dīn marched on Chitor and captured it without much difficulty; its Rajput ruler, Ratan Singh, was brought as a prisoner to Dihlī. Malik Muḥammad D̲j̲āisī, a Hindi poet of the 10th/16th century, has versified a story that ʿAlāʾ al-Dīn's attack on Chitor was prompted by his desire to obtain Padmini, the beautiful daughter of its Rād̲j̲ā, but it is not mentioned by any contemporary historian, and cannot, therefore, be accepted as a fact, although it has been included in the chapter on the K̲h̲ald̲j̲īs in *The Cambridge History of India*. After Rajputana, ʿAlāʾ al-Dīn turned his attention to Mālwā and sent ʿAyn al-Mulk Multānī in 705/1305 to conquer it. The Rād̲j̲ā forces offered a determined resistance, but they were defeated by the Muslims who captured important places like Ujjain, Māndū and Chanderi. Kānhar Deo, the Rād̲j̲ā of Jalore, was so unnerved by these victories of ʿAyn al-Mulk that he accompanied him to Dihlī and offered allegiance to the Sulṭān. In Ramaḍān 705/March 1306 (according to Amīr K̲h̲usraw, *K̲h̲azāʾin al-futūḥ*, Calcutta 1953, 65) ʿAlāʾ al-Dīn despatched Malik Kāfūr (now Malik Nāʾib) to punish Rama Čandra who had not sent the tribute for several years. He was also commissioned to bring Dewal Dewi, daughter of the fugitive Rād̲j̲ā of Gud̲j̲arāt, as her mother, now in Dihlī, wanted to see her. The princess was abducted and sent to Dihlī, where she was married to ʿAlāʾ al-Dīn's son, K̲h̲iḍr K̲h̲ān; the story of their love and marriage was described by Amīr K̲h̲usraw in his *mat̲h̲nawī* entitled *K̲h̲iḍr K̲h̲ān-Dawalrānī*. Appointing his own officers in Elličpur, Malik Nāʾib marched on Deogīr; Rama Čandra offered his submission, and was treated generously by ʿAlāʾ al-Dīn; the title of *rāy-rāyān* was conferred on him and he was allowed to govern Deogīr as a vassal of Dihlī.

Two minor expeditions may be mentioned before Malik Nāʾib's next campaign in the south. Siwāna, an important stronghold in Mārwār, was besieged and captured; its ruler Sītal Deo offered submission and presented one hundred elephants and costly gifts. His state was annexed, but he was allowed to retain his fortress. An army was also sent against Jalore, and its Rād̲j̲ā, Kānhar Deo, put to death. Malik Nāʾib left Dihlī in 709/1309 (Baranī, 327) on his second campaign in the south, which was directed against the Kākatya State of Telingana. Its capital, Warrangal, was captured from the ruler Pratapudra Deo II, who submitted and offered a large indemnity in the form of horses, elephants, coined money and jewels besides the payment of an annual tribute.

In 710/1310 Malik Nāʾib and K̲h̲ʷād̲j̲a Ḥād̲j̲d̲j̲ī were again sent to the south. Marching via Deogīr (now governed by Rama Čandra's son) the Sulṭān's army reached Dwāra Samudra, capital of the Hoysāla ruler, Vira Ballāla III. After its fall, Malik Nāʾib moved towards the Pāndya Kingdom in the extreme south. Prince Sundar Pāndya, who had murdered his father but had failed to seize the throne and had been expelled by his brother, Vīrā, had come to the court of ʿAlāʾ al-Dīn with an appeal for help. However, on hearing that Malik Nāʾib was marching on his capital Vīra fled from there and the Sulṭān's army captured Madura without any fighting. Malik Nāʾib's last expedition to the south was directed against Deogīr, as its new Rād̲j̲ā had tried to defy the authority of the Sulṭān. The Malik put the rebellious Rād̲j̲ā to death and assumed its government. To make firm the authority of the central government, he had to recapture some fortresses in the south and annex the tract between the Kris̲h̲na and Tungabhadra rivers. Malik Nāʾib is stated to have built a small mosque, known as *ʿAlāʾī Masd̲j̲id*, at Rāmes̲h̲varem, near the sea coast, which was in existence when Firis̲h̲ta wrote his book (Bombay ed., i, 210). Thus in the course of less than eight years, ʿAlāʾ al-Dīn's generals brought the entire region of the south under the sway of their master. The Sulṭān, however, being a realist in politics, did not assume direct administration there; except for Deogīr, which was annexed and directly governed from Dihlī, the Hindu rulers remained as vassals of the Sulṭān.

Besides his extensive conquests and positive measures to establish peace by stopping the raids of the Mongols, ʿAlāʾ al-Dīn's reign is marked by a series of administrative, agrarian and economic reforms. The successive rebellions which had occurred during his absence from the capital at the time of the siege of Ranthambor convinced the Sulṭān of the need of inquiring into their causes and taking necessary steps to eradicate the possibility of their recurrence. It seemed to him and his advisers ultimately that they were due to neglect of the internal espionage system, a general use of wine, matrimonial alliances among the families of the nobles, and the concentration of excessive wealth by individuals. In pursuance of curbing this last, he enacted laws according to which

all rent-free lands, including religious endowments, were confiscated to the state, and tax collectors were instructed to collect gold on all possible pretexts, with the result that only small holdings of a few thousand *tankas*' rental were left with the landowners, thus reducing their military power and their ability to rebel, as is clear from the history of the remaining years of ʿAlāʾ al-Dīn's reign. The internal espionage system was improved, and it was stated that courtiers became so afraid of their conversations being reported to the Sulṭān that when near the palace they dared not speak, and expressed their ideas by signs rather than words. Another ordinance prohibited the use of alcohol and intoxicating drugs; the Sulṭān himself gave up drinking and ordered his wine vessels to be broken and their contents poured out in front of the Badāyūn gate. Those who tried to smuggle wine into the capital suffered exemplary punishment. However, the Sulṭān later relaxed the rigour of these measures by not taking notice of private manufacturers and consumption of wine. Lastly, he issued an ordinance which made it obligatory on the nobles to obtain permission of the Sulṭān for matrimonial alliances among their families. These enactments naturally affected the nobles and wealthy families living in the capital or its suburbs, but ʿAlāʾ al-Dīn knew that the rich and influential persons in the villages could also become a source of danger. The regulations issued by him with regard to the leading men in the villages (*muḳaddams*, *balāhars* and *kh̲ūṭs*) have been misunderstood by some writers; Baranī used the general term "Hindu" for these persons, and possible most of them did belong to that community. According to another ordinance, some new taxes were levied as, for instance, a grazing cess on milch cows and goats.

ʿAlāʾ al-Dīn's economic policy, mainly based on a system of price control, was the result of his efforts to maintain a large standing army against threats from the Mongols. Apparently realising that taxes could not be raised indefinitely, and that it was dangerous to decrease the pay of the soldiers, he decided to reduce the prices of commodities and make the necessaries of life so cheap that a horseman could be recruited on a comparatively small pay of 234 *tankas* per annum with 78 *tankas* for keeping an additional horse. ʿAlāʾ al-Dīn started with issuing several regulations according to which prices of corn were fixed, government stores were opened, the caravans of newcomers were registered and state revenue in the neighbouring areas was collected in kind. Malik Ḳabūl, an honest and strict officer, was appointed *S̲h̲aḥna-i-Mandī* (market superintendent). He suppressed hoarding, and the Sulṭān ordered that those who gave short measure should have flesh equal in weight to the deficiency cut from their own bodies. The state also fixed the prices of other necessaries of life, such as cloth, for which a separate market was opened in an open plot of land near Badāyūn gate, known as the *Sarāy-i ʿAdl*. Some idea of the resulting cheapness of commodities can be formed from the list given in Baranī's *Tāʾrīk̲h̲-i Fīrūzs̲h̲āhī*, according to which wheat was sold at $7^1/_2$ *d̲j̲ītals* (small copper coins) per maund and rice at 5 *d̲j̲ītals* per maund. The price of a fine horse was for obvious reasons over 100 *tankas*, but a milch cow could be had for 3 to 4 *tankas*, while a goat was sold for 10 to 14 *d̲j̲ītals* only (a silver *tanka* was equal to 64 *d̲j̲ītals*). However, much opposition must have arisen from vested interests, and this explains Barani's remark that all these regulations remained in operation only in the time of ʿAlāʾ al-Dīn, whilst his son Mubārak S̲h̲āh K̲h̲ald̲j̲ī was unable to enforce them.

ʿAlāʾ al-Dīn was a severe but vigorous ruler, yet owing to rivalries and a quarrel for power between his eldest son, K̲h̲iḍr K̲h̲ān, and Malik Nāʾib, his last days were unhappy. The former was transferred to Amrōha and thus sent away from the capital, but returned to Dihlī on the pretext of visiting the tombs of some of the leading *s̲h̲ayk̲h̲s* there. In the midst of these worries, the Sulṭān died in S̲h̲awwāl 716/ January 1316. Before his death Malik Nāʾib, who had great influence over the Sulṭān, had persuaded him to disinherit K̲h̲iḍr K̲h̲ān, to imprison him in the fort of Gwalior, and to nominate his young son, S̲h̲ihāb al-Dīn ʿUmar, as heir to the throne. On the latter's accession Malik Nāʾib assumed the powers of regent and ordered K̲h̲iḍr K̲h̲ān and his brother, S̲h̲ādī K̲h̲ān, who had been imprisoned in Sīrī, to be blinded. ʿAlāʾ al-Dīn's third son, Mubārak K̲h̲ān, who had also been imprisoned, was also blinded. The prince, however, succeeded in bribing some of the palace guard, and they agreed to murder Malik Nāʾib and his companions. Thus this cruel and ambitious slave of ʿAlāʾ al-Dīn was killed only 35 days after his master's death. Mubārak now became the regent of his infant brother, but only two months later he blinded him and ascended the throne under the title of Ḳuṭb al-Dīn Mubārak S̲h̲āh. The new Sulṭān, a youth of 18, began his reign by setting free a number of prisoners, recalling those who had been banished by his father and rescinding his enactments in regard to heavy taxation and control over prices of commodities, thus gaining considerable popularity.

Soon after his accession Mubārak left for the south where Harpāl Deo, a son-in-law of Rama Čandra, had seized power and defied the authority of Dihlī. On the approach of the Sulṭān's army, however, he fled from the capital, but he was captured and put to death and the administration of Deogīr was entrusted to Malik Yaklakhī; after sending his favourite slave, K̲h̲usraw, on an expedition to Madura, and having spent the rainy season of 718/1318 in Deogīr, the Sulṭān set out for the north. On his return journey a plot was made to kill Mubārak, but the news leaked out and the conspirators were executed. He also ordered his three brothers, K̲h̲iḍr K̲h̲ān, S̲h̲ādī K̲h̲ān and S̲h̲ihāb al-Dīn ʿUmar, to be murdered.

Mubārak now gave himself up completely to a life of debauchery. His infatuation for K̲h̲usraw K̲h̲ān, a slave belonging to a low caste (variously spelt as *parwārī* or *brādū* in the Persian histories), grew day by day until the latter secured an ascendancy over his master, and he decided to kill the Sulṭān and seize the throne. Mubārak was warned of the danger of a conspiracy, but he paid no heed to it and K̲h̲usraw's partisans succeeded in murdering him (720/1320). His head was severed from his body and thrown into the courtyard where the courtiers who were urgently summoned to the Palace could see it. On the following morning, K̲h̲usraw ascended the vacant throne, assuming the title of Sulṭān Nāṣir al-Dīn; his reign, however, proved brief.

According to Baranī, 411, K̲h̲usraw and his followers embraced Islam but were not genuine in the change of faith; they started worshipping idols within the palace, used copies of the Ḳurʾān as stools and wantonly outraged the Muslim women. Some of the Muslim leaders, unable to bear his excesses, decided on his overthrow. D̲j̲ūnā K̲h̲ān (the later Sulṭān Muḥammad b. Tug̲h̲luḳ (725-52/1325-51) left the capital for Sāmāna where his father, G̲h̲āzī Malik, was then posted. The latter organised a campaign and marched

on Dihlī and defeated an army that was sent against him under the command of Khusraw's brother. The final battle was fought near the old fort of Indrapat in which Khusraw was defeated, in spite of his profuse distribution of wealth to win the support of the army and the sympathy of the people. He escaped, but was later found, and Ghāzī Malik ordered him to be beheaded. On the following morning the nobles urged him to accept the crown as there was no one left in the family of ʿAlāʾ al-Dīn who could lawfully wear it. Hence Ghāzī Malik ascended the throne of Dihlī in Shaʿbān 720/September 1320 under the title of Sulṭān Ghiyāth al-Dīn Tughluḳ Shāh and began the line of Tughlūḳid Sultans.

KHALDJIS of MĀLWA. [see MĀLWA].

AL-**KHALDŪNIYYA** (AL-**DJAMʿIYYA**), a cultural association established in Tunis under the spiritual aegis of Ibn Khaldūn. It was sanctioned on 22 December 1896/18 Radjab 1314 and its premises officially opened on Saturday, 14 Dhu 'l-Ḥidjdja 1314/15 May 1897 in the presence of the Tunisian authorities.

Its creation was in part due to the united efforts of Tunisians educated at the Ṣādikī College, who were anxious to effect a reconciliation with former students of the Zaytūna. In this aim they were supported by *shaykhs* who were the Zaytūna's instructors. Their action was in line with the political and cultural trends advocated and put into practice by the minister Khayr al-Dīn [*q.v.*], which put a determinedly modern slant on traditional studies and provided the Zaytūna's students with a scientific course of study that gave them an opening into the modern world, which the French socio-cultural presence in Tunisia made essential.

The activities of the Near Eastern reformists, and Shaykh Muḥammad ʿAbduh's two visits to Tunis (in December 1884 and 1903), also had an influence on the teaching of Arabic studies. During his second visit to the city, ʿAbduh even put forward the notion of introducing instruction in science and mathematics into the Zaytūna itself.

In 1893 the modern studies courses followed at the Khaldūniyya were set as obligatory tests in the Zaytūna's examinations and recognised in the official diploma of applied studies which was created by a decree of 28 Djumādā II 1316/12 November 1898 and which conferred job advantages on its holders.

In order to achieve these ends, the association had to smooth over difficulties, combat numerous instances of prejudice and counter the many objections raised by the traditionalists, who considered that the study of modern science was a profane action which might strike a blow at the unity of Islam. The association also had to struggle to balance a very shaky budget and raise the necessary credit to cover the cost of organising courses and lectures, acquiring books for the library and materials which would enable students to begin scientific experiments.

The Khaldūniyya course of studies, taught in modern Arabic, imparted, up to World War I, the rudiments of knowledge which played a valuable part in the diffusion of scientific ideas among students and the adults who attended lectures aimed at popularising ideas on physics, chemistry, zoology, botany, modern literature, history, law, economic and commercial geography and political economy.

The last president, Shaykh Fāḍil Ibn ʿĀshūr, had a Zaytūn university education but was a wholehearted advocate of the modern ideas that, from 1945, took over from the former directors, who were of essentially Ṣādiḳian education. Ibn ʿĀshūr inaugurated the final phase, which concluded with the educational reforms of 1958. Several projects were dear to his heart. He renewed the objectives of the association by setting up many "Khaldūnian" organisations which coincided with a new spirit of nationalism stemming from the Arab League. He created an Arabic general certificate of education based on a general and scientific curriculum in the Arabic language which fitted students for enrollment in the universities of the Arab countries. He also opened an Institute of Islamic Studies which was intended to revitalise Islamic culture, and from 1945 onwards drew attention to the new realities governing the modern world by organising a series of conferences on specific themes. In addition, he set up an Arabic Institute of Law in 1946 with the aim of modernising law studies and improving the education of barristers and magistrates, so that Tunisian justice might be better served. Finally, in the same year he founded the Institute of Philosophy, to educate students who wished to prepare for advanced level philosophy, and also to give wider currency to the major trends of Islamic philosophy.

It is clear, therefore, that from its inception the Khaldūniyya had the dual aim of preparing students for official examinations through a proper course of study and of giving adults the opportunity to round off their general education and diversify their knowledge.

With its combination of instruction and culture, the Khaldūniyya was gradually raised from the status of a private association to that of a national cultural institution which organised courses and conferences and put in train various other activities. To fulfil these tasks, it employed a linguistic tool which served to transmit traditional teaching but was sufficiently flexible to convey and give mastery of modern and scientific knowledge.

BANŪ **KHĀLID**, an Arab tribe occupying the central part of the eastern provinces of modern Saudi Arabia, the region along the Gulf coast known since earlier times as al-Aḥsāʾ or al-Ḥasā [*q.v.*]. The tribe at present occupies the territory lying between al-Miḳṭāʿ in the north and al-Bayāḍ in the south, with its centre at the town of al-Ḥasā. For the last two centuries, the chieftainship has been in the hands of the ʿUrayʿir family.

The tribe begins to figure in historical sources from the 10th/16th century onwards, indicating its growing importance. In 989/1581 they fought off Sharīfian forces trying to occupy al-Ḥasā from the sea, but could not prevent the Ottomans, who had the support of the Muntafiḳ tribe [*q.v.*] of Lower ʿIrāḳ, from occupying the region soon afterwards. The Ottomans held it till 1082/1670, when Barrāk b. ʿUrayʿir Āl Ḥamīd, member of an important family of the Banū Khalīd, killed Rashīd b. Maghāmis Āl Shabīb of the Muntafiḳ and drove the Turks from the town of al-Hufhūf or al-Hufūf [*q.v.*], and thus ended the first Turkish occupation of the province. It was Barrāk who established a summer residence in Kuwayt, in a fortress called, like that of al-Hufhūf, a *kōt* or *kūt* (whence the diminutive *kuwayt* from this Indian word). He also sacked the town of al-Dirʿiyya [*q.v.*] in *ca.* 1091/1680, but died soon afterwards, and his brother Muḥammad succeeded as tribal chief. Until his death in 1102/1691, Muḥammad made various incursions into the regions of al-Yamāma, al-Khardj and Sudayr in Nadjd. He was followed by Saʿdūn b. Muḥammad b. Ḥusayn b. ʿUthmān, who had been Barrāk's ally in the expulsion of the Turks, and under him the area controlled by the Banū Khālid reached its greatest extent, from Kuwayt in the north to Ḳaṭar in the south. He envisaged also a policy of conquest in Nadjd, where in 1095/1684 the Idrīsid Sharīf Idrīs b. Waṭbān, who at that time controlled al-Dirʿiyya, had been killed by one Sulṭān b. Ḥāmid al-Ḳaysī, who was probably a member of the Banū Khālid, and who had then made himself lord of that town; it was held by Sulṭān and his brother ʿAbd Allāh for some two decades. However, incursions from al-Ḥasā continued, and we find Saʿdūn again attacking and sacking ʿAḳrabā and ʿAmmāriyya in 1133/1721 just before his death in battle in 1135/1723.

A series of internecine conflicts within the family followed, ending in the triumph of Saʿdūn's cousin ʿAlī b. Muḥammad, who was in turn followed by his brother Sulaymān. It was during his reign that Muḥammad b. ʿAbd al-Wahhāb [*q.v.*] began his preaching in Nadjd, and Khālidī opposition to this teaching was one of the main causes of the ensuing warfare between the Banū Khālid and the Āl Suʿūd, beginning with the expulsion of Muḥammad b. ʿAbd al-Wahhāb from ʿUyayna by ʿUthmān b. Aḥmad Āl Muʿammar at the behest of Sulaymān b. Muḥammad, after when he settled at al-Dirʿiyya (1157/1744). Further internal conflict followed amongst the Banū Khālid, with Sulaymān driven out of al-Ḥasā in 1165/1752; he found refuge in al-Khardj, but died there in the same year. The Āl Suʿūd now intervened in al-Ḥasā, at the invitation of discontended members of the ruling family, but when Saʿdūn of the Banū Khālid was defeated at Djadaʿa by the rebels, who were aided by the Muntafiḳ chief Thuwaynī, Saʿdūn actually found refuge in al-Dirʿiyya with his enemy ʿAbd al-ʿAzīz b. Muḥammad b. Suʿūd and died there shortly afterwards. The rebel leaders Duwayḥis and Muḥammad b. ʿUrayʿir, together with their uncle ʿAbd al-Muḥsin, now became leaders of the Banū Khālid in al-Ḥasā until 1203/1789, when they were briefly succeeded by Zayd b. ʿUrayʿir and Barrāk b. ʿAbd al-Muḥsin. In 1207/1793 ʿAbd al-ʿAzīz felt strong enough to invade al-Ḥasā, and two years later totally defeated Barrāk. One Nādjim, of obscure family and not a member of the Banū Khālid, came to power now in al-Ḥasā as a vassal, nominally *wālī* or governor, of the Āl Suʿūd.

The expansionist policies of Suʿūd b. ʿAbd al-ʿAzīz, who by 1223/1808 controlled the Ḥidjāz, ʿAsīr, al-Ḥasā and Baḥrayn, as well as Nadjd, alarmed the Ottoman Porte, leading to the invasion from Egypt of an army under Ibrāhīm Pasha [*q.v.*] which defeated Suʿūd and razed al-Dirʿiyya to the ground in 1233-4/1818-19. This provided an opportunity for the Banū Khālid to regain control in al-Ḥasā, and two brothers from the ʿUrayʿir family, Mādjid and Muḥammad, briefly managed to seize al-Hufhūf and Ḳaṭīf before Ibrāhīm's commander Muḥammad Kāshif appeared there. Mādjid, however, remained ruler of al-Ḥasā until 1245/1830, when he was killed in battle at ʿAḳlā with the resurgent Āl Suʿūd. Al-Ḥasā again passed under Suʿūdī control, despite the temporary re-imposition of Turco-Egyptian control over Nadjd in 1838, until internal conflict within the Āl Suʿūd in 1872 allowed the Ottomans to re-establish their power in al-Ḥasā, with their headquarters in al-Hufhūf. In the following year, the Turkish troops withdrew, and the Porte appointed as local governor or *mutaṣarrif* a member of their old supporters, the Banū Khālid, sc. Bāziʿ b. ʿUrayʿir. His position nevertheless proved unstable, and when the Suʿūdī ʿAbd al-Raḥmān b. Fayṣal attacked him, and besieged him in the citadel of al-Hufhūf, al-Kūt, Turkish forces had to return and drive off the Suʿūdīs.

In 1912 the whole region of al-Ḥasā came into the hands of the founder of modern Saudi Arabia, ʿAbd al-ʿAzīz II. This ruler followed a policy of linking the Banū Khālid to his own dynasty by marriage alliances; hence there are many Saudi princes today who have the blood of the Banū Khālid in their veins.

KHĀLID B. **ʿABD ALLĀH** AL-**ḲASRĪ**, governor for the Umayyads, first of Mecca and later, during almost the entire caliphate of Hishām b. ʿAbd al-Malik [*q.v.*], of ʿIrāḳ. There his position may be compared with that of Ziyād under Muʿāwiya and al-Ḥadjdjādj under ʿAbd al-Malik. Information about Khālid in the sources often seems to be the product of polemic between different political, religious, ethnic and tribal groups, and it should, therefore, be used cautiously.

His clan, the Ḳasr, was a branch of Banū Badjīla [*q.v.*]. While his grandfather and great-grandfather are counted as Companions of the Prophet (Ibn Ḥadjar, *Iṣāba*, Calcutta 1854-73, i, 59, iii, 1341), and the latter is known as a hero of the Badjīla, an earlier ancestor is said to have been a Jewish slave, and Khālid himself is often called Ibn al-Naṣrāniyya on

account of his Christian mother. Some scandalous details about Khālid's ancestry seem to reflect anti-Arab Shuʿūbī sentiment (Goldziher, *Muh. Stud.* i, 205 = Eng. tr. i, 188). In a tradition which Goldziher (*ibid.*, ii, 45-6 = Eng. tr. ii, 53-4) classified as a pro-Umayyad fabrication, and which may refer to the rivalry between Khālid and his successor as governor of ʿIrāḳ, Yūsuf b. ʿUmar al-Thaḳafī [*q.v.*], the Prophet gave Khālid's grandfather Asad precedence over a man of Thaḳīf and asked for special blessings on Asad's descendants. The report that Khālid was not a descendant of Asad (Ibn ʿAsākir, Damascus 1332/1914, v, 68) may be a response to this *ḥadīth*. For these and other details of Khālid's ancestry, see especially *Aghānī*[1], xix, 52 ff.

The dates of Khālid's governorship at Mecca are uncertain. Ṭabarī's two reports, one *sub anno* 89/707-8, the other *sub anno* 91/709-10, both attribute Khālid's appointment to the caliph al-Walīd. Some sources, however, refer to Khālid as governor at Mecca under ʿAbd al-Malik (d. 86/705), among them a detailed report in pseudo-Ibn Ḳutayba of the arrest by Khālid, after his arrival as governor in Mecca, of the pious Saʿīd b. al-Djubayr [*q.v.*], a refugee from ʿIrāḳ after the suppression by al-Ḥadjdjādj of the revolt of Ibn al-Ashʿath (*K. al-Imāma wa 'l-siyāsa*[2], Cairo 1969, ii, 51 ff.). The suggestion of F. Gabrieli (*Il califfato di Hishâm*, Alexandria, 1935, 8, n. 2) that the story of the arrest of Saʿīd b. al-Djubayr has been moved forward by pseudo-Ibn Ḳutayba in order to make it follow the account of Ibn al-ʿAshʿath's defeat in 84/703 or 85/704, and that other reports which have Khālid as governor of Mecca under ʿAbd al-Malik all derive from the account of pseudo-Ibn Ḳutayba, seems to be contradicted by the reports of al-Azraḳī, an earlier source, which refer to Khālid as governing Mecca for ʿAbd al-Malik in circumstances which have nothing to do with Saʿīd (F. Wüstenfeld, *Die Chroniken ... Mekka*, Leipzig 1857-61, i, 265, 304-5). Wüstenfeld considered it possible that Khālid governed Mecca on two separate occasions, once for ʿAbd al-Malik and once for al-Walīd (*ibid.*, iv, 148). While the end of Khālid's governorship at Mecca is usually associated with the accession of the caliph Sulaymān b. ʿAbd al-Malik (96/715) and his removal of those officials whom he considered had been too close to al-Ḥadjdjādj (J. Wellhausen, *Das arabische Reich*, Berlin 1902, 165 ff., Eng. tr. 265 ff.), al-Azraḳī has two traditions which refer to Khālid governing Mecca for Sulaymān and which seem inconsistent with the view that the removal of Khālid from office was one of Sulaymān's first acts as caliph (*Chron. Mekka*, i, 339-40).

Apart from his involvement in the arrest of Saʿīd b. Djubayr, the information about Khālid's activities in Mecca concentrates on aspects of the cult. He is said to have decorated the Kaʿba with gold sent by al-Walīd (Azraḳī, *Chron. Mekka*, i, 146; Yaʿḳūbī, ii, 340), to have been the first to enforce the segregation of the men from the women in the *ṭawāf* (Azraḳī, 265-6), and the first to arrange the lines of worshippers around the Kaʿba (*ibid.*, 304-5). But, on the other hand, he is said to have proclaimed his willingness to violate the *ḥaram* (Ṭabarī, ii, 1231) or to tear down the Kaʿba and remove it to Jerusalem (*Aghānī*[1], xix, 90; pseudo-Ibn Ḳutayba, ii, 51-2), should the caliph desire it, and it is Khālid who is charged with the construction, on the orders of al-Walīd (Ṭabarī, ii, 1199-1200; *Aghānī*[1], xix, 60) or Sulaymān (Azraḳī, 339-40), of a fountain which was intended to supplant Zamzam.

Between his removal from the governorship of Mecca and his appointment to that of ʿIrāḳ, Khālid is mentioned only as one of the two men sent by the caliph Yazīd b. ʿAbd al-Malik to take *amān* to Yazīd b. al-Muhallab [*q.v.*] in a futile attempt to forestall his revolt (Ṭabarī, ii, 1382, 1387-8). His appointment as governor of ʿIrāḳ is dated to the beginning of the caliphate of Hishām b. ʿAbd al-Malik, but there is some doubt whether it was in 105/723-4 or 106/724-5 (Ṭabarī, ii, 1471; but cf. Dīnawarī, *Akhbār al-ṭiwāl*, Leiden 1888, 336, where it is said that it was Yazīd II who appointed Khālid).

It seems likely that Khālid was appointed to ʿIrāḳ in the hope that, since B. Badjīla was not powerful and belonged neither to Muḍar nor Yemen, he would be able to remain aloof from the inter-tribal feuds which had become more intense as a result of the rebellion of the Yemenī Ibn al-Muhallab and the pro-Muḍar policy of Khālid's predecessor, ʿUmar b. Hubayra. Nevertheless, his appointment seems to have aroused the hostility of the Muḍar, and this may have been a factor in causing his removal from office and downfall, an event which the sources attribute to the jealousy of the caliph at the increase of Khālid's wealth as a result of his agricultural works. In relation to the length of his governorship in ʿIrāḳ, information about his administration is sparse. Towards the end of his period of office he suppressed a number of "heretical" movements, among them the revolt of the Khāridjī Bahlūl b. Bishr al-Shaybānī (Ṭabarī, ii, 1622-7), the rising of the Shīʿī *wuṣafāʾ* in Kūfa under al-Mughīra b. Saʿīd (*ibid.*, ii, 1619-21), and that of Wazīr al-Sikhtiyānī in al-Ḥīra (*ibid.*, ii, 1628-9), all of which are dated to 119/737. Khālid is also mentioned in some sources in connection with the execution of Djaʿd b. Dirham [*q.v.*] (al-Dārimī, *K. al-Radd ʿalā 'l-Djahmiyya*, Lund-Leiden 1960, 4). From time to time, Khurāsān and the eastern provinces were placed under his control, and at such times Khālid relied on his brother Asad as his governor in Khurāsān. (For Asad's activities there, see Gabrieli, *Hishâm*, 38-63, with further references). At other times, the caliph appointed the governor of Khurāsān himself. In Baṣra Khālid's representative was Bilāl b. Abī Burda (see Ch. Pellat, *Milieu*, index). Khālid seems to have minted *dirhams* of a high quality (Balādhurī, *Futūḥ*, 469) and to have prevented the minting of coins outside Wāsiṭ (J. Walker, *Catalogue ...*, London 1956, p. lxiii).

In spite of his suppression of the "heretical" movements, there exist a number of traditions referring to Khālid's governorship in ʿIrāḳ which, from a later point of view, would seem to illustrate his indifference to Muslim sensibilities. He built a church for his mother immediately behind the mosque of Kūfa (Balādhurī, *Futūḥ*, 286); he justified his decision to have a fountain which he had installed in the mosque of Kūfa blessed by a Christian priest by the statement that his prayer was more likely to be heard than that of Abū Turāb (Gabrieli, *Hishâm*, 16 n. 3, citing Ṣibṭ b. al-Djawzī); more explicitly, he declared that "their religion (sc. Christianity) is better than ours" (*ibid.*); he was scornful of those who memorised (*ḥafiẓa*) the Ḳurʾān (*Aghānī*[1], xix, 63); he favoured Zoroastrians and Christians in the distribution of offices and in disputes with Muslims; and according to the *Fihrist* (338 = tr. Dodge, 804) he was a Zindīḳ.

Khālid's fall from office in 120/738 was followed by a period of about 18 months during which he was held in prison in Kūfa, next by a period of residence first in Ruṣāfa, where the caliph Hishām had established his court, and then at Damascus, and finally,

after the death of Hishām and the succession to the caliphate of al-Walīd b. Yazīd, by his deliverance on the orders of the new caliph once again into the hands of his successor as governor of ʿIrāķ, Yūsuf b. ʿUmar al-Thaķafī, under whose torture he died (126/743-4; Ṭabarī, ii, 1641-59, 1778-83, 1812-25).

Bibliography: given in the article.

(G. R. HAWTING)

KHĀLID B. BARMAK. [see AL-BARĀMIKA].

KHĀLID B. ṢAFWĀN B. ʿABD ALLĀH B. ʿAMR B. AL-**AHTAM** (whence the name IBN AL-AHTAM sometimes given to him) AL-TAMĪMĪ AL-MINĶARĪ, ABŪ ṢAFWĀN, of Baṣra (d. 135/752), the companion of ʿUmar b. ʿAbd al-ʿAzīz, Hishām b. ʿAbd al-Malik, Khālid b. ʿAbd Allāh al-Ķasrī and probably also of Abu ʾl-ʿAbbās al-Saffāḥ, was a transmitter of historical traditions, poetry and memorable orations, but was especially famed for his eloquence, since he fulfilled a rôle parallel to that of the poets, in that he was able to improvise a homily or description with abundant usage of rhymed prose and that his sayings enjoyed as wide a circulation as famous verses, but with the difference that no-one ever fraudulently attributed to him a single word (al-Djāḥiẓ, *Bayān*, i, 317-18).

He belonged moreover to a family, the Banū Minķar, which had in it a considerable number of celebrated orators (enumerated in *Bayān*, i, 355), especially Shabīb b. Shayba, who is often mentioned at the same time as him. His fame became such that two monographs were devoted to him, one by al-Madāʾinī (*Fihrist*, ed. Cairo, 151: *Kitāb Khālid b. Ṣafwān*), and the other by ʿAbd al-ʿAzīz b. Yaḥyā al-Djulūdī (*Fihrist*, 168: *Kitāb Akhbār Khālid b. Ṣafwān*). Although he claimed to have undertaken never to find himself alone with a sovereign without reminding him of God, at times he gave pieces of advice of another kind, above all to al-Saffāḥ, in front of whom he defended eloquently his homeland, but was also quite happy to describe women whom the caliph might choose as concubines; as a result of this, he stirred up opposition from Umm Salama and had subsequently to retract (al-Masʿūdī, *Murūdj*, §§ 2327-30; Muḥammad b. Hilāl al-Ṣābiʾ, *al-Hafawāt al-nādira*, ed. Ṣ. al-Ashtar, Damascus 1387/1967, 101-4; Ibn al-Djawzī, *K. al-Adhkiyāʾ*, Beirut n.d., 116-18). His eloquence often consisted of plays upon words, alliterations and witty responses, and some of his aphorisms have a general validity. Yet he had not only favourable qualities; on the one hand, he was accused of committing linguistic solecisms and of not always reflecting over what he was saying, and on the other, he was accused of being a miser (see al-Djāḥiẓ, *Bukhalāʾ*, index). Towards the end of his life he lost his sight (al-Ṣafadī, *ʿUmyān*, 148-9).

Bibliography: Ibn al-Kalbī, *Djamhara*-Caskel, Tab. 76, ii, 343; Djāḥiẓ, *Bayān* and *Ḥayawān*, indices; Ibn Ķutayba, *ʿUyūn al-akhbār*, index; *idem*, *Maʿārif*, index; Ibn ʿAsākir, *Taʾrīkh Dimashķ*, v, 53-63; Harawī, *Ziyārāt*, 82; Ibn ʿAbd Rabbihi, *ʿIķd*, index; Mubarrad, *Kāmil*, index; Yāķūt, *Udabāʾ*, xi, 24-35; *Dāʾirat al-maʿārif*, ii, 351-2; Brockelmann, S I, 105 (not to be confused with al-Ķannāṣ, S I, 93). (CH. PELLAT)

KHĀLID B. **SAʿID** B. AL-ʿĀṢ B. UMAYYA B. ʿABD AL-SHAMS B. ʿABD MANĀF B. ĶUṢAYY B. KILĀB B. MURRA B. KAʿB B. LUʾAYY, d. 13/635, was, according to several traditionists, if not the fourth Companion of the Prophet, at least one of the second group of three. Ibn Isḥāķ, however, places his conversion to Islam at a much later date and thus excludes him from the privileged group of the eight Predecessors (*sābiķūn, mutaķaddimūn*).

As a rich member of the Umayyad clan, he is said to have presented to Muḥammad the slaves inherited from his father; he had some education, and was possibly Muḥammad's third secretary, after ʿUthmān and ʿAlī. He fulfilled this latter rôle, and was also responsible for protocol at the time of the reception of the important tribe of Thaķīf and their allies in the year 9.

Previous to this, when one of the emigrants in Ethiopia, he had been able to strengthen his ties of friendship with the Prophet by helping to arrange the latter's marriage with a woman from his own clan, Umm Ḥabība, daughter of Abū Sufyān, after the death of her husband, with whom she herself had emigrated. Khālid b. Saʿīd had the responsibility of arranging the match (as *walī* or *wakīl*), placed upon him by his companions, although one tradition gives this task to ʿUthmān.

His political career began in the year 10. When Muḥammad sent back to his tribe in Yemen Farwa b. Musayk, who had just come to profess his adhesion to Islam, he appointed Khālid to accompany him and to collect the *ṣadaķa*. At the beginning of the year 11, and just before his death, Muḥammad appointed seven governors for Yemen and ʿUmān, including Khālid for the territory between Nadjrān, Rimaʿ and Zabīd. At the time of al-Aswad's revolt, the governors came together around al-Ṭāhir b. Abī Hāla, who was in charge of the Tihāma of Yemen, but Khālid b. Saʿīd and ʿAmr b. Ḥazm, governor of Nadjrān, left their posts and returned to Medina a month after the Prophet's death, i.e. in Rabīʿ II 11/July 632.

At the beginning of the year 13, Abū Bakr was getting ready the expedition for Syria, and according to a *ḥadīth* of ʿUmar b. Shabba (al-Ṭabarī, i, 2079) gave Khālid b. Saʿīd command of the first army, but then revoked this act before the army set out. Al-Ṭabarī considers the affair to have been of such importance that he takes up Khālid's career since Rabīʿ II 11 and lists his faults, which comprised abandoning his post and daring to present himself in Medina dressed in silks, deriding ʿAlī and ʿUthmān for having let the power slip from the control of the descendants of ʿAbd Manāf, and refusing to recognise Abū Bakr for two months. In the end, Abū Bakr appointed Khālid to defend Taymāʾ until the armies from the south arrived. At first, he carried out his task successfully; many of the local tribes joined him, and he pushed back the Byzantines. However, rushing to cover himself with glory before the other generals arrived, he pursued northwards a Byzantine general who, after simulating a retreat, defeated him. Khālid fled on horseback, leaving ʿIkrima and Shuraḥbīl the task of bringing back his scattered and demoralised forces.

Back in Medina, ʿUmar again brought up the matter of Khālid before Abū Bakr, together with that of Khālid b. al-Walīd, whom he hated even more. Abū Bakr steadfastly refused to dismiss the latter, but this time he allowed ʿUmar to dismiss Khālid b. Saʿīd, to whom he sent a very harshly-worded message. When he reached Medina and sought Abū Bakr's pardon, the latter repulsed Khālid and regretted not having listened to ʿUmar and ʿAlī. According to another tradition, Abū Bakr even forbade him to enter Medina. It was ʿUmar, after he had become caliph, who pardoned Khālid, on condition that he redeemed himself. He was then placed under the order of Shuraḥbīl, and died during the Syrian campaign of this same year, 13/635. The attention

once again accorded to him by al-Ṭabarī, who cites four *ḥadīth*s mentioning his death, shows the interest which Khālid b. Saʿīd seems to have raised; it is probable that his attitude, together with reminiscences of his friendship with Muḥammad, posed a problem of conscience for Abū Bakr.

KHĀLID B. SINĀN B. ʿAYTH AL-ʿABSĪ (see his genealogy in Ibn al-Kalbī *Djamhara*, Tab. 133), one of the personages of the interval [see FATRA] between Christ and Muḥammad who, in Islamic tradition, was considered as a prophet; he was even regarded as the first prophet to arise amongst the descendants of Ismāʿīl. He is said to have foretold the coming of Muḥammad, and the latter is said to have greeted Khālid's daughter, who had come to him, with these words "Here is the daughter of a prophet whom his people has lost"; popular belief even went as far as to attribute to him knowledge of Sūrat al-Ikhlāṣ (*Thimār al-ḳulūb*, 456). He is mentioned in connection with the fire called *nār al-Ḥarratayn* (al-Djāḥiẓ, *Ḥayawān*, iv, 476; cf. al-Ḳalḳashandī, *Ṣubḥ*, i 409-10), into which he threw himself and which he extinguished in order to demonstrate the ridiculousness of the cult of fire which had spread amongst the Arabs (*Thimār*, 456), and in connection with the *ʿanḳāʾ* [*q.v.*], whose race God destroyed as the result of a prayer of his (R. Basset, *Mille et un contes*, iii, 203-4). There is already found in al-Djāḥiẓ (*Ḥayawān*, iv, 477) a tradition according to which Khālid is said to have instructed his people to disinter him after death so that he could reveal the secrets of the hereafter; this is often repeated later (Ibn Ḳutayba, *Maʿārif*, 62, al-Masʿūdī, *Murūdj*, iv, 21-2 = §§ 1349-50; al-Harawī, *Ziyārāt*, 61/137; etc.).

These legends, together with the prophethood of Khālid, are rejected by al-Djāḥiẓ (*Ḥayawān*, iv, 478) in the name of the *mutakallimūn* who say that Khālid was a Bedouin, but God never raised up a prophet from amongst the Bedouin, hence Khālid could not have been a prophet (a syllogism taken up, in particular in *Thimār*, 456).

(Ch. Pellat)

KHĀLID B. AL-WALĪD B. AL-MUGHĪRA AL-MAKHZŪMĪ, Arab commander at the time of the early conquests. Muslim tradition gives his career as follows. He fought against Muḥammad at Uḥud, but was converted in 6/627 or 8/629 and participated in the expedition to Muʾta and the conquest of Mecca, both in 8 A.H. The Prophet charged him with the destruction of the idol of al-ʿUzzā at Nakhla and later sent him to the B. Djadhīma, whom he wrongfully attacked. In 9/630 the Prophet sent him from Tabūk to Dūmat al-Djandal [*q.v.*] where he captured the ruler al-Ukaydir and sent him to Medina. In 10/631 he was sent to invite the B. al-Ḥārith of Yemen to Islam. On the outbreak of the *ridda* or "apostasy" after the Prophet's death in 11/632, Abū Bakr sent him against the rebels, on which occasion he committed another two misdeeds, first by killing Muslims (through a misunderstanding) and next by marrying the widow of one of the victims. Abū Bakr, however, forgave him and he commanded the Muslims against Musaylima in the Yamāma. In 12/633 he was sent either directly from the Yamāma or via Medina to ʿIrāḳ where he conquered al-Ḥīra [*q.v.*], Dūmat al-Djandal and other places before crossing the desert to Syria to assist the armies there. He stayed in Syria, though his troops returned to ʿIrāḳ (Ṭabarī, i, 2145). On Abū Bakr's death in 13/634, ʿUmar b. al-Khaṭṭāb immediately dismissed him from the high command, but he fought in Northern Syria under Abū ʿUbayda and conducted a number of campaigns on the Byzantine border before his death in Ḥimṣ (or Medina) in 21/642. His son ʿAbd al-Raḥmān was governor of Ḥimṣ and the Djazīra for Muʿāwiya, who is said to have had him killed because he feared his prestige. Khālid b. ʿAbd al-Raḥmān b. Khālid, who avenged his father, is found as a commander in 48/668-9, but otherwise nothing significant is heard of the family.

There are two points of major interest in Khālid's career. Firstly, Muslim tradition is extraordinarily eager to discredit him. He is known as *Sayf Allāh*, an epithet he earned in battle against the Romans at Muʾta (Ṭabarī, I, 1617, differently in 1531), but he is condemned rather than celebrated as such, doubtless because the title belongs in the same context as that which designated the armies of Syria as *djund Allāh*, sent to take revenge from the Romans for their oppression of the Jews (Ṭabarī, i, 2409), or which knew ʿUmar b. al-Khaṭṭāb as the redeemer (*fārūḳ*, see *ibid.*). Later tradition might have reduced Khālid to *Sayf Rasūl Allāh* (cf. *Khalīfat Allāh*), but instead reduced his contribution, partly by depicting him as selfwilled, as exemplified in his misdeeds, and partly by having ʿUmar dismiss him, though, as De Goeje has pointed out, ʿUmar must on the contrary have appointed him to the high command in the first place.

Secondly, Muslim tradition has Khālid initiate the conquests in ʿIrāḳ, a point contradicted by non-Muslim sources. Sebeos (*ca.* 661 A.D.) has the Arabs divide their armies after their first successes in Syria and send one division to ʿIrāḳ (the returning armies of Muslim tradition), and the Khūzistānī chronicle (*ca.* 680 A.D.) only knows Khālid as the conqueror of Syria. In fact, Ṭabarī, i, 2018, has Abū Bakr instruct Khālid to go to Syria. The doctrinal significance of this shift is that it suppresses Syria's status as the promised land for Jews and Arabs alike (for a similar shift, compare Syria in Sebeos, 95-6, with ʿIrāḳ in Ṭabarī, i, 2254, 2285, 2289). The manner in which the shift was effected is clear when we consider the appearance of the Prophet at the head of the first invasions of Syria in non-Muslim sources (*Doctrina Iacobi*, (*ca.* 634 A.D.), 86-7; *Cont. Byz. Arab.* in *MGH*, xi, 337), which Muslim tradition has reduced to the pointless expedition to Tabūk. It was from Tabūk that the Prophet sent Khālid to Dūmat al-Djandal, the city which he is supposed to have conquered again on his later campaign in ʿIrāḳ, though this was an unlikely détour from al-Ḥīra. On initiating the conquest of Syria, the Prophet must therefore have sent Khālid to Dūmat al-Djandal, which was vital for the control of Syria, and it was from here that Khālid crossed to join the armies in Syria, a more plausible, if less romantic desert crossing than that preserved in Muslim tradition.

Cook, *Hagarism*, Cambridge 1977. (P. Crone)

KHĀLID B. YAZĪD AL-KĀTIB AL-TAMĪMĪ, ABU 'L-HAYTHAM, a Baghdādī of Khurāsānian origin who was secretary for the army in the vizierate of al-Faḍl b. Marwān (218-21/833-6) [*q.v.*], retaining his office under the ministry of Ibn al-Zayyāt [*q.v.*], until his mind gave way, in circumstances which remain obscure (Yāḳūt, *Udabāʾ*, xi, 48). He then wandered, almost naked, through the streets of Baghdād, pursued and stoned by a mob of urchins (*Aghānī*, xx, 244; al-Ṣābiʾ, *Wuzarāʾ*, 162-3). He died *ca.* 269/883.

Khālid was the boon-companion of ʿAlī b. Hishām and then of al-Faḍl b. Marwān. He had the entrée to al-Muʿtaṣim's company, was close to the poet ʿAlī b. al-Djahm [*q.v.*], and collaborated with the famous player on the *ṭunbūr*, Aḥmad b. Ṣadaḳa (*Aghānī*, xxii, 216-17, 517-18). But it is his verses which have saved him from obscurity. He described himself as a poet "who tells of the sorrows of his soul, and is not concerned with panegyric or satire" (al-Shābushtī, *Diyārāt*, 16-17; *Taʾrīkh Baghdād*, viii, 313). In practice, he was the author of short pieces of up to four verses only. When he went so far as to compose long poems in honour of al-Muʿtaṣim's victories (the ms. of his *Dīwān* contains five eulogies), Diʿbil [*q.v.*] criticised him for tackling something beyond his poetic powers. Khālid's real talent lay in the elegy, in which he describes the lover's torments and the cruelness of his solitude; the memory of the beloved haunts him, and the fatalness cf passion tortures him. His verses are addressed to women and also to ephebes, to whom he devoted numerous poems. He also wrote some moving pieces during the period when his reason was tottering. He complained at that time of the loss of his poems: "He said despairingly that people had not learnt them off by heart, and he himself had forgotten them" (*Aghānī*, xx, 244).

The term most often used by anthologists when speaking of his poetry is *riḳḳa*. We have here a delicate poetic art which expresses, in an elegant language, the various states of a sensitive and sincere mind. The importance of the sound pattern within his verses should also be noted; he often employs twice or three times in a verse the same root, and this mannerism gives shape to a subtle sense of playing with semantic substitutions.

(J. E. Bencheikh)

KHĀLID B. YAZĪD B. MUʿĀWIYA, ABŪ HĀSHIM, was one of the sons of the caliph Yazīd I and Fākhita bint Abī Hāshim b. ʿUtba b. Rabīʿa. The year of his birth is not recorded, but he was probably born *ca.* 48/668. When his brother Muʿāwiya II died in 64/683 without having designated his successor, a struggle broke out. Ḥassān b. Mālik b. Baḥdal [*q.v.*] favoured Khālid, who was however not elected because he was too young. In his place the elderly Marwān b. al-Ḥakam [*q.v.*] was chosen, on the condition that he would be succeeded first by Khālid b. Yazīd and then by ʿAmr b. Saʿīd b. al-ʿĀṣ al-Ashdaḳ [*q.v.*]. Marwān furthermore pledged himself to marry Fākhita; in doing so he won over Khālid's followers.

After his return from Egypt, however, Marwān secured the succession for his son ʿAbd al-Malik [*q.v.*], probably because he considered Khālid politically of no importance. When Khālid reminded him of his promise, Marwān insulted him publicly. In revenge the caliph was killed by Fākhita, as the somewhat legendary story has it (in reality Marwān's death in 65/685 may have been brought about otherwise).

ʿAbd al-Malik then became caliph without Khālid being mentioned again. Nor did the latter lay claim to his rights. Relations between them even became friendly. Khālid married ʿAbd al-Malik's daughter ʿĀʾisha (Balādhurī, *Ansāb*, xi, ed. Ahlwardt, 153, ll. 12 ff.), acted as his councellor and joined him in the summer of 71-72/691 in the Ḳarḳīsiyāʾ [*q.v.*] campaign against Zufar b. al-Ḥārith al-Kilābī. For the rest, Khālid seems to have confined his activities to governing his emirate of Ḥimṣ.

Besides ʿĀʾisha bint ʿAbd al-Malik b. Marwān, Khālid married Umm Kulthūm bint ʿAbd Allāh b. Djaʿfar b. Abī Ṭālib, Āmina bint Saʿīd b. al-ʿĀṣ b. Umayya and Ramla bint al-Zubayr b. al-ʿAwwām. Romantic stories are current concerning his love for this last. Khālid probably died in 85/704, during the caliphate of ʿAbd al-Malik; other sources have 90/709.

In the Ridjāl [*q.v.*] literature Khālid is counted among the Ḥadīth scholars, but his rôle as a traditionist was in fact of no importance. Also, as a poet he was no more than an amateur.

Later legend has made Khālid into an alchemist He is said to have ordered Egyptian scholars to translate Greek and Coptic works on alchemy, medicine and astronomy into Arabic, and to have learned alchemy from a Byzantine monk by the name of Maryānos (the name Stephanos is also mentioned). All this is however not historical. These legends can be traced back to an anecdote according to which Khālid was sneered at because he had been robbed of the caliphate and henceforward was wasting his time by trying to get at something impossible (*ṭalab mā lā yuḳdaru ʿalayhi*, Balādhurī, *Ansāb*, ivb, 71, ll. 5). This wording was later interpreted as meaning alchemy (*yaʿnī 'l-kīmiyāʾ*). When this interpretation had become part of the anecdote (see, e.g., *Aghānī*[1], xvi, 90, ll. 7 = [3]xvii, 345, ll. 12), Khālid's name became attached to important alchemical works, like the *K. Firdaws al-ḥikma*, a large *dīwān* of alchemical didactic poems, and several other treatises such as the Maryānus-legend, his last will to his son etc. In the Latin Middle Ages works attributed to *Calid filius Jazidi* were in circulation.

KHĀLID ḌIYĀʾ, USHĀḲĪ-ZĀDE, originally MEHMED KHĀLID, ḌIYĀʾ AL-DĪN (Mod. Tkish. Halid Ziya Uşaklıgıl), 1868-1945, Turkish novelist and short story writer, the greatest representative of prose in the *Therwet-i fünūn* (*Edebiyyāt-i djedīde*) literary school of the late 19th century. His family originated from Ushāḳ in western Anatolia where they were known as Ḥelwādjī-Zāde. Apart from sweetmeat (*ḥelwā*) trading, they also owned the leading carpet business of the area, winning an international reputation under the management of Khālid's grandfather Ḥādjdjī ʿAlī Efendi, who eventually moved his carpet business to İzmir where the family came to be known as Ushāḳī-Zāde. Ḥādjdjī ʿAlī sent his eldest son Khalīl to Istanbul to start a branch of the firm. Khālid Ḍiyāʾ was born there in Eyyūb in 1868 (1284 *Rumi* year), as the youngest of the three children of Ḥādjdjī Khalīl Efendi and his wife Behiyye Khānïm (H. Z. Uşaklıgıl, *Kırk Yıl*, 1 vol. edn., Istanbul 1969, 9-11). Khalīl Efendi was a devout man with a keen interest in Ṣūfism and a knowledge of Arabic and Persian who read, in his spare time, the *Dīwān* of Ḥāfiẓ and Rūmī's *Mathnawī*. The family soon moved to a *konak* near the Süleymaniye district. Khālid attended various local schools and avidly read at home all the folk stories and other popular tales he could get, and also attended frequently performances at the then famous Gedik Pasha Theatre, thus developing a passion for the theatre (*ibid.*, 32-6). Ḥādjdjī Khalīl lost his fortune during the turbulent period preceding and following the war with Russia (1877), and moved with his family to İzmir to live on the property of his father, whose business had continued to flourish. At the age of ten, Khālid discovered the great popular novelist Aḥmed Midḥat [*q.v.*]. This enthusiasm was soon shared by Ḥādjdjī ʿAlī Efendi, who asked his grandson to read this author's famous novels and the books of other writers then in vogue, in the evenings, in the presence of his important visitors. With the help of his grandfather, Khālid quickly built up a library of his own. He first attended the local secondary school (*rüshdiyye*), but soon transferred to a French-language school run by the Mekhitarists, where he was the only Turkish pupil. In the meantime, he had become acquainted with the works of modernist writers like Nāmïḳ Kemāl and ʿAbd al-Ḥaḳḳ Hāmid. Some of the teachers in his new school who discovered his talent, guided him in his readings in French literature, in which he read avidly.

Science was his great hobby and he made many translations from popular scientific books, some of which are among his earliest publications. They appeared in the official provincial paper *Aydïn* and in the Istanbul periodical *Khazīne-i evrāḳ* for March 1883. Also at this time, he sent his first original writings to the same periodical. He experimented with a poem *ʿAshḳïmïn mezārï* ("The Grave of my Love") which he sent to the Istanbul daily *Terdjumān-ï ḥaḳīḳat*. It was published, with ironical remarks of Muʿallim Nādjī [*q.v.*], who was later to become the main opponent of the new school. Leaving school at seventeen, he began to work as a clerk in his father's business, took lessons in English and dancing and enjoyed the cosmopolitan life of İzmir society. In 1884 he founded, with his poet friend (later a Young Turk) Tewfīḳ Newzād (1865-1906), the short-lived review *Newrūz* where he serialised the translations of Georges Ohnet's *Le Maître de forges* as *Demirkhāne müdürü*. He made a short abortive trip to Istanbul to try his chance at entering a diplomatic career, but he did, however, meet there important personalities of the literary and publishing world and secured the publication of his *Gharbdan sharḳa seyyāle-i edebiyye* ("Literary current from the West to the East"). Back in İzmir, he was appointed teacher of French at the *Rüshdiyye* and an accountant at the Ottoman Bank, where he was the only Turkish employee. Later, he also taught at the local lycée (*iʿdādī*). In 1886 he founded, again with Tewfīk Newzād, the newspaper *Khidmet* where he published his *Menthūr shiʿirler* ("Poems in Prose") (published in book form in 1889) and began to serialise his first novel *Sefīle* ("The wretched woman"), which was stopped by the censor. Some of his short stories and his second novel *Nemīde* were also serialised in *Khidmet*. The loss of his mother in 1886 inspired his poems in prose *Mezārdan sesler* ("Voices from the grave"), followed by his third novel *Bir ölünün defteri* ("The diary of a dead man"), also serialised in *Khidmet*. In the meantime, Khālid Ḍiyāʾ married Memnūne Khānïm, the daughter of a tax director (and a niece of Köse Rāʾif Pasha, 1836-1911).

He accompanied an uncle on his European trip, as far as the Paris exhibition of 1889; he was particularly impressed by Paris, which he knew so well from Balzac's novels. The years 1889-93 were full of bitter experiences for Khālid Ḍiyāʾ: several losses in the family, including his four month's old daughter and his grandfather, and the arrest and banishment of one of his uncles for being involved in a secret society. In the middle of this turmoil, he finished his fourth novel *Ferdī ve shurekāsï* ("Ferdī and co."), serialised in *Khidmet* (published in book form in 1312/1896). At the same time, he translated specimens from world literature (including Sanskrit and Hebrew) which were later published in four volumes (*Nāḳil*, 1308/1892).

About this time, he met Redjāʾī-Zāde Ekrem, who was passing through İzmir, and who invited him to come to Istanbul to join the group of young writers there. After resigning from the Ottoman Bank, and a brief period as acting director of the Foreign Affairs (*Meṣāliḥ-i edjnebiyye*) Department at the Vilāyet, he received an offer to become First Secretary to the Director of the *Reji* (Régie, administration of the tobacco monopoly) in Istanbul, which he eagerly accepted. This was a turning point in his literary career. He arrived in Istanbul on 31 August 1893 (amid the anniversary celebrations of ʿAbd al-Ḥamīd II's enthronement) and immediately began to visit the celebrities of the literary and publishing world like Redjāʾī-Zāde Ekrem, Aḥmed Midḥat, Muʿallim Nādjī, Abu 'l-Ḍiyāʾ (Ebüzziya [*q.v.*] Tewfīḳ, ʿAlī Ekrem and Aḥmed Iḥsān. Within a very short time, he had met all the leading writers of the new group: Meḥmed Raʾūf, Ḥuseyn Djāhid

[*q.v.*], Djenāb Shihāb üd-Dīn, and free-lance writers like Rīzā Tewfīḳ (Bölükbashī), Aḥmed Rāsim [*q.v.*] and Ḥuseyn Raḥmī [*q.v.*]. Some time later, he met the poet who was to be his great partner in the new movement, Tewfīḳ Fikret [*q.v.*]. His office, comparatively safe from Ḥamīdian control, since the *Reji* was a foreign establishment, became gradually a kind of a literary club where long and excited discussions were held at a period when a meeting of more than three people was forbidden. Khālid Ḍiyāʾ began to write short stories for Aḥmed Iḥsān's *Therwet-i fünūn* [*q.v.*] (originally a popular science magazine founded in 1891 as the weekly supplement of *Therwet*) and for the dailies *Iḳdām* and *Ṣabāḥ*. In 1894, he also began to contribute to the literary fortnightly *Mekteb* (originally a children's magazine, founded in 1891), where several members of the new group published their works. An article he published in *Mekteb* on Sanskrit literature, where he discussed Indian philosophy and pantheism, was denounced to the Palace by an informer's *jurnal* which claimed that the author was trying "to spread the doctrine of the materialists (*Māddiyyūn*) in the country". Although the article had passed the censorship, Khālid Ḍiyāʾ was summoned to the residence of the Minister of Public Security (*Ḍabṭiyye nāẓīrī*). *Mekteb* ceased to appear, and most of the young writers moved over to *Therwet-i fünūn* which seemed safer, thanks to a friend and a protector of Aḥmed Iḥsān's in the Palace. On Redjāʾī-Zāde's invitation, Khālid Ḍiyāʾ joined it under Tewfīḳ Fikret's editorship (1896). For five years *Therwet-i fünūn* became the most representative organ of the new, western-oriented literary school of *Edebiyyāt-ī djedīde* or *Therwet-i fünūn edebiyyātī*. It was in the *Therwet-i fünūn* that Khālid Ḍiyāʾ serialised his famous novel *Māʾī ve siyāh* (Nos. 273-317) and his masterpiece *ʿAshk-ī memnūʿ* (Nos. 413-79), and many of his short stories and articles appeared there. But all this suddenly came to an end: a *jurnal* sent to the Palace (probably by Baba Ṭāhir, editor of the rival conservative periodical, *Maʿlūmāt*) informed the Ḥamīdian censors that in issue No. 553 of the *Therwet-i fünūn*, published in October 1901, the forbidden words "French Revolution" appeared, in an article translated from the French by Ḥuseyn Djāhid (for details and the text of the article, see Hüseyin Cahit Yalçın, *Edebi hatıralar*, Istanbul 1935, 161-9). The journal was immediately suspended, and when it was allowed to reappear again, all literary writings were banned and it could only publish articles on popular science. Khālid Ḍiyāʾ interrupted the serialisation of his novel *Ḳīrīḳ ḥayātlar* ("Broken Lives"), which had already been mutilated by the censorship, and wrote nothing for more than six years until the Revolution of 1908, meanwhile living in his villa in Ayastafanos (present Yeşilköy). During the nine months' period between the restoration of the constitution in 23 July 1908 and the deposition of ʿAbd al-Ḥamīd II, following the mutiny of 13 April 1909, Khālid Ḍiyāʾ wrote extensively in many of the dailies and periodicals which quickly mushroomed after the abolition of the censorship. He also serialised in the daily *Ṣabāḥ* his period novel *Nesl-i akhīr* ("The last generation" which he never published in book form; cf. Cevdet Kudret, *Türk edebiyatında hikaye ve roman*[2], 176-80). Also during this period, he was appointed government representative at the *Reji* (virtually a sinecure) and Professor of Western Literature and Aesthetics in the University.

In the meantime, he had become a member of the Committee of Union and Progress (CUP) [see ITTIḤĀD WE TERAḲḲĪ DJEMʿIYYETI]. On the day of Meḥemmed V's accession on April 27, 1909, he was appointed First Secretary to the new Sultan, and shortly afterwards he was also made a senator. When the CUP government fell from power in July 1912, the new Grand Vizier Ghāzī Aḥmed Mukhtār Pasha suggested to the Sultan that Khālid Ḍiyāʾ should be replaced (Luṭfī Sīmāvī, *Sulṭān Meḥemmed Reshād Khānīn we Khalefinin sarāyīnda gördüklerim*, Istanbul 1924, 82-5). He left the Palace on 30 July 1912 and returned to his writings and to his chair in the University. After the Unionists came back to power in January 1913, he was sent several times to Europe on various missions. At the end of the First World War, he was in Germany, but returned to Istanbul in 1919 and became later the chairman of the governing body of the *Reji*. Otherwise, he lived in seclusion in his country house, concentrating on the revision of his works for a final edition, carefully avoiding any involvement in politics. During the decade following the Nationalist victory in Anatolia (30 August 1922) and the proclamation of the Republic (29 October 1923), many leading personalities of the Istanbul literary world (with the exception of those who had openly disapproved of the Kemālist movement, e.g. Djenāb Shihāb üd-Dīn) found themselves elected to the Grand National Assembly. Khālid Ḍiyāʾ, however, was never considered as a candidate (Yusuf Ziya Ortaç, *Portreler*, Istanbul, n.d. [1960], 34), probably because of his earlier association with the Palace and the Unionist leaders.

When Muṣṭafā Kemāl (Atatürk) started his language reform movement in 1932, with the inauguration of the First Turkish Linguistic Congress in Istanbul, Khālid Ḍiyāʾ joined the host of writers and scholars who declared their enthusiastic approval of the movement (*Birinci türk dili kurultayı, tezler ve müzakere zabıtları*, Istanbul 1933, 330-42; the single exception being Ḥuseyn Djāhid (Yalçin), *ibid.*, 270-9).

Khālid Ḍiyāʾ's last years were troubled with family misfortunes, culminating in the suicide in 1937 of his young diplomat son Khalīl Wedād. His last two public appearances were his participation in 1942 in the 50th anniversary jubilee of his career as a writer and his chairmanship in Ankara of the committee for the "Best novel" prize (awarded to Khālide Edīb's *Sinekli bakkal*). He died on 27 March 1945 in his country house at Yeşilköy near Istanbul. An extremely prolific author, Khālid Ḍiyāʾ contributed to all branches of prose literature as journalist, essayist, publicist, popular science writer, playwright and translator. But his name is particularly associated with the short story and novel, of which he is the real founder in modern Turkish literature.

Novels and short stories in modern sense did exist before him. After ʿAlī ʿAzīz's [*q.v.*] *Mukhayyalāt* (1796), which is a transition between the old and the new type of story-writing, and several translations (mainly from the French) in the 1850's and 1860's, the tendency to modernise the narrative technique is apparent in Turkish literature. If we leave out the pioneer work of the scholar-writer Shems üd-Dīn Sāmī's *Taʿashshuḳ-i ṭalʿat we fītnat* (1872) and experiments by Nāmīḳ Kemāl (*Intibāh*, 1876) and some of his associates (particularly Sāmī Pasha-Zāde Sezāʾis's *Sergüdhesht*, 1889), the great representative of the novel among the generation of *Tanẓīmāt* modernists is Aḥmed Midḥat, whom Khālid Ḍiyāʾ greatly admired; see his note at the end of his un-

finished translation of George Ohnet's *Maître de forges*, *Demirkhāne müdürü*, 1889). Hüseyn Raḥmī, an independent contemporary of Khālid Ḍiyā᾿, was a follower of the Aḥmed Midḥat school and soon became an equally popular novelist. Although Khālid Ḍiyā᾿, as a boy-writer, was an admirer of Aḥmed Midḥat and had a high opinion of Ḥüseyn Raḥmī's talent (*Kırk yıl*, 421), there is hardly any trace of the old Turkish popular narrative technique or the influence of the French novels of adventure and entertainment, even in his early novels of the formative İzmir period (1888-93). These romantic and, at times, over-sentimental, love stories with some elements of realism (particularly in *Ferdī ve shurekāsī*, 1893), already reveal a complete break with traditional methods of story-telling and develop a well-disciplined narrative technique where there is no room for irrelevant digressions or "small talk" with the reader (for synopses and analyses of Khālid Ḍiyā᾿'s individual novels, see *Bibl.*). Khālid Ḍiyā᾿ perfected this technique in his later novels of the Istanbul period, inspired mainly by the method and style of French realists and naturalists, and until the middle of 1930's, his works remained the best examples of realism in the Turkish novel. Two titles stand out: *Mā᾿ī ve siyāh* ("Blue and black", 1897) which describes the dreams, struggles and eventual disillusionment of a young poet and writer, and *ʿAshk-ı memnūʿ* ("Forbidden Love", 1900), generally considered his best novel, which tells the story of the desperate love of a young woman who could not find happiness in her marriage to an elderly rich man. In both these novels and in his later works, the environment and the setting are described in minute detail and the characters are submitted to exhaustive psychological analysis. The setting and the characters are often chosen from upper or upper-middle class of Istanbul, for which Khālid Ḍiyā᾿ has been severely criticised. A stereotype judgement on him is that his characters are not typically Turkish and never leave Istanbul. This is obviously an unfair criticism. Under the Ḥamīdian régime, travel, even within the country, was restricted and supervised, and writers had to confine their observations by necessity to Istanbul. Also as a member of a well-to-do upper-middle class family, and very reserved in temperament, Khālid Ḍiyā᾿ described only the type of people with whom he came into direct contact. We know now, from various sources, particularly from many Turkish and foreign memoirs, that an exclusive upper-class Turkish society flourished in Istanbul following the *Tanẓīmāt*, particularly after the 1880s. It led an *alla franca* (*alafranga*) way of life which is faithfully described by Khālid Ḍiyā᾿ and his colleagues of the *Therwet-i fünūn* school (and ridiculed by others, see Ḥüseyn Raḥmī). Even so, ordinary people, even working-class people, were not been ignored by Khālid Ḍiyā᾿, who described them with equal realism in some of his novels, but particularly in most of his numerous short stories. He himself bitterly complains that the exotic titles of a few of his short stories (e.g. *Mösyö Kanguru* in *Solghun demet*, 1901, *Bravo maestro* in *Bir yazīn ta᾿rīkhi*, 1900) gave rise to sweeping and unfair judgements that he concentrated on non-Turkish subjects (*Kırk Yıl*, 479-81). Moreover, we know that there is a considerable autobiographic element in most of his work, and that many of his characters are based on or inspired by people he himself had known.

As a consequence of their principle of "art for art's sake" Khālid Ḍiyā᾿ and his friends of the movement chose to write in an extremely precious and artificial language which was full of rare Arabic and Persian words and compounds. They thus deviated from the trend of the first generation of modernists (the *Tanẓīmāt* writers) who made an attempt (not always successful) to create a style which would be understood by a larger audience. Khālid Ḍiyā᾿'s manner of writing was indeed very unusual: endless waves of long intricate sentences loaded with lots of unheard of foreign words, interspersed with symmetrical chains of Persian *izāfe*s, but using a faultless technique to construct his plots. Khālid Ḍiyā᾿ realised, before most of his colleagues, that this hopelessly artificial language, created by the *Therwet-i fünūn* triumvirate (Tewfīḳ Fikret, Djenāb Shihāb üd-Dīn and himself) and other members of the new school, was a dead end, and its excesses outbalanced by far what contribution they made to the improvement of Turkish syntax and verse technique. In his memoirs he looks back to this phenomenon of preciosity and finds it "irritating", calling this morbid urge to gild the lily "a disease of the East", but nevertheless trying hard to justify it for the period (*Kırk yıl*, 465-72). Khālid Ḍiyā᾿ spent the last decades of his life touching up the language and style of his novels, "simplifying" them and in some cases re-writing entire passages. In spite of this linguistic handicap, however, Khālid Ḍiyā᾿s works are far from being forgotten today. Although half-a-dozen leading novelists of the succeeding generations almost revolutionised the genre, Khālid Ḍiya᾿ is still considered by many not only the founder but *the* great master of the novel in Turkish literature. Some of his works have been filmed and produced on television, and his complete works are being published in modern Turkish paraphrase (edited by Nevzat Kızılcan, Istanbul, 1975-6). This may perhaps be partly explained by the recent "Ottomanist revivalism" in literature.

Khālid Ḍiyā᾿ published three books of memoirs, the only important work outside his fiction: *Kirk yil*, 5 vols, Istanbul 1936, one vol. ed., Istanbul 1969, which deals with the first forty years of his life, is about his family, his school years and his literary activities in İzmir and Istanbul; *Saray ve ötesi*, 3 vols, Istanbul 1940-2, one vol. ed., Istanbul 1965, reminiscences of the court of Meḥemmed V; *Bir acı hikâye*, Istanbul 1942, is mainly about his son Khalīl Wedād and his death. These memoirs are selective and of limited interest, as the reserved and over-cautious character of the author did not always allow him to treat freely and discuss impartially the people he had known and events he witnessed. Finally, Khālid Ḍiyā᾿'s research work, including his courses in the University, were mostly based on translation or compilation.

(FAHİR İZ)

AL-KHĀLIDĀT. [see AL-DJAZĀʾIR AL-KHĀLIDĀT].

KHĀLIDE EDĪB (modern Turkish, Halide Edib Adıvar), prominent Turkish novelist, writer and nationalist, (1884-1964). She was born in Beshiktash not far from the Yıldız Palace, where her father Meḥmed Edīb Bey was First Secretary to the Sultan's Privy Purse (*djeyb-i hümāyūn serkātibi*). Edīb was the adopted son of a Sheykh Maḥmūd of Salonica, who brought him up and later sent him to Istanbul for further education (Halide Edib, *Memoirs*, New York 1926, 200). In later life, he served as director of the Tobacco Régie in Yanya (Janina) and Bursa. Khālide's mother Bedrfem Khanīm was a daughter of ʿAlī Agha from Kemaḥ (in northeastern Anatolia), a former Chief Coffee Maker (*Ḳahvedji Bashī*) in the Palace of Prince Reshād (Meḥemmed V) who had become the Warden of the Porters' Guild (*Ḥammāllar Kāhyasī*). At the age of 15, Bedrfem had been married to ʿAlī Shāmil Bey (later Pasha, 1855-1908), but this marriage did not last, and Meḥmed Edīb was her second husband. A few years later she died of consumption. As Edīb Bey soon remarried, Khālide's need for motherly affection was filled by her grandmother, her half-sister Makhmūre and by other members of both households.

The women folk and the servants initiated her into the traditional Muslim and Turkish way of life and the popular stories and epic tales of folk literature. A local *imām* taught her to read and write and recite the Ḳurʾān. When she was eleven, her father sent her for a year to the American College where she learned English and studied the Bible, to the horror of the people at home. Khālide then had an English governess, and several celebrated tutors, particularly Riḍā Tewfīḳ (Bölükbashī, [*q.v.*]), the pioneer of folk-inspired poetry, (Rūshen Eshref, *Diyorlar ki*, Istanbul 1918, 133-4, 179). In 1899 she re-entered the American College as a boarder, where she was the only Turkish pupil. The year 1900 was a turning point in her life, as the mathematician Ṣāliḥ Dhekī Bey (see İ. A. Gövsa, *Türk meşhurları ansiklopedisi*, Istanbul 1948, s.v.) became her tutor; she married him in the year of her graduation (1901), and had two sons by him. During the years 1901-8, she read deeply in Shakespeare, Zola and the Ottoman chroniclers. In July 1908, when the Constitution was restored, she became a writer overnight, urging immediate educational and social reforms. Her articles were published mainly in the daily *Ṭanīn*, organ of the Committee of Union and Progress (CUP), founded in August 1908 by Ḥüseyn Djāhid and Tewfīḳ Fikret [*qq.v.*], and found an immediate favourable response. Following the counter-revolutionary attempt of 13 April 1909, Khālide thought her life was endangered and went to Egypt and from there to England, where her visit to Parliament particularly impressed her, as did also a speech of the Irish nationalist John Dillon which "was one of the emotional causes which started her on the road of nationalism" (*op. cit.*, 293). Back in Turkey in October 1909, she wrote her first important novel *Seviyye ṭālib* (published in 1910), and while continuing her articles on educational problems, joined the staff of the Women Teachers' Training College (*Dār al-muʿallimāt*), and with the help of the noted educationist Naḳiyye Khanīm (Nakiye Elgün, 1882-1965) reformed its syllabus and administration. In the meantime, she was divorced from Ṣāliḥ Dhekī Bey, having left home immediately after he had told her that he had married a second wife (1910). Soon she was attracted by the new movement of Turkism (*Türkčülük* [*q.v.*]). She wrote her novel *Yeñi Tūrān* (1911) and joined the activities of the Turkish Hearth (Türk Odjaghī [*q.v.*]), where she worked with Ḍiyāʾ Gökalp [*q.v.*] and his associates. When she resigned her teaching position over a conflict of principle with the Minister of Public Instruction Shükrī Bey (see Gövsa, *op. cit.*, s.v.), she became Inspector-General of *Ewḳāf* Schools which the minister, (the later *Sheykh al-Islām* Muṣṭafā Khayrī Efendi [*q.v.*]) decided to modernise. This gave her an opportunity to visit and study the outlying and poorest districts of Istanbul and their people, which incidentally became valuable for her novels. At the same time, she joined with Naḳiyye (Elgün) in the activities of the Women's Club (*Taʿālī-yi Niswān Djemʿiyyeti*) in social relief work and nursing.

In the autumn of 1916, at the invitation of Djemāl Pasha [*q.v.*], Army Commander in Syria, she toured all the important educational institutions there, and then returned to Istanbul after submitting her report. She subsequently continued her educational activity there by organising schools and by reforming the large ʿAyntura Orphanage. Meanwhile, she was married to Dr. ʿAdnān (Adıvar [*q.v.*]), a leading member of the CUP, by proxy (23 April 1917). Her educational work completed, she returned to Istanbul in early March 1918. In the autumn of the same year the war was over. After the Armistice of Mudros (30 October), the CUP triumvirate and many leading members of the Committee fled the country, and the Allied fleets entered Istanbul.

Parliament was dissolved, Italian troops occupied Antalya, and the Greeks, supported by the Allies, landed in Izmir (15 May 1919) and were advancing towards the interior. Sporadic resistance and guerilla warfare started in Anatolia. Khālide Edīb joined in protest rallies, and her name is particularly associated with the historic mammoth meeting of 23 May in Sulṭān Aḥmed Square, where she made a famous moving and dramatic address; her bust stands there today in memory of that unique occasion (Halide Edib, *The Turkish ordeal*, New York 1928, 32-3). In the following week, 55 intellectuals were deported to Malta by the British. In the meantime, Muṣṭafā Kemāl Pasha (Atatürk) had assumed the leadership of the resistance movement in Anatolia. On 10 August of the same year, Khālide Edīb wrote a famous controversial letter to Muṣṭafā Kemāl Pasha in support of an American mandate over Turkey (Ghāzi Muṣṭafā Kemāl, *Nuṭuḳ*, Ankara 1927, 56-9; *Speech*[2], Istanbul 1963, 76-80). She represented a group of opinion which thought that in the summer of 1919 there could be an alternative to armed resistance and to the partition of the country, *sc.* by asking for a great power's mandate (H. N. Howard, *The King-Crane Commission*, Beirut 1963, index; Sabahattin Selek, *Anadolu Ihtilali*[2], Istanbul 1968, 276-8; Niyazi Berkes, *Türkiye'de çağdaşlaşma*, Ankara 1973, 419-20). At Khālide's suggestion, an American representative was sent to the Congress of Sivas

(4-11 September) by Charles R. Crane, the co-chairman of the American King-Crane Commission, in order to interview Muṣṭafā Kemāl and to investigate the question of the American mandate (*Nuṭuḳ*, 63, *Speech*², 85-6, Kinross, *Atatürk*, 188, Howard, *op. cit.* 289-90). The idea was discussed and definitely rejected by the Congress (Ali Fuat Cebesoy, *Milli mücadele hatıraları*, Istanbul 1953, 175-6). During the winter months of 1919-20 Khālide kept in close contact with the Nationalists and their supporters in Istanbul and talked frequently to a number of American and British officials, but there came a reinforced occupation of Istanbul by the British (16 March 1920), followed by a raid on the Parliament and more arrests and deportations, so that the recently-elected pro-Nationalist Parliament which had adopted the National Pact (see MĪTHĀḲ-I MILLĪ) had to prorogue itself on March 18 (see B. Lewis, *Emergence*², 251). To avoid certain arrest and deportation (see *Ordeal*, 65-8, and A. E. Yalman, *Gördüklerim ve geçirdiklerim*, ii, Istanbul 1970, 55) Khālide and her husband Dr. ʿAdnān went into hiding in a dervish convent (Özbekler tekyesi) in Üsküdar and left secretly for Ankara. They arrived in Ankara on 1 April 1920 (followed shortly by Colonel ʿIṣmet (Inönü) and Fevzī (Çakmak) Pasha (G. Jaeschke, *Türk kurtuluş savaşi kronolojisi*, Ankara 1970, 96-100), and she immediately began to work in the "Agricultural School", the headquarters of the Nationalists, where she surveyed the foreign press, collected news for the "Anatolian Agency", translated or drafted English and French correspondence and occasionally contributed to the daily *Ḥākimiyyet-i milliyye*, the organ of the Nationalists. She soon became a member of their "inner circle", and with Muṣṭafā Kemāl Pasha, and five other Nationalist leaders, was condemned to death on 11 May by the sultan's government in Istanbul. In the fighting in central Anatolia, the first victory of the nationalist regular army was won by ʿIṣmet at Inönü (10 January 1921), a few days after the guerilla leader Čerkes Edhem [*q.v.*] had gone over to the Greeks. Khālide Edīb was busy in Ankara, mobilising the women of the city and reorganising the Red Crescent and relief work. Before the Greek offensive of July, she went to Eskishehir and worked as a nurse in the Red Crescent hospital until the fall of the city. On August 5 1921, Muṣṭafā Kemāl was elected generalissimo (*Bash kumandan*), and soon afterwards, Khālide Edīb volunteered for work on the Western front under ʿIṣmet Pasha. During the critical weeks before and during the battle of Sakarya [*q.v.*], 22 August-11 September, she served in the general headquarters (*Ordeal*, 284-310); she was promoted to corporal (*onbashî*), and the name *Khālide Onbashî* became the symbol of Turkish women who took part in the national struggle. Towards the end of December 1921, she moved to Aḳshehir (between Afyon and Konya), the new headquarters, and she spent the best part of the eight first months of 1922 with the army, which was preparing for the great offensive. On 24 August she was summoned to the front just before the offensive started. After the decisive battle of Dumlupinar on 30 August the Greek army began to retreat, burning cities and villages and massacring the civilian population in their wake (Lord Kinross, *Atatürk*, London 1971, 318). After spending a week in recaptured Izmir with the leaders, Khālide, now a sergeant-major, left with a group of journalists to inspect and report on the devastated area between Izmir and Bursa (published in *Izmirden Bursaya*, in collaboration with Yaʿḳūb Ḳadrī and Fāliḥ Rîfḳî, Istanbul 1922). After the armistice of Mudanya (11 October) which confirmed the triumph of the Nationalists, the sultanate was abolished by the Grand National Assembly presided over by Dr. ʿAdnān (1 November) and Khālide settled in Istanbul, as her husband was appointed representative of the Ankara Ministry of Foreign Affairs (*Khāridjiyye mürakhkhaṣî*) in Istanbul.

Ideological differences between Muṣṭafā Kemāl, an uncompromising radical, and most of his close associates (including Khālide and ʿAdnān), who were conservatives or liberals, soon developed into a rift culminating with the foundation (17 November 1924) of the Progressive Republican Party (*Teraḳḳîperver Djumhūriyyet Fîrḳasî* [*q.v.*]). This party was soon suppressed (3 June 1925) following the counter-revolutionary rebellion, led mainly by Kurdish *sheykhs*, in the east. Khālide Edīb and Dr. ʿAdnān had left for Europe before the discovery on 15 June 1926 of the conspiracy against Muṣṭafā Kemāl's life, planned mainly by a group of former Unionists. All leading members of the former Progressive Party, suspected of the complicity with the plotters, were arrested. Dr. ʿAdnān was tried in his absence, and although completely acquitted, he and Khālide Edīb lived in self-imposed exile in Europe for fourteen years.

During the four years when she lived in England (1924-8) she wrote her memoirs and continued to write novels which were serialised in the Turkish dailies (see N. A. Banoğlu's interview with Khālide Edīb in the *Yedigün* of 28 May 1939). During 1929-39 she lived mainly in Paris, where her husband was lecturer in Turkish at the École des Langues Orientales Vivantes. In 1929 she was in the United States, and went on a lecture tour of various American Universities. She was a visiting professor at Columbia University during the 1931-2 academic year. In 1935 she went to India to lecture on the political and cultural background and contemporary problems of Modern Turkey, at the *Djāmiʿa Milliyya Islāmiyya* of Delhi, then left for a lecture tour of the principal universities of the sub-continent. Back in Paris, she wrote more novels, particularly her only novel in English, *The Clown and his daughter*, which she later re-wrote in Turkish as *Sinekli bakkal* (see below). She paid a brief visit to Istanbul in August 1935 and returned to Turkey on 5 March 1939 for good, four months after Atatürk's death (10 November 1938). In December 1939 Khālide Edīb was appointed the chairman of the newly-founded department of English at the University of Istanbul where she trained, in ten years, a team of young scholars with whom she worked on new translations of Shakespeare. Elected as an independent member of Parliament for Izmir at the general elections of May 1950, she retired from political life in January 1954. Dr. ʿAdnān died in July 1955 and her health began to decline; she herself died in her modest home in Bayezid on 9 January 1964 at the age of eighty.

Khālide Edīb was a woman of small stature but with extraordinary energy and vitality. Although considered primarily a novelist, Khālide Edīb was an extremely prolific and versatile writer and her enormous output extending over nearly 60 years covers a wide area: novels, short stories and essays, criticism, articles on social, educational and political topics, plays, memoirs, translations and research. Many of her essays, etc. appeared in various dailies and periodicals, where most of her novels were also serialised. Khālide Edīb (who signed her name Khālide Ṣāliḥ until her divorce from Ṣāliḥ Dhekī in 1910) started her career in the daily *Ṭanīn* and since

then she contributed mainly to the dailies *Akshām/Akşam*, *Wakit*, *Ikdām*, *Djumhūriyyet* (*Cumhuriyet*), *Yeni Istanbul* and periodicals *Türk Yurdu*, *Büyük Medjmūʿa*, *Dergāh*, *Yedigün*, *Hayat*, etc. (for a detailed list with dates, see the introduction of İnci Enginün's anthology *Halide Edip Adıvar*, Istanbul 1975).

Her twenty novels can be divided into three categories: (1) Novels where love and passion are the central themes, and the heroines, who predominate, are submitted to elaborate psychological analyses, e.g. some of her early novels like *Seviyye ṭālib* (1910), *Khandān* (1912), *Son etheri* (serialised in 1913, published 1919), *Mewʿūd hüküm* (1919) and the two novels of the twenties: *Kalb aghrīsī* (1924) and its continuation *Zeyno'nun oghlu* (1926). All these novels have considerable autobiographical elements and the passionate, independent, strong-willed heroines symbolise the author's ideal of the emancipated Turkish woman; until she joined the Nationalists in 1921, the settings are mainly those of the "westernised", upper class, well-to-do families following (perhaps unconsciously) the tradition of the preceding *Therwet-i Fünūn* [*q.v.*] school, a fact severely criticised by Gökalp (*Memoirs*, 319); the setting of the last-mentioned two novels switches from Istanbul and Europe to the Anatolian countryside. (2) Novels on the episodes of the War of Liberation: *Āteshden gömlek*, (serialised in *Ikdām* from 6 June to 11 August 1922, published 1923; Eng. tr. by Y. Khan, *The Daughter of Smyrna*, Lahore 1938) and *Vurun kahbeye!* ("Hit the whore!", serialised in *Akshām*, 1923, published 1926); these are based on personal experience and first-hand information, like most of her short stories of the same period (see *Dagha čikan kurt*, Istanbul 1922, enlarged 4th ed. 1963). These novels were pioneering works on this period; they became immensely popular and were filmed several times (see Aytekin Yakar, *Türk romanında milli mücadele*, Ankara 1973). (3) Period Novels. After the age of fifty, Khālide Edīb produced a series of novels in which she proposed to describe the various aspects of Turkish society, beginning with her most famous novel *Sinekli bakkal* (originally written in English as *The clown and his daughter*, London 1935) serialised in the Istanbul daily *Haber* in 1935 and published in 1936, which won the Republican People's Party's prize for the Best Novel in 1942, became an all-time best seller in Turkish literature (33rd edition in 1976) and was filmed in 1968. This is mainly a description of the Istanbul society in its various aspects at the turn of the century during ʿAbd al-Ḥamīd II's autocratic rule. A *Karagöz* [*q.v.*] performer and his talented daughter with a beautiful voice who live in a back street of Istanbul ("in the quarter of fly-ridden grocers") are the central characters of the novel, assisted by a great number of secondary heroes, including the inevitable Ḥamīdian *pasha* and Young Turks (synopsis in *Litteratur-lexikon*, see Bibliogr.). This popular novel was presumably conceived to cater for a foreign audience in search of exotic details which explains its somewhat artificial "mystic" atmosphere and its unconvincing dénouement. It was followed by *Tatarcık* ("The Little Tatar") in 1939, an equally unrealistic description of the generation of the young people grown up during the author's years of exile (for a synopsis, see *op. cit.*, and Muzaffer Uyguner, *Halide Edib Adıvar*, Istanbul 1968, 63). After 14 years of absence, Khālide Edīb settled down again in an old district of Istanbul where she soon built up a large circle of friends, but also discovered the new world of the Anatolian peasants and small town-dwellers who had moved to Istanbul. Most of her novels written after the last two mentioned above, particularly *Sonsuz panayır* ("The eternal fair", 1946), *Döner ayna* ("The revolving mirror", 1954), *Akıle Hanım sokağı* ("Akıle Hanım Street", 1958) contain a realistic rendering of her personal experiences and of her observations of Turkish society in the late 40's and the 50's, and describe powerfully the panorama of the various types and problems of a society in the process of rapid political and social change in the years following the World War II.

Her novel *Yeñi Tūrān* (serialised in *Ṭanīn* in 1912 and published the same year, German tr. by F. Schrader, *Das neue Turan*, 1916) stands by itself as a fruit of her brief courtship with Pan-Turanianism or Pan-Turkism, supported at the time by the CUP (synopsis in *Litteratur-Lexicon*, see Bibliogr.); although she later rejected Pan-Turkism as a political creed (Halide Edib, *Türkiye'de şark, garp ve Amerikan tesirleri*, Istanbul 1956, 99-101), this novel is nevertheless imbued with the strong nationalistic spirit that characterises most of her writing. The obvious failures in the post-1908 period of Ottomanism and Pan-Islamism, served further to strengthen her national consciousness (*Memoirs*, 312, 329-34), and during the traumatic years 1911-22, her exuberant nationalism mellowed and was further enriched with her experiences in exile.

Some of her short stories have been collected into three books: *Dagha çıkan kurt* mentioned above; *Kharāb maʿbedler* (1911, 4th ed. 1973) which contains her earliest work; and the posthumous miscellaneous collection *Kubbede kalan hoş sada* (Istanbul 1974).

Khālide Edīb wrote her memoirs in two volumes in English during her years of exile in England (*Memoirs of Halide Edib*, New York 1926 and *The Turkish ordeal*, New York 1928). Apart from their intrinsic literary value, these volumes are of invaluable documentary importance for her biography up to 1922 and for the background of many events in Turkish history between 1900-22. In these, she is extremely honest and candid in recording everything about her own life and, on the whole, fair and balanced in her description and judgement of other people. Thus she is generous in praising many leading men like Ṭalʿat, Djemāl and ʿIṣmet Pashas; but she loses her sense of balance and fairness frequently when she discusses Muṣṭafā Kemāl Pasha, recognising his unquestionable superiority, his almost superhuman energy and his powers of command, but recognising also his obstinacy. This makes her vacillate between praise and blame; she is unfair to the point of conspicuously leaving out the name of the hero of Gallipoli while referring to that campaign (*Memoirs*, 384), and elsewhere complains that "Turkish people are always the victims of hero worship, especially in military affairs" (*Memoirs*, 341). All this is of course the result of the fundamental conflict between her own liberal views and the radicalism of Muṣṭafā Kemāl. Khālide Edīb published substantially shortened and altered Turkish versions of her memoirs: *Mor salkımlı ev* (serialised intermittently in *Yeni Istanbul*, 1951-55 and published 1963) and *Türkün ateşle imtihanı* (serialised in the weekly magazine *Ḥayat* as *Millî mücadele hatıraları*, 1959-60, published 1962) in which much of the controversial material has been either left out or toned down. Khālide Edīb is not always careful with dates; her chronological data should be used critically.

Apart from her English novel already mentioned, Khālide Edīb published three books in English while

abroad. The first two are based on her lectures in America and in India: *Turkey faces west*, New Haven 1930 and *Conflict of east and west in Turkey*, Lahore 1935. The third book, *Inside India*, London 1937, contains her impressions and thoughts on a country which she "felt to be nearer to my soul-climate than any other country not my own" and where she met Mahatma Gandhi and all the outstanding nationalist leaders of the sub-continent. The Turkish version *Hindistan'a dair* was serialised in *Yeni Sabah* in 1940-1, but not published in book form. Kh̲ālide Edīb was always keenly interested in the theatre, but wrote only two plays, which had no success: the experimental *Kenan çobanları* (produced in Syria 1916, published in 1918) and *Maske ve ruh* (serialised in Yedigün in 1937-8, published in 1945, English version *Masks and souls*, 1953). She directed the translation of four plays of Shakespeare in the Department of English of Istanbul University: *Hamlet* (1941), *As you like it* (1943), *Anthony and Cleopatra* (1943) and *Coriolanus* (1945), and she translated herself George Orwell's *Animal Farm* (*Hayvan çiftliği*, serialised in *Cumhuriyet* in 1952, published in 1954). Her research work mainly consists of a history of English literature from the origins to the end of the 17th century in three volumes, *İngiliz edebiyati tarihi* (Istanbul 1940-9).

Kh̲ālide Edīb's language and style have always been severely criticised both by fellow writers and critics (Rūs̲h̲en Es̲h̲ref, *op. cit.*, *passim*; Cevdet Kudret, *Türk edebiyatında hikâye ve roman*, ii, Ankara 1970, 66-7). It is true that her language is often awkward and ungrammatical, her style untidy and unpolished, but it is equally true that this warm and extremely personal style has a strange charm and an immediate impact upon the reader. As a great admirer of folk literature, she had always disliked the artificial and precious language of most of her contemporaries and wrote, like Refīḳ Kh̲ālid [*q.v.*] in simple, straightforward Turkish, even before the principles of the "New Language" (*Yeñi lisān*) were proclaimed by ʿÖmer Seyf el-Dīn [*q.v.*] and his friends in Salonica. This explains why she is still one of the most-read writers of her generation.

AL-KH̲ĀLIDĪ, Rūḥī, Palestine scholar, diplomat and politician, born in Jerusalem in 1864 to a well-known family of scholars tracing its origin to Kh̲ālid b. al-Walīd [*q.v.*]. He received a religious and linguistic education in Jerusalem, Nābulus, Tripoli and Beirut, and studied philosophy, law and politics at the Royal College, Constantinople. He continued his studies of political science and of philosophy and Islamic and Oriental studies at the Sorbonne; he later taught Arabic in Paris and attended the 1897 Orientalists' Congress. In 1898 he was appointed Ottoman consul-general in Bordeaux, where he was active in diplomatic and scientific life.

After the proclamation of the Ottoman Constitution (1908), he returned to Jerusalem and was elected for three terms as a deputy of his city to the Ottoman Parliament. He died in Constantinople in 1913.

His *Taʾrīkh ʿilm al-adab ʿind al-Ifranj wa 'l-Arab wa-Fiktor Hūkū* [Victor Hugo], is the first work on comparative literary studies in modern Arabic Literature. He discusses here the similarities and differences between Arabic and European (mainly French) literature, their respective developments, the influence of Arabic literature on European literature, and the rôle of Victor Hugo in introducing such influence to French literature. This work was first published in *al-Hilāl* magazine in 1902-3, and in book form in 1904 under the name of al-Maḳdisī. Only in the later editions of 1912, 1929 and 1932 was the name of the author given. His other works were mainly political and scientific, such as *al-Inḳilāb al-ʿUth̲mānī wa-Turkiyā 'l-Fatāt* was lithographed and dated Bordeaux, 7 October 1908, probably in the author's own writing, and further published in *al-Hilāl*, xvii (1908), and later in Cairo 1909, with the title *al-Inḳilāb al-siyāsī al-ʿUth̲mānī*. Al-Kh̲ālidī also wrote *al-Muḳaddima fī 'l-masʾala al-sh̲arḳiyya mundh̲u nash̲ʾatihā 'l-ūlā ilā 'l-rubʿ al-th̲ānī min al-ḳarn al-th̲āmin ʿash̲ar* (Jerusalem 1925?); *al-Kīmyāʾ ʿind al-ʿArab* (Cairo 1953); *Risāla fī surʿat intish̲ār al-dīn al-Muḥammadī fī aḳsām al-ʿalam al-Islāmī* (Tripoli 1314/1896); and an edition of a booklet by Saʿd al-Dīn al-Kh̲ālidī, known as Ibn al-Dīrī, entitled *al-Ḥabs fī 'l-tuhma wa 'l-imtiḥān ʿalā ṭalab al-iḳrār wa-iẓhār al-māl* (1321/1903). There are other works still in manuscript.

Bibliography: J. A. Dagher, *Maṣādir al-dirāsa al-adabiyya*, ii/1: *al-Rāḥilūn (1800-1955)*, Beirut 1956, 333-35; al-Ziriklī, *al-Aʿlām*[2], iii, 64; Sarkīs, *Muʿdjam al-maṭbūʿāt*, cols. 813-14; Cheikho, *Taʾrīkh al-ādāb al-ʿarabiyya* (Beirut 1926), 50; al-Kh̲ālidī, *al-Muḳaddima fī 'l-masʾala al-sh̲arḳiyya*, pp. a-h. (S. Moreh)

AL-KH̲ĀLIDIYYĀN[1], the name generally given to two poets of Sayf al-Dawla's [*q.v.*] entourage, the two inseparable brothers Abū ʿUth̲mān Saʿd/Saʿīd (d. 350/961) and Abū Bakr Muḥammad (d. 380/990), sons of Hās̲h̲im b. Saʿīd b. Waʿla. They came originally from a village of the region of al-Mawṣil called al-Kh̲ālidiyya (Yāḳūt, ii, 390), and possibly lived for some time in Baṣra (Yāḳūt, *Udabāʾ*, xi, 208 affirms this and attributes to Abū ʿUth̲mān the ethnic designation of al-Baṣrī), but became celebrated above all as the librarians of Sayf al-Dawla, to whom they dedicated their occasional verse. They attracted notice through their rivalry with al-Raffāʾ [*q.v.*], who accused them of plagiarism through the use of their prodigious memory; Ibn al-Nadīm displays surprise at this, and gives a reply via Abū Bakr that he knew by heart a thousand books (*sifr*) each of a hundred leaves. Their poetic works, of which specimens can be read in al-Th̲aʿālibī's *Yatīma*, i, 507-30, were gathered together by Abū ʿUth̲mān into a *dīwān* which has not, it seems, been preserved. However, two anthologies compiled by the brothers, *Ḥamāsat sh̲iʿr al-muḥdath̲īn* (or *al-Ash̲bāh wa 'l-naẓāʾir*) and *al-Hadāyā wa 'l-tuḥaf*, are extant (see Brockelmann, I, 147, S I, 41, 226); also attributed to them is a *Mukh̲tār min sh̲iʿr Bash̲sh̲ār*, known through a selection made by Abū Ṭāhir Ismāʿīl al-

Tudjībī and published as *Mukhtār al-mukhtār min shi'r Bashshār* by Muḥammad Badr al-Dīn al-ʿAlawī at Cairo in 1353/1934-5 (cf. *Dīwān Bashshār*, ed. Muḥ. al-Ṭāhir Ibn ʿAshūr, Cairo 1369/1950, i, 90). Finally, the biographers cite further amongst their works: *K. fī akhbār Abī Tammām wa-maḥāsin shiʿrihi, K. Ikhtiyār shiʿr al-Buḥturī, K. fī akhbār shiʿr Ibn al-Rūmī, K. Ikhtiyār shiʿr Muslim b. al-Walīd* (cf. S. Dahhān, *Sharḥ Dīwān Sarīʿ al-Ghawānī*, Cairo n.d., 338, 340, according to al-Ṣafadī, *Ghayth*, Cairo 1305, 143, 187), *K. Akhbār al-Mawṣil* (see Yāḳūt, iii, 363; F. Rosenthal, *A history of Muslim historiography*, 405, n. 2) and *al-Diyārāt*.

Bibliography: In addition to works mentioned in the article, see *Fihrist*, 169 (Cairo edn. 240-1); Kutubī, *Fawāt*, Nos. 141, 457; ʿAbbāsī, *Maʿāhid al-tanṣīṣ*, i, 60; M. Canard, *Sayf al Daula*, Algiers 1934, 293-5; Mez, *Renaissance*, Eng. tr. 264-5; R. Blachère, *Motanabbî*, 132, 142.

(CH. PELLAT)

KHALĪFA.

(i) THE HISTORY OF THE INSTITUTION OF THE CALIPHATE

A study of the caliphate, its institution and subsequent developments, has never been attempted in its entirety until the present. The principal reason is that it has not seemed possible to conduct such a survey independently of historical studies relating to different reigns, which are still in most cases insufficient, or even non-existent, whereas studies of doctrine, while more advanced, have not been developed to the same extent with regard to the various periods. The tentative attempts that have been made have therefore been superficial, or lacking sufficient historical perspective. Here we must confine ourselves to making a brief statement of the question and stressing the problems, rather than attempting a complete exposition, which, to do justice to the subject, would require treatment at too great length.

A. The first period

In a sense, the institution of the caliphate was born on the day after the death or the Prophet when the new head of the community, in the event the trusted Companion Abū Bakr, became in 11/632 *khalīfat rasūl Allāh*. The date and the circumstances of the appearance of this institution would seem therefore to be well-established, but two questions arise at once. First, how did the designation of the first caliph take place, and was the procedure adopted observed in subsequent cases? Second, what powers were attributed to this "successor" of the Prophet?

As regards the first point, the tradition adopted by the majority of historians tells of the acclamation of the new caliph by the leading Companions, who gave him an oath of allegiance; this was the first *bayʿa*. Whatever were the circumstances under which this proclamation was made, whatever pressures were applied by ʿUmar to the congregation to have Abū Bakr recognized, whatever may have been the protests of ʿAlī and his supporters, it seems to have been accepted from this time onwards that the oath of the Believers, to which corresponded the promise of the new chief to lead the community on the right path, alone conferred upon him the succession.

For the two caliphs who followed, variations in procedure should be noted. Abū Bakr, before his death in 13/634, had, according to the chroniclers, personally designated his successor in the presence of ʿUmar. The community of Believers was not therefore in a position to state its own wishes, but got the chance to ratify this appointment. The oath in fact, was taken only by the Companions present at Medina, which explains how the authority of ʿUmar could be disputed by certain groups dispersed elsewhere in Arabia, who refused to pay the legally-assessed poor tax [see RIDDA].

ʿUmar, before dying in his turn in 23/644, had decided that a group of six persons, including among others ʿUthmān and ʿAlī, should choose his successor from among themselves. After discussion the choice fell on ʿUthmān, who then received the oath of allegiance. So even with the designation of the first three caliphs, three different methods were explored; all, however, were only to be put into effect if ratified by the community, or by its most influential and closest members.

The second question, that of the powers exercised by the new leaders of the community, is more problematical, since these powers were not at the time defined in a precise fashion. One cannot base conclusions on the sense of the title *khalīfa* (see above) which, suggesting at once the ideas of succession, appointment and authority, remained somewhat vague. These powers seem, essentially, to have authorised the first three successors of Muḥammad to pursue the actions previously set in motion by the Prophet himself for the expansion of Islam and to put into practice the regulations set out in the Ḳurʾānic message, which was to be supplemented by the *Sunna* instituted among the community of Believers in the lifetime of the Prophet.

The continuation of the work begun by the Prophet was seen during the time of Abū Bakr in the fight against the dissidents of Arabia, soon followed by raiding operations towards the north which became a vast movement of conquest. From this time onwards the caliph assumed the role of army commander, and military operations, conducted against infidels or against rebellious Muslims who, for one reason or another refused to accept his authority, became one of his most important responsibilities.

Meanwhile, questions of law, relating to the spheres both of the cult and of social relations, were posed to those caliphs called by the tradition *rāshidūn*, that is to say "those who walk in the right way", as opposed to those who came later and were accused of making the caliphate a family possession. Thus ʿUmar was obliged to take decisions concerning the penal law, certain types of inheritance and the practice of the law of retaliation (Shahrastānī, *Milal*, Cairo, i, 18). To him also are attributed some initiatives in matters of ritual, culminating in the attempt, carried on by ʿUthmān, to set in motion the establishment of the text of the Ḳurʾānic "vulgate".

It was also in the time of ʿUmar that for the first time the question was raised of the financial organisation of the Islamic state. Since members of the Arab tribes were entitled to endowments, ʿUmar instituted the *dīwān*, a register in which the names of beneficiaries were inscribed. In addition, the troops were entitled to a share of the booty, which was gradually replaced by a pension, registered in the same way. The organisation of the *dīwān* [*q.v.*], first established at Medina, later in all the principal cities of the empire, was thus linked to that of the fiscal system, on which it is not possible to dwell here. Let it be said only that it was at the initiative of the two caliphs ʿUmar and ʿUthmān that a treasury was established, which collected and from which were distributed the revenues supplied first by booty, later by property taxes. As this treasury

also met some expenses of communal interest, it should have been seen as the beginning of a financial system which was not strictly in accord with Ḳurʾānic principles for the distribution of booty, but which was made necessary by the development of the new State [see BAYT AL-MĀL]. This innovation was one of the causes of the troubles which culminated in the assassination of ʿUthman in 35/656.

Another cause was the choice by ʿUthmān of members of his own family to undertake the government of the principal provinces; in acting thus he was in effect supplanting the earliest converts to Islam, who by virtue of this title had in general more right than the descendants of Abū Sufyān to participate in the organisation of the community. Two concepts of power came into conflict here, of which one consisted in observing strictly the principles of the Ḳurʾān and giving pride of place to the "first converts", while the other paid greater attention to the efficiency of the apparatus of government. After the confrontation which took place between ʿAlī and Muʿāwiya, following the judgement of ʿAdhruḥ [*q.v.*], the second concept held definitive sway.

The murder of ʿUthmān and the events which followed posed to the Islamic community the problem of knowing whether a caliph could be deposed for neglecting his duties. It seems that it was at this time that there appeared the sect later to be known as the Khawāridj which declared the principle that the caliph must not under any circumstances deviate from the ordinances of divine origin (see the interpretation by W. Montgomery Watt, *The formative period of Islamic thought*, Edinburgh 1973, 14-15). The judgement of ʿAdhruḥ itself, the principle of which was denied by the Khāridjīs on the grounds that the cause of good could not be set under discussion, implied a conception of the caliphate according to which the holder of power must answer for his actions, and the justification chosen by Muʿāwiya to explain his action against ʿAlī was the defence of the rights of his kinsman, "unjustly" assassinated at the instigation of his political enemies.

The Umayyads, however, on becoming installed in power, made efforts to eradicate this notion of moral responsibility. At the same time as they had the principle of dynastic succession recognised, they maintained the idea that unconditional obedience was owed to the reigning caliph. Thus Yazīd and his successors paid no heed to the proclamation as caliph of ʿAbd Allāh b. al-Zubayr [*q.v.*] at Medina in 61/681 nor to the declaration of dethronement pronounced by the leading citizens against the son of Muʿāwiya. It was their opponents, of the movement called Ḳadarī (see *Ḳadariyya*), who vindicated the right to judge the actions of the sovereign, establishing a doctrine which was invoked by Yazīd III, pretender to the caliphate, to justify his revolt against al-Walīd II, accusing him of misconduct. As for the revolutionary movements which appeared at this time, some of them were of a Khāridjī tendency, demanding of the caliph particular moral qualities (they succeeded in proclaiming Ḳaṭarī b. al-Fudjāʾa [*q.v.*] caliph in Fārs and Kirmān; he bore the title *amīr al-muʾminīn* and coined money in his own name for ten years, 69-79/688-99), while the others followed more or less strictly the Shīʿī tendency, that is to say, demanding the accession to the caliphate of either a descendant of ʿAlī, or in the case of the ʿAbbāsid party, of an unspecified member of the Family of the Prophet. It was therefore the legitimacy of the Umayyads that they contested, while at the same time they strove to discredit them, denying their adherence to Islamic principles and accusing them of having usurped the caliphate; the origins and the actions of the ruling caliphs thus being called into question.

On their side, the Umayyads were not content with imposing the notion of unconditional obedience to the caliph; they established at the same time, in effect, the dynastic caliphate. Without abandoning the principle of election followed by oath of fealty (*bayʿa*), Muʿāwiya accomplished his object by means of an election guaranteeing in advance that his son Yazīd would be recognised as his successor. The same procedure was used for the designation of Muʿāwiya II. But on the death of the latter, the problem of succession arose once more, and the Arab "nobility", meeting at Djābiya, made free use of their right to proceed to the choice of a new caliph, without however denying the fact that he should belong to the family of the Banū Umayya. A cousin of Muʿāwiya, Marwān, was duly appointed caliph; to the branch called Sufyānid, there succeeded the Marwānid branch to which belonged all the subsequent Umayyad rulers, all of them nominated by their predecessors, with the exception of the rebel Yazīd III. In fact, from the time of ʿAbd al-Malik onwards, the caliph was in the habit of leaving a written designation, called *ʿahd* (whence the granting to the heir presumptive of the title *walī 'l-ʿahd*, in the sense of beneficiary of a contract concluded between him and the community). The testamentary nomination, bearing the signature of witnesses of repute, thus became the essential mandate which had executive force and relegated the ceremony of the *bayʿa* to a position of secondary importance. It was also the practice for the caliph to nominate two heirs; but such nominations were not acted upon unless an order of precedence had been set. The heir was most often a son of the ruling caliph but could equally well be a brother or a cousin; only one exclusion was maintained, the nomination of the son of a non-Arab concubine; for this reason the prince Maslama b. ʿAbd al-Malik, who was remarkably active during the reign of his father, neither inherited power nor was entitled to do so.

At the same time this period saw a real attempt by the Umayyads to establish the legitimacy of their dynastic caliphate. Their panegyrists traced back the right of sovereignty from ʿAbd al-Malik to Marwān, then to Muʿāwiya and ʿUthmān. Some even went so far as to express the idea that the Umayyads had inherited the "legacy of Muḥammad". *Ḥadīth*s appeared in which Muḥammad predicted their coming. To be sure, all this was nothing more than the outward signs of a different legitimacy, but the idea was disseminated.

The Umayyads also on the other hand strove to underline the theocratic nature of their powers, as appears notably from the terms of a *khuṭba* of al-Ḥadjdjādj: "The *amīr* of the Believers ʿAbd al-Malik is a leader whom God has chosen as His viceroy upon earth and appointed *imām* for His creatures." The expression occurs also in the texts of testamentary nominations and in the speeches preceeding the *bayʿa*. The ruling caliphs considered themselves in fact as appointed by God, and the title *khalīfāt Allāh* (formerly denounced by Abū Bakr, according to a tradition which appears to be of doubtful validity) came into use from the start of the Umayyad era, helping to establish firmly the duty of obedience to the dynasty.

Moreover, the ruling sovereigns were required to take decisions, touching on problems of general

policy, sometimes directly concerning the sphere of Ḳur'ānic precepts. They were obliged for example to define the place that new converts, non-Arabs becoming *mawālī*, might take in the organisation of a state where the reins of power were held by Arab Muslims. Also, the exigencies of the conquests in the west led them to emply the services of Berber contingents, who played an active role in the conquest of Spain and whose status raised difficulties from that time onwards. More delicate was the fiscal problem which the caliph ʿUmar b. ʿAbd al-ʿAzīz was obliged to settle by means of an edict. His decision to establish fiscal equality between the original Muslims and the converts having proved impossible to put into effect, it was decided to retain the former land-taxes, irrespective of the religion of the occupant of the land. Thus was established the form of the levy called henceforward *kharādj* [*q.v.*] as distinct from the poll-tax called *djizya*, whereas new converts were required to pay a higher tax than that levied on the original Muslims for the lands that they possessed subsequent to the conquest. Hence to this period belongs the definition of the *kharādj* and *djizya* taxes, an important stage in the development of Islamic law, the process of which can only be grasped with difficulty, but which is to be attributed to the activity of the Umayyad caliphs.

B. The ʿAbbāsid caliphate until 658/1258.

New modifications to the concept of the caliphate were brought about by the ʿAbbāsid dynasty, which assumed power in 132/750 and retained it in ʿIrāk until 658/1260, then in Egypt until 923/1517. Its members presented themselves as belonging to the family of the Prophet, and it was with this title that the first among them to accede to power justified their action. They thus maintained the thesis according to which the caliphate must revert to the kinsmen of the Prophet, and more particularly to the descendants of al-ʿAbbās, who were considered to be the best qualified. Nevertheless, this ʿAbbāsid legitimism raised difficulties in establishing principles usable against ʿAbd claims. The principal argument, employed very frequently by the caliph al-Manṣūr in his controversy with the Ḥasanid Muḥammad b. ʿAbd Allāh, and subsequently developed on several occasions by the sovereigns themselves or by their panegyrists, followed the principle of right of succession: the descendants of al-ʿAbbās, son of the Prophet's uncle, must take precedence over the "sons of the daughter", that is to say, over those who were descended from the Prophet through his daughter Fāṭima and who were related to his two grandsons al-Ḥusayn and al-Ḥasan. As this argument did not always appear sufficient, the caliph al-Mahdī sought to adduce in addition the thesis according to which al-ʿAbbās had been nominated by the Prophet himself as his successor. Quite independently of this attempt, which did not last long, the panegyrists for their part strove to prove the eminent qualities of al-ʿAbbās, protector and nephew of the Prophet. The legitimism of the ʿAbbāsids thus depended on various arguments, whose vogue changed with the times, arguments which were sometimes radically opposed to those upon which the Umayyad legitimism had been based and which sometimes approximated to them, as when the panegyrists inevitably proclaimed that the sons of al-ʿAbbās were "the best of Ḳuraysh". This legitimism never ceased in any case to be generally recognised, even when the "great *amīrs*" of Shīʿī persuasion held power, and it was in a sense consolidated by the arrival of the Saldjūḳs who, while taking over control of the empire, nevertheless upheld the Sunnī caliphate as it was then established.

Previously, the most dangerous challenge had taken place during the reign of al-Ma'mūn, when this caliph attempted to nominate as his heir the ʿAlid ʿAlī al-Riḍā, considered by him "the best of the descendants of ʿAlī and of al-ʿAbbās". This attempt did not amount to an adoption of the Shīʿī point of view; rather, it aimed at restoring vigour to a broader Hāshimī legitimism, which would have permitted the choice of the *imām* from one or the other of the branches of the Hāshimī family. To this new legitimist concept was linked a doctrine of Zaydī inspiration, according to which the office of *imām* must revert, in the context of a defined line of succession, to the most deserving. If the attempt failed, it was through the opposition of circles in ʿIrāḳ who showed their attachment to the ʿAbbāsid family and their hostility to the new religious policy of al-Ma'mūn, which the latter was forced to abandon.

Whatever may have been the basis of ʿAbbāsid legitimism, it was the priority of the ruling caliphs to reinforce the theocratic nature of their power. The same expressions were employed in their case as in that of the Umayyad caliphs. Al-Mansūr declared himself, it is said, "the power of God on earth" (*sulṭān Allāh fī arḍi-hi*) and the caliphs exacted, like all their predecessors, a duty of unconditional obedience which was founded, from the 3rd/9th century onwards, on the concepts of traditionists of the Ḥanbalī persuasion. In addition, the royal titles adopted by the sovereigns stressed the charismatic quality of their power: the second caliph had himself named al-Manṣūr, "he who receives the victory from God", the third, al-Mahdī, "he whom God leads in the right way", a title which tended at the same time to assimilate the caliphs to the ʿAlid *imāms*. Subsequently, the honorifics al-Amīn, al-Ma'mūn and al-Wāthik bi-llāh, stressed rather the piety of those who bore them; but the personal link between the caliph, and the divinity guaranteeing his power remained strongly marked. One may add that from the reign of al-Ma'mūn onwards, the caliphs did not disdain the title of *imām*, previously considered to be of too Shīʿī a flavour.

Also, the dynastic principle was applied in the same fashion as under the Umayyads, the heir being most often nominated by the ruling caliph after consultation with the most influential supporters of the régime. The procedure adopted bore a solemn character on some occasions; thus the testament of Hārūn al-Rashīd, which named two heirs, establishing a kind of division of the empire between them and specifying the rights and obligations of each towards the other, was displayed in the Kaʿba at Mecca in 185/802; the same procedure was used for the testament of al-Muʿtamid in 261/874.

But as in the preceding period, no rule determined this choice, and the caliph could just as well nominate a distant cousin as one of his sons. It was nevertheless to a son that the sovereign most often sought to bequeath his office, on condition that the son was of the required age or close to it, that is to say, to the age of majority. This need was admitted by all, as it had been already in the Umayyad period, but not the procedure for its application. On the one hand, a minor could be designated heir, since normally he was not required to assume immediately the function of caliph; on the other hand, the age of majority was not fixed in a precise fashion. It was only in 296/908 that the nomination of a caliph 13 years of age, al-Muḳtadir, set a kind of precedent.

The practice of testamentary nominations posed another problem when these contained two names. It often happened that a new caliph sought to cancel the act established by his predecessor, so as to replace the person chosen as second heir and now becoming first heir—his brother most often—and to substitute for him his son, for example. It was necessary in such cases to obtain the abdication of the heir, since there was no procedure allowing for the dismissal of an heir, just as there was none for a caliph, and it was considered that the oath of allegiance already given was binding upon the heir as it was upon the community. In consequence, it was almost always by means of more or less violent persuasion that heirs considered to be undesirable were forced to renounce their rights.

As in the preceding period, it happened sometimes that a caliph died without having designated an heir. The choice then reverted to the community or at least to its most prominent representatives. On the death of al-Wāt͟hiḳ in 232/847, it was a select committee composed of the chief-*ḳāḍī*, of the vizier and some of the officers of the Turkish guard, who proceeded to the nomination of the future al-Mutawakkil. However, at the times of the sickness of al-Muktafī in 296/908, it was the vizier and the leading officials of the realm who chose a successor to the caliph, who had not chosen an heir. So the composition of the electoral council varied according to the circumstances.

Under the ʿAbbāsids, no more than under the Umayyads, was there a procedure for deposing a ruler for moral faults. Where attempts were made to do this, it was a case of local councils, convoked in an arbitrary fashion, proclaiming the dethronement of the ruling sovereign or of the heir presumptive, and these had no more than a limited influence on the course of events. Examples of this were seen when al-Amīn and al-Maʾmūn declared one another deposed, or when the population of Bag͟hdād refused to obey al-Maʾmūn and proclaimed as caliph Ibrāhīm b. al-Mahdī [*q.v.*]. In fact, these situations always culminated in a trial of strength, and the judicial death, banishment, dismissal or abdication of one of the rivals produced each time a judicial solution.

On the other hand, each abdication registered officially by the *ḳāḍīs* led to an interregnum, and abdications were frequent in the history of the ʿAbbāsid caliphate. These were almost always forced abdications. One caliph, al-Ḳāhir [*q.v.*], who refused to bow to pressure, had his eyes put out, by which means he was legally incapacitated from fulfilling his duties. But instances of forced abdication were particularly flagrant in the period of the Buwayhid *amīrs*, who brutally deposed two caliphs to replace them with princes of their own choosing. The grand-*amīr* then convoked each time an electoral college comprising the principal dignitaries of the State as well as jurists and members of the ʿAbbāsid and ʿAlid families; but his own opinion was the only decisive one in the final choice.

It is only in the ʿAbbāsid period that one sees in the texts the office of caliph as clearly accompanied by insignia worn by the caliph when giving audience; there is mention of the cloak attributed to the Prophet (*burda* [*q.v.*]), his sceptre (*ḳaḍīb* [*q.v.*]), and of a high bonnet (*ḳalansuwa*), which first appeared no doubt in the Umayyad period (although the information concerning ceremonial in this period remains of dubious interpretation); in addition, in the 4th/10th century, a copy of the Ḳurʾān of ʿUt͟hmān was carried ostentatiously by the caliph. Insignia of this kind, recalling to a greater or lesser extent contemporary or previous courtroom practice, had the object of stressing the eminent qualities of the "successor of the Messenger of God", and a full etiquette governed the conduct of audiences, requiring from visitors and officials precisely defined marks of respect: the principal one being the kissing of the carpet (*taḳbīl*) on coming face-to-face with the sovereign, if not kissing his hand. A similar symbolism marked the manners of solemn processions, and when the caliph appeared in public outside the palace he was preceded by the chief of police bearing the lance (*ḥarba*), at once the symbol of authority and a reminder of the customs of the Prophet.

Between the 2nd/8th and the 4th/10th centuries, the functions of the caliph are easy enough to determine, using the information supplied by the ancient chronicles. The caliph was then seen as the guardian of dogma, and in this capacity opposed innovations (*bidaʿ*) and all that was considered to be such. He was thus permitted to play a part in the formulation of doctrine, and numerous examples of this may be cited: al-Mahdī ordered for example the persecution of the *zindīḳs* [*q.v.*]; al-Maʾmūn and his two successors sought to impose Muʿtazilism as an official doctrine; al-Mutawakkil returned to the traditionalist position which condemned in particular the notion of the "created" nature of the Ḳurʾān; later, al-Muʿtaḍid sought to curb the activities of popular preachers of traditionalist tendencies; al-Rāḍī, [*q.v.*] condemned Ḥanbalī theodicy; al-Ḳādir [*q.v.*], in the full swing of the Buwayhid period, proclaimed his adherence to a profession of faith of Ḥanbalī inspiration in an attempt to prevent the dissemination of other doctrines. On the other hand, the caliphs did not participate in the formulation of law; al-Manṣūr did not take up the suggestion of Ibn al-Muḳaffaʿ [*q.v.*] to establish a uniform code of law to which judges would be obliged to refer, and from this time onwards, the judicial schools were established, independent of all interference from the caliph. The measures which the caliph could take in the judicial sphere were thus limited to decrees applying to fiscal matters, although he was obliged, in his capacity as leader of the community, to ensure that the law was observed in all its various aspects.

The caliph was the *imām* [*q.v.*] par excellence, and conducted the Friday Prayers in the great mosque. At the end of the 3rd/9th century, however, he was exercising this function only in the great mosque of the caliph's residence, leaving to delegated officials the task of conducting the prayers and performing the *k͟huṭba* [*q.v.*] in the other great mosque of the capital. Similarly, he performed the Pilgrimage in his official capacity or sent a delegate on his behalf. Many of the earlier caliphs performed this religious duty in person, sometimes more than once, as in the case of Hārūn al-Ras͟hīd.

In the same way, the caliph was expected to preside over the periodic expeditions against the lands of the infidel. This was done in person by Hārūn al-Ras͟hīd, then by al-Maʾmūn, while subsequent caliphs delegated this duty to appointed officers. He also conducted campaigns against rebels, whoever these might be; but when operating against particularly ferocious enemies such as the Zand͟j [*q.v.*], he would delegate his powers to an effective regent, in this event, al-Muwaffaḳ, brother of the sovereign al-Muʿtamid. The maintenance of order was in fact one of the normal obligations of the caliph, who was

obliged to defend the community against all types of subversion. It was also the caliph who was obliged eventually to deal with those governors who demanded financial autonomy and the hereditary status of their office. On the other hand, it was his duty to ensure the normal exercises of the judiciary in nominating directly—as the practice had been established since the start of the ʿAbbāsid caliphate—the *ḳāḍīs*, who were themselves subject, from the reign of Hārūn al-Rashīd onwards, to the intermediate authority of the *ḳāḍī 'l-ḳuḍāt*. So the caliph delegated his powers to magistrates, but he reserved the right to arbitrate as a last resort in cases of litigation and to settle differences arising between administrators and administered. It was the practice of "redressing of wrong" that every caliph conscious of his reputation conducted in person, while other entrusted it to persons specially appointed for this purpose.

Finally, the caliph ensured the well-being of the state, though this concept was to some extent ignored in the middle period of Islam—that is to say, he ensured the material life of the community. In particular, he managed the levying of taxes of which the revenues were subsequently distributed between soldiers and officials, and these taxes were levied according to rules established at the end of the Umayyad caliphate [see DJIZYA, KHARĀDJ, ʿUSHR, ZAKĀT]. The collection of these taxes was entrusted to agents of the caliph, the *ʿummāl*, who collected sums in cash or contributions in kind from the administered peoples, or to "tax-farmers", who sent to the treasury a lump sum and then recouped the equivalent by means of the sums collected in the territories entrusted to them; the method used remained at the discretion of the caliph. The system varied according to different regions and periods at the will of sovereigns constrained to a greater or lesser extent to cover continually rising expenses; but financial difficulties led the caliph to make a general practice of the farming-out of the taxes, advantageous in the short term but later to prove dangerous, and in the long term making the caliphs dependent on these tax-farmers.

Nevertheless, the details of the powers thus exercised by the caliph and related in precise fashion in the historical texts do not suffice to clarify completely the technicalities of a situation in respect of which two kinds of questions are posed. The first kind arises from the impossibility of deciding with certainty in what measure the authority of the caliph was, or could be, arbitrary or despotic. Certainly, the arbitrary exercise of power was in principle limited by the existence of the law, which the caliph was bound to respect, while enforcing it upon others, and which forbade him in particular to put a Muslim to death, except in precisely defined circumstances. But on the other hand, the duty incumbent on the caliph to suppress all rebellion gave him in this capacity a free hand in treating as a rebel against Islam every rebel against the dynasty, and thus in eliminating, sometimes in summary fashion, the enemies of his own policy.

The second set of problems arises from another difficulty, that of deciding to what extent the caliph himself exercised the powers with which he was invested. It is certain for example that the representatives of judicial authority enjoyed a certain degree of independence, in that they possessed knowledge and technical ability to which the caliph could only with difficulty lay claim; cases of resistance to the caliph on the part of provincial *ḳāḍīs*, or even of the chief *ḳāḍī* of Baghdād, were not uncommon. It is certain also that the arbitrary exercise of the powers of the caliph was restricted, after the end of the 3rd/9th century, by the establishment of High Courts, before which individuals accused of treason or heresy were most often tried; in this period, only rebels caught bearing arms were executed or subjected to torture in a manner not authorised by the law; others were tried before courts where the final decision was taken by one or the other of the *ḳāḍīs* of Baghdād, playing the role of chief magistrate, although the caliph was not bound to ratify this decision.

In addition, it should be noted that in numerous other fields, between the 3rd/9th and the mid-4th/10th century, the caliph no longer reserved for himself the conduct of affairs. We cannot speak in this context of a steady progression, since we observe on the part of some sovereigns reactions in the opposite direction, which were generally of short duration. The evolution was, however, none the less irreversible and the main beneficiary was the vizier [see WAZĪR], a man of trust and reliability whose title appeared at the start of the ʿAbbāsid regime, without from that time onwards being necessarily attributed in a regular fashion. It was to him that the caliph most often delegated the conduct of administrative affairs, and subsequently matters of general policy, including dealings with the governors of provinces and military affairs. The vizier was, however, entrusted with nothing more than the execution of political decisions which he had previously formulated and which had received the approval of his master; he was regularly accountable to him and could be dismissed at any moment, as could any agent of the sovereign, and was only the "minister" *par excellence* of the caliph, employed by him for as long as his activities gave satisfaction and liable to be replaced as soon as he ceased to please. The arbitrary will of a caliph who apparently disassociated himself from the conduct of affairs but wished nevertheless to retain the exercise of power, was much in evidence in these nominations and dismissals, of which we see examples in the reigns of Hārūn al-Rashīd and al-Muḳtadir. On the other hand, it should not be forgotten that the caliph would have difficulty in holding cheap the services of a supporter who could assure him of such-and-such a group of partisans and faithful servants, without whom it would be impossible to govern, and from among whom originated the viziers. Even if there existed among the administrators themselves rival cliques which encouraged the exercise by the caliph of arbitrary power, the presence of these persons, linked to the régime which supplied them, according to the circumstances, with more or less high offices, remained an element of stability likely to discourage abuse of personal power in the golden age of the caliphate.

After the middle of the 4th/10th century, the caliphs ceased to exercise their authority in person, and even ceased to control those to whom they had delegated this authority, in whole or in part. It was then that there began the period of the "grand-amirate", to be replaced a century later by the sultanate. The chief characteristic of this period is that the delegate of the caliph appeared first as a military commander and that after 336/945, that is to say ten years after the appointment of the first "grand-*amīr*", a dynasty of grand-*amīrs* was established and the caliph was not permitted to interfere in the succession of these new officers. The authority that the latter exercised in all matters relating to

the administrative, financial and military spheres was nevertheless officially delegated from him, and the caliph retained, in theory at least, the right to appoint agents. It was thus that he succeeded, in certain exceptional cases, in exercising real power, and in one known instance, the Buwayhid *amīr* was unable in spite of all his efforts to obtain for a Ḥusaynī *sharīf* nomination to the post of chief *ḳāḍī*. For, besides doctrine, the area in which the caliph continued to exercise some influence was the judiciary. There was, however, no clear-cut separation of functions between the caliph and the *amīrs*, and it would be inaccurate to say that the latter exercised "temporal power", while the caliph retained a limited authority in "spiritual" matters. Not only did the caliph consider himself entitled to intervene in all areas of policy, but the *amīr*s did not hesitate to use their authority for settling religious affairs, e.g. in promoting the celebration of specifically Shīʿī feasts.

Moreover, the relations established between the caliphs and their *amīr*s varied constantly. There was during the second half of the 4th/10th century a period when caliphs were frequently dethroned or forced to abdicate to be replaced by persons chosen by the *amīr*s, although the latter did not always obtain by this means the result envisaged. On the contrary, in the first half of the 5th/11th century the caliphs al-Ḳādir and al-Ḳāʾim were able to nominate their own heirs and enjoyed a resurgence of power, feeling themselves supported by the Ghaznavid *amīr*s who appeared in Khurāsān and actively upheld Sunnī policies there. However, at this time there appeared the first examples of titles compounded with *dīn* and attributed to certain local *amīr*s, to Buwayhids as well as Ghaznavids. This practice, the origin of which cannot be definitely identified, doubtless did not correspond so much to a new set-back in the authority of the caliph, as to a devaluation of the titles compounded with *dawla*, which were born at first only by the grand-*amīr*s, later by the Ḥamdānid *amīr*s of al-Djazīra, and were eventually attributed to other *amīr*s of secondary rank. In this period, titles employed in official documents became more and more pompous, and the caliph had himself called *al-ḥaḍra al-muḳaddasa al-nabawiyya*, a title stressing the sacred character of an office now almost entirely void of its original significance.

The arrival of the Saldjūḳ Turks brought, in principle, no changes of an institutional order to the situation. The new *amīr*s behaved like their predecessors, receiving a large measure of power which extended legally to the west, occupied by the Fāṭimids, as to the east; this is indicated notably by the title accorded to Ṭughrīl Beg, *malik al-mashriḳ wa'l-maghrib*, in 449/1057. To be sure, they enjoyed in addition a more exalted title, that of *sultan*, which was perhaps originally chosen to show that they were the sole depositaries of the full range of the powers of the caliph. Another difference, with particular reference to the functioning of the régime, was that the Saldjūḳ sultans claimed to be defenders of the *Sunna* and the Sunnī caliphate, claiming to have come to the aid of the sovereign, with the particular object of re-opening the Pilgrimage route. But the tension was hardly less between the caliphs and the sultans than it had been previously between the caliphs and the grand-*amīr*s.

Thus the sultans had imposed themselves on the caliphs in a manner which the latter could not and did not appreciate: it was with the greatest of displeasure that the caliph al-Ḳāʾim was obliged to give his daughter in marriage to Ṭughrīl Beg, for example. On the other hand, the caliphs and the sultans did not follow the same political-religious orientation. Faced with sovereigns remaining loyal to the traditionalist Ḥanbalī doctrine, the sultans adopted the Shāfiʿī-Ashʿarī line, which was somewhat different, and it was of design that one of the most remarkable viziers, Niẓām al-Mulk, founded in Baghdād as in the eastern provinces *madrasas* intended for the training of future lawyers. It was nevertheless admitted, in this period of domination by Saldjūḳ sultans, that the latter alone should nominate the candidate for the caliphate: this attitude was justified, as we know, in various of the writings of the celebrated al-Ghazālī who, among other things, castigated the "bad doctors", too eager to submit to the authority of the sultans. The doctors for their part, considered themselves at this time to be the true depositaries of the Law, and demanded in consequence no longer the capacity of *idjtihād* for the caliph which in principle was claimed for him in the past, but above all qualities of morality and piety.

In these difficult circumstances, the caliphs did not abandon the attempt to recover their power, undermined as it was from various quarters. Thus, about 460/1067-8, al-Ḳāʾim dismissed a vizier judged to be too amenable to the sultan Alp Arslān. Then his successor al-Muḳtadī, after the death of Malik Shāh, succeeded in profiting from the rivalries between the various claimants to the sultanate to make his own authority better respected. Subsequently, in 485/1092, al-Mustarshid managed to raise an army which permitted him to oppose the Arab chief Dubays, but which did not prevent him from being made a prisoner by sultan Masʿūd. Finally, it fell to al-Muḳtafī, after the death of Masʿūd in 547/1152, to assert definitive sway over ʿIrāḳ. Whatever the circumstances, the disintegration of the Saldjūḳ empire was accompanied by a multiplication in the number of sultans, and this fact alone further enfeebled the position of the Saldjūḳs; it was in 514/1120-1 that for the first time the *khuṭba* was made in Baghdād in the name of two sultans of this family, but the title of sultan had already been taken by the Ghaznavid Ibrāhīm, inasmuch as it appeared on his coinage, although it cannot be confirmed that the titulary in question had received the agreement of the caliph.

A new turning-point in the relations between caliphate and sultanate occured in 547/1152 when the caliph, assisted by an energetic vizier, Ibn Hubayra, chased out of ʿIrāḳ the *shiḥna* who represented the sultan and dismissed from his service Turkish and Iranian mercenaries, replacing them with Greek or Armenian *mamlūk*s. Ibn Hubayra, who then received the title "*sulṭān* of ʿIrāḳ", was also an eminent jurist of Ḥanbalī tendency, who strove in his works to minimise the differences between judicial schools, so as better to reinforce Sunnism.

Finally there appeared on the scene, in 575/1180, a new caliph, al-Nāṣir, who followed the policy of his predecessor but used different means. His knowledge of religious sciences permitted him to pose as the "doctor" whom the community must follow. Deriving support on the other hand from the Ṣūfīs and the members of the *futuwwa* communities which he reorganised under his own direction in 604/1207, he tried to bring about the unification of the community of Islam and to draw into the framework of his authority the greatest possible number of princes.

One of his propagandists, Abū Ḥafṣ al-Suhrawardī, thus formulated a theory of the caliphate which, while retaining the traditional bases, linked to these Ṣūfism and the *futuwwa*, making the caliph the intermediary between God and the believers and giving him the attributes of a kind of *shaykh*.

Al-Nāṣir, who had no vizier as such, was better able by virtue of this to assert his political prerogatives: he succeeded in having his authority recognized by the powerful Ayyūbid Ṣalāḥ al-Dīn (576/1181), who for his part declared himself a defender of the caliphate and of Islam. It was nevertheless with difficulty that he obtained the *bayʿa* of certain local *amīr*s of Persia and Upper Mesopotamia. Moreover, the efforts of al-Nāṣir, in which he continued until his death in 622/1225, did not prevent the caliphate from remaining fragile as an institution, and the great reconciliation between Sunnī and Shīʿīs which was one of the most cherished objectives of his policy was never achieved. After only a few more years, the Mongols put an end to the ʿAbbāsid caliphate of Baghdād, executing the caliph al-Mustaʿṣim in Ṣafar 656/February 1258.

Even so, one should not forget the importance of the rôle played throughout the Saldjūḳ and post-Saldjūḳ period by an ʿAbbāsid caliph, whom a number of local rulers recognised as the guarantor of their power. Alongside the sultans, who were not so numerous, even when the sultanate was conferred upon several dynasties (Saldjūḳs of Rūm and of Iran, and Ghaznavids), there were princes of Syria, of Anatolia or of Iran who to some extent put themselves under the authority of the caliph, bearing among their titles a title with the component of *-amīr al-muʾminīn* bestowed by the chancellery of Baghdād and stressing their personal link with the caliph. This was the case with Zankids and Ayyūbids in Syria, Rasūlids in the Yemen, Ghaznavids, Ghūrids and princes of Delhi in eastern Iran and in India, to mention only the most important of this group. Different relationships were established too between the caliph and a prince of the Islamic west such as the Almoravid Yūsuf b. Tāshfīn, who had confirmed by the chancellery of Baghdād the new title of *amīr al-muslimīn* which he had just taken upon himself. But this came about in a political milieu, that of the Muslim West, where the process of evolution had been quite different from that in the East, and where since the 4th/10th century rival caliphates to that of the ʿAbbāsids had appeared.

C. The caliphates of the west.

It was at the beginning of the 4th/10th century that an Umayyad *amīr* of Spain put an end to the situation which had previously arisen in the region: the situation of a local prince who, while not recognising the authority of the caliph of Baghdād, nevertheless allowed the *khuṭba* to be made in his name. Then, in 316/928, ʿAbd al-Raḥmān III declared himself *amīr al-muʾminīn*. According to Ibn Khaldūn, this decision was explained by the fact that at that time "the authority of the caliphate of the east was reduced to nothing". To this should be added the fact that the Fāṭimid Shīʿī caliphate had appeared in Ifrīḳiya, and the new caliph of al-Andalus hoped to make himself the champion of Sunnism against this new form of sovereignty.

The new caliphs essentially based their legitimacy on the idea of inheritance. "Sons of the caliphs", they considered the caliphate a "portion" set aside by God for the Banū Umayya, who had inherited it from Marwān, if not from ʿUthmān himself, as was stated by Ibn Bassām who went so far as to call the Umayyad caliph "kinsman of the Prophet" by virtue of his status as a member of Ḳuraysh. Furthermore, in imitation of the Umayyads, the caliphs of Spain adopted the colour of white. They applied the hereditary principle in a stricter manner than did the ʿAbbāsids, not considering the minority of an heir presumptive as an obstacle to his proclamation. But the succession was put into effect by the same process, *bayʿa*, whether preceded by an *ʿahd* or not. Also, the *bayʿa* held a more important place than in the Orient and sometimes the rite lasted several days.

The caliph frequently declared himself the "caliph of God". He governed in a direct fashion, surrounded by a council of viziers, but in the course of the 4th/10th century, he rapidly ceased to take an active interest in the conduct of affairs, relying on a prime minister who bore, in Spain, the title of *ḥādjib*, not that of *wazīr*: whence the appearance, in 371/981, of a dynasty of "major-domos", of which the founder was the famous al-Manṣūr (Almanzor). A kind of sultanate was thus established in Spain also, but it lasted only a short time, since the caliphate came to an end, in a period of disturbances, in 422/1031.

In the West, other Sunnī caliphs appeared subsequently in rivalry to the caliph of Baghdād. If the Almoravids contented themselves, as has been seen, with the title of *amīr al-muslimīn*, which they adopted with the consent of the chancellery of Baghdād, the Almohad ʿAbd al-Muʾmin, successor to the *Mahdī* Ibn Tūmart, *ca.* 525/1132 took the title of *amīr al-muʾminīn*, thus setting himself up as a rival to the ʿAbbāsid sovereign and claiming that he was restoring a caliphate now in decline, in the same way that the *Mahdī* Ibn Tūmart had revived Islam; in addition, the Almohad caliph, just as was previously the Shīʿī *imām*, was the bearer of the *ʿiṣma*. Although the original character of the Almohad movement was gradually effaced, to the point where one chronicler declared that the sons of ʿAbd al-Muʾmin had transformed the caliphate into a *mulk* (al-Maḳḳarī, viii, 23), the Almohad protocol retained in its formulae (*al-ḥaḍra al-ʿaliyya al-sunniya al-ṭāhira al-ḳudsiyya*), a reminder of the initial doctrine. The title of caliph was subsequently taken over by the Ḥafṣids, successors to the Almohads, and likewise by the Marīnids.

D. The Fāṭimid caliphate and the Shīʿī imāmates.

Founded in 297/909 in Ifriḳīya by the Mahdī ʿUbayd Allāh, the Fāṭimid caliphate [*q.v.*], the appearance of which had, as stated above, led to the constitution of an Umayyad caliphate in Spain, had only a temporary historical rôle to play—it lasted in fact only until 567/1171—but dominated a vast expanse of territory, including Egypt snd Syria, and for a brief period came close to endangering the institution of the ʿAbbāsid caliphate. It was a Shīʿī caliphate derived from the Ismāʿīlī movement. As such, it presented a different aspect from that of the Sunnī caliphate; the caliph was the *imām maʿṣūm*, impeccable and infallible, supreme interpreter of the Law. This charismatic leader derived his powers from his predecessor by virtue of an explicit nomination (*naṣṣ*), kept secret throughout the preceding reign and revealed only after the death of the caliph, by the man of trust to whom it had been confided. Opinion held that the descent should be by a direct line, from father to son, and by virtue of the Shīʿī doctrine, the community could not remain even for a moment without an *imām*, whom it had no right to nominate.

This principle of accession was applied in a general way throughout the duration of the Fāṭimid caliphate. After the demise of each sovereign the *waṣiyya* of the late caliph, revealed by the senior minister, was put into effect. Nevertheless, after the end of the 5th/11th century the system ceased to function regularly, as the ministers had begun to exert too much influence and to involve themselves in affairs of succession. As early as 411/1021, on the death of al-Ḥākim, who had nominated one of his cousins, his sister Sitt al-Mulk decided that the appointment made by al-Ḥākim was contrary to the rule and intervened to have the son of the late caliph proclaimed. Later, in 487/1094, the minister al-Afḍal proclaimed the succession of one of the caliph's sons, al-Mustaʿlī, whereas another son, Nizār, had, in the opinion of some, been named by the *waṣiyya*. This was the origin of the schism of the Nizārīs or neo-Ismāʿīlīs. Another crisis occurred in 525/1130, when the caliph al-Āmir died without male issue and without having named an heir: this caused some public disorder, if we are to believe the historians; the caliphate passed to a collateral branch of the family. More serious was the initiative taken by the minister Ṭalāʾiʿ in 555/1160 when, upon the death of al-Fāʾiz, he sought out a candidate for the caliphate without troubling to discover whether the late caliph had designated an heir. The new caliph could not be under age, as was the case with al-Fāʾiz; in such an instance a *de facto* regency exercised power, and sometimes the trustees were women. This was what happened for example in the case of the aunt of al-Fāʾiz, and previously in the case of the sister of al-Ḥākim, who for a time made her authority supersede that of a nephew, then seventeen years of age. Let it be added, that throughout the closing years of the régime, the candidate for the caliphate, whose position was the same as that of the *walī ʾl-ʿahd* for the ʿAbbāsids, was appointed by the minister.

The new caliph received a *bayʿa* which apparently did not differ from the *bayʿa* made for the ʿAbbāsid caliphs. This *bayʿa* was, however, in principle simply an expression of homage, and could not in any sense be considered a designation of the sovereign.

The caliph, as *imām*, was in this respect the chief of propaganda, the interpreter of the law, the source of all knowledge. The panegyrists did not cease to develop these themes, stressing that the caliph was the friend (*walī*) of God, intercessor for all; the doctrine of the *walāya* was in fact regarded by the jurists as one of the pillars of the faith. Only the caliph al-Ḥākim went so far as to consider himself an incarnation of the deity, or at least, he allowed himself to be proclaimed as such (in 408/1017).

The theocratic nature of power was thrown into especial relief under the Fāṭimid caliphate. Nevertheless, the conditions for the exercise of power did not differ noticeably from what they were under a Sunnī caliphate. Here also the authority of the caliph fell into decline and, in the 5th/10th and the 6th/11th centuries, power was in the hands of all-powerful ministers who, to the normal title of *wazīr*, succeeded in adding that of *malik* (530/1135), and some of whom passed on their power in what was temporarily a hereditary manner. The last of these ministers was Ṣalāḥ al-Dīn, who put an end to the régime, restoring the *khuṭba* to the name of the ʿAbbāsid caliph and depriving the last Fāṭimid caliph al-ʿĀḍid of his rights and powers, without however proclaiming his dethronement.

Although the Ismāʿīlī movement thus succeeded in maintaining an effective caliphate for more than two centuries, there never was such a possibility for the Imāmī movement, whose devotees continue to this day to await the return of the *Mahdī*.

On the other hand, the Zaydī movements led to the creation of Zaydī states ruled by *imāms* descended from al-Ḥasan. One of these states, that of Ṭabaristān, constituted in the mid-3rd/9th century, was short-lived, but the other, the Yemen, constituted in 288/901, lasted into the very recent past, covering, it is true, only a very limited area. The Zaydī *imāms*, though not considered impeccable, were doctors schooled in the religious sciences as well as warriors. The most famous of these was the founder of the state of the Yemen, Yaḥyā b. al-Ḥusayn, who took the surname *al-Hādī ilā ʾl-ḥaḳḳ*, as well as the title *amīr al-muʾminīn*, which appeared in the state documents and on the coinage. Al-Hādī, considered by the Zaydīs to be a model sovereign, possessed, in addition to his qualities of courage, a great knowledge of law and great piety. It is said that he strove to apply strictly the prescriptions of Islam, especially in fiscal matters, and to him are attributed a number of scholarly writings. Under the terms of the Zaydī doctrine, the *imām* did not command unconditional obedience, because the subordination of the subjects ceased if the caliph deviated from the prescriptions of the Book and the *Sunna*. On the other hand the imāmate did not necessarily pass from father to son, since it was personal qualities which, in addition to ʿAlid origin, gave entitlement to the imamate. This explains how it was that the Zaydī imāmate succeeded in surviving into the 20th century, in spite of interruptions, especially in the Ayyūbid and Ottoman periods, and in spite of various vicissitudes.

E. The institution of the caliphate after 658/1258.

If the murder of al-Mustaʿṣim and the Mongol invasions did not bring about the effective disappearance of the ʿAbbāsid caliphate, the new era which began at this date was nevertheless of a quite different character. The Mamlūks, having taken power in Egypt and Syria, took to Cairo a member of the ʿAbbāsid family, the uncle of the last caliph of Baghdād, and Baybars had this man declared caliph through the good offices of the chief *ḳāḍī* who had verified his genealogy (*Radjab* 659/June 1261). This individual, who took the surname al-Mustanṣir, claimed in his first *khuṭba* all the privileges of the caliph and claimed to extend his authority over the whole Islamic world, to which end Baybars entrusted an army to him. He failed in his attempt to reconquer Baghdād, and the new caliph, al-Ḥākim, who was then proclaimed in Cairo (*Muḥarram* 661/November 1262) and installed in the citadel, no longer had the right to interfere in political life; his presence seems to have had no other purpose than to render legitimate the power effectively exercised by the Mamlūks, according to a regulation which remained in force for two-and-a-half centuries.

From a juridical viewpoint, the caliph remained, it is true, titular holder of a sovereignty which continued to be transmitted in the line of the caliph al-Ḥākim. But the ensemble of powers, including the right of nominating various agents, had been delegated to the sultan, who was henceforward chosen by the Mamlūks and invested with the sultanate by the caliph. The author al-Ḳalḳashandī compares the sultanate to a delegated vizierate, and declares besides that it consisted of a combination

of the *imārat al-istīlā'* with the *wizārat al-tafwīḍ* (*Ṣubḥ*, xi, 72), which shows the importance that he still attached to the investiture by the caliph. The sultanate had none the less acquired a kind of juridical autonomy; when the Mamlūks could not agree on the appointment of a sultan, as happened for example in 815/1412, they entrusted to the caliph the powers of the sultan, which were thus, according to the chroniclers, "added" temporarily to the caliphate.

In addition, the caliphs lost in Cairo certain of their privileges, the right of *sikka*, which was no longer observed from the time of the third caliph onwards, the right of *khuṭba* which seems to have fallen into disuse, while the traditional insignia of the caliphate were henceforward carried by the sultans themselves. The name of the caliph was no longer mentioned in the *khuṭba* at Mecca, but retained the prestige of holding a power of divine origin and of being, as in the past, the "lieutenant of God on earth" (*nā'ib Allāh fī arḍi-hi*). So obedience to the caliph seems to have been, especially for rulers of distant provinces, a kind of religious duty. Investiture at his hands was always sought by various sovereigns, notably the Muẓaffarids of Iran, the sultans of Delhi and the Ottomans of Anatolia. Khalīl al-Ẓāhirī (d. 862/1468) wrote: "The *amīr* of the believers is the lieutenant of God on earth and no prince of east or west can justly call himself sultan if he has not received investiture at his hands." Without this investiture, he could not for example nominate a *ḳāḍī* whose decisions were to be valid.

Various princes of this period refused, however, to recognise the ʿAbbāsid caliphs of Cairo. This happened notably in the case of the Il-Khānid Ghazān Khan, who occupied Damascus in 698/1299 and had himself named in the *khuṭba* "the august sultan, sultan of Islam and the Muslims". As for the Tīmūrid Shāh Rūkh, he considered himself sovereign by divine right and it was his ambition to be recognized as *khalīfa* by the other princes which was refused by the Mamlūk sultan Barsbāy and the Ottoman sultan Murād II.

Moreover, it seems that from the end of the 7th/13th century onwards, certain princes introduced the word *khalīfa* into their titles, without however appropriating the title *amīr al-mu'minīn*; this was done by the Saldjūk sultans of Rūm, protected by the Mongols, and also by the sultans of Dihlī. The Türkmen Uzun Ḥasan (857-82/1453-78) wrote *ca.* 875/1471 to the Ottoman sultan concerning his new capital Shīrāz, calling it the "throne of the caliphate". At the beginning of the 10th/16th century the prince of Transoxania, Muḥammad Shaybānī, put on his coinage the title *khalīfat al-Raḥmān*. While it is admitted that these titles did not always correspond to a precise aspiration, it appears that from the time of the Mongol invasions onwards, the title of *khalīfa* was no longer reserved for the ʿAbbāsid *amīr* of the Believers and that a number of rulers did not hesitate to take it up, as though it were a normal title of Muslim sovereigns.

This title appeared notably in letters of congratulation addressed by allies to Ottoman sultans after certain of their successes. Thus Murād I at the end of the 8th/14th century saw fit to call himself "chosen *khalīfa* of the Creator", and "shadow of God on the earth". A little later, the sultan Bāyazīd did not hesitate to apply to himself verse VI, 165 of the Ḳur'ān: "we have made of you a representative (*khalīfa*) on the earth." In the same way, Meḥemmed I after the restoration of the Ottoman empire at the start of the 9th/15th century, spoke of his "caliphate", a term which the other Ottoman sovereigns did not hesitate to use on certain occasions in dealings with their allies. At all events, and in spite of the fact that Meḥemmed II the Conqueror did not take to himself the title of *khalifa*, official correspondence addressed to the Ottomans by their neighbours did not cease to consider them repositories of the caliphate and Selīm himself, after 1512, was called by his brother "shadow of God on earth".

It is noteworthy that at the same period too, various eulogists applied on occasion to Ottoman sultans the title of *khalīfa* or *khalīfat Allāh*, although these expressions were nothing more than laudatory epithets, appearing generally in texts of rhymed prose and not to be regarded as official titles. More often, indirect expressions such as "the throne of the caliphate" were employed.

In fact, the Ottoman sultans early wished to be considered, without however claiming the title *amīr al-mu'minīn*, as bearers of the sultanate and the caliphate combined, a caliphate conceived by the Muslim thinkers of the time in terms completely different from those of early Islam. Thus two thinkers as different one from the other as Ibn Taymiyya and Ibn Khaldūn agree in declaring that the caliphate ceased after the *rāshidūn* caliphs and that the sovereignty exercised by the Umayyads and the ʿAbbāsids had never been more than a sort of "royalty". This was their way of expressing how they were struck by the contrast between the theory of the caliphate as it had been formulated by al-Māwardī and the reality which they saw. It may be added that the lawyers of the Ḥanafī school were also of the opinion that the true caliphate had lasted no more than thirty years, up to the death of ʿAlī. For their part, Persian authors, such as Dawwānī, who wrote in the 9th/15th century, supported the thesis which held to be a caliph every sovereign who became, as defender of the cause of Islam, "representative" of God on earth. As was stressed by Sir Thomas Arnold, the title *amīr al-mu'minīn*, associated with the traditional Ḳurashī caliphate, was then abandoned, while the powerful sovereigns of the Irano-Turkish world sought to adorn themselves with the title of *khalīfa*; they considered themselves, in fact, simply by virtue of their taking power, as sovereigns by divine right and lieutenants of God.

At the same time, they recognised no authority on the part of the caliph of Cairo. This is seen in the episode when the sultan Selīm conquered Syria, then Egypt, making a prisoner of the caliph al-Mutawakkil, treating him with a complete lack of deference and exiling him to Constantinople. Al-Mutawakkil was unable to leave this involuntary exile until the reign of the sultan Sulaymān, returning to Egypt where he died in 950/1543; he made no further exercise of his functions as caliph, except in conferring the investiture on the governor Aḥmad Pasha, a governor who had rebelled against the Ottoman sultan. The fact emerges clearly from the account of these events that the last ʿAbbāsid caliph was considered of negligible importance by the victorious Ottoman sultan.

On the other hand, not one of the historical accounts states in precise fashion that Selīm sought to take to himself the legacy of the caliphate to the extent that might be inferred from the late, popular versions which began to circulate at the end of the 18th century and were collected by Mouradgea d'Ohsson. There is no justification for the view that there was an official transfer of the caliphate to Constantinople. It is true that certain relics of the Prophet and of the Companions were transferred

to the capital of the Ottoman empire; as for sultan Selīm and his successors, they never bore officially in documents of state, inscriptions and coinage, titles other than *sulṭān* and *khāḳān*; they did not use those of *amīr al-muʾminīn* or of *imām*. The only new title adopted by Selīm after the conquest of Egypt was that of *khādim al-ḥaramayn* [*q.v.*], which was in fact a title belonging to the Mamlūk sultans and not to the caliph.

These ill-defined pretentions of the Ottoman sultans towards sovereignty over the entire Islamic world, came into conflict in certain respects, in the east, with the ambitions of the Mughal rulers of India during the 16th and 17th centuries. After the reign of Akbar (963-1014/1556-1605) [*q.v.*], the capital of these faraway but powerful princes, Dihlī, was called *dār al-khilāfa* ("seat of the caliphate") and the coinage of Akbar bore the inscription: "the great sultan, the exalted *khalīfa*." The Mughals, who dealt on equal terms with the Ottomans, continued until the reign of Shāh ʿĀlam II (1173/1760) to qualify themselves with the title of *khalīfa*, although it is unclear to what extent they were thereby disowning the traditional concept of the Ḳurashī caliphate.

Nevertheless, it was the masters of the Ottoman empire who finally enjoyed the distinction, in the 18th century, of being presented by their diplomats to foreigners, including European monarchs, as the holders of the "caliphate". An example of this appeared in 1774 in the treaty concluded between ʿAbd al-Ḥamīd I and the empress Catharine of Russia; the sultan was called "the *imām* of the Believers and the caliph of those who profess the divine unity", an expression which at the time was rendered in French by "le Souverain calife de la religion mahométane". The intention was to retain the sultan's religious authority over Muslim populations which had passed under foreign domination; this the Russians did not accept (the treaty was revised in 1783). In any case, from this time onward, and throughout the 19th century, in the various confrontations which occurred between the Ottomans and the European states, the Ottoman sultans strove to present themselves officially as caliphs, that is to say, as the spiritual leaders of the Muslims and defenders of Islam. The distinction, of European origin, between the spiritual and the temporal thus found, through the exigencies of the situation, echoes in Ottoman circles. Hence the constitution formulated in December 1876 by the sultan ʿAbd al-Ḥamīd II declared explicitly in its art. 3: "The august Ottoman sultanate, the office of the supreme Islamic caliphate, must devolve upon the eldest of the members of the family"; and in art. 4: "the sultan, in his capacity as caliph, is the protector of the Muslim religion".

Even though the process of giving executive force to the constitution of 1876 was postponed until 1908, the sultan continued to hold to this conception which enabled him to assert his authority over the Arab countries and furthermore to embrace the ideal of pan-Islamic unity, inspired in him by Djamāl al-Dīn al-Afghānī [*q.v.*]. The principle was in any case recognised in the countries of the West, and in Bosnia-Herzegovina, after the annexation of the province to the Austro-Hungarian empire in 1908, the name of the Ottoman sultan continued to be mentioned in the public prayers. In Libya, even after the establishment of the Italian protectorate, the chief *ḳāḍī* of that country was still appointed by the Ottoman *shaykh al-Islām*. In Bulgaria, under the terms of the treaty of Constantinople of 1913, the prerogatives of the Ottoman sultan, though more strictly limited, were nevertheless upheld, as was also the case in Greece at that time.

It should be added that the Ottoman sultans had, in fact, for a number of centuries, exercised functions similar to those of the ancient caliphs, with the difference that they sought to establish a more regular system. In addition to the law, they formulated a code of rules, the purpose of which was in principle to supplement the Law, but which sometimes tended to supplant it; called *ḳānūn*, it was employed by Sulaymān the Great as by the other sultans, and was applied not only to financial questions, but also to questions such as the problem of succession. Later, in the 19th century, the sultans sought, under the pressure of various circumstances, to modernise the structures of the Ottoman state. This is not the place to examine the reforming measures known as the *Tanẓīmāt* [*q.v.*], but it should be recalled that it was in their capacity as leaders of an important Muslim community that the sultans introduced modifications in the traditional *fiḳh*, as in the organisation of public powers. The movement culminated in the formulation of the constitution of 1876 which envisaged a parliamentary régime and which did not come into force until 1908.

The installation of a parliamentary régime, then the appearance of the officers of the Committee of Union and Progress, had the effect of calling into question, even before the First World War, the sultanate and the caliphate. The Young Turks had at first been cautious, and if they sought to circumscribe the powers of the sultan, they tended also to use the expedient of the caliphate to maintain Turkish influence over the Arab lands. The issue of the war modified the assumptions of the problem, since the new Turkish nationalism, whose champion was Muṣṭafā Kemāl, had nothing to do with the caliphate. The suppression of the ancient institutions was nevertheless gradual. Muṣṭafā Kemāl began by attacking the sultanate, while recognising the caliphate as "a moral link, sacred and respected by the entire Muslim world." On the 1st November 1922, the sultanate was abolished by the Grand National Assembly of Ankara, which reserved for itself the right to choose the holder of the caliphate under the terms of the Constitution adopted in January 1921 and which declared the sovereignty of the people. The sultan Meḥemmed VI, deposed by means of a *fatwā*, went into exile and was replaced by ʿAbd al-Madjīd, who had been chosen by the Assembly and was asked to consider himself only as the caliph of the Muslims. In fact, the new caliphate was ill-defined, and fruitless discussions were held regarding the functions to be attributed to a figure in whom Muṣṭafā Kemāl, in April 1923, recognised above all "supreme inter-Islamic authority" and the "symbol of Islamic solidarity", and yet who held no real spiritual power, for he did not have the right to appoint *ḳāḍīs*, *muftīs* or preachers. In January 1924 Muṣṭafā Kemāl declared: "The idea of a single caliph, exercising supreme religious authority over all the peoples of Islam, is an idea taken from fiction, not from reality." In February, the caliphate was abolished by the National Assembly which was then endowed with all powers of legislation (*tashrīʿ*). The prayer was delivered in the name of *al-Ḥukūma al-djumhūriyya wa ʾl-milla al-islāmiyya*. Meanwhile, a group of *ʿulamāʾ* had drafted a document which was circulated not only in Turkey but also in the Arab countries and which tried to show that the problem

of the caliphate was a question not of theology but of practical politics, that the caliphate had not been instituted by the Prophet and that it did not constitute a fundamental element of Islam.

The abolition of the caliphate, of which the concept had changed somewhat since the 7th/13th century, was none the less powerfully resented in the Middle-East, where various projects were attempted for the restitution of this institution, considered to be fundamental to the very life of the community of Islam. The sharīf of Mecca, Ḥusayn, made an attempt to have himself recognised as caliph, but succeeded only with a few neighbouring princes. In 1926, two congresses were held, which had the object of debating the issue of the caliphate; one took place in March, in Cairo, the other in July at Mecca, without any result. The western powers, for their part, sought to encourage the restoration of the caliphate, on the condition that the holder be their ally. In 1930 there was denunciation from certain Muslim quarters of the policies of the British, who continued to give financial support to the former Ottoman sultan while backing King Ḥusayn, and those of the French, who favoured the Bey of Tunis. Then in 1931, a congress of *ʿulamāʾ* and political figures was held in Jerusalem. It had no result other than to affirm the spirit of solidarity which still existed among Arab and Muslim countries and which was the origin of the "Congress of Arab Unity" held in 1937 and from which arose the League of Arab States, founded in 1944. Meanwhile, the attempt of King Fārūḳ of Egypt, in 1939, to revive the caliphate to his own advantage, met with vigorous opposition from the Turkish government. The rise of nationalism thus brought about the transformation of a pan-Islamic movement into a simply pan-Arab movement.

In fact, Muslim opinion was in general resigned to the new situation, entrusting interpretation of the Law to the doctors, and political affairs to the *de facto* authorities. Even in 1922, the reformist Rashīd Riḍā had proposed a plan for the reform of the caliphate in his work *al-Khilāfa aw al-Imāma al-ʿUẓmā*; he asserted that no Arab sovereign was worthy to accede to this office and he proposed the holding of a seminar with the purpose of drawing up a list of doctors from among whom the caliph would be chosen; the rôle of the caliph would essentially have been to adapt Islamic law to the conditions of modern life. But such a project was never realised.

More radical was the theory advanced by a *shaykh* of al-Azhar, ʿAlī ʿAbd al-Razīḳ, who, in 1925, wrote an essay entitled *al-Islām wa-uṣūl al-ḥukm* "Islam and the bases of power", which caused a sensation in traditionalist Muslim circles because it laid down a doctrinal basis for the separation of the temporal and the spiritual, and suggested that the government of the Prophet at Medina was not dependent on the prophetic mission. This work was condemned by the *shaykhs* of al-Azhar, but the notion of temporal sovereignty continued nevertheless to take root in Muslim circles during the decades that followed.

(ii) In political theory

There are two references to *khalīfa* in the Ḳurʾān (Sūra II, 30 and Sūra XXXVIII, 26). The first, "We have made thee a *khalīfa* in the land; then judge between the men with the truth, and follow not thy desires, lest they cause thee to err from the path of God", refers to Adam. The second, "We have made thee a *khalīfa* in the earth; so judge between the people with truth" is addressed to David. The plural (*khalāʾif* and *khulafāʾ*), which occurs frequently, means successors (i.e. progeny) (see further R. Paret, *Signification coranique de ḫalīfa*, in *Studia Islamica*, xxxi (*pars prior*), 211-17, and W. Montgomery Watt, *Islamic political thought*, Edinburgh 1968, 32 ff.). For the commentators such as Zamakhsharī, the concept of Adam included or typified all mankind and the prophets, while David had the dual rôle of king and prophet. Although there is no indication that the word *khalīfa* was intended to serve as the title of the successor of Muḥammad, both the passages quoted above are important for the development of the theory of the *khalīfa* as the successor of the prophet, and his office, the *khilāfa*.

It is asserted by Muslim historians that the term *khalīfa* was first used as the title of the successor of Muḥammad by Abū Bakr, but it is doubtful whether he ever assumed it as a title (Caetani, *Annali dell' Islam*, 11 A.H., para. 63 n. 1). From the reign of ʿUmar b. al-Khaṭṭāb, however, *khalīfat rasūl Allāh*, successor of the messenger of God, became the common designation of the leader of the community, the *amīr al-muʾminīn* [*q.v.*], the Commander of the Faithful, the title which ʿUmar had adopted on his

election (cf. Ibn Khaldūn, *al-Muḳaddima*, ed. Quatremère, Paris 1858, i, 408-14, ed. Beirut 1886, 227-30 and cf. M. A. Shaban, *Islamic history A.D. 600-750 (A.H. 132)*, Cambridge 1971, 19, and idem, *The ʿAbbāsid Revolution*, Cambridge 1970, 140-1 on *amīr al-muʾminīn*). The title *khalīfat rasūl Allāh* implied the assumption by Muḥammad's successor of Muḥammad's functions as judge and temporal leader of the community. Muḥammad's prophetic function, on the other hand, was held to have ceased with him and it was believed that the spiritual guidance of the community had been inherited by the community as a whole. The *khalīfa*, thus, had no authority to give new interpretations to religious matters: his function was merely to maintain old doctrines. His office was simply a delegation of authority for the purpose of applying and defending the *sharīʿa*. The title *khalīfat rasūl Allāh* was commonly applied to the orthodox or rightly guided caliphs (the Rāshidūn), who were regarded as the representatives or successors of Muḥammad. Muʿāwiya's claim to the caliphate, if it was based on the text of the Ḳurʾān (XVII, 35), was to be sultan: as such he was not Muḥammad's deputy but God's, and the title *khalīfat Allāh*, vicegerent of God, appears to have been approved by the Umayyads (D. S. Margoliouth, *The sense of the title Khalifah*, in *A volume of oriental studies presented to E. G. Browne*, ed. T. W. Arnold and R. A. Nicholson, Cambridge 1922, 327). The phrase *khalīfat Allāh* had earlier excited the indignation of Abū Bakr, because of the boldness of its implication. It was, nevertheless, used by Ḥassān b. Thābit in A.D. 35 in an elegy he wrote on the caliph ʿUthmān (*Dīwān of Ḥassān Ibn Thābit* ed. W. N. Arafat, *GMS*, N.S. xxv/1-2, London 1971, i, 96). The ʿAbbāsids later employed the title *khalīfat Allāh*, but its use was resisted by many of the *ʿulamāʾ*, who rejected the idea that the *khalīfa* was the representative of God and the implication of autocratic power contained in the title (I. Goldziher, *Muhammadanische Studien*, ii, 61, H. A. R. Gibb, *al-Mawardi's theory of the caliphate*, in *Studies on the Civilization of Islam*, ed. Stanford J. Shaw and W. R. Polk, London 1962, 158, S. D. Goitein, *Attitudes towards government* in *Studies in Islamic history and institutions*, Leiden 1966, 203). An attempt to limit the true caliphate to the Rāshidūn, on the basis of a tradition attributed to the prophet which states "the caliphate after me will be thirty years: then it will become kingship" (quoted by Margoliouth, *op. cit.*, 328), did not become accepted doctrine. Later Sunnī jurists, however, drew a distinction between the caliphate of the Rāshidūn, the *khilāfat al-nubuwwa* (the vicariate of prophecy) and the later caliphate which they held to have had the character of worldly kingship (*mulk*) [*q.v.* in IMĀMA].

As used in the sources, the terms *khalīfa* and *imām* (and *khilāfa* and *imāma* [*q.v.*], which refer to his office) are broadly interchangeable. The former is primarily applied to the supreme leader of the Muslim community as the ruler of the community exercising the "temporal" functions of Muḥammad, while the latter is applied to him as the religious leader of the community and derives from his function of leading the prayers of the community, which, in the view of the Sunnīs, was his most important function. The propriety of the election of Abū Bakr was, in fact, defended by many jurists on the ground that he had led the prayers. In *fiḳh* literature the terms *imām* and *imāma* are used in preference to *khalīfa* and *khilāfat*. Among later writers traces are occasionally to be found of a distinction between the functions of the leader of the community as *khalīfa* and as *imām*. For example Rāwandī alleges that Ṭughril b. Arslān's atabeg, Muḥammad Pahlavān-djahān, used openly to say, "The *imām* should occupy himself with delivering the *khuṭba* and leading the prayers, which are the best of actions and the greatest of deeds and which uphold (or protect) profane rulers; and he should entrust kingship to sultans and leave rule to this sultan (*i.e.*, Ṭughril)" (*Rāḥat al-ṣudūr*, ed. Muḥammad Iqbāl, *GMS*, N.S. ii, London, Leiden 1921, 334).

Politics and religion in Islam were inextricably mixed and the political doctrines of the *khalīfa* as the leader of the community cannot be easily separated from the theological and juridical doctrines concerning his office [see IMĀMA]. The early doctrinal disputes and religious polemics—the controversies over the imamate raised by the first civil war, the development of the Shīʿat ʿAlī and the Khawāridj schisms, the succession of the Umayyads and their overthrow by the ʿAbbāsids, the Muʿtazilī movement and its refutation by the Ashʿarīs, and the polemics against the Rawāfiḍ and Khawāridj—profoundly influenced the development of the political theory as well as the religious doctrine of the *khalīfa*, as also did Hellenistic and Sasanian theories of government.

As the temporal head of the community, whose internal organisation was secured by a common acceptance of and submission to the *sharīʿa*, the caliph was the symbol of the supremacy of the *sharīʿa*. He, like other believers, was subordinate to it and they owed him obedience only as its representative. So far as there was an element of contract in the relations between him and his followers this was to be found in the *bayʿa* [*q.v.*]. Termination of the contract was only permitted if a change took place in the status and condition of the caliph such as might cause prejudice to the rights of the community. The weakness of the position was that no tribunal was specified to decide upon his deposition.

Gradually the political doctrines of the imamate were worked out in the light of political developments (cf. H. A. R. Gibb, *al-Mawardi's theory of the caliphate*, 154-5). Significantly, most of the important expositions of the theory of the caliphate were written, if not at a period of crisis, at least at a time when some fairly major problem faced the Muslim community and was exercising the minds of the faithful.

In the turbulent years following the transfer of power from the Umayyads to the ʿAbbāsids, Ibn al-Muḳaffaʿ [*q.v.*], who died probably in 139/756, concerned at the internal dissensions within the community, felt the need for a definition of the powers and authority of the caliph. Recognising the change in the basis of the caliphate which had taken place with the ʿAbbāsid revolution, and believing that the only bond between the caliph and his army was religious conviction, he made right belief the cornerstone of his political programme. Convinced of the need for stability, he proposed a rigid control by the state. He suggested that the caliph should supersede and regulate *raʾy* [*q.v.*] as used in the ancient schools of law and recommended that he should create a code based on (i) precedents and usage (*siyar*), (ii) tradition and analogy, and (iii) his own decisions which would in turn be emended by succeeding caliphs. Ibn al-Muḳaffaʿ's pleas, however, went unheeded: orthodox Islam rejected the view that *raʾy* was the domain of the ruler and referred the final decision

to *idjmā*ʿ [*q.v.*] (see further S. D. Goitein, *A turning-point in the history of the Muslim state*, in *Studies in Islamic history and institutions*, 149-67).

Abū Yūsuf (d. 182/798) [*q.v.*] represents a somewhat different point of view. Disturbed by contemporary practices, many of which seemed contrary to the spirit of the early caliphate as reflected in the works of the Traditionists, he cites a number of traditions in his *Kitāb al-Kharādj* showing the duty of the subjects to their *imām*. The *bay*ʿ*a* by this time was no longer of practical significance and Abū Yūsuf does not attempt to maintain even the principle of election. He is aware of only one source of authority: God's choice by which the caliph became a vicegerent of God on earth (see further S. D. Goitein, *Attitudes towards government in Islam and Judaism*, in *Studies in Islamic history and institutions*, 203 ff.). By implication he holds that the actual possession of power is the necessary basis for authority and a sufficient justification for its exercise, irrespective of the ruler's personal qualifications. Although Abū Yūsuf, who looks upon the caliph as the shepherd of his people, bases the principles of true Islamic government upon the *sunna* of the Rāshidūn and of ʿUmar b. ʿAbd al-ʿAzīz, and implicitly protests against the prevailing cult of the Sasanian tradition (cf. Gibb, *The evolution of government in early Islam*, in *Studies on the civilization of Islam*, 45), he opens the way, by his acceptance of the caliph as the *khalīfat Allāh*, to the theory of the ruler as the Shadow of God upon earth, which was later to be transferred to the temporal ruler once the caliph had ceased to be the effective and immediate source of power (cf. A. K. S. Lambton, *Quis custodiet custodes*, in *Studia Islamica* v (1956), 125-48).

Al-Djāḥiẓ (d. 255/868-9) [*q.v.*] approaches the question of the imamate from yet another point of view and bases his argument on the need for an *imām* on the predatory nature of men and their lack of understanding, an argument frequently put forward later in the works of Islamic philosophers and the writers of mirrors for princes (see further Ch. Pellat, *L'imamat dans la doctrine de Ǧāḥiẓ*, in *Stud. Isl.*, xxv (1961), 23-52). Preoccupied with the feud between the supporters of the ʿAbbāsids and their opponents, he raises the question of the duty to resist an impious government. In this, his concern is not with the right to resist *bad* government as such, but simply with the duty to oppose the transgression of the law which was involved by the abandonment of Islamic government by the *imām*. When this happened al-Djāḥiẓ held that it was the duty of the *imām*'s subjects to denounce and depose him, though he limits this duty by the possibility of fulfilment (see further Pellat, *locc. cit.*, and also B. Lewis, *Islamic concepts of revolution*, in *Revolution in the Middle East*, ed. P. J. Vatikiotis, London 1972, 35 ff.).

By the end of the 3rd/9th century the political control of the ʿAbbāsid caliph was on the one hand becoming increasingly eroded by his governors, who had usurped his temporal powers, and on the other threatened by movements of politico-religious dissent. This made a restatement of the basis and nature of caliphal authority imperative. One of the first to attempt this was al-Bāḳillānī (d. 403/1013) [*q.v.*], who in his exposition of the imamate was mainly concerned to defend the Sunnī position against the threat of the Shīʿa (see further A. Abel, *Le chapitre sur l'imamat dans le Tamhid d'al-Baqillani*, in *Le Shi'isme imamite*, Paris 1970, 55 ff., and Y. Ibish, *The political doctrine of al-Baqillani*, Beirut 1966).

Al-Māwardī (d. 450/1058) [*q.v.*], starting from the premiss that authority was delegated by God to the *imām* and that he alone could delegate this to others, is primarily concerned to maintain the theoretical validity of the caliph's authority and his delegation of this in spite of the actual usurpation of his power by others. In *al-Aḥkām al-sulṭāniyya*, he lays down the qualifications of the *imām* [see IMĀMA] and discusses the functions of his office, having in mind the limitations imposed upon the caliph by political circumstances. Like various writers before him, al-Māwardī speaks of the forfeiture of the imamate, without, however, laying down any legal means by which this might be brought about. In his discussion of the formal institutions of government he concentrates mainly upon what constitutes a valid investiture by the caliph of his functionaries, in particular the *wazīr* and the *amīr*. Some two centuries earlier al-Djāḥiẓ had defined political obligation with regard to the overthrow of an impious *imām* in terms of possibility. Al-Māwardī went further. Constrained by necessity and expediency, he limited even the political obligations of the caliph as the executor of the *sharīʿa* by the possibility of fulfilment. (See further H. A. R. Gibb, *al-Mawardi's theory of the caliphate*).

In the 5th/11th and 6th/12th centuries the jurists continued to wrestle with the problem of how to assert the supremacy of the caliph. They were all concerned to a greater or lesser degree with the caliph's mission as the vicegerent of the prophet, and with his duty to defend Islam and to administer the affairs of the community. Among them were Abū Yaʿlā (380-458/990-1066) Ibn al-Farrāʾ [*q.v.*], Ibn ʿAḳīl (431-513/1040-1119) [*q.v.*], al-Djuwaynī, the Imām al-Ḥaramayn (419-499/1028-1105) [*q.v.*], and al-Ghazālī (450-505/1058-1111) [*q.v.*]. The last named breaks new ground on the subject of the relationship of caliph and sultan in his *Iḳtiṣād al-iʿtiḳād*. The caliph remains the symbol of the supremacy of the *sharīʿa* but the sultan is associated with him and recognised as the holder of coercive power (see further L. Binder, *al-Ghazali and Islamic government*, in *The Muslim world*, July 1955, and H. Laoust, *La politique de Ġazālī*, Paris 1970).

Ibn Djamāʿa (639/1241-733/1333) [*q.v.*], writing after the extinction of the caliphate by the Mongols, broadly speaking transfers to the *de facto* rulers the constitutional theories worked out by earlier jurists, holding that the seizure of power itself gave authority, while Ibn Taymiyya (661-728/1263-1328) [*q.v.*], seeking a more radical solution, denied the obligatory nature of the caliphate (see further H. Laoust, *Essai sur les doctrines sociales et politiques de Ibn Taimīya*, Cairo 1939, idem, *Le traité du droit publique d'Ibn Taimīya*, Beirut 1948).

(A. K. S. Lambton)

(iii) In Islamic mysticism

This term may have any of the following meanings, all carrying the idea of vicarship, when used in writings dealing with or pertaining to certain aspects of Islamic mysticism:

1. He may be the *ḳuṭb* or perfect man, *al-insān al-kāmil* [*q.v.*], around whom the spheres of being evolve, upon whom the Muḥammadan Reality (*al-ḥaḳīḳa al-muḥammadiyya*), which is the hidden side (*bāṭin*) of his own reality in the world, irradiates. This makes the *ḳuṭb* the *khalīfa* of the Prophet on the plane of manifestation (*ẓāhir*). In this sense the founders of the *ṭarīḳa*s [*q.v.*] and their successors, when identified with the *ḳuṭb*, are referred to as *khulafā'* of the Prophet (see e.g. Muḥammad Abu 'l-Maḥāsin al-Ḳāwuḳadjī, *al-Badr al-munīr ʿalā ḥizb al-shādhilī al-kabīr*, Alexandria 1314, 19; Muḥammad Māḍī Abu 'l-ʿAzā'im, *al-Ṭuhūr al-madār ʿalā ḳulūb al-abrār*, Cairo 1340, 32; Muḥammad ʿAbd al-Raḥīm al-Nashshābī, *Asrār al-ḥaḳīḳa li-man yasluku al-ṭarīḳa*, Cairo 1921, 66 f.).

They do not unite *al-khilāfa al-ẓāhira* with *al-khilāfa al-bāṭina*, however, as did *al-khulafā' al-rāshidūn*, but held only *al-khilāfa al-bāṭina* (cf. ʿUbayd Allāh Ṣāliḥ b. Muḥammad al-Ḳusanṭīnī al-Ḥanṣālī, *Fatḥ al-Raḥīm al-Raḥmān bi-sharḥ naṣīḥat al-ikhwān*, Cairo 1312, 176; Muḥammad al-Nūrī, *al-Nafaḥāt al-hadā'iyya ʿalā wird al-sādāt al-aḥmadiyya*, Alexandria 1316, 109, 111). This is also referred to as *al-khilāfa al-kubrā* (cf. Ẓahīr al-Dīn al-Ḳādirī, *al-Fatḥ al-mubīn fīmā yataʿ allaḳa bi-tiryāḳ al-muḥibbīn*, Cairo 1306, 118).

2. He may be the successor of the (alleged) founder of a *ṭarīḳa* or to the deceased leader of a group of mystics, without the connotations attached to the term as mentioned under (1). The term may refer to his immediate successor (see e.g. Taḳī al-Dīn ʿAbd al-Raḥmān al-Wāsiṭī, *Tiryāḳ al-muḥibbīn fī ṭabaḳāt khirḳat al-mashāyikh al-ʿārifīn*, Cairo 1305; 20, Karīm al-Dīn al-Barmūnī, *Tanḳīh rawḍat al-azhār wa-minyat al-sādāt al-abrār*, Tunis 1325, 343; al-Nashshābī, *Asrār*, 64 f.) or to the successor to *al-khilāfa*, i.e. to the position of supreme leadership over the *ṭarīḳa* or group as shaped by its founder or first leader and/or their successors (see e.g. Djalāl al-Dīn al-Karakī, *Lisān al-taʿrīf bi-ḥāl al-walī al-sharīf Sīdī Ibrāhīm al-Dasūḳī*, ed. Aḥmad ʿIzz al-Dīn Khalf Allāh, Ṭanṭā 1969, 5 f., for *al-khilāfa al-Birhāmiyya*, and al-Djabartī, *ʿAdjā'ib al-āthār*, i, 70, for *al-khilāfa al-Wafā'iyya*).

Equivalent to *al-khilāfa* in this sense is the term *sadjdjāda* [*q.v.*]. According to ʿAbd al-Wahhāb al-Shaʿrānī, *al-Anwār al-ḳudsiyya fī maʿrifat ḳawā'id al-ṣūfiyya*, Cairo-Beirut 1962, 6, i, 185, preference for succession of a deceased *shaykh* [*q.v.*] should be given to the eldest of his disciples. The successor may already have been designated by the *ṭarīḳa*'s leader during his lifetime (on this see e.g. Muḥammad ʿAbd al-Bāḳī al-Laknawī, *al-Minaḥ al-madaniyya fī mukhtārāt al-ṣūfiyya*, Medina 1330, 88 ff.). In addition, the *ṣūfī* manuals mention the existence of consensus among the disciples about the successor as a legitimate basis for the assumption of leadership (cf. al-Laknawī, *al-Minaḥ*, 93). Hereditary patrilineal succession to the leadership position became the rule adopted by many of the Ṣūfī orders. This practice is frowned upon by those belonging to al-Naḳshibandiyya [*q.v.*] such as Muḥammad b. ʿAbd Allāh al-Khānī, *al-Bahdja al-saniyya fī ādāb al-ṭarīḳa al-ʿaliyya al-Khālidiyya al-Naḳshibandiyya*, Cairo 1319, 33, and it is discarded as Shīʿa custom by authors belonging to al-Shādhiliyya [*q.v.*], such as ʿAlī Sālim ʿAmmār, *Abu 'l-Ḥasan al-Shādhilī*, Cairo 1951, 62, i, 31.

3. He may be a *murīd* [*q.v.*] who, after having reached a certain stage of mystical perfection as defined by the teachings of the *ṭarīḳa* to which he belongs, is granted permission by his spiritual master to initiate novices and to guide them on the mystical path. This includes permission to transmit the *ṭarīḳa*'s prayers, to lead *ḥaḍra*s [*q.v.*] and to grant the status of *khalīfa* to his own disciples in turn. To this effect a so-called *idjāza* (Pers./T. *idjāzatnāma/icazetname*) [*q.v.*] is granted to him by his spiritual master, possibly during a festive gathering of the *ṭarīḳa*'s members, when the *idjāza* is read (cf. P. Kahle, *Zur Organisation der Derwischorden in Egypten*, in *Isl.*, vi (1916), 157). The actual investiture may consist in the pronounciation of a special oath-formula, the *mubāyaʿat al-khilāfa* (cf. al-Laknawī, *al-Minaḥ*, 89) which differs from the common *ʿahd* formula [*q.v.*]. An *idjāza* of this type may be defined as the deed of spiritual succession granted to a *murīd*. It is generally referred to as *idjāzat al-khilāfa* (Pers./T. *khilāfatnāma, hilafetname*), or just *khilāfa*. This document generally contains a more or less elaborate exposition of rights and obligations of its recipient and mentions the *silsila* [*q.v.*], i.e. the chain of initiation and transmission of mystical knowledge also known as *sanad* [*q.v.*] *al-khilāfa* (cf. Aḥmad b. Muḥammad al-Kashshāshī, *al-Simṭ al-madjīd fī sha'n al-bayʿa wa 'l-dhikr wa talḳīn wa-salāsil al-ṭarīḳ*, Ḥaydarābād 1327, 67 ff.). Provided with the seal of its purveyor, who must have been similarly authorised by his own spiritual master, and sometimes endorsed by a number of witnesses, who may also be *khalīfa*s (cf. Muḥammad b. Mubārak ʿAlawī Kirmānī (Amīr Khurd), *Siyar al-awliyā'*, Dihlī 1302, 179) it constitutes the *khalīfa*'s primary source of legitimation as a teacher of the *ṭarīḳa*. The *idjāzat al-khilāfa* need not necessarily be restricted to the permission to transmit mystical knowledge, but may also contain permission to teach and transmit texts of a different nature. It can also contain permission to initiate into and to teach the methods of more than one *ṭarīḳa* (cf. Muḥammad b. Sulaymān al-Ḥanafī al-Baghdādī, *al-Ḥadīḳa al-nadiyya fī ādāb al-ṭarīḳa al-Naḳshibandiyya wa 'l-bahdja al-Khālidiyya*, Cairo n.d., 45). The fact that somebody has been granted the *idjāzat al-khilāfa* means only that he possesses the prerequisites for initiating and guiding disciples of his own, independent of his spiritual master. He is not under the obligation to do so, and he may very well refrain from setting himself up independently until after his master's death (cf. e.g. Amīr Khurd, *Siyar al-awliyā'*, 169, and for present-day practice, Syed Naguib al-Attas, *Some aspects of Sufism as understood and practised among the Malays*, Singapore, Malaysian Sociological Research Institute, 1963, 37). He may also choose not to set himself up independently but to accept the spiritual leadership of another *khalīfa* as his master's legitimate successor. In this case "a renewal of the *ʿahd*" may take place with the latter (see e.g. Maḥmūd b. ʿAfīf al-Dīn al-Wafā'ī, *Maʿāhid al-taḥḳīḳ fī radd al-munkirīn ʿalā ahl al-ṭarīḳ*, Cairo 1960 (various editions), 145). According to the tenets of some *ṭarīḳa*s, a *shaykh* has the obligation to grant the *idjāzat al-khilāfa* to a disciple who has attained perfection

(cf. al-Khānī, *al-Bahdjat al-saniyya*, 43). Other *ṭarīḳa*s, however, like al-Čishtiyya [*q.v.*], and a Khalwatiyya [*q.v.*] branch like al-Sharḳāwiyya, do not seem to have known such a rule, and some of the principal *shaykh*s of these orders refused to grant an *idjāzat khilāfa* to any of their disciples (cf. Ḥamīd Ḳalandar, *Khayr al-madjālis*, ed. K. A. Nizami, Aligarh, n.d., 287 f. On the last regular *khalīfa* of al-Sharḳāwiyya, see Muḥammad ʿAbduh al-Ḥidjādjī, *Min aʿlām al-saʿīd*, Cairo 1969, 63 ff. His *idjāza* was edited by Aḥmad al-Ṭāhir, Cairo 1328). Formal registration of the permission to initiate and the transmission of mystical knowledge in an *idjāza* seems to be a relatively late development (cf. ʿAbd Allāh b. al-Sayyid ʿAlawī b. Ḥasan al-ʿAṭṭās, *Ẓuhūr al-ḥaḳāʾiḳ fī bayān al-ṭarāʾiḳ*, n.p. [Bombay] 1312, 26 f.), coinciding with the period in which Islamic mysticism became institutionalised in gradually expanding formal organisations, the *ṭarīḳa*s, during and after the 8th/14th century.

4. He may be the deputy of the head of an order in a particular area. The precondition for assignment to such a position is formal investiture as *khalīfa* and hence possession of an *idjāzat khilāfa*, which is crucial for the legitimation of any claims for the office or position of local deputy. Appointment as *khalīfa* in this sense may be to an already existing group of *murīd*s, in succession to a deceased or suspended predecessor (cf. Muḥammad al-Bakhshī al-Ḥalabī, *Shams al-mafākhir. Dhayl li-Kitāb Ḳalāʾid al-djawāhir*, Cairo 1908, 27; Amīr Khurd, *Siyar al-awliyāʾ*, 197; ʿAbd al-Ṣamad Zayn al-Dīn, *al-Djawāhir al-saniyya wa 'l-karāmāt al-aḥmadiyya*, Cairo 1277, 55), in charge of a particular *tekke* [*q.v.*] or *zāwiya* [*q.v.*] (see e.g. al-Bakhshī, *Shams al-mafākhir*, 64) or, in a particular area where the *ṭarīḳa* has no adherents, in order to proselytise (see e.g. Muḥammad Abu 'l-Hudā al-Sayyādī, *Tanwīr al-abṣār fī ṭabaḳāt al-sāda al-Rifāʿiyya al-akhyār*, Cairo 1306, 110; Muḥammad Hāshim Badakhshānī, *Zubdat al-maḳāmāt*, Lucknow 1885, 70-1, 347, 382; al-Baghdādī, *al-Ḥadīḳa al-nadiyya*, 85). The degree to which these *khalīfa*s could and did act independently of the incumbent(s) of a position of superior authority within the *ṭarīḳa* differs considerably among the various *ṭarīḳa*s over time and in diverse areas. The position of the office of *khalīfa* may differ within the organisational hierarchies of the orders. Thus within the Central African Ḳādiriyya branch, having its centre at Ujiji (Tanzania), *khalīfa*s are inferior to and nominated by a category of officials known as *maakida* (sing. *akida*), (cf. J. M. Cuoq, *Les Musulmans en Afrique*, Paris 1975, 325). Within a *ṭarīḳa* such as al-Aḥmadiyya al-Marāziḳa, the *khulafāʾ* of its semi-autonomous sub-sections (*buyūt*) rank under the *shaykh* of the *bayt*, who is a *khalīfa* himself in the sense mentioned in section 3 above (cf. Muḥammad Ḥasan Shams al-Dīn, *al-Risāla al-Aḥmadiyya al-Thāniyya*, Cairo 1376, 59). In the Maghrib and West Africa, the local deputy of the head of an order is generally referred to as *muḳaddam* [*q.v.*]. This is also the case within a number of Shādhiliyya orders in the Middle East and Egypt, e.g. al-Yashruṭiyya (cf. J. van Ess, *Libanesische Miszellen 6, Die Yašruṭiya*, in *WI* xvi (1975), 1-103, passim), and a now defunct Egyptian branch of al-Nāṣiriyya. Within the latter *ṭarīḳa*, the *muḳaddam*s (*khalīfa*s) ranked under the so-called *nāyib*s, who as provincial deputies of the *ṭarīḳa*'s leader held jurisdiction over them (cf. Ibrāhīm Khalīl, *al-Mardjiʿ*, Cairo 1934, 40 f.). Frequently, the *khilāfa* in a particular area was inherited within the family and developed into a virtually autonomous power position which allowed its incumbents to pay only nominal allegiance to the head or principal leader of their *ṭarīḳa*. In many cases, this constituted the prelude to the formation of an independent branch or an entirely new *ṭarīḳa*. The position of the *khalīfa* as *murshid* [*q.v.*] is to all intents and purposes the same as the position of the head of a *ṭarīḳa*. Therefore, the rules for spiritual leadership, i.e. the pre-conditions which allow one to assume the position of *shaykh*, found in Ṣūfī manuals, also apply to the position of *khalīfa*. It is only in relatively late 19th and 20th century manuals of the Egyptian orders, which became integrated parts of a highly developed bureaucratic organisation, that sets of rules pertaining to the office of *khalīfa* may be found. Within this organisation a limited number of *khalīfa*s in various areas received additional confirmation as local deputies of the heads of their orders from the head of al-Bakriyya [*q.v.*], and formed a special category of dignitaries within the administration. They held jurisdiction over those *khalīfa*s who could only claim this status by virtue of the *idjāzat al-khilāfa* in their possession. Within some of the Egyptian orders, a *khalīfa* may continue to hold some degrees of authority over either the *khulafāʾ* ordained by him or over those within a particular area. In this case, he is referred to by the term *khalīfat al-khulafāʾ*. In Persia under the Ṣafawids [*q.v.*] a similarly-named office existed, which was defined by V. Minorsky as "a special secretariat for Ṣūfī affairs". The incumbent to this office was regarded as the vicar of the king, on whose behalf he acted and appointed *khalīfa*s in the provinces (cf. Minorsky, *Tadhkirat al-mulūk. A manual of Ṣafawid administration*, London 1943, 55, 125 ff.). A possibly identical office of this name was also known in another Shīʿī *ṭarīḳa*, the Niʿmatullāhiyya [*q.v.*] (cf. R. M. Savory, *The office of khalīfat al-khulafāʾ under the Ṣafawids*, in *JAOS*, lxxxv (1965), 497).

5. He may be the pre-eminent representative and principal propagator of a *ṭarīḳa* in a particular area acting independently, i.e. duly authorised as mentioned in section 3 above but not paying allegiance to any of the *ṭarīḳa*'s leaders elsewhere. It is this meaning which can be most safely adduced whenever the term *khalīfa* is mentioned in conjunction with the name of a *ṭarīḳa* or of a *ṭarīḳa* founder, when the latter is not a contemporary of the *khalīfa* mentioned and when there is no evidence of the existence of this *ṭarīḳa* as an organisation. It should be interpreted as such in passages in a variety of texts in Arabic, Persian and Turkish as diverse as the following ones in which the relevant passage is found on the pages indicated: Muḥammad Ḍayf Allāh al-Djaʿalī, *Kitāb al-Ṭabaḳāt fī khuṣūṣ al-awliyaʾ wa 'l-ṣāliḥīn wa 'l-ʿulamāʾ wa 'l-shuʿarāʾ fī 'l-Sūdān*, Cairo 1930, 40; al-Djabartī, *ʿAdjāʾib al-āthār*, i, 210; Maḥmūd Shukrī al-Ālūsī, *al-Misk al-adhfar*, Baghdād 1930, 141; *Tūzuk-i Djahāngīrī*, ed. Sayyid Aḥmad Khān, Ghazipur 1864, 211; Ewliyā Čelebi, *Seyāḥatnāme*, Istanbul 1938, x, 237.

6. Within al-Bektāshiyya [*q.v.*] it refers to a rank of spiritual achievement which could be attained only by those who had been ordained as *bābā*. It is marked by the donation of the *idjāzat al-khilāfa* as mentioned in section 3 above and was the pre-condition for investiture as *dede*. The latter degree entailed, among other rights, the right to participate in the elections of a *dede bābā*. Investiture as *dede* entailed the right to appoint heads (*bābā*s) of *tekke*s.

7. In addition, the term *khalīfa* may denote the representative of the head of the Sanūsiyya order who has been sent on a mission to a *zāwiya* (cf. H. Duveyrier, *La confrérie musulmane de Sidi Mohammed Ben ʿAlī es-Senoūsī et son domaine géographique*, Rome 1918, with notes by C. A. Nallino, 11, n. 1), the head of a holy lineage among the Mourides in Senegal (cf. D. B. Cruise O'Brien, *The Mourides of Senegal. The political and economic organization of an Islamic brotherhood*, Oxford 1971, 111), and in Turkey prior to 1925, the vicar of the head of a *tekke*, as reported by J. P. Brown, *The darvishes or oriental spiritualism*, London repr. 1968, 114. It may take a similar meaning in the Maghrib, where the term may denote the vicar of the head of a *zāwiya* (cf. V. Crapanzano, *The Ḥamadsha*, Berkeley and Los Angeles 1973, 81 f.). In Mamlūk Egypt, the offices of the custodians of the shrines of Aḥmad al-Badawī and Ibrāhīm al-Dasūḳī [*qq.v.*] became detached from the leadership positions of the *ṭarīḳas* founded by or named after these saints. Ever since, the incumbent to either of these two offices has been known as *khalīfat al-maḳām*, while the head of the Birhāmiyya *ṭarīḳa* and the heads of the various Aḥmadiyya branches are referred to as *khalīfat Ibrāhīm al-Dasūḳī* and *khulafāʾ Aḥmad al-Badawī* respectively (cf. *Taḳrīr ʿan waẓīfat al-khilāfa bi ʾl-maḳām al-aḥmadī*, n.p. [Cairo], n.d. [approx. 1898], and al-Karakī, *Lisān al-taʿrīf*, 5 f.).

Trimingham, *The Sufi orders in Islam*, Oxford 1971, 174 ff., and idem, *Islam in the Sudan*, Oxford 1949, 202 ff., which also gives an abbreviated English text of an *idjāzat khilāfa*. On the appointment of *khalīfas* and on the *khilāfat nāmas* issued by a 7th/13th century Čishtī mystic, see K. A. Nizami, *The life and times of Shaikh Farid-u'd Din Ganj-i-Shakar*, Aligarh 1955, 92 ff., and idem, *Some aspects of religion and politics in India during the thirteenth century*, Bombay 1961, 214 ff. and also 349-52 for the texts of two *khilāfat-nāmas* drawn from Amīr Khurd's *Siyar al-awliyāʾ*. The text of a Čishtī *idjāza* translated from the Urdu may be found in G. R. Smith, *A Muslim saint in South Africa*, in *African Studies*, xxviii/4 (1969), 267-8, 277 f. For the text of a Ḳādiriyya *idjāza*, as well as for the text of an *idjāza* of a mixed nature (i.e. *ʿilm* and *taṣawwuf*), in a French translation, see A. Abel, *Les musulmans noirs du Maniema*, in *Corr. d'Orient*, iv (Brussels 1960), 22 and 151 ff. A translation of a late 19th century Aḥmadiyya *idjāza*, together with a discussion of its contents and significance, may be found in E. Kümmerer, *Die Aḥmadīya. Beiträge zur Kenntnisse der ägypt. Derwischordens*, Diss. Tübingen 1953 (unpublished). On the rank of *khalīfa* (T. *halife*) in al-Bektāshiyya, see in addition to J. K. Birge, *The Bektashi order of dervishes*, London 1937, 165 f., where this is dealt with somewhat defectively, Aḥmad Sirrī Dede Bābā, *Ḳānūn al-ṭarīḳa al-Bektāshiyya*, Cairo 1959, 5. For details about the office of *khalīfa* in various *ṭarīḳas* in Egypt in the 19th and 20th century, and concerning the contents and significance of *idjāzas*, see F. De Jong, *The Ṣūfī orders in post-Ottoman Egypt* (forthcoming), in particular chs. iii and x. Examples of Ṣūfī manuals and other texts defining the relationship between the *shaykh* of a *ṭarīḳa* and his *khulafāʾ* as mentioned in section 4 above are: Muḥammad ʿUthmān al-Mīrghanī, *al-Zuhūr al-fāʾiḳa fī ḥuḳūḳ al-ṭarīḳ al-ṣādiḳa*, Būlāḳ 1316, 9 f.; idem, *Minwāl al-ṭarīḳa al-ṭāhira al-nūrāniyya*, in *al-Rasāʾil al-Mīrghaniyya*, Cairo 1939, 108 ff.; ʿAbd al-Salām al-Ḥalawānī, *al-Sīra al-ḥalīliyya*, al-Manṣūra 1339, 97 ff.; Muḥammad Ṣāliḥ Muḥsin (ed.), *Murshid al-sālikīn ilā ṭarīḳ al-muhtadīn*, Cairo 1927, 20 ff.; Aḥmad ʿAbd al-Munʿim ʿAbd al-Salām al-Ḥalawānī, *al-Ḳuṭb al-rabbānī Sīdī ʿAbd al-Salām al-Ḥalawānī, bīʾatuhu, nashʾatuhu, ʿilmuhu, ṭarīḳatuhu, atharuhu fī ʾl-umma al-islāmiyya*, Cairo 1970, 22 ff.; Salāma Ḥasan al-Rāḍī, *Ḳānūn ṭarīḳat al-sāda al-Ḥāmidiyya al-Shādhiliyya*, Cairo 1965 (revised ed.), 9 ff. An English translation of these latter regulations is found as an appendix to M. Gilsenan, *Saint and Sufi in modern Egypt*, Oxford 1973. On the position of the *khulafāʾ* in al-Ḥāmidiyya al-Shādhiliyya, a *ṭarīḳa* with which this study mainly deals, see in particular 82 ff. (F. de Jong)

(iv) In the Sudanese Mahdiyya

The term had various significances during the Sudanese Mahdiyya (1881-98).

(1) The originator of the Mahdist movement, Muḥammad Aḥmad b. ʿAbd Allāh, as a leading member of the Sammāniyya *ṭarīḳa*, was commissioned in 1292/1875-6 to appoint *khalīfas* by Muḥammad Sharīf Nūr al-Dāʾim, the head of this *ṭarīḳa* in the Egyptian Sudan: one letter of appointment is extant (see Muḥammad Ibrāhīm Abū Salīm, *al-Murshid ilā wathāʾiḳ al-Mahdī*, [Khartum] 1969, no. 1). (2) After his public manifestation as Mahdī (1 Shaʿbān 1298/29 June 1881), Muḥammad Aḥmad appears to have conferred the title of *khalīfa* on at least some of those to whom he delegated authority to administer the *bayʿa*: two examples have been calendared by Abū Salīm, *al-Murshid*, nos. 23, 62. (3) This use of the term *khalīfa* for local Mahdist leaders fell into disuse, and the title became restricted to three of the Mahdī's principal companions, ʿAbd Allāh b. Muḥammad al-Taʿāʾishī [*q.v.*], ʿAlī b. Muḥammad Ḥilū (a pious man of the tribe of Dighaym from the White Nile), and Muḥammad Sharīf b. Ḥāmid (the Mahdī's son-in-law). The Mahdiyya was represented as an eschatological drama, reviving the primitive *umma* in the end-time. In his drama, the Mahdī was the Successor of the Apostle of God (*Khalīfat Rasūl Allāh*), and his three companions the Successors respectively of Abū Bakr (*Khalīfat al-Ṣiddīḳ*), ʿUmar (*Khalīfat al-Fārūḳ*), and ʿAlī (*Khalīfat al-Ḳarrār*). The date of this development is uncertain; perhaps before the Mahdī left Abā (Ramaḍān 1298/August 1881) or during the following months, while he was at Ḳadīr (cf. R. C. [von] Slatin, *Fire and sword in the Sudan*, London 1896, 138; F. R. Wingate, *Ten years captivity in the Mahdi's camp 1882-1892*, London 1892, 14). In a letter dated 5 Radjab 1300/12 May 1883, the Mahdī informed Muḥammad al-Mahdī al-Sanūsī that he had been designated by the Prophet as the Successor of ʿUthmān, but al-Sanūsī ignored this approach. The letter is calendared in Abū Salīm, *al-Murshid*, no. 113; there is a good text in *Manshūrāt... Muḥammad al-Mahdī b. ʿAbd Allāh*, ii, 70-3 (Khartum 1963, photographic reproduction of corpus lithographed during the Mahdiyya).

The pre-eminence of ʿAbd Allāh b. Muḥammad was stressed in a proclamation of the Mahdī (17 Rabīʿ I 1300/26 January 1883), where he is styled *khalīfat al-khulafāʾ* (calendared in Abū Salīm, *al-Murshid*, no. 78; text in *Manshūrāt*, i, 30-2). The restriction of the title *khalīfa*, and the special status of ʿAbd Allāh b. Muḥammad, aroused resent-

ment. One of the Mahdī's most influential supporters, al-Manna Ismāʿīl, a holy man of Kordofān, fell from grace and was ultimately executed after claiming the *khilāfa* (see Abū Salīm, *al-Murshid*, no. 112, dated after 4 Radjab 1300/11 May 1883; A. R. C. Bolton, *El Menna Ismail: Fiki and Emir in Kordofan*, in *Sudan Notes and Records*, xvii/2, 1934, 229-41). Another pretender to the *khilāfa*, Fakhr al-Dīn Ḥasan, was reproved in two letters from the Mahdī (calendared in Abū Salīm, *al-Murshid*, nos. 351, 352, dated 2-4 Shawwāl 1301/26-28 July 1884: texts in Abū Salīm (ed.), *Manshūrāt al-Mahdiyya*, n.p., 1969, 76-9).

(4) When on the Mahdī's death, ʿAbd Allāh b. Muḥammad succeeded him as head of the Mahdist state, the analogy to Abū Bakr's succession to the Prophet was emphasized in a proclamation by the two junior *khalīfa*s and the Mahdī's kin (text in Abū Salīm (ed.), *Manshūrāt al-Mahdiyya*, 84-9, dated 8 Ramaḍān 1302/22 June 1885). From this time, ʿAbd Allāh assumed the new style of *khalīfat al-Mahdī*, "the Successor of the Mahdī", which was not used as a formal title by his two colleagues. His reign saw the appearance in Dār Fūr [*q.v.*] of another pretender—the holy man called Abū Djummayza, who claimed the vacant *khilāfa* of ʿUthmān, but who died about the beginning of 1889.

(P. M. Holt)

ĀL-**KHALĪFA**, the ruling dynasty of Baḥrayn since 1197/1783. One of the three clans of the ʿUtūb tribe (the others were Āl Ṣabāḥ and Āl Djalāhima) which established itself in Kuwayt *ca.* 1128/1716, the Āl Khalīfa migrated to Zubāra in Ḳaṭar under the leadership of Khalīfa b. Muḥammad in 1179-80/1766. Khalīfa b. Muḥammad died in 1197/1783 while on pilgrimage to Mecca, and in the same year his son Aḥmad wrested control of the Baḥrayn Islands from the Persians. Aḥmad b. Khalīfa continued to reside at Zubāra until his death in 1210-11/1796, Baḥrayn being governed by his sons Salmān and ʿAbd Allāh. They succeeded him as joint rulers of Baḥrayn and its dependencies, and the dual arrangement was continued after Salmān b. Aḥmad died in 1240-1/1825, his son Khalīfa being chosen as co-ruler with his uncle, ʿAbd Allāh b. Aḥmad. On Khalīfa b. Salmān's death in Muḥarram 1250/May 1834, ʿAbd Allāh b. Aḥmad became sole ruler of Baḥrayn.

The remaining years of ʿAbd Allāh's reign were turbulent. He was beset by enemies from without—by the Āl Saʿūd of Nadjd who believed him to be implicated in the murder of Turkī b. ʿAbd Allāh in Dhu 'l-Ḥidjdja 1249/May 1834, by the Persians who had never reconciled themselves to the loss of Baḥrayn, and by the Āl Bū Saʿīd of ʿUmān who coveted the island for themselves—and by troubles from within brought on by his own misgovernment and his incapacity to restrain the avarice of his Āl Khalīfa kinsmen. His relations with the British government in India, with whom he had signed a treaty in 1235/1820 to refrain from piracy, deteriorated after 1255/1839 because of his offer in that year to become a tributary of Muḥammad ʿAlī Pasha of Egypt. After a series of rebellions in Baḥrayn and Ḳaṭar he was deposed by the leading members of the Āl Khalīfa in Rabīʿ I 1259/April 1843. He died in exile at Masḳaṭ in Rabīʿ I 1265/February 1849.

ʿAbd Allāh's successor was his great-nephew Muḥammad b. Khalīfa, the son of Khalīfa b. Salmān, his former co-ruler. Muḥammad b. Khalīfa's reign (1259-85/1843-68) was hardly an improvement upon his great-uncle's. He was constantly embroiled at home in quarrels with his kinsmen and with his subjects in Ḳaṭar, who several times rebelled against his oppressive conduct and repeated fiscal exactions; whilst abroad he was at feud with the Āl Saʿūd, the Persians, and the Ottoman Turks, all of whom claimed sovereignty over Baḥrayn although only the Āl Saʿūd attempted to pursue the claim by force of arms. Muḥammad b. Khalīfa's struggles with his foes disrupted the maritime peace of the Gulf, which the British Indian government was at pains to preserve. His conduct led that government in Dhu 'l-Ḳaʿda 1277/May 1861 to force him to conclude a convention by which he forswore piracy, maritime warfare, and the seaborne slave trade, in return for British recognition of his independence and a guarantee of the security of his territorial possessions against aggression. Six years later, in Djumādā II 1284/October 1867, he attacked and sacked Dawḥa and other ports in Ḳaṭar to punish some rebellious tribesmen. When called upon by the British authorities in the Gulf to afford redress for this breach of the convention, he refused to do so, and as a consequence he was deposed by the British as ruler of Baḥrayn in Djumādā I 1285/September 1868 in favour of his brother ʿAlī.

Muḥammad b. Khalīfa found refuge after his deposition at Ḳaṭīf, where he formed an alliance with his kinsman, Muḥammad b. ʿAbd Allāh, son of ʿAbd Allāh b. Aḥmad. Supported by other disaffected members of the Āl Khalīfa and several hundred tribesmen, they descended upon Baḥrayn in Djumādā II 1286/September 1869, overcame ʿAlī b. Khalīfa, and slew him. Muḥammad b. ʿAbd Allāh then turned on his allies, imprisoned Muḥammad b. Khalīfa, and declared himself ruler. Two months later he and Muḥammad b. Khalīfa both surrendered to a naval force sent by the British Indian government and were taken as prisoners to India. There they remained in custody until Muḥammad b. ʿAbd Allāh's death in 1294/1877, when Muḥammad b. Khalīfa was transferred to Aden. He lived there for ten years and was then released on condition that he never returned to Baḥrayn. He died at Mecca in 1307/1890.

The new ruler of Baḥrayn was ʿĪsā b. ʿAlī, the 21-year old son of the slain ʿAlī b. Khalīfa. Considerable pressure was exerted upon him by the Ottoman Turks, after their occupation of al-Ḥasā in 1288/1871-2, to acknowledge Ottoman suzerainty, and it was because of this pressure that a convention was concluded by him with the British government in Muḥarram 1298/December 1880 by which he undertook not to enter into relations with any other state or to allow other governments to establish diplomatic or consular agencies in Baḥrayn. He confirmed this undertaking in a further agreement signed in Shaʿbān 1309/March 1892 in which he also engaged not to alienate any of his territory to another power. By this time, most of the Āl Khalīfa possessions in Ḳaṭar had been lost to Djāsim b. Muḥammad Āl Thānī of Dawḥa, who had acknowledged Ottoman suzerainty in 1288/1871. Zubāra, the principal Āl Khalīfa possession in Ḳaṭar, was sacked and destroyed by Djāsim, in alliance with renegade members of the Āl ʿAbd Allāh branch of the Āl Khalīfa, in Dhu 'l-Ḳaʿda 1295/November 1878. Although the town was not rebuilt, ownership of its site has been disputed by the Āl Khalīfa and the Āl Thānī ever since.

ʿĪsā b. ʿAlī reigned longer than any other Āl Khalīfa ruler; for although he formally abdicated in

favour of his son Ḥamad in 1342/1923, he continued to hold the reins of government almost until his death in Shaʿbān 1351/December 1932 at the age of 85. Ḥamad b. ʿĪsā, who had been named heir-apparent by his father with the concurrence of the principal members of the Āl Khalīfa as early as 1311/1893, in turn designated his son Salmān heir-apparent in Muḥarram 1359/February 1940, again with the consent of the leading Āl Khalīfa members. Two years later, in Ṣafar 1361/February 1942, Ḥamad died at the age of 76, and Salmān b. Ḥamad succeeded. He ruled until his death in Djumādā I 1381/November 1961, aged 67, being succeeded by his eldest son ʿĪsā, who had been named heir-apparent some years earlier.

A slight but significant devolution of power, under the pressure of domestic and external events, took place in the latter years of Shaykh Salmān's reign, and the process was accelerated by his successor. An advisory council to assist the ruler was established, individual members having responsibility for different departments of government. The councillors were at first predominantly members of the Āl Khalīfa, but after the accession of ʿĪsā b. Salmān they have become more representative through the addition of members from Baḥrayn's mercantile and professional communities. ʿĪsā b. Salmān promulgated a constitution in 1393/1973 which declared Baḥrayn to be an Islamic state with the *Sharīʿa* as the principal source of legislation. It also provided for the setting-up of a national assembly composed of appointed and elected members. The first elections for the 30 elected seats took place in Dhu 'l-Ḳaʿda 1393/December 1973.

In external affairs, the principal changes that have occurred have been the renunciation by the Persian government in 1390/1970 of its claim to sovereignty over Baḥrayn, and the termination of the Āl Khalīfa's treaties with the British government, following Britain's withdrawal from its special position in the Gulf in 1391/1971.

KHALĪFA B. **ABI 'L-MAḤĀSIN** AL-ḤALABĪ, Arab physician who came originally from Aleppo, and was possibly related to the family of Ibn Abī Uṣaybiʿa [*q.v.*]. The biographical details concerning him are fairly sparse, but it is known that he wrote, probably between 654 and 674/1256-75, a work on ophthalmology called *al-Kāfī fi 'l-kuḥl* (or *fi 'l-ṭibb*). In this he gives a concise sketch of the history of ophthalmology among the Arabs and deals with the anatomy, physiology and hygiene of the eyes, citing the medicaments used for treating eye disorders, and describing also the surgical operations, e.g. for cataract, which can be performed on them. All in all, the work is on a high scientific level, and the text is often accompanied by synoptic pictures and illustrations which throw light on the text itself. Various manuscripts exist, and a German translation has been made by J. Hirschberg and his collaborators.

KHALĪFA B. **ʿASKAR**, Libyan nationalist who, after having sought refuge in Tunisia, hastened from November 1914 onwards to assume leadership of the revolt fomented by the Sanūsīs [*q.v.*] against Italian domination. The rebels soon achieved some spectacular successes against the Italians [see LĪBIYĀ], and Khalīfa speedily attempted to raise the Tunisians against France. On 16 August 1915, in a letter to the head of the postal service in Dehibat (southern Tunisia), he called upon the latter to send back to him his family, which had remained in Tunisia, and declared war on the French government. Benefiting from a certain amount of complicity in his plans by the notables of southern Tunisia, he went on to the attack in September of this same year with Tripolitanian troops aided by some tribal elements of Tunisia. These *fellaga* [see FALLĀḲ] at the outset constituted a grave threat for the small outposts strung all along the frontier, and these had to be evacuated, and then they inflicted severe losses on the Franco-Tunisian garrisons of the Dehibat, Tatahouine and Remta outposts, without however managing to occupy them. On 2 October, at the head of 3,000 rebels, Khalīfa suffered a severe defeat before Umm Swīgh, which led to a period of calm for some months along the Tunisian frontier, but the situation became threatening again in the following spring. Armed now with some field artillery, Khalīfa returned to the attack, bombarded Dehibat on 19 June 1916 and then inflicted heavy losses on the Remada garrison; but he was again defeated on 28 June and did not engage in activity with such ardour during the last two years of the Great War. After the Armistice, the Tunisian rebels benefited by measures of clemency, and Khalīfa b. ʿAskar was even able to be reunited with his family, who had been kept as hostages.

KHALĪFA B. **KHAYYĀṬ** [see Ibn Khayyāṭ al-ʿUṢFURĪ].

KHALĪFA SHĀH MUḤAMMAD, Indian Muslim scholar who flourished during the latter part of the 11th/17th and early part of the 12th/18th century. He was the author of an epistolary work in Persian entitled *Djāmiʿ al-ḳawānīn*, also known as *Inshāʾ-yi Khalīfa*. According to Ghulām ʿAlī Khān Āzād Bilgrāmī, Shāh Muḥammad's book was much used in schools, and he spent some time in Bilgrām studying under two local scholars, Shaykh ʿAbd al-Ghafūr and Sayyid Khayr Allāh (d. 1115/1703). The *Djāmiʿ al-ḳawānīn* is divided into four sections: the first two contain long and short letters respectively, the third (divided into two parts) comprises letters of greetings and condolence, and the last gives forms of civilities and styles of addressing in correspondence. The book, as mentioned in the preface, was composed at the incentive of some friends while the author was residing in Kanawdj as a student. The original printed edition of the work (Lucknow 1846) carries a chronogram which gives 1085/1674 as the date of composition.

Bibliography: *Djāmiʿ al-ḳawānīn*, B. M. Add. 19,434; Ghulām ʿAlī Khān Āzād Bilgrāmī, *Maʾāthir al-kirām*, B. M. Or. 1804; cf. Rieu, *Catalogue of Persian manuscripts in the British Museum*, i, 414. (Munibur Rahman)

AL-**KHALĪL**. [see IBRĀHĪM].

AL-**KHALĪL**, The Arabic name for Hebron, a town in southern Palestine, 32 km. south of Jerusa-

lem (31° N 34° E), the only urban centre in the southern Judaean hills and their virtual capital and commercial centre. It has given its name to the entire mountainous region surrounding it, which is known as *Djabal al-Khalīl*, while the whole plateau is known by the name of *Djabal Ḳays*, due to the local tradition which regards the fellahin of the area as of Ḳaysī origin (cf. Volney, *Voyage*, Paris 1787, ii, 194-5, 197). Hence in the Bedouin dialects of southern Palestine, *Ḳēsī* means a peasant, particularly of the Hebron hills.

In mediaeval times Muḳaddasī, 172, mentions Djabal Naḍra (or Naṣra, Nuṣra) as the nearest hills to the town. Since the reading is uncertain (*EI*[1] art. AL-KHALĪL), it is possible that Nuṣra represents a copyist's mistake for *nimra* (Mamre (?); cf. Arculfus, *Early travels*, 6), the north-westernmost spur of Djabal al-Djaʿābira, which dominates the city from the north-east. The town is the highest in Palestine, and one of the highest in the Middle East, ascending on the surrounding hills to altitudes between 925 m. (the old city) and 1,000 m. (the modern parts built in the present century) above sea level. It is situated in the northern reaches of Wādī al-Khalīl which is a tributary of the Wādī Beersheba. Its extremely fertile soil and the fair amounts of rainfall, especially in the northern parts of the area (average of 700-850 mm. a year), along with the skill the inhabitants have acquired in preserving water and utilising the soil, have made this area into one of the most flourishing in the country.

Because of the mountainous nature of the area and its climate, it developed the cultivation of certain fruit trees, particularly apples and grapes, which, according to Muḳaddasī, *loc. cit.*, used to be exported mainly to Egypt. The Hebronites developed, in particular, the cultivation of vines, and throughout the ages they were regarded as the best viticulturists in the Middle East (Karmon, in *Studies on Palestine*, etc., 71-3). They learnt how to prolong the grape season for about six months a year, between July and December, a fact which proved to be of great economic importance. After the Islamic conquest, many vineyards in the lowlands of Palestine had to be abandoned in the wake of the prohibition and decline of wine production and consumption. Hebron then turned its supply of fresh grapes into its main cash-crop.

In addition to this agricultural advantage, Hebron had yet another advantage arising from its topographical setting. It lies astride natural crossroads which lead to the Negev and the coast in the south and south-west to the southern end of the Dead Sea and the main ancient Syrian-Arabian caravan route. Hebron thus offers an alternative to the *Via Maris*, sc. the mountain route which cuts from Baysan through Nābulus and Jerusalem. In the later Middle Ages and until modern times, travellers from Egypt often preferred the Hebron route to the *Via Maris* which could be more easily attacked by Bedouins.

Topography. The ancient town of Hebron (*Ḳiryāt Arbāʿ* (?), see below) was built to the west of Wādī al-Khalīl or the Valley of Hebron, which runs along the modern town in the north-east direction, on Djabal Rumayḍa, on which a tomb called Ḳabr Ḥabrūn is shown today next to *Mashhad al-Arbaʿīn* (called locally today by the name of *Dayr al-Arbaʿīn*), a Muslim sanctuary which in Jewish tradition has been identified with the tomb of Jesse. The Arab town developed on the eastern side of the Vale around the sanctuary of the Tomb of the Patriarchs; until the Crusading period, to the north of it Nāṣir-i Khusraw, 53-4, Le Strange, *Palestine*, 311), and during the Mamlūk period in other directions also, mainly in the south and south-east. Until the beginning of the 19th century, therefore, the town consisted of three sections. The oldest, on the eastermost spur of Djabal al-Djaʿābira (called al-Raʾs), adjacent to the Ḥaram; a smaller section around the Mosque of ʿAlī al Bakkāʾ to the north-west of it on another spur called Djabal Baylūn; and a third section, larger than the previous two, called Ḥārat al-Ḳayṭūn, to the south of the valley. This division of the town into three sections was possibly the factor which prevented the construction of an encompassing wall (cf. Arculfus, *op. cit.*). Each section was partially protected by means of building the houses along the periphery in a continuous line with no doors facing outwards.

Water supply was the main problem of the town. In the pre-Ottoman period, the Muslim sources mention a few springs from which water used to be brought to the town by means of aqueducts. Nāṣir-i Khusraw, *loc. cit.*, cf. Le Strange, *loc. cit.*, mentions a channel conducting water "in no great abundance" from a spring in a nearby village to the town. This must have been the same channel which is later mentioned by Mudjīr al-Dīn as conducting water from the village of Madjdal Faṣīl to a water tank near the northern entrance to the Ḥaram, which was rebuilt by the Mamlūk *amīr* Baktamūr al-Djukandār. In the *zāwiya* of Shaykh ʿAlī al-Bakkāʾ, a water tank and a *sabīl* for a well that was found in the place, were built by Sayf al-Dīn b. Sālār, the Mamlūk *Nāʾib al-Salṭana* in Syria, in 702/1300.

Mudjīr al-Dīn mentions another six springs that supplied water to the town (*al-Uns al-djalīl*, 428). However, the quantity of water supplied by all these springs was meagre and could hardly have supported the population of the city. Since during the later Middle Ages and the Ottoman period, large numbers of pilgrims came to the city and passed through it on the *Ḥadjdj* route to Mecca, the need for greater reserves of water necessitated the construction of two large reservoirs in the Hebron valley. The date of their construction is unknown, but in the Ottoman period and most probably during the time of Süleymān Ḳanūnī they were rebuilt and enlarged. One was called Birkat al-Ḳazzāzīn (today filled up, and a mosque built in its place), and the other Birkat al-Ṣulṭān, a name given to several cisterns built by the Ottomans along the *Ḥadjdj* route, including Solomon's Pools, the large reservoirs in Kurmul (Biblical Carmel) and ʿEin Gēdī. This further attests to the prominence of Hebron as an important station on the Ottoman (and possibly Mamlūk) *Ḥadjdj* route from Jerusalem to the main Syrian route in Trans-Jordan through southern Judaea and the Dead Sea region (Karmon, 74-6).

The name. The ancient Biblical name of Hebron, Ḳiryāt Arbāʿ, is not mentioned in the Arab sources, which are very well-informed about the original name of the town and which they repeat in many versions: Ḥabrun, Ḥafrun, Ḥibrā (or Ḥabrā), Bayt Ḥabrūn, (Muḳaddasī, 172; Yāḳūt, s.v. *al-Khalīl*, Dimashḳī, 201; Ḳalḳashandī, *Ṣubḥ*, i, 335; iv, 102; Arḍ Ḥabrūn (Ibn Iyās, *Nashḳ al-Azhār* ed. Arnold, *Chrest Arab.*, 66), Mazraʾ at Ḥabrūn (Muṭahhar b. Ṭāhir al-Maḳdisī, *al-Badʾ wa ʾl-taʾrīkh* (ed. Huart), iii, 53). However, the number of four settlements hinted by the ancient Hebrew name (Arbāʿ, cf. B. Mazar, *Ḳiryāt Arbāʿ*, in *Sefer Ḥevrōn* [in Hebrew], 20 f.) could have some reference to four localities in the

city and its environments mentioned in the Islamic literature: Ḥabrūn, Marṭūm, Bayt ʿAynūn (= Khirbet Beit ʿEinūn; its identification with Aenon of St. John, iii, 23 is very doubtful, cf. *EI*[1], art. AL-KHALĪL), and Bayt Ibrāhīm. According to a famous legend which appears as early as the 2nd/8th century, the Prophet bestowed the different quarters of Hebron on his companion, the oil merchant Tamīm b. Aws al-Dārī (Mudjīr al-Dīn, 428-9). In the early literature, however, there is mention of only two or three localities. Ibn Saʿd mentions Ḥibra and Bayt ʿAynūn (*Ṭabaḳat*, ed. Sachau, i/2, 75, vii/2, 129-30; cf. Bakrī, *Muʿdjam*, ii, 420; Ibn Durayd, *Ishtiḳāḳ*, ed. Hārūn, Cairo 1958, 377), and Balādhurī adds to them Masdjid Ibrāhīm (*Futūḥ*, 129; cf. Ḳalḳashandī, i, 335). The name Marṭum, which must have existed as well in this or similar form appears in later literature, and it was mistaken by Nāṣir-i Khusraw as the name of the whole town (though in the corrupted spelling Maṭlūn, *Safar-nāma*, 53, cf. Le Strange 310 and note; Ḳalḳashandī, xiii, 120 has al-Ruṭūm).

The Muslims extended the name which they gave to the sanctuary, Masdjid Ibrāhīm al-Khalīl, to the whole town, in the same way that Bayt al-Maḳdis was extended to the whole of Jerusalem. In both cases, the new name is connected with the sacredness of the respective shrines in Islamic tradition [see AL-ḲUDS]. The prominence of Abraham in Islamic literature from the Ḳurʾān onwards, in which he is called Khalīl Allāh or Khalīl al-Raḥmān (Tadmurī, *Muthīr al-gharām*, 196), and regarded as a true Muslim and builder of the Kaʿba, immediately after the Islamic conquest made his tomb sacred to the Muslims. The early name Masdjid Ibrāhīm (Iṣṭakhrī, 57, Ibn Hawḳal, 113) developed later to Mashhad al-Khalīl (Nāṣir-i Khusraw, *loc. cit.*), Turbat al-Khalīl (Balawī, *Tādj al-mafriḳ*, Ms. BM or. 9252, fol. 62 b) or in short al-Khalīl. It is difficult to ascertain to what an extent the choice of the name al-Khalīl "the friend [of Allāh]" is connected with the early Jewish homily which derived the name Hebron (Hevron) from the name of Abraham, who was also called "Haver" and "Yadid" (a friend) (*Midrāsh Rabba*, on Genesis, section 84; Babylonian Talmud, *Menāḥoth*, 53b). The deep Islamic significance of the attribute al-Khalīl was, however, further stressed in the Islamic tradition which says that Muḥammad was also named *Khalīl Allāh* (Muslim, *Ṣaḥīḥ*, *masādjid*, no. 23, cf. *LA*, *kh-l-l*).

Islamic Significance. The Islamic sanctification of Hebron came in two phases, parallel to and following that of Jerusalem. Whereas at least the name of Jerusalem was known to the Muslims from the time of Muḥammad, they did not know anything about Hebron. In the earliest reports about the conquest of Syria, unlike the case of Jerusalem, its conquest is passed over with no special remark. The sources only mention the legend of the bestowal of the place on Tamīm al-Dārī and his descendants by the Prophet, a fact which was of importance to the beneficiaries alone. They later tried to confirm their claims by presenting a letter from the Prophet to Nuʿaym b. Aws al-Dārī attesting it. Although the Arabic sources mention such a document (*kitāb*), there is no doubt that it is a forgery (*EI*[1], art. AL-KHALĪL; Balādhurī, *loc. cit.*; Mudjīr al-Dīn, 428-9; Ḳalḳashandī, i, 335; cf. Caetani, *Annali dell' Islam*, ii/1, 298, 9 A.H., § 69). However, the tradition about this *iḳṭāʿ* or *waḳf* is very early, and the rights of the Dārīs have been recognised down the ages. At least one abortive attempt was made on the part of the government to abolish them on the ground that the Prophet could not have granted land which he had not possessed (Mudjīr al-Dīn, *loc. cit.*).

For lack of any detailed early Islamic traditions, we must assume from the mention in Balādhurī of the name of *Masdjid Ibrāhīm* that the first phase of the Islamic sanctification of the city was connected solely with the memory of this Patriarch. Similarly, the early traditions about Jerusalem made it holy because of the Biblical episodes and figures which were related to it, (Abraham's sacrifice, the Ark of Moses, Solomon's Temple, etc.). The fact that active worship of the tomb of Abraham was conducted by Jews in Hebron during the Byzantine period, as attested by the 5th century Greek author Sozomenus, puts this assumption on firmer ground. The close and friendly relations, immediately after the conquest of Syria, between the local Jews in Palestine, who were quite numerous in the Hebron area, and the Muslims, may explain this. It also elucidates the Frankish account, according to which the Jews showed the Arabs the entrance to the sanctuary which had been walled up by the Byzantines, and in return they were allowed to live in peace in the town and build a Synagogue next to the Sanctuary (*RHC*, *Hist. occ.* v, 309 f.). The report of Mudjīr al-Dīn, that the Djāwuliyya mosque, adjacent to the sanctuary from the north-east, was built over an ancient Jewish cemetery, attests the historical element in this account.

The second phase of the Islamisation of al-Khalīl came about when the city was connected *directly* with the person of Muḥammad once again according to the same method applied to Jerusalem. The older Biblical traditions were no longer sufficient for an Islam that had to confront both Christianity and Judaism; the Islamised holy places had to be connected to the founder of the faith. The *isrāʾ* and the *miʿrādj* were therefore connected at the beginning of the 2nd/8th centuries with Jerusalem and later with many other places in Syria which had to have a proper Islamic sanctity. Early traditions speak about the *isrāʾ* only from Mecca to Jerusalem (cf. Bukhārī, *Ṣaḥīḥ*, *bāb al-miʿrādj*). Later on, probably towards the second half of the century, traditions appeared saying that the Prophet was ordered, during the *isrāʾ*, to descend and pray on Mount Sinai, in Hebron and in Bethlehem before finally reaching Jerusalem (Tadmurī, *Muthīr al-gharām*, 192). Local traditions developed very rapidly connecting the sanctity of Jerusalem with that of al-Khalīl, enhanced no doubt by the interest in establishing the Islamic holiness of Palestine *vis-à-vis* Christianity and in attracting pilgrims and settlers to it. The Cave of the Patriarchs was made the Tomb of Adam as well, his head lying in Jerusalem and his feet in Hebron (Tadmurī, 178 f.; cf. Muḳaddasī, 46; Arculfus, *loc. cit.*). When Abraham died, Allāh said to Hebron, *anti ḳudsī wa-bayt maḳdisī*, and promised that it would be the scene of the resurrection (*Anon.* BM. MS. or. 1510, fols. 54b-55a). Local, popular Islam found a real object of veneration in the tombs of the Saints. Jerusalem had none, but Hebron had plenty of them. In addition to Adam, the Patriarchs and their wives, the tomb of Joseph was also discovered just outside the southwestern wall of the sanctuary and a dome was built over it (in the time of the ʿAbbāsid al-Muḳtadir, Tadmurī, 186-91), and some forty obscure martyrs were also found to be buried on Djabal Ramayda, the tomb of which also became a pilgrimage site (Mudjīr al-Dīn, 427). In the post-Crusader period, Jerusalem and Hebron were called *al-Ḥaramayn al-Sharīfayn*, a

term which, until then, was reserved for Mecca and Medina. During the Mamlūk period, control of the sanctuaries in both towns, including the management of their very extensive endowments, was entrusted to one functionary, either a Mamlūk *amīr* of a local dignitary, who bore the title *Nāẓir al-Ḥaramayn al-S̲h̲arīfayn* (Sak̲h̲awī, *al-Ḍawʾ al-lāmiʿ*, iii, 208, 218, iv, 13, 134, vii, 32, and *passim*; Mud̲j̲īr al-Dīn, *passim*, all through the description of the Mamlūk period e.g. 440-5, 623, 632, etc.; on an inscription: M. Van Berchem, *CIA*, ii, No. 183). Local ceremonies grew up around the visiting of the Tombs of the Patriarchs which were similar to those practices at the visit of the Prophet's Tomb in Medina, and traditions appeared to legalise them. "He who cannot visit me", the Prophet was made to say, "let him visit the Tomb of Abraham . . . The prayer next to it is the *Ḥad̲j̲d̲j̲* of the poor . . .", "He who visits the tomb of Abraham, Allāh abolishes his sins", etc. (On the attachment of the sanctity of Hebron to that of Mecca and Medina see K̲h̲ʷārizmī, MS. BM Or. 4584, fol. 22b (Kister)) (Tadmurī, 193-6; Sibṭ b. al-D̲j̲awzī, *Mirʾāt al-zamān*, ed. Jewett, 305; Kister in *Le Muséon* lxxxii (1969), 193). Al-K̲h̲alīl thus developed in popular Islam as a real substitute for Medina in the same way that Jerusalem was supposed to be a minor substitute for Mecca.

For the visitors to al-K̲h̲alīl, the tombs also had a practical meaning. An atmosphere of miracles and mysticism grew up around those tombs. This found expression in popular legends concerning the cave, in which the Patriarchs were supposed to rest, and in which the requests of the believers were promptly fulfilled (e.g. Tadmurī, 139). This atmosphere, the status of the city and the pilgrimage to it, were all supported and stimulated by the practice, peculiar only to this place, of distributing a daily meal to everybody in town. The meal, known only by the name of *al-simāṭ al-K̲h̲alīlī* or *ʿadas al-K̲h̲alīl*, was supposed to honour Abraham's generosity and hospitality. The earliest account of it is given by Muḳaddasī, 172, who relates that the meals, consisting of lentils (*ʿadas*) cooked in olive oil, used to be distributed to both rich and poor. Substantial funds, which comprised of the income of many villages, were endowed for the *Simāṭ*, which was a huge enterprise. At the height of its development, during the Mamlūk period, meals of a certain recipe called *das̲h̲īs̲h̲a* and bread used to be distributed from its kitchens three times a day, in the morning and at noon to the local citizens, and in the evening to the visitors. Fourteen and sometimes even fifteen thousand loaves of bread were baked daily (Mud̲j̲īr al-Dīn, 58-9). The *Simāṭ* was certainly a vast and complicated undertaking, involving diverse activities and high expenditure. It comprised the buying of the grain, milling and baking it, buying oil, lentils and wood for fueling the ovens, and many other things. In times of drought, in the early Ottoman period, grains for the *Simāṭ* were imported from Egypt (Heyd, *Ottoman Documents*, 132, n. 1 to document 81). In view of the frequent maladministration of the endowment for the *Simāṭ*, the success in keeping it functioning almost continuously was in itself regarded as a miracle (see on this particularly, Mud̲j̲īr al-Dīn, 59; Muḳaddasī, *loc. cit.*; Ḳazwīnī, ii, 125; Nāṣir-i K̲h̲usraw, 57-8; Maḳrīzī, *Sulūk*, i, 505; Ibn Baṭṭūṭa, Cairo 1928, 33; Balawī, fol. 62b). The endowments established for the *Simāṭ*, in particular, and the *Ḥaram* in general, comprised villages and property all over Syria and especially in the vicinities of Hebron and Nābulus. Here again, Jerusalem and Hebron shared many of these *waḳf*s. An inscription over the main entrance to the *Ḥaram*, from 612/1215, speaks of the *waḳf* made by the Ayyūbid al-Muʿaẓẓam ʿĪsā (*RB* (1923), 812, No. 14; Wiet, *Syria*, v, 228; idem, *RCEA*, x, No. 3752); and another inscription on the Eastern Gate beyond Sara's tomb commemorates the *waḳf*s of the Sultān Barḳūḳ (Mud̲j̲īr al-Dīn, 440; see Maḳrīzī, *op. cit.*, 445; Ibn Tag̲h̲rībirdī, *Nud̲j̲ūm*, ed. Cairo, vii, 194; Ibn Iyās, *Badāʾiʿ al-zuhūr*, i, 111, (for Baybars) and Heyd, *op. cit.*, 92 n. 1, 151, (for the early Ottoman period). In this latter period, and most probably also previously, the inhabitants of Hebron and the villages of its *waḳf* were exempted from government taxes (Heyd, *op. cit.*, 145 n. 4).

A peculiar practice that developed around the *Simāṭ* in the Mamlūk period was a daily drum-beating ceremony performed by the *Ṭablk̲h̲āna* during the evening distribution of the meal. A local legend explained this practice as a commemoration of Abraham, who used to summon his many guests to meals by beating a drum (Mud̲j̲īr al-Dīn, 58).

The development of the sanctuary of Hebron into a popular Muslim shrine, the pilgrimage to it, the ceremonies and practices centred around it, all gave rise to a most unfavourable reaction amongst the strict Islamic orthodoxy. Most of the popular ceremonies which developed around the Tomb, including the *Simāṭ*, were regarded as *bidaʿ*. Early traditions denounced the use of tombs as mosques, ("May Allah curse the Jews and Christians, they turned the tombs of their prophets into mosques", Muslim, *Ṣaḥīḥ*, *masād̲j̲id*, nos. 16-22). However, the fact that there is a *ḥadīt̲h̲* which says that Muḥammad is Allāh's friend (*K̲h̲alīl*) exactly like Abraham and continues to forbid the usage of tombs as mosques (*ibid.*, no. 23), which is a simple amalgamation of two traditions, shows that the debate around the status of the al-K̲h̲alīl shrine was an early one. The only tomb that Islam has sanctified for the purpose of prayer and pilgrimage is the Prophet's tomb. The above combination of traditions puts Abraham and Muḥammad on the same level in an attempt to give the former's tomb the same status as the latter's. Orthodoxy has never accepted the solution hinted at here. While Muḳaddasī, *loc. cit.*, only raised objections to partaking in the free meals of the *Simāṭ*, in the post-Crusader period, with the wave of Islamic veneration of Jerusalem and Hebron, scholars representing strict orthodoxy like Ibn Taymiyya and Ibn Ḳayyim al-D̲j̲awziyya (Ibn Ḥad̲j̲ar, *al-Durar al-kāmina*, ii, 40) raised objections to this popular veneration of both sanctuaries and cast doubt even on the authenticity of the locality of al-K̲h̲alīl's tomb. The Mag̲h̲ribī theologian Ibn al-Ḥad̲j̲d̲j̲ al-ʿAbdarī (died 737/1336) ruled against entering the sanctuary on the grounds that the exact location of the graves is unknown, and that the present tombs were built by the Franks, who also opened a door in the sanctuary wall. The pious Muslim should heed therefore the previous generations and visit the place only from outside (*al-Madk̲h̲al*[2], Beirut 1972, iv, 258). He was particularly angry about the musicians of al-K̲h̲alīl who used to play trumpets; drums and other instruments after the afternoon prayer (*nawbat al-alil*) and brought people to dance and be amused, all of which he regarded as a grave sin (*s̲h̲aniʿ wa-munkar*). (Kister, *op. cit.*, 195). He also objected to the daily meals of bread and lentils called *ḍiyāfat al-K̲h̲alīl* which he regarded as a desecration of Abraham's memory, for he used to offer his guests meat and not lentils (*ibid.*, 259).

On the other hand, there were *ʿulamāʾ* who argued in favour of the place. Tadmurī and Mudjīr al-Dīn devote long discussions to proving the authenticity of the tombs by reporting stories about people who went into the cave and actually saw the bones or even the intact bodies of the Patriarchs (Tadmurī, 183-4, 188-9). Prominent authorities are quoted calling the place *ḥaram* and *masdjid* to prove that it is not a cemetery and that the prayers and the other ceremonies in it are legal (Mudjīr al-Dīn, 55).

In the long run, the advocates of al-Khalīl were those who triumphed. Both the Mamlūk and Ottoman governments showed considerable interest in the town, in which popular Ṣūfī activity came to be combined with learning. Mudjīr al-Dīn, 425-7, lists 32 *zāwiyas*, mosques and *mashāhid*, in addition to the *Mashhad al-Arbaʿīn* (mentioned above) and the mosque of Shaykh ʿAlī al-Bakkāʾ (died 670/1272, Maḳrīzī, *op. cit.*, i, 604) and two *madāris*, al-Madrasa al-Fakhriyya and al-Madrasa al-Ḳaymāziyya. This was confirmed by the Maghribi traveller al-Balawī, fols. 62b-63a, who regards al-Khalīl as a place of Islamic scholarship.

History. Historical information about al-Khalīl in the Arabic literature is very spare, since the city, like the rest of Palestine, was never the centre of any important political activity except for during the Crusader period. Sporadic traditions concerning its sanctity already appear in the 2nd/8th century, but it was only at the end of the 9th/15th that, probably for the first time, a more comprehensive work appeared, compiled by the *ḳāḍī* Mudjīr al-Dīn. It seems that he was the first to collect and classify the material then available about it. With the exception of the legend about Tamīm al-Dārī (see above), the Arabic sources are silent about the town. Nothing is said even about its conquest. A Frankish source, which could by no means be considered as reliable, reports that the Byzantines walled the entrance to the sepulchral cave before leaving the town and that the Arab invaders were shown the place by the Jews (for the implications of this, see above).

The history of al-Khalīl revolves around two main poles, sc. its sanctuary and its topographical situation, and also its proximity to the desert and its important traffic route.

Until the time of Mudjīr al-Dīn, the sources concentrate on the sanctuary with a few references to the agricultural products of the locality. The first information is, however, no earlier than the 4th/10th century (Iṣṭakhrī and Ibn Ḥawḳal, *loc. cit.*). From the more detailed information of Muḳaddasī it appears that the Muslims changed nothing inside the sanctuary nor in the traditionally-accepted arrangement of the tombs: Isaac and Rebecca inside the covered (Byzantine Basilican) mosque in the south-east, Abraham and Sara at the entrance and Jacob and Leah on the other (north-western side) of the open court. This arrangement was established at least at the end of the 3rd century A.D., if not earlier (Braslāvī, in *Sefer Hevron*, 288). According to Muḳaddasī, 172-3, the domes over Abraham and Sara were built in the Islamic period (but Mudjīr al-Dīn ascribes the work to the Umayyads). According to Nāṣir-i Khusraw (438/1047), who gives a minute description of the *Ḥaram*, one of the Fāṭimid caliphs ordered that a gate be opened in the north-eastern wall of the Sanctuary enclosure. He also relates, and this was most probably a local story that was repeated later by ʿAbdarī, that until then the interior of the building was inaccessible for visitors (*op. cit.*, 258; cf. Le Strange, 315). The place was highly venerated by the Fāṭimids and other rulers who sent many expensive gifts, and Muslims from many other countries sent their dead to be buried there (*ibid.*, cf. Muḳaddasī, 173, note *d*).

In 425/1033, the *Ḥaram* suffered from the heavy earthquake which destroyed large parts of Ramla and Nābulus (Mudjīr al-Dīn, 269-70). It underwent extensive alterations under the Crusaders, who occupied Hebron in 1099 and converted the mosque into a church, supplying it with a sloping roof (the present building, cf. Le Strange, 311, notes). They called Hebron Saint Abraham, and Godfrey of Bouillon bestowed it in 1100 as a seigneurie on Gerard d'Avesnes (d. 1102). He was followed by Hugo de Rebèque, Rohardus (Rorgius), Galterius Mahomet and Baldwin. In Baldwin's time (1119-20), the sepulchral cave was discovered by Christian monks, a detailed account of which was preserved in a Frankish chronicle (see *EI*[1] art.) and mentioned by ʿAlī al-Harawī and later Arabic chroniclers (cf. Le Strange, 318). It seems that Baldwin and his successors were the governors of Hebron, first under the king of Jerusalem and later, from about 1155, under the lord of Ḳarak. In 1168 Hebron was made a bishopric, and the Crusader convent of ʿEin Gēdī was subordinate to it (*EI*[1] art.; E. Rey, *Les colonies franques de Syrie aux XII*[me] *et XIII*[me] *siècles*, 1883, 384; cf. G. A. Smith, *Historical Geography*, 185).

ʿAlī al-Harawī, who visited Hebron in 567/1171-2, relates how he met a knight who had entered the cave, and gives details about the restoration of the place at the order of King Baldwin II (Le Strange, 316-18). It was then that the ancient flat roof of the covered mosque was replaced by a system of arches and a sloping roof (Vincent, *Hébron*, 166).

Hebron was captured by Ṣalāḥ al-Dīn, according to most sources, after the conquest of Ascalon (Ibn al-Athīr, *al-Kāmil*, Beirut 1966, 360-1); Maḳrīzī (*op. cit.*, i/1, 95) puts it in the same year but before the conquest of Ascalon (583/1187). According to Mudjīr al-Dīn (56), the wooden *minbar* which had been built by Badr al-Djamālī [*q.v.*] by order of the caliph al-Mustanṣir in 484/1092 for the Martyrion (*Mashhad*) of Ḥusayn's head in Ascalon, was brought to the mosque of al-Khalīl, most probably after Ascalon was razed to the ground by Ṣalāḥ al-Dīn in 588/1192 (for the inscription on his *minbar* see, M. Van Berchem, in *Festschrift Edward Sachau*, Berlin 1915, 300-1; Vincent, *Hébron*, 222, fig. 85, cf. ʿAbd Allāh Mukhliṣ, in *BIFAO*, xxv, 57; Jaussen, *RB* (1923), 579; *RCEA* vii, n° 2790).

After the death of Ṣalāḥ al-Dīn, Hebron passed into the domains of al-Malik al-Naṣīr Dāwūd of Karak, who was supported by his father al-Muʿaẓẓam ʿĪsā. After the death of the latter in 624/1227, his domains were claimed by his uncle al-Malik al-Kāmil of Egypt. The crisis that ensued threatened to engulf all the Ayyūbid princes in war. At the end of that year, however, a treaty was signed redividing the Ayyūbid territories, and according to this Hebron, together with large parts of southern Palestine, were given to Egypt (Maḳrīzī, *Sulūk*, i/1, 235). Later it came once again under the rule of al-Nāṣir Dāwūd until 642/1244. In this year, during yet another war amongst the Ayyūbids, southern Palestine fell into the hands of al-Ṣāliḥ Ayyūb of Egypt, who was helped by the Khwārazmians. Shortly afterwards, the Khwārazmians changed sides, joining Dāwūd, and Hebron was again returned to him (*ibid.*, 318-22); and in 658/1260,

Main entrance. — 20. Entrance.

[After Vincent, *Hébron*].

a Mongol detachment captured the city for a short while (*ibid.*, 425).

When Mamlūk rule was established in Egypt and Syria, securing the country from external danger for over 250 years, the sanctuaries of both Jerusalem and Hebron were given particular attention by the central government as well as by the local governors. Hebron came under the jurisdiction of the governor (*nā'ib*) of Jerusalem and its *waḳf*s and other endowments were supervised by a special functionary (*Nāẓir al-Ḥaramayn al-Sharīfayn*). In one case, however, a special *nā'ib* is mentioned for Hebron (Maḳrīzī, *op. cit.*, 699; cf. Ḳalḳashandī, iv, 199). In 664/1266 Baybars visited Hebron and issued an order banning the Christians and Jews from entering the sanctuary. Until then they could enter the place in return for certain payments (Maḳrīzī, *op. cit.*, 544). This ban continued in force until Israel occupied Hebron in 1967. In 666/1268 he allocated large sums and rich endowments for the *Ḥaram* and its attendants and ordered extensive repairs to be carried out there, despatching the *amīr* Djamāl al-Dīn b. Nahār to inspect the works (*ibid.*, 445, 563; Mudjīr al-Dīn, 434; Kutubī, *Fawāt al-wafawāt*, Būlāḳ 1299, i, 89; Ibn Taghrībirdī, *Nudjūm*, vii, 194; Ibn Iyās, *Badā'i'*, i, 111). He also ordered that the free meal, the *ḍiyāfa* of al-Khalīl, should be distributed some distance from the sanctuary (Maḳrīzī, *op. cit.*, 565). Ḳalāwūn built in 679/1280-1 a *ribāṭ* opposite the citadel and adjacent to the *Ḥaram*, which was called al-Ribāṭ al-Manṣūrī after him, and a year later, he dedicated the *Bīmāristān al-Manṣūrī* (Mudjīr al-Dīn, 426). The ever-growing number of pilgrims that came to Hebron or passed through it on the way to Mecca necessitated the building of a large water reservoir. Orders were given in 682/1283 that the poll-tax of the *dhimmī*s of Jerusalem, Bethlehem, Bayt Djālā and Hebron should be dedicated for this purpose; the construction was entrusted to the hands of the *amīr* ʿAlā' al-Dīn Aydughdī al-Ruknī (Ibn al-Furāt, *Ta'rīkh*, Beirut 1939, vii, 259; Maḳrīzī, *op. cit.*, 712). In 713/1313 another water project was completed when the *amīr* Abū Saʿīd ʿAlam al-Dīn Sandjar al-Djāwulī (d. 745/1344-5) dedicated an aqueduct that conducted water to ʿAyn al-Tawāshī at the northern entrance to the *Ḥaram*. The same *amīr* built between 718/1318 and 720/1320 from his private funds the Djāwuliyya mosque adjacent to the north-eastern wall of the sanctuary. Next to the Djāwuliyya were the kitchens, the mills and storage places of the *Simāṭ* (cf. Balawī, *loc. cit.*; Ibn Hadjar, *al-Durar al-kāmina*, ii, 171; Maḳrīzī, *op. cit.*, ii, 131, 674; Mudjīr al-Dīn, 58, 131). The walls of the covered mosque (*al-mughaṭṭā*) were overlaid with marble by the *amīr* Tankiz, the viceroy (*nā'ib al-salṭana*) of Syria, in 732/1332 (*ibid.*, 55, 57). The citadel (*ḳalʿa*) of the town was rebuilt and dedicated by al-Nāṣir Ḥasan (748-52/1347-51, 755-62/1354-61) (*ibid.*, 426). In 796/1394, during the reign of Barḳūḳ, the *miḥrāb* of the Mālikiyya to the right of the entrance to the covered mosque and the arcade along its western wall (the "Women's Mosque") were built by Shihāb al-Dīn al-Yaghmūrī (*ibid.*, 57-8). Barḳūḳ himself dedicated the village of Dayr Isṭiya in the vicinity of Nābulus solely for the expenses of the *Simāṭ* (*ibid.*, 440). Additional endowments for the *Ḥaram* were ordered by al-Ashraf Īnāl (859/1454) and al-Ẓāhir Khushḳadam, who also renewed the marble covering on the walls of the Djāwuliyya (867/1462-3). Ḳā'it Bāy showed great interest too in the sanctuaries of Hebron and Jerusalem, and used to inspect them in person (Sakhāwī, *Ḍaw'*, vi, 205; Mudjīr al-Dīn, 647; Ibn Iyās, iii, 108). To this period belong three detailed descriptions of the *Ḥaram*, that of Abu 'l-Fidā' Isḥāḳ al-Khalīlī (752/1351), copyied by Suyūṭī and Mudjīr al-Dīn; cf. Ibn Baṭṭūṭa, who visited al-Khalīl in 626/1326; and of Balawī, who arrived there in 737/1337. While the latter spoke sceptically about the location of the tombs, Ibn Baṭṭūṭa defended the traditional sites (Balawī, *loc. cit.*; Ibn Baṭṭūṭa, 32; cf. Le Strange, 319-20).

The proximity of Hebron to the desert put it and its environs in constant danger from the Bedouins. The roads leading southwards from the town came almost constantly under attack and travellers could rarely pass along them in safety. The Bedouins in Syria and Palestine preserved the old division into Ḳays and Yaman, which also divided the fellahin [see ḲAYS and YAMAN. In the Ottoman period]. The two factions were in constant strife; and from time to time the nomads used to attack the sedentary areas. The Mamlūks could not keep the Bedouins in check all the time, and their military expeditions against them were at best only a temporary remedy (cf. Sharon, *The political role of the Bedouins in Palestine*, in *Studies on Palestine*, ed. M. Maʿoz, Jerusalem 1975, 11-17. On a large Bedouin eruption in 750/1349, see Maḳrīzī, *op. cit.*, ii, 709, 804). Sometimes the Bedouins were invited to participate in the local rivalries, as happened with a quarrel between the Dārīs and the Kurds when each side invited the Bedouins to help him and the town was almost destroyed (Mudjīr al-Dīn, 632-3).

The Ottomans occupied Hebron in 921/1517 and made it the administrative centre of a *nāḥiya* in the *sandjaḳ* of Jerusalem (Heyd, *op. cit.*, 86 n. 1). Its Muslim inhabitants were exempted from government taxes (*ibid.*, 71-2) and like the Mamlūks, the Ottoman sultans regarded the repair and the maintenance of the sanctuaries in it and in Jerusalem, as well as elsewhere in the country, as a major obligation. Large numbers of pilgrims from all over the empire and from other countries visited them and had to be protected and provided for. Frequent orders were issued from Istanbul concerning the proper management, repairs and upkeep of the holy places, and in case of want of funds, additional new lands were endowed as *waḳf* and skilled workers sent from Damascus for repairs to the *Ḥaram*s (*ibid.*, 15). A document from 959/1552 reports that the domes over the tombs of Patriarchs, which had not been repaired since the time of the Circassian Mamlūks, had fallen to pieces, and orders are issued for their repairs (*ibid.*, 155). From another unique document of the *Mühimme defterleri* dated 991/1583, it appears that the wardens of the *Ḥaram* (*türbedār*) and its doorkeepers were traditionally eunuchs, so as not to disturb the women's tranquillity of mind when they came to pray there (*ibid.*, 157-8).

In 979/1571, an additional source of income was added to Hebron when saltpetre was discovered in its vicinity, and an extensive gunpowder industry was developed there for the Ottoman army (*ibid.*, 129, 137-8). Large quantities of this gunpowder, as well as large quantities of arms, some of which were directly smuggled from the army arsenals in Istanbul, reached the Bedouins and other rebels in the country. Hebron continued to suffer even more intensely from both the Bedouins and the continuous warfare between the Ḳays and Yaman factions. The Ottomans tried in many ways to keep the Bedouins in check, in particular to safeguard the pilgrimage roads. These measures

included building fortresses along the roads, taking hostages from the tribes and nominating 40 *timār* and *zi'āmet* holders, who were exempted from participating in the wars of the empire, but all this was to no avail. Hebron and its vicinity were at the mercy of the Bedouins until modern times. The towns and travellers to and from them had to pay special taxes to the Bedouins (*khāwa*, [*q.v.*]), in order to gain some degree of safety. The mountain villages around the town relied for their defence on their own strength (*ibid.*, 76, 85, 97-8 n. 3, 101-2, 111, 116; cf. Sharon, *op. cit.*, 17-30; cf Hoexter, in *Asian and African Studies*, Jerusalem 1973, 249-311, and Karmon, 79). On the other hand, being the only urban centre in the vicinity and the main market place of the area, the Bedouins usually refrained from attacking Hebron openly, and economically the city was prosperous. In the closing years of the 18th century and during the Napoleonic wars when the coastal towns were almost completely destroyed, Hebron flourished as one of the most important commercial centres in Palestine with the caravans from Egypt prefering the more southerly route through Sinai and Beer Sheba to Hebron and Jerusalem over the insecure coastal one. Glass manufacture also developed rapidly in the town, for which it is famous until this very day. The caustic soda required for this industry was supplied by the Bedouins, who produced it from a plant growing near the shores of the Dead Sea. Other major industries in the city in the 19th century were soap, hides and cotton spinning (Kermon, 80-1).

The town began to deteriorate during the Egyptian occupation of Palestine by Ibrāhīm Pasha (1831-40). While the coastal towns flourished again and were freed from the Bedouin menace, the mountainous areas which opposed the Egyptians suffered. Hebron took an active part in the revolt of 1834. It was besieged by the Egyptians, its citadel destroyed by cannon fire, and it was occupied and sacked. Additional destruction was caused by earthquake that affected Palestine in 1837. Towards the end of Egyptian rule in 1840, a rebel from Dūra near Hebron, 'Abd al-Raḥmān al-'Amr, killed the Egyptian governor of the town, proclaimed the Ottoman sultan and made himself the governor. He terrorised Hebron, especially the Jews and Christians in the town, from whom he used to extort heavy taxes. In 1846 the Ottomans, in pursuit of him, destroyed parts of Hebron with gunfire and the soldiers looted it. The rebel was not caught and he continued to infest the area for many years to come, as we learn from the detailed reports of James Finn, the British consul in Jerusalem and the only source of help to the Jewish community during the 1850s (A. M. Haymson, *The British Consulate in Jerusalem*, London 1939, i, 168-9, 171-2, 198 ff.).

The improvement of security in the country during the second half of the century, with the growth of the European Powers' interest in it after the opening of the Suez Canal in 1869, brought recovery to Hebron. Its population grew from 8,000-10,000 in the 1870s to about 14,000 at the close of the century. This trend continued after the British conquest of 1917 and the establishment of the British mandate, when Hebron was made the capital of a subdistrict in the Southern District (1922). It also became an important political centre, and its leaders have been fanatical opponents of the Jewish settlement in Palestine. During the riots of 1929, influenced by the *Muftī* of Jerusalem, Amīn al-Ḥusaynī and by local agitators, the mob attacked the Jewish quarter and slaughtered 63 Jews. The rest of the community fled from the town. An attempt to renew the Jewish community in Hebron a few years later was cut short during the riots of 1936. After the war of 1948, Hebron came under the rule of Jordan, until in 1967 it was occupied by Israel during the Six Day's war. Until 1976 it was led by the ancient and powerful Dja'barī family. Its population is over 38,000. During the present century, a large number of Hebronites have emigrated to Jerusalem, where they occupy a very prominent position in the commercial life there.

(M. SHARON)

KHALĪL ALLĀH (SHĀH), d. 866/1460, the son of Shāh Ni'mat Allāh Kirmānī (730-834/1329-1431), "a great saint and mystic as well as a poet." Hearing the fame of Ni'mat Allāh's great piety and learning, the Bahmanī ruler Shihāb al-Dīn Aḥmad I (825-39/1422-34) invited him to Muḥammadābād-Bīdar, his capital. The saint declined the invitation, but sent one of his disciples. The Sulṭān repeated the invitation with the request to send one of his sons, if he could not himself come. Ni'mat Allāh replied that, since he had only one son, named Khalīl Allāh, with whom he did not wish to part, he was sending the latter's son, Nūr Allāh, instead. However, after his father's death, Khalīl Allāh emigrated to the Deccan with his family and many of the followers. Aḥmad I received him with honour, and gave his daughter in marriage to the saint's elder son, Ḥabīb Allāh, and his grand-daughter to the saint's younger son, Muḥibb Allāh. In addition, he accepted Khalīl Allāh as his *pīr* and conferred on him the title of Malik al-Mashā'ikh Burhān al-Dīn Khalīl Allāh, thus

giving up his allegiance to the descendants of the famous saint of Gulbarga, Sayyid Muḥammad Gīsū Darāz (721-825/1321-1422). Under the influence of Khalīl Allāh and his sons, who were Shīʿīs, not only Aḥmad I became a Shīʿī, but Shīʿī forces were strengthened in the Deccan.

Khalīl Allāh continued to be revered by Aḥmad's son and successor, ʿAlāʾ al-Dīn Aḥmad II (830-62/1427-58) who also regarded him as his *pīr*, and, on the occasion of his coronation ceremony, seated him on his right. Khalīl Allāh was not a poet or mystic like his father; he was a pious man, given to prayer and meditation, and, unlike his elder son, Ḥabib Allāh, kept aloof from war and politics. He was succeeded by his younger son, Muḥibb Allāh, as his *sadjdjāda-nashīn* (spiritual successor). Over his grave a beautiful tomb was erected by Aḥmad II. Another building called Takht-i Kirmānī, because it contained the *takht* or throne on which Khalīl Allāh used to sit, was also constructed in his memory during this period.

(MOHIBBUL HASAN)

AL-KHALĪL B. AḤMAD B. ʿAMR B. TAMĪM AL-FARĀHIDĪ (AL-FURHŪDĪ; see W. Caskel, *Ǧamharat an-nasab*, ii, 343 f.) AL-AZDĪ AL-YAḤMADĪ AL-BAṢRĪ ABŪ ʿABD AL-RAḤMĀN, important Arab philologist. Born in ʿUmān, he grew up in Baṣra where he died, at over seventy, in 175/791, or 170/786, or 160/776 (Zubaydī, *Ṭabaḳāt*, 47; Marzubānī, *Muḳtabas*, 56; *Fihrist*, 42). As a young man he adhered to the Ṣufriyya [*q.v.*], but he embraced Sunnī orthodoxy under the influence of his teacher Ayyūb al-Sakhtiyānī (d. 131/748,) a well-known traditionist and *faḳīh* (Ziriklī, *Aʿlām*, i, 382). His studies in Arabic philology were especially encouraged by the two Baṣran scholars ʿĪsā b. ʿUmar al-Thaḳafī [*q.v.*] and Abū ʿAmr b. al-ʿAlāʾ [*q.v.*]. All the sources agree that he lived an unpretentious and pious life, in modest circumstances, on the yield of a garden left to him by his father (Marzubānī, *op. cit.*, 56, 58, 67), and on falconry—probably not only occasionally ([al-Ḥusayn] al-Bāzyār al-Miṣrī, *al-Bayzara*, Damascus 1372/1953, 19; Fr. tr. F. Viré, *Le Traité de l'art de volerie*, Leiden 1967, 7 (= *Arabica*, xii [1965], 7); cf. D. Möller, *Studien zur mittelalterlichen arabischen Falknerliteratur*, Berlin 1965, 73 ff.). He had many pupils (see E. Bräunlich, *al-Ḫalīl und das Kitāb al-ʿAin*, in *Islamica*, ii (1926), 66 ff.), the most conspicuous among whom were Sībawayh [*q.v.*], al-Aṣmaʿī [*q.v.*] and the *ṣāḥib al-Khalīl* al-Layth b. al-Muẓaffar [*q.v.*], who completed, edited and published al-Khalīl's lexicon. By his comprehensive studies and intensive teachings al-Khalīl promoted decisively the already existing beginnings of Arabic philology, and thus became its real founder.

As was the case with others, al-Khalīl's scholarly work started from Ḳurʾān exegesis and knowledge of Tradition, as demonstrated in particular by evidence available and source material. It is not known whether he himself wrote on Ḳurʾān exegesis and Tradition (see below). But as a teacher he not only permanently influenced the broad field of philology in his capacity as grammarian, lexicographer and metrist, but he also left an impressive written testimony—though more indirectly than directly —of his competence, acumen and gift of presentation. There is a double reason why his output was so small. First, it was not yet at all common in those days to commit to writing scholarly discussion; secondly, it seems that al-Khalīl had scruples about finally editing his material together with his explanations and commentaries. It is not correct to assume that he was unable to do so through incapacity to generalise from details. Recent investigations have shown clearly that al-Khalīl had a fundamental part in the first systematic grammar of Arabic, the *Kitāb* of his pupil Sībawayh, not only as far as the material is concerned, but also in the systematisation. In this connection it must be remembered that al-Khalīl had already found elements for a theory of the language. It is even possible that such a theory had already been formulated in a fragmentary way and noted down in lecture courses, in answers to questions about individual problems, and the like. But it started to take shape only thanks to the abundance of observations of individual cases, comparisons and proofs adduced by al-Khalīl, which gave the impulse to systematisation. To give Arabic grammar its first comprehensive written form, hardly surpassed later, was reserved for his great pupil, the Persian Sībawayh. This however does not alter the fact that al-Khalīl was the real creator of this science (see G. Weil in the Introduction to Ibn al-Anbarī's *Kitāb al-Inṣāf*, Leiden 1913, 69), as may be seen clearly from almost every page of Sībawayh's work. For details see W. Reuschel, *al-Ḫalīl ibn Aḥmad, der Lehrer Sībawayhs, als Grammatiker*, Berlin 1959; G. Troupeau, *A propos des grammairiens cités par Sībawayhi dans le* Kitāb, in *Arabica*, viii (1961), 309-12; cf. also M. G. Carter, *Les origines de la grammaire arabe*, in *REI*, xl (1972), 69-97, esp. 74 ff.

It has yet to be studied how far al-Khalīl's *Kitāb al-Djumal fi 'l-naḥw* corresponds to those passages which Sībawayh associates with al-Khalīl's name; according to a statement in Yāḳūt, *Udabāʾ*, i, 411, the author of the *Kitāb al-Djumal* was Ibn Shuḳayr (d. 317/929)! In the ms. Ayasofya 4456, 2, dated 601/1204, the work fills 75 folios and deals with *naṣb, rafʿ, khafḍ, djazm, alifāt, lāmāt* (cf. a fragment, Berlin, vi, 212 no. 6902), *hāʾāt, tāʾāt, wāwāt, lām-alifāt, al-ikhtilāf fi maʿānīhi*, in connection with many, mostly anonymous verses (O. Rescher, in *ZDMG*, lxiv (1910), 508 ff.; for the *Incipit*, see Rescher, *Abriss*, ii, 121, note 1). For a second (?) manuscript, see Ḳawala, ii, 118, no. 266 ḳ: *Kitāb Wudjūh al-naṣb* (fol. 1: by Ibn Shuḳayr?), 65 folios; for a third (?) incomplete(?) manuscript, see *Fihrist-i nuskhahā-i khaṭṭī-i Kitābkhāna-i Markazī-i Dānishgāh-i Tihrān*, Tehran 1345/1967, xv, 4075 ff., no. 4981, 3: *Sharḥ Djumal al-iʿrāb*, 16 folios. Ibn Khallikān, *Wafayāt*, Cairo 1367/1948, ii, 17 no. 206, may well be referring to the *Kitāb al-Djumal* when he mentions a *kitāb fi 'l-ʿawāmil* among al-Khalīl's works.

Further investigation is necessary into a short treatise of two pages by al-Khalīl about the question why the root *fʿl* is used as paradigm (ms. Bodleiana, i, 230 no. 1047,4, dated 654/1256). The longer fragment of 24 folios of a *Kitāb Ṣarf al-Khalīl*, dated 821/1418 (Berlin, vi, 215 no. 6909), is perhaps connected with this treatise.

Appreciation of the significance of al-Khalīl's lexicographical activities has steadily increased as

scholars have recognised him as the author of the first Arabic dictionary, the *Kitāb al-ʿAyn*, and this notwithstanding the fact that even in the early period his authorship of this work was rejected by a majority. Recent investigations have again considerably contributed to the solution of this problem. They have shown that the plan of the dictionary undoubtedly comes from al-Khalīl. It is not arranged alphabetically but—probably under Indian influence—by certain groups of sounds (the phonetic-permutative principle), *i.e.*, after the so-called "order of al-Khalīl": *ʿ, ḥ, h, kh, gh, ḳ, k, dj, sh, ḍ, ṣ, s, z, ṭ, d, t, ẓ, dh, th, r, l, n, f, b, m, w, alif, y, ʾ*. Recent investigations have also shown that al-Khalīl's contribution to the dictionary is hardly more than that of a source, and that the *Kitāb al-ʿAyn* in its present form, especially in regard to the bulk of the material, is to be considered as the work of al-Layth b. al-Muẓaffar [*q.v.*]. Al-Layth may have arranged his compilation soon after al-Khalīl's death. But a little later—probably not long after 200/815—this work was revised by an otherwise unknown Abū Muʿādh ʿAbd Allāh b. ʿĀʾidh. Additions and corrections, also in the form of refutations (*rudūd*), followed. Many abstracts have been made and it is well known that later lexicographers have repeatedly gone back—directly or indirectly—to the *Kitāb al-ʿAyn* and have often quoted from it. Finally it is worth noticing that the Introduction to the *Kitāb al-ʿAyn*, with the exception of editorial interpolations, may go back directly to al-Khalīl. For details see Bräunlich, *op. cit.*, esp. p. 94, on al-Khalīl's *Kitāb Fāʾid al-ʿAyn*, mentioned e.g. in *Fihrist*, 43; J. Kraemer, *Studien zur altarabischen Lexikographie nach Istanbuler und Berliner Handschriften*, in *Oriens*, vi (1953), 201-38; J. A. Haywood, *Arabic Lexicography*, Leiden[2] 1965, *passim* (reviewed by A. Spitaler, in *OLZ*, lxiii [1968], 50-8); above all Stefan Wild, *Das Kitāb al-ʿAin und die arabische Lexikographie*, Wiesbaden 1965 (reviewed by J. W. Fück, in *Bi Or*, xxiii [1966], 199 ff.; M. M. Bravmann, in *Isl.*, xlvii [1971], 238-44). A first fascicule of the *Kitāb al-ʿAyn* was published by Father Anastase al-Karmalī under the title: *al-Layth b. al-Muẓaffar, Kitāb al-ʿAyn fi 'l-lugha*. Baghdad 1914; of the new edition by ʿAbd Allāh Darwīsh, *Kitāb al-ʿAyn awwal muʿdjam fi 'l-lugha al-ʿarabiyya li-'l-Khalīl b. Aḥmad al-Farāhīdī*, the first volume appeared in 1386/1967 in Baghdad (reviewed by R. ʿAbd al-Tawwāb, in *al-Aḳlām* v/2 [Baghdad 1388/1968] 127-51).

Al-Khalīl's small treatise *al-Ḥurūf*, also called *Risāla fī maʿnā 'l-ḥurūf*, which is not listed by the ancient biographers and bibliographers (see Bräunlich, *op. cit.*, 67), has been published by R. ʿAbd al-Tawwāb, Cairo 1969. The author deals concisely with the additional meanings of the letters of the alphabet and as a rule supports them by citing ancient verses.

While working on old Arabic verses as evidence for the meaning of words, linguistic peculiarities and grammatical constructions (*Fihrist*, 43, mentions among his writings a *Kitāb al-Shawāhid*), al-Khalīl made a surprising and important discovery. The scanning of verses revealed to him that short and long syllables alternate and repeat themselves in strict patterns. He divided these unities, which can be distinguished according to their quantity, into five concentric circles. He thus found an adequate and telling graphical form, equally simple and brilliant, for representing the metre-order of the verses, following each other repetitively, while the rhythmical accent was also taken into account. Al-Khalīl's metrical system has been adopted by all later authors (see, *e.g.*, the manuscripts and summaries Berlin, vi, 323-48 no. 7108-58). The names of the metres (cf. Marzubānī, *op. cit.*, 71) and a series of terms also reach undoubtedly back to him so that metrics were called simply *ʿilm al-Khalīl* (see Ḥādjdjī Khalīfa under the title *ʿarūḍ Ibn al-Ḥādjib*; I. Goldziher, in *WZKM*, xvii [1903], 187-90; see also al-Djāḥiẓ, *al-Muʿallimūn*, on the margin of al-Mubarrad, *al-Kāmil*, Cairo 1324/1906, i, 33; idem, *al-Ḥayawān*, Cairo 1356/1938, i, 150). Although al-Khalīl's original work, the *Kitāb al-ʿArūḍ*, does not seem to have survived, the content of this treatise (cf. Zubaydī, *op. cit.*, 291) may be conjectured from later works, like Ibn ʿAbd Rabbihi's [*q.v.*] chapter on *ʿarūḍ* [*q.v.*] in his *al-ʿIḳd al-farīd*, Cairo 1365/1946, v, 424-518. For details see G. W. Freytag, *Darstellung der arabischen Verskunst*, Bonn 1830; G. Weil, *Das metrische System des al-Xalīl und der Iktus in den altarabischen Versen*, in *Oriens*, vii (1954), 303-21; and esp., idem, *Grundriss und System der altarabischen Metren*, Wiesbaden 1958 (reviewed by A. Bloch, in *GGA*, 213 [1959], 67-80). [See also ʿARŪḌ.] Two other works by al-Khalīl, the *Kitāb al-Nagham* and the *Kitāb al-Īḳāʿ*, dealing with tones and rhythmic tempi, are mentioned in *Fihrist*, 43 (see H. G. Farmer, *The sources of Arabian music*, Leiden 1965, 1, nos. 5 and 6; E. Neubauer in *Oriens*, xxi-xxii [1968-9/1971], 196 ff.).

Among the eight works by al-Khalīl enumerated in *Fihrist*, 43, a *Kitāb al-Naḳṭ wa 'l-shakl* is mentioned, an otherwise unknown treatise on diacritical punctuation and vocalisation (in the Ḳurʾān) (see *Gesch. des Qor.*, iii, 262, note 1 and *TA*, iv, 411, 9 s.v. *ʿbd*). According to *Dharīʿa*, i, 38 ff. no. 184, it is identical with the above mentioned *Kitāb al-Djumal*. Such a supposition is however as doubtful as another statement by the same *Dharīʿa*, ii, 325 ff. no. 1292, namely, that al-Khalīl composed a *Kitāb al-Imāma*, allegedly finished by Abu 'l-Fatḥ Muḥammad b. Djaʿfar al-Marāghī (d. 376/986). The correctness cannot be verified from the available sources and literature (see, e.g., Kaḥḥāla, ix, 157; Brockelmann, S III, 1194 should be corrected accordingly). A so-called *Kitāb al-Muʿammā* finally is mentioned only by Zubaydī, *Ṭabaḳāt*, 47, and then in connection with a quite unconvincing story (cf. Haywood, *op. cit.*, 21 and 133).

(R. Sellheim)

KHALĪL b. **ISḤĀḲ** b. Mūsā b. Shuʿayb, Abu 'l-Mawadda Ḍiyā' al-Dīn, Ibn al-Djundī, Mālikī *faḳīh* of Egypt, born in Cairo 13 Rabīʿ I 776/22 August 1374 (but other dates, in particular 767 and 769 are also given). His father was a Ḥanafī, and it was through the influence of his teacher ʿAbd Allāh al-Manūfī (d. 749/1348) that he adopted the Mālikī law school. He performed the Pilgrimage, and then remained some time in Medina, studying and teaching at the *madrasa* *Shaykhūniyya*. Although generally leading a fairly retiring life, he nevertheless took up arms in the defence forces, and thus took part in the recovery of Alexandria from the Christians in 767/1365-6.

From a juridical point of view, Khalīl represents, just like his model Ibn al-Ḥādjib, a view of law somewhat tinged with Shāfiʿism, the result of a fusion between the Egyptian and the Maghribī aspects of the Mālikī school. He composed various works, of which manuscripts survive: *al-Tawḍīḥ*, a commentary on the *Mukhtaṣar* of Ibn al-Ḥādjib, *K. al-Manāsik*, *Manāḳib al-Shaykh ʿAbd Allāh al-Manūfī*, and *Ḍabṭ al-muwadjdjahāt wa-taʿrīfuhā*; but all these are today forgotten. His *Mukhtaṣar*, however, called by some simply *al-Kitāb* "the Book" par excellence, gained him a great fame, both in the Maghrib and also in the Mālikī centres of West Africa, and furthermore the honorific designation of Sīdī Khalīl.

This *Mukhtaṣar*, then, so obscure because of its conciseness that it can only be understood by means of a commentary, is the most renowned manual in the countries of the Muslim West, where, to some extent replacing the *Muwaṭṭa'* of Mālik and the *Mudawwana* of Saḥnūn, it is everywhere the subject of teaching which is usually based on a host of partial or complete commentaries, glosses and scholia inspired by it (see Brockelmann, II, 83, S II, 96-9). It is divided into 61 chapters dealing with ritual, personal law, the *muʿāmalāt* and various topics.

Orientalists early concerned themselves with it. Between 1848 and 1854, Dr Perron published at Paris, bringing together both text and commentary, a complete French translation called *Précis de jurisprudence musulmane ou Principes de législation musulmane civile et religieuse selon le droit malékite*, 6 vols. The first edition, prepared by Richebém, appeared at Paris in 1855, from which there were successive printings down to 1883; G. Delphin produced a further edition, also at Paris, in 1900. In 1889 E. Fagnan brought out at Algiers the *Concordances du manuel de Sidi Khalîl* (in reference to the edition of 1883). The second complete translation, this time in Italian, was made by I. Guidi and D. Santillana (Milan 1919, 2 vols.). Amongst partial translations, one should mention those of Sautayra and Cherbonneau on personal status and on succession (Paris 1873-4), of Seignette (Constantine 1878, Paris 1911), of Fagnan, on the holy war (Algiers 1908), marriage and divorce (Algiers 1909) and of L. Bercher on apostasy, etc., in the *RT* (1923). The most recent is that of G.-H. Bousquet, *Abrégé de la loi musulmane selon la rite de l'Imâm Mâlek*, i-iv, Algiers-Paris 1956-62; utilising as an aid the commentary of Ṣalāḥ ʿAbd al-Samīʿ, *Djawhar al-iklīl*, the translator has adopted a technique of typography which has allowed him to bring out the translation of the comparatively few words making up this "condensation" and to distinguish the expansions strictly necessary for the comprehension of the text.

(M. Ben Cheneb *)

KHALĪL, al-Malik al-Ashraf Ṣalāḥ al-Dīn, eighth Mamlūk sultan, reigned 7 Dhu 'l-Ḳaʿda 689 to 12 Muḥarram 693/11 November 1290 to 13 December 1293 as successor to his father al-Malik al-Manṣūr Ḳalāwūn [*q.v.*]. Ḳalāwūn's elder son al-Malik al-Ṣāliḥ ʿAlā' al-Dīn ʿAlī, the designated heir-apparent, had died in 687/1288, two years before his father, and the *wilāyat al-ʿahd* passed to his younger brother al-Ashraf Khalīl. Khalīl is said not to have enjoyed the particular favour of his father—Ḳalāwūn's seal (*ʿalāma*) was lacking on Khalīl's diploma of investiture (*taḳlīd*)—but it should be stressed that on several occasions he was the official substitute of his father, notably when Ḳalāwūn was absent from Egypt during the siege of Tripoli in 688/1289. Furthermore, Khalīl was the only son old enough to reign and thus the only one to qualify for the dynastic succession.

The battle for a strong sultanate that should be independent from the oligarchy of the *amīrs* left its stamp on Khalīl's short reign. Yet he failed to achieve his aim. In 693/1293 he was killed during a hunting-party in the Nile delta by his deputy Baydarā and a handful of other conspirators. In the beginning, Baydarā had been Khalīl's esteemed *nā'ib*: still in 690/1291 the sultan had granted him the Syrian fortress of al-Ṣubayba (*Alṭāf*, 29 ff.). But later he had been humiliated repeatedly by Khalīl, on one occasion in the presence of the assembled *amīrs*, probably in connection with Baydarā's unsuccesful campaign against the Maronites of Djabal Kasrawān in 691/1292. Other *amīrs* like Ḳarāsunḳur, who later acquired fame for his flight to the Mongols, or the future sultan Ḥusām al-Dīn Lādjīn (see on him P. M. Holt, in *BSOAS*, xxxvi (1973), 521-32), were imprisoned. Although they were set free shortly afterwards, Khalīl failed to secure their loyalty. Khalīl's closest adviser and confidant, his arrogant vizier Ibn al-Salʿūs, a Syrian merchant, did everything to estrange the high *amīrs* even more from the sultan. Under Ibn al-Salʿūs, the vizierate ceased to be in the hands of the military, the *mukalwatūn*, and became the "second office of the state" (Ibn al-Dawādārī, *Kanz*, viii, 306; Ḳalḳashandī, *Ṣubḥ*, iv, 17).

Ibn al-Salʿūs was the first of a long series of merchants who decidedly influenced Mamlūk policy between 1290 and 1450, particularly under Sultan Barsbāy [*q.v.*] [see KĀRIMĪ].

Khalīl's reign saw the beginning of the flourishing Mamlūk trade policy. After the fall of ʿAkkā [*q.v.*] in 690/1291 Khalīl resumed and strengthened contacts with the Christian Mediterranean powers. He concluded treaties with Venice and Aragon. In his biography of Khalīl, *al-Alṭāf al-khafiyya*, 44 ff., Ibn ʿAbd al-Ẓāhir [*q.v.*] mentions an exchange-treaty of Venetian prisoners. With James II of Aragon Khalīl renewed on January 29, 1293 the treaty which Ḳalāwūn had made with James's predecessor Alphonso III, including its provisions concerning the delivery of such forbidden war-materials as iron, weapons, wood and pitch (see K. Müller, *al-Malik al-Aśraf*, 64, quoting Ḳalḳashandī, *Ṣubḥ*, xiv, 63-70). He also made contacts with the small principalities of Menteshe, Aydīn and Ḳaramān, which were developing in Anatolia under Mongol suzerainty (*Alṭāf*, 15 f.).

Khalīl won his greatest fame, however, in the Islamic and Christian world alike as the skilled commander of the Egyptian-Syrian armies who captured ʿAkkā (St. Jean d'Acre) after a carefully prepared six-weeks siege. Only the flight from the colours of the *amīr* Ḥusām al-Dīn Lādjīn, the later sultan, before the walls of ʿAkkā, jeopardised the Muslim victory for a short time. Ṣaydā, Bayrūt, ʿAthlīth, Djubayl and Ṣūr, the few remaining strongholds of the Franks, fell into the hands of the Muslims without a fight. All the captured Frankish fortresses were demolished; thus Palestine lost the basis of its economic prosperity. Contemporary chroniclers, especially al-Djazarī [*q.v.*], probably the most important authority for this period, complain seriously of the destructive fury of Khalīl, which fell even upon Damascus and the stronghold of Shawbak in the land of Moab. But it should be remarked that this policy was a calculated one, both on strategic and economic grounds: the Syrian cities should no longer serve as a foothold for Frankish invaders nor attract the lucrative Indian trade which was directed from South Arabia through the Red Sea to Alexandria and Damietta and further to Europe. The undisguised aversion of the Syrians for Ḳalāwūn and his successors reflects the political and economic centralisation of the Mamlūk state after the capitulation of the insurgent *amīr* Sunḳur al-Ashḳar of Ṣahyūn during Ḳalāwūn's reign. The building of a fleet to protect the Syrian coast (*Alṭāf*, 56-61) is not in contradiction with Khalīl's endeavours to monopolise the East-West trade through Egypt.

In contrast with his father, Khalīl seems to have been inspired by religious motifs in his political and military activities. Certainly, the reproach that he was a vile libertine is unfounded. Ibn ʿAbd al-Ẓāhir pictures Khalīl's zeal in the *Dār al-ʿadl*, the royal court of justice, and speaks highly of his equity and incorruptibility. As opposed to his predecessors and to most of his successors, the sultan had a command of Arabic and concerned himself actively with the *dīwān al-inshāʾ*, until 693/1293 headed by the above-mentioned Ibn ʿAbd al-Ẓāhir. Khalīl was eager to secure the homage of the *sharīf* of Mecca Nadjm al-Dīn Abū Numayy (*Alṭāf*, 20), and gave new functions to the ʿAbbāsid shadow caliph al-Ḥākim, the returning of the legitimate ruler of the Islamic world to the old capital of the caliphs being one of the foremost aims of his foreign policy. Ibn ʿAbd al-Ẓāhir (*Alṭāf*, 6 ff.) records the text of the public *djihād* sermons given by the caliph—another indication of Khalīl's religious zeal.

Khalīl's strategy was mainly directed against the Mongols, "the vile enemy" (*al-ʿaduww al-makhdhūl*), at least after the Franks had been driven away. After the death of Arghūn, the Ilkhāns [*q.v.*] lost their clear military superiority over the Mamlūks. Khalīl grasped his chance, attacked the kingdom of Lesser Armenia and conquered the important stronghold of Ḳalʿat al-Rūm on the Euphrates [see RŪM ḲALʿESI]. One year later, the Armenian king Hethoum II surrendered the fortresses of Bahasnā, Marʿash and Tall Ḥamdūn, commanding the routes to Aleppo, to the Mamlūk ruler. The Bedouins, controlling the strategic Ilkhānid-Mamlūk frontier in the Syrian desert, were also, if only temporarily, subdued. But the great dream of the age, the recovery of Baghdād, Khalīl was not able to bring about.

Information on Khalīl's internal policy is scarce. Three times yearly the troops received a special pay (*nafaḳa*) (Ibn al-Dawādārī, *Kanz*, viii, 352), which constituted an additional burden on the treasury, already heavily drawn upon by the costly campaigns in Syria. Only Khalīl's early death may have prevented him from redistributing the *iḳṭāʿ*s of the emirs, brought about by sultan Lādjīn a few years later (*al-rawk al-ḥusāmī*). The *amīr*s staunchly resisted any interference with their privileges; Baydarā's refusal to cede his share of the customs dues of the port of Alexandria to Khalīl or his vizier aggravated the strife between the sultan and the most powerful *amīr*s. Other sources of income were not easily accessible. The very lucrative confiscation of the fortunes of Ṭurunṭāy, Ḳalāwūn's *nāʾib*, remained an isolated episode.

Khalīl's murderer Baydarā reigned only for a few days. Unable to capture the citadel of Cairo, the centre of political and military power, he was killed after a short fight against Khalīl's followers, led by the *ustādār* (majordomo) Ḥusām al-Dīn. The eight-years' old al-Nāṣir Muḥammad, Khalīl's brother, was enthroned (for the first time), the real ruler being the new *nāʾib* Zayn al-Dīn Kitbughā, who usurped the throne in 694/1294 under the name al-Malik al-ʿĀdil.

KHALĪL ALLĀH BUT-SHIKAN, Persian mystic active in South India. Sayyid Burhān al-Dīn Khalīl Allāh was born at Kūbnān, in Kirmān

province of Persia, on Friday 11th Shaʿbān 775/26th January 1374, and was the son and spiritual successor of the celebrated Shāh Niʿmat Allāh Walī of Kirmān [*q.v.*]. He was widely respected as the chief exponent of the Ṣūfī school founded by, and named after, his father. The contemporary Tīmūrid princes Shāh-Rukh Mīrzā and Bāysunḳur Mīrzā, who held him in great reverence, for some time played host to the Sayyid in Harāt. After his father's death in 834/1431, he migrated to the Deccan where the local dynasty of the Bahmanīs were engaged in fierce wars against the neighbouring Hindu kingdoms. It is said that the Muslims came out victorious because of the saint's auspicious participation in one of those battles, and this event accounts for his sobriquet of *But-shikan* ("Iconoclast"). Thenceforth, he became the focal point of the socio-religious resurgence which his preachings created among the Muslims of South India. Two of his sons who had accompanied him to India married into the Bahmanī royal family, and his eldest son, Sayyid Nūr Allāh, who had preceded him to the Deccan at the instance of Shāh Niʿmat Allāh himself, was received with particular marks of honour by all classes of society. Sayyid Khalīl Allāh's most devoted disciple was no less a person than the Bahmanī Sultan Aḥmad Shāh Walī (825-39/1422-36), who was also ordained as his spiritual vice-regent (*khalīfa*).

Whether Sayyid Khalīl Allāh died whilst he was still in India or after he had returned to Persia has been a disputed point among the historians. Firishta, *Taʾrīkh*, 634-5, while asserting that the Sayyid had returned to Māhān in Kirmān, where he breathed his last and lies buried, refers to the opinion of some persons that he could not return to Persia and that he died in India. Modern scholars such as Yazdānī and Shērwānī have said that he died in Bīdar, the Bahmanī capital, in 864/1460 and that his tomb is situated there in the domeless octagonal building called the *Čawkhandī*. This story, however, was regarded as a myth by Sir Wolseley Haig, who considered the said tomb to be merely a cenotaph, and added that the saint's grave is in his father's beautiful shrine at Māhān; see *The religion of Ahmad Shah Bahmani*, in *JRAS* (1924), 77.

(ABDUS SUBHAN)

KHALĪL EDHEM [see ELDEM].

KHALĪL EFENDI—ZĀDE, MEḤMED SAʿID EFENDI, one of the *ʿulamāʾ* of the time of Sulṭān Maḥmūd I (1143-68/1730-54). He was the son of Birgili Khalīl Efendi who was twice *Ḳāḍi-ʿaskar* of Anatolia. He studied under his father, then passed through the usual *madrasa* course, and beginning as *mollā* of Yeñishehir in 1135/1722-3, ascended the various steps of the *ʿulamāʾ* hierarchy to the highest office. He was appointed *Shaykh al-Islām* in 1162/1749, but was dismissed within ten months in 1163/1750 on account of his stern and unyielding disposition and banished to Bursa where he died in 1168/1754-5, and was buried near Amīr Sulṭān.

He was regarded as a learned man, ready with his pen, and well-fitted for all the claims of his office. Besides a commentary, he left the Turkish translation of a part of the history of ʿAynī (d. 762/1361). Of his sons and grandsons, several were notable theologians.

KHALĪL GHĀNIM (1846-1903), journalist and author, born in Beirut of Maronite parents and educated at the Lazarists' school in ʿAynṭūra, where he acquired a knowledge of French and English, as well as Arabic and Turkish. Khalīl Ghānim began his career in 1862 as a member of the commercial court in Beirut. He was then appointed dragoman of the Beirut *mutaṣarrifiyya*, and subsequently of the *wilāyet* of Syria. A *wālī* under whom he served, Sakīzlī Aḥmad Asʿad, appointed him dragoman to the Ministry of Foreign Affairs when he became briefly Grand Vizier in 1873. He was promoted dragoman of the Grand Vizierate and its master of ceremonies when Asʿad once more became Grand Vizier in 1875. Following the proclamation of the Ottoman constitution, Khalīl Ghānim was elected a deputy for Syria, and sat in the chamber of deputies until it was prorogued in February 1878. He seems to have become a supporter of Midḥat Pasha, and thus to have attracted the displeasure of Sultan ʿAbd al-Ḥamīd II. In consequence, he took refuge in the French embassy and fled to France, where he spent the rest of his life, becoming a naturalised French citizen and marrying a Frenchwoman. In 1881, in partnership with Faḍl Allāh Dabbās of Beirut, he started in Paris an Arabic newspaper *al-Baṣīr*, which received a subsidy from the French government and which acted as the advocate of French interests and policies in Tunis and in the Ottoman empire; it was presumably in recognition of these services that he was awarded the *légion d'honneur*. Khalīl Ghānim was also a contributor to the *Journal des Débats* and the *Figaro*, and was prominent in anti-Ḥamīdian and Young Turk activities in Europe. In Paris, he published a periodical *La Jeune Turquie* and in Geneva the *Hilāl*, and in 1895, he joined the well-known Aḥmad Riḍā (Ahmet Riza) [*q.v.* in Suppl.] in publishing the influential Young Turk newspaper *Meshveret*. He published a book *Les Sultans Ottomans* in two volumes (Paris 1902), and was also the author of a *Life of Jesus* and of a work on political economy in Arabic.

(E. KEDOURIE)

KHALĪL MUṬRĀN, Lebanese poet born on 1 July 1872 at Baʿlabakk (Baalbekk). His family is reckoned to have been of Ghassānid origin (Alūf, *Taʾrīkh Baʿlabakk*, 86-118; Ṭunnāḥī, 14). Neither his father, ʿAbdu Muṭrān, nor his mother, Malaka Ṣabbāgh, of whom the latter figures more prominently in his biography (*Dīwān*, iv, 145), seems to have had much influence on his life. It was at Zaḥla (al-Kulliyya al-Sharḳiyya), then at the Patriarchal College of Beirut, that he received respectively his primary and secondary education (*al-Muḳtaṭaf*, June 1888; Djamāl al-Dīn, 44; Ṭunnāḥī, 37-40), a bilingual education in which Arabic, his mother-tongue, combined with French to shape his cultural

development and the nature of his poetry. The stringent Catholic discipline must have served to enhance his sense of moral values, and the restrained attitude attributed to him (*Muḳaṭaf*, Nov. 1939, 467-78; *Madjallat Sarkīs*, special issue, 1913; *al-Kitāb al-Dhahabī*, passim). Mention should be made of the influence of his eminent master Ibrāhīm al-Yāzidjī (d. 1906), from whom he gained his mastery of the language and his concern for perfection. (Evidence of the poet, *Dīwān*, i, 290, 294, ii, 29, 326; and testimony born by al-Yāzidjī, *Anīs al-djalīs*, ix, 371). He imitated al-Yāzidjī in composing the bitter poem which hastened his departure from Lebanon in 1890 (for the poem of al-Yāzidjī, see *Arab awakening*, 1955 ed., 54, and Maḳdisī *al-Ittidjahāt*[1], 80-3; we have two verses from Muṭrān's poem, al-Ṭunnāḥī, 45-6; see Djamāl al-Dīn, 46).

Muṭrān paid a visit to Alexandria and stayed some time in Paris, making preparations for emigration to Chile (Ṭunnāḥī, 58-64; *Muḳtaṭaf*, June 1939, 91). To the time spent in Paris (1890-2), he owes his cultural sympathy with the West. There he discovered French romanticism, in which he became engrossed, and he exposed himself to the literary and artistic trends of the nineties. He became acquainted with a group of militant Lebanese and Syrian emigrés, and with Aḥmad Riḍā, a founder-member of the Young Turks. Imbued with the ideas of the French Revolution, he was inspired and stirred by it. (The celebrations of the 14th of July thrilled him; see Aḥmad al-Ṣāwī, Paris, the references to Muṭrān and Ṭunnāḥī, 61-4.) Asked to restrain his political activities, he left Paris, made his way to Egypt and landed in Alexandria on 11 August 1892 (*ibid.*, 71). The following day, the death of S. Taḳla, founder and proprietor of the daily newspaper *al-Ahrām* (*Muḳtaṭaf*, *ibid.*, 209), gained him access to the journal where he made his debut as a journalist with an obituary poem (unpublished, seven verses quoted in Ṭunnāḥī, 72-3).

In 1899 he abandoned his duties, revisited Lebanon after an absence of ten years (see the poems where he evokes his memories and *Ḳalʿat Baʿlabakk*, in *Dīwān*, 97-101), returned to Cairo and on 1 June 1900 published the first issue (in 40 pages, latter in 96) of his bi-monthly revue *al-Madjalla al-Miṣriyya* (in the issue of April 1901 the main lines of the programme which he proposed to follow are sketched out; see interview in *al-Hilāl*, Jan. 1930, 269-70; *Muḳtaṭaf*, August, 316), which for financial reasons was forced to cease publication in 1902, to re-appear temporarily seven years later, 17 January 1909. Meanwhile, on Friday 6 February 1903 he launched a daily paper, *al-Djawāʾib al-Miṣriyya* (a title borrowed from Fāris al-Shidyāḳ, d. 1887), in which he pleaded for social reform and defended liberty and the public interest.

To this period (1897-1903) belongs the story of his great love which inspired him to write many lyric poems (Ṭunnāḥī, 126-8, 140-1, 151-4, 157; *Dīwān*, i, 144, 184-222, ii, 10, 17, 288, 326). His attachment to Egypt, which he was henceforward to consider a second homeland, became more pronounced (*Dīwān*, ii, 13, 226, 295). A moderate partisan of the nationalist movement, he became committed to its cause. A foreigner, one of a minority, he found in Egypt his social equilibrium. The friendship and admiration which he showed towards Muṣṭafā Kāmil (1874-1908; *Dīwān*, i, 308-13, iv, 292-6) attached him to his successors (Muḥammad Farīd, d. 1919; see *Dīwān*, ii, 233; Saʿd Zaghlūl, d. 1927; see *Dīwān*, ii, 320, iii, 261, iv, 250; and see M. Khoury, *Poetry and the making of modern Egypt*, 134-72), and earned him the favour of the Khedive (*Madjallat Sarkīs*, issue of Sept. 1913). It is to this new attachment, no doubt, that he owes the surname Shāʿir al-Ḳuṭrayn. The enforcement of repressive legislation against the press caused the change of heart of the poet (*Dīwān*, iii, 50) and of the journalist (*al-Madjalla l-Miṣriyya*, 14th Feb. 1909). Inspired poems on the history and the reality of Egypt multiplied.

Speculation on the money-markets brought him, in 1912, to a financial crisis which almost drove him to suicide, (Djamāl al-Dīn, 50; Ṭunnāḥī, 266-7; *Dīwān*, ii, 117-9). Nevertheless, in this same year he was appointed assistant secretary to the syndicate of agriculture. On the 24th of April 1913, a demonstration was organized in his honour at the National University (*Madjallat Sarkīs*, special issue, 190-260).

With the revival of the theatrical movement and the return from Paris of the actor G. Abyaḍ [*q.v.* in Suppl.], he became involved in the theatre as translator and producer (*al-Risāla*, ix, nos. 288-96, 301; Ṭunnāḥī, 280-9). A co-founder of the Society of the Arabic Theatre which he inaugurated on 30 Dec. 1920 (*al-Hilāl*, xxix, 465-72), he was appointed to the post of administrative director of the National Company (1935-42, Muḥammad Taymūr, *Ḥayātunā al-tamthīliyya*, 108-9; *al-Hilāl*, xxxvi, 303-4; *al-Kitāb al-Dhahabī*, 60-7; *al-Ahrām*, 14 Dec. 1937). The tour which he organised in 1924 (Lebanon, Syria and Palestine) increased his reputation. In 1947, he found himself covered in honours (the week of 26-29 of March; *al-Kitāb al-Dhahabī*, passim). Disabled by attacks of arthritis, he succumbed to the disease and died on 30 June 1949.

Muṭrān left a varied corpus of work. Among his unpublished writings, there is mention of a study of Shiblī al-Shumayyil, scientist and philosopher. He also published the *Dīwān* of Ibn Ḳalāḳis (*Maṭbaʿat al-Djawāʾib*). His translations, adapted and sometimes annotated, are diverse: *Le Précis d'Histoire Naturelle* of Victor Duray (d. 1894), which he published under the title *Mirʾāt al-ayyām fī mulakhkhaṣ al-taʾrīkh al-ʿāmm* (2 vols., Cairo 1897); *Tarbiyat al-irāda* (1968), *L'Education de la Volonté* of Payot (*al-Hilāl*, Oct. 1918 and 1924), the survey of political economics of Leroy-Beaulieu (*al-Mūdjaz fī 'l-iḳtiṣād*, 5 vols., in collaboration with Ḥāfiẓ Ibrāhīm). Of his literary translations, mention should be made of his versions of the two Nights of May and of October of Alfred de Musset, and the classic works of the Western theatre which he published in the Arab world during four decades. Perceptive critics sometimes find fault with his Shakespearian translations (Nuʿaymeh, *al-Ghirbāl*, 1957 ed., 166-74; al-Māzinī, *Ḥaṣād*, 1932 ed., 35-50; *al-Risāla*, *loc. cit.*; *Muḳtaṭaf*, summer 1939, 314-5; Nadjm, *al-Masraḥiyya*, 2nd part). Hundreds of articles covering a wide spectrum of themes have still to be collected and edited. His work published posthumously, *Arādjīz ilā 'l-shabāb* (102 *urdjūzas*, *Ḥarīṣa* 1951, one part of it published in *al-Hilāl*, Oct. 1917), which is of a didactic nature, has nothing original to convey.

All of this work today appears as of marginal importance. It is as a poet that he is remembered. In 1908, Muṭrān made a selection of poems and fragments previously published sporadically (for a historical view, see Adham, *al-Muḳtaṭaf*, Dec. 1939, 538-50), revised them, arranged them chronologically, and published them under the title *Dīwān al-Khalīl*. This collection shows the characteristic traits which were to distinguish the integral poetic corpus published in 1949 (4 vols., comprising 434 pieces, a total of 22,000 lines approximately (see the thesis of Ramādī, 216). In this connection may be mentioned

the predominance of lyrical and descriptive poems, narrative poems inspired by history (*Dīwān*, i, 15, 41, 120, 179-83) or social conditions (*ibid.*, 223-45), the militant tendency retained (*ibid.*, 162-4, 308-13), and the poetry inspired by circumstances varying between authentic vigour (*ibid.*, 271-4, 290-2, 308-13) and pale conventional urbanity (*ibid.*, 118, 167-71). The traditional structure of the *ḳaṣīda* with juxtaposed lines disjointed in sense, appears alongside poems where the line becomes an organised unit contributing to the overall effect of the whole. In some instances, the poet abandons metre and simple rhyme and makes use of *takhmīs*, of *tathlīth*, of *madjzū'*, complex or varied rhyming-schemes, and even comes to the point of writing prose poems (*Dīwān*, i, 294-6). Other combinations of style produce new poems. The number of poems grows, but there is no apparently no radical change affecting the nature of his poetry. However, the narrative poem, drawn out to extreme length, finds its ultimate realisation in a long piece of 332 lines, entitled *Nāyrūn* (*Dīwān*, iii 50-73). In this unique exercise he was aiming at a work of definitive nature (*ibid.*, Introd. 48-50). Also, he immersed himself in a patient process of craftsmanship, seeking documentary evidence, researching details and ephemeral nuances, orchestrating sonorous alliterations, manipulating the language to an excessive degree, reconstructing the apocalyptic decadence of Rome (*ibid.*, 61-8), depicting under the portrait of Nero an allegorical potentate embodying the tyranny of ʿAbd al-Ḥamīd II. So the present takes on a historical perspective through the mask and the cloak of poetic illusion.

The lyric poem, on the other hand, is introspective and goes deeper, as may be illustrated by his poem *al-Asad al-bākī* (*Dīwān*, ii, 17-9), where the conscious being, divided, discovers its *alter ego*, crucified, hung by its wounds, converted and a "tomb which bleeds and walks on the tombs." A play on the senses of words infuses this poem with a remarkable evocative force.

Figures of kings, martyrs and heroes constitute a Legend of the Ages. From its dirges there emerge some genuine personalities. (Djallād, *al-Kitāb al-Dhahabī*, 109-11).

A promoter of modern poetry, he declared that the true modern poet should live his life so as to analyse it, should reject all imitation, uncover the secrets of the human soul, recreate the language through poetry, construct rationally a poetry where the component parts are complete in themselves while contributing to the whole, cultivate purity of form while maintaining authentic spontaneity (*al-Hilāl*, July 1928; *Dīwān*, i and ii, Introd.; his poetry, i, 303-7). He defined his poetry in these terms: -*ḳashība, gharība, aṣriyya, nasdj Muḍār.*

His critics agree in according him a place among the avant-garde of the modernist movement (T. Ḥusayn, *Ḥāfiẓ wa-Shawḳī*, passim; Mandūr, *Muḥāḍarāt*; ʿAḳḳād and B. Fāris in *al-Kitāb al-Dhahabī*, 49-52, 71-3, 74-5).

One should emphasise the organised scheme of composition whereby the poem regains its lost unity, the poems inspired by history, narrative or fable, poems where, militant, he sings of liberty and the dignity of man, reality disguised as allegory, or symbol, lyrical experience which probes itself, dissects itself and emerges rationally from chaos, inspired songs of the human condition and cosmic transcendence meditating on matter; in fact, the entire gamut of romantic themes which are produced in a form that is sober, perceptive, charged with images and tending towards the overall unity of the poem.

Intimately linked to that of Shawḳī (d. 1932) and Ḥāfiẓ (d. 1932), then in decline, his poetry, with its quality of neo-classicism, presaged in many ways the beginnings of a new poetic era.

(A. G. Karam)

KHALĪL PASHA DJANDARLİ, Ottoman Grand Vizier, the eldest son of Djandarlī Ibrāhīm (d. 832/1429), who served as Grand Vizier to Meḥemmed I [*q.v.*]. He was serving as *Ḳāḍī-ʿasker* [*q.v.*] at the time of his father's death. Murād II [*q.v.*] raised him to the vizierate, and by 847/1443 he was Grand Vizier, becoming this sultan's closest adviser. He appears to have been the chief architect of Murād's policy of appeasing Hungary and the western powers in an effort to prevent a concerted crusader attack against the Ottomans in the Balkans. He was chief Ottoman negotiator in the discussions leading to the Treaty of Edirne, concluded with the Hungarians on 24 Ṣafar 848/12 June 1444. On his abdication after the conclusion of peace, Murād appointed Khalīl Grand Vizier to his son Meḥemmed [*q.v.*], and it was presumably Khalīl who recalled Murād on the crusader invasion of Djumādā II 848/September, 1444. Although he commanded a force which guarded the Bosphorus at the time of Murād's crossing to Rumelia with the troops of Anatolia on his way to meet the invaders, he himself was in Edirne [*q.v.*] as the young sultan's guardian at the time of Murād's

victory at Varna. He appears during the years of Murād's abdication to have regarded Murād as the true sultan. Having the loyal support of the Janissaries [see YEÑI ČERI], Khalīl used the Janissary revolt of 850/1446, which he may himself have engineered, as a pretext for recalling Murād to the throne. On the old sultan's reaccession, he retained the post of Grand Vizier unchallenged.

On Murād's death in 855/1451, Khalīl summoned Meḥemmed to Edirne and at first retained the Grand Vizierate, despite the grudge which Meḥemmed evidently bore him for his actions during his first sultanate. Khalīl's cautious and pacific policies in fact suited the delicate political situation at the time of Meḥemmed's accession, with a Ḳaramānid attack [see ḲARĀMĀN-OGHULLARĪ] and the fear that the Byzantines might release the pretender Orkhān. Khalīl appears to have played an important part in negotiating the peace with the Ḳaramānids. It was he, too, who during the campaign, dismissed the Byzantine ambassador who sought an increase in the sum paid to the Emperor for keeping Orkhān in captivity. By securing peace on the borders and causing a breach with the Byzantines, Khalīl created conditions favourable for the Ottoman siege of Constantinople. Perhaps in recognition of his diplomatic achievements, Meḥemmed granted *mülk* lands near Plovdiv or Filibe [*q.v.*], in Shaʿbān 855/September 1451. However, Khalīl's continuous opposition to the siege of Constantinople both before and during the operations aroused the sultan's displeasure. He had, furthermore, a reputation of being a "friend of the Greeks". With the fall of Constantinople, he lost all remnants of his power and influence to Zaganos Pasha [*q.v.*] and the war-party around the sultan. Meḥemmed had him arrested on 21 Djumādā I 857/30 May 1453. He was sent to Edirne and executed a few weeks later.

(C. H. IMBER)

KHALĪL PASHA ḤĀDJDJĪ ARNAWUD, Grand Vizier under the Ottoman Sulṭān Aḥmad III. He was an Albanian from Elbaṣān born *ca.* 1655. At the time his elder brother Sinān Āghā was *Bostandjî Bashî* [*q.v.*], he entered the *Bostandjî* corps. After the latter's death *ca.* 1105/1649, he became attached to Ḳalaylîḳoz Aḥmad Pasha and served under him in Baghdād, where his protector was *beglerbegi*. On his return to Istanbul, Khalīl became *Khāṣṣaki* [*q.v.*] and in 1123/1711, *Bostandjî Bashî*. On 16 Muḥarram 1128/11 January 1716, having been appointed *beglerbegi* of Erzurum, he was sent by the Grand Vizier Dāmād ʿAlī Pasha [*q.v.*] to Nish to repair this important fortress, in view of the coming war with the Emperor. In Shaʿbān 1128/July-August 1716 he was appointed governor (*muḥāfiẓ*) of Belgrade, then the key-fortress in the campaign against the Emperor.

After the death of the Grand Vizier Dāmād ʿAlī Pasha on 16 Shaʿbān 1128/5 August 1716 in the battle of Peterwardein, where Prince Eugene of Savoy defeated the Ottomans, Khalīl Pasha acted as commander-in-chief. This was confirmed by Sulṭān Aḥmad III who appointed him Grand Vizier on 4 Ramaḍān 1128/22 August 1716. In this appointment must be seen the influence of the Sulṭān's favourite, Nevshehirli Ibrāhīm Pasha [*q.v.*], who at this juncture of events preferred to remain in the background of the war, near the seat of power of the Sulṭān, in the position of *Ḳāʾimmaḳām*. The 1716 campaign ended in another disaster for the Ottomans with the loss of the frontier-fortress of Temeshvar, 4 Dhu 'l-Ḳaʿda/21 October 1716, to the Emperor.

After the news of this event, the Grand Vizier Khalīl drew his army back into winter quarters and returned to Edirne. In this manner, a disastrous scattering of the Ottoman army was prevented. The beginning of 1717 saw the rise of the Sulṭān's favourite Ibrāhīm Pasha, who married the 13 year-old daughter of Aḥmad III Fāṭima Sulṭān, earlier widow of the Grand Vizier ʿAlī Pasha. Khalīl Pasha successfully opposed Ibrāhīm's policy of peace with the Emperor, refusing an offer of English mediation. The Grand Vizier insisted on the precondition of Temeshvar's being first evacuated by the Imperial forces. On 2 Radjab 1129/12 June 1717 the army marched from Edirne in the direction of Belgrade and towards the front. In the meantime, the imperial generalissimo Prince Eugene of Savoy had laid siege to the city and fortress of Belgrade. Khalīl Pasha was not able to relieve the city. But having decided, after long tergiversations, on a massive attack, he was utterly beaten by the fully-prepared imperial army, which in fact had attacked first at daybreak on 8 Ramaḍān 1129/16 August 1717. Khalīl Pasha managed to escape with his life, but all the Ottoman artillery, the whole camp equipment and all the archives were lost to the enemy, and the Ottoman losses in men were heavy. The full retreat of the Turkish army to Nish left the governor of Belgrade, Sarî Muṣṭafa Pasha, no other choice than to surrender with full military honours. With proposals for peace from Prince Eugene, this *Pasha* reached Sofia, where he found Aḥmad III and his court. Soon afterwards, on 18 Ramaḍān 1129/26 August 1717 at Nish, Khalīl Pasha was dismissed as Grand Vizier because of his signal military failure before Belgrade. After his fall, he went into hiding and thus saved his life. His hiding-place was discovered in 1133/1721 and he was pardoned by Aḥmad III. Then Khalīl became governor of Lesbos (Midilli) where he remained till 1140/1727. Afterwards he was appointed governor of Salonica and Sedd ül-Baḥr (the Dardanelles). Khalīl Pasha died in 1136/1733. He had the reputation of being a pious Muslim, but became infamous by his losing of Belgrade, *Dār ül-djihād*, to the unbelievers.

KHALĪL PASHA ḲAYṢARIYYELI, Ottoman Grand Vizier and admiral, born probably *ca.* 1570, in the village of Zeytun (now Süleymanlı) in the province of Maraş on the way to Ḳayseri, near Furnuz, at that time an Armenian village with a rich population (iron mines nearby, Andreasyan, 1964). It suffered heavily from destructions done by Djelālī rebels.

As a young boy, Khalīl was recruited by the *Devshirme* [*q.v.*], (Uzunçarşılı, *Kapıkulu*, i, 27, n. 4) and received the full education of the palace-school as an *ič oghlān*. His career may have been promoted by the fact that he had an elder brother who had successfully become Chief Falconer, *Beglerbegi*, Vizier and boon-companion of Murād III, Shahīd Meḥmed Pasha, who lost his life in the so-called "incident of the *Beglerbegi*" on 2 April 1589 (Danişmend, iii, 111 ff.), considered to be the earliest Janissary revolts involving the killing of a Vizier.

In 1606 he was appointed *čaḳırdjı bashı* (Chief Hawker), one of the court positions whose holders were entitled to become *ṣandjaḳbeyi*. Meanwhile, Khalīl had become a friend of the French Ambassador to the Porte, Baron de Salignac. The latter's equerry Bordier reported the frequent hunting parties in the forests east of Üsküdar together with his master, a keen sportsman himself. In *ca.* 4 Ramaḍān 1015/4 Jan. 1607, Khalīl became Agha of the Janissaries. That year's campaign was against the rebels in Asia Minor, commanded by the *serdār* Ḳuyudju Murād Pasha. In the fighting against Kalenderoghlu and Djānbulāṭ ʿAlī Pasha [*q.v.*] he distinguished himself (Gontaut-Biron, ii, 407-12). Also in 1608, Khalīl acquired fame under Murād Pasha in eastern Anatolia. From this time date his relations with Abāẓā Meḥmed, a follower of ʿAlī Pasha Djānbulāṭ, whom he pardoned and adopted as a spiritual son. At the end of the second year of campaigning (1608), the Serdār Ḳuyudju Murād Pasha returned in triumph to the Ottoman capital, and Khalīl returned with his commander and protector.

In 1018/16 Feb. 1609 the *Ḳapudān Pasha* Ḥāfiẓ Aḥmad [*q.v.*] was deposed and Khalīl was appointed his successor. The admiralty had long since become a perquisite of the Sulṭān's court, but although lacking any naval experience, Khalīl became successful at sea as well. His first task was to ferry over the army of the Grand Vizier Murād Pasha to Asia for another campaign against the rebels. This and other services delayed the sailing of the Ottoman fleet till July 1609. Khalīl chased corsairs in the Levant seas, but his fame was established by the defeat of a Maltese squadron off Cyprus and the capture of the "Red Galleon" of 80 guns called "Ḳara Djahannam" by the Turks, commanded by the Chevalier de Fraissinet.

On his return to Istanbul, Khalīl was given by Aḥmad I the rank of Vizier (1018/25 Nov. 1609). On 16 July 1610, Khalīl set out to sea again to chase corsairs, but did not fight any major battle. In this same year, he began to work towards the formation of an offensive alliance between the Dutch Republic, Morocco and the Porte against Spain. His first letter to the States-General in the Hague was sent off on 15 July 1610. Venetian and French opposition to this policy did Khalīl no harm in entertaining good relations with both respective ambassadors.

From 1020/late 1611 till 1022/1613 Khalīl was deprived of the admiralship, and the court favourite Dāmād Öküz Meḥmed Pasha [*q.v.*] took his place. Being out of office did not weaken Khalīl's position in promoting the Dutch alliance. Meanwhile, a Dutch envoy, Cornelis Haga (1612-39), had arrived in Istanbul on 17 March 1612. With Khalīl's help, the Dutchman was soon received by the *Ḳāʾim-maḳām* and other persons in authority at the Porte. Venetian and French intrigues were also rendered vain by his help, so that the Dutch envoy was given an audience by Aḥmad I on 1 May 1612 and recognised as ambassador of the States-General. Khalīl Pasha remained all along a supporter of Dutch interests at the Porte, but the States-General never entered upon a military alliance with the Porte because of their pacific policy towards Spain at that time (1609-21, Hispano-Dutch truce), and because of general political opinion in Europe being unfavourably disposed towards it.

On 8 Shawwāl 1022/22 Nov. 1613, Khalīl became *Ḳapudān Pasha* for a second time. At once he started the re-equipment of ships in the Sulṭān's dockyard. The Turco-Dutch-Moroccan alliance project was taken up again with the letters to Maulāy Zaydān of Morocco (1012-39/1603-28) and to the States-General. The following year he went to sea and made a raid on Malta and continued to Tripoli (Ṭarabulūs-i Gharb) on a punitive expedition against a local insurgent, Ṣafar Ḍāʾyī, whom he executed. On the return journey, rebellious Greeks in the Maina district (southern Peloponese) were suppressed in co-operation with the local Ottoman Governor, Arslān Pasha. Khalīl was back in Istanbul at the end of November 1023/1614 to be duly honoured by the Sultan. He continued the overhaul and enlargement of the fleet during the winter of 1614-15. A part of the fleet remained in the Archipelago on police duty against Christian corsairs, but no meeting took place with Spanish squadrons or other enemy war-fleets.

On 17 Rabīʿ II 1024/17 April 1615, Khalīl left with a small fleet for the Mediterranean. Off Calabria, a Spanish galleon from Sicily was taken but no great offensive was feasible. At the end of the season, murmurs in Istanbul rose accusing him of having avoided confrontation with the enemy fleet. After his return on 26 Shawwāl 1024/6 November 1615, Khalīl counteracted Habsburg intrigues of the Ottoman plenipotentiary in Vienna, Gratiani (d. 1620), against the Dutch, Venetian and French interests at the Porte. In 1616 Khalīl once again started on the project of equipping a large fleet with the special support of Aḥmad I. A Moroccan embassy to the Porte from Maulāy Zaydān was sent back with letters addressed

to the States-General to foster the alliance scheme cherished by Khalīl. These negotiations failed, however, because of private intrigues of the merchant family of Palache established in Morocco and Holland at the time. Khalīl tried to reaffirm the Porte's authority in Algiers and Tunis and to curtail the predatory raids of the Muslim corsairs of those places against English and Dutch merchant-shipping in the Mediterranean. Cossack naval raids on Black Sea coastal towns forced Khalīl to send a squadron into the Black Sea. He himself went on a short campaign through the Archipelago in this season. Contraband trade here had increased widely, especially that carried by Dutch merchantmen. Upon advice given by the *Dīwān*, Khalīl Pasha was appointed Grand Vizier by Aḥmad I on 8 Dhu'l-Ḳaʿda 1025/17 Nov. 1616.

As Grand Vizier, Khalīl made an end to the levying of *kharādj* on subjects of the four capitulatory nations in the Ottoman Empire, thus ameliorating relations. Further, he ordered the equipping of the fleet against the menace of the Spanish navy. An agreement between a delegation from Algiers and the Dutch Ambassador was made under authority of the Grand Vizier. His main task was, however, to continue the war against Persia in a more successful manner. On 10 Djumādā 'l-awwal 1026/15 June 1617, as *serdār-i ekrem*, he left for the Turco-Persian border. Consequently Khalīl played no role in the succession to Aḥmad I, who died on 23 Dhu'l-Ḳaʿda 1026/22 Nov. 1617, which brought Muṣṭafā I [*q.v.*] on the throne. This Sulṭān was deposed soon afterwards, and Aḥmad I's son ʿOthmān II was installed on 1 Rabīʿ I 1027/26 Feb. 1618. Khalīl was consulted about this matter by letter. Khalīl, having wintered in Diyār Bakr, opened the campaign against Persia in May 1618, after the Turkish plenipotentiary sent by him to Shah ʿAbbās had returned without concluding a truce. On 20 Ramaḍān 1027/10 Sept. 1618, the Ottoman army was defeated by the Persians near Ardabīl. On 6 Shawwāl 1027/26 Sept. 1618, the Grand Vizier concluded peace with Persia on the same terms as the earlier treaties, with the exception of the Persian tribute of silk being reduced to 100 *yük*. This peace treaty of Serāw was ratified by ʿOthmān II on 29 Sept. 1619 and held firm till 1624. Khalīl withdrew to winter quarters at Tokat and the army stayed in Erzurum. The Ottoman position had thus been consolidated in the East. On his return to Istanbul, Khalīl received the news of his dismissal (1 Ṣafar 1028/18 Jan. 1619). He refused the appointment of *beglerbegi* of Damascus and sought refuge in the *tekke* of his spiritual director, the *Shaykh* Maḥmūd Hüdāʾī [*q.v.*] in Üsküdar. However, he kept the rank of vizier and member of the *Dīwān*, probably due to the fact that the Sulṭān could not do without such a popular and capable vizier; this, at least, was the opinion of the Dutch Ambassador, Haga (letter of 17 Jan. 1619/recd. 25 March 1619).

When on 16 Muḥarram 1029/23 Dec. 1619 the then *Ḳapudān Pasha* became Grand Vizier, Khalīl was appointed (for the third time) as admiral in his place. His position was weak, since he served under the former admiral of the fleet, but he continued his anti-Spanish policy, advising ʿOthmān II to invade the territory of the King of Spain, rather than attack Venice, which still possessed a formidable navy. Moroccan support, too, would be available against the Spaniards. However, the Grand Vizier preferred the war in Hungary against the Emperor. War against Poland was advocated by neither of the two statesmen (Sagredo, 604 ff.), but was desired by ʿOthmān. In support of the Sulṭān's army, Khalīl was ordered with 43 galleys to the mouth of the Danube. His fleet suffered heavily during that winter. Spanish moves for a Turco-Spanish armistice were blocked by Khalīl later in spring. On Shaʿbān 6 1030/27 June 1620 he left for the Archipelago. Spanish hostilities provoked him to make a raid on Manfredonia (Shaʿbān 1030/July 1620), and he remained cruising till October. The next year Khalīl went back to the Black Sea in support of the campaign of ʿOthmān II. He had to keep off the Cossacks with a squadron of 40 galleys, returning in November 1621 to harbour.

In the spring of 1622, ʿOthmān II ordered his admiral to set out for the Archipelago, but in May the great revolt burst out [see ʿOTHMĀN II]. During the terror of the revolt, Khalīl remained aboard ship, lying off Seraglio Point. He refused to become Grand Vizier (9 Radjab 1031/20 May 1622), and stuck to this resolution of staying out of the troubles in Istanbul. In June he left with the fleet on its yearly cruise of 1622. In the beginning of 1623 he was still admiral, and supported the policy of peace with Poland. But the new Grand Vizier, Mere Ḥusayn, dismissed him as a rival to power and banished Khalīl to Malkara (Thrace) in April 1623 (thus Haga's letter dated 30 April 1623/recd. 27 June 1623; and Césy's of 14 April 1623, FF 16151 fol. 56; also Sagredo, 633 f.).

It was at this time that Khalīl's fate became linked with that of Abāẓā Meḥmed Pasha [*q.v.*], who, leading the *sipāhī*s, had revolted in Erzurum to avenge the murder of ʿOthmān II and to punish the rival corps of Janissaries for it. Abāẓā was a protégé, a spiritual son (as he was called by the Dutch ambassador Haga) of Khalīl. It was now either the hatred and fear of the Janissaries which kept him out of office, or the support of the *sipāhī*s which pushed him towards it, in the years following 1623. His influence on Abāẓā was much counted upon. Some time after his accession in 1623, Murād IV, or rather the Wālide Sulṭān Kösem [*q.v.*], reappointed Khalīl as a vizier (Sagredo, 638 f., calling him "la miglior testa della Turchia"). Khalīl remained for a long time out of higher office now, opposition to his becoming Grand Vizier being too strong.

On 2 Dec. 1626, Murād IV at last appointed Khalīl to be Grand Vizier once more. His orders were to bring Abāẓā Meḥmed Pasha into submission, the latter being still in revolt in Anatolia. Furthermore, Khalīl had to put an end to the war against Persia by a treaty. It was a hard journey to the winter quarters of the army. In August 1627, Khalīl opened negotiations with Abāẓā at Erzurum, but to no avail; furthermore he could not be subdued, being strongly entrenched in the fortress. Akhiskha [*q.v.*] was lost to the Persians, and the siege of Erzurum was given up by Khalīl in November because of the lack of siege artillery. He thus moved to Tokat for the winter, and the only result of his campaign was the restoring of order in Anatolia and Syria.

The failure on the Persian front, and the failure to negotiate with or force the submission of Abāẓā Meḥmed Pasha, caused Khalīl's dismissal on 1 Shaʿbān 1037/6 April 1628. Only then was it possible to find a *pasha* ambitious enough to take over. This was Khusraw Pasha, the Agha of the Janissaries, who was able to make Abāẓā surrender later in the same year. At the end of May 1628, Khalīl returned to Istanbul retaining his rank of vizier, with his prestige still great. In the next year on 7 August 1629/15 Dhu'l-Ḥidjdja 1038, Khalīl Pasha died.

In private life, Khalīl Pasha had links with various

mystical orders or groups, the Malāmī-Ḥamzawiyya, the Sha'bāniyya, the Khalwatīyya, and especially with the Djilwatīyya order and its *shaykh* Maḥmūd Hüdā'ī from Üsküdar (950-1038/1543-1628), a famous and influential mystic of the period and a religious poet. This holy man was his lifelong spiritual guide, and in the crisis periods of his existence gave him refuge in his *tekke* in Üsküdar, notably in 1028/1619, in 1032/1623 and in 1038/1628. Often Hüdā'ī gave his blessings to the outgoing Ottoman fleet under Khalīl. Curiously, the *shaykh* strongly disapproved of Khalīl's last appointment in 1626. This same mystical bond must have attached him to Abāzā Meḥmed.

Even Christians like the Dutch ambassador Haga were admitted into Khalīl's spiritual friendship with Hüda'ī. It was rare for an Ottoman of the early 17th century to entertain friendships with foreigners and Christians. Undoubtedly Khalīl used these friendships with diplomats like Salignac, Haga, Césy, the Venetian *baili* Nani and Valier, as sources of political information. These and other contacts like the dragomen in his service, the renegadoes of his household, and his Jewish physician, helped him to play the role in foreign policy of the Porte that he did.

On the whole, historians, Turkish and non-Turkish, have praised Khalīl Pasha as a wise and moderate statesman and a good admiral. His constant anti-Spanish policy brought him the favour of the Venetian, Dutch and French historians and contemporaries, as did his loyal fulfilling of the capitulatory obligations of the Porte. Great successes did not come to him, however, either in diplomacy or on the battlefield. His *türbe* still stands near the *tekke* and mausoleum of Hüdā'ī in Üsküdar.

KHALĪL PASHA KUT. [see enwer pasha].

KHALĪL SULṬĀN [see tīmūrids].

KHALĪLĪ (*ca.* 810-90/*ca.* 1407-85), Ottoman Turkish poet and mystic. Apparently a native of Diyārbakr, where he studied theology, he then moved to Iznik for further study, where he remained for the rest of his life, apart from one year in Istanbul (870/1465-6). He established a dervish convent or *khānaḳāh* in Iznik, becoming its *shaykh*, and died in this office.

At one point in his life, he formed a passionate attachment to a youth, causing him to abandon his studies and to pour out his longing in a long poem, the *Firḳat-nāma* or *Firāḳ-nāma* ("Book of separation"). This was completed in 866/1461-2, and was written in both epic and lyric metres, an alternation of *mathnawī* and *ghazal*. As with much Ṣūfī literature, the poem is capable of interpretation on two levels, that of earthly, homosexual passion, and that of divine love, the latter interpretation being that preferred by the Ottoman anthologists and biographers. The poet seems in the *Firḳat-nāma* to be under the influence of Nesīmī, and Khalīlī seems in general to have had an influence in turn on, e.g. Ḥabībī and Fuḍūlī. He also wrote a *Dīwān* of poetry, not apparently extant complete, though various of his *ghazal*s, *na't*s and *tardjī'*s are quoted in the later *tadhākir al-shu'arā'* or literary biography literature, such as, according to Bursalı Ṭāhir, Ḥādjdjī Kemāl's *Djāmi' al-naẓā'ir* (918/1512). Khalīlī thus forms an interesting and significant figure in 9th/15th century Ottoman literature.

KHĀLIṢA (pl. khāliṣadjāt) as a term signifying crown lands comes into general use in Persian sources in the middle ages. It is also applied to lesser rivers, *ḳanāt*s [*q.v.*] and wells belonging to the crown. In early Islamic times the term *ṣawāfī* [*q.v.*] is used to denote crown lands in general, while the terms *ḍiyā' al-khāṣṣa*, *ḍiyā' al-sulṭān* and *ḍiyā' al-khulafā'* are applied to the private estates of the caliph. Under the early semi-independent dynasties which arose in Persia on the fragmentation of the caliphate, the terms *khāṣṣ* and *khāṣṣa* are used of the personal possessions of the ruler with special reference to the revenues paid into his personal treasury from land and other sources. The funds controlled by the *dargāh* were known as *māl-i khāṣṣa* in contradistinction to *māl-i maṣāliḥ*, which were the funds controlled by the *dīwān* (cf. Rāwandī, *Rāḥat al-ṣudūr*, ed. Muhammad Iqbal, *GMS*, London, Leiden 1921, 382). From the reign of the Īlkhān Ghāzān Khān (694-703/1295-1304), the term *khāliṣa* is used as well as *khāṣṣ* and *khāṣṣa*, with which it may sometimes have been synonymous, though it appears to have been applied especially to crown property consisting of dead lands. Under the early Ṣafawids the terms *khāliṣa* and *khāṣṣa* are used apparently indiscriminately, but from the reign of Shāh 'Abbās I (995-1038/1587-1629) *khāliṣa* is applied to royal

estates while *khāṣṣa* is used of provinces and districts under the direct administration of the central government in contradistinction to provinces (*mamālik*) alienated from its direct control. With the fall of the Ṣafawids the distinction between *khāṣṣa* and *mamālik* disappears and under the Ḳādjārs the terms *khāliṣa* (pl. *khāliṣadjāt*) and *amlāk-i khāliṣa* are used to signify crown lands. The term *amlāk-i salṭanatī* is also used in contradistinction to *amlāk-i khāṣṣa* (private estates).

Throughout Islamic times crown lands, originating from conquest, confiscation from rebels and tax defaulters, gift, purchase and reclamation, formed an important category of land in Persia. The basic theory of crown lands goes back to the Ḳur'ānic prescription that one fifth of the booty (*fay'*, [*q.v.*]) was to be set aside for the Prophet Muḥammad while the remainder was to be divided among the combatants. Under the orthodox or rightly guided caliphs, the Rāshidūn, there was general agreement that the caliph might retain in the same way one fifth of the booty, and so far as this concerned land it became crown land, *ṣawāfī*. Special *dīwāns* were from time to time established to administer crown lands and their revenues, but in practice if often happened that little distinction was made between the revenue from the private estates of the caliph, and later of the temporal rulers, on the one hand and the revenue from land which belonged to the community or the state on the other.

With the spread of the Islamic conquests, modifications were made in the theory of what constituted *fay'* and its use. ʿUmar I and ʿAlī are both represented as resisting the division of *fay'* land in the Sawād (Ṭab., i, 2371-2, 2469), while the people of Kūfa sought to exclude their lands from *fay'*, alleging that *fay'* land was to be found only in the Sawād (Ṭab., i, 2375). Drained marshes and swamps, property belonging to fire-temples and post-houses, princes and their wives, and to those who fell in battle, and mills in Mesopotamia were exempted from *fay'* by most authorities. Such lands became *ṣawāfī al-istān* or crown land. Some authorities, however, maintained that the estates belonging to the former Persian royal house and the property of those who had fallen in battle were not so exempted (Ṭab., i, 2468; *Taxation in Islam*, iii, *Abū Yūsuf's Kitāb al-kharāj*, ed. A. Ben Shemesh, Leiden, London 1969, 75; Balādhurī, *Futūḥ*, 272-3; *Taxation in Islam*, i, *Yaḥyā b. Ādam's Kitāb al-kharāj*, Leiden 1967, 53-4; N. P. Aghnides, *Mohammedan theories of finance*, New York-London 1916, 508; F. Løkkegaard, *Islamic taxation in the classic period*, Copenhagen 1950, 50, 224; M. van Berchem, *La propriété territoriale et l'impôt foncier*, Geneva, 1886, 41-2). It is not to be assumed, however, that all former Sasanian crown land in fact became Muslim crown land. Some estates, at the time of the conquests, were usurped by local *dahāḳīn* (Løkkegaard, 111). In the reign of Muʿāwiya there was an increase in crown land (cf. M. A. Shaban, *Islamic History, A.D. 600-750 (A.H. 132)*, Cambridge 1971, 89). Grants of crown land in Lower ʿIrāḳ were made by him in the form of *ḳaṭīʿā* [*q.v.*] to his relatives and supporters. Resentment at this was one of the factors in the revolt of Ibn Ashʿath against Ḥadjdjādj in 82/701. At the time of the battle of Dayr al-Djamādjim the register of *ṣawāfī* lands was burnt and some crown land was temporarily usurped. ʿAbd al-Malik and his son Walīd I further extended the principle of *ṣawāfī* in order to appropriate lands reclaimed from desert, marshes or sea, and granted much of it to members of their own family, though some of these grants were later annulled by ʿUmar II (Shaban, *op. cit.*, 124, 132). In the reign of Walīd I more land was reclaimed from the swamps of Lower ʿIrāḳ by Maslama b. ʿAbd al-Malik and became his *ḳaṭīʿa* and the owners of many of the estates (*ḍiyāʿ*) along the two Sīb canals entrusted these to him for his protection. These eventually became the estates of the caliph when the heirs of Dāwūd b. ʿAlī b.ʿAbdallāh b. al-ʿAbbās, to whom the Sībayn estates were granted after the fall of the Umayyads, sold them (Balādhurī, 294). Reclaimed and other public lands and endowments in the Ḥidjāz were also assimilated in the reign of Muʿāwiya to *ṣawāfī* land (W. Schmucker, *Untersuchungen zu einigen wichtigen bodenrechtlichen Konsequenzen der Islamischen Eroberungsbewegung*, Bonn 1972, 142).

The measures taken to deal with the conquered territories were often of an *ad hoc* nature. There were wide divergences in practice, and many controversies arose concerning their extent and their administration and the right of the caliph to dispose of them. The main question at issue was whether they were the joint possession of the Muslim community, held by it in common and administered by the consent of its leaders, or were held by the *imām* for the community and were at his disposal (see further Schmucker, *op. cit.*). The jurists in their expositions were concerned primarily with the practical consequences of the ownership of land rather than its legal status. They attempted to regularise and unify the various practices which had grown up during the conquests, basing their classification of the land upon their varying interpretations of separate incidents in the conquests, in particular the conquest of the Ṣawād. Extensive Sasanian crown lands had existed in this district, and under the later Sasanian rulers grants from these had been made to members of the royal family. Registers of Sasanian crown lands were apparently kept, though it was not until the reign of Muʿāwiya that lists of the crown lands which had been in the possession of the Sasanian ruler and the royal family are alleged to have been obtained for Muʿāwiya from Ḥulwān (Yaʿḳūbī, *Ta'rīkh*, ed. M. Th. Houtsma, Leiden 1883, ii, 2581; Balādhurī, 290, 295).

Social and political conditions in Khurāsān and Transoxania at the time of the conquest differed from ʿIrāḳ and the neighbourhood, as also did the circumstances of the conquest, and did not affect the evolution of the theory of crown lands. There was no development of crown lands there comparable to what happened in ʿIrāḳ and the neighbourhood.

There appears to have been a great increase in crown lands under the ʿAbbāsids (P. Schwarz, *Iran im Mittelalter, nach den arabischen Geographen*, Leipzig, 1929-36, vii, 876). In some cases, the owners of land in the conquered territories transferred their property into crown lands, sharing the proceeds with the caliph in order to obtain protection from lawless elements or unjust tax-collectors (cf. Balādhurī, 310-11; Løkkegaard, 68-70; Ḥasan b. Muḥammad b. Ḥasan al-Ḳummī, *Tārīkh-i Ḳumm*, tr. into Persian by Ḥasan b. ʿAlī b. Ḥasan b. ʿAbd al-Malik, ed. Sayyid Djalāl al-Dīn Tehrānī, Tehran 1934, 187). The revenues from crown lands were paid into the *bayt māl al-khaṣṣa*, a distinction being made, in general, between what belonged to the caliph and the state revenue. It was, however, by no means without precedent for money from the *bayt māl al-khāṣṣa* to be used to defray expenses made for the benefit of the whole realm (Løkkegaard, 51-2, 157. Cf. also D. Sourdel, *Le vizirat ʿabbāside*, Damascus 1960, on the *dīwān al-ḍiyāʿ*, ii, 591-2).

The classification of the land by the jurists was affected both by the concepts of communal ownership [see ḤIMĀʾ] prevalent among the early Muslims and the theories of the functions and position of the *imām*. Land conquered by force (*ʿanwatan*) and abandoned by its inhabitants, who had been killed, captured or had fled, was, according to al-Shāfiʿī, treated as booty and divided among the conquerors, unless the latter renounced it, in which case it was immobilised for the public good. Mālik on the other hand considered that such land belonged to the community, while Abū Ḥanīfa held that the *imām* could divide it among the captors, who would pay *ʿushr* on the land so divided, return it to its original owners and levy *kharādj* on them, or immobilise it for the benefit of the Muslim community. Since land conquered by force constituted booty, the caliph had the right to one fifth of it as *ṣawāfī*. Land acquired peacefully because its owners had abandoned it formed a second category. This paid *kharādj*, which represented a *dominium* paid by whoever exploited it, while a third category was constituted by land coming into Muslim ownership by virtue of a treaty, such land remaining in the possession of its original owners on condition they paid *kharādj*.

Crown land, deriving in part from lands conquered by force and in part from the former crown lands of the Persian kings, was thus distinguished from both land belonging to the community and administered by the *imām* and land occupied by its original owners, the ownership of which was vested in the Muslim community. Land belonging to the community could not be sold, though in some cases, possibly irregularly, hereditary grants on such land were made to Muslims. *Ḳaṭīʿa* grants, on the other hand, could be made from crown land, which, from early times, was also granted to individuals as *iḳṭāʿ al-tamlīk* (see further Løkkegaard, 58 ff., and IḲṬĀʿ). In practice, there was a general tendency for the land belonging to the community to become assimilated to crown land and for both to be looked upon as the property of the *imām* (cf. Wellhausen, *Das arabische Reich und sein Sturz*, Berlin 1927, 171-2). Cases of the usurpation of both were common. (See further A. K. S. Lambton, *Landlord and Peasant in Persia*, Oxford 1953, 17 ff.)

The Shīʿī theory of crown land, formulated rather later than the Sunnī, differs only in matters of detail. Land acquired in any way other than war, whether abandoned by its owners or voluntarily handed over to the *imām*, or land which had ceased to be cultivated by its owners, belonged to the *imām*. He could dispose of it to individuals to cultivate, the latter becoming responsible for the tax on the land. Land which was untenanted and without owners, such as beaches and shores of the sea, and the summits of mountains, also belonged to the *imām*. Similarly, after the conquest of enemy territory all the effects, moveable and immoveable, of the conquered ruler, provided such property had not been seized formerly from a Muslim, ally or tributary, became the property of the *imām* (Muḥammad b. al-Ḥasan al-Ṭūṣī, *al-Nihāya fī mudjarrad al-fiḳh wa'l-fatāwā*, ed. Sayyid Muḥammad Bāḳir Sabzawārī, Tehran 1954, 130-1, 133-4; Nadjm al-Dīn Abu'l Ḳāsim Djaʿfar b. ʿAlī Yaḥya al-Muḥaḳḳiḳ al-Awwal, *Sharāʾiʿ al-Islām fī masāʾil al-ḥilāl wa'l ḥarām* (*Droit musulman*), tr. A. Querry, Paris 1871-2, i, 179-80, tr. into Persian with the title *Mukhtaṣar al-nāfiʿ*, ed. Muḥammad Taḳī Dānishpazhūh, Tehran 1964, 145). There was, however, some difference of opinions as to the disposal of the "fifth" of the booty during the concealment of the *imām* (*al-Nihāya*, 133-4). Dead land or abandoned land belonged to the *imām* and no one could take possession of it except with his permission. He could take possession of it himself, give it away or sell it, though in the case of dead land it was preferable that he should give it to whoever had reclaimed it; he could also buy such land (*al-Nihāya*, 131). All land conquered by force became the property of the Muslim community as a whole and not only of the combatants. It could not be sold, constituted into *waḳf* or given away. Its administration belonged to the *imām* alone. Its proceeds were to be used for the public good (*maṣāliḥ*) (*al-Nihāya*, 130-1; *Sharāʾiʿ*, i, 337; *Mukhtaṣar al-nāfiʿ*, 144-5).

In view of the special position of the law in the life of the Muslim community, no independent theory concerning the legal status of the land or its ultimate ownership was to be expected. The formulation of the jurists, whether Sunnī or Shīʿī, based on their interpretation of the conquests, remained the standard theory, though practice diverged even more widely from theory than in early Islamic times. Just as confusion had existed in early times between *ṣawāfī* and *fayʾ* land, and lack of clarity as to what constituted ownership, to what extent the ruler enjoyed rights of disposal, and to whom and on what terms rights of use might be given, so in later times there was often confusion between the land held by the ruler as the head of the state (*dīwānī* land) and crown land, though the nature of his ownership of the one clearly differed from that of the other. The conception of the community as the owner of the land disappeared and was, as it were, swallowed up in the conception of the ruler as the owner of *dīwānī* land. But whereas under Islamic law the ownership of land held by the community could not be disposed of, the ruler was able to make permanent, temporary and life grants on *dīwānī* land. It may, perhaps, have been argued that such grants were merely of a right of use, but *dīwānī* land was also sometimes constituted into *waḳf*, which implies full rights of disposal. Crown land, as in the case of the earlier *ṣawāfī*, was not all of the same kind: some was acquired by the ruler in his "official" capacity, such as that which had belonged to former rulers, and some by purchase or gift. The latter constituted his "personal" estates. In either case, however, he appears to have enjoyed full rights of disposal over the land. So far as the ruler's "personal" estates were transmitted by inheritance or gift to minor members of his family and not to the suceeding sultan, they became ordinary private property (*milk*). Permanent, temporary and life grants were at all times made from crown land, as from *dīwānī* land, and crown estates were also frequently constituted into a charitable or personal *waḳf*. The fact that crown land could be thus disposed of makes it extremely difficult to estimate its extent at any given moment. Moreover, the registers in which crown land was entered were often destroyed in the upheavals and disturbances which accompanied the transfer of power from one dynasty to another.

When the caliphate fragmented in the 3rd and 4th centuries, the local rulers also acquired by conquest, confiscation, purchase, or gift lands which they converted into crown lands. A similar process took place in the various empires and kingdoms which arose in Persia after the fall of the caliphate. During the reassertion of the temporal power of the caliphate by al-Nāṣir billāh (575-622/1180-1225), his wazir, Mu'ayyid al-Dīn (d. 592/1195-6), appears to have attempted to assert the caliph's ownership to all land. He called in title-deeds (*ḳabālahā*) in Khūzistān and

said "The land belongs to the Commander of the Faithful" (Rāwandī, *Rāḥat al-ṣudūr*, 381-2, Bartold, *Turkestan*, 348).

According to Gardīzī, ʿAmr b. Layth, the Ṣaffārid (265-87/878-900), had four treasuries. One was for his weapons and the other three for funds obtained from various sources and expended on different purposes. One of these was for the monies (*māl-i khāṣṣ*) deriving from grain and estates (*ḍiyāʿ*), which were expended on his personal expenses (*nafaḳāt wa maṭbakh wa mānand-i ān*) (*Zayn al-akhbār*, ed. Muḥammad Nāẓim, Berlin 1928, 15; Bartold, *Turkestan*, 221). One of the nine government offices of the Sāmānids mentioned by Narshakhī in the *Tārīkh-i Bukhārā* is the *dīwān-i mamlika-i khāṣṣ*, which was presumably concerned either with the ruler's personal estates or with lands whose revenue was paid directly to him (transl. into Persian by Abū Naṣr Aḥmad b. Muḥammad b. Naṣr al-Ḳubāvī, adapted by Muḥammad b. Zufar b. ʿUmar, ed. Mudarris Riḍavī, Tehran 1938-9, 31). Narshakhī also mentions the purchase of estates by Ismāʿīl Sāmānī (*ibid.*, 33-5), and an occasion when crown lands (*ḍiyāʿ-i sulṭān*) were exempted from *kharādj* after a flood (*ibid.*, 40). The Ghaznavids also had extensive royal estates (*ḍiyāʿ-i ghaznī-i khāṣṣ*). These were under a special official, who appears to have held an important position (cf. Abu'l Faḍl Muḥammad b. Ḥusayn Bayhaḳī, *Tārīkh-i Bayhaḳī*, ed. ʿAlī Akbar Fayyāḍ, Mashhad 1971, 156). In the western provinces under the Būyids, particularly during the reign of Muʿizz al-Dawla, (320-56/932-67), there was apparently considerable confusion and disorder in the field of land tenure. Former crown land, consisting of the estates held by the caliph, together with most of the Sawād, was assigned to his officers, household and military followers (Ibn Miskawaih, in *The eclipse of the ʿAbbāsid caliphate*, ed. H. F. Amedroz and D. S. Margoliouth, Oxford 1921, ii, 96; Ibn al-Athīr, viii, 342). Expropriation was widespread, but it is not clear whether expropriated estates became crown land or state land, though in all probability no clear distinction was made between the two. The *dīwān al-khāṣṣa* in Baghdād is mentioned by Hilāl al-Ṣābiʾ in 392/1002 (H. Busse, *Chalif und Grosskönig*, Beirut 1969, 314-15). In Fārs, according to Ibn Zarkūb, most of the land became *dīwānī* land (*Shīrāz-nāma*, ed. Ismāʿīl Wāʿiẓ Djavādī, Tehran 1971-2, 45). ʿAḍud al-Dawla (who ruled in Fārs from 338/949 and over ʿIrāḳ also from 367/977 to 372/982) probably owned many personal estates, some of which he made into *waḳf* for the ʿAḍudī hospital in Shīrāz (*ibid.*, 51).

The Saldjūḳ period was dominated in the field of land tenure and land administration by the spread of the *iḳṭāʿ* [*q.v.*] or land assignment (see further *Landlord and Peasant*, 60 ff.). The territories which fell to the Saldjūḳs were either assigned by the sultan as *iḳṭāʿ*s to his family and followers or were administered directly by the state. Niẓām al-Mulk appears to have regarded the sultan as the sole owner of the soil (*Siyāsat-nāma*, ed. Schefer, Paris 1891-3, Persian text, 28; *Landlord and Peasant*, 61), but crown land, as such, appears to have had small importance. There is little evidence to show that former crown land, so far as it existed, became Saldjūḳ crown land, though isolated crown properties may have survived. For example, the estates of Ighārayn, which ʿAlī b. ʿIsā had resumed many years earlier (Løkkegaard, 62), apparently became the private estates of the Saldjūḳ sultans (Yāḳūt, *Muʿdjam al-buldān*, ed. Wüstenfeld, Leipzig 1866-73, i, 420), while Ibn Balkhī mentions that the Rāhibān *kārīz* (near Kāzirūn) belonged to the ruler (*īn kārīz bi ḥukm-i dīwān-i pādishāh bāshad*) (*Fārs-nāma*, ed. G. Le Strange and R. A. Nicholson, *GMS*, Leiden 1921, 145-6). Alp Arslān appears to have held a number of private estates, some of which had been newly created (Niẓām al-Mulk, *Naṣāʾiḥ-nāma*, ms. in my possession, f. 30b). Mention is also made of estates held by the sultan (*khāṣṣ al-sulṭān*) in Kūfa in the reign of Ṭughril Beg (Ibn al-Athīr, x, 8), which may, however, have been the private estates of the caliphs surviving from earlier times. There are also references to property belonging to the *dīwān-i khāṣṣ* of Sandjar in Basṭām, Marv and Ray (*ʿAṭabat al-kataba*, ed. Muḥammad Ḳazwīnī and ʿAbbās Iḳbāl, Tehran 1950, 56, 67, 72), to peasants on his estates (*barzigarān-i asbāb-i khāṣṣ*) in Marv (*ibid.*, 67) and to the *dīwān-i ʿamal va asbāb-i khāṣṣ* in Ray (*ibid.*, 73).

The rulers of the Saldjūḳ succession states also acquired, like others before them, crown land. Part of Fārs, for example, was held by the Atabegs (543-686/1148-1287), as their personal estates (*amlāk*) (*Shīrāz-nāma*, 94).

The Mongol invasion, in contradistinction to the Saldjūḳ, brought about a large increase in crown lands. Much land, both at the time of the conquest and later, became dead or unclaimed land and this became crown land. Many estates also were confiscated to the crown, though Ḥāfiẓ Abrū states that when Rashīd al-Dīn Faḍl Allāh was executed in 718/1318-19 his estates were taken by the *dīwān* (*Dhayl-i djāmiʿ-i tawārīkh-i Rashīdī*, ed. Khānbābā Bayānī, Tehran 1971-2, 129). The terms *dālāy* (*dala*) and *īndjū* (originally applied to the subjects of the Great Khan and those whom he had granted to his relatives and others respectively) were at first applied to land which belonged immediately to the ruler and to land granted as apanages to his relatives (cf. Doerfer, *Türkische und mongolische elemente im Neupersischen*, Wiesbaden 1963, i, 325). The term *dālāy* rapidly went out of use, but the term *īndjū* continued to be used throughout the Ilkhān period to designate land primarily, though not exclusively, granted to the ruler's family and supporters (cf. *Tārīkh-i mubārak-i Ghāzānī*, ed. K. Jahn, *GMS*, Leiden 1940, 19-20). Gradually the concept of *īndjū* land became assimilated to existing concepts of crown land and came to signify land over which the ruler had full rights of disposal and which he granted on a hereditary title to his family and others. Whether the grantees then had full rights of disposal themselves is not clear. Much of Fārs became *īndjū*. When Aḥmad Tegudar reappointed Abish bint Saʿd over Fārs (*ca.* 682/1283-4), her wazir Niẓām al-Dīn urged Aḥmad to issue a *yirlīgh* declaring the former *khāliṣa* of the Atabegs, much of which had been resumed by the *dīwān*, to be *īndjū* and to share its proceeds with the Atabeg. A *yirlīgh* was duly issued and on this pretext Niẓām al-Dīn converted much land in Fārs into *īndjū*, although it had not, in fact, formerly been *khāliṣa* (Waṣṣāf, *Tārīkh-i Waṣṣāf*, lith. 1852-3, 211; *Shīrāz-nāma*, 94). Among the estates confiscated by the Mongols were those of the Ṭabāṭabāʾī *sayyids*. Eventually some of these estates were re-granted to Sayyid Ḳuṭb al-Dīn Aḥmad and the Ṭabāṭabāʾī *sayyids* of Fārs were thenceforward known as the Īndjū *sayyids* (Fasāʾī, *Fārs-nāma-i Nāṣirī*, lith., Tehran 1894, ii, 42). Rashīd al-Dīn states that Ghāzān Khān assigned *īndjū* lands to each horde to provide for its upkeep and that of the Mongol princesses. These lands were separated from the *dīwān* and given into the possession of the hordes. He made his own *īndjū* lands into *waḳf* for his sons by his chief wife. At the time of

the composition of the *Tārīkh-i mubārak-i Ghāzānī* all *indjū* lands were alleged to have been in the possession of the deputies (*nuwwāb*) of Ghāzān Khān's wives. Drafts were made on them when money was required for the army (*Tārīkh-mubārak-i Ghāzānī*, 330-1). In 703/1303-4 when Ghāzān decided to give *iḳṭa*ʿs to the soldiery, these were granted on *indjū*, *dālāy* and dead land (*ibid.*, 305; *Landlord and Peasant*, 89-90).

The Persian ministers of the Īlkhāns were, no doubt, largely responsible for the assimilation of the concept of *dālāy* and *indjū* respectively to the concept of state land and crown land which existed in the conquered territories. Among them was Naṣīr al-Dīn Ṭūsī, who discusses crown land in a brief essay on finance. He is clearly influenced in his exposition by the Islamic conception of *fay*ʾ. He states that one fifth of the booty taken from rebels and others belonged to the ruler and that land, water, quadrupeds, and wealth found in a conquered territory were to be reckoned as royal property. He also claims that "what comes from those who have passed away, and what comes to the king from his fathers" became the *khāṣṣa* of the king and similarly that what came from the kingdom of former kings was royal property. Approaching the problem from the point of view of finance rather than the legal status of the land, he makes the traditional distinction between the king's revenue from his private property (*az khāṣṣa-i ū*) and that destined for the needs of the kingdom (*māl-i maṣāliḥ-i pādishāhī*). The former came from the reclamation or improvement of places which had been in a ruined or bad condition (after the right of the owners had been redeemed) and landed estates (*milk-hā*) which had been bought and from various other sources (*Madjmūʿa-i rasāʾil*, Proc. of the University of Tehran, No. 308 (1956), 32. See also M. Minovi and V. Minorsky, *Naṣīr al-Dīn Ṭūsī on Finance*, in *BSOAS*, x/3 (1942), 51 ff.).

As in the case of the earlier *ṣawāfī* there appear to have been different categories of crown land. At the time of Ghāzān Khān, in addition to *indjū* land and *amlāk-i khāṣṣa* (royal estates), mention is also made of *ḍiyāʿ-i ghāzānī* (the personal estates of Ghāzān Khān) (cf. Rashīd al-Dīn Faḍl Allāh, *Mukātabāt-i Rashīdī*, ed. Muḥammad Shafīʿ, Lahore 1945, 224-5). Dead land also constituted a special category and was called *khāliṣa*. Its extent was very considerable, and Ghāzān Khān, in his efforts to revive agriculture and to restore prosperity, established a special *dīwān*, the *dīwān-i khāliṣa*, for the registration and classification of dead lands.

Reclamation, as in Islamic law, carried with it rights of ownership and sale (*Tārīkh-i mubārak-i Ghāzānī*, 353-4, 356. Cf. also *ibid.*, 204, and *Landlord and Peasant*, 91). According to Waṣṣāf, in or about 698/1298-9, 20,000 *faddān*s of land, including 3,000 ploughlands (*djuft*) in Baghdād and the neighbourhood, and 3,000 in Shīrāz were transferred to the *dīwān-i khāliṣa*. The latter supplied seed, draught animals, and implements to those who undertook their cultivation. In return so much per ploughland was to be paid annually to the *dīwān-i khāliṣa*. The contracts for cultivation were apparently for a limited period only and on the expiry of this period the seed, draught animals and implements, or a sum of money in lieu thereof, were to be returned to the *dīwān-i khāliṣa* (*Tārīkh-i Waṣṣāf*, 349). What success attended Ghāzān's efforts to reclaim *khāliṣa* and how long the *dīwān-i khāliṣa* existed as a special *dīwān* is not clear.

When the Īlkhān empire broke up into a number of succession states, their rulers also became possessed of crown land. For example, the Muẓaffarids had estates in Kirmān (Muʿīn al-Dīn Naṭanzī, *Muntakhab al-tawārīkh-i Muʿīnī*, ed. J. Aubin, Tehran 1957, 181). Ḥāfiẓ Abrū mentions the *amlāk-i khāṣṣa* of Amīr Maḥmūd Shāh Īndjū (*Dhayl-i djāmiʿ al-tawārīkh-i Rashīdī*, 187) and Ibn Zarkūb makes an interesting statement to the effect that when Maḥmūd Shāh became independent in Fārs "*indjū* and *dala* became one" (*Shīrāz-nāma*, 101). Between the decline of the Īlkhān empire and the rise of the Ṣafawids in the 16th century there does not appear to have been any major spread of crown lands such as occurred under the Īlkhāns, though further research may cause this statement to be modified.

Under the Ṣafawids the general distinction between *khāṣṣa* or crown land and *dīwānī* or state land, which was now know as *mamālik* (provinces), continued to exist, but was not so much a question of the ownership and the legal status of the land as of the control and expenditure of its revenue. All *dīwānī* (*mamālik*) land was, as Chardin pointed out (*Voyages du Chevalier Chardin en Perse, et autres lieux de l'Orient*, ed. L. Langlès, Paris 1811, v, 382), potentially *khāṣṣa*, since the shah could, whenever he wished, declare it so. In a sense, therefore, there was in theory no difference between his ultimate ownership of *dīwānī* (*mamālik*) land and *khāṣṣa* land. Under Shāh ʿAbbās (985-1038/1587-1629), if not earlier, it appears to have been assumed that all property was owned by the shah, and that only its usufruct, not its outright possession, could be granted (cf. *A chronicle of the Carmelites in Persia*, London 1939, ii, 1032).

The separation between *khāṣṣa* and *mamālik* districts was not absolute, and it appears to have been possible for *dīwān* drafts to have been drawn on *khāṣṣa* land and for transfers to have been made between the *khāṣṣa* and *mamālik* treasuries. A decree given by Shāh ʿAbbās for the gift of land along the Zāyanda-Rūd of Iṣfahān to the Armenians of Djūlāh in 1028/1619 suggests that no very clear distinction was made at that time between crown land and state land. It states that the land to be given to the Armenians was "our royal property (*milk-i nuwwāb-i humāyūn-i mā*)", and instructs the *mustawfī*s of the *dīwān* to delete the land from what belonged to the *dīwān* (*milkiyyat-i dīwān*) (Hunarfar, *Gandjīna-i āthār-i tārīkh-i Iṣfahān*, Iṣfahān 1966-7, 505-6).

Within the general category of crown land there was, as in earlier times, a confusion between land directly administered under the crown and the personal estates of the ruler. Prior to the reign of Shāh ʿAbbās, the terms *khāṣṣa* and *khāliṣa* appear to have been applied indiscriminately to provinces and districts which were under the direct administration of the state in contradistinction to provinces which were alienated as *tuyūl* from its direct control. Broadly speaking, *khāṣṣa* appears to have been applied to large districts or provinces, whereas *khāliṣa* was more often applied to smaller districts reserved to the *khāṣṣa* administration within provinces which were granted as *tuyūl* (K. Rohrborn, *Provinzen und Zentralgewalt Persiens im 16. und 17. Jahrhundert*, Berlin 1966, 131). Shāh Ṭahmāsp (930-84/1524-76) is alleged to have remitted the *kharādj* for eight years from districts which were *khāliṣa* (Ḥaydar b. ʿAlī Rāzī, *Tārīkh-i Ḥaydarī*, quoted by Rohrborn, 132). On the death of Ṭahmāsp, Iskandar Munshī states that Murshid Ḳulī Khān appropriated most of the *khāṣṣa* estates (*amlāk-i khāṣṣa*) which had belonged first to Ṭahmāsp, and then to Sulṭān Ḥamza Mīrzā and Abū Ṭālib Mīrzā (*Tārīkh-i ʿĀla-*

mārā-yi ʿAbbāsī, Tehran, 1951-2, 381). Other members of the Ṣafawid family also held private estates in different parts of the empire. Zaynab Begum, Ṭahmāsp's daughter, held estates (*amlāk wa raḳabāt*) in Yazd and the neighbourhood (Muḥammad Mufīd, *Djāmiʿ-i Mufīdī*, ed. Īradj Afshār, Tehran 1951-2, iii, 262, 701). Shāh ʿAbbās also possessed extensive personal estates and in 1015/1606-7 or 1016/1607-8 he constituted all of them (*djamīʿ-i amlāk wa raḳabāt-i muktasab-i khāṣṣa-i khʷud*) into *waḳf* for the twelve *imāms*, Muḥammad and Fāṭima (*ʿĀlamārā*, ii, 760-1).

The administration of *khāṣṣa* land was under wazirs appointed by the central government, each *khāṣṣa* district or province having its own wazir. In a farman dated 975/1567 entrusting the wazirate of Gīlān to the wazir of Khurāsān, the latter was instructed to make, with the knowledge and approval of the minor wazirs of Gīlān, payment orders on the taxes and monies (*māl u djihāt wa wudjūhāt*) of each district (*maḥall*) for the wages (*mawādjib*) allotted by royal decrees to the great *amīrs*. He was to take possession on behalf of the *khāṣṣa* administration, of whatever remained (B.M. Or. 4678, ii, 117b, quoted by Rohrborn, 108). In general, it seems that local administration and defence was the first charge on the revenue of the *khāṣṣa* districts. If the revenue of a given district was insufficient for these purposes, it was possible for an additional draft on *khāṣṣa* revenue from some other source to be made available to make good the deficit (cf. Rohrborn, 109).

From the reign of Shāh ʿAbbās onwards a distinction was made between *khāliṣa* and *khāṣṣa*. Muḥammad Mufīd, for example, mentions the *khāliṣadjāt* of the *khāṣṣa* administration (*Djāmiʿ-i Mufīdī*, iii, 173). He also states that a certain Mawlānā Muḥammad Ṣādiḳ (d. 1063/1652-3) was entrusted by the shah with the annual distribution of 1,000 *tūmāns* in cash and kind from the *khāliṣa* to the deserving of Yazd (*ibid.*, iii, 308-9). Rohrborn considers that the distinction between *khāliṣa* and *khāṣṣa* became clearly drawn after Shāh ʿAbbās had decided to pay the standing army and the provincial militia by assignments made on *khāṣṣa* land (*ʿĀlamārā*, ii, 924; Rohrborn 110, 134. Cf. also Chardin, *Voyages*, v, 250-2, 279, 298-9, 303-4, 380-2). Rohrborn gives lists of the *khāṣṣa* provinces up to 995/1587, the year of Shāh ʿAbbās' accession, and after (177-8). In either case the outlying provinces tended to be *mamālik* and the central provinces *khāṣṣa*. In the second period the number of *khāṣṣa* provinces is greater. The most important and richest of them was Iṣfahān, which became the capital under Shāh ʿAbbās. Defence of the *khāṣṣa* provinces was the concern, not of the provincial governor or *tuyūldār*, as it was in the *mamālik*, but of the standing army and local militia (Rohrborn, 118-22). Under Shāh Ṣafī (1038-52/1629-42) Fārs became *khāṣṣa* but, contrary to Chardin's assertion (v, 279), he did not initiate the policy of resuming *mamālik* into *khāṣṣa*. This policy reached its height under Shāh ʿAbbās II (1052-77/1642-67), who, according to Chardin, resumed Ḳazvīn, Gīlān, Māzandarān, Yazd, Kirmān, Khurāsān and Ādharbāydjān (v, 251). The resumption of a province was, however, sometimes only temporary. After the reign of Shāh ʿAbbās II the tendency was for the *mamālik* to expand at the expense of the *khāṣṣa* and at the same time for the distinction between them to become, perhaps, less sharp.

Chardin states that various types of grant were made on *khāṣṣa* land. These were (i) grants in lieu of salary, such grants being sometimes attached in perpetuity to an office, (ii) grants to officers and servants of the royal household and for the pay of the standing army, and (iii) temporary and life grants, which were sometimes continued from father to son over several generations. What remained after the allocation of such grants was administered under the wazirs for the benefit of the *khāṣṣa* administration. So far as crown estates were not rented they were worked on a crop-sharing system, which probably differed little from that in operation in privately owned property. The main difference was that both the *māl* (the taxes) and the *mināl* (what remained after the payment of taxes) belonged to the crown. Kaempfer gives an account of the crop-sharing system prevailing in *khāṣṣa* land round Iṣfahān in or about 1684 (*Amoenitatum exoticarium politico-physico-medicarum*, fasc. v, Lemgo 1712, 91; *Landlord and Peasant*, 127). Du Mans, writing in 1660, states that most of the land was crown land, "*moulki chahy*", as opposed to privately owned (*arbabi*) land. He gives an unfavourable account of the administration of crown land, alleging, like Chardin, extortion by the wazirs and comptrollers (*Estat de la Perse en l'an 1660*, Paris 1890, 227, Chardin, v, 250-4, 276-7, 279). Sanson, on the other hand, alleges that the whole of Persia was the property of the shah, that all estates were held by his grace and that he could, when he wished, resume them (*Voyage ou relation de l'état présent du royaume de Perse*, Paris 1695, 96 ff.). This, however, would seem to be an exaggeration. It is possible that both Sanson and Chardin, whose evidence on the subject of land tenure is not wholly consistent (cf. Rohrborn, 113), in their interpretation of the legal status of the land, were influenced by their knowledge of western European feudal tenure.

Two administrative handbooks, the *Tadhkirat al-mulūk* (ed. V. Minorsky, *GMS*, London and Leiden 1943) and the *Dastūr al-mulūk* (Muḥammad Taḳī Dānishpazhūh, *Dastūr al-mulūk-i Mīrzā Rafīʿā*, in *Rev. de la Faculté des Lettres et des Sciences humaines*, University of Tehran, xv/5-6 and xvi/1-6), belonging to the late Ṣafawid period and possibly going back to a common original, make a clear distinction between the *khāṣṣa* administration and the *mamālik* administration. The duties of the *mustawfī* of the *sarkār-i khāṣṣa* give an indication of some of the matters (in addition to those pertaining to the royal household) which came under the *khāṣṣa* administration. These were not confined to the administration of crown land. The main duty of the *mustawfī* was to keep the records and files of the taxes and monies (*māl u djihāt wa wudjūhāt*) from the *maḥāll* of Iṣfahān, Gīlānāt, Māzandarān, Kāshān, Bandar [? ʿAbbās], and Yazd, and certain monies (*wudjūhāt*) from other provinces (*sāʾir-i wilāyāt*), and monies from the *djizya* of the Armenians, the sale of tobacco, road tolls (*rāhdārī*), *ad hoc* levies on sheep and goats in Iṣfahān, customs at the ports (*wudjūh-i ʿushr wa khurūdj-i banādir*), the mints, *pīshkash* from *kalāntars* [*q.v.*], fees (*dushulluk wa pīshkashhā-yi muḳarrarī*), and other monies according to the assessments made by the *khāṣṣa* administration (? *sāʾir-i wudjūhāt-i djamʿī-i sarkār-i khāṣṣa*), and to clear the accounts of the taxpayers with that administration (*Dastūr al-mulūk*, xvi/3, 312). The *khāṣṣa* administration was not, however, wholly independent from the *mamālik* administration, since the *mustawfī al-mamālik* could, it seems, make drafts on *khāṣṣa* revenue (cf. *Tadhkirat al-mulūk*, ff. 28a-b, *Dastūr al-mulūk*, xvi/3, 299). Further, the grand wazir exercised supervision over both administrations, and documents for the appointment of scribes to the royal secretariat and private house-

hold (*daftarkhāna-i humāyūn wa khāṣṣa*) and of workers in the royal workshops (*buyūtāt*) were issued by the grand wazir with the approval of the *mustawfī al-mamālik*, the *nāẓir-i buyūtāt*, and the *mustawfī-i khāṣṣa*. Applications for remissions of taxation from taxpayers in *khāṣṣa* districts also had to be sanctioned by the grand wazir (*Tadhkirat al-mulūk*, f. 10a).

One of the main tasks of the *khāṣṣa* administration was to administer the land round Iṣfahān, known as the *maḥāll*. This consisted of *khāliṣa*, *awḳāf*, and *intiḳālī* land. The first was under the wazir of the capital. His duty was to arrange for the cultivation of *khāliṣa* land either by concluding tenancies or crop-sharing agreements with the peasants, to ensure that no place lacked peasants or what was needed for its cultivation, to see to the repair of *ḳanāt*s, and buildings (shops, caravansarais, baths, etc.), to protect the peasants from oppression from whatever quarter, to investigate agricultural disputes, to collect the revenue and produce of the *khāliṣa* districts, and, after the deduction of his own salary and the expenses of the administration, to see that what remained was expended upon its proper purposes (*Dastūr al-mulūk*, xvi/3, 319-20; *Tadhkirat al-mulūk*, ff. 72a-74a; *Landlord and Peasant*, 119). The second, *awḳāf*, came under the wazir of the *fayḍ āthār* department, whose duty was to see that the land concerned was cultivated according to its capacity, to provide whatever was needed for its cultivation, to see that gardens, buildings, mills, and *ḳanāt*s were in good repair (*Dastūr al-mulūk*, xvi/3, 321; *Tadhkirat al-mulūk*, ff. 71a-72a; *Landlord and Peasant*, 121). The third, which came under the wazir of the *intiḳālī* department, possibly consisted of land newly transferred from the *dīwān* to the *khāṣṣa* administration (cf. *Dastūr al-mulūk*, xvi/5, 540). The duties of the wazir of the *sarkār-i intiḳālī* were similar to those of the wazir of the capital (*Tadhkirat al-mulūk*, ff. 82a-b; *Landlord and Peasant*, 120).

With the fall of the Ṣafawids, the distinction between *khāṣṣa* and *mamālik*, which had concerned the administration rather than the legal status of the land, disappeared. The sources use again, from time to time, the term *dīwānī* for land which belonged to the state as opposed to *khāliṣa*, crown land belonging to the ruler and deriving from earlier times, confiscation or purchase. The difference between them is not always clear, however, especially since confiscated land sometimes became *dīwānī* land and sometimes *khāliṣa*. The situation became further confused by later dynastic changes. New *khāliṣadjāt* were created, mainly by confiscation, while some old *khāliṣadjāt* were usurped. In 1151/1738-9 Nādir Shāh (1148-60/1236-47) issued orders for the resumption of the *awḳāf* of Fārs by the *dīwān-i khāliṣa* (*Fārs-nāma-i Nāṣirī*, i, 181, 183, cf. also ii, 46, 86), and in the last year of his reign promulgated a decree for the resumption of all *awḳāf*. Consequent upon this decree a considerable number of *awḳāf* were taken over and entered with *khāliṣa* estates in the land register subsequently known as the *raḳabāt-i nādirī* (Ḥasan Khān Shaykh Djābir-i Anṣārī, *Tārīkh-i niṣf-i djahān wa hama-i djahān*, lith. n.d., 36-8; *Landlord and Peasant*, 131-2). The decree was revoked by Nādir's successor, ʿĀdil Shāh. Some of the confiscated estates were returned to their former owners (*Tārīkh-i niṣf-i djahān*, 49), but Sir John Malcolm, writing at the beginning of the 19th century, states that the lands were never fully restored (*History of Persia*, London 1829, ii, 313).

Under the Ḳādjārs, *khāliṣa*, deriving partly from earlier periods and partly from confiscation for arrears of taxation, rebellion or other reasons, and purchase, became an increasingly important category of land (cf. J. Macdonald Kinneir, *A geographical memoir of the Persian empire*, London 1813, 47). On various occasions the estates of a minister on his fall from power were confiscated, as happened in the case of two of Fatḥ ʿAlī Shāh's *ṣadr-i aʿẓam*s (cf. *Landlord and Peasant*, 147). The estates of Muḥammad Shāh's *ṣadr-i aʿẓam*, Ḥādjdjī Mīrzā Āḳāsī, were also confiscated on the death of his master, while those of Mīrzā Āḳā Khān Nūrī, Nāṣir al-Dīn's *ṣadr-i aʿẓam*, were confiscated on his fall, but later returned (cf. Gīlānshāh, *Yak ṣad u pandjāh sāl-i salṭanat dar Īrān*, Tehran 1951-2, 21, 60). According to E. S. Waring, one eighth of Fārs and Persian ʿIrāḳ was probably in the hands of the shah (*A tour to Sheeraz by the route of Kazroon and Feerozabad*, London 1807, 85). Land taken by conquest also became *khāliṣa*. Zuhāb, so acquired from the Ottomans, thus became *khāliṣa*, and was farmed by the governor of Kirmānshāh, in whose government it lay, to the chief of the Gūrān (H. C. Rawlinson, *Notes on a march from Zohab, at the foot of the Zagros, along the mountains of Khuzistan (Susiana) and from thence through the province of Luristan to Kirmanshah, in the year 1836*, in *JRGS* (1839), 26). In due course, as the conception of state revenue as something distinct from the personal income of the shah became stronger, *khāliṣa* land ceased to be considered as his personal estates and came to be regarded as belonging to the state rather than to him. The same terms continued to be used, but gradually they acquired different and separate meanings. In 1865 there is a reference to the *khāliṣadjāt-i dīwānī* in the official gazette, *Rūznāma-i dawlat-i ʿaliyya-i Īrān*, (12 Ṣafar 1282/8 July 1865) and in 1861 to the *khāliṣa-i dawlatī* (2 Ramaḍān 1277/15 March 1861, in the same journal). E. Stack, writing in 1882, notes that there was "a constant tendency for arbabi land to become diwani, by resumption of religious grants, confiscation, and by escheat" (*Six months in Persia*, London 1882, ii, 248).

Āḳā Muḥammad Khān, the first of the Ḳādjar rulers, who rose to power on the death of Karīm Khān Zand in 1779, is alleged to have bought considerable areas of land in Māzandarān, Astarābād and elsewhere and to have made these into *khāliṣa* (ʿAbd Allāh Mustawfī, *Sharḥ-i zindagī-i man*, Tehran 1945-6, i, 657). Under Fatḥ ʿAlī (1797-1834) there were new additions to *khāliṣa* property in the neighbourhood of Iṣfahān, the estates of his *ṣadr-i aʿẓam*, Amīn al-Dawla, being confiscated for arrears of taxation and becoming *khāliṣadjāt-i ḍabṭī*. In the case of an estate becoming *khāliṣa-i ḍabṭī*, a portion of the revenue might be allowed to the former owner or his relatives as a *mustamarrī* allowance. The estate remained annexed to the crown until its former owner (or his family) were restored to favour, when the estate might, according to the pleasure of the sovereign, be returned (*Landlord and Peasant*, 147). During the reign of Muḥammad Shāh (1834-48) a number of estates were confiscated from rebels and made into *khāliṣa* (ʿAbd Allāh Mustawfī, i, 657). There was also again an increase, albeit temporary, in *khāliṣa* land in the neighbourhood of Iṣfahān. As a result of a series of famine years many villages had become ruined, and so, in order that prosperity might be restored, *dīwān* officials were instructed to provide the peasants with seed, and the names of the villages concerned were included in the lists of *khāliṣadjāt*. Although these lands were subsequently returned to their owners, they continued to be known as *khāliṣa*-

d̲j̲āt-i bad̲h̲rī (*Tārīk̲h̲-i niṣf-i d̲j̲ahān*, 49; *Landlord and Peasant*, 148).

K̲h̲āliṣa land, as at earlier periods, was either directly administered on a crop-sharing basis or let on a tenancy, which in effect amounted to a revenue farm, the farmer concluding crop-sharing agreements with the local peasants (*Landlord and Peasant*, 148-9). *Tuyūls* were also frequently assigned on the revenues of *k̲h̲āliṣa* land either to officials in lieu of salary or as allowances and pensions to the ruler's supporters, tribal leaders or religious dignitaries (cf. Rawlinson, *Notes on a journey from Tabriz through Persian Kurdistan to the ruins of Takhti-Soleiman*, in *JRGS* (1841), 5). In the provinces, the taxes on *k̲h̲āliṣa* land and the government's rent or share of the produce were collected by the provincial governors, provided that they had not been otherwise assigned. Grain obtained in this way was used primarily to provision the army, but also to prevent the creation of artificial shortages and hoarding in times of grain shortages.

By the second half of the 19th century much *k̲h̲āliṣa* land, which still occupied a considerable part of the country, was in a state of decay and made little contribution to the revenue. Some estates had been abandoned by their peasants as was the case in Māzandarān (cf. *Rūznāma-i waḳāʾiʿ-i ittifāḳiyya*, 29 D̲j̲umādā I 1269/2 March 1853). Many villages in the province of Iṣfahān, some of which were *k̲h̲āliṣa*, had also fallen out of cultivation. At the beginning of the reign of Nāṣir al-Dīn (1848-96) a large sum of money, together with a considerable quantity of grain, was made available on the revenue of Iṣfahān to Mīrzā ʿAbd al-Ḥusayn, the head of the finance department of Iṣfahān, to enable him to bring them back into cultivation. Instead, he spent the money on military supplies and rebelled. After the ensuing disorders were put down, the estates of those implicated were confiscated and became *k̲h̲āliṣa*. Subsequently, however, their former owners regained them by various means.

In 1861, Eastwick wrote that a third, or according to some, half of the land of Persia was *k̲h̲āliṣa*, but that it was said to be much neglected. Advances for the expenses of cultivation at enormous rates of interest were made to the cultivators, who, subject to innumerable arbitrary exactions, were unable to accumulate capital to make improvements, and who would, in any case, not make them if they could "knowing that their rent would be raised or their leases rescinded" (UK. British Parliamentary Papers, 58 (1862)—Accounts and papers: Manufactures and commerce, and trade of foreign countries, Session 6 Feb.-7 Aug. 1862, LVIII (1862). Report by Mr. Eastwick, Her Majesty's Secretary of Legation, camp near Tehran, 5 July 1861, 70). Some two years later, in 1863, an attempt was made to develop *k̲h̲āliṣa* land in Iṣfahān, and an order was issued that the necessary expenses should be provided by the government and that they should be let on a five-year lease (*Rūznāma-i dawlat-i ʿaliyya-i Īrān*, 18 D̲h̲u'l Ḳaʿda 1279/7 May 1863). The measures were abortive. Wakīl al-Mulk, who had been sent about the same time to Kirmān to look into the condition of *k̲h̲āliṣa* property was apparently more successful (*ibid.*, 14 D̲j̲umādā II 1280/26 Nov. 1863).

More land fell out of cultivation during the famine years of 1871-2. No control was exercised over *k̲h̲āliṣa* land, and further confusion ensued in the land registers. Finally in 1874, Ẓill al-Sulṭān, when he was appointed governor of Iṣfahān, concluded *muḳāṭaʿa* contracts for a ten-year period (instead of the more normal three years) for the *k̲h̲āliṣad̲j̲āt* of Iṣfahān, presumably hoping that a long-term contract would encourage the lessees to improve the land (*Tārīk̲h̲-i niṣf-i d̲j̲ahān*, 51 ff.).

Nāṣir al-Dīn and his successor, Muẓaffar al-Dīn, were repeatedly in need of money and on several occasions lots of *k̲h̲āliṣa* land were sold, including, in the latter years of Nāṣir al-Dīn's reign and the early years of Muẓaffar al-Dīn's reign, most of the *k̲h̲āliṣa* round Iṣfahān (*Tārīk̲h̲-i niṣf-i d̲j̲ahān*, 63 ff.). Much of it was bought by the rich notables and the *ʿulamāʾ* (see further *Landlord and Peasant*, 153-4, and cf. also UK. Consular reports 2260/1899, No. 2260 Annual series. Preece "Isfahan, 1897-8", 13). In 1901-2 there was another major sale of *k̲h̲āliṣa land*, when the *ṣadr-i aʿẓam*, Mīrzā ʿAlī Aṣg̲h̲ar Amīn al-Sulṭān, disposed of most of S̲h̲ūlistān to Muʿīn al-Tud̲j̲d̲j̲ār Bushihrī (*Gazeteer of Persia* 3, Calcutta 1910, under Mamassani, 653). For the rest, no effective steps were taken to improve the cultivation of crown lands or to exploit them effectively for the benefit of the state (cf. A. Destrée, *Les Fonctionnaires belges au service de la Perse 1898-1915*, doctoral thesis presented to the Free University of Brussels, 1973, i, 423).

In the 20th century new political exigencies led to the disappearance of some categories of *k̲h̲āliṣa*, the creation of new *k̲h̲āliṣa*, and legislation to deal with it. This legislation, however, was mainly concerned with the sale, acquisition, and administration of *k̲h̲āliṣa* and no general legal principles underlying the existence of such land were formulated. The dichotomy in the administrative field between *dīwānī* (state) land and *k̲h̲āliṣa* (crown) land, so far as it had survived, disappeared after the grant of the Constitution, and in due course the term *k̲h̲āliṣa* came to be applied to crown lands in the sense of state lands and no longer signified the personal estates of the ruler, which were referred to as *amlāk-i s̲h̲āhī* or *amlāk-i salṭanatī* (see further *Landlord and Peasant*, 238 ff., for an account of the history of crown lands since 1906, and A. K. S. Lambton, *The Persian land reform 1962-6*, Oxford 1969, index).

Bibliography: given in the article. It is not possible to give here a list of all texts which might contribute to the history of crown land in Persia since they would include most chronicles and local histories. (A. K. S. Lambton)

AL-K̲H̲ĀLIṢA, Fāṭimid citadel built in 326/937-8 by K̲h̲alīl b. Isḥāḳ b. Ward, who had been sent by the Faṭimid caliph al-Ḳāʾim [*q.v.*] to suppress a rebellion of the Sicilians against the *amīr* Sālim b. Abī Rās̲h̲id.

For strategic reasons, in particular, the possibility of receiving with ease reinforcements by sea, the town was constructed opposite the ancient Cassaro (al-Ḳaṣr) of Palermo [see BALARM] and near to the port. Its construction, at the inhabitants' own expense, was achieved by demolishing a large part of the ancient urban centre, whose walls were carried off, according to Ibn al-At̲h̲īr (for the information of this historian, and of the geographers cited below, see the *BAS*, cited in the bibliography, index). The town, called by its founder al-K̲h̲āliṣa ("the Pure") (Χάλεσα in Greek diplomas of the Norman period, Chalcia, Halcia and more rarely Chalesa in Latin documents down to the 14th century, and Alza or Alcza at the end of the 13th century, a vulgar form from which is derived the present name Ausa), was encircled by walls provided with gateways, apart from the eastern side. Al-Muḳaddasī gives the names of the four gates as Bāb Kutāma, Bāb al-Futūḥ, Bāb al-Bunūd and Bāb al-Ṣināʿa (Bāb al-Baḥr in al-Idrīsī). In the Fāṭi-

mid and Kalbid periods, it was the residence of the Muslim governor and his entourage, and at this time, according to Ibn Ḥawḳal who visited it in 361/972, it possessed neither markets nor hostelries (*funduḳs*), but was provided with administrative services, a small Friday mosque, an arsenal, a prison and baths.

This new "external" town, whose prestige as an administrative centre was linked with all the fortunes of the Muslims in Sicily, is mentioned as one of the five sectors of Kalbid Palermo visited by Ibn Ḥawḳal (in addition to al-Khāliṣa, they are named al-Ḳaṣr al-Ḥārat al-Djadīda, Ḥārat al-Masdjid and Ḥārat al-Ṣaḳāliba). It was then described by al-Idrīsī as part of the *rabaḍ* of Palermo, and by Yāḳūt (d. 626/1229) as a mere *maḥall* in the centre of Palermo.

The disappearance of the walls, from the 14th century onwards, makes identification of the former Fāṭimid citadel difficult within the urban sprawl of modern Palermo, where the name of Kalsa has been extended to a quarter which goes from St. Francis of Assisi square to the port. If the reconstruction of the former urban limits done by Amari (*BAS*, i, 12 n. 3) seems to posit too great an extent for al-Khāliṣa, the hypothesis of Columba seems more acceptable: he proposed an area trapezoidal in shape and covering some 8 hectares, which would be enough to make Kalsa into a citadel including the *amīr*'s residence, administrative buildings, a small Friday mosque, baths and a certain number of other buildings.

(A. DE SIMONE)

KHALḲ (A.), creation.

I.—*Lexicographical data.*

Khalḳ, noun of action of the verb *khalaḳa*, which properly means the act of creating, can also be used to designate Creation in its entirety: *wa'l-khalḳ yakūn al-maṣdar wa-yakūn al-makhlūḳ* (*LA*). The noun of the agent, *al-khāliḳ*, defined by the article, is applied only to God and is one of His Names. According to the *LA*, in the speech of the Arabs *al-khalḳ* is used to designate the production of some new thing (*ibtidāʿ*) on a pattern which has not been previously employed (*ʿalā mithāl lam yusbaḳ ilayh*). Abū Bakr b. al-Anbārī, a philologist of the 4th/10th century, gives a slightly different definition: *khalḳ* is either a product (*inshāʾ*) designed on an invented model (*abdaʿa*), or it is the act that determines the proportions (*taḳdīr*) of something which is to be brought into being; thus when ʿĪsā b. Maryam (Ḳurʾān, III, 49) says: "Yes, I will create (*akhluḳu*) for you from clay the likeness of a bird", he does not wish to say that he will bring into existence that which does not exist (*lam yurid annahu yuḥdithu maʿdūmᵃⁿ*). Ibn Sīdah (5/11th century) considers that for God to create is to bring into being a thing which previously was not (*baʿd an lam yakun*). It should be noted that some commentators (al-Ḥasan al-Baṣrī and Mudjāhid) give the meaning of *dīn* (religion) in the sense of *ḥukm* (the totality of classes of the Law) to the word *khalḳ* in the verse (IV, 119): "They have tampered with God's creation". The reasoning behind this is that God has stamped on creation a nature (*faṭara 'l-khalḳ*) that conforms with Islam; cf. Ḳurʾān, XXX, 30: "nature created by God (*fiṭrat Allāh*) according to which He has stamped the nature of men: there can be no change in God's creation", that is, in the truth of religion (*ṣiḥḥat al-dīn*). Elsewhere, *khalḳ* can mean a mendacious forgery (Ḳurʾān, XXVI, 137): three commentators indicate the reading, "It is nothing but a forgery (*khalḳ*) of the ancients" instead of the customary *khuluḳ*. *Khalḳ* is therefore equivalent to *asāṭīr al-awwalīn*, the legends of the ancients, which is found in a number of sūras (cf. al-Zamakhsharī, *Kashshāf*). There is also the expression *aḥādīth al-khalḳ*, which is synonymous with *khurāfāt*, old wives' tales.

Most of these meanings are supplied by relatively late lexicographers and bear the clear stamp of theological reflection on the word *khalḳ*. But the *LA* gives uses which seem to haste back to the primitive meaning of the root. Thus the Arabs say: *khalaḳa'l-adīm*, which means: "to determine before it is cut how much leather is needed to make what is required, and to size it up with a view to cutting out a shopping-bag, a water bottle or a boot". Ibn Manẓūr gives, as an example, one of Zuhayr's verses and a *ḥādīth* from the sister of Umayya b. Abi ʾl-Ṣalt, both evidence from early times, and a verse by al-Kumayt (d. 124/743). With the meaning of a lie, the form *ikhtilāḳ* is also used (Ḳurʾān, XXXVIII, 7). Moreover, although with other *maṣdārs* than *khalḳ*, the verb *khalaḳa* (or *khaluḳa*) means to be worn out (= *baliya*). The root subsequently carries the meaning of being smooth, polished, without cracks (the *LA* gives (*layyin, amlas, musmat* as synonyms of *akhlaḳ*: equal, harmonious). All these meanings are found in the corresponding Hebrew root, *ḥaloḳ*: to shave, distribute, assign a part to; to be flat and polished. In the piʿel, *ḥalleḳ* signifies to differentiate separate, specify (cf. *taḳdīr*); in the hiphʿil, *haḥᵃleḳ* means to smooth, to polish, to plane. It seems therefore that the original sense of *khalḳ* expressed on the one hand the idea of determining parts (as does *taḳdīr*; cf. *ḳaddara 'l-arzāḳ*, to determine sustenance), and on the other the idea of polishing, equalising. These very concrete etymological values can be found in certain Ḳurʾānic terms associated with *khalḳ*, and in the speculations of theological commentaries. The latest and most abstract meanings, grafted on to the earliest ones, constitute one of the bases of speculative and mystical *kalām*, as well as of *falsafa*.

II.—*The Ḳurʾānic vocabulary and the ideas it carries.*

Before considering what creation is in the Ḳurʾān, it must be stated first of all that the words *khalḳ* and *khāliḳ* are the most frequently employed. On only three occasions, in two verses, do we find the usage *al-Bāriʾ*, the Creator, the agent noun from the Semitic root which appears at the beginning of Genesis: *Bᵉreshīt bārā Elōhīm*. These passages are: "He is God, the *Khāliḳ*, the *Bāriʾ*, the Maker (al-*Muṣawwir*)" (LIX, 24); "Return therefore, towards your Creator (*ilā Bāriʾikum*); it is best for you in the sight of your Creator (idem)" (II, 54). It is pointless to look for two English words to translate these two terms, which the lexicographers give as synonyms. Nevertheless, according to the *LA* the *Bāriʾ* is he who creates without imitating a model (*lā ʿan mithāl*); moreover, it is nearly always used for the creation of living beings in particular. In the same way, *bariyya* is synonymous with *khalḳ*. The former term is found

twice in two verses (XCVIII, 6 and 7) and the context clearly underlines that the subject is human creatures. In the *LA*, *al-Bāriʾ* is associated with *al-dh̲āriʾ*, which is not Ḳurʾānic, although the Ḳurʾān uses the verb *dh̲araʾa* with complements which designate living things: plants and cattle (VI, 136), djinns and men (VII, 179). Abū Isḥāḳ and Th̲aʿlab accord it the sense of God multiplying (*yukath̲th̲ir*) the beings in creation. Parallel with *bariyya* we find *dh̲ariyya*, which has a similar meaning but is not used in the Ḳurʾān. The Hebrew *beriʾah* has the etymological sense of "cutting and putting into shape" (*The Jewish Encyclopedia*, art. *Creation*).

Only once do we find the words "work of God" (*ṣunʿ Allāh*); in the context of mountains which seem inert but which God causes to travel like clouds (XXVII, 88), a context that led R. Blachère to translate the expression as "miracle". The commentators (al-Zamak̲h̲s̲h̲arī, al-D̲jalālayn) consider it a strengthening verbal noun of the verb (*maṣdar muʾakkid*) which refers to the entirety of divine acts enumerated in the preceding verses. By these means God has worked a work of God, he has acted as God "who makes all things good" (*atḳana*: *aḥkama*). In this sense, of merely accentuating the idea of a verb, which is retrenched (*maḥdh̲ūf*) in other respects according to the *Kas̲h̲s̲h̲āf*, although it can be found in *d̲jaʿalnā* (we have established) in verse 86, the word *ṣunʿ* has no grammatical value alone and does not expressly designate the divine work of creation. Nevertheless, the presence of this term in the Ḳurʾān has authorised those who allow God to be given names formed by deviation (*is̲h̲tiḳaḳ*) to call the Creator *al-Ṣāniʿ* the Artisan, the Demiurge of the Greeks, the τεχνίτης of some Church Fathers, and the supreme Maker of La Fontaine.

One important root is *s.w.r*. We have already met *al-Muṣawwir* following on from *al-K̲h̲āliḳ al-Bāriʾ*. *Taṣwīr* is an action brought into being by the creative act proper: "We created you, and then We gave you form" (*wa-laḳad k̲h̲alaḳnākum, th̲umma ṣawwarnākum*, VII, 11). The same verb is employed for the shaping of a man in his mother's womb (III, 6). One verse is particularly rich in philosophical meaning: "In the very shape (*ṣūra*) He willed, He created you (*rakkabaka*)". Therefore *taṣwīr*, the constitution of a shape, is a *tarkīb*, a composition. Yet, in the hylomorphism of the *falāsifa*, creation is identified with this timeless insertion and is shaped from a single blow (*dafʿatan*) in matter. By contrast, the Ḳurʾān links the creative act to the 'informing' act by the particle *th̲umma*. According to the grammarians, there is a relationship of diminishing order between *wa* (and), *fa* (and then) and *th̲umma* (and afterwards). There is therefore a certain distance between the act of creating and the act of giving form, the *k̲h̲alḳ* and the *taṣwīr*. The verb *sawā* (to level, smooth; cf. above, the sense "to polish") is linked to *k̲h̲alaḳa* by the particle *fa*: "He who has created you and then proportioned and stabilised you" (*alladhī k̲h̲alaḳaka fa-sawwāka fa-ʿadalaka*, LXXXII, 7); "He who has created and proportioned" (LXXXVII, 2). The close relationship between these two verbs seems to indicate a kind of explanation of the etymological meaning of *k̲h̲alaḳa* by the meaning of *sawwā*. Likewise, *k̲h̲alaḳa* can be explained by *ḳaddara* (cf. above, the meaning of *taḳdīr*): "He created him from a drop of sperm and (*fa*) fixed his proportions" (LXXX, 19); "He has created all things and (*fa*) fixed their proportions of their species" (*fa-ḳaddarahu taḳdīran*, LIV, 49).

What then, can be said about the doctrine of creation *ex nihilo* in the Ḳurʾān? Quite simply that Arabic, like all other languages, has had to use a word which originally signified something concrete and material for an ineffable reality. Similarly in Greek, Aristotle says that Anaxagoras employed Intelligence for "ordering" (κοσμοποιία); afterwards, the word meant God's creation of the world. True, many Ḳurʾānic verses call to mind a demiurgic action when the verb *k̲h̲alaḳa* is followed by the preposition *min*. For example: "He created man of a drop of sperm" (XIV, 4) and various ingredients (*ams̲h̲ād̲j*, LXXVI, 2, males and females according to the D̲jalālayn); "God created every animal of water" (XXIV, 45); "It was He who created man of a drop of water" (XXV, 54), or "of potter's clay" (*salsāl*, LV, 14), note to explain use of archaic "of" not "from" clay (*ṭīn*, XXVIII, 89, VI, 2), of clinging clay (*min ṭīn lāzib*, XXXVII, 12), of an extraction of clay (*sulāla min ṭīn*, XXIII, 12) and of earth (*turāb*, XVIII, 37, XXX, 20, etc.); stinking mud (*hamāʾ masnūn*, XV, 28); "He created the djinn of smokeless fire" (LV, 15). But these examples indicate clearly that the preposition denotes the matter with which these created beings are created, and not a pre-existent matter from which they would be created. This can be seen specifically in the statement of Iblīs who, because he is made from fire, considers himself superior to men, who are made from mud. On the other hand, while *k̲h̲alaḳa* designates the creative act, it can also mean the word *fī*, the mode of being which characterised the appearance of the resulting creative, either used along with the preposition *fī* (in), as in "We created man in the fairest stature" (XCV, 4) and "We created man in affliction" (*fī kabad*, XC, 4); or with the adverbial accusative *ḥāl*, as in "Then We created a speck of sperm into (or as) a drop of blood" (XXIII, 14). Here *k̲h̲alaḳa* has precisely the same meaning as *d̲jaʿala*: to render an object this way or that, to make from that object this thing or that, which is exactly equivalent to one of the usages of the Latin *creare*, e.g. *creare aliquem consulem*, *d̲jaʿala fulānan ḥākiman*, to make someone a governor. In the passage in Ḳurʾān, XXIII, already cited, verse 12 has "We created (*k̲h̲alaḳnā*) man of clay", verse 13 states, "We made (*d̲jaʿalnāhu*) a drop of sperm of clay", while in verse 14 the verb *k̲h̲alaḳnā* reappears. Verse X, 5 follows the same pattern: "It is He who made the sun a radiance (*d̲jaʿala 'l-s̲h̲amsa ḍiyāʾan*) and the moon a light". The preposition *min* does not seem to mean "from", as in expressions like "He created you from a single soul" (*k̲h̲alaḳakum min nafsin wāḥida*, IV, 1, VII, 189, XXXIX, 6). Here, however, the meaning is clear: the text refers to the children of Adam from whom Eve was drawn forth, who are themselves created; also clear is "We created you from a male and a female" (XLIX, 13).

But in a broader sense *k̲h̲alaḳa* appears to mean "to create" like the Hebrew *bārā* as it is understood by the Jewish exegetes. Many Ḳurʾānic verses are the exact replica of the first verse of Genesis; such as "Praise be to God who created the heavens and the earth . . ." (VI, 1). Sometimes the text adds, "and what is between the two" (XXV, 59, etc.). God also created whatever is in the heavens or on earth (X, 6), the sun, the moon, etc. He created day and night. In a word, God's every action on one of his creatures can be called creation. Similarly, the different developmental phases of a created being are also creations: "He created you in your mother's wombs, creation after creation (*k̲h̲alḳ min baʿd k̲h̲alḳ*)" (XXXIX, 6). The same word is used for the act of creation in general, the heavens and the earth encompassing all creatures, and for the particular

creations of each category of beings. This second usage explains the extension of meaning which bring *khalaḳa* close to *sawwā, ṣawwara, ḳaddara, dja'ala, anbata* (LXXI, 17: "God has caused you to sprout from the earth like shoots", which the *Tafsīr al-Djalālayn* elucidates as "He created (*khalaḳakum*) you from the earth, because it is from earth that He created your father Adam"), and to *ansha'a* (to make grow, to produce, to create), which is exactly synonymous with *khalaḳa* in the verse, "It is he who caused you to spring from a single soul" (VI, 98; cf. above). Other examples are: "He produced you from the earth" (XI, 617, LIII, 32) and "Say: it is He who produced you" (LXVII, 23). This root is important, because it is used to express the idea of two creations. In fact, we read: "Then We made him grow (the embryo being completed) in another creation" (*thumma ansha'nāhu khalḳan ākhara*, XXIII, 14)—by blowing the spirit into him, explains the Djalālayn commentary—which can be compared to: "See how God originated creation (*kayfa bada'a 'l-khalḳ*); then God produced the second production (creation) (*yunshi'u 'l-nash'ata 'l-ākhira*)" (XXIX, 20); and to: "On Him rests the second creation (*anna 'alayhi 'l-nash'ata 'l-ukhrā*)" (LIII, 47); and finally to: "You have certainly known the first creation (*al-nasha'ata 'l-ūlā*)" (LVI, 62). Thus in *khalḳ* in general there should be two degrees of production; and commentators battled with these texts.

Nevertheless, creation *ex nihilo* is not the incontestable deduction from the root *khalaḳa* in these Ḳur'ānic contexts, except perhaps in a very few verses such as the words addressed to Zacharias (XIX, 9): "I created you beforehand, when you were nothing" (*wa-lam taku shay'an*); this is the authority for the formula theologians later used to convey creation *ex nihilo*: that which was not, then came into being (*lam yakun, thumma kāna*). The arbitrariness of the divine will can be taken as a sign that nothing else plays any part in creation: "God creates whatever He wishes" (III, 47). God being the sole Creator, and the Creator of all things, then it follows that he creates from nothing. But the verses which are most widely used as the basis for the doctrine of creation *ex nihilo* are those which say: "When God decrees (*ḳaḍā*) a thing He only has to say to it Be! and it is" (II, 117, III, 47, XIX, 35); "We only have to say to a thing when We desire it, Be! and it is" (XVI, 40). Verse VI, 73 is particularly important: "And the day when he says, Be! and then (*fa*) His Word is Reality (*ḥaḳḳ*)"; this can be compared to a number of other verses, where it is said: "He created the heavens and the earth *bi 'l-ḥaḳḳ*" (XXXIX, 5, etc.), which R. Blachère translates as "with gravity". He considers Grimm's translation: "Beide schufen wir durch die Wahrheit" (by the truth: The Book of God) inadmissible, and supports his own reading by pointing out the parallelism of verses 38 and 39 of Sūra XLIV: "We did not create the heavens and the earth ... in a game (*lā'ibīn*, in sport)" and "We did not create them except *bi 'l-ḥaḳḳ*, therefore "with gravity". Lexicographers do indeed give *la'b* (game) as the opposite of *djidd* (a serious, assiduous action, performed steadfastly). But if this parallelism is taken into account, it is not enough to put forward an opposite (*la'b-djidd*); the contradiction must be chosen: God did not create in sport (he was not *lā'ib*, but *ghayr lā'ib*). This goes much further than the simple opposite.

The Ḳur'ān, however, offers various equivalents of *lā'ibīn*: "Do you think that We created you idly (*'abathan*) and that you would not be returned to Us?" (XXIII, 115); "We have not created heaven and earth for nothing" (*bāṭilan*); Blachère "lightly", which is weak; the *Tafsīr al-Djalālayn* makes *bāṭilan* synonymous with *'abathan* and interprets it by *lā li-shay'*). The word *bāṭil* is very strong; it evokes all the futility of error and in the Ḳur'ān itself is opposed to *ḥaḳḳ*. Examples are: "Do not cover the true reality with the futility of error" (II, 42, III, 71); "And say: the truth has come and falsehood has vanished. Yes, falsehood by its nature, must vanish" (*zahūḳ*: which marks the instability and inconstancy of *bāṭil* (XVII, 81); and "Say: Truth has come and falsehood cannot originate or repeat (creation)" (XXXIV, 49).

Thus the creative Word, the *kun* (equivalent to the biblical *fiat*), is not a *flatus vocis*: it brings about being in factual truth. Creation has an end, although God has no need of anything apart from Himself: He is sufficient unto Himself (cf. *wa-staghnā 'llāh*, LXIV, 6). He is learned, wise, living, determined. Creation, say the theologians, disagreeing with some conclusions of Greek philosophy, does not emanate from Him by a natural and necessary process. The *Tafsīr al-Djalālayn* expounds *bi 'l-ḥāḳḳ* (in XLIV, 39) in these terms: "that is to say, We have created by allowing Our Truth (*muḥiḳḳīn*) to triumph, so that Our power and Our unity may be proven." Elsewhere the Ḳur'ān assigns a purpose to the work of creation: "I have created not men and djinns except to worship Me" (LI, 56). This worship profits God nothing, but it is the greatest good of mankind. This good is "in the hand of God" (III, 26); "that which is with God is the good of the pious" (III, 198). All the names of God by which he is designated as He who gives, who pardons, who pours out his bounties in favour of believers, who fear Him and obey Him, are therefore associated with this ultimate end of creation, the return to God. Verse XXIII, 115 (cited above) states this clearly, a point which recurs in XXX, 11: "God originates creation (*yabda'u 'l-khalḳ*), then repeats it (which refers to the latest Life), then unto Him you shall be restored". The same is true of all the passages concerning man. But man is privileged: God appointed him His viceroy on earth, (II, 30); He made all other creatures subject to man: "God has put at your service (on duty for you: *sakhkhara lakum*) whatever is in the heavens and on the earth (XXXI, 20, XLV, 13): the rivers (XIV, 32), the sun and the moon, night and day (XIV, 33, XVI, 12), the sea (XVI, 14), etc. It can therefore be said that man is the purpose of creation, because he has been created with the power to know God, to obey Him, to worship Him, and to return to Him. Creation by the Word, but for the good of the creature, and done out of pure generosity, goodness and munificence, that is *ikrām* (LV, 27 and 78).

Nonetheless, one verse causes problems here. It is written concerning Adam: "He created him from earth, then (*thumma*) He said to him, Be! and he was" (III, 59). The *kun*, therefore, comes after the creation. The Djalālayn's commentary gets over the difficulty by adding after *kun basharan*, "be a human being." This is not on the level of the ultimate creative act; in fact, the work made from earth is already a particular creation. Consequently, like the verb *khalaḳa*, the word *kun* can mean the act of creation *simpliciter* or a subsequent act of specific creation. It must be added, however, that this is the sole example of the use of *kun* with a relative sense in the Ḳur'ān. It is possible to speak of a creation *ex nihilo* which is primordial and universal, then of succeeding creations which give life to particular beings of which occur at different stages of their development. More-

over, the Kur'ān alludes to a first beginning of creation. The expression *bada'a 'l-khalk*, therefore, does not always refer to an absolute beginning, as in, for example, the case of "He began the creation of man from earth" (XXXII, 7). Elsewhere we read: "As we originated the primordial creation (*bada'nā awwala khalkin*), so will We repeat it" (XXI, 104; X, 4, 34, etc.). This refers to the creation of the visible world in its entirety and to a second creation in the hereafter. Al-Zamakhsharī, followed by the Djalālayn, explains that the primordial creation is the fact of giving existence to the world by making it emerge from the void (*idjāduhā ʿan al-ʿadam*). But this raises a grammatical problem: Why "a creation" in the indefinite form? "This is because it is said: *awwal radjulin djā' anī*, where the indefinite mode is employed with the sense of "the first of men who has come to me"; but the indefinite singular is used when what is meant is that they are dealt with in detail one by one (*irādata tafṣīlihim radjulan radjulan*). Therefore *awwal khalkin* means *awwal al-khalā'ik* in the sense of *awwal al-khalā'ik*, the first of creatures, because *khalk* is a *maṣdar* which cannot be put into the plural." The aim of this commentary is not just to point out the idea of creation *ex nihilo* but also to pose the problem of the first creation drawn out of the void, a problem we shall encounter again.

Another term corresponding to *ibtidā'*, noted by the *LA* (above), is found once in the Kur'ān: "The Inventor (*badīʿ*) of the heavens and the earth, when He decrees something, need do no more than say Be! and it is" (II, 111). The *Tafsīr al-Djalālayn* explains *badīʿ* as: "that which gives existence (*mūdjid*) without following a previous model". On the other hand, the Kur'ān does not use the root *ḥ.d.th.* to express, in the IVth form, the idea of producing a new being in time, nor do we find the words *ikhtaraʿa* (to invent) and its derivatives, *kawwana* (to form a being which can generate: cf. generation and conception, *kawn* and *fasād*) and its derivates, nor *awdjada* (to cause to exist).

This creation, which had a beginning, must have an end. Not only because all that is born must naturally die, but because God willed it so: "Then He decreed a final term (*adjal*), a fixed term (*musammā*) in relation to Him" (VI, 2). This refers to the end of each man's life; but it seems that it is the idea of the end of the world, associated with the Judgement Day, that is conveyed by the expression *kudiya 'l-amr* which should be translated "the affair is finished" and not "the order is decreed".

The idea of the end of the world followed by a mustering (*ḥashr*, L, 44) is central to the Kur'ān. As regards the second creation, of the Afterlife, that is, Heaven and Hell, certain verses lead to the conclusion that it will have no end: mankind, it is said, will be there eternally (*khālidūn fīhā abadan*). Yet, though no verse says anything explicit about a final term set on the duration of this stay, some theologians interpreted Sūra XI, 107 and 108 ("So live there forever, as long as the heavens and the earth shall remain ...") as implying the destruction of Heaven and Hell. Therefore Djahm b. Ṣafwān, on the basis of LVII, 3 ("He is the First and the Last"), thought that God would remain alone at the ultimate end of time, just as He had been alone before the creation. But in expounding *mā dāmat al-samawāt wa 'l-arḍ*, al-Zamakhsharī writes: "You must understand by this that the heavens and the earth of the region of the After life are perpetual and created forever." It is written: "Until the day when the earth will be replaced by another earth, and the heavens likewise" (XIV, 48); and "Praise be to God who has bequeathed us the earth" (XXX, 74) in the sense of "the earth of Paradise" (*arḍ al-djanna, Tafsīr al-Djalālayn*), for "we take up our estates in Paradise wherever we wish" (*ibid.*). It can also be said, adds the *Kashshāf*, that here is an *ʿibāra ʿan al-taʿbīd wa-nafy al-inkiṭāʿ*, an expression which means perpetuation in eternity and denies its cessation. This is the sense in which the Arabs say "As long as the mountain of Thabīr endures".

Apart from the allusion in XIV, 48, the Kur'ān does not mention explicitly the creation of Paradise and Hell. Yet it is said that these two places are prepared (*uʿiddat*) for believers and unbelievers (III, 131, 133; cf. XVIII, 102, XLVIII, 6). Similarly, in the account of Genesis there is only an indirect reference to the creation of the angels: "Or did We create the angels female?" (XXXVII, 150). It should also be noted that Iblīs says to God, "You created me from fire" (VII, 12, XXXVIII, 76). We also read: "Everything that is in the heavens and on the earth, the animals in fact (*min dabba*) and the angels ... bows down before God" (XVI, 49). According to the *Kashshāf*, the word "animals" can refer to creatures both in the heavens and on earth, for there are creatures in the heavens which creep as man creeps on earth (*yaddibūn*). It may refer only to beings on earth, and then what is in the heavens is the creature called spirit (*rūḥ*). It could also refer to the angels, who are mentioned also by name because of their special worship. Finally, it is possible that the words "that is in the heavens" can mean the heavenly angels, while the word *malā'ika* which follows *dābba* refers to those on earth, such as the Guardian Angels (*ḥafaẓa*). If the angels in the skies are meant, then they were created at the same time as the heavens and all which they contain, just as Greek Fathers of the Church like Epiphanus had thought.

The text of the Kur'ān poses several other problems: of the creation in six days, of the first created being, and of the process of creation. These will be dealt with under *ḥadīth* and *tafsīr*.

III.—*Khalk in ḥadīth.*

The Prophet was often questioned about the Beginning. One tale recounts this reply: "God was and there was nothing else with Him; His throne was on water (cf. Kur'ān XI, 7). Then he created the heavens and the earth." When someone asked the Prophet where (*ayna*) God was before he created the creatures (*kabla an yakhluka khalkahu*), he said: "He was in a mist (*ʿamā'*); there was no atmosphere either above or below Him, and He created His throne on the water, that is, there was nothing with Him (*laysa maʿahu shay'*)." The role of water in creation is important (cf. Kur'ān XXI, 30, XXIV, 45, XXXII, 8, LXXVIII, 20, LXXXVI, 6). Several *ḥadīths* relate how when water boils it becomes a vapour which constitutes the sky, while it forms on its surface a froth which becomes the earth. The vapour, called smoke (*dukhān* = *bukhār murtafiʿ*, *al-Djalālayn*) plays a part in the Kur'ān (XLI, 11) in the creation of the sky. On this subject, the narratives are simply picturesque amplifications of the Kur'ānic text conveying any number of mythical traditions of Oriental peoples which were transmitted by way of rabbinical *haggādā* or Iranian and Hellenistic gnosticism. A large number of them are found at the beginning of al-Ṭabarī's *Annales*, in al-Masʿūdī works, and, much later, in Madjlisī's *Biḥār al-anwār*. A sea beneath the seven heavens, eight *awʿāl* beneath the sea, and a throne carried on their backs are also

described. This image is an extension of the verse: "And on the borders of the sky shall stand the angels, and on that day eight shall carry above them the throne of their Lord" (LXIX, 17). The word *waʿil* designates the chamois goat which lives on the mountain tops. The plural *awʿāl* or *wuʿal* is applied to those beings dwelling on the height, the *ashrāf*, here the angels (*LA*, *malāʾika ʿalā sūrat al-awʿāl*). At this stage, the distance which separates each rung from the next is a 71, 72, or 73-years' walk (500 according to other versions). But in some texts, the figure 500 represents the thickness (*ghilaẓ*) of each sky.

There are many, though differing, narratives about the days of creation and their duration in terrestial years, about the first day (Saturday or Sunday), and the division of the creative work between the different days. Many of them are designed to refute the Jewish concept of the sabbath day of rest: God never rests because tiredness can never affect Him (cf. Ḳurʾān L, 38). Concerning the successive order of creation the Prophet said: "God created the earth (*turba*) on Saturday, the mountains on Sunday, the trees on Monday, the *makrūh* on Tuesday and light on Wednesday. On Thursday he dispersed the animals (*dawābb*) over the earth, and he created Adam at the end of creation, after the *ʿaṣr* of Friday in the last hour of the last day, during the period which separates *ʿaṣr* from night." But according to another tale, the Prophet replied to Jews who were quizzing him that God had created the earth on Sunday and Monday, the mountains and all the useful matter they contained on Tuesday, trees, water, cities, the prosperity of cultivated lands (*ʿumrān*) and destruction (*kharāb*) on Wednesday, which makes four days (cf. Ḳurʾān XLI, 9-10). On Thursday He created the sky, on Friday, up to the last three hours of the day, the stars, sun, moon and the angels (cf. XLI, 12: "In two days, He, by his decree, established the heavens in seven heavens ... and We adorned the lower heaven with lamps and placed it under a good watchman." Here, says al-Zamakhsharī, the text speaks of the creation of lights, stars and the angels. Then during the first of the remaining three hours, He created the fixed terms of the beings which live and die; in the second He threw the destructive (*āfa*) flame over all that man could take to his use, and in the third He created Adam, giving him the garden (of Eden) to dwell in and ordering Iblīs to bow before him. From these two examples we can see to what extent two accounts can diverge. However, they converge on one important point: God created moral and physical evil (cf. *makrūh*, *kharāb*, *āfa*).

The *ḥadīth*s reveal the identity of the first created being. Most consider that this was *al-Ḳalam*: at God's command it wrote the *ḳadar* and marked out everything which could be engendered in being (*al-kāʾin*). Consequently, if the *ḳaḍāʾ* is the Command by means of which God decides to create being as He wills, the *ḳadar* influences the determination of the temporal order and gives rise to *al-Ḳalam*. According to other traditionists, light and darkness are the first things created. Then came the creation of *ʿamāʾ*, of the mist or cloud (*ghamām*) to which Ḳurʾān II, 210 alludes, followed by the Throne, water (or water, then the Throne), before the creation of the heavens and the earth. But other traditions give a different order: *kalām*, *kursī*, air and darkness, water. (The association between air and darkness recalls an old notion, adopted by the Stoics, that air is black.) Elsewhere a new entity, the *haykal*, appears: it encloses the seas which surround the heavens and the earth and is enveloped by the *kursī*. There is a notable *ḥadīth* on the Intelligence (*al-ʿaḳl*) which, linked to Verse XVII, 85 on the Spirit (*al-rūḥ min amr rabbī*), greatly influenced later speculations (cf. below). The Prophet said: "When God created the Intelligence He said to it, 'Come forward', and it came forward. Then he said, 'Go back', and it went back. Then God said: 'I have created nothing that I love more than you and I will place you only in the creature I love most'."

IV.—*Khalḳ in tafsīr.*

All the Ḳurʾānic commentaries on creation are based on a number of *ḥadīth*s, some on more than others. Generally, they state precisely that it was a creation *ex nihilo* and often explain *khalḳ* by *īdjād*, the gift of existence. But while taking their inspiration from these contexts, they sometimes make it follow that God speaks of His creative act to show that He is Almighty God, to whom worship is owing, because He is Unique, He alone is able to create. Thus when commenting on the verse, "Worship your Lord who created you," al-Zamakhsharī understands the verb *khalaḳakum* as constituting "an explanatory and distinguishing attribute" (*ṣifa mūḍiḥa mumayyiza*) of our Lord (*rabbakum*). *Khalḳ* is therefore associated with divine lordship (*rubūbiyya*). Creation is an act belonging to God, and is shared with no other. *Khalḳ* is also shown as a blessing (*niʿma*).

One problem which caught the attention of the commentators was how to reconcile apparently contradictory verses, such as LXXIX, 28-32, where the creation of the earth and all it contains seems to follow that of the heavenly corners after the creation of all that is on earth. According to Fakhr al-Dīn al-Rāzī, the earth must have been created before the sky, but God would not have "spread it out" (*daḥāhā*) before creating the sky, since *taḍhiya* is the act of displaying or unfurling (*basṭ*) not of creating. But, he said, this explanation raises two objections: the first is that since the earth is an immense expanse it is impossible to separate its *khalḳ* from its *taḍhiya*, and if one occurs later so must the other. The second objection is that verse II, 29 proves that the creation of the earth and all it encompasses came before the sky; but the creation of things on the earth is not possible before it is "spread out." Thus both creation and unfurling of the earth came before the creation of the sky. There was an attempt to counter this by distinguishing between the creation and the "levelling" (*taswiya*) of the sky, particularly its division into the seven heavens. The creation of the sky was before the creation of the earth, but its *taswiya* came afterwards. Unfortunately verse LXXIX, 26 makes the construction, lifting of the vault and levelling of the sky all part of the same thing, and all take place before the spreading out of the earth. As a last resort, al-Rāzī suggests extending the preposition *thumma* (and then) in verse II, 29 to mean not an actual order of succession, a *tartīb*, but a simple list of bounties (*taʿdīd al-niʿam*), which enumerate in second place something which could very well actually have been first. The aim of this discussion is to show that some processes like *taswiya* and *taḍhiya*, which come into the general category of *taḳdīr*, are, with a few exceptions, conceived of as creative acts, or at least as aspects of *khalḳ*.

Another contradiction, between XLI, 9-12 and L, 38, concerns the total number of days of creation. The first text seems to give a total of eight days; two for the creation of the earth, four for establishing (*wadjaʿala*) the mountains and diversifying (*ḳaddara*) its nourishment, two for the seven heavens. The second

text states quite precisely that six days sufficed for the creation of the heavens, the earth and what is between them. All the commentators solve this by saying that in XLI, 9-12 we must not make the addition 2 + 4 = 6. The Ḳur'ānic sentence *wa-dja'ala* ... is an *isti'nāf*, a new sentence which goes back to the beginning and means that the creation of the earth and all it entails (mountains, foodstuffs) took place in four days. Likewise, explains al-Rāzī, when we say that it is twenty days' walk from Kūfa to Medina and thirty to Mecca, it does not mean that the distance from Kūfa to Mecca is 20 + 30 = 50, but that Kūfa to Medina takes 20 days and (*isti'nāf*) Kūfa to Mecca 30. Here the *dja'l* and *taḳdir* are considered as creations. Ibn Ḥazm, however, in the *Refutation of Ibn Naghrila*, separates them from *khalḳ*: "The two days during which God created the sky in seven heavens are the last two of the four days when he distributed the crops on the earth, for this distribution is something other then creation." Hardly a satisfying explanation! Finally, some commentators also echoed theological or philosophical conceptions.

V.—*Khalḳ in kalām.*

With the theologians, especially the Mu'tazilīs, the vocabulary of creation grew richer. In the first place, the creative act was expressed by the term *īdjād*, the fact of giving existence to that which did not exist. God is He who also gives existence (*al-Mūdjid*). But in order to endure, existence (*wudjūd*) needs subsistence (*baḳā'*), and that in abundance; *khalḳ* is not only *īdjād* but also *ibḳā'*, the gift of sustenance. Al-Rāzī related this second idea to the one expressed in the Ḳur'ānic term *rizḳ*: the act of catering for, providing for, sustaining. God is *Rāziḳ* and *Razzāḳ* just as He is *Khāliḳ* and *Khallāḳ*. The Ḳur'ān brings together the two ideas: "Is there a creator other than God who gives you sustenance (*yarzuḳukum*)" (XXXV, 3). And, more explicitly: "He who originated creation and repeated it, and He who gives you sustenance from the sky and the earth, is there another than God?" (XXVII, 64). The sustaining power, like the creating power, is associated with the oneness of God. The act of creation is not simply an original snap of the fingers; it must be repeated at each moment of the existence of creatures lest they should sink into the void. This is the Muslim doctrine of continuous creation, which is illustrated to perfection in al-Bāḳillānī's atomism and occasionalism, though it is not a prerogative of Ash'arism alone. Al-Bāḳillānī thinks that an accident cannot last two minutes in succession on a body which God has created in each of those two moments. The Mu'tazilīs are not unanimous on this point: some, the disciples of Mu'ammar, deny that God can create an accident; other affirm it. 'Abd al-Djabbār belongs to the second group, since he speaks of *ḥudūth* (generation of a new thing in time) of accidents, which are therefore *muḥdath* and must have a *muḥdith*, who is God. Nevertheless, the existence of accidents is a weaker proof of the existence of the Creator than that of bodies (*Sharḥ al-uṣūl al-khamsa*, 39 f.).

Khalḳ is an attribute of God; it is an attribute of action and for the Mu'tazilīs, it is like the realisation of an act of goodness (*iḥsān*) or the exercise of justice (*'adl*). But it is necessary to know if God was thus eternally "creatory" (*lam yazal khāliḳan*), or if before the creation of the world He was, in pre-eternity, eternally "non-creatory" (*ghayr khāliḳ*). In general, the Ash'arīs think that *khāliḳ*, as a name of God, was eternally applied to him, but they do not press the analysis of the problem any further. All of the Mu'tazilīs do not deny that God was eternally "non-creatory", "non-providing", "non-operatory". They think that this is true of all those attributes of action which are unambiguously styled (*laysa fī na'tihi īhām*): in fact, God can be just either because justice is of His essence or because He exercises it. Thus, states al-Djubbā'ī, it must be said that He is eternally "not-just" and eternally "not-injust", for as long as the ambiguity lasts, that is, for as long as the object of his justice does not exist. But in the case of the creation there is no such ambiguity: the Creator is He who creates in reality. 'Abbād b. Sulaymān takes another stance: when he was told that God had never ceased to be *khāliḳ*, he denied it; he denied it also when he was told that God had never ceased to be *ghayr khāliḳ*. By this double denial, 'Abbād touched on the philosophical problem of the eternity of God and the temporality of his creation. He maintained in fact that God is before (*ḳabl*), but not before things or after things, just as it is not said that He is the First with regard to things (*awwal al-ashyā'*). The question of divine will was asked in this context of ideas. 'Abd al-Djabbār (*Sharḥ*, 440) writes that God is "willing" by an "innovatory" will (*bi-irāda muḥdatha*). We will not dwell here on his evidence, but will observe that if, as Abū Hāshim thinks (*Sharḥ*, 548), the act of creation is none other than the act of will (*al-khalḳ innamā huwa 'l-irāda*) and the act of creation cannot be realised without the realisation of a created being (*makhlūḳ*, *ibid.*, 549), this way lies the trap which philosophical reflection has spotted in connection with *muradjdjiḥ*, that is, the thing which swings the balance in favour of creation. Is it eternal? Creation must then be eternal. Is it not so? It must therefore be created in its term, and the question stretches back into infinity. Or, perhaps the *muradjdjiḥ*, eternal though it is, was hindered from acting? Therefore there must have been a hindrance, a *tark al-muradjdjiḥ*. And was that eternal or created? This notion leads to the same labyrinth as the previous one.

But theological speculations, by Mu'tazilīs at any rate, never went to these lengths. For them, the essential problem was to know what could be said of God from what the Ḳur'ān teaches. They had not the least doubt that the creation, as regards creatures, was "innovatory". Creation was produced in time and cannot be eternal. The question of the eternity of the creative act, however, underlined in their eyes the general problem of the attributes of essence and action. 'Abd al-Djabbār thought (*Sharḥ*, 115) that God had the power to create and to will by His essence; but saying that His will to create is *muḥdatha* does not imply that He needs a *muradjdjiḥ* in order to create, just as from our own experience (*fi'l-shāhid*, 116) we know that man does not need the will to will something in order to do so.

Relationships between attributes exist. *Khalḳ* is obviously connected with the Almighty (*Ḳudra*). This latter substantive is not Ḳur'ānic, but theologians consider that the word *ḳuwwa*, which occurs in verse II, 165 (*al-ḳuwwa li 'llāh djamī'an*), is its equivalent. God is *khāliḳ* in respect of *ḳādir* (Ḳur'ān, XVIII, 99, XXXVI, 81, XLVI, 33). 'Abd al-Djabbār writes: "The proof which demonstrates that God is the Innovator of the world proves this attribute, His Almighty Being, acting without intermediary" (*Sharḥ*, 151). This is why the Mu'tazilīs say that it was the Almighty who conceived us originally. Creation also proves that God is wise, through the

intermediary of the harmonious company of creatures (*taʾlīf*), the marvels of the animal world and the ordering (*tarkīb*) of the celestial spheres (*ibid.*, 157), in short, well-conducted processes (*al-afʿāl al-muḥkama*).

But the relationship between creation and knowledge did present the Muʿtazilīs with a serious problem. Did God know his creatures before He created them? Did He have any knowledge of what their essential being must be before He gave them existence? Is it permissible to speak of a "before" at all? We have already looked at ʿAbbād b. Sulaymān's thesis. The disciples of Abū 'l-Ḥusayn al-Ṣāliḥī claim that the Creator does not cease to be eternally "within the beforeness of things" (*lam yazal ḳablu 'l-as̲h̲yāʾ*), but not "before things" (*ḳabla 'l-as̲h̲yāʾ*). Following the *Maḳālāt al-islāmiyyīn*, most Muʿtazilīs nonetheless think that He has been eternally before things. Despite the various shades of opinion, this does not indicate a belief in the eternal simultaneity (*maʿiyya*) of God and things. Consequently, the preceding question is asked legitimately in this school. All the scholars agree that God is eternally knowing (*ʿālim*). But does He have eternal knowledge of the elements? Are those things which can be known (cognisables, *maʿlūmāt*) in fact known before they come into being (*ḳabla kawnihā*)? Furthermore, have "things" (a very general term corresponding to *mā*, Greek τι) never ceased to be (albeit as pure cognisables)? Various different answers are given. Al-Fuwaṭī, for example, thinks that God knows eternally what He is, but to say that He knows things from all eternity is tantamount to asserting their eternal co-existence with the Creator. It is not even possible to say that He knows what they will be, because that would be devising (*is̲h̲āra*) them and it is not possible to devise what exists. The name thing can only be applied to that which God has created or destroyed, *mak̲h̲lūḳ* and *maʿdūm*. The pure void (*ʿadam*) is not so named and cannot be known.

Abu 'l-Ḥusayn al-Ṣāliḥī, however, is of the opinion that God knows things eternally, but "in their moments" (*fī awḳātihā*), that is, that motionless eternity embraces all times in the flow of their moments. The knowledge of God is eternal, immutable, but the objects of this knowledge are subject to a temporal factor. ʿAbbād b. Sulaymān acknowledges that God has eternal knowledge of the creative act (*al-mak̲h̲lūḳāt*) elements or results of acts (*al-mafʿūlāt*). Al-D̲j̲ubbāʾī subscribes to a similar doctrine.

What does this mean? If God has knowledge of substances and accidents before they are created, why does He not also know the elements which are the substances that transmit the accidents? The stress laid on the ideas of action (*k̲h̲alḳ*, *afʿāl*) leads to the notion that God has eternal knowledge of the power which He has to create certain sorts of being without knowing these beings themselves in their concrete and transient reality. Eternal knowledge of the eternal Almighty Power to create, this creative knowledge, can neither, by the preceding definition, be an *a posteriori* knowledge of creation nor a knowledge of creation in the *a priori* of His Idea. In fact, these speculations encompass the problem of Platonism's exemplary Ideas, *mut̲h̲ul*, which the Muʿtazilīs reject. If such models existed in the divine mind, the creatures would resemble their Creator; but "nothing resembles God" (Ḳurʾān XLII, 11). If there was ever in Islām a *ḥadīt̲h̲* that God created man in his image, it was either rejected as unauthentic or interpreted as meaning that man was created in accordance with his own form.

These speculations led to the theory that essences were eternal in the state of nothingness (*fī ḥāl al-ʿadam*). He did not create them to give them an essential existence before making them exist in things, because to create essences in this way implies that they are known beforehand, and this leads once more to the Platonic error they were anxious to avoid. If to create is to bring into being out of the void, it is reasonable to suppose that the essences of created things, like the things themselves, are in the void before creation. They must at least have the determination to be possible, meaning by possible that which is not but could be. This corresponds to God's almighty power, and its *mumkināt* are *maḳdūrāt*. Thus what God knows eternally is His power. The problem, therefore, is to know if God creates all possible beings or if He makes a choice, or again if His power wears itself out in the creation of that which He creates. D̲j̲ahm thinks that the objects of God's power and knowledge have an end and a limit (*g̲h̲āya wa-nihāya*) and that His acts will end in a final act (*wa-li-afʿālihi āk̲h̲ir*). But, agreeing with Islam's deepest conviction, the Muʿtazilīs as a whole believe that God's power is limitless and that the created world does not exhaust it.

VI.—*K̲h̲alḳ in falsafa.*

As a general rule, the *falāsifa* used the word *k̲h̲alḳ* in the sense of creation *ab aeterno*. Proclus formulated this conception precisely in the Commentary on the Timaeus and it was elaborated upon by commentators on Plato and Aristotle. It was revived by al-Fārābī and Ibn Sīnā. Al-G̲h̲azālī criticised it in his *Tahāfut al-falāsifa*, and his theological arguments were refuted by Ibn Rus̲h̲d in *Fahāfut al-tahāfut* in the name of a pure Aristotelianism which differed significantly from the Avicennan ideas on this question [cf. ḲIDAM]. Ibn Sīnā often uses the term *ibdāʿ* [*q.v.*]. It is the extent to which a thing owes its existence to something other than itself, and is subordinate to this other thing and no other, without the intermediary of matter, instrument or time (*Is̲h̲ārāt, namaṭ*, v, section 9). "The Prime Innovator is an intellectual substance (*d̲j̲awhar ʿaḳlī*) which is innovated (*mubdaʿ*) in the true sense of the word. By his intermediary He (God) innovates an(other) intellectual substance and heavenly body (*ibid.*, VI, 21)." Here we have the theory of the emanation (*fayḍ*) of intelligences and spheres which comes directly from al-Fārābī. Quiddities exist in concrete form in things, abstractly in human thought and as an exemplar in God's knowledge. But, unlike the Platonic Ideas, these are not individualised as if divine thought was their "intelligible place" (τόπος νοητός). God had prior knowledge of the "exemplary representation of universal order" (*tamat̲h̲t̲h̲ul al-niẓām al-kullī*) from which this order is unfolded in its disposition and divisions (*ʿalā tartībihi wa-tafāṣīlihi*), in the intelligible course of its emanation. The two major Neoplatonic principles adopted by the Muslims are present here; that nothing can come from the One but one, and that God has no knowledge of details as such, neither in their material reality nor in their individual essence. Yet verse LVII, 3, which states that God is the Manifest and the Concealed, gives rise to the notion that worldly beings are simply manifestations of God (cf. *al-Fuṣūs fī 'l-ḥikma*: "In as much as He is manifest, he extracts All from His essence . . . His knowledge of All multiplies in a multiplicity which comes after His essence, and All is united by His essence in His unity . . . He is therefore manifest in as much as He is concealed and Concealed in as much as He is

manifest"). Ibn ʿArabī systematised this concept: Being had an interior reality and an exterior expression which are inseparable and dialectically united. This gives rise to the cosmological pair *khalḳ-ḥaḳḳ* corresponding to the ontological pair *ẓahir-bāṭin*. Creation is an expression and a manifestation of God; it is the "epiphany" of God. Beings are manifold mirrors of the divine Essence, which is absolutely one, ineffable and without end. The most beautiful names of God are the patterns from which and for which all the beings in the world are "created" (*Futūḥāt*, i, ch. 4). "The first divine step in creation was resolution (*taḳdīr*), even before the existence of creatures: it is the manner in which creatures are qualified in respect of being manifestations of Divine Reality (*bi-kawnihim maẓāhir li-'l-Ḥaḳḳ*)" (*ibid.*, ii, 11, ch. 3, question 30).

The Ikhwān al-Ṣafāʾ also believe in emanation, but of a different type than Ibn Sīnā's. They call the Creator (*al-Bārīʾ*) *muḥdith*, *mukhtariʿ*, *mubdiʿ*, *mubḳī*, *mutammim*, *mukammil*. The Intelligence, the prime innovator, has existence (*wudjūd*), sustenance (*baḳāʾ*), completeness (*tamām*) and perfection (*kamāl*). The soul, which comes after him, lacks perfection, while matter has only existence and sustenance. The soul achieves perfection through giving completeness to matter, which by this union has a body. Like Ibn Sīnā they believe that the creative, innovatory act of God affects directly His Intelligence alone, which receives all it requires at a single stroke (*dafʿatan*). Here the Ikhwān make an interesting distinction. When discussing the verse: "*A lahu 'l-khalḳ wa'-l-amr*" (VII, 45) they explain that *khalḳ* designates corporeal things and *amr* spiritual substances. Their general term for creation is *ibdāʿ*.

A distinction of this type is even more marked among later Ismāʿīlis. In *Kanz al-walad*, Ibrāhīm b. Ḥusayn al-Ḥāmidī also speaks of an *ibdāʿ* which arose from a single stroke connected with the Prime Innovator (*al-mubdaʿ al-awwal*) or Prime Intelligence; then came successively the first emanation (*al-Munbaʿith al-Awwal*), *al-Ḳalam*, which subsists in action, and the second emanation, which subsists in power. Both are derived from the Prime Innovator, which was not created (*mukhtariʿ*) as a result of "something which can be called an act of innovation", but which is "the very act of the Highest (*al-Mutaʿālī*), gushing from Him towards existence." The first emanation glorifies, worships and sanctifies the Prime Innovator, and together they testify to the Highest. It too is perfect in its essence and completed in its act. The second emanation, however, while of course glorifying the Prime Innovator, neglected to join it in testifying to the Highest. It also occupied second place and did not acknowledge the first emanation's prerogative. For all these reasons, although perfect in its essence, it is defective (*nāḳiṣ*) in its action, which is therefore power. Here we notice the appearance of a fault committed by the upper world, and the idea of a culpability that is inserted into the process of creation, which is not found in the Ikhwān's thought, gradually develops in later Ismāʿīlism. Evil is therefore born in the spiritual world, that of the *ʿuḳūl* and the angels, although at the "emanatory" (*inbiʿāthāt*) level and not that on the *ibdāʿ*. In his article "*The Ismaili Vocabulary of Creation*" in *SI*, xl (1974) 75-84), a study of the *Kitāb al-Yanābīʿ*, a manuscript of Abū Yaʿḳūb al-Sidjistānī's *Maḳālid* and al-Kirmānī's *Kitāb al-Riyāḍ*, P. E. Walker concludes: "In sum, the creation process ... divides into three distinct levels, each corresponding to the level of reality being created." He cites the *Maḳālid*, which makes a distinction between *aysiyya mukawwana*, *aysiyya munbaʿitha* and *aysiyya maḥḍa*. At the sensible level, things are created by the passage of time and things come to be out of things that were. On a higher plane, things in the intelligible world come forth by emanation or the special process of *al-inbiʿāth*. Above all is creation by *al-ibdāʿ*." He defines creation by *ibdāʿ* as "the radical coming to be of being from what is not being." It is "an eternal, timeless existentiation." H. Corbin compares this theory with al-Kindī's in *Hist. de la philos. isl.*, 220. The source of such innovation is a God there is a recognisable will, one which does not more can be said than what He is not, while adding that He is not what he is not." *Ibdāʿ* is outside the realm of intellectual speculation and is not a process arising from an intelligible act; this gave rise to the voluntarist conception of it. God innovates through a commandment that is also will (*amr-irāda*). Oddly enough, we have here in the use of words a reflection of Ibn Rushd, who, for other reasons, also thought that God, immobile Prime Mover that He is, moves the world through His *amr*. He acknowledges that in God there is a recognisable will, one which does not resemble man's will at all but is for Him analogous to it. Ibn Sīnā, and especially his commentator Naṣīr al-Dīn al-Ṭūsī, rejected the intervention of will in the creative act, for to will is to strive for something missing and God does not lack anything. He creates through pure generosity (*djūd*), which these philosophers consider the exact mean between a natural production (*ṭabīʿī*) and a willed creation.

VII.—*Creation in the thinking of the Shīʿī Imāms.*

Imāmī teaching introduces the concept of a pre-eternal creation of "forms of light, precosmic entities" (H. Corbin, *op. laud.*, 75). Many traditions speak of a pleroma of five of these: Muḥammad, Fāṭima, ʿAlī, Ḥasan and Ḥusayn. The universe is made from them, governed by them and constructed to receive their temporal manifestations. The Muḥammadan Light is the Prime Innovator of all creation. There are many accounts of this topic in *Biḥār al-anwār*. But all the *Imāms* are of a unique essence. In *Kāfī*, al-Kulaynī recounts a number of *ḥadīth*s about the creation of the *Imāms*: "God created us from the light of His majesty. Then He shaped our already created beings (*ṣawwara khalḳanā*) from clay kept hidden beneath His Throne and made this light dwell there. Thus we are creatures of light and men of light." Another *ḥadīth* speaks of a river flowing beneath the Throne; beneath the Spirits, the Spirit of Holiness and the Spirit which proceeds from God's Commandment (cf. Ḳurʾān, XVII, 85). God takes ten portions of clay, five from Paradise and five from earth. The *Imāms* are created from these and given breath by the two Spirits. Another text says that they are created from the sublimest of the ʿIlliyyūn (cf. Ḳurʾān, LXXXIII, 18-19). Clearly, while based on Ḳurʾānic verses, all these tales embody elements alien to Muslim Revelation and obviously showing Gnostic influence.

VIII.—*Supplementary questions.*

Some *ḥadīth*s state clearly that God created evil and the pains suffered by mankind. Theology, particularly Ashʿarī theology, supported this doctrine, justifying it by saying that creation does not entail that normal causality where effect issues from cause. God can therefore create evil, but it is not necessary to call Him evil. Associated with this question is that of the creation of human actions, a concept which the

Djabriyya upheld, which asserts that God created belief and unbelief, worship and disobedience. All that exists and is not God is created by God. Evil exists and is not God. The conclusion is inescapable.

Elsewhere, we find the doctrine of creation by the Word (the imperative ***kun***, the ***amr***), and creation by generosity (*djūd*). It should be added that some mystics, such as al-Ḥallādj, believed that God created by love. In al-Ḥallādj's eyes, says L. Massignon, concluding his study of the developments of *khalḳ* and *ʿishḳ*, "the mystery of creation is love, essence of the divine essence" (*Passion*[2], iii, 116 and index s.v. *khalḳ*.

KHALḲEVİ (Modern Turkish orthography, HALKEVİ, pl. HALKEVLERİ), "People's House", the educational and social centres founded by Muṣṭafā Kemāl (Atatürk) to replace the "Turkish Hearths" (see *Türk Odjaghi*) which were active, with some intervals, between 1912 and 1932. The *Odjaḳs* represented originally the Pan-Turkist ideology of the Committee of Union and Progress (*Ittiḥād ve Teraḳḳī Djemʿiyyeti* [*q.v.*]). Although the government continued to support them after the foundation of the Republic in 1923, they were gradually looked upon as an obsolete institution, out of keeping with Kemalism, which rejected "unrealistic" ideologies (i.e. Ottomanism, Pan-Islamism, Pan-Turanianism) and cultivated a nationalism based on the National Pact (*Mīthāḳ-i Millī*). Hence they were dissolved on 10 April 1930. In the meantime, the Republican People's Party (RPP, see DJUMHŪRIYYET KHALḲ FİRḲASİ) Convention of May 1931 formulated the six fundamental principles of Kemalism: republicanism, nationalism, populism, statism, secularism and reformism, which were going to be disseminated all over the country through a new organisation, the People's Houses. Founded on 19 February 1932, they developed rapidly and their number in cities and towns reached 379 in 1940 and 478 in 1950. In 1939 they were expanded into villages, where they were called *Halk Odası* ("People's Room", pl. *Halk Odaları*), and their number reached 4,322 in 1950. People's Houses and Rooms were under direct control of the RPP, which appointed the heads of the houses and closely supervised their activities which were divided into nine areas: (1) Language and literature, (2) Fine Arts, (3) Theatre, (4) Sports, (5) Social Assistance, (6) Adult Education, (7) Library and publication, (8) Rural development, and (9) Museums and History. In addition to *Ülkü* ("Ideal"), the organ of the Central office in Ankara, almost every important provincial People's House published a periodical which encouraged the study of local popular literature and folklore. The collections of these periodicals (available in the Milli Kütüphane or National Library in Ankara) contain invaluable materials for research in these fields. The most outstanding of these periodicals, *Ülkü* (1933-50) was, under the editorship of the eminent scholar M. Fuad Köprülü, until 1941 a leading review of serious research in the field of Turcology, becoming later a predominantly literary magazine. Although primarily meant for the masses, the People's Houses, which possessed fully equipped libraries and theatres, attracted mostly the educated classes, particularly students, teachers, doctors, lawyers, government officials, etc. Apart from their remarkable achievements in adult education, the People's Houses made a great contribution in the field of drama, as they gradually became a training ground for many actors, producers and playwrights. Following the end of the single-party régime in 1946, the RPP made great efforts to turn the People's Houses into non-party institutions. After the victory of the Democratic Party [see DEMOKRAT PARTI] in the general elections of May 1950, the RPP suggested to the government a compromise to "to save this heritage of Ataturk"; this was nevertheless rejected, and the People's Houses and Rooms were abolished on 8 August 1951 (by law No. 530) and all their property confiscated. After the Revolution of 27 May 1960, the military régime, which stood for the principles of Kemalism, on 12 April 1961 set up Turkish Cultural Associations (*Türk Kültür Dernekleri*). On 21 April 1963, these non-political associations changed their names to *Halkevi*. The revived People's Houses have not yet (1976) recovered their former important position in the country.

(Fahir Iz)

KHALKHA, the name of a river which rises on the western slopes of the Great Khingan in Mongolia and empties into the Buyir-Nor; this river appears in the Chinese atlases in the forms Ha-lo-hin or Ha-êrh-ha, which render the name Khalkha. It is mentioned in the 12th century by the "Kin dynastic history" (*Kin-she*) in ch. 94, 3, under the name Ha-lo, very likely an incomplete transcription of this name for the river. It is cited on a few occasions in the Mongol period and the Ming one, appearing very frequently in the Manchu period in the Chinese, Mongol, Russian and western sources. Naturally, it is cited in the Mongol period by Rashīd al-Dīn, ed. Berezin, in *Trudy VORAO*, xiii (St. Petersburg 1868), Persian text, 216, Russian tr. 134: *Ḳalā*, and xv (1889), text, 3, 1. 14, tr. 3. For the greater part of its course, this river forms the frontier between the province of Khingan (former Hei-long-kiang) and the Mongolian People's Republic. Since the 16th century, the term Khalkha has designated the northeastern part of Mongolia, from the actual province of Khingan to the eastern frontier of the province of Kobdo, and from the Russian frontier to the territory of Inner Mongolia. The name Khalkha is also used at the present time for the language spoken in almost all of the Mongolian Republic.

Sanang Setsen, *Geschichte der Ost-Mongolen*, ed. I. J. Schmidt, St. Petersburg 1829, 191, 197, and also the later Mongol chroniclers, speak of 12 Khalkha tribes, and they distinguish five "nearer tribes" and seven "further tribes" (*op. cit.*, 205, also 191, 285). *The Mong-ku she-hi p'u* "Genealogical tables of the Mongols" (L. Hambis, *Documents relatifs à l'histoire des Mongols*, Paris 1969, 235) relates thus: "The eighth son of Batu Mongkä Dayan-Ḫan was called Gärösanǰa; he himself had seven sons who lived among the Qalqa tribes, whence their name of the seven Qalqa banners". On the other hand, J. B. du Halde, *Description ... de l'Empire de la Chine et de la Tartarie chinoise*, The Hague 1736, 75, mentions thus in regard to the Khalkha: "This name is taken from the river Kalka. At Peking, they are called Kalka tase and Kalka Mongu". The ancestor of all the Khalkha princes was thus Gärösanǰa (or "Geresentse"), son of Dayan-Khān (d. 1543?); cf. on his genealogy, A Pozdneyev, *Mongolia i Mongoli*,

St. Petersburg 1896, i, 472, and especially the genealogy in the *Šara Tūdži*, ed. N. P. Shastina, Moscow-Leningrad 1957, 153-8. From the different branches of this princely family there derive the four *aymaks*, into which the Khalkha, from the east to the west, the *aymak* of Tsetsen-khān, that of Tushetu-khān, that of Sayin-noyan and that of Djasaktu-khān are nominally divided. The Mongol inscription of Dolon-Nor, inscribed on the occasion of the submission of the Khalkha to the emperor Kang-hi in 1691, published and tr. A. Pozdneyev, *op. cit.*, ii, 291 ff., mentions seven sons of "Geresentse", amongst whom the Khalkha were said to be divided in seven divisions (*khoshun*, in Arabic script *koshūn*); these would be the seven "further tribes" of Sanang Setsen. Around 1585, the Khalkha appeared to have adopted lamaist Buddhism, and the Dalai Lama appointed for them a "Kutuktu". The five "nearer tribes" are essentially the Djaraγut (< Djarōd) and the Bārin who live today in the southern part of the Khingan province on the borders of the former Manchuria (cf. B. Ya. Vladimirtsov, *Gde "pyat" Khalkhaskikh pokolenil—Tabun otoj γalγa* ["Where are the 'five tribes of the Khalkha'?"], in *Dokl. Ak. Nauk* (1930), 201-5).

After the proclamation of the Chinese Republic in 1911, the Khalkha proclaimed their independence, but despite Russian intervention, were brought into subjection again by the Chinese government. After many vicissitudes, and after having received aid from the Soviet army in order to suppress the attempts of Ungern-Sternberg, they became independent under the name of "People's Republic of Mongolia", thus putting an end in 1921 to the feudal era. Since this time, and despite the fact that China has never recognised this independence as *de jure*, as official maps show, the Khalkha have undergone a radical transformation through the revolution and through socialisation, having suffered bitterly during the Stalinist period.

(L. Hambis)

KHALKHĀL, in mediaeval times a district and town, now a district only, of Ādharbāydjān in northwestern Persia. It lies to the south of Ardabīl, and is bounded on the east by that part of the Elburz chain which separates Gīlān and Tālish in the Caspian coastlands from the upland interior of Ādharbāydjān, the mountains here rising to over 10,000 feet. Much of the district is drained by the left-bank tributaries of the Kïzïl Uzun affluent of the Safīd-Rūd. In mediaeval times it adjoined on the east the district of Ṭārom and was part of the general region called Daylam [*qq.v.*].

The actual name Khalkhāl is not known before Yākūt, but it may be connected with the Khalkhal which lay in eastern Transcaucasia and was, according to Greek and Armenian authors of the 2nd-5th centuries A.D., the winter residence of the kings and then of Albania or Arrān (Marquart, *Ērānšahr*, 118). Yākūt describes Khalkhāl as both a town and a district of lofty mountains and strong fortresses, being two days' journey from Ardabīl and seven from Qazwīn; he himself passed through it as he fled before the Mongols in 617/1220 (*Buldān*, ed. Beirut 1374-6/1955-7, ii, 381-2). Mustawfī (wrote 740/1339-40) is more informative. He states that Khalkhāl district has four component sub-districts, Khāmida-Bīl, Sadjasrūd, Andjīlābād and Mīsdjīn, that it comprises *ca.* 100 villages, with good pasture land and stocks of game, and that its revenue amounts to 30,000 dīnārs a year. The seat of its governors was formerly Fīrūzābād at the top of the Bardalīz Pass; this had been replaced by the town of Khalkhāl, now itself declined to little more than a village (*Nuzhat al-kulūb*, tr. 84). The site of this old capital of Fīrūzābād or Fīrūzān is marked, according to Minorsky, by the modern village of Kabakh.

The district of Khalkhal at present forms a *shahrastān* of the *ustān* or province of Ādharbāydjān East, and has four *bakhshs* or component sub-districts; the *Farhang-i djughrāfiyā-yi Īrān* (1330/1951) estimates the population of the whole district at 110,000. The administrative centre is Harawābād, which lies on a relatively easy route across the Tālish mountains to the Caspian, and which seems to have existed as such for some three centuries, though Minorsky surmised that the *al-H.r* of Bīrūnī's *Kānūn* was probably the modern Haraw(*ābād*), see his *Transcaucasica*, in *JA*, ccxvii (1930), 72. The present population is largely Turkish, ethnically and linguistically. The *Farhang*, ii, 104, also mentions a place Khalkhāliyān in Tālish, doubtless in origin a settlement of Khalkhālīs, and Mustawfī, tr. 206, records a fishing village called Khalkhāl on the eastern shore of the Caspian where the Oxus channel debouched from the direction of Khwārazm.

Bibliography: the information of the mediaeval geographers is given by Le Strange, *Lands of the eastern Caliphate*, 169-71, and Schwarz, *Iran im Mittelalter*, viii, 1173-4, see also Barbier de Meynard, *Dictionnaire géographique, historique et littéraire de la Perse*, 210-11, and Minorsky, *EI*[1] art. *Tārom*. For the modern period, see *Admiralty handbook, Persia*, 55, and *Farhang-i djughrāfiyā-yi Īrān*, iv, 193-4, 546-7.

(C. E. Bosworth)

AL-**KHALLĀL**, AḤMAD B. MUḤAMMAD B. HĀRŪN, better known as Abū Bakr al-Khallāl (d. 311/923), traditionist, legal scholar and theologian, and an outstanding figure in the history of Ḥanbalism.

Very little is known of his life, however. He was a pupil of Abū Bakr al-Marwadhī (d. 275/889), the author of the *K. al-Waraʿ*, himself one of the favourite pupils of Aḥmad b. Ḥanbal. He further followed the teachings of the *shaykh* ʿAbd Allāh (d. 290/903), younger son of Ibn Ḥanbal, who transmitted virtually the whole of his father's work and who arranged in an orderly fashion the materials of the *Musnad*. We also know that Abū Bakr al-Khallāl taught at Baghdād in the mosque of al-Mahdī, one of the city's most important ones. He died on the last Friday of Rabīʿ II 311/15 August 923, during the caliphate of al-Muktadir.

Abū Bakr al-Khallāl's literary and dogmatic theological work is almost all lost today, yet it was extremely important. Above all, he was the author of the *K. al-Djāmiʿ*, the first great *corpus iuris* of Ḥanbalism. In this, he brought together and classified all the responsa (*masāʾil*) of the *Imām* Aḥmad which had already been brought together into special collections. This enormous compilation ran to some twenty volumes, and was still in existence in the 8th/14th century, for both Ibn Taymiyya and Ibn al-Kayyim made abundant use of it.

It was for a long time considered that the *K. al-Djāmiʿ* was lost, but an important fragment is preserved in a British Museum ms. (Brockelmann, S I, 311; Sezgin, *GAS*, I, 511-12), of which we have given a short analysis in *Les premières professions de foi hanbalites*, in *Mélanges Louis Massignon*, Damascus 1956-7, iii, 17-22. In this text are contained equally the elements of a profession of faith, of a treatise on public law and of a legal work. It is aimed against

the traditional enemies of Ḥanbalism and, more generally, against the committers of evildoing and disorder (*fasād*) likely to threaten the caliphate and the Sunnī order.

He also composed various manuals setting forth Ḥanbali doctrines, whose importance is attested for us. Aḥmad b. Taymiyya tells us in his *K. al-Īmān* (ed. Cairo, 158) that Abū Bakr al-Khallāl's *K. al-Sunna* was the supreme work of the Ḥanbalī school for the study of its ideas on dogmatic theology (*uṣūl dīniyya*), whilst his *K. fi 'l-ʿIlm* was moreover the best Ḥanbalī manual for setting forth the *Imām* Aḥmad's doctrines in moral theology (*uṣūl fiḳhiyya*).

Al-Dhahabī also held the opinion that Abū Bakr al-Khallāl had written the first summa of Ḥanbalī doctrine, and emphasised the importance of his *K. al-ʿIlal* on the defects of *ḥadīth* (*Tadhkirat al-ḥuffāẓ*, iii, 7-8).

Finally, Abū Bakr al-Khallāl wrote a history of Ḥanbalism, of which a few leaves survive in the Ẓāhiriyya library at Damascus. The greater part of this work, however, was incorporated in two classic histories of Ḥanbalism which are still extant: the *Ṭabaḳāt al-ḥanābila* of the *ḳāḍī* Abu 'l-Ḥusayn (d. 526/1132) and the *Dhayl* of Ibn Radjab (d. 797/1395).

His work was transmitted, continued and to some extent completed by his chief disciple, Abū Bakr ʿAbd al-ʿAzīz b. Djaʿfar (d. 363/974), better known as Ghulām al-Khallāl (Dhahabī, *op. cit.*, ii, 119-27; *Ikhtiṣār ṭabaḳāt al-ḥanābila*, 334-40).

Abū Bakr ʿAbd al-ʿAzīz completed the *K. al-Djāmiʿ* by his *Zād al-Musāfir* in which he sets down the *masāʾil* which had escaped his master. The work is now lost, but we do have two texts by this same author. One is a *K. al-Amr*, preserved in the Ẓāhiriyya, in which there is a strong criticism of the life of luxury and ease enjoyed by the caliphal circles and the Turkish *amīr*s which formed part of them; the other is a list of *masāʾil* concerning which the author diverges from the doctrine of al-Khiraḳī (*Ṭabaḳāt al-ḥanābila*, ii, 75-118).

Bibliography: *Taʾrīkh Baghdād*, v, 112-13; *Ṭabaḳāt al-ḥanābila*, ii, 12-15; *Tadhkirat al-ḥuffāẓ*, iii, 7-8; Ibn Kathīr, *Bidāya*, xi, 148; *Ikhtiṣār* 295-7; *Shadharāt*, ii, 261; Laoust, *Le ḥanbalisme sous le califat de Bagdad*, in *REI* (1959), 79-80, 91.

(H. Laoust)

KHALWA, technical term of mysticism, meaning "retirement, seclusion, retreat" (from *khalā* "to be alone"), and, more specifically, "isolation in a solitary place or cell" (*zāwiya*, [*bayt al-*]*khalwa*), involving spiritual exercises. "Seclusion" or "solitude" in general (syns. *ʿuzla, waḥda, infirād, inḳiṭāʿ*) is one of the fundamental principles of asceticism (*zuhd*); and the predilection of early Muslim ascetics for the solitary way of life is a prominent topic of Ṣūfī hagiographic literature. The example of Christian asceticism is likely to have exercised a certain influence in the formation of this ideal, though orthodox Muslim authorities, e.g. Sufyān al-Thawrī (d. 161/778), are also quoted as favouring a life in separation from society (Abū Nuʿaym al-Iṣbahānī, *Ḥilyat al-awliyāʾ*, Beirut 1387/1967, vi, 376, ll. 20-2). The Ṣūfī Dhu 'l-Nūn al-Miṣrī (d. 245/860) learnt from a Syrian hermit about the "sweetness of seclusion, invocation (*dhikr*) and of secret conversation with God in private (*al-khalwa bi-munādjātihi*)" (*Ḥilyat al-awliyāʾ*, ix, 356, ll. 14-15). The same Ṣūfī is frequently quoted as "knowing of no better incitement to bring about spiritual sincerity (*ikhlāṣ*) than *khalwa*"; and another celebrated Ṣūfī, Abū Bakr al-Shiblī (d. 334/945), is said to have given this advice, "Cleave to solitude, abolish your name from the (memory of the) people, and face the wall (of prayer) until you die!" (al-Ḳushayrī, *Risāla*, Cairo 1379/1959, 55 f.; Abū Ḥafṣ al-Suhrawardī, *ʿAwārif al-maʿārif*, Beirut 1966, 210; cf. Rūmī, *Mathnawī*, i, vv. 643-9). However, the statements of classical early Ṣūfīs quoted by Ḳushayrī (*Risāla*, 54-6) and Ghazālī (*Iḥyāʾ ʿulūm al-dīn*, Cairo 1352/1933, ii, 197-216) reflect a wide spectrum of opinions as to the relative virtues of "solitude" and "community" (*ṣuḥba, mukhālaṭa*). Spiritual isolation from the world was considered higher than material seclusion; and it is clear that periodic retreats rather than permanent seclusion were practised in reality. The Sunna certainly does not favour the solitary way of life, and community life was, in fact, increasingly becoming a characteristic feature of Ṣūfism itself. Thus, Abu 'l-Ḥusayn al-Nūrī (d. 295/907-8) is said to have strongly commended "community" as a means to practise "altruism" (*īthār*) (ʿAṭṭār, *Tadhkirat al-awliyāʾ*, ed. Nicholson, London-Leiden 1907, ii, 46, and Abū Yaʿḳūb al-Sūsī of Baṣra (*ca.* 300/900) is quoted with this statement: "Only the strong ones are able to support solitude, whereas community life (*al-idjtimāʿ*) is more beneficial for people like us, so that each individual's behaviour is controlled by each other" (Abū Naṣr al-Sarrādj, *Kitāb al-lumaʿ*, ed. Nicholson, London-Leiden 1914, 207, ll. 19-21; Ḳushayrī, *Risāla*, 56, ll. 1-3).

In post-classical Ṣūfism, the situation is essentially the same. According to Abū Ḥafṣ al-Suhrawardī ([*q.v.*], d. 632/1234), it is community life which distinguishes the Ṣūfīs from the ascetics, but Suhrawardī explains this difference by claiming that the Ṣūfīs prefer community because, due to their spiritual "health", they are free from the temptations from which the ascetics tried to escape by choosing the solitary way of life (*ʿAwārif*, 108). Still, the Ṣūfīs' spiritual sustenance is "solitude" (*ibid.*, 221), and even in the "common room" (*bayt al-djamāʿa*) of the Ṣūfī *ribāṭ* [*q.v.*], they are supposed to sit on their prayer carpets as if these were their individual retreat (*ibid.*, 108). Besides, the Ṣūfī establishment often has individual cells; and the practice of periodic retreats, which plays an important role in Ṣūfī education (*tarbiya*), is developed into a real institution. Suhrawardī devotes three chapters of the *ʿAwārif* to its description (*op. cit.*, 207-27). Special emphasis is also placed on it by the Kubrawiyya, the Shādhiliyya, the Ḳādiriyya and, of course, the Khalwatiyya. This *khalwa* involves the "Major Holy War" (cf. Rūmī, *Mathnawī*, v, vv. 3785-6), i.e. ascetic discipline, notably vigils, gradually increased fasting, and concentration of the mind, mainly by means of *dhikr* [*q.v.*]. On entering *khalwa*, one should free oneself from wordly possessions and be in a state of ritual purity. Being in the cell should evoke the idea of being in the grave (ʿAmmār al-Bidlīsī, *ca.* 600/1200, in Kubrā, *Fawāʾiḥ al-djamāl*, ed. F. Meier, Wiesbaden 1957, text 60, introd. 32); the cell itself should be a dark room prohibiting the entering of daylight. Its purpose is the "closing up of the external senses" and the "opening of the internal senses" (Kubrā, in M. Molé, *Traités mineurs de Naǧm al-Dīn Kubrā*, in *Annales Islamologiques*, iv (1963), 25; cf. *Fawāʾiḥ al-djamāl*, text 18), i.e. readiness for mystical experiences. However, warnings against attaching too much value to such experiences (*waḳāʾiʿ al-khalwa*) are voiced frequently; the guidance of a spiritual director is, therefore, considered vital. According to Suhrawardī, visionary experiences and extrasensory perceptions in general may serve a certain purpose

on the mystic way, but the ultimate goal of *khalwa* is rather the experience of the "*dhikr* of the divine Essence" through consubstantiation (*tadjawhur*) of its light in the heart (*ʿAwārif*, 216, 219).

This institutionalised seclusion is normally limited to periods of forty days, which is why it is also called *al-arbaʿīniyya*, or *čilla* (from Persian *čihil*); it should not be interrupted except for ritual community prayers, and it should be repeated once every year (*ʿAwārif*, 221). It is conceived as an *imitatio prophetae*, the prophet Muhammad's custom to retreat in a cave in Mt. Ḥirāʾ before he received the Ḳurʾānic revelation being taken as a traditional basis. However, the number forty is linked to the example of other prophets as well, especially Mūsā (cf. Ḳurʾān VII, 138/142). It also symbolises the "forty stages" of the universe, which is the scene of the mystic "journey" (*ʿAwārif*, 207 f.; ʿAṭṭār, *Muṣībat-nāma*, cf. H. Ritter, *Das Meer der Seele*, Leiden 1955, 18 ff.).

At the same time, the *khalwa* extends ideally over the whole life of the Ṣūfī (*ʿAwārif*, 221, 226). The practice of retreat is only a means to an end, and the goal of Ṣūfī education is *khalwa* "in spirit" (*khalwat al-maʿnā*), i.e. being spiritually with God in spite of material presence in the world (Kubrā, *Fawāʾiḥ al-djamāl*, 60). The same idea is expressed in the Naḳshbandī formula of *khalwat dar andjuman* (solitude in society). Similarly, Ibn ʿArabī is not speaking of the common practice of retreat when he considers *khalwa* as the highest *maḳām*; he takes it to mean the absolute "emptiness" (*khalāʾ*) of the Perfect Man, i.e. the state of being "filled" with the Absolute (*al-Futūḥāt al-Makkiyya*, Cairo 1270, ii, 166 ff.).

KHALWATIYYA (Turkish: Halvetiyye), a highly ramified and widespread *ṭarīḳa* [*q.v.*].

History and branches. The Khalwatiyya is mentioned as a branch of al-Abhariyya al-Zāhidiyya by Kamāl al-Dīn Muḥammad al-Ḥarīrī (*Tibyān*, i, 343b), who gives as its founder ʿUmar al-Khalwatī (born in Lāhidj, Djīlān, died in Tabrīz, 800/1397). However, Muṣṭafā Kamāl al-Dīn al-Bakrī [*q.v.*] stresses that ʿUmar's *shaykh*, Muḥammad b. Nūr al-Bālisī, who was called al-Khalwatī because of his frequent retreats, is the first in the Khalwatiyya *silsila* (cf. Muḥammad Ḥasanayn Makhlūf al-ʿAdawī, *Awrād al-Sāda al-Khalwatiyya*, Cairo 1963, 67 and ʿAbd al-Khāliq al-Shabrāwī, *Sirādj Ahl al-Bidāyāt fī 'l-Taṣawwuf*, Cairo 1366, 180). Khalwatī literature mentions Yaḥyā al-Shirwānī al-Bākūbī (born in Shemākhā, Shirwān, d. in Bākū, 869/1464) as the second *pīr*, the first being ʿUmar. There are three *shaykhs* in between the two in the Khalwatiyya *silsila*. Al-Shirwānī is the author of the *Wird al-Sattār*. Its reading is among the obligations imposed upon the members of most branches.

H. J. Kissling (*ZDMG*, ciii (1953), 240), has argued that al-Shirwānī was the real founder. He discarded the suggestion of G. Jacob (Türkische Bibliothek, 9. Band, 80) that the origins of the Khalwatiyya were in the Anatolian *Akhī*-fraternities [*q.v.*]. Among ʿUmar al-Shirwānī's *khalīfas*, who further shaped and spread the order, were ʿUmar Rūshānī (d. 892/1486 in Tabrīz) and Yūsuf al-Shirwānī (d.?). The former became a protégé of the Aḳ Ḳoyūnlu ruler, Uzun Ḥasan, in Tabrīz. He initiated Muḥammad Demirdāsh al-Muḥammadī (d. 929/1524) and Ibrāhīm Gulshanī [*q.v.*], each of whom founded their own orders, al-Demirdāshiyya and al-Gulshaniyya respectively, both with their centres in Cairo. Two branches of the latter order gained some renown: al-Sezāʾiyya, founded by Ḥasan Sezāʾī (d. 1151/1738, Edirne) and al-Ḥāletiyya, founded by Ḥasan Ḥāletī ʿAlī Aʿlā (d. 1329/1911, Edirne). Among the *khalīfas* succeeding Yūsuf Shirwānī the most notable are Shams al-Dīn Aḥmad Sīvāsī (d. 1006/1597 in Sīvās) and ʿAbd al-Aḥad Nūrī al-Sīvāsī (1061/1650 in Istanbul). Both established their own *ṭarīḳas*, known as Shamsiyya [*q.v.*] and Sīvāsiyya.

Initially, the order spread in Anatolia mainly in the Amasya-region when it was governed by Bāyezīd II. Here, the most notable *shaykh* of the order was Meḥmed Djamāl al-Dīn al-Aḳṣarāʾī, known as Čelebī Efendi (d. *ca.* 903/1497, Tābūt Ḳorusu near Damascus). This branch was originally called al-Djamāliyya after him. After the death of his successor, Yūsuf Sünbül Sinān al-Dīn (d. 936/1529 Istanbul), it became known as al-Sünbüliyya. Its history until the middle of the 17th century and its involvement in Ottoman politics have been dealt with by Kissling, *op. cit.*, 233 f. The stages of the order's early history, subsequent to its spread in the region of Amasya, are the following: I.—a spread westwards during the reign of Bāyazīd II (886-918/1481-1512), when the centre of the order's activity shifted from Amasya to Istanbul; II.—stagnation during the reign of Selīm I, concomitant with the increasing Sunnī orientation of the Empire and connected with the conflict with the increasingly Shīʿī-influenced Persia (the names of five Shīʿa *Imāms* were dropped from the *silsila*). III.—a new florescence during the reign of Sulaymān the Magnificent (926-74/1520-66) and Selīm II (974-82/1566-74). Many personalities prominent in the administration (e.g. the Djamālzādes and the grand-vizier Luṭfī Pāsha [*qq.v.*]) had links with the order and favoured it.

In this era the Shaʿbāniyya, named after Shaʿbān Velī al-Ḳasṭamūnī (d. 976/1568), became prominent. Its most notable branch, al-Ḳarābāshiyya, was founded by ʿAlī Ḳarābāsh (d. 1097/1685), who had been active in the Ḳasṭamonu and Ankara areas. His pupil Naṣūḥī Meḥmed (d. 1130/1717, Istanbul) established his own *ṭarīḳa*, al-Naṣūḥiyya, from which the Čerkeshiyya, named after Čerkeshī Muṣṭafā (d. 1229/1813, Čerkes), separated itself. The Khalīliyya and the Ibrāhīmiyya are branches of the latter *ṭarīḳa* and were founded by Ḥādjdjī Khalīl Geredeli (d. 1229/1881, Gerede) and Ḳušadalī Ibrāhīm (d. 1283/1866-7, Scutari) respectively (cf. H. J. Kissling, *Šaʿbān Velī und die Šaʿbāniyye*, in *Serta Monacensia, Festschrift Babinger*, Leiden 1952, 86 ff.).

In the first half of the 12th/18th century a branch of the Ḳarābāshiyya emerged under the leadership of Muṣṭafā Kamāl al-Dīn al-Bakrī and called al-Bakriyya after him. One of his *khalīfas*, ʿAbd al-Karīm Kamāl al-Dīn (d. 1199/1784, Gāza), established his own branch, al-Kamāliyya. Another *khalīfa*, Muḥammad ʿAbd al-Karīm al-Sammān (d. 1189/1775, Mecca), also founded his own order, al-Sammāniyya which spread to the Sudan and Ethiopia, and from Mecca into South-East Asia. A branch of this *ṭarīḳa*, al-

Fayḍiyya, named after Fayḍ al-Dīn Ḥusayn Ghunaym, was active in Istanbul, where its founder lived most of his life and died in 1309/1891 (cf. *Tibyān* i, 306a). Al-Bakrī's *khalīfa* and direct successor in Egypt was Muḥammad b. Sālim al-Ḥifnī (d. 1181/1767, Cairo). The spectacular spread of al-Khalwatiyya in Egypt in the 19th and 20th century is due to the latter's students and their *khalīfas* (cf. al-Djabartī, *ʿAdjāʾib*, i, 298). For details on the various branches which developed in Egypt, see F. de Jong, *The Ṣūfī orders in post-Ottoman Egypt* (in preparation).

Out of a Syrian branch of the Djamāliyya, introduced in Damascus by ʿUways al-Ḳaramānī, a *khalīfa* of Čelebi Efendi, two *ṭarīḳas* emerged: al-ʿAssāliyya, named after Aḥmad b. ʿAlī al-Harīrī al-ʿAssālī (d. 1048/1638, Aleppo; cf. al-Muḥibbī, *Khulāṣat al-Athar*, i, 248 f.) and al-Bakhshiyya, founded by Muḥammad al-Bakhshī al-Ḥalabī al-Baḳfalūnī (d. 1098/1686, Mecca), which had its centre in the Ikhlāṣiyya *tekke* in Halab (cf. *Tibyān*, i, 108b). The remaining Khalwatiyya branches all have *silsilas* going back to Aḥmad Shams al-Dīn b. ʿĪsā al-Marmarāwī al-Djigitbashī (d. 910/1504, Maghnisa). He had founded his own order, al-Aḥmadiyya, which had spread mainly in and around Maghnīsa. His *shaykh* ʿAlāʾ al-Dīn ʿUshāḳī (d. 890/1485), was a student of Ibrāhīm Ḳayṣariyyalī, who was initiated by Meḥmed Erzindjānī, one of Yaḥyā al-Shirwānī's *khalīfas*.

Further details, including the *silsilas* of most of these orders, are given by Kissling. From al-Ḥarīrī's mention of his initiation into the majority of the branches, which had emerged prior to the middle of the 19th century, it appears that many had active nuclei or propagators around that time. Anderson, in *MW*, xii, 1922, 53 f., reports the number of active *tekkes* of the various branches in Istanbul in 1921 as follows: Djarrāḥiyya (10), Shaʿbāniyya (25), Sünbüliyya (18), Sinānivya (3), ʿUshāḳiyya (5), and four *tekkes* of unspecified branches.

Doctrine and practice.—The writings of the *mashāyikh* of the order manifest in various degrees the influence of Ibn al-ʿArabī's thinking; the position taken with respect to the idea of *waḥdat al-wudjūd* varied over periods of time within the same branch and between the branches. Meḥmed Niyāzī al-Miṣrī, e.g. taught that *waḥdat al-wudjūd* is restricted to certain levels of being (cf. *Tibyān*, iii, 132a). Ḥasan Riḍwān (d. 1310/1892), a *khalīfa* of Ibrāhīm al-Shalḳānī al-ʿImrānī, openly adhered to Ibn al-ʿArabī's ideas (cf. *Rawḍ al-Ḳulūb al-Mustaṭāb*, Cairo 1332). Muṣṭafā Kamāl al-Dīn al-Bakrī opposed monist views altogether (cf. E. Bannerth, *La Khalwatiyya en Egypte*, in MIDEO, viii (1964-6), 11 f.). He stressed the separate identities of God and the human soul, hence conceiving unity with the divine as a conjunction (*ittiṣāl*). Shīʿa conceptions have occasionally been incorporated and elaborated, e.g. by Dāʾūd al-Shāmī (cf. Kissling, *ZDMG*, ciii, 260; idem, *Zur Geschichte des Derwischordens der Bayrāmijje*, in *Südostforschungen*, xv (1956), 248-9). In early as well as later Khalwatī writings it is stressed that the order is basically the *ṭarīḳa* of al-Djunayd (cf. Tibyān, ii, 65a; Sirādj, 160; al-ʿAdawī, 67; Muḥammad b. ʿAbd al-Mutaʿāl al-Buhūtī, *Itḥāf al-Bashar bi-Sharḥ Wird al-Saḥar*, Cairo 1953, 13). The foundations of this order are considered to be voluntary hunger (*djūʿ*), silence (*samṭ*), vigil (*sahar*), seclusion (*iʿtizāl*), *dhikr*, meditation (*fikr*), permanent ritual cleanness and tying (*rabṭ*) one's heart to one's *shaykh*. In some treatises only the first four are mentioned as such (cf. Muḥammad al-Munīr al-Sammanūdī, *Tuḥfat al-Sālikīn*, Cairo 1934, 26 f.).

In most of the Khalwatiyya *ṭarīḳas* periodic retreat, *khalwa*, is required of the *murīd*. The shortest period recommended is three days and the longest forty days (cf. al-Bakrī, *Hadiyyat al-Aḥbāb fī-mā li'l-Khalwa min al-Shurūṭ wa 'l-Adāb*, in *Sirādj*, 179 f.). Various sets of rules, regulating the *murīd*'s behaviour before, during and after the period of *khalwa*, have been elaborated (see, e.g. E. Bannerth, *Über den Stifter und Sonderbrauch der Demirdâšiyya-Ṣûfis in Kairo*, in *WZKM*, lxii (1969), 125 f., for the *khalwa* rules of this order). Opinions about who may enter the *khalwa* have varied among the various *ṭarīḳas*. According to some branches it is necessary to prepare for initiation, while others hold it to be appropriate only for those who have reached a specific *maḳām* or stage of the soul [see ḤĀL], generally the fifth. *Al-ʿuzla* is recommended to those in the lower *maḳāms* (cf. ʿAbd al-Ḥāfiẓ ʿAlī al-Azharī, *Luḳṭat al-ʿIdjlān wa-Tuḥfat al-Ikhwān*, Cairo 1323, 5, 23). In al-Khalwatiyya seven *maḳāms* are postulated. To each *maḳām*, *dhikr* of one of the seven names (*al-asmāʾ al-sabʿa*), viz. *al-Tahlīl, Allāh, Hū, Ḥayy, Ḥaḳḳ, Ḳayyūm* and *Ḳahhār* is appropriate. On this point, al-Khalwatiyya differs fundamentally from al-Shādhiliyya; in the latter only three *maḳāms* are postulated. The first *maḳām* of *al-nafs al-ammāra*, is conceived as a part of the preparatory stage of *tawba* and only the fifth, sixth and seventh *maḳām* are conceived as reality. These cannot be reached by *idjtihād* but only by divine grace (cf. ʿAlī Muḥammad ʿĀmir al-Mughāzī, *al-Fuyūdāt al-Ihsāniyya wa'l-Tadrīdjāt al-Insāniyya fī Sayr al-Tarīḳ al-Khalwatiyya*, Cairo 1301, 15, 21).

Dhikr of the names is surrounded by a number of ritual prescriptions set out in the manuals. For communal *dhikr* exercises or *ḥaḍras*, similar rules apply, although the ritual itself, the formulas, and the names recited may be different. Aḥmad Shams al-Dīn b. ʿĪsā al-Marmarāwī (see above) is credited for having added five names, (*al-furūʿ*: *Wahhāb, Fattāḥ, Wāḥid, Aḥad, Ṣamad*) to be recited after completion of the other seven names (*al-uṣūl*). This practice is found in the Aḥmadiyya branches. It was incorporated by some Bakriyya branches as well (cf. Muḥammad Fuʾād al-Ḍayfī, *Madjmūʿ al-Fawāʾid al-Muhimma*, Cairo 1930, 108 f.; Aḥmad b. Aḥmad al-Djunaydī al-Maymūnī, *Risālat al-Sayr wa 'l-Sulūk ilā 'llāh ...*, Cairo 1308). There are differing opinions about the *dhikr* of names not transmitted by the *shaykh* to the *murīd*, ranging from the point of view that any name is allowed as well as any noise or sound to the view that only the *dhikr* of a clearly pronounced *allāh* is permissible (cf. Muḥammad b. ʿAbd al-Karīm al-Sammān, *al-Nafaḥāt al-Ilāhiyya fī Kayfiyyat Sulūk al-Ṭarīḳa al-Muḥammadiyya*, Cairo 1326, 26; *Tibyān*, iii, 59 f.; al-Munīr, *Tuḥfa*, 21). In addition, other prayer-tasks, fasting and nightly vigils may be required from the *murīd*, which differ considerably between the branches. An element of ritual which all Khalwatiyya *ṭarīḳas* have in common is the reading of Yaḥyā al-Shirwānī's *Wird al-Sattār* at set times and occasions. It consists of three sections which glorify the oneness of God, the Prophet and his prophethood, and the Companions. According to Muṣṭafā Kamāl al-Dīn al-Bakrī, it is the pivot of Khalwatiyya ritual. It should be read aloud by a single person, while the others are listening; this is held to be more beneficial than reciting. It equals silent *dhikr*, the *dhikr* of the heart. The external union on these occasions is believed to lead to an internal

union, which equals *mudjāhada* and should lead to *mushāhada* (cf. al-Bakrī, *al-Manhadj al-ʿAdhb al-Sāʾigh li-Warrādihi fī Dhikr Ṣalawāt al-Ṭarīḳa wa Awrādihi*, Cairo 1332, 145 f.). In other words, participation in the community is conceived of as *murāḳaba* and may lead to *mushāhada*. Here lies a basic difference with other *ṭarīḳas*, e.g. al-Naḳshabandiyya. It is the *shaykh* who, as object for *murāḳaba* of the *murīd*, leads to *mushāhada*. Some Khalwatiyya groups however take the latter position, e.g. al-Djūdiyya (cf. Djābir Aḥmad Muʿammar, *Manhal al-Warrād wa Bahdjat al-Irshād li-man arāda Ṭarīḳa al-Rashād*, Cairo, n.d., 430), where this is expressed by stating that the *fatḥ al-murīd* is proportionate to one's belief in his *shaykh*. Within Turkish Khalwatiyya branches, notably within the Ḳarābāshiyya, the role of the *shaykh* in guiding the *murīd* is conceived of as necessarily a passive one. He is for the *murīd* what the *rūḥ* is for the body. If it goes, all is gone. He should not approve or disapprove of the *murīd*'s behaviour even if the latter were to become *kāfir* (cf. *Tibyān*, iii, 59b).

Restrictions upon membership existed within the Aḥmadiyya and its branches, which did not initiate illiterates. This was held to break off *al-fayḍ* [*q.v.*] and to diminish the light of gnosis (cf. *Tibyān*, i, 53).

Present-day situation.—In Albania the government recognised in 1945 the principal *ṭarīḳas* as independent religious communities with their own leaders. Leader of the Khalwatiyya became ʿAlī Hormova (cf. S. Skendi, *Albania*, New York 1956). This arrangement was brought to an end by the Albanian Cultural Revolution in early 1967. In Macedonia and Kosovo-Methohija 25 Khalwatiyya *tekkes* were functioning in 1939 (cf. G. Palikrusheva, *Dervishkiot red Khalveti vo Makedoniya*, in *Zbornik Shtipskiot naroden Muzey*, i (1958), 105-19). In 1971 *ḥaḍras* took place regularly in *tekkes* in Ohrid, Struga, Kičevo, Shtip (all Ḥayātiyya) and in Peč, Djakovice, Orahovac and Prizren (all Ḳarābāshiyya). For a description and historical information about the latter two *tekkes* see Mücahit Asim, *Kosova'da Esirgenmiş Islam Anıtları*, Çevren ii, 8, Prishtina 1974. In Greek Thrace active groups with a *tekke* existed in Xanthi, Komotini and Echinos.

No data are available for the Khalwatiyya in Turkey after 1925, when the orders were abolished and all *tekkes* and *zāwiyas* were closed. In the Middle East various Khalwatiyya groups are active in Lebanon (Beirut, Tripoli) and Syria (Aleppo, Damascus). Some of these groups have a *silsila* going back to Muṣṭafā b. Muḥammad b. al-ʿAzūz, founder of the Raḥmāniyya *zāwiya* in Naftā (Tunisia); cf. *al-Bayān fī ʿAmal al-Lisān*, Beirut 1964, 63-4. The Egyptian Khalwatiyya al-Djunaydiyya claims substantial membership in Syria (cf. *Madjalla al-Islām wa 'l-Taṣawwuf*, i/5, Cairo 1958, 82). Khalwatiyya and other *ṭarīḳas* active in Egypt are listed in Muḥammad Maḥmūd ʿAlwān, *al-Taṣawwuf al-Islāmī*, Cairo 1958, 71 f. In addition to these *ṭarīḳas* and the *ṭarīḳas* mentioned by Bannerth, the following branches were active in Egypt in 1973: al-Dawmiyya (two branches), al-Djūdiyya, al-Fuʾādiyya, al-Ḥaddādiyya, al-Ḳaṣabiyya, al-Ḥayātiyya, al-Nimriyya, al-Sharḳāwiyya, al-Shawādifiyya and al-ʿImrāniyya al-Ḳubaysiyya. Al-Sammāniyya has its own *shaykh al-sadjdjāda* for Egypt. Some Egyptian Sammāniyya, however, consider themselves as a part of one or another of the Sudanese branches of this order. In Ethiopia, it is the only active Khalwatiyya branch. Little is known about its present functioning beyond what is reported by Trimingham (*Islam in Ethiopia*, Oxford 1952, 247). Nothing is known about the present state of al-Sammāniyya in Indonesia. L. P. Fauque (*Où en est l'Islam traditionel en Algérie?*, in *L'Afrique et l'Asie*, lv (1961), 17-22) provides the most recent information on al-Raḥmāniyya, and he states its membership in Algeria as 230,000.

Bibliography: in addition to the references in the text, see the literature mentioned in the articles by Kissling and the bibliography to Bannerth's article, which gives information about Khalwatiyya orders active in present-day Egypt and includes a translation of Aḥmad al-Dardayr, *Tuḥfat al-Ikhwān* (a set of rules for the *murīd*). Literature not mentioned in these studies may be found in B. G. Martin, *A Short History of the Khalwatiyya order of Dervishes*, in N. R. Keddie (ed.), *Scholars, Saints and Sufis, Muslim Religious Institutions since 1500*, Berkeley-Los Angeles, 1972, 275-305, which is largely based upon the work of Bannerth and Kissling. A Turkish source not mentioned by these authors is the anonymous *Ṭarīḳet ʿAliyye Khalwatiyyeniñ uṣūlu*, Istanbul 1288. For literature and detailed information about the Khalwatiyya orders in Egypt, see F. de Jong, *The Ṣūfī Orders in post-Ottoman Egypt* (in preparation). Muḥammad al-Makkī b. ʿAzīz, *al-Nafaḥāt al-Raḥmāniyya fī Manāḳib Ridjāl al-Khalwatiyya*, Istanbul 1327 (partly published), 11-8, gives a list of Khalwatiyya writings. Kamāl al-Dīn Muḥammad al-Ḥarīrī (d. 1299/1882), *Tibyān Wasāʾil al-Haḳāʾiḳ fī Bayān Salāsil al-Ṭarāʾiḳ*, Mulḥaḳ Fātiḥ, mss. 430-2, is as valuable for the study of the Khalwatiyya as it is for the study of other orders. Muḥammad b. Ṣāliḥ al-Būsnawī al-Khāndjī, *al-Djawhar al-Asnā fī Tarādjim ʿUlamāʾ wa Shuʿarāʾ Būsna*, Cairo 1349, contains a number of biographies of Khalwatiyya *shaykhs* based mainly upon the sources mentioned by Kissling. It gives some original data. Meḥmed Tewfīḳ, *Monastir wilāyeti taʾrīkhčesi*, Monastir 1328 (cf. Babinger, 409), gives some information about the Ḥayātiyya in Macedonia and contains a section on Meḥmed Ḥayātī, see p. 234 of the more easily-accessible Serbian translation, *Kratka Istorija Bitolskog Vilajeta*, Belgrade 1932, 190-244. For detailed information about Raḥmāniyya *zāwiyas* in Algeria and Tunisia, see P. J. André, *Contribution à l'étude des confréries religieuses musulmanes*, Algiers 1956, 263-89.

(F. de Jong)

KHAMĀSA [see muzāraʿa].

KHAMBĀYAT, modern Cambay in Gudjarāt, western India. Variously spelt in Arabic as Kanbāya, Kanbāyat, Kanbāyā, Kinbāya, Kinbātā, the name is derived from Khambhāt or Khāmbha (< *Stambhatīrtha*, i.e. "the place of pilgrimage of the pillar"). According to the Muslim geographers, it was situated about 3 *farsakhs* (9 Arabian miles) from the sea. As one of the most important ports of western India during the mediaeval period, Cambay was famous for the beautiful sandals (*al-niʿāl al-kanbātiyya*) manufactured there. It also produced rice, fine honey and a variety of fruits, but had no date-palms.

Muslims seemed to have settled down in Cambay from early Islamic times; they had Friday mosques and Islam was practised by them freely. Al-Masʿūdī, who visited the town in 303/915, says that the local governor was a Brahmana named Bāniyā (probably Prachanda, of the Brahmavaloka), who was fond of religious discussions with the Muslims and represented *al-Balharay* (Rāshṭrakūṭa Indra III, 914-22 A.D.). During the 11th and 12th centuries A.D., Cambay appears as one of the chief ports of the Anhilvāra

kingdom, and at the time of its conquest by the Muslims in 697/1298, it is said to have been one of the richest towns in India. Ibn Baṭṭūṭa describes it as one of the most beautiful towns of India, with fine mosques and gorgeous buildings constructed by the resident Muslim merchants. It was annexed by the Mughal Emperor Akbar in 981/1573. Its decline as a port and commercial town, which took place during the 11th/17th century, was mainly due to the silting-up of the gulf and the swift high-tide or "bore".

(S. MAQBUL AHMAD)

KHAMĪS MUSHAYṬ, also Khamīs ibn Mushayṭ, the main town in interior 'Asīr [*q.v.*] in Saudi Arabia, between al-Ḥidjāz and the Yaman, 22 miles (32 km) almost due east of Abhā [*q.v.*], capital of 'Asīr, on the east bank of the principal branch of Wādī Bīsha, part of the main inland drainage system from al-Sarāt; situated at 42° 45′ long. and 18° 20′ lat., and 6000 feet (1950 m) of altitude. It is more a cluster of villages than a town, and the name is derived from the Mushayṭ clan of the Rushayd section of Shahrān, the leaders of which have been the titular heads of the Shahrān tribe over an unrecorded but probably very long time. To the east and northwest, the Shahrān are by far the most important tribe, while towards the southeast elements of Ḳaḥṭān are also found. Most of the settlements of Khamīs Mushayṭ cluster around the villages of Ḍarb and Ḳambar, and the Thursday (*khamīs*) market is held on the plain between these two villages. Khamīs Mushayṭ is important for strategic and economic reasons. Its easy access to Abhā, Ẓahrān, and Nadjrān made it a favourite staging point for military campaigns, e.g. those of 1338/1920 and 1353/1934. Its agricultural produce grows on terraces to the west and on gently sloping land to the east, irrigated by wells and some eastward-draining monsoon precipitation, and is quite varied, including spring wheat, autumn millet, alfalfa, and a number of fruit trees such as apricots, peaches, plums, pomegranates, and figs. Cattle are more common than camels, and dates must be imported. Khamīs Mushayṭ has thus become the most important interior trading centre between Bīsha and the Yaman. It is also worthy of note that it is here where a traveller from the north first encounters the multiple-storey style of architecture characteristic of South Arabia. Since the early 1960s, Khamīs Mushayṭ has experienced great growth in size and importance with the development of all-weather roads, a main airfield, and the establishment of a military garrison.

(F. S. VIDAL)

KHAMR (A.), wine. The word, although very common in early Arabic poetry, is probably a loanword from Aramaic. The Hebrew *yayn* has in Arabic (*wayn*) the meaning of black grapes. The question has been fully treated by I. Guidi in his *Della sede primitiva dei popoli semitici*, in *Memorie della R. Acad. dei Lincei*, series iii, vol. iii, 603 ff.

1. JURIDICAL ASPECTS

Arabia and the Syriac desert are, in contradistinction to Palestine and Mesopotamia, not a soil fit for the vine; there are, however, exceptions, among which may be mentioned al-Ṭā'if (see H. Lammens, *Ṭāif*, 35 ff. = *MFOB*, viii, 146 ff.), Shibām and other parts of Yaman. Wine, probably of an inferior quality, is also mentioned in Medina (see below). Usually, however, it seems to have been imported from Syria and 'Irāḳ; in early Arabic poetry the wine-trade is chiefly connected with Jews and Christians, who pitched their tent (*ḥānūt*, also a loanword from Aramaic) among the Bedouins and provided it with a sign denoting its character. In it entertainment sessions were held, in the company of female singers who often also belonged to the establishment. The wine was kept in jars or skins, provided with a mouth-piece which was closed by means of a string.

In the days of Muḥammad the people of Mecca and Medina used to indulge in drinking wine as often as an occasion offered itself, so that drunkenness often became a cause of scandal and of indulgence in a second vice, gambling, which together with wine, incurred Muḥammad's condemnation. Tradition has not refrained from describing how Ḥamza b. 'Abd al-Muṭṭalib, Muḥammad's uncle, in a fit of drunkenness mutilated 'Alī's camels (Bukhārī, *Sharb*, *bāb* 13; *Khums*, *bāb* 1; Muslim, *Ashriba*, trads. 1, 2; *Maghāzī*, *bāb* 12; Abū Dāwūd, *Kharādj*, *bāb* 19). The commentaries on the Ḳur'ān also relate how Muḥammad's companions held drinking-parties which caused them to commit faults in ritual prayer (see al-Ṭabarī, *Tafsīr*, *ad* sūra XIV, 44; Muslim, *Faḍā'il al-Ṣaḥāba*, trad. 44, cf. 45; Aḥmad b. Ḥanbal, i, 185-6).

The prohibition of wine was not in Muḥammad's programme at the beginning. In Sūra XVI, 69 we even find it praised as one of the signs of Allāh's grace to mankind: "And of the fruit of palmtrees, and of grapes, ye obtain an inebriating liquor, and also good nourishment". But the consequences of drunkenness manifesting themselves in the way just mentioned are said to have led Muḥammad to change his attitude. The first revelation giving vent to these feelings was Sūra II, 216: "They will ask thee concerning wine and gambling (*maysir*). Answer, in both there is great sin and also some things of use unto men: but their sinfulness is greater than their use". This revelation, however, was not considered as a prohibition. As people did not change their customs and the order of prayer happened to be disturbed in consequence thereof, a new revelation was issued, viz. Sūra IV, 46: "O true believers! come not to prayers when ye are drunk, until ye understand what ye say" etc. But neither was this revelation considered as a general prohibition of wine, until Sūra V, 92 made an end to drinking: "O true believers! Surely wine and *maysir* and stone pillars and divining arrows, are an abomination of the work of Satan; therefore avoid them, that ye may prosper".

This sequence of revelations regarding wine is the accepted one among the traditionists and commentators of the Ḳur'ān (see Aḥmad b. Ḥanbal, *Musnad*, ii, 351-2; Ṭabarī, *Tafsīr*, v, 58 *ad* sūra IV, 46).

The prohibition of wine may, however, also be looked upon from a wider aspect, as Islam is not the only monotheistic religion which has taken a negative attitude towards wine. It is well known that, according to the Old Testament (Numbers vi, 3-4) the Nazarite who had wholly devoted himself to Yahweh had to abstain from wine and spirits, just as the priests before administering the sacred rites (Lev. x, 9). The Nabataeans, according to Diodorus Siculus (xix, 94, 3), likewise abstained from wine and one of their gods is called in their inscriptions "the good god who drinks no wine". Likewise, abstention from wine belonged to the rule of many Christian monks. All this has its roots in remote Semitic antiquity which ascribed a demoniac character to wine and spirits. The same is true for music, especially singing, which is also prohibited by Islam. It is not improbable that negative feelings of this kind may have worked, together with the motives mentioned above, to induce Muḥammad to prohibit wine.

The prohibition of the Ḳur'ān has been taken over by the jurists; all *madhhabs*, and also the Shī'a, call wine *ḥarām* and the wine-trade is forbidden. For an exposition of the Shāfi'ī view, see al-Nawawī, *Minhādj*, ed. van den Berg, iii, 241; for that of the Ḥanafīs, *Fatāwā 'Ālamgīrī*, vi (Calcutta 1835), 604 ff.; for that of the Mālikīs, Zurḳānī in his commentary on the *Muwaṭṭa'*, Cairo 1280, iv, 26; for that of the Shī'a, *Sharā'i' al-Islām*, Calcutta 1839, 404. Theology reckons the drinking of wine among the gravest sins (*kabā'ir*).

Ḥadīth has many utterances regarding this theme. Wine is the key of all evil (Aḥmad b. Ḥanbal, *Musnad*, v, 238; Ibn Mādja, *Ashriba, bāb* 1). Who drinks wine in this world without repenting of it, shall not drink it in the other world (Bukhārī, *Ashriba, bāb* 1; Muslim, *Ashriba*, trads. 73, 76-8, etc.). Cursed is he who drinks, buys, sells wine or causes others to drink it (Abū Dāwūd, *Ashriba, bāb* 2; Ibn Mādja, *Ashriba, bāb* 6; Aḥmad b. Ḥanbal, i, 316; ii, 25, 69, 71, 97, 128, etc.). Who drinks a draught of wine on purpose shall have to drink pus on Doomsday (Ṭayālisī, no. 1134). Prayer of him who drinks wine is not accepted by God (Nasā'ī, *Ashriba, bāb* 43; Dārimī, *Ashriba, bāb* 3), and faith is incompatible with drinking it (Bukhārī, *Ashriba, bāb* 1; Nasā'ī, *Ashriba, bāb* 42, 44). It is even inadvisable to use it as medicine (Muslim, *Ashriba*, trad. 12; Aḥmad b. Ḥanbal, iv, 311, 317 bis etc.); and it is prohibited to use wine for manufacturing vinegar (Tirmidhī, *Buyū', bāb* 59; Aḥmad b. Ḥanbal iii, 119, 260 bis). But times will become ever worse and there will be people who declare wine allowed (Bukhārī, *Ashriba, bāb* 6; Nasā'ī, *Ashriba, bāb* 41 etc.), and so it will be drunk by the generation of the last days (Bukhārī, *Ashriba, bāb* 1; Aḥmad b. Ḥanbal, iii, 176, 202, 213-4).

The prohibition of wine, although unanimously accepted, gave rise to dissensions between the juridical schools, dissensions which are reflected in *ḥadīth* in a historical disguise. The discussions start from the question: what is wine? It is said that, when the use of wine was peremptorily prohibited, the people of Medina poured out in the streets all that they possessed of the appreciated liquor (Aḥmad b. Ḥanbal, ii, 132-3; iii, 26, 189-90, 217, 260 bis; iv, 355-6). Ibn 'Umar declares, on the contrary, that at the time of the prohibition, there was no wine in Medina at all (Bukhārī, *Ashriba, bāb* 2). Anas b. Mālik (*ibid.*) says that there was scarcely any wine from grapes in Medina, when the prohibition was revealed; people used wine from *busr* and *tamr* (two kinds of dates). In another tradition (*ibid., bāb* 3) wine from *faḍīkh* and *zahw* (two other kinds of dates) is mentioned. 'Umar is represented as delivering a *khuṭba* which was meant to settle the question; according to his son 'Abd Allāh, he said: Wine has been prohibited by the Ḳur'ān; it comes from five kinds of fruits, from grapes, from dates, from honey, from wheat and from barley; wine is what obscures the intellect (*wa 'l-khamr mā khāmara al-'aḳl*; Bukhārī, *Ashriba, bāb* 2). The question remained, whether beverages prepared from grapes in a different way were prohibited. There was e.g. a kind of syrup. "When 'Umar visited Syria, the population complained of its unhealthy and heavy climate and they added: This drink alone will heal us. Then 'Umar allowed them to drink honey. Then they said: Honey cannot heal us. Thereupon one of the natives of Syria said to him: May we not prepare something of this drink for you? It has no inebriating power. He said: All right. Then they cooked it till two-thirds were evaporated and one-third of it remained. They brought it to 'Umar, who put his finger into it and licked it. Then he said: This is *ṭilā'* like camels' *ṭilā'* (viz. the pitch with which they smeared their skins). Then he allowed them to drink it" (Mālik, *Ashriba, bāb* 14). According to the first chapter of the same *kitāb*, however, 'Umar punishes a man who had become drunk on *ṭilā'*. Juice from grapes, prepared by pressing them only, is considered as wine. Ṭāriḳ b. Suwayd al-Ḥaḍramī said to the Prophet, We have in our country grapes which we press. May we drink the juice? He said: No. This negative answer is given three times and when Ṭāriḳ asks whether the juice may be given the sick to drink, Muḥammad answers: It is no medicine, it is sickness (Aḥmad b. Ḥanbal, v, 292 f.). And not only those who drink and sell wine are cursed by Muḥammad, but also those who press grapes and have them pressed in order to drink the juice (Ibn Mādja, *Ashriba, bāb* 6).

Another question of importance arose, in connection with spirits: Had they to be considered as wine or not? All the *madhhabs*, except the Ḥanafīs, have answered the question in the affirmative sense. They have consequently extended the prohibition of wine, in accordance with the intention underlying it. Tradition, which is the best source for the history of the origin of several institutions, shows that the question belongs to the much-debated ones. The standard *ḥadīth*, which is found very frequently in the classical collections, runs as follows (Muslim's version *Imām*, trad. 26 is cited, because it contains important details): "Some men of 'Abd al-Ḳays went to the Apostle of God and said to him: O Prophet of God, we are a tribe belonging to Rabī'a; between us and yourself dwell the infidels of Muḍar, so that we can only reach you in the sacred month. Tell us therefore what we have to tell our tribespeople which will open Paradise for us if we to cling to it. The Apostle of God answered: I order four things and I forbid four things. Serve God without associating anything with him. Perform the *ṣalāt*, pay the *zakāt*, fast the month of Ramaḍān and deliver the fifth part of booty. And I forbid four things: *dubbā'*, *ḥantam*, *muzaffat* and *naḳīr*. They asked: O Apostle of God, how do you know what the *naḳīr* is? He said: Well, it is a palmtrunk which you hollow out; then you pour small dates into it and upon them water. When the process of fermentation has finished, you drink it with the effect that a man hits his cousin with the sword.—Now among these men there was someone who had received a blow of the sword in this way,

but he had concealed it out of shame before the Apostle of God. So he said: But from what vessels should we drink then, O Apostle of God? He answered: From leather skins, the mouthpieces of which are smeared with pitch. They answered: O Prophet of God, our country teems with mice so that no single skin can be kept whole. Then the Prophet of God answered: Even though the mice should eat them, even though the mice should eat them, even though the mice should eat them.

This tradition did not meet with general approval. It is said that the Anṣār or other people complained of their difficulty in finding the skins necessary for preserving drinks without their becoming fermented. Thereupon the Prophet is said to have withdrawn his prohibition, wholly or partly (Bukhārī, *Ashriba*, *bāb* 8; Muslim, *Ashriba*, trads. 63-6, etc.). In some versions of this tradition there occurs the restriction that all the fermented inebriating drinks remain prohibited. Innumerable are the traditions which only contain the rule that all drinks which may cause drunkenness are prohibited in any quantity (*kull muskir ḥarām kathīruhu wa ḳalīluhu*) and this rule has passed into many books of *fiḳh* (Bukhārī, *Maghāzī*, *bāb* 60; Muslim, *Ashriba*, trads. 67-75; Aḥmad b. Ḥanbal, i, 145; ii, 16 bis; iii, 38; iv, 87; v, 25-6; vi, 36, etc.). Of special traditions prohibiting fermented drinks, there may be mentioned the following. It is forbidden or disapproved of to sell raisins if they are to be used for preparing nabidh (Nasāʾī, *Ashriba*, *bāb* 51, 51). It is prohibited to mix together different kinds of fruits so that the mixture should become intoxicating. This tradition occurs frequently; see e.g. Bukhārī, *Ashriba*, *bāb* 11; Muslim, *Ashriba*, trads. 16-29; Nasāʾī, *Ashriba*, *bābs* 4-17; Ibn Saʿd, viii, 360; Aḥmad b. Ḥanbal, i, 276; ii, 46; vi, 242, 292. But each of these kinds may be used separately for preparing a non-fermented drink (Muslim, *Ashriba*, trads. 81-3; Nasāʾī, *Ashriba*, *bābs* 14-18, etc.).

It can easily be seen that the difficulty in this matter was caused by two circumstances. People were accustomed to prepare from all kinds of dates, from raisins and other fruits, drinks which only became inebriating if they were preserved a long time, and probably also if they were prepared after special methods. Where was the line of demarcation between the allowed and the prohibited kind to be placed? Several collections of traditions went so far as to mention *nabīdh* among the drinks prepared by Muḥammad's wives and drunk by him (Muslim, *Ashriba*, trads. 79-89; Aḥmad, i, 232-3, 240, 287, 320-1, 336, 355, 369, 372; ii, 35; iii, 304, 307, 313-14, 326, 379, 384, etc.). Abū Dāwūd (*Ashriba*, *bāb* 10) and Ibn Mādja (*Ashriba*, *bāb* 12) have preserved a tradition on this subject which is instructive. Ibn Mādja's version is given here: ʿĀʾisha said "We used to prepare *nabīdh* for the Apostle of God in a skin; we took a handful of dates or a handful of raisins, cast it into the skin and poured water upon it. The *nabīdh* we prepared in this way in the morning was drunk by him in the evening; and when we prepared it in the evening he drank it the next morning". In another tradition of the same *bāb*, Ibn ʿAbbās says that the Prophet used to drink this *nabīdh* even on the third day; but what was left then was poured out.

All this could, however, not persuade the majority of the *faḳīhs* to declare *nabīdh* allowed; three of the *madhhabs* as well as the Shīʿa prohibit the use of *nabīdh*. The Ḥanafī school, on the other hand, allows it, when used with moderation, for medicinal purposes, etc.

It would take us too far to give here a detailed survey of the opinions of the *faḳīhs* of all *madhhabs*; it would be superfluous, to some extent at least, because the more important differences regard chiefly *nabīdh* only. The following rapid survey is based on the *Fatāwā ʿĀlamgīrī*, vi, 604 ff. (cf. Shaʿrānī's *Mīzān*, Cairo 1279, 192-3).

Allowed according to the *idjmāʿ* is non-fermented, very sweet drink.

Prohibited (*ḥarām*), according to the *idjmāʿ*, are wine and *sakar* of every kind. As to wine, there are six cases: to drink it in any quantity or to make use of it is *ḥarām*; to deny this is *kufr*; to buy, sell, present it, etc. is *ḥarām*; no responsibility (*ḍimān*) rests on him who spoils or destroys wine (*mutlifhā*); whether wine is a possession (*māl*) is an unsettled point; it is *nadjis* just as blood and urine; he who drinks any quantity of it is liable to punishment.

Several kinds of products prepared by means of grapes (*bādhiḳ*, *munaṣṣaf*, etc.) are prohibited according to the majority (*ʿāmma*) of the *faḳīhs*.

Allowed, according to the majority of the *faḳīhs* are *ṭilāʾ* (see above) or *muthallath* and *nabīdh* from dates with the restrictions mentioned above. So is juice from grapes when the process of cooking has made to evaporate two-thirds. Muḥammad (al-Shaybānī [*q.v.*]) has a deviating opinion on this point.

As to the punishment of him who drinks wine, *ḥadīth* tells us that Muḥammad and Abū Bakr were wont to inflict forty blows by means of palm branches or sandals (Bukhari, *Ḥudūd*, *bāb* 2-4; *Ḥudūd*, trads. 35-7). Under ʿUmar's caliphate, however, Khālid b. al-Walīd reported to him that people were indulging in prohibited drinks. Thereupon ʿUmar consulted the Companions, who advised him to fix the number of blows at eighty, a number suggested by the Ḳurʾān which prescribes that those who accuse *muḥsanāt* of *zināʾ*, without being able to prove their accusations by the aid of four witnesses, shall be punished with eighty blows (Sūra XXIV, 4).

Repeated drinking of wine, according to some traditions, was punished by death at Muḥammad's order (Abū Dāwūd, *Ḥudūd*, *bāb* 36; Ibn Mādja, *Ḥudūd*, *bāb* 17; Aḥmad b. Ḥanbal, ii, 136, 166, 191; iv, 93, etc.). It is, however, added in some traditions that capital punishment in such cases is not according to the *sunna* of the Prophet (Aḥmad b. Ḥanbal, i, 125, 130; cf. Ṭayālisī, no. 183).

The different *madhhabs* have adopted ʿUmar's view; drinking wine is punished with eighty blows; if the transgressor is a slave this number is however reduced to forty, because in the Ḳurʾān the punishment of the handmaid's *zināʾ* is fixed at half the amount of blows with which the free woman is punished (Sūra IV, 30). The Shāfiʿis, however, cling to the practice ascribed to Muḥammad and Abū Bakr; with them the number of blows is consequently forty or twenty (see Zurḳānī, iv, 42; Nawawī, in Muslim, iv, 156).

The prohibition of wine and spirits (according to three of the four *madhhabs*) is one of the distinctive marks of the Muslim world; its consequences can hardly be overrated. This is not seriously affected by the fact that transgressors have been numerous, according to literary evidence. The praise of wine, not uncommon in pre-Islamic poetry, remained one of the favourite topics also of Muslim poets (cf. the wine-songs by Ibn al-Muʿtazz, Abū Nuwās, etc., and see KHAMRIYYA), and at the court of the Caliphs wine was drunk at revelling parties as if no prohibition existed at all (see e.g. *The 1001 Nights*, *passim*). Even the common people could not always and

everywhere refrain from their national drink, date wine of several kinds; the caliph ʿUmar b. ʿAbd al-ʿAzīz deemed it necessary to promulgate a special edict in order to abolish this custom (see von Kremer, *Culturgeschichtliche Streifzüge*, Leipzig 1873, 68-9).

Wine has a special place in the literary works of the mystics, where it is one of the symbols of ecstasy. In this point they only took over the language of their Christian and non-Christian predecessors. As early as Philo of Alexandria ecstasy is compared with intoxication (see especially his *De Vita Contemplativa*). Among the Ibāḥiyya, language may have been a reflex of practice; but this cannot be said of Ṣūfīs in general, who on the contrary, clung to the ascetic methods of the *via purgativa*. As to Ḥāfiẓ's wine- and love songs, it is an unsettled point whether they are merely metaphorical or not.

2. As a product.

Wine has been known in the Orient since the earliest times, and Arabic literature preserves vague memories of its legendary origin, not omitting to recall the demonic aspect, in accordance with Ḳurʾān V, 90-2. It takes account, on the one hand, of Babylonian traditions linked to Biblical characters such as Adam and Noah (cf. the *Midrash* based on Babylonian elements; *Tanḥūmā*, Lublin 1879, 28-9) and, on the other hand, of the Aramaic-Syriac extra-Biblical tradition, thus symbolising that ancient culture of the Fertile Crescent inherited by the mediaeval Muslim world. Certain versions link the origin of wine to the two great civilisations which were neighbours to Islam, that of Rūm and that of India (cf. al-Masʿūdī, *Murūdj*, ii, 88-92, §§ 518-9; al-Raḳīḳ al-Ḳayrawānī, *Ḳuṭb al-surūr*, B.N. Paris, ar. 3302, f. 42; al-Nawādjī, *Ḥalbat al-kumayt*, Cairo 1938, 11-12; al-Badrī al-Dimashḳī, *Rāḥat al-arwāḥ*, B.N. Paris, ar. 3544, ff. 58a-59a; *Baḥr al-ḥikāyāt*, B.N. Paris, ar. 3588, ff. 107b-108b; the literature of the *awāʾil* [*q.v.*], notably Istanbul, Reisülküttab, 899, f. 98b; Topkapı, E.H. 1329, f. 69; B.N. Paris, ar. 2079, ff. 96a-97a, 5931, f. 252a).

The *Book of Agriculture* attributed to Ibn Waḥshiyya [*q.v.*] points out the importance of the vine in the Fertile Crescent, and alludes to wines in speaking of the various types of grape which are suitable for their manufacture (Leiden ms. or. 303, ii, 87-291).

The Arabs who settled in agricultural regions had no real tradition of viticulture; in fact, in pre-Islamic Arabia vineyards were rare and wine-vaults even more so (however, there were some in al-Ṭāʾif). The quality of the wine was mediocre, and a certain amount must even then have been imported, mainly by Jewish and Christian merchants (after the birth of Islam, this commerce was practised exclusively by these two communities, as a result of the Ḳurʾānic prohibition). One should not suppose that the Bedouin knew nothing of wine (as is claimed by the Shuʿūbīs [Bashshār, *Dīwān*, Cairo 1950-6, i, 378, l. 2, and especially Abū Nuwās, *Dīwān*, Cairo 1898, 244-5; cf. Ibn Ḳutayba, *ʿUyūn*, iii, 237; Ibn Ḥamdūn, *Tadhkira*, Istanbul Ragib, 1083, iii, f. 287a; Ibn Gharsiya, in *Nawādir al-makhṭūṭāt*, Cairo 1951, 250]), nor that they drank it to excess (Ibn Ḥāwi, *Fann al-shiʿr al-khamrī*, Beirut n.d., 11). The truth is that the ancient Arabs were acquainted with wine, though tasting it only on rare occasions such as inter-tribal fairs (cf. G. Jacob, *Studien in ar. Dichtung*, Berlin 1895, 95-109; H. Lammens, *Le berceau de l'Islam*, Paris 1914, 84-5; H. F. Lutz, *Viticulture and brewing in the Ancient Orient*, Leipzig 1922, 33-7, 143-51; Djawād ʿAlī, *Taʾrīkh al-ʿArab ḳabl al-Islām*, Baghdād 1951-9, viii, 162-5).

The expansion of Islam enabled the Muslims to familiarise themselves with new regional types of wine, and the taste of the consumers gained in refinement to the extent that connoisseurs were able to appreciate and distinguish between wines of diverse origin; al-Djāḥiẓ (*Shārib*) speaks even of various "wine-producing regions" (*buldān*). The poets of the Islamic era speak of countries renowned before the advent of Islam for the quality of their wines (for Beirut, see F. Gabrieli, in *RSO*, xv (1935), 39; for ʿĀna, in Upper-Mesopotamia, see al-Akhṭal, *Dīwān*, Beirut 1891, 117; F. Gabrieli, *art. cit.*, 51; J. Bencheikh, in *BEO*, xviii (1963-4), 18-20; cf. Ibn Ḥawḳal, tr. Kramers-Wiet, 223; for Iran see F. Gabrieli, *art. cit.*, 62; for the viticultural tradition, very often of Sāsānid origin, cf. the wine-producing regions mentioned by al-Thaʿālibī, in J. M. Unvala, *King Husrav and his boy*, Paris 1926, 45, and J. Bencheikh, *op. cit.* There were also renowned wine-producing districts in Egypt and in other parts of the Muslim world.

As regards the wine-making process, the information that we have is not very extensive. The grapes were trodden, with a light jumping movement, in a *maʿṣara* (shallow vat), according to an ancient procedure. Wine-presses of circular motion were not introduced in the Orient until very late (some ancient specimens still exist in certain monasteries in the Lebanon). A poet of the 4th/10th century (*apud* al-Nuwayrī, *Nihāya*, iv, 144), describes the *maʿṣara* as a sea of red flames in which the labourer stands, the lower half of his body soaked with the grape-juice. From the 7th/13th century onwards, miniatures provide the best illustrations of the process (see D. S. Rice, *Deacon or drink*, in *Arabica*, v (1958), to which may be added Leningrad ms. S. 23, p. 76); here labourers are seen carrying the grapes, others press them by treading them in a vat, hanging on straps in order to jump more easily; in the vat there is an aperture, allowing the juice to flow out into a receptacle; against a wall stand the amphorae (*dann*, pl. *dinān*) with tapered bases, in which the fermentation takes place (in vaults, seldom in the open), and the maturation (on the storing in amphorae, cf. Leningrad S 23, pp. 44, 103; yet what are

involved are perhaps not wine amphorae, but large water containers, see G. Le-Bon, *La Civilisation*, Paris 1884, 397, and cf. the *khazzān* described by Kushādjim, *Dīwān*, 1313, 83, and al-Suyūṭī, *al-Hay'a al-saniyya*, Univ. of Istanbul, Arap 1476, f. 50). These various stages are described in works of literature, while religious treatises aimed at prohibiting the consumption of certain drinks, concern themselves at some length with the various types of vessel used for fermentation.

The mediaeval anthologies and the treatises of *fiḳh* list various ingredients for the manufacture of alcoholic beverages; fruits: dates (see TAMR), figs, apricots, cherries, mulberries, and various berries; cereals: wheat, barley, maize, millet; honey (hydromel is called *bitʿ*); sugar cane; milk (Ibn Ḳutayba, *Ashriba*, speaks of the making of alcoholic drinks from different kinds of milk), especially mares' milk (for making *kūmis*, introduced at an early stage by the Turks, and attested from the 5th/11th century onwards, which was to become the favourite drink of the Mamlūks [see KUMĪS]). On all these beverages, see SHARĀB.

KHAMRIYYA (A.), designates a Bacchic or wine poem in modern critical terminology, at least since Ṭaha Ḥusayn in 1923 (*Ḥadīth al-Arbiʿā'*, ii, 71). This name does not seem to be attested in the mediaeval nomenclature of the genres. The usual expressions *al-ḳawl fi'l-khamr*, *lahu maʿānī fi'l-khamr*, *waṣṣāf li'l-khamr*, indicate the existence of themes, but do not include any willingness to organise them into an independent poem. In fact, the problem of appellation conceals the problem of evolution, of which the principal stages will be traced here.

i. *In early times: the inserted statement.* The state in which the works of the *Djāhiliyya* have been transmitted to us forbids our pronouncing on the problems that the working of the Bacchic framework poses. It is possible, despite that, to put forward observations which are not without interest. The first concerns the insertion of statements in compositions with many themes, sc. the *Muʿallaḳāt* of Labīd (vv. 57-61), ʿAntara (vv. 37-40), and especially ʿAmr b. Kulthūm (vv. 1-8), where the person involved already has a closer relationship with this type of inspiration. With the elegiac poet Muraḳḳish al-Aṣghar, uncle of Ṭarafa, the Bacchic statement presents itself in the *nasīb* as a syntactic and semantic intrusion. As a tool for comparison, it does not have an autonomous function. Several other poems offer examples of instrumental, inserted statements: in an amorous evocation of ʿAwf b. ʿAṭiyya (*Mufaḍḍaliyyāt*, no. 124, vv. 5-6); in a heterogenous sequence of animal descriptions of Mutammim (or Mālik) b. Nuwayra (*Muf.*, no. 9, vv. 28-30); in a sequence of *fakhr* of Rabīʿa b. Maḳrūm al-Ḍabbī (*Muf.*, no. 113, vv. 10-13); or even the object of a poem of *munādama* heightening both bragging and satire in ʿAbd al-Masīḥ b. ʿAsala (*Muf.*, no. 72).

There is reason to question whether this fact reveals the beginning of work on Bacchic statements presented in certain frameworks to which they are strictly subordinated or whether some themes, included in a framework more or less well established, appear in some common thematic areas in several registers. Is it a question of scattered and corollary statements, or of themes properly so-called?

The analysis of two other texts would rather incline one to the second hypothesis, obviously without being able to assert anything as historical. In one of these, attributed to ʿAlḳama b. ʿAbada (*Muf.*, no. 120, vv. 39-45), the Bacchic sequence follows a development of *fakhr*. It is written into a whole that is ruled and ordered by the amatory framework, which rules even the long description of a she-camel. However, we are in the presence of statements already on the lines of Abū Nuwās, with precise vocabulary, images finely welded together and homogeneous language.

Another piece, more important, dating from the first years of Islam confirms our impression. It comes from ʿAbda b. al-Ṭabīb (*Muf.*, no. 26, vv. 66-81), and comprises a sequence of 15 purely Bacchic lines. The juxtaposition of several descriptions (she-camel, fight of a wild bull with dogs, visit to a wine merchant) permits one to note the relationship of the language used on these different occasions. The vocabulary, whose precision borders on technicality, derives from the Bedouin context and the images presented in the Bacchic statements originated in the same socio-cultural background. In fact, this poet is a technician of the *waṣf*, which uses similar realistic writing to describe an animal, a cup-bearer or an ewer. With this poet, there is no sensibility to pleasure, no awareness of voluptuousness. However, this text, in so far as it is genuine, proves the existence of an established framework.

The theory may be advanced that in the Bedouin tradition this framework, used in the form of coherent groups of statements or in inserted fragments, had already been made the object of a certain rectification. Its basic elements are in service, but it remains dependent on the major framework or enclosed in a purely descriptive scheme.

The Precursors of al-Ḥīra: Attention should be drawn to the particularism of a group of poets of al-Ḥīra [*q.v.*] in whom Bacchism constitutes a dominant characteristic, at least, if one wishes to believe the fragmentary texts which are in our possession A new tendency seems to be displayed in an area more propitious to the blossoming of the *khamriyya*, where the literary production reflects an existential attitude and expresses a view of the world. The autonomy of the framework tends to assert itself, the language becomes more supple and better adapted to the nature of the inspiration, and the brief Bacchic poem makes its appearance.

It is possible to make a list of famous poets having more or less strong connections with the sphere of al-Ḥīra. Some use the technique of the inserted statement. For instance, Muraḳḳish al-Aṣghar (cf. above), al-Aswad b. Yaʿfūr [*q.v.*] (*Muf.*, no. 44, vv. 21-4; no. 125, vv. 6-7) and Ṭarafa. With the latter, the principal themes are in service and the

Time

- In the shelter of every contact.
In the shelter of light and fire-time.
- Virgin cloistered wine.

Preparation → Wineharvest / Harvesting → Pressing → Fermentation → Ageing
Preparation → Vineyard

philosophy of intoxication appears in relief (*Muʿallaḳa*, vv. 45-57). Although still attached to the *fakhr*, included in a heterogeneous *ḳaṣīda* written in the Bedouin context, this poem introduces a particular treatment of Bacchism.

It is in this sense that several other poets are regarded rightly as true precursors. The Tamīmī Christian author of combined Arab-Iranian culture, ʿAdī b. Zayd [*q.v.*], produced poems of which fragments survive. Their writing foreshadows unquestionably that of the later great tradition. The work of Abū Miḥdjan [*q.v.*] is badly mutilated, but his personality may be viewed as a means to illustrate the attitude of refusal that would characterise his successors. Finally, the *dīwān* of al-Aʿshā Maymūn [*q.v.*] includes about ten pieces, important because of the number of lines devoted to the Bacchic framework, which, however, never constitutes the whole of the poem. We have before us here an autonomous discourse which is written in the space of the *ḳaṣīda* similar to other frameworks. The poet expresses in it a genuine pleasure without a bad conscience or aggressiveness. The monsters of Bacchism, who will appear later, do not dwell there. Moreover, its language is strong, still rough and one may speak of an inspiration still sustained by the Bedouin environment. But the use of numerous Persian words must also be noted, especially when flowers are mentioned —there is the beginning of a poetry of *rawḍiyyāt* or *nawriyyāt* which was to develop later. Thus an Iranian influence is felt which also affected ʿAdī b. Zayd. The work of al-Aʿshā reveals how the tendencies are entangled or juxtaposed and makes therefore hazardous any hypothesis which would claim to distinguish them. One must be content with the observation that several elements of the Bacchic framework are set there and that there is an evolution towards a specific kind of writing and the characteristics of a genre.

ii. *The First Century: consolidation of a framework.* While set entirely under the sign of a historic mutation, the first century of Islam is still a period of transition and, as such, marked by great complexity. In a purely operative manner, it is possible to distinguish two types of production:

(a) Ḥidjāzī Bacchism. In a Ḥidjāz disappointed in its ambitions, which history made of marginal consequence and immobilised as sacred, it is well-known how hedonism developed among the representatives of an idle aristocracy. This was a decisive stage for amorous poetry and Bacchic poetry, which lent support to one another and shared between them some large thematic areas. In view of this, Ḥassan b. Thābit is a forerunner, especially as the local trend is linked with the influence that the court of al-Ḥīra had on him. Even if his work is in part apocryphal, and even if his Bacchic statements survive scattered in mainly laudatory compositions, he was capable of some audacities, of which posterity preserved the memory (Yāḳūt, *Udabāʾ*, xv, 164-6).

Ḥidjāzī Bacchism is well represented by Ibn Sayḥān [*q.v.*], a not very productive poet, but one who dedicated himself to wine and love and was often punished for it. Al-Aḥwaṣ is the type of aristocrat of whom it could almost be said that he combined several features of the libertine, while taking care not to give to that word a meaning which would exceed the socio-cultural realities of the time. A great lover of the pleasures which love, music and drink offered him, he put an adventurous insolence into his pursuit of them, saw how far he could go with morality or even with religion, and arrived at a political attitude that was critical of the régime that brought him to the pillory and exile. It is a great pity that the state of his works hardly allows judgement to be made, for certain fragments are significant, notably those that are concerned with the combined treatment of the elegiac and Bacchic frameworks.

(b) ʿIrāḳī Bacchism. Due to the copiousness of his Bacchic work, al-Akhṭal [*q.v.*], another Christian connected with the milieu of al-Ḥīra, appears as the successor of al-Aʿshā, and that despite the harsh evaluation that certain modern critics have placed on his real importance. But once the necessary cautions have been given as to the present state of the *dīwān*, it must be acknowledged that we are analysing here an important treatment of the framework studied. Indeed, Bacchic development is inserted in a *ḳaṣīda*. But the variety of the themes (concerning the preparation of wine and its effects), the diversity of the descriptive processes, and, generally, the coherence of the scheme, allows some interesting observations to be made (M. S. Benani, *Bacchic themes and personalities in the dīwān of al-Akhṭal*, thesis [in Arabic], Algiers 1965, and *Madjallat Kulliyyat al-Ādāb*, Algiers, i (1967), 59-78). One might mention here the overlapping of the themes of water and wine, which compose very rich semantic constellations. Beneficent or destructive, abundant or rare, calm or violent, occupying space with their sound and perfume, leading to drunkenness or suspending it, water and wine join together or confront one another to impose a framework of liquidity which continues in strict relationship with reality. Later poets were to depart from this reality and their work was to become enriched with symbolic significance.

The poetry of al-Akhṭal preserves some characteristics of traditional Bedouin Bacchism as it continued in this first century in a few poems of al-ʿUdjayr b. ʿAbd Allāh al-Salūlī (*Aghānī*, xiii, 60, and al-Djumaḥī, *Ṭabaḳāt*, 517 ff.) and al-Nābigha b. Shaybān (*Aghānī*, vii, 107-8, 110); cf. Blachère, *HLA*, iii, 505). But it is also connected with another type of inspiration that develops in ʿIrāḳ, especially at al-Kūfa, which sets itself up as heir of al-Ḥīra. With this type must be linked the works of Ḥāritha b. Badr al-Ghudānī [*q.v.*], comprising about 80 lines, which certify that numerous Abū Nuwās-like processes were already in use. A great drinker (*khimmīr*), this noble Baṣran of Tamīm defied the prohibition on drinking where Bedouin bragging takes on quite significant tones of rebellion. But the poet is mediocre and his Bacchism has few nuances, finding only inadequate expression.

Mālik b. Asmāʾ b. Khāridja (*Aghānī*, xvii, 158-67; Ibn Ḳutayba, *Shiʿr*, 666-7), a senior official of al-Ḥadjdjādj's with few scruples, sings of the pleasures of love, music and wine in this light language which was soon to impose itself on *khamriyyāt*.

But it is above all another Kūfan, a pure Arab, al-Mughīra b. ʿAbd Allāh, called al-Uḳayshir al-Asadī (*Aghānī*, xi, 234-59; cf. Blachère, *HLA*, iii, 515), who represents one of the first truly Bacchic personalities of the literature of the first century. This writer was first of all a picturesque Bohemian with little to recommend him, but amusing and quiet-loving, who haunted the taverns and monasteries of al-Ḥīra, and formed with several companions a group called the *mudjdjān al-Kūfa*. We are here at the beginning of the libertine school of al-Kūfa which was henceforth to be exposed to the repression of official morality.

Al-Uḳayshir is moreover an excellent poet, who describes wine in beautiful language, still strongly

marked by the Bedouin lexical tradition. In this poetry, which is very true to life, describing tavern adventures, the relation is skilful and lively, the Bacchism vigorous and sympathetic. This type of inspiration can be connected with the brief and rather dull pieces of the Kūfan Muḥammad b. ʿAbd al-Raḥmān al-Tharwānī (al-Shabushtī, *Diyārāt*, 49, 176, 230-2), an inveterate drinker and lover of young men, found dead among the leather bottles of a low tavern. So, in the first century, various tendencies exploited a well-established framework to which great poets were soon to give fuller expansion.

iii. *The Second Century: the assertion of a literary style.*

(a) *A great forerunner: al-Walīd b. Yazīd.*

The second century, which was to end with the glory of Abū Nuwās, had at its outset that of the caliph al-Walīd b. Yazīd. Between the two men the line of descent is direct. Everything is included between these two poles: a philosophy of existence, the conception of an art, the practice of a language. A style of writing defines Bacchic poetry as a major mode of speech.

Al-Walīd, a controversial personality if ever there was (see our brief sketch of a counter-portrait in *Encyclopaedia Universalis*, *Thesaurus*, s.v.), Arab prince, poet and composer linked with the musical school of the Ḥidjāz, throwing himself into the passions of life, free with a lordly freedom that could not conceive of any limit and, hence, of any morality, is doubly important. He gathered around himself a literary group, in which were Ibn Mayyāda [*q.v.*]; Ibn Shurāʿa; Yazīd b. Ḍabba, an excellent poet, the inseparable friend of the prince (*Aghānī*, vii, 92-100); Yaḥyā b. Ziyād al-Ḥārithī, and many others. Also, conspicuous personalities like Muṭīʿ b. Iyās, Ḥammād al-Rāwiya and Ḥammād ʿAdjrad, the famous libertines of al-Kūfa frequented his salon. The composition of this literary group is significant, and makes understandable the literary admiration of al-Walīd for ʿAdī b. Zayd and for Bashshār b. Burd, whose personality and work incontestably dominates this century.

Moreover, al-Walīd is recognised as the master of modern Bacchism. The author of *al-Aghānī* asserts it already: this poet composed numerous poems which were plundered, notably by al-Ḥusayn b. al-Ḍaḥḥāk [*q.v.*] and Abū Nuwās (*Aghānī*, vii, 21). The quality of the borrowers is itself a homage rendered to a work of which only some fragments have been preserved. The Bacchic inspiration is here very close to the amorous inspiration which predominates. Features of exquisite delicacy in the sentiment, of finesse in the expression, can be neighbours to excesses which still go to set off an insolent elegance. The language by its simplicity and its naturalness breaks away from the heavy machinery of conventional poetry. Bacchism finds suddenly a personality which animates it and a way of writing, even more, a style—that is to say a depth—able to exploit the richnesses of its register. Bacchic speech has combined all its mediums.

(b) *The libertines of al-Kūfa.* The poets of al-Kūfa form a group whose homogeneity is such that it is permissible to speak of a school which becomes notable in the second half of the second century. Al-Kūfa became the centre of a poetical activity, of which the components are complex and the characteristics diverse. Its motivations originate at many levels, and their interactions do not allow them to be disentangled easily. Everything comes within the conception of what could almost be called a counter-culture: the political, the religious, the racial, the economic and the social. It is here, and at its best, that Bacchism appears as the expression of a rebellion, that the attitudes of the poet take on subversive overtones. The rebellion is spectacularly directed against religious precepts: it is not an accident that most of the poets of this group fall under the accusation of *zandaḳa* (cf. for example, *Aghānī*, xiii, 280, 335, but all the sources underline this point), and several of them paid with their life for their desire to reject a constraining socio-cultural system. For it goes without saying that the subversion did not only aim at the Ḳurʾānic law; it was in fact the entire system of a culture that was threatened.

This group includes famous luminaries of the literary milieu, such as Wāliba b. al-Ḥubāb; the three Ḥammāds: ʿAdjrad, al-Rāwiya and al-Zibriḳān; and Muṭīʿ b. Iyās, who all died between 155/772 and 169/787. Their freedom of morals, their anti-religious spirit or their indifference towards religion, their Shuʿūbī tendencies, are a mark of this period. Bashshār b. Burd is their great contemporary. But his work, fundamentally amorous, touches only slightly upon the Bacchic framework, and, if his companions are sometimes drunk, he loves above all to sing of the beauty of the *mughanniya* or singing girl.

Among the libertines one notices the presence of poets who are little-known, but who are nevertheless of great interest for the study of the genre. Such is Bakr b. Khāridja (*Aghānī*, xxiii, 66 ff.; al-Shābushtī, *Diyārāt*, 242-3), a Kūfan *mawlā* of Asad, a poor Bohemian who was deprived of his reason by drink and misery. He spent most of his time in taverns, and took refuge to drink amongst the ruins of al-Ḥīra. He is the author of small pieces which al-Djāḥiẓ and Diʿbil enjoyed.

ʿAmmār b. ʿAmr, whose *kunya* is poorly established as Dhū Kināz or Kubār (*Aghānī*, xxiii, 366 ff.), was the friend of Ḥammād al-Rāwiya and Muṭīʿ b. Iyās; his wife, a shrew, shared in his drinking. A minor poet, he is the author of numerous love poems and some *khamriyyāt*.

Appearing here also is Yaḥyā b. Ziyād al-Ḥārithī (*Diyārāt*, 247 ff.), who gave himself over to some unbridled orgies with his friend Muṭīʿ b. Iyās. The two were accused of *zandaḳa*, and it is true that their provocative attitudes do not leave any doubt as to the unbelief of Muṭīʿ who was absolutely passionate in his anti-religious activities.

With the Kūfan milieu of this period is associated Abū Dulāma [*q.v.*], a habitué of taverns and a great lover of joyful evenings spent far from the palace where he was kept as a buffoon. Exasperated by the religious duties, he hurls several vigorous gibes against Islam. There must be noted in his production some characteristics, notably linguistic, which make one think of an inspiration of popular origin. This fact, attested also in Ḥammād ʿAdjrad, shows firstly that the Bacchic genre is directly opposed to laudatory poetry, whose official function is specific. But one is also left thinking that the poetry of rebellion, based on an existential attitude, and transcribed in a literary or non-literary form—according to the dominant norms—has perhaps drawn vigour and vivacity from a people absolutely excluded from the cultural system (cf. J. E. Bencheikh, *Poétique arabe, Les voies d'une création*, Paris 1975, ch. i).

We may note finally that the works of this group are quite sparse. But they played a decisive role in the maturation of a genre which eventually found its masters in the second half of the century.

(c) *The Pre-Nuwāsians.* Emphasis must be placed on the most original, the most striking of these, and reparations be paid for an injustice that posterity commits against him, sc. Abu 'l-Hindī al-Riyāḥī (it is difficult to establish his exact name: *Aghānī* xx, 293; al-Kutubī, *Fawāt*, ii, 240 ff.; Ibn ʿAbd Rabbih, *ʿIḳd*, vi, 342; al-Maʿarrī, *Ghufrān*, 168, 208; Ibn Ḳutayba, *Shiʿr*, 572; Ibn al-Muʿtazz, *Ṭabaḳāt*, 136-43, etc.). A poet of Arab origin, he lived mostly in Khurasān and Sidjistān, and this remoteness explains how he came to be forgotten. His talent was nevertheless real. Ibn al-Muʿtazz, who composed in the 3rd century the first anthology of Bacchic poetry that has come down to us, asserts that Abū Nuwās, al-Ḥusayn b. al-Ḍaḥḥāk and Abū Hiffān were able to establish themselves in the genre only after reading his poems (*Ṭabaḳāt*, 142). The author of the *Aghānī* quotes the judgement delivered by Abū ʿUbayda and confirmed by Isḥāḳ al-Mawṣilī, according to which Abū Nuwās drew all his inspiration from Abu 'l-Hindī (*Aghānī*, xx, 29). Even anecdotes of which he was the hero are attributed to other personalities who were living in a similar way. Remote from cultural centres, Abu 'l-Hindī was unable to defend himself against being pillaged, and it seems that it did not worry him. He was one among these poets whose work contributes to the growth of a trend, to the putting of his own plan into effect, but who, melting into the collective effort of creation, leave little trace in memory. All his importance must be due to this *transmission function* in Arabic poetry.

Abu 'l-Hindī never wrote anything but *khamriyyāt*, which impels al-Iṣfahānī to assert that he was the first Bacchic poet of the Islamic period (*Aghānī*, xx, 293, copied by *Fawāt*, ii, 242). This is clearly false, but not useless for the understanding of an evolution: Abu 'l-Hindī is considered in fact as the first to give independence to the genre, and we must concur in this judgement. In a plain and harmonious language, this poet chisels poems of an excellent workmanship, highly representative of this lively, exciting spirit, that was also to be that of Abū Nuwās.

Aḥmad b. Isḥāḳ al-Khārakī (*Fihrist*; Ibn al-Muʿtazz, *Ṭabaḳāt*, 306 ff.; Ibn al-Djarrāḥ, *Waraḳa*, 58, etc.) was, according to Abū Nuwās, the origin of the public practice of debauchery (*mudjūn*) and of the composition of verse describing his drinking bouts and varied sexual activities. He was thus to open a path that his young contemporaries were quickly to follow in a kind of cresendo of libertinism. Out of a *dīwān* of 50 pages that the *Fihrist* attributes to him, there remain several pieces representative of the genre, but without charm and lacking in inspiration.

This Baṣran had rivals. Ismāʿīl b. Yūsuf al-Baṣrī constituted, with Abu 'l-Saffāḥ al-Anṣārī and ʿAbd Allāh b. Riḍā, a group of *mudjdjān* who decided to devote all their poetry to wine (Ibn al-Muʿtazz, *Ṭabaḳāt*, 339). The first-named has left a few lines of quality. Also at Baṣra, ʿUkkāsha b. ʿAbd al-Ṣamad (*Aghānī*, iii, 251-60) deals differently with the Bacchic framework. This minor elegiac writer expresses his amorous despair, but includes in his poems important, often very happy, Bacchic developments. From the profligate violence of some verses, to the amorous passion of others, there is unfolded the full range of the relations linking the Bacchic and amorous frameworks which undergo a joint evolution.

The Kūfan tradition is maintained in lively manner with Abu 'l-Ḥasan ʿAlī b. al-Khalīl (*Aghānī*, xiv, 165 ff.), a close friend of Ṣāliḥ b. ʿAbd al-Ḳuddūs, accused with him of *zandaḳa*, but who escaped execution. While he regained, under al-Mahdī, a measure of wisdom or of prudence, which turned him away from pleasures, he composed in his youth Bacchic lines interspersed with panegyrics, and also short well-developed pieces not devoid of elegance, but which are more relevant to the drinking song than the poems.

But Bacchism, in this second century, was not the prerogative of ʿIrāḳ solely. Ibrāhīm b. Harma [*q.v.*], a Ḥidjāzī poet, continually gave himself over to drink throughout his life. Of the 10,000 lines attributed to him, at least a thousand have been preserved (*Dīwān*, Baghdād 1969) and the Bacchic pieces must surely have suffered the greatest loss, for they are very few in number.

(d) *Abū Nuwās: the glory of a genre.* The last third of the century is dominated by poets who include some of the greatest names in mediaeval Arabic literature: al-Ḥusayn b. al-Ḍaḥḥāk, Muslim b. al-Walīd and Abū Nuwās. Among them, other less famous men or men of lesser talent contributed to the masterly blossoming of the genre. The whole work of this period constitutes the most important corpus which we have at our disposal. Later work as good would be produced, but never better; above all, no further developments appear.

Abū Nuwās is not the creator of the *khamriyya* —far from it—and we ascribe to him the glory of inventions that were not his own. But he is a striking figure because he sums up everything that it had been possible for anyone to write before him. He explores the thematic register and refines some statements well; he handles the Bacchic language with an incomparable skill; his poetry and his life are closely linked, and with him the word magnifies the experience. With a talent made up of sensibility, elegance and intelligence, he wrote poems which do not always have the merit of originality, but often have the sparkle of exceptional success. Thus a unique work of its genre, through its abundance, its variety and its quality, comes to crown a long evolution. Abū Nuwās mastered a speech that others had forged for him, and nobody in this field can dispute with him for first place. Such was the domination that he exercised during his lifetime that he was able to force Ibn al-Ḍaḥḥāk, for example, to cede to him some of his lines, and posterity was bound to attribute to him much that did not belong to him. A personality of remarkable prominence, he gave to Bacchism its existential significance, one which did not reduce it to the simple pleasure of drinking (cf. J. E. Bencheikh, *Thèmes bachiques et personnages dans le dīwān d'Abū Nuwās*, in *BEO*, xvii (1963-4), 1-84).

In the very incomplete *dīwān* of Muslim b. al-Walīd, a score of poems contain important Bacchic developments. These entail two observations. The first, in certain pieces, relates to the Bacchic note being given priority treatment and becoming a framework in which other themes are inserted. The second deals with the language; Muslim is a master of the *badīʿ*, and does not forget it even in these poems. This concern for formalism makes the expression heavy and goes against the nature of the inspiration.

Ibn al-Ḍaḥḥāk produced some verse which is better-developed (cf. Muḥammad al-Munīf, *al-Ḥusayn b. al-Daḥḥāk, aghrāḍ khamriyyātihi wa-ashkhāṣuhā*, Faculty of Letters of Algiers University thesis, 1965). Despite the fragmentary state of his *dīwān*, it is possible to place him among the poets of the first order. One should mention with him Abu 'l-Shīṣ [*q.v.*], cousin of Diʿbil, friend of Muslim and Abū

Nuwās, author of long Bacchic poems revealing a great mastery of the language (Ibn al-Muʿtazz, *Ṭabaḳāt*, 77-86). They are furthermore interesting to study, as the survivals of the Bedouin language are quite marked in them. Finally, ʿAmr b. ʿAbd al-Mālik al-Warrāḳ (al-Shābushtī, *Diyārāt*, 172 ff.; al-Marzubānī, *Muʿdjam*, 218; etc.) was a companion of Abū Nuwās, a lewd drunkard, a wicked rogue of a fornicator and pederast, an arrogant mocker of religion, who wrote a poetry without genius more closely connected with the drinking song than the poem.

iv. *The* khamriyya *after Abū Nuwās: the playing-out of a style of writing.* It seems that, having attained glory, the genre become fixed in the academic. While the formalists reduced poetry to the set exercise, the *khamriyya* was drained of its subversive function. Having become a stylistic exercise, it is not surprising to find it composed by any hand. Some poets whose temperament was as far removed as possible from Bacchism attempted it (al-Buḥturī, for example, wrote a dozen *khamriyyāt*). This evidently contributes to the playing-out of the genre. The surprises, quite rare, come from obscure authors in whom is found a note of sincerity or a felicitous expression.

Besides, the Bacchic tone becomes diversified—and loses some of its strong homogeneity—with the development of the *rawḍiyyāt*, floral poems, of the *dayriyyāt*, poems describing evenings spent in convents or monasteries, and of the *ikhwāniyyāt*, versified friendly letters, whose respective domains are not always easy to delimit. These different forms competed to render familiar a light poetry, with a descriptive tendency, which expressed a pleasure in living surrounded by a peaceful and happy nature. The force of the Bacchic theme becomes insipid in this gentle culture of the Muses.

The 3rd century is dominated by Ibn al-Muʿtazz [*q.v.*] who composed an important Bacchic anthology (*Fuṣūl al-tamāthīl fī tabāshīr al-surūr*). He wrote poems of youth, whose delicacy recalls that of the other talented aristocrat, al-Walīd b. Yazīd. But the well-born *adīb* Ibn al-Muʿtazz, an enemy of every passionate outburst and concerned with an elegant measure, was unable to exploit in depth a framework whose indispensable vitality he did much to lessen.

The voluminous work of Ibn al-Rūmī [*q.v.*] contains several *khamriyyāt* in which he attempts, not without difficulty it is true, a more spontaneous and sensitive language than that of his great compositions. But it is elsewhere that we must look for truly Bacchic temperaments. The literary circle of ʿAlī b. Yaḥyā al-Munadjdjim (cf. Bencheikh, *Les voies d'une création*, thesis, Paris 1972, i, 116 ff.) gathered together a number of libertine poets, among them Abū Hiffān. The latter served his apprenticeship under the direction of Abū Nuwās and was his *rāwī*, but the fragments that remain to us of his works do not permit us to make a pronouncement. At his side, Abu 'l-Shibl ʿĀṣim b. Wahb al-Burdjūmī was admitted into the society of al-Mutawakkil, a lover of scabrous narrative (cf. *Les voies d'une création*, i, 127-8). Indeed, he brings to life a group of jolly rogues who joined in rough escapades in the taverns of Baghdād and Sāmarrā. In the reign of the same caliph there should be noted Muḥammad b. Isḥāḳ al-Ṭarsūsī, who exercised his wit against the month of Ramaḍān (al-Marzubānī, *Muʿdjam*, 395; *al-Muḥammadūn min al-shuʿarāʾ*, ed. Mammeri, 1973, nos. 102, 134). In fact, these figures provide material for the anecdotal literature which flourishes around Bacchic poetry, but do not leave any striking work.

From this point of view, more interesting is Abu 'l-Ṭayyib Muḥammad b. al-Ḳāsim al-Numayrī. A close friend of Ibn al-Muʿtazz, he exchanged with him a whole correspondence (*Aghānī*, ix, 137; al-Shābushtī, 71 ff.; al-Marzubānī, *Muʿdjam*, 336-7; etc.). It consists of *ikhwāniyyāt*, friendly invitations to profit from the pleasure of love and drink, where the poet shows himself skilful at making glittering promises, and subtle in expressing his joy in accomplishing them with friends. These notes are sometimes in *sadjʿ* (*Diyārāt*, 74). They deal with the same themes as poetry and offer samples of a Bacchic prose for consideration; it reveals an atmosphere and way of life. Here it is a case of well-born companions who have nothing to do with the "Fauvists" of the preceding century. They handle drunkenness like love, sc. with delicacy and good taste, in an allusive language which suits the courteous elegance of the salons. The *adab* of the *munādama*, already defined by Abū Nuwās, finished by imposing its rules on the *ẓurafāʾ* of polite society.

In the 4th century, Kushādjim [*q.v.*] confirmed this insertion of Bacchism in a poetry of social relationship. This *nadīm*-poet was capable of describing a flower, a cup, a musical instrument in an exquisite, light, delicate language, closely related to a way of life. The social discourse determines the inspiration and the poem is subjected to an essentially descriptive plan (cf. al-Shabushtī, *Diyārāt*, 259 ff.). On the last point, this approach becomes clear in the production of al-Ṣanawbarī (*Diyārāt*, 218-24, which cites several poems that do not figure in the *dīwān*). Here appears very clearly the relationship existing between the *khamriyya* and the poetry of nature. But it must be noted that in the *dayriyyāt*, the Bacchic themes become more and more secondary.

Associated with this tradition is Muḥammad b. al-ʿAbbās b. al-Baṣrī, called Ṣāḥib al-Rākūba, a drug seller in the service of the Ikhshīdids of Cairo (*Diyārāt*, 292, 294-7). He is presented as a debauchee (*mādjin*). But in his eclogues, the themes, reduced to commonplace stereotypes, serve above all to introduce here the description of a lake peopled with birds, and there that of narcissi and roses growing on the banks of a stream. In this poetry of a smiling nature, wine is described in it as a supplementary, but not exclusive, joy.

On the other hand, Abu 'l-Faradj Muḥammad al-Waʾwāʾ (al-Kutubī, *Fawāt*, no. 367, ii, 301-6), a Damascene poet of simple and harmonious language, returned to the Bacchic tradition in dedicating certain excellent verses to the great themes well-known in the register and in rediscovering, sometimes with felicity, the Nuwāsian inspiration. But we can feel that in this 4th/10th century, still honoured by the works of al-Mutanabbī and Abū Firās [*q.vv.*] (cf. the poems of the latter's *dīwān*, nos. 150, 171, 178 and especially 364, his great *ṭardiyya* which finishes in a Bacchic development), Arabic poetry has nothing more to invent, so that it becomes set, worn out by nearly six centuries of an exceptionally abundant production. The few poets that remain to be cited wrote a poem worthy to be cited in an anthology, and reveal only a fanciful spirit already too familiar; they approach as well as possible these great masters of the past, of whom some are still cited by al-Maʿarrī in his *Risālat al-ghufrān*, 134-45.

In the 5th/11th century Ibn Shibl [*q.v.*] (and in addition, al-Ḳifṭī, *al-Muḥammadūn min al-shuʿarāʾ*, no. 254, 270 ff.; Yāḳūt, *Udabāʾ*, x, 23-45), physician, philosopher and poet, composed numerous couplets full of jollity, and a few longer pieces describing

the pleasures enjoyed in a monastery. But the Bacchic note is minor in his work, as attested in the great philosophic poems where he gives himself up to a reflection on existence and the fate of man. Muḥammad b. Khalīfa b. al-Ḥusayn al-Numayrī (al-Kutubī, *Fawāt*, no. 403, ii, 402), a poet of Sayf al-Dawla's circle, strove without success in the genre. Ibn al-Nabīh [*q.v.*], a poet of the Ayyūbids, revived a few of the most frequently-repeated statements without introducing the slightest new note. We may conclude this list, which could be filled with the names of several minor authors, by citing three poets of the 7th/13th century.

Nūr al-Dīn Muḥammad al-Isʿirdī (619-56/1222-58: *Fawāt*, no. 377, ii, 329-34; *Shadharāt al-dhahab*, v, 284), who grouped the libertine part of his *dīwān* under the title of *Sulāfat al-zardjūn fi 'l-khilāʿa wa'l-mudjūn*, a work which also comprises an anthology section. This poet loved wine, and he speaks of it with passion in some quite long poems running to more than 20 verses. He asserts especially the superiority of alcohol over *ḥashīsh* for the quality of intoxication which it provides. But his poetry is prosaic, heavy, often trivial, deprived as it is of the Nuwāsian brilliance which lent glamour even to obscene developments. A little later, Ibn Nubāta [*q.v.*], poet of the Ayyūbid sovereign Abu 'l-Fidā', inserted Bacchic formulae in heterogeneous compositions. But it is above all Ṣafī al-Dīn al-Ḥillī who, at the end of the 7th/13th century and in the first third of the 8th/14th one, rediscovered a real inspiration with a richness of themes and remarkable images. The fact is so much more notable, since this poet tock a great interest in the strophic poetry of classical or colloquial language.

v. *Mystical intoxication or substituted speech.* It was, paradoxically, the mystics drunk with their love for God who gave to Bacchism a new impetus. They took possession of a well-established framework and activated it by substituting for hedonistic motivations the decisive quest for happiness in God. From there, a whole symbolism became established. Wine becomes a divine emanation which spreads its rays from one form to another, a symbol of the supreme love which manifests itself in creation. Drunkenness is forgetfulness of all that is not He. Under the effect of this application of meanings, an inner discourse is substituted for a text apparently set in its formulae. For, it must be noted, the mystical poet is not anxious to renew the writing of the Bacchic framework, or he does not care to do so; instead, he adds to it another meaning. At the same time as he accepts and pronounces the fixity of a language, he enlarges his conceptual field. Thus constellations of symbols appear around original themes. A thorough study of these appropriations—it is necessary to reverse the order of things, says al-Nābulusī—would show how a new inspiration was able to raise from within an old language, to illuminate it, but not destroy it. No more than the Bacchic poets of the 2nd/8th century did the mystics conceive a poetic theory. In going beyond the Islamic orthodox vision, they imposed a style of speech, not a writing.

The operation had been attempted with success as early as the middle of the 2nd/8th century in the poems of Rābiʿa al-ʿAdawiyya. The importance of the zones common to the erotic and Bacchic frameworks was to mark out the *khamriyya* for serving the passionate quest of the mystics. The *dīwān* of al-Ḥallādj contains only one quatrain of this type, which is furthermore also attributed to Ibn al-Ḍaḥḥāk and Abū Nuwās (*Dīwān*, ed. Massignon, 73, no. 38), but several anonymous poems were later dedicated to the description of mystical intoxications (*ibid.*, 127-30). The saint from Tilimsān, Abū Madyan [*q.v.*], composed some *zadjals* of very marked popular inspiration, illustrating also an ancient tendency of the Bacchic genre to distinguish itself from classical poetry. It is also true that the mystics had at their disposal two keyboards, that of esoteric composition, and that of popular incantation which was to become fundamental in the practice of the brotherhoods. An entire production of *khamriyyāt* was to see the light of day in the East and in the Maghrib, where a representative sample is supplied by Ḥurayfish al-Makkī (d. 801/1398-9; cf. *Dīwān al-Ḥallādj*, 140 ff.).

But it is Ibn al-Fāriḍ [*q.v.*] who draws attention with his great *khamriyya*. In this, indeed, he gives himself to a masterly re-interpretation of the whole Bacchic theme and deepens its symbolic range. Moreover, he does this without renouncing the artifices of a formalistic rhetoric. The mechanisms of poetic writing continue to be used, but here they injure neither the feverish palpitation of the substituted speech nor the powerful rhythm of the incantation. In the 11th/17th century, ʿAbd al-Ghanī al-Nābulusī was to write a commentary on this poem, composed according to the comments made on it by the author of the *Tardjumān al-ashwāḳ*, Ibn al-ʿArabī. Al-Nābulusī reveals also the secret significance of wine in pieces where Bacchic themes are intertwined with developments of love themes. In the mystics, the overlapping of the two registers becomes total in order to express passion and ecstasy. In the *dīwān* of Abu 'l-Ḥasan al-Shushtarī, very few poems do not have recourse to Bacchic statements (*Dīwān*, ed. al-Nashshār, Alexandria 1960, e.g. poems nos. 5, 8, 9, 12, 20, 26, 31, 38, and the majority of *muwashshaḥāt* and *azdjāl*; cf. also Massignon, *Recherches sur Shushtarī*, in *Mélanges W. Marçais*, 1950, 251 ff.). The quest for the intoxication of love is a central theme which catches in him the nervous rhythm of a popular language. Moreover, he exploits the vein of an Ibn Ḳuzmān, and the narrative of visits to a monastery, or evenings in a tavern, could easily lead to confusion, the language being to such an extent that of the *khamriyyāt*. There could not exist here any of those deceits which sometimes inspired pornographic poems with a pseudo-mystical aim. But it is interesting to note this second substitution of speech, by means of which we return to the origins.

The mystical *khamriyya* continued to be practised, anonymous or obscure, in classical or dialectal language, until the 19th century, where it is attested, for example, in the *dīwān* of the Algerian *amīr* ʿAbd al-Ḳādir (cf. A. Ben Harrath, *Madjallat Kulliyyat al-Ādāb*, i (1967), 47 ff.), and even in the 20th century in its popular form.

vi. *The* khamriyya *in Muslim Spain: atomised speech.* The Andalusian environment suited the fading of Bacchic poetry, especially after the proliferation of the kingdoms of the *Ṭawā'if*. On the literary side, the creation of strophic forms such as the *muwashshaḥ* and the *zadjal* offered a more supple and effective structure to capture this type of inspiration. The use, especially in the *zadjal*, of a semi-popular language, assured a very appreciable source of invention. Linked with the pleasure of life, with the quest for love, with a profound communion with nature, Bacchism competed to express a certain mode of existence in the world.

Paradoxically, the conjunction of these favourable elements provoked, it seems, a contrary result. The Bacchic framework, already exhausted in the East,

falls into such common use here that it becomes increasingly worn out. Used to love or the joys of nature, it is instrumentalised and hardly requires an autonomous plan and specific style any more. If one adds to all this the proliferation of poets, and especially the mutilation that time has wrought in their work it is understandable why it is necessary to speak here of "pulverised" or "atomised" speech, echoing E. García Gómez.

As early as the 4th/10th century, during the period of the *amīrs*, then of the caliphs, Ibn Darrādj [*q.v.*] included Bacchic statements in some *nawriyyāt*, floral poems, which augur the coming of Ibn Khafādja. The prince Abū ʿAbd al-Malik Marwān, great-grandson of ʿAbd al-Raḥmān III, also followed this path, and Bacchic themes came to sustain in him an inspiration of an erotic or descriptive order.

But it is in the 5th/11th century that Bacchism finds its full extent, as much from the point of view of poetic creation as from that of anthological activity. To the latter, Ibn Shuhayd ascribes the setting of a visit to the valley of the *tawābiʿ*, where he meets especially the inspirational genius of Abū Nuwās during a succession of very interesting poetic confrontations. For his part, the historian Ibn al-Raḳīḳ al-Ḳayrawānī [*q.v.*] dedicated to the Eastern *khamriyyāt* his *Ḳuṭb al-surūr fī waṣf al-anbidha wa'l-khumūr*, still in manuscript, and a *Kitāb muʿāḳarat al-sharab* which has not come down to us. The vizier Abū ʿĀmir Ibn Maslama [*q.v.*] for his *Ḥadīḳat al-irtiyāḥ fī ḥaḳīḳat al-rāḥ*, draws upon the Andalusian works, his own notably, of which a few fragments survive devoted to largely banal forms of enjoyment.

In that which concerns poetry properly so-called, we must make a choice among numerous poets who are often known only by a few lines in anthologies. Ibn al-Abbār [*q.v.*], also an author of floral poems, dedicated a few pieces to the *madjālis al-uns* in which an elegant aristocracy tasted the delights of love, walks and friendly evenings. The striking personality of the century was the sovereign of Seville al-Muʿtamid (cf. R. H. Souissi, *al-Muʿtamid Ibn ʿAbbād et son œuvre poétique*, doctoral thesis, Paris 1973, 135-46). He drank with pleasure and describes the joys of drunkenness in poems where the themes of liquidity and luminosity are touched upon. But the statements do not represent an organised view, even if the signs of an existential anguish often appear. The author's attractive personality does not succeed in giving life to a language that has been over-used. The same observation applies to Bacchic mentions noted in the work of those faithful to the unfortunate prince, sc. Ibn al-Labbān [*q.v.*] (cf. *Dār al-Ṭirāz*, 55; M. al-Karīm, *Fann al-tawshīḥ*, 179 etc.) or Ibn Ḥamdīs [*q.v.*]. The *kātib* ʿAlī b. Aḥmad (al-Kutubī, *Fawāt*, no. 304, ii, 140-1; H. Pérès, *La poésie andalouse*, 154) composed short pieces where the astral themes play an important role in the description of the sparkle of the wine.

Bestriding the 5th/11th and 6th/12th centuries were several poets who attempted the *khamriyya*. Ibn Khafādja [*q.v.*] (cf. Ḥ. Ḥadjdjādjī, *Vie et œuvre du poète andalou Ibn Khafādja*, typed thesis, Paris 1969) did not detach himself in any way from the Nuwāsian vein, which he exploits in brief developments and without originality. His tavern outings supply the opportunity for imitation, and he remains incapable of rendering an atmosphere and painting a living picture. His talent is elsewhere. His nephew Ibn al-Zaḳḳāḳ [*q.v.*] wrote mostly love poems or pastoral verse, a genre in which his uncle was famous. The sole aim of the Bacchic statement in his work is to underline the beauty of nature, or to introduce the presence of a cup-bearer. Ibn al-Sīd al-Baṭalyawsī [*q.v.*] succeeded in a few beautiful descriptions where there must be noted the abundance of comparisons and metaphors making reference to the animal lexicon. Ibn al-Bāḳī [*q.v.*] (cf. e.g. *Dār al-ṭirāz*, 67; *Fann al-tawshīḥ*, 185; *Nafḥ al-ṭīb*, iv, 240), and his friend al-ʿAmā al-Tuṭīlī (*Dār al-ṭirāz*, 43; *Fann al-tawshīḥ*, 183; Ibn Saʿīd, *Mughrib*, ii, 453; etc.) sprinkled with Bacchic statements the *muwashshaḥāt* of love in which they excel. Finally, Ibrāhīm b. Sahl al-Isrāʾīlī [*q.v.*] incited his audience to the theme of *carpe diem* and sang promiscuously of his love of wine, flowers and the cup-bearer.

It may well be noted that the framework of the *khamriyya* is truly scattered in a poetry whose plan is no longer to exploit a genre to the full, but to limit itself to the thematic areas common to several frameworks. Eclecticism triumphs and imposes a structure whose analysis leads inevitably to the disintegration of the poem. A good example of this overlapping of themes is given by the production of Abū Bakr b. Zahr (*Fann al-tawshīḥ*, 193 ff., nos. 12-15; *Dār al-tirāz*, 45, 73; *Mughrib*, i, 268, *Nafḥ al-ṭīb*, i, 440). Bacchic statements are more numerous and precise, but are never detached from the expression of the pains of love in poems articulated in connection with *hawā* ⇄ *mudjūn*, *shawḳ* ⇄ *rāḥ*, *bukāʾ* ⇄ *khamr*. In short, we have a Bacchic elegiac form which innovates neither in one field nor the other.

In fact—and all the fragments which are left to us of an abundant œuvre confirm it (cf. H. Pérès, *La poésie andalouse*, 359-77)—there is no original Bacchic expression in Andalusia.

Even such a picturesque personage as Ibn Ḳuzmān [*q.v.*] does not altogether escape this observation (see E. García Gómez, *Todo Ben Quzmān*, Madrid 1972). This "impecunious Bohemian, open drinker and debauchee" combined all the conditions required to give to the genre a new vigour. He loved wine passionately, and led a dissolute life in the taverns and other places of ill-repute, of which he knew how to paint lively pictures. His inspiration is on a realistic level and his spirit assumes in it lively and colourful features. A certain sense of the burlesque even animates certain scenes. Finally, Ibn Ḳuzmān composed entirely Bacchic *zadjals* among other heterogeneous pieces, in a Spanish dialect intended certainly to be understood in educated circles, as G. S. Colin remarks, but suitable all the same to allow itself to be invested with an inspiration of popular type. Despite all this, the poet did not succeed in breaking away from the old Bacchic language and one is very much disappointed to see him having recourse to formulae which are abundant in the works of his predecessors. Certain successes in this field do not conceal the recourse to hackneyed effects, which we are led inevitably to think belong perhaps to a language which has reached exhaustion in this framework.

The strophic Andalusian forms were definitely unhelpful for the revival of the genre. Practised also in the East, the *muwashshaḥa* continued to exploit a vein long since dried up. Also, in the 6th/12th century there is Yūsuf b. Zaylaḳ (al-Kutubī, *Fawāt*, no. 482, ii, 633 ff. and M. Z. Enani, *Le muwashshaḥ en Orient*, typed thesis, Paris 1973, index), author of quite long poems with nothing that reveals a personality or expresses a voluptuousness. East and West do no more than exchange formulas. The characteristic of a school exercise is that it is repeated *ad infinitum*. For a little longer, Muslim Spain, and

for a long time the Maghrib and the Near East, were to fill with languishing echoes the great silence of a bloodless poetry. After the *nahḍa*, Bacchic statements are rediscovered at the hand of a Amīn Nakhla or an Abu 'l-Ḳāsim al-Shabbī in elegies with accents of Lamartine, *aghānī al-ḥayāt*. But the time of another poetry had by then come.

vii. *The* khamriyya: *the scope of the poem.* The evolution which led from the technique of inserted statements to the composition of homogeneous *khamriyyāt*, then to the "pulverisation" or "atomisation" of a style of speech, was not accompanied by the enactment of any rules which defined a genre or determined the architecture of a fixed form. The general characteristics that one can discern, belonging to a very much mutilated corpus (except perhaps in the case of Abū Nuwās), do not have an informative value.

(a) *Brevity: the requirements of a style of writing.* The *khamriyya* is a relatively brief poem. Only 41 poems of Abū Nuwās out of 299 have more than 14 lines. In his work, the tendency to conciseness is found again in conventional genres. But this brevity characterises all the Bacchic poets of different periods. A need was felt to keep to a number of lines, ranging from 4 to 15 as a verifiable average, even when it involved inserted statements in multithematic *ḳaṣīdas*. Bacchic writing was composed in a limited compass because the means used in writing the work required it (cf. J. E. Bencheikh, *Poétique arabe*, ch. iii). This requirement of means was to lead the set *ḳaṣīda* on the other hand to a progressive lengthening. What may be called light or spontaneous poetry—all very ambiguous words—must in reality be analysed as a language whose internal connections appear very clearly. We must qualify not the nature of the inspiration, but that of mechanisms which determine the setting of the poem. For the *khamriyya*, this involves the choice of a certain compass—a poem is written in the plan of the creation at the level of the language and notably the phono-semantic organisation.

(b) *The organisation of an allotted space.* There is no rule for the thematic regulation of a *khamriyya*. If we except the poems that are ordered around a narrative and so of a chronology, the poet handles the statements freely (cf. the six thematic tables pp. 999-1001 above). The unity of the inspiration, the fairly strict limits of the framework, assure homogeneity to the whole. We have noted the frequent recourse to amorous or floral themes. It is a matter of common areas exploited by several frameworks. It is possible, moreover, in refining the analysis, to disclose an entire rhetoric of Bacchic discourse which governs small units of this discourse or even imposes a few broad lines of development. A good example is given by the erotic descriptions which often occur at the end of a poem. But it is also possible to note some more subtle or more closely-followed connections between certain statements of unequal importance. The first masters did a great deal in this direction, and the drying-up of the Bacchic vein is justly measured by an inability to imagine new relations between statements which are from now onwards set in unalterable relationship.

(c) *Relations within the frameworks.* It appears from the evidence that the *khamriyya* underwent and exerted influences within these. When it is concerned with *fakhr*, the Bacchic statement does not have the same value as when it is autonomous. Put to the service of the framework of love, or detaching itself from it, inspiring love of nature or instrumentalised in floral poems, this statement follows an evolution and enjoys fortunes that we have analysed historically. There remains one observation to make concerning the particular treatment of erotic themes.

Compared with the themes of the *nasīb*, of the amorous *tashbīb* of an ʿUmar b. Abī Rabīʿa (whose poems contain a few formulaic statements, e.g. *Dīwān*, 107, ll. 7-8; 115, ll. 3-4; 120, l. 10; 149, l. 8; etc.), or with those of courtly love in the work of Bashshār b. Burd and al-ʿAbbās b. al-Aḥnaf, the Bacchic *ghazal* appears specific. It is sensual at first, then tough and truculent, without prudery; it is further without delicacy, and often runs into obscenity. Drunkenness seems to destroy love, retaining only a caricaturist's style. The relation between the two frameworks has therefore become reversed. At first a unity of instrumentalised statements, the *khamriyya* later defines themes of love that are its own, as well as personages who express them. At the point at which courtly poetry refines its nuances but takes refuge in abstraction, the Bacchic *ghazal* on the other hand cloaks itself in the concrete. But one should not see there the simple transcription of orgiastic experiences; instead, one may perceive a desperate attempt to fight against the constraining morality and the good conscience of a socio-cultural system which pronounces the traumatic exclusion of the feminine being. It may also be said that the themes of homosexuality found in the *khamriyya* an opportunity for development without resorting to subterfuges. Bacchism makes its goal what is forbidden and what is recommended. It appears provocative, and its vigorous audacities could have had a subversive effect. But the scheme lacked a philosophy of existence which was detached from pure enjoyment and an ideology which went beyond simple rejection. The elegant master of Bacchic *adab*, Ibn al-Muʿtazz, put an end to an evolution which could have been dangerous, but which proclaimed its failure by not viewing the situation of woman differently. Even in Bacchism, love remains a masculine preoccupation.

(d) *Problems of metric specificness.* The problem of the adequacy of the metre for the framework is a very delicate one. The thesis according to which evolution takes place towards the choice of so-called "light" metres remains from many points of view subject to reservations (cf. J. E. Bencheikh, *Poétique arabe*, ch. "De la mesure au rythme"). The fragmentary state of the Bacchic works keeps analysis within the field of hypotheses most of the time. In the case of developments inserted in a *ḳaṣīda*, it cannot be a question of specificness. In al-Aʿshā, the group of four major metres is formed by the *ṭawīl* (34%), the *kāmil* (14.5%), the *mutaḳārib* (12%) and the *basīṭ* (11%); and in al-Akhṭal, by the *ṭawīl* (53%), the *wāfir* (15.7%), the *basīṭ* (14%) and the *kāmil* (9.2%). The *dīwān* of Abū Nuwās, the only Bacchic corpus sufficiently important to lend itself to enumeration, supplies the following results, drawn from 893 poems: *ṭawīl* (15.45%); *basīṭ* (14.21%); *sarīʿ* (13%); *wāfir* (11.1%) and *kāmil* (8.75%). This general percentage, compared with a percentage drawn from only conventional poetry (panegyric, elegiac, etc.) brings out a perceptible decline of the *ṭawīl* and the *kāmil*, and a slight increase of the *basīṭ* and *sarīʿ* (cf. *op. cit.*, the curves of metric use drawn from three centuries). The one is a long metre, the other a short metre, which leaves the problem intact. Without denying the frequency of the use of so-called "light" metres such as the *sarīʿ* and the *khafīf*, a frequency confirmed elsewhere even in poets as little

modernist as Abū Tammām and al-Buḥturī, it is always worth asking ourselves the real nature of the connection between the metre and the theme treated. It will not be possible for any suggestions to be made in this matter as long as no serious analysis has been made of the connections established between the structures of the phonic chain in operation and the stylistic organisation of the verse which is wedded to the scheme. At this point, we return to the fundamental problem of the language of the *khamriyya*, which has unfortunately not been the object of study. Considerations as to the use of a simple vocabulary and the clarity of a syntactic organisation have certainly not taken place.

The study of Bacchic literature remains to be undertaken. Such a study ought to show how its expression was fed by a variety of philosophic tendencies, and how it analysed a series of spiritual attitudes in historical relationship with given socio-cultural situations. From materialism to the search for the absolute, the *khamriyya* was the field for a multitude of experiments, perhaps founded moreover on the same existential despair. Its scattering away thus signified the failure of individual attempts to escape a condition and an order.

Bibliography: Djamīl Saʿīd, *Taṭawwur al-khamriyyāt fiʾl-shiʿr al-ʿarabī*, Cairo 1945; Muḥammad Ḥusayn, *Asālib al-ṣināʿa, shiʿr al-khamra waʾl-nāḳa bayn al-Aʿshā waʾl-djahiliyyīn*, Alexandria 1960; Ilyā Ḥāwī, *Fann al-shiʿr al-khamrī*, Beirut 1960; M. al-Ṣādiḳ al-ʿAfīfī, *Thawrat al-khamriyyāt*, Beirut 1971. All these are very unequal studies. Several monographs on authors or periods dedicate sections of varying length to the *khamriyya*. (J. E. Bencheikh)

KHAMSA (a.) "five" still possesses, in several Muslim countries, as amongst peoples of ancient times, a magical value in connection with the use of the fingers of the hand as a defence against the evil eye [see ʿayn]. An efficacious method of protection against the evil eye, especially in North Africa but also in certain parts of the Near East also, consists essentially in stretching out the right hand, with the fingers spread out, towards the person whose glance can harm, and in pronouncing a formula containing the word *khamsa*, e.g. *khamsa fī ʿayni-k* "five in your eye". This gesture is supposed to send the evil to its source, but since it is not always possible conveniently to do, pronouncing the formula in the mind retains also a certain prophylactic force, and has in any event the force of a curse.

Various representations of the hand, which were formerly current also in ancient civilisations, may be attached to this belief (see J. A. MacCulloch, in Hastings' *Encycl. of Religion and Ethics*, vi (1913), 495). One of the best-known is the piece of jewellery called "the hand of Fatma", used as an amulet and called *mkhammsa, khamsa, khumsa*, etc. (see W. Marçais, *Textes arabes de Tanger*, 285; J.-H. Prost-Biraben, *La main de Fatma et ses antécédents symboliques*, in *Revue anthropologique*, xliii (1933), 370-5), but one often finds, on the walls of houses and elsewhere, the mark of a henna-painted hand, or a more schematic pattern with five branches. Also, many amulets contain patterns made up of five elements.

In certain countries, notably in North Africa, the name of Thursday (*al-khamīs*) likewise possesses a prophylactic value, and it is combined with "five" in formulae against the evil eye, above all in *khamsa wa-khamīs*. Furthermore, Thursday is a day eminently favourable for undertaking enterprises (e.g. travelling) or ceremonies (e.g. circumcision, marriage), and is referred to euphemistically by means of qualificative terms like *mabrūk* or *mubārak* "blessed".

The use of these terms against the evil eye makes them in practice to a large extent inconvenient to use. Thus the reply of *khamsa* pure and simple to a question requiring such a response is avoided, and various euphemisms are employed: *yəddək* "your hand", *ʿadd*/*ʿaddət yəddək* "the number of your hand", etc., or else two numbers whose sum or differences is equal to 5: e.g. at Rabat, *tlāta u-žūž* = 3 + 2.

"cinq"; E. Panetta, *Pratiche e credenze popolari libiche*, 88, and bibl.; W. Marçais and A. Guîga, *Textes arabes de Takroûna*, Paris 1925, 337-8, 366, 393-4, 396-7, and bibl.; W. Marçais, *L'euphémisme dans les parlers arabes maghrébins*, in *Mélanges Isidore Lévy*, Brussels 1955, 375-6. (Ed.)

KHAMSA is in the technical language of Persian and Turkish literature a set of five *mathnawī* poems. The term is used, first of all, to designate the five epic poems of Niẓāmī [*q.v.*] of Gandja which were composed between *ca.* 570/1174-5 and 600/1203-4. The set contains one didactic poem *Makhzan al-asrār*, in the metre *sarīʿ-i maṭwiyy-i mawḳūf*; three romantic poems: *Laylā u Madjnūn* in the metre *hazadj-i musaddas-i maḳbūḍ-i maḥdhūf*, *Khusraw u Shīrīn* in the metre *hazadj-i musaddas-i maḥdhūf*, and *Haft Paykar* in the metre *khafīf-i makhbūn-i maḳṣūr*; and the *Iskandarnāma* in the metre *mutaḳārib-i muthamman-i maḥdhūf* consisting of two parts, the *Sharafnāma* and the *Iḳbālnāma*. This last work belongs to the genre of the heroic epic as well as to that of the literature of wisdom. There is no general concept connecting these five poems. That they were traditionally regarded as a whole may have been caused by the exceptional brilliance displayed by Niẓāmī in all of them, but it may also be a result of their being transmitted almost exclusively as a complete set in so-called *kulliyyāt* manuscripts. An earlier example of a collective name for a set of *mathnawī*-poems written by a single author is the term *Khizāna-yi Yamīn al-Dawla* ("Treasury of Yamīn al-Dawla", i.e. Sultan Maḥmūd of Ghazna) applied by ʿAwfī to the romantic poems of ʿUnṣurī (*Lubāb*, ii, 32). The enlargement of the *khamsa* pattern to a set of seven poems by Djāmī constituted in its turn a model for so-called *sabʿa*s which were written by a number of poets from the 10th/16th century onwards. Occasionally, the term *sitta*, a set of six poems, is used for collections of the *mathnawī*-poems of ʿAṭṭār and Sanāʾī.

The entire *Khamsa* as well as its individual poems have from the late 7th/13th century onwards inspired many imitators in Persian as well as in the main literary languages of the Turks (i.e. Čaghatay, Azeri and Ottoman Turkish) and, more rarely, in Kurdish. The attempts to write a parallel (*naẓīra*) to the *Khamsa* of Niẓāmī can be classified into two main types. To the first type belong those efforts which were aimed at producing a *khamsa*, every single part of which would correspond to one of the original poems, not only as far as the subject-matter was concerned but also in the choice of the metre and the characteristic features of Niẓāmī's poems (e.g. the form of the opening lines, the presence of certain sections in the conventional introduction (*dībāča*) of the poems and specific traits in the structure of the tales). Although many Persian and Turkish poets

accepted this challenge, only very few of them succeeded in finishing more than one or two parts of the proposed scheme. The earliest imitation of the *khamsa* was written by the Indo-Persian poet Amīr Khusraw Dihlawī [*q.v.*] between 698-701/1298-1301. It contains the poems *Maṭlaʿ al-anwār*, *Shīrīn u Khusraw*, *Madjnūn u Laylā*, *Hasht bihisht* and *Āʾina-i Iskandarī*. The last poem of this *khamsa* consists only of one part dealing mainly with Iskandar as a seeker of wisdom. The second successful *khamsa* of this type was written in Čaghatay Turkish by ʿAlī Shīr Nawāʾī between 888-90/1483-5. The poems are entitled: *Ḥayrat al-abrār*, *Farhād u Shīrīn*, *Laylā u Madjnūn*, *Sabʿa-i sayyāra* and *Sadd-i Iskandarī*. Nawāʾī's work was inspired by both the examples of Niẓāmī and Amīr Khusraw.

The second type of *khamsa* is formed by those collections of *mathnawīs* which only contain some imitations of Niẓāmī's works. The number of five is achieved by adding poems which are either entirely original as far as their subject-matter is concerned or may be regarded as imitations of the works of other great *mathnawī*-poets such as Sanāʾī or Farīd al-Dīn ʿAṭṭār. In the *Khamsa* of Khwādju Kirmānī [*q.v.*], for instance, which was written between 732-46/1331-46, only the first poem, *Rawḍat al-anwār*, is a *naẓīra* of Niẓāmī's *Makhzan al-asrār*, whereas the four others, *Humā u Humāyūn*, *Kamālnāma*, *Gul-u Nawrūz* and *Djawharnāma* deviate from the Niẓāmian pattern both as to their subject-matter and, partly, their metres. Collections of this latter type very soon contain even more than five poems, like the six poems in the *kulliyyāt* of ʿImād al-Dīn Faḳīh-i Kirmānī (d. 773/1371-2) (cf. Ahmed Ateş, *İstanbul kütüphanelerinde farsça manzum eserler*, Istanbul 1968, 273 ff.). His mystic *mathnawīs* in the metre *hazadj* show the influence of the works of ʿAṭṭar. The most celebrated instance of an extended *khamsa*, however, is the *Haft awrang* of Djāmī [*q.v.*] (written *ca.* 890/1485). These seven poems are entitled: *Silsilat al-dhahab*, in *khafīf*, *Salāmān u Absāl* in *ramal*, *Tuḥfat al-aḥrār* (a *naẓīra* of the *Makhzan al-asrār*), *Subḥat al-abrār* in *ramal*, *Yūsuf u Zalīkhā* (taking the place of *Khusraw u Shīrīn*), *Laylā u Madjnūn* and *Khirad-nāma-i Iskandarī*. The last five poems are sometimes taken together as the *Khamsa* of Djāmī, but even in this way the scheme does not confirm to that of Niẓāmī. Other notable *khamsa* writers in Persian literature were Hātifī [*q.v.*] who introduced a historic theme in his *Tīmūr-nāma* taking the place of the *Iskandar-nāma*, and Fayḍī [*q.v.*], among whose incomplete set of five poems there is a treatment of the Indian love story of Nal-Daman. In Ottoman-Turkish poetry prominent authors of *khamsas* were Bihishtī; Lāmiʿī, who composed in fact a *sabʿa* to the model of Djāmī; Yaḥyā Bey; ʿAṭāʾī; and Nergīsī [*q.vv.*], who composed his *khamsa* in prose. All these collections consist mainly of poems which do not belong to the canon of Niẓāmī. The imitation of Niẓāmī's poems was particularly popular during the hey-day of the Indo-Persian literature in the 10th-11th/16th-17th centuries.

The numerous imitations of the individual poems of Niẓāmī's *Khamsa* are to some extent parts of unfinished *khamsas*, but this is not necessarily always the case. The most frequently imitated works were the *Makhzan al-asrār* and *Laylā u Madjnūn*. Some of the best *naẓīras* can be found among the parallels to the latter poem, e.g. the *Madjnūn u Laylā* of Maktabī (written in 895/1489) in Persian and that of Fuḍūlī [*q.v.*] in Azeri. Most of these imitations, however, were not very successful. They have either disappeared completely or have only been preserved in very rare manuscript copies.

Bibliography: The *khamsas* of Niẓāmī, Amīr Khusraw and Nawāʾī, as well as the *Haft awrang* of Djāmī, have been described in the following works: E. E. Bertel's *Izbrannie Trudī. Nizami i Fuzuli*, Moscow 1962, 173-360; idem, *Izbrannie Trudī. Navoi i Džami*, Moscow 1965, 31-6, 126-170, 256-72; Muḥ. Waḥīd Mīrzā, *The life and writings of Amir Khusrau*, Calcutta 1935, 190-203; J. Eckmann, in *Philologiae Turcicae Fundamenta*, ii, Wiesbaden 1964, 336-48. See further W. Björkman, *ibid.*, 436 ff., 444; A. Caferoğlu, *ibid.*, 640; H. Ethé, in *Gr.Ir.Ph.*, ii, 245-8; *Istanbul kütüphanelerinde türkçe hamseler*, Istanbul 1961, with introd. by Nail Tuman; J. Rypka, *History of Iranian literature*, Dordrecht 1968, 210 f., 283-5. Cf. also IRAN. vii. LITERATURE and the articles on the individual authors.

(J. T. P. DE BRUIJN)

KHAMSE (WILĀYĀT-I —) [see WILĀYĀT-I KHAMSE].

KHĀN, a Turkish title (*khan* or *ḳan*) first used by the Tʿu-chüeh apparently as a synonym of *ḳaghan*, the later *khāḳān* [*q.v.*], with which its relationship is obscure; it was afterwards normally applied to subordinate rulers. The title is first recorded in Muslim lands on the coins of the Ḳarakhānids or Ilek Khāns [*q.v.*]. Under the Saldjūḳs and Khwārazm-Shāhs, *khān* was the highest title of the nobility taking precedence over *malik* and *amīr*. It was applied by the Mongols to the head of an *ulus* [*q.v.*], *ḳaʾan*, i.e. *khāḳān*, being reserved for the Great Khān in Ḳaraḳorum or Peking. In Ṣafawid Persia, the *khān* was a provincial governor of lesser rank than the *beglarbegi* and higher than the *sulṭān* "deputy governor". The title survived into modern times in much the sense of the English "esquire". In India under the Turkish kings of Delhi, *khān* was the title of the principal nobles, especially those of Persian or Afghān descent; it was still in Mughal times restricted to courtiers, but to-day it is a common affix to the names of Muslims of all classes and is often regarded as a surname.

(J. A. BOYLE)

KHĀN, a word of Persian origin designating on the one hand a staging-post and lodging [see also MANZIL] on the main communication routes, on the other a warehouse, later a hostelry [see also FUNDUḲ] in the more important urban centres.

I. The highway *khān*. The economic functions served by this institution have changed little from the Middle Ages to the present day. It had its roots in the beginnings of organised highway trade in the earliest times, but it flourished with particular vigour in the Islamic world. The *Khān* was born of the need to ensure safe lodging and protection from robbery for travellers in regions where nomads and hill-bandits posed a threat to security. It was an indispensable factor for commerce on land and sea, necessary in regions where sources of provisions were not regular and where watering-places were few and far between. It seems that it was originally an enclosure protecting a well which in the course of time developed into a work of architecture. Herzfeld connects its origin to the relay-post system (*avahāna*) organized by the Achaemenids on the major com-

munication routes such as the Sardis to Susa highway. These staging-posts which Herodotus calls καταλύσεις and Ctesias calls *emporia* were numerous in the Byzantine empire, where they were set at a distance of 50 parasangs one from another. Little is known of the architectural evolution of these structures in ancient times, for the oldest *khān*s built of unfired brick have disappeared.

The appropriate term to describe the type of building which provided lodging for caravan traffic on the main trade routes is *caravanserai*, transcribed by Pierre Belon of Le Mans as "Carbaschara"; *khān*, with which it is often confused, being applied rather to an establishment where commercial travellers could lodge for a period of time and where facilities weie provided for the sale of their wares. A stopping-place for caravans is often called *manzil* in the ancient Arabic texts.

As communal buildings for public use, mentioned by all the travellers who testify to their vast number in the east, the *khān*s marked the commercial highways once followed by caravan traffic in an area comprising Asia Minor and the "isthmus region", to borrow the phrase of Maurice Lombard, usually set at a distance apart of a day's journey, about 20 miles, the *khān*s of plain and mountain, varying in number according to the degree of prosperity of the region, provided staging posts or places of refuge. Often the *khān* was more than a shelter for travellers, pilgrims and itinerant traders; it was indeed a centre for the exchange of ideas among individuals from different parts of the world.

The institution flourished greatly from the 7th/13th century onwards in Iran, Syria and Anatolia; in this region alone, Erdmann has listed 119 *khān*s belonging to that century. Sometimes it happened that over a period of time there developed around the *khān* a conurbation such as at Khān Shaykhūn or at Djisr al-Shughūr in Syria.

The term appears for the first time in Arabic epigraphy in Syria on the occasion of the foundation of the Khān al-ʿAḳaba in 610/1213 (*RCEA*, No. 3720).

The plan of construction of the highway *khān*, which was most often located in an isolated position, needed to provide for the security of people and of animals and of warehouse goods stored there for long or short periods. The construction material varied according to the regions: it might be brick, fired or unfired; it might be limestone; lastly, it might be basalt. The building comprised rooms for the accomodation of travellers, an oratory and sometimes a bath-house. There were places for the stabling of pack-animals and saddle-animals, covered stables for horses and donkeys, stalls for mules and camels or dromedaries, according to the area. The installations needed to take account of the temperament of each species, for horses cannot endure the smell of dromedaries and mules do not readily accept the proximity of donkeys.

From the outside, the *khān* appears as a quadrangular structure, often having two storeys, with massive towers at each corner and exterior walls supported by buttresses. It resembles a small fortress from which it is distinguished by an entrance protected by salients framing a monumental gateway, decorated to a greater or lesser extent according to the period. This gateway gives access to a deep vestibule on which there open, on either side, the warden's quarters and sometimes shops from which items of basic necessity could be purchased. From here there is access to a large central courtyard, usually square, with a water-cistern. Around the courtyard on ground level there would be storerooms and shops, living-quarters and stables, sometimes a forge for the shoeing of animals. In many *khān*s, the travellers would sleep in a communal hall on raised platforms. In a *khān* of some importance there is an upper floor laid out on the same plan as the ground level, to which there is access by an internal stairway. The dimensions and number of rooms vary, the plan differing according to the region and the period.

The *khān*s of mountain districts are on a smaller scale than those of the plain. They are built square with corner buttresses; against the inner face of the outer wall there are installations for the accomodation of animals, while the travellers' quarters are built on the inner wall, opening on the central courtyard. There are also, in cold regions, very simple *khān*s without courtyard, consisting only of a hall with one or more aisles, whose archways, with openings for light, rest on columns or pillars while a bench runs the length of the interior, providing sleeping or sitting space. The prices paid by the traveller for accommodation, storage of goods and shelter of animals would very according to the quality and facilities of the highway *khān*. Some *khān*s received *waḳf*s, enabling them to entertain pilgrims free of charge.

The *khān*s which have survived enable us to identify the characteristics distinguishing the various types. At the time of the expansion of Islam in the Near East, there were two types of staging-post in existence; the one, consisting of oblong halls running parallel to the central courtyard, is specifically Iranian. Soon axial *īwān*s appear and the gateway takes on a particular importance. The other consists of a quadrangular structure with galleries enclosing a central courtyard. This "Mediterranean" type existed from the earliest times.

The oldest known Muslim highway *khān* would seem to be, according to the hypothesis of Oleg Grabar, the building dating from the Umayyad era known as Ḳaṣr al-Ḥayr al-Sharḳī [*q.v.*]. It consists of a structure with a windowless façade, corner towers and buttresses on the walls, on the inside two floors opening on a courtyard, a peristyle on the ground level and a gallery on the upper floor. It is thus built in the "Mediterranean" type.

There are distinctions to be drawn between the Saldjūk *khān*s of Iran and Anatolia, the Ayyūbid *khān*s cf Syria, the Mamlūk *khān*s of Egypt and Syria, the *khān*s of the Pilgrims' route, the Ilkhānid and Ṣafawid *khān*s of Iran and the Ottoman *khān*s of Asia Minor.

From the Saldjūk period in Iran, where there was a flowering of commercial activity at the end of the 5th/11th century, we know the Khān Zafarānī, between Nīshāpūr and Sabzawār. It is built on a square plan, the exterior walls 75 m. in length, built of unfired brick on foundations of fired brick, with circular towers at the corners. In the centre of the façade a high gateway flanked by towers gives access through a vestibule to the almost square inner courtyard (36 × 38 m.) on to which, as in the *madrasa*s, open four *īwān*s. Those of the lateral sides are enclosed by four rooms on each face, while those of the rear and the vestibule have three rooms on both sides. The lay-out of the courtyard resembles that of the cruciform *madrasa*; it is only the purpose of the rooms which is different. In the one case they are designed for study, in the other for the accommodation of commercial traffic. On the right hand side of the entrance is a mosque, and on the exterior there is a bath-house attached to the building.

There are some excellent examples of Saldjūḳ
Plan of the Evdir Khān [K. Erdmann, *Das anatolische Karavansaray des 13. Jahrhunderts*, i].

*khān*s from the 7th-8th/13th-14th centuries in Anatolia. They are of four types. There are *khāns* with a monumental entrance and a vestibule giving access to a central rectangular courtyard surrounded by arched galleries and rooms, as at Evdir Khān (606-16/1210-19) near Anṭaliya, Ḳïrḳgöz Khān (633-43/1236-46), Sulṭān Khān (633/1236) between Sivas and Kayseri, or Yeñi Khān (717/1317) on the road from Tokat to Sivas, and the *khān* of Marand in Ādharbāydjān (730/1330). There are covered *khān*s like Susuz Khān (644/1246) near Burdur, measuring 25 m. by 26 m., with five cradle-vaulted girders and a central cupola. Some *khān*s combine the courtyard surrounded by rooms and the covered building, bringing together the "Mediterranean" and "Iranian" types, as at Sulṭān Khānï (626/1229, restored in 677/1278) 40 km. southwest of Aḳ Sarāy, not to be confused with its namesake near Kayseri. This *khān*, which is entered through a gateway decorated by stalactites, has two sections, one measuring 50 m. by 62 m. with a courtyard bounded by a portico upon which the living-quarters open and by a warehouse as well as a bakehouse and a *ḥammām*; in the centre of the courtyard is an oratory with a cupola standing on four pillars; to the south of the courtyard is the other section; a huge hall measuring 33 m. by 55 m., with five cradle-vaulted aisles and a door at each end, in which the animals were quartered. It is the most important *khān* of the 7th/13th century. Aḳ Khān, to the north-east of Deñizli, built in 650/1252 by sultan Kay Kāwūs, is of a rectangular plan with a square inner courtyard bounded by porticos on two sides and by a vaulted hall supported on ten lines of pillars. Finally, the Alara Khān to the north-west of Alaniya is of yet another design: the inner courtyard is nothing more than a corridor open to the sky with seven rooms on each side, the whole enclosed by long cradle-vaulted halls. Differing in design and dimensions, the Saldjūḳ *khān*s are alike in having corner towers and walls supported by buttresses; they are remarkable for their large gateways, having broken arches decorated with stalactites, framed by intricately worked geometric patterns often consisting of figured decoration.

The Ayyūbid type (6th-8th/12th-14th centuries) in Syria is of square or rectangular plan with central courtyard and a peripheral gallery with cradle-vaulting, broken along the principal axis by an entry corridor, with, in some cases, a room on either side of the vestibule. The gate may be preceded by a salient. In the axis of entry there sometimes opens on the opposite side the wide bay of an *iwān*. The design of Ayyūbid *khān*s is almost always identical, the only variations being in the proportions of the various parts (e.g. Khān al-ʿArūs, Ḳutayfa, and Ḳara to the north of Damascus).

In the later Mamlūk period (9th/15th century) commerce in the Orient was most active and *khān*s multiplied in Syria, especially on the Aleppo to Cairo highway; there is, however, no particular architectural evolution to be noted. The *khān*s of this period are rectangular with windowless walls and a central courtyard containing a water-cistern and surrounded by a gallery, cradle or groin-vaulted, there is a mosque and often a bath-house, the main door-way opens in the façade or in a fore-projection of the wall, and the entry corridor is flanked by two vaulted chambers. Worthy of mention are, in the vicinity of Damascus, Khān Ayāsh to the north and Khān Dunnūn to the south, in Palestine Khān al-Aḥmar, Khān Rastān on a bridge over the Orontes between Ḥims and Ḥamāt, and the *khān* of Ḳalʿat al-Mudīḳ (40 m. by 40 m.) at Apamaeus. There are examples of the same type from the 11th/17th century at Khān Tūmān and at Ḳaramurt (1048/1638), and an enormous *khān* (161 m. by 122 m.) near Baghras [*q.v.*].

In Iran, the *khān* evolved more rapidly and with more frequent changes than in Syria. In the 8th/14th century, in the time of the Īl-Khānids, a new type of *khān* appeared. This is a building on a rectangular plan with the exterior wall reinforced by circular corner towers, and there is a monumental entrance in the form of a bastion with a solid vaulted door-way in an ornamental setting of brick such as that of which traces survive near Marand (730/1330). Within, one enters a vast courtyard bordered by lodging-quarters with *iwān*s in the main axes. A fountain, cisterns and a mosque complete the installation. These *khān*s often have two stories with gallery, on the ground floor there are the stables, and the shops, and there is access by an interior stairway to the first floor and the merchants' quarters, sometimes furnished with fire-places as at Sin (730/1330).

Under the Ṣafawids, in the 10th/16th century, wealthy caravans, signs of the significant progress made by the economy of Central Asia since the Tīmūrids, moved along the trade-routes. Shāh ʿAbbās I
Plan of the Alara Khān [K. Erdmann, *Das anatolische Karavansaray des 13. Jahrhunderts*, i].

made improvements in highway communications and in the system of staging-posts. The period saw an increase in the number of *khān*s, extending as far as the trade-routes to India. In these *khān*s, the monumental effect of the gate-way with salient is accentuated, while the installations of a religious

nature tend to disappear. In the period following the death of the great sovereign, a concern for symmetry dominates the building-style and huge hypostyle stables appear. At the end of the 11th/17th century, *khāns* on an octagonal plan with circular corner towers are found in mountainous areas. We shall mention three examples, at Amīnābādh, at Khān-i Khurra and at Dahbid on the road between Iṣfahān and Shīrāz.

In Ādharbāydjān, the *khān* typical of the 9th/15th century is that of Sangatchali, near Baku, with its window-less walls, designed on a plan identical to that of the Mamlūk *khāns*. In the 10th-11th/16th-17th centuries there existed in this region two types of *khān*: one, on a square plan with a central courtyard and a lay-out resembling that of the Mediterranean *khān*, and the other, on a rectangular plan, having a long hall open at both ends divided into three aisles, open at both ends with a single entrance in a pillared projection.

In the same period in the Ottoman empire, a large number of highway *khāns* continued to appear, some consisting of one section containing installations bordering on a courtyard open to the sky and another section covered against the winter, others constructed according to the Saldjūḳ prototype, but decorated in a more sober fashion.

A new type appeared, built on a plan almost square, with a long central passage lying along an east-west axis and bounded by shops; in the middle of the passage, two doorways each giving access to an oblong hall running parallel to the passage, with four aisles and three sets of pillars. The chamber on the north side of the passage, provided with a bench, was intended for travellers, while that on the south side sheltered animals and merchandise. Of this type were the Yeñi Khān (10th/16th century), which has recently disappeared, but was formerly on the road from Tokat to Sivas, and Khān Meḥmed Pasha (1028/1619) at Ulukişla to the east of Konya. Finally, at Gebze, on the road from Istanbul to Izmit, there is a *khān* of classical Ottoman type having a rectangular structure, without a central courtyard, and consisting of a double hall with six pillars marking off two sets of seven twin sections.

The last great highway *khān* was built in Iran in
Plan and section of the *khān* of Māder-i Shāh [M. Siroux, *Caravansérails d'Iran et petites constructions routières*].

the reign of Shāh ʿAbbās II (1052-77/1642-66). It is the imposing *khān* of Mādar-i Shāh, a grim and impressive work of architecture 45 km. from Iṣfahān.

Two instances of the structural evolution of the *khān* should be noted, one in Syria, the other in Iran. In the first case, we observe the transformation of a highway *khān* into an urban *khān*: in fact at Djisr al-Shughur, to a *khān* built in 1070/1660, in the course of time a refectory was added, later a hospital; this collection of buildings, on the left bank of the Orontes at the approaches to a bridge, became in the 19th century the nucleus of an urban settlement which grew up around it. The second case is that of the *khān* of ʿAlī-ābād, between Tehran and Ḳum which became at the end of the 19th century the nucleus of a flourishing oasis settlement; with the addition of a *ḥammām*, a flour-mill, two ice-houses and some shops, the *khān* lost its original character, ceasing to be a highway institution and taking on the functions of an agricultural centre.

II. The urban *khān*. While the highway *khān* is a staging-post and a relay-station, the urban *khān* lies at the end of a journey; it is a depot, a place for commercial transactions and brief stay.

In fact, the term *khān* has been applied to hostelries and urban depots in the Near East only since the Mamlūk and Ottoman periods, more especially the latter.

In the 5th/11th and 6th/12th centuries in Baghdād and Damascus, the large depots bore the name of *dār* with the name of the commodity for which the establishment was noted. The urban caravanserai would have been called *dār al-wakāla* (the house of procuration or agency), before this became a synonym for *funduḳ*, which at the end of the 7th/13th century began to be replaced by *khān* as a designation for suburban hostelries. Later, in the 11th/17th century the *khān* began progressively to take upon itself exclusively the functions exercised within the city-walls by the *dar al-wakāla*, the *funduḳ* (πανδοχεῖον) and the *ḳayṣariyya* [*q.v.*]. In fact, in the town, the *khān* gave lodging to travellers who could lodge there in exchange for a fee paid to the warden who provided bedding and straw. In the present day as in the past we find installed there wholesalers, middlemen, importers' agents, messengers, and retailers looking for merchandise. There is the bulk selling of imported merchandise or export-bound goods; bales and packing-cases are stacked in the courtyard.

The most common type of depot, the *khān*, providing the means to await the time for the transfer of merchandise, is designated either by the name of the founder or by the name of the principal commodity to be sold there. Thus there are to be found in most towns a *khān al-ṣābūn* (*khān* of soap) or a *khān al-zayt* (*khān* of oil).

In the second half of the 9th/15th century, the Mamlūk sultans provided certain facilities for European traders visiting Alexandria. After the grant of capitulations by the Ottoman sultans [see IMTIYĀZĀT], the urban *khāns* flourished greatly in the Near East. The number of visiting Western merchants grew and they no longer confined themselves to staying in the harbour-districts (*iskele*) but went to do business in towns of the interior such as Aleppo and Damascus or Cairo, centres where export and import goods from all over the Orient were accumulated. Until the mid-11th/17th century, ambassadors from the major powers were accommodated in Istanbul in a *khān* specially adapted for their use, the Elči Khāni.

In the 12th/18th century, the *khān* supplanted, as regarded commercial activity, the *funduḳ* which henceforward had only the function of a hostelry for pilgrims and travellers.

While the term *khān* was current in Asia Minor, by contrast in Egypt, the word was considered foreign and, from the start of the 10th/16th century tended to be replaced by the Arabic term *wakāla* used in a concrete sense, transcribed by Western authors as "okel" (and similar forms). The *khān* was to remain nevertheless, and at the end of the 18th century, there were still in Cairo 14 *khāns* as against 206 *wakālas*.

Situated in the middle of the souks in city centres, the *khāns*, by their number and their size reflected the amplitude of the traffic and the economic importance of each city.

Sometimes the urban *khān* would be not a structure, but a group of several specialised markets, like the Khān al-Khalīlī in Cairo, a collection of shops enclosed by two large gateways. Sometimes in the interior opening on the courtyard there would be shops (*ḥāṣil*), leased or bought by the merchants.

The plan of the urban *khān* "has not varied in the course of time: a central courtyard around which developed a row of shops built on to the surrounding wall and opening beneath a covered portico extending, in front of their doors, all around the courtyard. This arrangement simply reproduces, under a less monumental guise, the traditional plan of the agora." This description by Jean Sauvaget applies to the classic type of *khān* which has prevailed in the lands of the Oriental basin of the Mediterranean since the Mamlūk epoch, and subsequently throughout the Ottoman empire, as is attested by a picture of Raffet, depicting the *khān* of Bucharest in the 19th century.

The *khān* could be a pious foundation set up by a rich and illustrious person; it would then be either one of the sources of revenue of a *waḳf* to the benefit of a *madrasa* like the *khān* Mādar-i Shāh in Iṣfahān, or for the upkeep of a mosque, such as the two *khāns* of Bursa which supported the Green Mosque (Yeşil Cami), or the beneficiary of fixed revenues, attributed to it when it served the specific purpose of sheltering pilgrims. Being a profitable business, the *khān* could represent an investment, and more than one *amīr* was proprietor of a *khān* in the 8th/14th and 9th/15th centuries. At the end of the 9th/15th century, at Damascus, out of five new *khāns*, three were built by *amīrs* and two by merchants; at Aleppo, as against nine *khāns* built by *amīrs*, only one was founded by merchants. The managers of *khāns* would often be the descendants of the founders, and the principal official was the *wakīl al-tudjdjār*, the agent of attorney who attended to the storage and sale of the merchants' goods; the *khān* also received visits from an inspector appointed by the *muḥtasib*. At nightfall, the leaves of the door were always closed while a guardian kept watch in his lodge.

In the Ottoman period, according to J. Sauvaget, the plan is "uniform in principle: around two courtyards of unequal dimensions there are juxtaposed, on ground-level, shops rented by the foreign merchants lodging on the upper floor in rooms opening on a gallery, while a vaulted warehouse protects the stocks of merchandise against theft and bad weather." In some *khāns* the central courtyard is replaced by a covered hall, as at Khān Asʿad Pāshā at Damascus, or sometimes the central courtyard instead of being square becomes a long rectangle, divided crosswise into three suites, as at the Valide Han of Istanbul.

At Aleppo, the oldest *khāns* were situated in the suburbs of the city; Ibn Shaddād (end of the 7th/13th century) mentions eight of them. Within the city-

walls, the oldest *khāns* date from the Mamlūk period; they are in the centre of the city. The Khān Bayrakdīn was constructed by two *amīrs* in 827/1424. Between 815/1422 and 874/1470 numerous *khāns* were constructed. Ibn al-Shiḥna (d. 890/1485) mentions 25 of them within the city-walls and 13 outside. There were other *khāns* built, such as the Khān al-Zayt constructed by the *amīr* Khayr Bek, the Khān al-Ḳaṣṣābiyya begun by the *amīr* Abrak in 916/1510 and completed in 928/1522, and the Khān al-Ṣābūn with its rich façade, attributed to the *amīr* Uzdamur. Aleppo benefited, on the economic plane, from the expansion of the Ottoman empire. The buildings were situated on the edge of the commercial centres, and it was possible to set up on the exterior façades of the *khāns* rows of shops forming a souk, assured by its location of a good supply of business. "The prime example of the type at Aleppo is the *Khān al-Kumruk* (*Khān* of Customs) built in 982/1574, which combines within a single structure 52 shops, and 77 rooms as well as two stone-built souks lit by two cupolas, a total of 344 shops." It had two fountains, a mosque and a monumental entrance. Dating from the end of the 11th/17th century, the *Khān al-Wazīr* (1092/1682), now in ruins, still has its monumental entrance. In this period d'Arvieux counted 68 *khāns* at Aleppo; in the mid-20th century Sauvaget counted 38 still in existence.

At Damascus, the first *khāns* seem to have been built outside the city-walls as at Aleppo. In the 7th/13th century, in the northern suburb of al-ʿUḳayba, was the Khān al-Zindjārī; reputedly a place of debauchery, it was destroyed in 632/1236 and replaced by the al-Tawba mosque. The inner-city *khāns* are situated to the south of the Great Mosque in the western sector of the old city. Ibn Ṣaṣrā mentions five *khāns* at the end of the 8th/14th century, including the *Khān al-Ḥabbālīn* and the *khān* built by the *amīr* Mandjak al-Yūsufī. In the 10th/16th century the *khān* replaced in the city certain *funduḳs* and *ḳaysāriyyas*; thus we have the *Khān al-Zayt* (*Khān* of Oil) and the *Khān al-Harīr* (*Khān* of Silk), a vast building constructed by Darwīsh Pashā in 980/1572. The *Khān al-Kumruk* (*Khān* of Customs) was built at the end of the 10th/16th century and the start of the 11th/17th. Of the two biggest *khāns*, the one, covered by two cupolas, is attributed to Sulaymān Pasha (1145/1732), the other, with nine cupolas of which the central cupola has collapsed, to Asʿad Pasha al-ʿAẓm (1165/1752).

At Tripoli, the third city of Syria, we know of the existence of six Mamlūk *khāns*: *Khān al-Khayyāṭīn*, *Khān al-Ṣābūn*, the *Khān* of the Egyptians, *Khān al-Muhandis*, *Khān al-Manzil* and a *dār al-wakāla* which became a *khān* before 736/1336. Beirut had one *khān* in 766/1365. All the major ports of the Syria-Palestine coast had flourishing *khāns*, such as the Khān al-Firandj at Ṣaydā, one of the caravanserais built by Fakhr al-Dīn [*q.v.*] at the start of the 11th/17th century. There was also a Khān al-Firandj at ʿAkkā (Acre).

In Egypt, the term is applied essentially to the urban institution; it appeared in about 730/1330 designating the building of the Khān Amīr Ḳusūn. The best known is the Khān al-Khalīlī which was built by the *amīr* Djarkaṣ al-Khalīlī at the end of the 8th/14th century and was endowed with two porches by the sultan Ḳānsūḥ al-Ghūrī. This is no longer a building, but a conglomeration of specialist markets opening on the principal street of the commercial centre. It is a commercial estate, a business area with specialised branches for precious textiles, silk-works, embroidered cloth and carpets. There used to be workshops there for spinning and weaving. To this day it serves the functions of the ancient *ḳaysāriyya*.

The *khān* came to its peak of success at Cairo in the time of al-Maḳrīzī (9th/15th century): there were then built the Khān Maṣrūr and the Khān al-Ḥadjdjār (827/1424). In the 11th/18th century, the Khān al-Ḥamzāwī came to rival the Khān al-Khalīlī, while the Khān al-Bāshā became the biggest warehouse of the city and ʿAlī Bey, the famous *shaykh al-balad*, had a vast *khān* constructed at Būlāḳ.

In Baghdād, the identification of monuments is often difficult, for the city has undergone numerous destructions as a result of floods and fires, and often one would know nothing of its monuments were it not for references in the ancient texts. The most ancient *khān* is that of Abū Ziyād mentioned by al-Khaṭib al-Baghdādī (end of the 5th/11th century). Often the *khāns* mentioned by the authors pose a problem of terminology; in fact, they are often cited, notably by Yāḳūt (7th/13th century) under the name of *dār*, as the *Dār al-Ḳuṭn* (House of Cotton), *dār al-Ḳazz* (House of Raw Silk); the term has the sense of a specialised commercial centre, close to that of *ḳaysāriyya*. *Dār* means "palace", there is a *Dār al-Khayl*, the palace of the Cavalry, which was the hostelry reserved for the ambassadors and which was later to become the *Khān al-Khayl*. It owes its name to the stables which were incorporated in it.

In the 6th/12th century there existed a *Khan al-Safatiyyīn* (*Khān* of the Basket-weavers). In the mid-8th/14th century, the *amīr* Mirdjān constructed, in the commercial centre on the left bank of the Tigris, a *khān* which bears his name. In the 10th/16th century Baghdād became an important caravan centre. In 1089/1678 Aḥmad Bushnāḳ built the famous Khān Banī Saʿd. In 1823 the *madrasa* al-Mustanṣiriyya accomodated the Customs service and took the name Khān al-Ortmā; in this period European travellers testify to a great number of *khāns* at Baghdād.

At Iṣfahān, which knew a period of great economic prosperity after the accession of Shāh ʿAbbās I, Chardin counted in the 11th/17th century 1,802 caravanserais. Many have disappeared but the *khān* adjoining the *madrasa* Mādar-i Shāh remains and testifies to the prosperity of the capital at the end of the start of the 18th century.

In Asia Minor, the Ottoman *khāns* are mainly concentrated at Bursa and at Istanbul. The *khāns* of Bursa, the first Ottoman capital, rectangular in form with a central courtyard surrounded by a portico with arcade, are of classic Mediterranean type. The most ancient of these is the Bey Khān (mid-8th/14th century), which at the present day has lost its original form but survives under the name of Emir Khān. Mention should be made of the Ipek Khān (Khān of Silk) dating from the start of the 9th/15th century which, like the Geyve Khān, was constituted as a *waḳf* to the advantage of the Green Mosque and of which only a few traces remain. The Koza Khān (Khān of the Cocoon), with a central water cistern in the courtyard and an octagonal mosque, was built at the end of the 9th/15th century. The Pirinč Khān (Khān of Rice) with two stories, in ruins today, was built in 913/1507.

At Istanbul, the two most ancient *khāns* whose ruins are known to us in the vicinity of the Rustum Paşa Mosque, the Hurmali Khān (Khān of Dates) and the Balkapan Khān (Khān of Honey), date back for their origin to the Byzantine era. The most ancient of the sixteen *khāns* of the Grand Bazaar is the Çuhaci

Hani (Khān of Cloth); it dates from the 9th/15th century. These *khāns* are in most cases spinning-shops at the side of warehouses and retailers' shops. One of the largest warehouses is the Kürkçüler Hani (Khān of the Furriers) constructed by the grand vizier Maḥmūd Pasha in 872/1467; the building is of impressive dimensions (130 m. by 65 m.), with one courtyard measuring 40 m. by 45 m. and another pentagonal in shape, with a perimeter of 140 m. As many as 167 rooms open under the porticos on the ground-level; on the upper floor there are cradle-vaulted rooms with windows opening on the gallery, and in front of each door there used to be a miniature cupola covering the portico. The building remains, but has deteriorated beyond recognition. In the mid-10th/16th century, Sinān built in the name of Rustum Pasha two *khāns* on the banks of the Golden Horn, Čukur Khān (Khān of the Ditch) at Istanbul and Ḳurshunlu Khān (Khān of Lead) at Ghalaṭa. As elsewhere, the term stems from the dimensions of the installations. In the mid-11th/17th century, the buildings could not all have been large, for Ewliyā Čelebi counted 556 *khāns* at Istanbul. It was no longer a question of vast warehouses, but rather of places of sale for provincial and foreign traders.

The two finest specimens from the 11th/17th century are the Wālide Khānī with its three courtyards where all kinds of commerce were enacted, and opposite, the Büyük Yeñi Khān with its long rectangular courtyard bounded by two galleries with arcades; this stone-built edifice underwent modifications in 1178/1764. From the 18th century, we have the Khān Shirmakesh (Khān of the Silversmiths), whose façade has alternate rows of stone and brick and which was completed in 1128/1716 on the foundations of a mint. The original feature of this building is the fact that the rooms are set on both sides of a large corridor on the upper floor and do not open on the courtyard. Taking the examples of Üsküdar, the terminus of caravan-routes on the Asiatic shore of the Bosphorus, we may note in the 17th and the 18th centuries different categories of *khāns*: there are large buildings with many rooms and multiple stalls for saddle-animals such as the Mihrimāh Sulṭān and Orta Wālide Khāns, and there are luxury establishments like the Kösem Wālide Khān. There are numerous *khāns* of more modest dimensions, reserved for "merchants of land and sea." There are *khāns* for pilgrims, some of them offering lodging free of charge, but most often the Muslims would be accommodated in the town in *madrasas* or *khānaḳāhs*, while Christians would lodge in monasteries. The Waḳīf Khān (1918) of Istanbul, with its offices and commercial facilities, bears witness to the functional evolution of the contemporary *khān*.

KHĀN BĀLĪḲ [see KHĀNBALĪḲ].

KHĀN DJAHĀN LŌDĪ (*ca.* 995-1040/*ca.* 1587-1631), military commander under the Mughals of India.

Pīr Khān (Mīr in the printed text of Shaykh Farīd Bhakkarī, *Dhakhīrat al-khawānīn*, ii, Karachi 1970, is a misprint) was the younger of the two sons of Dawlat Khān Lōdī, an officer in Akbar's army and a nephew of the well-known Afghān nobleman, bearing the same name, who had invited Bābur to invade the kingdom of Sulṭān Ibrāhīm Lōdī. The date of Pīr Khān's birth is not recorded, but, as has been stated by Bhakkarī, he was about twenty years of age early in 1015/1607 when he was first received by Djahāngīr (*Tuzuk-e-Jehangeeree*, ed. Syud ʿAhmud Khan, Ghazeepore 1863, 42; *Dhakhīra*, ii, 74). It can, therefore, safely be assumed that he must have been born in 995/1587. The two brothers took service first under Rādjā Mansingh, and then under Prince Dāniyāl whom Akbar had appointed viceroy of the Deccan and whose service their father had joined. On the death of his father and subsequently that of his elder brother, Pīr Khān was summoned to the court by Djahāngīr, who conferred on him the title of *Ṣalābat Khān* and a *manṣab* of 3,000 *dhāt* and 1,500 *sawār* besides honouring him with the epithet of *farzand* ("son"); later in the same year (and not 1017/1608 as stated by Beni Prasad, *History of Jahangir*[3], Allahabad 1940, 226; see *Tuzuk*, 61, where the date is given as Radjab 1016/October 1607) he was given the higher title of Khān Djahān.

In the Deccan the Mughal forces had been facing a difficult situation for several years. Hence in 1019/

1610 the Emperor decided to send Khān Djahān Lōdī to help Khān Khānān ʿAbd al-Raḥīm Khān against the Deccanī statesman and commander Malik ʿAnbar (an Abyssinian or Ḥabshī [*q.v.*] by birth). After the fall of Aḥmadnagar, he had set up his headquarters at Khirkī, which was later given the name of Awrangābād by Prince Awrangzīb. The Mughals had suffered several reverses at his hands, particularly because of the guerilla tactics which he used against their slow-moving armies laden with heavy equipment. On his arrival at the base of Burhānpūr, Khān Djahān found that the Khān Khānān had suffered a major defeat and signed a disgraceful treaty, and Aḥmadnagar had also fallen to the enemy. Khān Djahān wrote to Djahāngīr that if he were given the chief command of the Deccan campaign, he would conquer Aḥmadnagar and Bīdjāpūr within two years. The Emperor agreed and sent Khān Aʿẓam with 10,000 troops and 2,000 *aḥadīs* to reinforce the Mughal army. According to the new plan of the campaign, Khān Djahān, Mansingh and the Amīr al-Umarāʾ were to march on Aḥmadnagar through Berār and Khāndesh while ʿAbd Allāh Khān, *Ṣūbahdār* of Gudjarāt, was to proceed from Aḥmadābād by way of Nasik. Both the armies were to coordinate their movements and hem in the Deccanis, but ʿAbd Allāh Khān, ignoring the advice of his colleagues to remain in contact with Khān Djahān, rushed into the territory of the enemy and sustained a defeat. The other army was also subjected to harassment by Malik ʿAnbar's men who had cut their sources of supplies, and managed only with difficulty to withdraw to ʿĀdilābād, in the vicinity of Burhānpūr, where Prince Parwīz was encamping (*Tuzuk*, 107-8).

Djahāngīr castigated the commanders who were responsible for the defeat and transferred them to other places; Khān Djahān was also demoted and posted as Thānadār in Thalnīr, but a year later he was restored to favour. He was again sent to the Deccan with Mahābat Khān, and early in 1026/1617 he was present on the banks of the Narbada to receive Prince Khurram, who had now been appointed supreme commander of the Deccan campaign. The Prince succeeded in concluding peace with the States of Aḥmadnagar and Bīdjāpūr and thus temporarily retrieved the Mughal position in the Deccan. Khān Djahān was among the principal officers who accompanied him on his departure from Burhānpūr and who were received by the Emperor in the fort of Māndū in Shawwāl 1026/October 1617.

In the account of the fifteenth year of his coronation, Djahāngīr says that Khān Djahān, who was a heavy drinker, suddenly abandoned this habit and "thenceforward did not touch wine despite my advice that he should give it up gradually"; possibly this action and a general change in his approach to life were due to his association with Shaykh Faḍl Allāh of Burhānpūr (see *Dhakhīra*, 115). However, in the same year he was appointed *Ṣūbahdār* of Multān because reports were coming from the direction of Ḳandahār of threats on it from the Ṣafawid Shāh ʿAbbās Ṣafawī (*Dhakhīra*, 77). On receiving reports that the Persian forces had besieged it, Djahāngīr issued orders for a relief expedition, but Shāhdjahān, who was to lead it, put forward conditions which the Emperor was not willing to accept.

In the last years of Djahāngīr's reign, the imperial court became a hotbed of intrigues on account of the plans of Nūr Djahān to raise Shahriyār, the youngest son of the Emperor, to power, because he had been married to her daughter by her former husband. Khān Djahān Lōdī, who had returned to the court in 1031/1622 and had been appointed *Ṣūbahdār* of Gudjarāt in the following year, was now ordered to take the place of Mahābat Khān as *Atālīḳ* of Parwīz, and later, on his death in Muḥarram 1036/October 1626, was entrusted with the supreme command of forces in the Deccan with the title of *Sipah-Sālār*. On the death of Malik ʿAnbar, the commander of the forces of Niẓām Shāh offered submission, but this peace did not prove to be a lasting one, and it was not long before the new regent of Aḥmadnagar, Ḥamīd Khān, again declared war. Khān Djahān promptly opened a vigorous campaign, but instead of subjugating the enemy completely he granted him peace, restoring his territories for the very moderate sum of three lakhs of *huns*; some writers have, therefore, accused him of accepting this money as a bribe. It has also been suggested that by granting exceptionally easy terms, he wanted to place Niẓām Shāh under obligation so that he might if necessary seek refuge with him.

At the time of Djahāngīr's death (October 1627), his son Shāhdjahān was in the Deccan. After some hesitation, Khān Djahān Lōdī recognised his succession, and the new Emperor appointed him Governor of Berār and Khāndesh. He was directed to recover the lost territories in the Deccan; but noting his reluctance, Shāhdjahān transferred him to Mālwā and ordered him to co-operate with Mahābat Khān in suppressing the rebellion of Djhūdjhar Singh Bundela. After this campaign, he was summoned to court where however he was greatly disappointed at his lukewarm reception. Fearing danger, he fled in Ṣafar 1039/Sept.-Oct. 1629, and though overtaken with his followers near Dholpur, managed to escape through Gondwana and Berar to the kingdom of Aḥmadnagar, where he hoped to find a refuge. Murtaḍā Niẓām Shāh welcomed Khān Djahān in his camp near Dawlatābād, and assigned to him the *parganah* of Bīr; he probably hoped to use Khān Djahān for recovering his territories lost to the Mughals.

Shāhdjahān realised the threat to the Mughal position in the Deccan, and left Āgra in person in Rabīʿ II 1039/December 1629. Three detachments of Mughal forces under the general command of Aʿẓam Khān invaded the Niẓāmshāhī territories. In Dhu 'l-Ḳaʿda 1039/June 1630 the Mughals inflicted a heavy defeat on the Deccanīs, but Khān Djahān nevertheless worsted one group of the invading forces. However, on the subsequent appearance of Aʿẓam Khān's army, Khān Djahān lost his nerve. He made a stand, but was defeated and fled towards Shivagaon, and at last managed to reach Dawlatābād, where Murtaḍā had shut himself up in the fortress. In the face of Murtaḍā's unwelcoming attitude, however, Khān Djahān had to leave for Mālwā with the intention of going to the Panjab where he thought he would be able to rally the support of his fellow-tribesmen. The Mughal Emperor had him pursued to Bundelkhand, where his trusted officer, Daryā Khān, was killed in a sharp action with the forces of the Bundelah chief, Bikramādjit (Djumādāʾ II 1040/January 1631). Khān Djahān continued his flight and passing Kalinjar, where his son Ḥasan was captured and put to death by the Mughal commander, he reached and encamped by the side of a pond called Sihindah (see *Maʾāthir al-umarāʾ*, i, 728), where he was attacked and slain by his pursuers. His head was taken to the court by Kāmgār, author of *Maʾāthir-i-Djahāngīrī*, who was given the title of Ghayrat Khān.

Khān Djahān Lōdī was a brave soldier but lacked statemanship, and this led to his downfall and ultimate ruin. The author of the *Dhakhīrat al-khawānīn*,

Shaykh Farīd Bhakkarī, who had served under him, nevertheless praised some of his personal qualities and says that he was a pious person, who passed hours in the society of the *ʿulamāʾ* and *shaykhs*.

KHĀN-I DJAHĀN MAKBŪL, ĶIWĀM AL-MULK, minister and confidant of the Dihlī Sultans Muḥammad b. Tughluķ and Fīrūz-Shāh in the 8th/14th century.

Of Hindu origin (his original name was Kannū "flower"), he stemmed from Tilangānā in South India, and was converted to Islam in 722/1322 when the local Rādja surrendered to a besieging army from Dihlī under the *amīr* Ulugh Khān, the later Sultan Muḥammad b. Tughluķ. The *amīr* accordingly gave him the name of *maķbūl* "the one accepted [into Islam]", and he rapidly became a favourite of Muḥammad b. Tughluķ. The contemporary historian Baranī mentions him in his *Taʾrīkh-i Fīrūz-Shāhī* as the Malik Maķbūl, the *nāʾib* or deputy *wazīr* of the Sultan, and he acquired the *laķab* or honorific of Ķiwām al-Mulk from the ruler also.

As well as being of undoubted administrative capability, Ķiwām al-Mulk benefited from his Deccani Hindu origin, having no racial or tribal connection with the Turkish military nobility in Dihlī and being therefore utterly dependent on retaining the Sultan's favour. In 727/1327 he was in Dawlatābād or Deogīrī in the Deccan, which the Sultan had made his second capital, and after crushing the revolt of Bahrām Aybā Kīshlū Khān at Multān, was appointed governor of that important frontier province. He was subsequently transferred after a few years in Multān to Dihlī, were he became deputy to the chief financial minister or *Wazīr-i Mamālik*, Khʷādja Djahān, achieving a reputation for strictness and probity in the auditing of the accounts and in the exaction of taxation from the *muķṭaʿs* and provincial governors. He also accompanied the Sultan away from Dihlī on various military campaigns and punitive expeditions. During the years between 746/1345 and 751/1350 he was in the Deccan at Warangal, and in Gudjarāt, subduing rebels, and shortly before Muḥammad b. Tughluķ's death in Sind in 752/1351, he returned to the capital as deputy to Khʷādja Djahān, the viceroy or *Nāʾib-i Ghaybat* in Dihlī during the Sultan's absence.

In the succession crisis on Muḥammad b. Tughluķ's death, Khʷādja Djahān promoted the short-lived cause of the child Maḥmūd against the rival contender Fīrūz-Shāh, the dead Sultan's cousin. Ķiwām al-Mulk, however, espoused the side of Fīrūz-Shāh, and when the latter came to power, the new Sultan rewarded him by promoting him to the office of *Wazīr-i Mamālik*, with the exalted titles of *Masnad-i ʿĀlī, Aʿẓam Humāyūn, Khān-i Djahān*. He now set about restoring order in the fiscal system, after an amnesty on outstanding debts left over from Khʷādja Djahān's tenure of office. He acquired far-reaching executive powers, including the hereditary grant of the vizierate for his family and the power to appoint or dismiss any official in the *Dīwān-i Wizārat*. A strict system of financial control was adopted over the revenues coming in from provincial nobles and over the registering of all presents (*khidmatī*) in either the state treasury or else in the royal storehouse or *kārkhāna*. The purity of the coinage was regulated and the criminal law enforced. The pacific Fīrūz-Shāh tended to leave much of the civil administration in his hands, and when the Sultan was absent from Dihlī, Khān-i Djahān usually assumed full civil and military powers in the capital as *Nāʾib-i Ghaybat*. However, he never forgot that his whole position depended on retention of the Sultan's favour. Thus he cultivated the friendship of Fīrūz-Shāh's favourite slave Bashīrā, who held the office of *Amīr-i ʿArḍ* or Inspector-General of the Army with the personal title of ʿImād al-Mulk, even though the latter was notoriously corrupt. Khān-i Djahān himself acquired extensive *iķṭāʿs* for the support of his official duties and rank, to the value of three million *tankāhs* per annum, and he built in them numerous markets and caravanserais and constructed irrigation canals.

He died, aged over 80, in 770/1368-9, and his office, his *iķṭāʿs*, the title of Khān-i Djahān and all his other privileges were made over to his eldest son Djūna Shāh.

KHĀN KHĀNĀN, a high military title in mediaeval Indo-Muslim usage. The term *Khān* [*q.v.*] became popular as the designation of a high officer or nobleman and in a technical sense it was used for a commander of ten thousand soldiers. In reproducing the instructions of Bughrā Khān to his son, Kayķubād, Baranī (*Taʾrīkh-i Fīrūzshāhī*, Bibl. Ind., 145) makes the former speak of a book, *Ādāb al-salāṭīn*, which had been especially brought from Baghdād for the sons of Iltutmish and which he had studied with Khʷādja Tādj al-Dīn Bukhārī; in this the legendary Iranian ruler Djamshīd speaks of the decimal chain of command, in which a *khān* commands ten *maliks*. More historical, however, are the statements of Ibn Faḍl Allāh al-ʿUmarī in his *Masālik al-abṣār fī mamālik al-amṣār*, and al-Ķalķashandī, *Ṣubḥ al-aʿshā*, that a *khān* commanded ten thousand soldiers, a *malik* one thousand, and an *amīr* one hundred; this decimal system probably came from Central Asia to the subcontinent.

Khān Khānān (Khān of Khāns) was the highest title conferred on an officer of the State, at least up to the time of Akbar, for Djahāngīr says that there was no title higher than that of *Amīr al-Umarāʾ*, shown also by the fact that normally the title of *Khān Khānān* was held by one person only. The first person to bear this title as recorded in the historical sources on the Dihlī sultanate was Maḥmūd, the eldest son of Sulṭān Djalāl al-Dīn Fīrūz Shāh (Baranī, 176); another case is that of the brother of Khusraw Khān

the usurper (Baranī, 410). Under the Mughals, this title was conferred rather more frequently, the first person to receive it at the hands of Bābur being Dilāwar Khān, son of Dawlat Khān Lōdī. Humāyūn had conferred this title on Bayram Khān; on his dismissal early in the reign of Akbar, Mun'im Khān received and held it till his death in 983/1575. Nine years later it was conferred on Bayram Khān's son, Mīrzā 'Abd al-Raḥīm, who died in 1036/1627. Mahābat Khān (d. 1043/1634) held it in the time of Djahāngīr and in the early years of Shāhdjahān's reign. Subsequently it was conferred on Āṣaf Khān (d. 1051/1641), and in the early years of 'Ālamgīr's reign it was conferred on Mīr Djumla.

Bibliography: given in the article.

(S. Moinul Haq)

KHĀNBALĪḲ (usually written Khān Bālīḳ), the "Khān's town", the name of Pekin, the capital of the Mongol Emperors after 1264 in Eastern Turkī and Mongol and afterwards adopted by the rest of the Muslim world and even by Western Europe (*Cambaluc* and variants in S. Hallberg, *l'Extrême Orient dans la littérature et la cartographie de l'Occident*, Göteborg 1906, 105 f.). According to Rashīd al-Dīn (ed. Berezin, *Trudî Vost. Otd. Arkh. Obshč.* xv, Persian text, 34), Pekin (Chinese, then Čūngdū, i.e. "the middle capital") was called Khānbālīḳ even earlier by the Mongols, apparently as one of the chief towns of the Kin dynasty [see čingiz khān]. As everywhere in the Mongol Empire, Muslims enjoyed considerable prestige in Khānbalīḳ also. Maḥmūd Yalawāč b. Muḥammad al-Khwārazmī (Barthold, *Turkestan*, i, 139), who died there in Rabī' I, 652/April 21-May 20, 1254, was several times confirmed in office as governor of North China (Rashīd al-Dīn, ed. Blochet, 85, 309). On the assassination of the vizier Aḥmad Fanākatī in 1282 and the events that followed see *ibid.*, 508 ff.; Marco Polo, ed. Yule-Cordier, i, 415 ff.; ed. Hambis, 117-20 and index; P. Pelliot, *Notes on Marco Polo*, i, 10-1. On the town and its situation on the Imperial Canal cf. Rashīd al-Dīn, ed. Blochet, 455 ff.; on the distances between Khānbalīḳ and other towns by the land routes see Waṣṣāf, ed. Hammer, 24, Indian ed., 12; *Notices et extraits*, xiii, 225 f. (al-'Umarī); Sharaf al-Dīn Yazdī, *Ẓafar Nāma*, Indian ed., ii, 219 f. The name Khānbalīḳ for Pekin was also retained after the decline of the Mongol empire in Central and Western Asia and also in Europe. On the five months' sojourn (Dec. 1420-May 1421) of the embassy of Sulṭān Shāh Rukh in Khānbalīḳ see *Notices et extraits*, xiv, 320 ff.; the original narrative, which survives in one MS only (Elliot 422 in Oxford, Bodleiana = *Zubdat al-Tawārīkh* of Ḥāfiẓ-i Abrū, fols. 390b ff.), has so far not been fully investigated (brief account in Barthold, *al-Muẓaffarīya*, 27; *Mir Islama*, 107). There was a mosque in Pekin even in those days. Khānbalīḳ is mentioned as late as the early years of the 18th century in an anonymous history written in Kāshghar (*Zap.*, xv, 251). In the reports of the Russian Ambassadors of the 17th century, the form Kambalīḳ (with variants) is used, under Western European influence (Yu. Arsenyew, *Puteshestviye ... ruskago polannika Nik. Spafariya*, in the *Zap. Geogr. Obshč. zu otd. etnogr.*, x, vip I, Index. Spafari (embassy 1675) is the first to write Pežin under the influence of the North Chinese pronunciation; this pronunciation also explains the names in the modern literature of Central Asia for Pekin (Bačīn or Bādjīn) (e.g. *Ta'rīkh-i Amāniyya*, 24; cf. *Zap.*, xvii, 0188 ff.

(W. Barthold*)

KHANDAḲ, ditch, trench or moat. The word seems to have come into Arabic from Persian through Syriac (cf. A. Siddiqi, *Studien über die persischen Fremdwörter im klassischen Arabisch*, Göttingen 1919). It is also known as a place-name (cf. Yāḳūt, ii, 476; al-Balādhurī, *Futūḥ*, 85). Its best-known application is to the so-called "expedition of the Khandaḳ", in which Muḥammad foiled a Meccan attempt to storm Medina by digging a moat or trench at those parts of the oasis which were open to attack by cavalry. This was in Dhū 'l-Ḳa'da 5/April 627. The Meccans had been preparing for this attack on Medina since the battle of Uḥud two years earlier; they had persuaded several nomadic tribes to send contingents to join the Meccan forces, and altogether had about 10,000 men with 600 horses. Muḥammad, however, had already harvested the grain in the northern part of the oasis, and when the cavalry arrived they were soon short of fodder. Meanwhile, as soon as Muḥammad heard of the imminent departure of the army from Mecca, he summoned the Muslims to help with the digging of the *khandaḳ*, and he himself took part in the work. Most worked with a will, and the digging is said to have been completed in six days. The Meccan cavalry, though on level ground overwhelmingly superior to the Muslim infantry, were repelled when they attempted to cross the *khandaḳ*. With their main offensive tactic thus nullified, the Meccans and their allies were forced to set about besieging Medina—an operation in which they were wholly unskilled. After a fortnight of little military activity but much intrigue and counter-intrigue, the confederacy broke up and the siege was abandoned. The failure of the expedition greatly strengthened Muḥammad's position and led to dejection in Mecca.

(W. Montgomery Watt)

KHWĀNDAMĪR, surname of the Persian historian Ghiyāth al-Dīn who was born *ca.* 880/1475 into a family of high officials and scholars. His father, Khwādja Humām al-Dīn Muḥammad b. Khwādja Djalāl al-Dīn Muḥammad b. Khwadja Burhān al-Dīn Muḥammad Shīrāzī, was for many years the minister of Sulṭān Maḥmūd b. Abī Sa'īd, who at the end of his political career became the Tīmūrid ruler of Samarḳand from 899-900/1494-5. The historian Mirkhwānd [*q.v.*] was his maternal uncle and took an important part in his primary education. It is, therefore, likely that Khwāndamīr was actually born in Herat where his grandfather lived, although the *Haft iḳlīm* (ed. Dj. Fāḍil, Tehran 1340 sh., iii, 430) enters him under Bukhārā. The earliest patron of his own career was Mīr 'Alī Shīr Nawā'ī, who put his vast library at his disposal and to whom Khwāndamīr dedicated his first three books. Shortly after the death of 'Alī Shīr in 906/1500, Khwāndamīr entered the service of Mīrzā Badī' al-Zamān, the eldest son of Sulṭān Ḥusayn Bayḳarā, who succeeded his father in 911/1506. During the years of the Uzbek invasion of the Tīmūrīd lands which ended with the conquest of Herat by Shaybānī in 913/1507,

Khwāndamīr was entrusted with diplomatic missions to potential allies of the Sulṭān. He was also appointed to the office of *ṣadr*. When the Uzbeks were marching on Herat, he wrote at the request of the citizens of the town a letter of submission to Shaybānī. He remained in Herat after its capture, and he has given an account of how he and other members of the local aristocracy were squeezed by the Uzbeks (cf. *Habīb al-siyar*, Tehrān 1333 sh., iv, 381 ff.). His verdict on the rule of the Ṣafawids, who took possession of Herat in 916/1510, was much more favourable, yet he seems not to have entered their service. In 920/1514 we find him living as a retired scholar in Pasht (or Basht), a township in the mountainous area of Gharčistān to the east of Herat (*op. cit.*, iv, 397). He then attached himself to Mīrzā Muḥammad-i Zamān, the eldest son of his old master Badīʿ al-Zamān, and performed a mission for him to the ruler of Balkh. Afterwards he returned to his secluded way of life and devoted himself to the writing of his main work, the chronicle *Ḥabīb al-siyar*. Having completed this work in 927/1520, he departed from Herat and travelled by way of Ḳandahār to Āgra where he presented himself before Bābur in Muḥarram 935/ September 1528. He entered the service of Bābur and accompanied him on an expedition to Bengal in the following year. After the death of Bābur in 937/1530 he served his son and successor Humāyūn until his own death. It is commonly said (e.g. Firishta, i, 402) that Khwāndamīr died of dysentery on the return march from an expedition of Humāyūn to Gudjarāt, but Badāʾūnī has recorded a poetic chronogram by Khwāndamīr on the death of the "riddle-maker" (*Muʿammāʾī*) Shihāb al-Dīn, which occurred in 942/ 1535-6 (*Muntakhab al-tawārīkh*, Calcutta 1864-9, i, 343). At his own request he was buried at Dihlī, near the tombs of the mystic Niẓām al-Dīn Awliyā and the poet Amīr Khusraw.

Works. Khwāndamīr was a voluminous writer, whose collected works are not restricted to historiography proper, but include also political ethics, biography, geography and epistolography. He has left several poems as well, most of which were used as stylistic embellishment for his proseworks. As a poet, Khwāndamīr made use of the penname Muʾarrikh (cf. A. Gulčīn-i Maʿānī, *Shahrāshub dar shiʿr-i fārsī*, Tehrān 1346/1967, 31 f.; idem, *Taʾrīkh-i tadhkirahā-yi fārsī*, ii, Tehrān 1350/1971, 588-90).

His first work, *Maʾāthir al-mulūk*, a collection of political maxims attributed to pre-Islamic kings and sages as well as to the Prophet, the *Imām*s and the secular rulers of the Islamic period, was completed before the death of his uncle Mīrkhwānd, which occurred in 903/1498 (cf. Storey, i, 102; Bregel' *Persidskaya literatura*, Moscow 1972, 380, 1398; A. Munzawī, *Fihrist-i nuskhahāyi khaṭṭī-i fārsī*, ii/2, Tehrān 1349/1970, 1675 ff.).

The *Khulāṣat al-akhbār fī bayān aḥwāl al-akhyār*, which was completed in 905/1499, is a concise world history digested from the *Rawḍat al-ṣafāʾ* of his uncle but also based upon other historical material which was put at his disposal by ʿAlī Shīr Nawāʾī. The most original contribution of the author is his description of Herat and of the contemporary divines, scholars and artists living there (cf. Storey, i, 102 ff.; Bregel', 380 ff.; Munzawī, iii, 1398 f. An autograph of this work has been described by A. M. Piemontese, in *RSO*, xlvi (1971), 40-6).

Just about the time of death of his patron, in 906/1501, Khwāndamīr completed a panegyric biography of ʿAlī Shīr Nawāʾī entitled *Makārim al-akhlāḳ* (cf. Storey i, 795; A. Khayyāmpūr, in *Nashriyya-i Dānishkada-i Adabiyyāt-i Tabrīz*, iii (1329/1950), 3-4, 41 ff. and 7, 68 ff.).

A collection of biographies of famous ministers, entitled *Dastūr al-wuzarāʾ*, was dedicated to Khwādja Kamāl al-Dīn Mahmūd, *wazīr* to Sulṭān Ḥusayn Bayḳarā, in 915/1509 (cf. Storey i, 1091; edited by S. Nafīsī, Tehrān 1317/1938).

Khwāndamīr's contribution to epistolary literature is the collection styled *Nāma-i nāmī* (also known as *Inshāʾ-i Ghiyāth al-Dīn*) which is said to contain genuine historical documents. It cannot have been compiled earlier than 929/1522-3 (cf. F. Tauer, in J. Rypka, etc., *History of Iranian Literature*, Dordrecht 1968, 434, 437 n. 53; Munzawī, iii (1350/1971), 2121 f.; G. Hermann, *Der historische Gehalt des "nâmä-ye nâmi" von Ḫândamîr*, Göttingen 1968, unpublished thesis).

The most valuable work of Khwāndamīr is the *Ḥabīb al-siyar*, a general history from the earliest times down to near the end of the life of Shāh Ismāʿīl I (died 930/1524). The title refers to Karīm al-Dīn Ḥabīb Allāh, the Ṣafawid governor to whom the work was eventually dedicated, after the death of the original patron of the writer, Sayyid Ghiyāth al-Dīn Amīr Muḥammad. The work consists of an introduction (*dībāča*), three books (*mudjallad*), dealing respectively with pre-Islamic history, Islamic history up to the end of the ʿAbbāsid caliphate, and the period of Mongol and Tīmūrīd rule till the foundation of the Ṣafawid state in Iran, each book being divided into four sections (*djuzʾ*), and an epilogue (*khātima*) containing geographical information. An interesting feature of the composition of the *Ḥabīb al-siyar* is the occurrence of a great number of biographies at the end of the treatment of each major historical period. This innovation in Persian historiography was imitated by writers of the Ṣafawid period (cf. ʿAbd al-Ḥusayn Nawāʾī, *Ridjāl-i kitāb-i Ḥabīb al-siyar*, Tehrān 1324/1945). The original version of the chronicle (represented by the text of the lithogr. edition, Tehrān 1271/1854-5) was written in 927-30/1520-4. Khwāndamīr continued however to make other, revised copies, the last we know of as yet being marked by a note added to the first volume in Shaʿbān 935/April 1529 while the author was in the camp of Bābur at the *trimohinī*, or the juncture of the Sardjū and the Ganges, during an expedition against Bengal (lith. ed. Bombay 1273/1857, i/4, 84 = ed. Tehrān 1333/1954, i, 587. On the question of the different versions of the *Ḥabīb al-siyar*, see N. D. Miklukho-Maklay, *Redaktsii vseobshčey istorii Xondemir* (*Khabib al-siyar*), in *Pis'menniye pamyatniki i problemi istorii kul'turi narodov vostoka*, Leningrad 1967, 23 f.). The most interesting part of the work is of course the treatment of contemporary history from the moment where the sixth volume of Mīrkhwānd's work had stopped, i.e. at the time of death of Sulṭān Abū Saʿīd in 873/1469. Khwāndamīr used this part of his own work also for a continuation of the seventh volume of the *Rawḍat al-ṣafāʾ* which was left unfinished by his uncle (cf. Storey, i, 92 f.). The historical value of the *Ḥabīb al-siyar* is enhanced by the fact that the author was a close witness, and sometimes even a participant, of such decisive developments as the breakdown of Tīmūrīd power in Central Asia and Eastern Iran under the impact of the Uzbek invasion, and the conquest of Khurāsān by the Ṣafawids. His account of Bābur's early career is one of the best sources for the latter's life and fills the two great gaps in the *Memoirs* of Bābur. He writes in the elegant Persian style of his times but applies the rhetorical embellishment with such moderation that

it does not obscure the factual contents of his text (cf. Storey i, 104-9, 1237 f.; Bregel', 383-93, 1399; Munzawi, vi, 4127-46).

The last work of Khwāndamīr is the *Ḳānūn-i Humāyūnī or Humāyūnnāma*, a description of institutions, ordinances and buildings introduced or erected at the order of that ruler, made at the latter's request and completed probably in 940/1534 (cf. Storey, i, 536, 1313; ed. by M. Hidayat Hosain, Calcutta 1940).

In the introduction to the *Ḥabīb al-siyar*, Khwāndamīr claims also to have made an abridgement of the general history of Waṣṣāf [*q.v.*], but there are no manuscript copies of this known to exist.

The historiographical tradition of Khwāndamīr's family was continued by one of his sons, Amīr Maḥmūd, who wrote a history of the reign of the early Ṣafawids (cf. Storey, i, 304, 1279; Bregel', 854-5, 1468).

Bibliography: In addition to the references given in the article, further references to manuscripts, editions and translations of Khwāndamīr's works as well as to secundary sources may be found in the works of Storey and Bregel' mentioned above and in the introductions to text-editions, notably those by M. Hidayat Hosain to the *Ḳānūn-i Humāyūn*, i-xxxvi, and the introduction by Djalāl al-Dīn Humāʾī to the edition of Tehrān 1333/1954 of the *Ḥabīb al-siyar*, i, 2-43.

(H. Beveridge — J. T. P. de Bruijn)

KHĀNDĒSH, a region of west-central India lying to the north-west of the Deccan [see DAKHAN], the upper valley of the river Tāptī (also called Tāpī), and the surrounding plain and forest country bounded on the north by the Satpuṛā hills and the river Narbadā, on the west separated from mainland Gudjarāt [*q.v.*] by the northern ranges of the Western Ghāṭs, on the south by the Sātmālā hills which separate it from the Deccan tableland, and on the south-west by the Laling and Gālnā hills which divide it from the Nāsik district of Mahārāshṭra. There is no well-marked eastern natural boundary, and the governed district, whether under the Dihlī sultanate, the Fārūḳī rulers, the Mughals, or the Marāṭhās, has frequently included territories outside the natural boundaries. The region owes its name to the Fārūḳī rulers who, not being admitted by their more powerful neighbours of Gudjarāt, Mālwā and the Deccan to the status of sultans, were known by the lesser title of Khān; but it has been suggested that the name Khāndēsh is a convenient Islamicisation of an older form. The Mughal *ṣūba* of Khāndēsh was for a time renamed Dāndēsh after Sulṭān Dāniyāl [*q.v.*], youngest son of Akbar.

The Tāptī, an ancient river flowing in a deep bed, is of no value for navigation or irrigation, although perennial; but its tributaries, all the more important of which lie on the left bank, provide irrigation water, and there is an abundance of wells in the central region. This is a 250 km. stretch of rich alluvial plain, ideal for cotton and foodgrains. The northern tract is hill forest, inhabited chiefly by Bhīls; the west and south-west are also well forested. In Mughal times the region was famous for its sugar-cane, indigo, the snow-white rice of Nawāpur, and its fine cotton and the cloth trade, especially the gold and silver brocaded cloth produced at Burhānpur (J. de Thevenot, *Voyages ... en Asie*,[2] Paris 1727, v, 212 ff. —J. B. Tavernier, *Voyages ... aux Indes*, Paris 1676; although Bernier points out that the labour was exacted almost by force and that the labourers were wretchedly poor). Much of its prosperity derived
from the trade-route from the north through the Burhānpur gap, along Khāndēsh, and to Sūrat.

1. History.—The Khāndēsh region was in the time immediately before the first Muslim conquest held variously by the Yādavas of Devagiri (= Dawlatābād) or a branch of the Čawhāns at Asīr. (The latter displaced the Tāks, a tribe (Takshaka) of Scythian origin; the statement s.v. ASĪRGARH identifying Tāks and Čawhāns needs correction.) In 695/1295-6 Asīrgaṙh was taken by ʿAlāʾ al-Dīn Khaldjī on his return north from the Deccan expedition, although apparently the district was not laid under tribute; although the Čawhān ruler and his family were killed. Asīr seems to have been occupied by another Hindū king. In 705/1306 Malik Kāfūr [q.v.], sent from Dihlī to exact the tribute from Devagiri, occupied Sulṭānpur in the north-east of Khāndēsh; six years later Kāfūr, again collecting tribute, established a governor at Devagiri, and hence presumably at least controlled the western part of Khāndēsh for Dihlī. Muslim power was reinforced firstly by Ḳuṭb al-Dīn Mubārak Khaldjī, and later by Muḥammad b. Tughluḳ. The fact that Malik Rādjā received this region in *djāgīr* from Fīrūz Shāh in or before 772/1370, and that the region does not figure in the four *aṭrāf* of ʿAlāʾ al-Dīn Bahman Shāh's kingdom, implies that it continued to be regarded as part of the Dihlī dominions; but many petty Rādjpūt chiefs held sway even within the central Tāptī valley region, and Malik Rādjā's first task as a *djāgīrdār* (later *sipah-sālār*) for Dihlī was bringing them under tribute. Malik Rādjā's independence from Dihlī did not come until about 784/1382 (it is worth stressing that this fell before the independence of both Gudjarāt and Mālwā); for the history of the region from then until the capture of Asīr by Akbar in 1009/1601, see the article FĀRŪḲIDS.

The *Āʾīn-i Akbarī* (tr. Jarett, ii, 222-7) describes the district and its products and revenues at the time of its absorption into the Mughal empire, and European travellers (Fitch, Newberry, Jangigny) supply further information: it was highly fertile and well populated, and its markets well stocked. The *Āʾīn* enumerates its sub-divisions (Nandurbār and the north-west seems to have been made over to Mālwā at this time), and mentions the principal towns and their forts (these are indicated on the map; some locations on this refer to the monuments, described below). But Khāndēsh rapidly became unsettled and its prosperity declined, and travellers in the next ten years (Hawkins, Finch) report bands of outlaws everywhere, necessitating huge armed escorts for travellers, and plundering of the country up to the Tāptī by "Deccanis": these were the bands of Marāṫhā mercenaries trained by Malik ʿAnbar [q.v.] in guerilla warfare for the harassment of the Mughal armies, who conducted their Khāndēsh and Deccan operations from Burhānpur. Roe, in 1618, found conditions little better, although Burhānpur commanded enough trade to attract an English factory. Shāhdjahān's reign saw even worse conditions at first, for the privations of the Deccan warfare were exacerbated by the terrible famine of 1039-40/1630; but conditions improved after Awrangzēb assumed the viceregency of the Deccan in 1045/1636, pacified the district, and introduced revenue reforms based on Ṭodar Mall's earlier settlement (see ḌARĪBA, vi). By the mid-11th/17th century Khāndēsh knew its highest prosperity, as accounts of European travellers (Thevenot, Tavernier, Ogilby) confirm.

The peace was seriously disturbed by the rise of the Marāṫhās under Shivādjī, who in 1081/1670 passed through Khāndēsh after the sack of Sūrat, demanding *čawth* (= a fourth part of the revenues); thereafter he continued to plunder the district (especially the trade towns of Čopṛā, Dharangāwn, Erandol) until his death in 1091/1680. Marāṫhā raids continued under Sambhādjī, Burhānpur falling to them in 1096/1695, and under Shāhū, Shivādjī's grandson; they were not checked until Niẓām al-Mulk [q.v.], chafing against the manipulation of Mughal power by the Sayyids of Bārhā [q.v. in Suppl.], left his governorship of Mālwā and invaded Khāndēsh, then the northernmost province of the Deccan under the Sayyid Ḥusayn ʿAlī. He gained possession of Asīrgaṙh and Burhānpur in 1132/1720, defeated the Sayyids' army, and moved on to assume the viceroyalty of the Deccan, whence he compelled from the Marāṫhās a guarantee of safety for Khāndēsh. His successors after his death in 1161/1748 [see ḤAYDARĀBĀD, i] were less competent: Ṣalābat Djang and the French general Bussy had to cede much of Khāndēsh and other western districts of Ḥaydarābād in return for the guaranteed safety of the centre, and when in 1173/1760 Asīrgaṙh fell to the Peshwa Bādjī Rāo the Marāṫhā possession of Khāndēsh was complete. For some years it remained peaceful, and recovered its prosperity, but later suffered in internecine Marāṫhā struggles, and from plundering by Bhīls and by disaffected Arab mercenaries in Marāṫhā employ. The British, first appearing in 1779, took Burhānpur and Asīr in 1803, and eventually the district was ceded to them in 1818. For the general history of the region under the Peshwas and others see MARĀṪHĀS.

The British assumption of power was met with sporadic resistance from Arab bands (especially at Amalnēr, Sōngir fort), and everywhere from Bhīls (two tribes of whom, the Tāḍvī and the Nirdhī, are Muslim, at least nominally), and it was not until 1846 that the district was finally pacified. With the reorganisation of district boundaries under the British, the Burhānpur-Asīrgaṙh region became part of the Nimār district of the Central Provinces (1864). In 1906 the district was divided into two new districts, West and East Khandesh; these are now known by the names of their headquarters towns, Dhulia and Jalgaon respectively.

Bibliography: For the early period of Khāndēsh history see Bibliography to DIHLĪ SULTANATE; for the Fārūḳī period see that to FĀRŪḲIDS, also ASĪRGARH, BURHĀNPUR, THĀLNĒR. To these now add H. K. Sherwani and P. M. Joshi (eds.), *History of medieval Deccan (1295-1724)*, i, 491-516, Hyderabad 1973 (chapter on Khāndēsh by P. M. Joshi, giving many additional references to contemporary non-Muslim sources). For the Mughal period see MUGHALS, and also: Abu 'l-Faḍl ʿAllāmī, *Āʾīn-i Akbarī* and *Akbar-nāma*, ed. Bib. Ind., index; of later texts, especially ʿAbd al-Ḥamīd Lāhawrī, *Pādshāh-nāme*, Bib. Ind., and Khʷāfī Khān, *Muntakhab al-lubāb*, Bib. Ind.; W. Foster (ed.), *Early travels in India*, London 1921, for Fitch, Hawkins, Finch, Coryat; ed. idem, *The embassy of Sir Thomas Roe in India*, Hakluyt Soc.[2] 1926; ed. idem, *English factories in India*, 13 vols., Oxford 1906-27. On trade routes: J. Deloche, *Recherches sur les routes de l'Inde au temps des Mogols*, Paris 1968 (some detailed maps on travellers' itineraries). Systematic geography of the region in O. H. K. Spate, *India and Pakistan: a general and regional geography*,[2] London 1957, index s.v. Khandesh. Now out of date in many particulars, but still very valuable for detailed descriptions of sub-districts, towns, products, ethnography, and history of British period up to 1880: *Gazetteer of*

the Bombay Presidency, xii (*Khandesh*), Bombay 1880; also *Imperial gazetteer of India*, xv, Oxford 1908, 225-39. (J. Burton-Page)

al-**KHĀNDJĪ** [see handžič in Suppl.].

KHĀNFŪ, an Arab name, denoting what was in the 3rd-4th/9th-10th centuries, the most important port of China, and centre of the maritime commerce with the peoples of western Asia. Certain scholars have in the past (from J. Klaproth, in *JA*, v (1824), 40, up to I. Hallberg, *L'Extrême-Orient*, etc., Göteborg 1906, 213) tried to prove that Khānfū should not be identified with Canton, but the identification of the two cities seems certain. This view derived support from the fact of the confusion between Khansā (Hang-ču) and Khānkhū (Khānfū) made by the informants of Abu 'l-Fidā (tr. Guyard, ii/2, 122-3); but in fact, Khānfū was the name by which Canton was known in the 3rd/9th century to the Arabs, since Khānfū is the rendering of Kuang-fu, the popular form of Kuang-čeu fu. According to Pelliot, *Notes on Marco Polo*, i, 272, s.v. "Čin", there is a piece of information in Yi-tsing which states that "Če-na (Čīna) is Kuang-fu (Canton); Mo-ho-če-na (Mahāčīna) is the capital (Č'ang-ngan = Si-ngan fu)"; cf. Chavannes, *Religieux éminents*, 56. Again following Pelliot, thirty years after Yi-tsing (in 730), an identical passage can be found in the Siu Ku-Kin Yi-Tsing t'u-tsi (Tripitaka, *kie*, iii, 93b): "The kingdom of Yin-tu (Indu, India) generally calls Kuang-fu (Canton) 'Če-na' (Čīna), and gives to the imperial capital (Si-ngan-fu) the name of 'Mo-ho-če-na' (Mahāčīna)". This note has passed into the Song kao-seng čum (Tripitaka, *che*, iv, 76b); cf. Bagchi, *Le canon bouddhique en Chine*, ii, 551-2).

In his commentary on the *Ḥudūd al-ʿālam*, 224, Minorsky gives some information concerning Khānfū not cited by that source.

It was only in the 8th/14th century that Khānfū was confused with Khansā [*q.v.*] by the Arab travellers and by historians of the Mongols. Ibn Baṭṭūṭa, iv, 92, 271-2, calls the city Sin-Kālān (cf. Yule, *Cathay*, etc., iv, 109, 120); this name is the Arabic form equivalent to the Indian name of Mahāčīn, whilst the Persian form was Čīn-Kālān. Waṣṣāf, ed. von Hammer, i, Vienna 1856, 43, has Čīn-Kālān; Rashīd al-Dīn, ed. Blochet, ii, 493, writes "Kōngi (?) which the Persians call Čīn-Kālān", which according to Pelliot, *Notes on Marco Polo*, 276, should be corrected to Kōnfū, since this is one of the popular forms of Kuang-čeu fu (cf. J. A. Boyle, *The successors of Genghis Khan*, New-York-London 1971, 283-4, "Chin-Kalān"). Finally, Abu 'l-Fidā, in his *Geography*, ed. Reinaud, 363-4, tr. Guyard, 122-3, writes Khānkhū, which may be read as Khānfū (see above); this town (Ferrand, Relations de voyages, 30, 123) is said to be four days' distance by boat from Lūnkhīn-fū, i.e. from Lūkhīn, which is mentioned in the 10th century as the land whose people had recently invaded Čampa. Lūkhīn should be corrected into Lūfū and identified with Long-pien = Hanoi, and as being 20 days by land.

Ibn Khurradādhbih's information (text, 69, tr. 49) on the site of Khānfū (at a distance of 4 days by sea and 20 by land from the most southerly port of China Lūḳīn, modern Hanoi) can only apply to Canton, as was also noted by H. Hirth and W. W. Rockhill, *Chau Ju-kua*, St. Petersburg 1911, 22; cf. also Idrīsī, ed. Jaubert, i, 84, 90.

Among the western sources, the name of Čīn-Kālān appears in Oderic of Pordenone (Van den Wyngaert, *Sinica-franciscana*, 458) in the form "Censcala", probably to be read "Cencala"; in John of Marignolli (*ibid.*, 543) in the form of "Cynkalan", in a context which opposes this name, of which he says "it is Greater India", to that of "Cynkali", of which he says "it is Lesser India" and which he calls "Mynibar"; and finally, in the Catalan Map under the form "Cincalan", probably borrowed from Odoric (cf. on all these facts, Pelliot, *op. cit.*, 275-6, s.v. "Cin", and 583, 590, 595-6, s.v. "Çaiton", also 833, s.v. "Silingiu".

Under the T'ang, Canton was an extremely important port, where numerous Muslims settled, who in 758 plundered it (cf. e.g. Chavannes, *Documents sur les Tou-kiue* (*Turcs*) *occidentaux*, St. Petersburg 1903, 173), an event not mentioned in Arabic sources. These last (Abū Zayd al-Sīrāfī, in Reinaud, *Relations des voyages faits par les Arabes et les Persans dans l'Inde et la Chine*, Paris 1845, 64-5; Sauvaget, *Relation de la Chine et de l'Inde*, Paris 1948, 6, 40; Masʿūdī, *Murūdj*, ed. Pellat, §§ 329 ff.; Ibn al-Athīr, vii, 221) mention the circumstances in which a large number of foreigners (120,000 or 200,000) Muslims, Christians, Jews and Mazdeans are said to have perished at the time of the destruction of Khānfū by the rebel general Huang-č'ao in 264/877-8; according to the Chinese sources, Canton was captured by this latter general in 879 (cf. S. Levy, *Biography of Huang Ch'ao*, Berkeley and Los Angeles 1955). It is in reference to this event that the importance of this city for overseas commerce is stressed (Pelliot, note on Ferrand's *Voyage du marchand arabe Sulayman en Inde et en Chine, rédigé en 851 suivi de remarques par Abû Zayd Ḥasan* (*vers 916*), in *T'oung Pao*, xxi (1922), 410). According to the Arabic information, the city gave 50,000 *dīnār*s each day to the government (Reinaud, *op. cit.*, text 41; Ferrand, *op. cit.*, 58). When a foreign vessel arrived, the Emperor sent his eunuchs there to select the best goods (Reinaud, text, 73-4); the journey between Khānfū and the capital Khumdān (Si-ngan-fu) took two months (*ibid.*, 77, 103). The ruler (*malik*), i.e. the governor, of Khānfū bore the title of *dīfū* (*ibid.*, 38; according to Reinaud, n. 81, ii, 27, for Chinese Či-fu); cf. on this title, R. des Rotours, *Traité des fonctionnaires et traité de l'armée*, Leiden 1948, ii, 554 *sh. c'e-fu* "army of the capital cities"—one should certainly understand here "[the chief of] the armies of the city", hence the governor. Concerning the treatment of the Chinese of merchants who had come from across the seas, cf. T. Lewicki, *Les premiers commerçants arabes en Chine*, in *RO* (1935), 173-86 (bibliography), and the Persian text of ʿAwfī in Barthold, *Turketsan*, i (texts), 98.

Bibliography: Given in the article.

(L. Hambis)

KHĀNIḲĪN, a town in al-ʿIrāḳ, on the Helwān-Čay. The statement that Nuʿmān V, king of al-Ḥīra, was kept here a prisoner till his death on the order of his overlord, the Sāsānian Khusraw II, suggests that there was a fortress here in the period. The bridge of Khāniḳīn must also go back to Sāsānian times; it is built of brick and plaster in several arches across the river valley. At the Muslim conquest, a battle seems to have been fought at Khāniḳīn, for a "day of Khāniḳīn" is mentioned in Ibn al-Faḳīh. Under Arab rule Khāniḳīn was a small town and an unpretentious station on the road from Baghdād to Khurāsān. Ibn al-Muʿtazz praises the wine of Khāniḳīn. According to Abū Dulaf, a naphtha well at Khāniḳīn yielded a considerable revenue to the state. The Zuṭṭ were deported to [the region of] Khāniḳīn after their rising in lower Mesopotamia had been suppressed in 219/834.

SCHWARZ*)

K͟HĀNḲĀH, a composite word of Persian origin meaning a building usually reserved for Muslim mystics belonging to a dervish order. The terms *ribāṭ*, *tekke* and *zāwiya* [*q.vv.*] refer to establishments with similar aims. After an early period of evolution which is still imperfectly known, these all became widespread throughout the Islamic world down to modern times. The usual translation of "monastery" does not, however, convey the complexity of the institution.

Etymology. From the outset, *k͟hānḳāh* appears in two forms, sometimes in the same author: (1) the Persian form *k͟hānagāh*, often lightened to *k͟hānagah*, with the *nisba* of *k͟hānagāhī* (*Ḥudūd al-ʿālam*, 107; Frye, *The histories of Nishapur*, ii, 8a, 22b, 41b, iii, 19a; al-Samʿānī, *Ansāb*, v, 29; Yāḳūt, s.v. *Marw*); and (2) the Arabised form *k͟hānḳāh* and its variant *k͟hāniḳa*. The *nisba* of *k͟hānḳāʾī* seems to be used only by the geographer Muḳaddasī (*Aḥsan al-taḳāsīm*, 44), whilst the normal term is *k͟hānḳāhī* (*ibid.*, 323; Frye, i, 41a, 46b; al-Samʿānī, v, 29; Yāḳūt, s.v. *K͟hāniḳa*). These uncertainties are also felt in the plural. *K͟hawāniḳ*, or sometimes *k͟hawānik* (al-Maḳrīzī, *K͟hiṭaṭ*, ii, 414) is mainly used by Arabic authors, but there is also found the Arabo-Persian form *k͟hānagāhāt* (read as *k͟hānkāhāt* in Arabic) and the Persian plural *k͟hānagāhā*, especially in Persian texts. In regard to meaning, the two component elements are easily identifiable: *-gāh*, Persian locative suffix becoming usually *-ḳāh* in Arabic; and *k͟hān*/*k͟hāneh* with the same ambivalence as *bayt* "house", "room" (*Burhān-i qāṭiʿ*, s.v.). On the other hand, the general sense is quite obscure. In mediaeval times, other etymologies were put forward, starting from *k͟hʷān* "table" or from the root of the verb *k͟hʷāndan* "to recite". These etymologies have the advantage of providing the word with a satisfactory sense in regard to its evolution in the context of mysticism (place of the table, of recitation), but they can only be accepted in defiance of the most elementary rules of Persian orthography and Arabo-Persian phonetics: the vocable *k͟hʷā* never loses its *w* in Persian orthography, and if it passes into Arabic, becomes *k͟hawā* or *k͟hiwā*, cf. Pers. *k͟hʷān* cited above, which becomes Arabic *k͟hiwān*.

History. The word *k͟hānḳāh* seems to appear first of all in authors of the 4th/10th century, who describe it as an institution of their own time and localise these establishments above all in K͟hurāsān and Transoxania. The anonymous author of the *Ḥudūd al-ʿālam*, writing in Gūzgān in 372/982, gives on this topic highly valuable, though unfortunately so far unconfirmed in other sources, information: "In Samarqand stands the monastery of the Manichaeans (*khānagāh-i Mānaviyān*) who are called *nighūshāk* ("auditores")" (*Ḥudūd al-ʿālam*, 107, tr. Minorsky, 113). If one bears in mind the valuable information from the same period given by Ibn al-Nadīm in the *Fihrist* about the transfer of the centre of Manichaeism from Babylonia to Soghdia, the presence of these Manichaeans at Samarḳand is not surprising. In regard to this establishment's functions, the use of the word "auditores" seems to show that it was a centre of worship as well as of teaching and evangelism, according to the traditional and well-tried Manichaean system of militant evangelism (Puech, *Manichéisme*, 86 ff.).

A second, highly-important piece of evidence on the early *k͟hānḳāh*s is provided by another contemporary, al-Muḳaddasī. According to him (179, 182, 238, 323, 365, 377), the *k͟hānḳāh*s belonged exclusively to the theological and ascetic sect of the Karrāmiyya. The Karrāmī groups flourishing above all in K͟hurāsān, Transoxania, D͟jurd͟jān and Ṭabaristān, and those of the west in Jerusalem and around the tomb of Ibn Karrām there (d. 255/869), all had their *k͟hānḳāh*s. The *nisba* of *k͟hānḳāʾī* used by al-Muḳaddasī seems to be reserved for the Karrāmīs alone. Mystics (the later users of *k͟hānḳāh*s) are generally called by him (44, 118, 188, 415, 430) Ṣūfīs, distinguished by him into specific groups and linked only with *masd͟jid*s or *ribāṭ*s of the countryside. If one takes this information into account, it must be admitted that the early history of the *k͟hānḳāh* cannot be properly elucidated until the early evolution of the Karrāmiyya and their eventual connections with the Manichaeans are examined [see KARRĀMIYYA].

However, from the end of the 4th/10th century there seems to be an evolution of the *k͟hānḳāh*s (appearance of directors of them in Nīs͟hāpūr, Frye, i, 36b, 41a, 46b, 55b; al-Samʿānī, *nisba* of *k͟hānḳāhī*; al-Subkī, *Ṭabaḳāt*, iii, 131, 344, iv, 127) into establishments connected with certain groups which become almost totally identified with them and largely disguise their origins. These groups are those of the Ṣūfīs, often allied to S͟hāfiʿism and As͟hʿarism; the emergence together of these and their links in eastern Persia have been too little studied (but see H. Halm, *Die Ausbreitung der schafiitischen Rechtsschule*, Wiesbaden 1974, and for the Ṣūfī-S͟hāfiʿī links, *Les étapes mystiques du shaykh Abū Saʿīd*, tr. M. Achena, Paris 1974, 36).

The first half of the 5th/11th century is one of founding and organisation. The Ṣūfī Abū Saʿīd [see ABŪ SAʿĪD B. ABI 'L-K͟HAYR] (d. 440/1048) drew up a code of ten rules for the people in the *k͟hānḳāh* (Achena, *op. laud.*, 324, already noted by Nicholson, *Studies in Islamic mysticism*, 46). He was considered by the next generation as the first to have regulated the communal life in the *k͟hānḳāh*s "according to rules still in use today" (Frye, ii, 74a). Such an enterprise inevitably led to the fabrication of references to it in the past. This is doubtless the reasoning behind the legend of the first *k͟hānḳāh*, allegedly built at Ramla at the opening of the 2nd/8th century (al-Anṣārī, *Ṭabaḳāt al-Ṣūfiyya*, 9; in fact, according to al-Muḳaddasī, 164 ff., the district of Ramla was sprinkled with coastal *ribāṭ*s). Moreover, the terminology was still indefinite; *madrasa* could mean a centre for Ṣūfīs (R. Bulliet, *The patricians of Nishapur*, Cambridge, Mass. 1972, 253-4), and *duwayra* often alternates with *k͟hānḳāh* to denote the same establishment (*duwayra*/*k͟hānḳāh* of al-Sulamī, in Frye, ii, 82a, iii, 6a, 18a, 27a, 42a, 73a). Finally, from this period onwards, certain *k͟hānḳāh*s are also burial places, a fact which enabled them to benefit from the largesse of pious pilgrims (Frye, ii, 47a).

The second half of the century is marked by the alliance, in effect, of the people of the *k͟hānḳāh*s with the Sald͟jūḳ ruling power. The ideological linkage of Ṣūfism with S͟hāfiʿism-As͟hʿarism in K͟hurāsān now enjoyed an unprecedented expansion, not only on a local scale, but also outside the region (naturally, Ḥanafism was also able to adapt itself and integrate itself within this movement). Sald͟jūḳ expansionism, far from being territorial and political only, was often linked with an ideological expansionism, based in

the first instance on the spirited policies of official patrons. Niẓām al-Mulk and his Khurāsānian imitators were not the only ones to found *madrasas* and *khānḳāhs* (examples of such patronage at Nīshāpūr in Frye, ii, 78b, iii, 192). The Saldjūḳs of the west and their slave commanders, masters of Syria in the third quarter of the 5th/11th century, speedily imitated them at Aleppo and Damascus (lists of Syrian *khānḳāhs* in al-Nuʿaymī, *Dāris*, ii, 139-91, for Damascus; this list repeated with another for Aleppo and other towns by Elisséeff, *Nūr ad-dīn*, iii, 765-71). In Damascus, however, there seem to be two *khānḳāhs* dating from the pre-Saldjūk period; but in reality, these early foundations seem to have had little connection with the later developments in their function and probably only received the name of *khānḳāh* from the Saldjūḳ period onwards (*Dāris*, ii, 146, 151, nos. 164, 166; Elisséeff, *op. laud.*, iii, 768, n. 1). From that time onwards, *ribāṭ* and *khānḳāh* seem to become synonymous; at the end of the 6th/12th century, Ibn Djubayr wrote concerning Ayyūbid Syria, "As for the *ribāṭ*s, called here *khānḳāhs*, there are many of them; they are meant for Ṣūfīs, and are splendid palaces, since Ṣūfīs are real Kings in this country" (*Riḥla*, 256). In ʿIrāḳ, the word *ribāṭ* predominated (J. Chabbi, *Fonction du ribāṭ à Baġdād*, in *REI*, xlii/1 (1974); Achena, *op. cit.*, 351).

In Egypt, the foundation of *khānḳāhs*, following the Saldjūḳ tradition, began logically under the Ayyūbids after the fall of the Fāṭimids in the later 6th/12th century. It continued under the Mamlūks, but with some slowing-down after the second half of the 8th/14th century. The *khānḳāhs* were then gradually transformed into official institutions, hence controlled and not always linked to the Ṣūfī orders, which accordingly tended to move into institutions enjoying more autonomy.

Often they became part of complexes containing several institutions, e.g. *masdjid-madrasa*-mausoleum. Nevertheless, terminology remained still imprecise, and mediaeval historians could not always agree on the name for such and such institution (see for all this period, art. AL-ḲĀHIRA, list of monuments shown on map, and section on Mamlūk *khānḳāhs*; al-Maḳrīzī, *Khiṭaṭ*, ii, 414-27). From the Ottoman period onwards (10th/16th century), *khānḳāhs* were still founded, but they appeared more and more in the form of the Turkish institution of the *tekke* (Pers. *takya*, Ar. *takiyya*). A good number of these various institutions have survived to the present days (see AL-ḲĀHIRA, section on the Ottoman period, *Madrasas, tekkes*). There is, however, a general conclusion to be drawn here: that whilst the *khānḳāhs* did not pass beyond Egypt, constituting the last wave of the original Saldjūḳ expansion, the Turkish *tekke*s were carried along by the Ottoman conquests and reached the Maghrib.

During this time, in the east the Khurāsānian *khānḳāhs* swiftly spread beyond the Saldjūḳ domains and reached the eastern Iranian fringes and Afghānistān, sc. the territories of the Ghaznawids and then the Ghūrids (middle of the 6th/12th century). The severe local upheavals involving these powers seem to have affected them little, but the opposite became true with the Mongol invasions of the early 7th/13th century. The last Ghūrids, soon replaced by their slave commanders, founders of the Dihlī sultanate, fled to India. There followed a migration, which included the Ṣūfīs, comparable to that accompanying the westwards advance of the Saldjūḳs. This does not of course imply that all the Persian *khānḳāhs* disappeared during the Mongol period, nor that new institutions were not built (*Cambridge history of Iran*, v, 372, 511).

But from the course of the 7th/13th century onwards, two new dervish orders, the Čishtiyya and Suhrawardiyya, founded by refugees and soon based upon a widespread network of *khānḳāhs*, appeared in the new sultanate (Kh. A. Nizami, *Some aspects of Khānqah life in medieval India*, in *St. Isl.* viii (1957), 52-69; see also ČISHTIYYA and DIHLĪ). In the 8th/14th century, the reforms imposed on the Ṣūfī movement by Sultan Muḥammad Tughluḳ took the form of a resumption of *khānḳāhs* but also of the extension of their network in the Indian territories [see DJALĀL AL-DĪN AL-BUKHĀRĪ]. This type of institution, brought from Persia in the 7th/13th century, prospered more there than almost anywhere else right down to modern times and constitutes one of the characteristic manifestations of Indian Islam [see HIND, v (a)].

Constitution and functions. It is impossible to give here more than a few bibliographical references, since such a study would be intertwined with the immense and complex question of the links between Ṣūfism and its various forms and the contemporary society and ruling institutions. The most exhaustive work is J. S. Trimingham's *The Sufi orders in Islam*, Oxford 1971; for the way of life in Khurāsānian *khānḳāhs*, Achena, *op. laud.*, 79, 81, 97, 165, 180, 356, etc.; for Egyptian ones, al-Maḳrīzī, *Khiṭaṭ*, is a rich source; for Indian ones, Nizami, *op. laud.*

Architecture. Since they were institutions meant both for leading the communal life (rooms for prayer, corporate sessions) and also for sheltering individual mystics, often in significant numbers, all *khānḳāhs* contained both types of accommodation (and frequently too various annexes and dependent buildings permitting self-sufficiency). However, there was a great gulf between the sumptuous buildings founded under official patronage (Syria, Egypt) and the first Indian *khānḳāhs*. But neither of these gave rise to a special type of architecture distinct, for instance, from that of the *madrasas* (Elisséeff, *Nūr ad-dīn*, iii, 265, 266). Moreover, at the end of the Circassian period in Egypt (9th/15th century), the *khānḳāhs* were integrated within great funerary complexes; they ceased to have individual living-rooms within them, and became non-residential centres for Ṣūfī activities [see AL-ḲĀHIRA, section on the Mamlūk period, *Khānḳāhs*].

Bibliography: given in the article.

(J. CHABBI)

KHANSĀ or **KHINSĀ**, a town of China, in the province of Che-kiang, and capital of the empire of the southern Sung (1127-1279). From 15 December 1129 till 11 December 1277 it bore the official name of Lin-ngan, and is in fact the town of Hang-ču of the Ming. Under the Mongols it was called *Hing-tsai suo* or *Hing-tsai*, meaning "Temporary residence of the emperor", when the various Islamic transcriptions Khingsāy, Khinsay, Khansa, Khinza, yielding the "Quinsai" of Marco Polo and the "Camsai" of Oderic of Pordenone.

The town is often mentioned in the Mongol period, and described as one of the chief commercial centres; according to both Islamic and western sources, an important colony of Muslims was then located there, perhaps as many as 40,000 persons. Rashīd al-Dīn, ed. Blochet, ii, 1911, 459, 460, 489, writes Khīngsāy, Khinsāy, and also Quatremère, *Hist. des Mongols . . .*, i, 1836, LXXXVII, Khinsāy, as also K. Jahn and H. Franke, *Die Chinageschichte des Rašīd al-Dīn*, Vienna 1971, 20, l. 12. Waṣṣāf, lith. ed. Bombay 1869,

21-2, writes Khinzāy (or Khanzay, Blochet, *op. cit.*, 489, Quatremère, *op. cit.*, LXXXIX) and (*apud* Barthold) Khitrāy. Ḥamd Allāh Mustawfī Ḳazwīnī, *Nuzha*, ed. Le Strange, 215, l. 10 and 261, l. 10, writes Khinsāy. Ibn Baṭṭūṭa, iv, 284 ff. has Khansā (as in G. Ferrand, *Rel. de voyages et textes géogr.*, ii, 1914, 429), and connects it with the poetess al-Khansāʾ [*q.v.*]. Abu 'l-Fidā, tr. Reinaud, *Geogr. d'Aboulféda*, 124, has Khansa and also Khinza, as in Ferrand, *loc. cit.*, and Blochet, in *JRAS* (1917), 9. Amongst the western sources, as well as Marco Polo, tr. in Hambis, *La description du monde*, 195, 206-14, 217-18, 398, there is Oderic of Pordenone, in Van den Wyngaert, *Sinica Franciscana*, i, 463 (with apparatus criticus), who writes "Camsay", "Cansay"; Marignolli, in *ibid.*, i, 548, who writes "Campsay"; Pegolotti, in G. F. Pagnini, *Della decima . . .*, Lisbon and Lucca 1766, iii, 1, and Yule, *Cathay*, iii, 148, 172, "Chassai"; and in the *Livre du Grant Caan*, sometimes attributed to John of Cora, in *JA*, vi (1830), 60, "Cassay". On the other forms in various sources, see I. Hallberg, *L'Extrême-Orient dans la litt. et la cart. d'Occident*, Göteborg 1906, 428-9.

Bibliography: The best data can be found in A. C. Moule, *Quinsai*, Cambridge 1957, 1-53, to which may be added the Islamic sources: Quatremère, *op. cit.*, LXXXVII ff., and in Ch. Schefer, *Centenaire de l'Ecole des Langues Orientales Vivantes*, 19-20, 23-4. On the foreign colony at Hang-ču, see Hirth and Rockhill, *Chao Ju-ku*, St. Petersburg 1911, 16; and on the town, Hirth, *Ueber den Schieffverkehr von Kinsay zu Marco Polo's Zeit*, in *TP*, v, 186-390. (L. HAMBIS)

AL-KHANSĀʾ ("the snub-nosed one" or "the gazelle"), sobriquet of Tumāḍir bint ʿAmr, of the tribe of Sulaym and the clan of Sharīd, Arab poetess of the pre-Islamic and early Islamic periods. She must have been born *ca.* 575 A.D. in the *ʿāliya* of Nadjd, where her tribe was encamping. Only a few details are known of her life: the demand for her in marriage by Durayd b. al-Ṣimma, the old poet-warrior of Djusham, whom she refused; her marriage, after other brief liaisons, with her kinsman Mirdās b. Abī ʿĀmir, for whom she bore six children; her coming to Medina *ca.* 629 with a deputation from her tribe, in order to embrace Islam (a detail very suspect to western critics, as also is the information that she was present at the battle of al-Ḳādisiyya, where four of her sons fell fighting courageously); and her death at an advanced age at the end of ʿUmar's caliphate (634-44) or even, according to another tradition, at the opening of Muʿāwiya's caliphate (661-80).

Al-Khansāʾ's fame rests on her poetic work, and above all on her elegies (*marāthī*) for her two brothers Muʿāwiya and Ṣakhr, successively killed in skirmishes of Sulaym with Murra and Asad. The *marthiya* genre, the elegy over a dead person, especially over one fallen in battle, was very old and widespread amongst the ancient pagan Arabs. It was certainly practised long before al-Khansāʾ, with many well-known poets and poetesses achieving fame in it. The rôle of this poetess of Sulaym, apart from her undeniable personal talent expressing a deeply-felt sorrow, was to develop and perfect in a masterly fashion (as Rhodokanakis clearly demonstrated) the fairly rudimentary rough outlines of her predecessors. The basic stock-in-trade of images and *topoi* in the eulogising of the dead person (his liberality, valour in battle, justice and sagacity, eloquence in tribal contests of oratory, etc.), which still remained fairly stereotyped in al-Khansāʾ's poetry, was enriched by her with new expressions; these became fixed in the history of the genre after her, but she brought in addition to these new stylistic and metrical embellishments which assured her a primacy in the elegiac genre which none could later dispute with her. One should nevertheless add that her verses make striking reading (there are about 1,000 of them, some of doubtful authenticity), especially the most famous of them, not only by their technical accomplishment, but also by the intensity, violence and tenderness of feeling, all of which place al-Khansāʾ well above the average level of accomplishment. She herself proudly proclaimed this, at the fair of ʿUkāẓ and elsewhere, by her insistence on a primacy in grief, no doubt along with a consciousness of her calibre as a poet. Although tradition makes her welcome Islam and even exhort her sons to fight to the death for the new faith, her poetry is wholly pagan in feeling, and her view of life and death is invariably that of the ancient Djāhiliyya.

Al-Khansāʾ's elegies were gathered together into a *Dīwān* in the ʿAbbāsid period, probably by Ibn al-Sikkīt, and enjoyed great fame amongst the Arabs as models of the genre. Apart from the citations in Ibn Sallām, Ibn Ḳutayba, the *Aghānī* and other authors of 9th and 10th centuries, the poems have come down to us in several manuscripts of varying value, on which (and above all on the excellent Cairo ms.) was based the edition with commentaries of Père L. Cheikho (Beirut 1896, preceded by another edition of the same author, Beirut 1888). Père Coppier provided a good French translation (Beirut 1889), and there are other examples in Italian by G. Gabrieli in the book cited below.

Bibliography: T. Noeldeke, *Alchansa*, in *Beiträge zur Kenntniss des Poesie der alten Araber*, Hanover 1864, 152-82; G. Gabrieli, *I tempi, la vita e il conzoniere della poetessa araba al-Ḫansāʾ*, Florence 1899, 2nd ed., Rome 1944; N. Rhodokanakis, *Al-Ḫansā und ihre Trauerlieder*, in *SBWAW*, cxlvii (Vienna 1904); R. Blachère, *HLA*, 290-2 (very sceptical, as always, about the poetess's life and the authenticity of a part at least of her work). (F. GABRIELI)

KHʷĀNSĀRĪ, SAYYID MĪRZĀ MUḤAMMAD BĀḲIR MŪSAWĪ ČAHARSŪḲĪ B. MĪRZĀ ZAYN AL-ʿĀBIDĪN (1811-95), was born into a religious notable family in Khʷānsār, Persia. He studied Arabic and theology under his grandfather, Sayyid Abu 'l-Ḳāsim, and others. After his grandfather's death in 1824, however, Khʷānsārī moved with his father to Iṣfahān where he studied *fiḳh*, *ḥadīth*, and other religious subjects under Shaykh Muḥammad Taḳī, the grandfather of Āḳā Nadjafī [*q.v.* in Suppl.], Sayyid Muḥammad Shahshahānī, Muḥammad Ibrāhīm Karbāsī, and Sayyid Muḥammad Bāḳir Rashtī, known as "Ḥudjdjat al-Islām". During a visit to the shrine cities of ʿIrāḳ, Khʷānsārī continued his studies under the religious authorities, from a number of whom he received his degree of *idjtihād*. As a *mudjtahid* he became expert in both traditional and rationalist sciences and gradually received a widely-based recognition as a religious leader in Iṣfahān.

Apart from leading congregational prayers and performing other religious functions, Khʷānsārī lectured regularly before a sizable number of students in the field. Several great religious leaders and sole *mardjaʿ al-taḳlīd*s whom we know of have been mentioned among his disciples, such as Sayyid Muḥammad Kāẓim Ṭabāṭabāʾī Yazdī (d. 1919) and Mīrzā Fatḥ Allāh Shaykh al-Sharīʿa Iṣfahānī (d. 1920) (see A. H. Hairi, *Shīʿism and Constitutionalism in Iran: a study of the role played by the Persian residents of Iraq in Iranian politics*, Leiden 1977, 62-5).

Khwānsārī was also an active and productive writer; the ʿIrāḳī journal *al-Murshid* has ascribed to him 14 books and treatises on Arabic syntax, Islamic dogmatics, jurisprudence, and ethics, and other related subjects (ʿAlī Wāʿiẓ Khīyābānī, *Kitāb-i ʿulamāʾ-i muʿāṣirīn*, Tabrīz 1947, 53-7). The grandson of Khwānsārī's brother, Sayyid Muḥammad Mahdī Mūsawī, has added in his *Aḥsan al-wadīʿa*, i, Nadjaf 1968, 102-28, another four items to the list of Khwānsārī's works, the most well-known of which is, of course, his biographical dictionary, *Rawḍāt al-djannāt fī aḥwāl al-ʿulamāʾ wa 'l-sādāt*, Tehran 1889.

Khwānsārī compiled his *Rawḍāt* in 1869, after having worked on it for over ten years. This book, which contains the biographies of over 700 learned men including the author's own (pp. 126-8), was compiled in an unusual manner which makes reference to it fairly difficult. The following authors therefore compiled separate guides to the book: Mīrzā ʿAṭāʾ Allāh and Sayyid Muḥammad ʿAlī Rawḍātī, Khwānsārī's son and great-great-grandson respectively, Muḥammad Bāḳir Ulfat, and Muḥammad ʿAlī Muʿallim Ḥabībābādī (Luṭf Allāh Hunarfar, *Gandjīna-yi āthār-i tārīkhī-yi Iṣfahān*, Iṣfahān 1965, 825).

Khwānsārī's approach to the subjects discussed in his *Rawḍāt* was not always objective; it was in fact overshadowed by certain sectarian tendencies, especially when he dealt with delicate problems such as that of the possibility of Ṭūsī's active role in the extinction of the ʿAbbāsid caliphate in 1258 (*Rawḍāt*, 605, and Abdul-Hadi Hairi, *Naṣīr al-Dīn Ṭūsī: his alleged role in the fall of Baghdad*, in *Actes du vᵉ congrès International d'Arabisants et d'Islamisants, Bruxelles, 31 août-6 septembre 1970*, Brussels 1971, 255-66).

Since its appearance, however, the *Rawḍāt* has enjoyed a great reputation among the students of the field; it has been described by the journal *al-Murshid* as "the best and the most useful" (*aḥsan wa anfaʿ*) source among 14 other biographical dictionaries, such as the *Wafayāt al-aʿyān* of Ibn Khallikān and the *Amal al-Āmil* of al-Ḥurr al-ʿĀmilī (Wāʿiẓ, *ʿUlamāʾ-i muʿāṣirīn*, 54). The fame of the *Rawḍāt* has reached such an extent that its author himself has often been identified by the book and has been referred to by some biographers as Ṣāḥib-i Rawḍāt al-Djannāt ("the author of ...") (Muḥammad ʿAlī Mudarris, *Rayḥānat al-adab*, iii, Tehran n.d., 366-7). Many of his numerous descendants also took their last name from the title of the book and called themselves "Rawḍātī". Khwānsārī, who was buried in the Takht-i Fūlād of Iṣfahān, left seven sons, five of whom succeeded in occupying certain dintinguished religious positions.

(ABDUL-HADI HAIRI)

KHWĀNSĀRĪ, SAYYID MUḤAMMAD TAḲĪ MŪSAWĪ (1887-1952), a Shīʿī *mudjtahid* of distinguished piety; he was born into a clerical family to which belonged celebrated *faḳīh*s such as Sayyid Ḥusayn (d. 1777) and Abu 'l-Ḳāsim Djaʿfar b. al-Ḥasan (d. 1744). After a preliminary education in Khwānsār, he moved to Nadjaf in 1904 and studied under the then religious leaders, including Muḥammad Kāẓim Khurāsānī and Muḥammad Kāẓim Yazdī. He stayed in ʿIrāḳ until the outbreak of World War I when the Shīʿī autorities of ʿIrāḳ, in an expedient response to the Ottoman declaration of *djihād*, declared a holy war against the British and their allies. Led by the Shīʿī leaders, at whose head was Mīrzā Muḥammad Taḳī Shīrāzī, Khwānsārī joined the *djihād* campaign, which proved however abortive and resulted in his banishment to India while suffering from a wound received in the Mesopotamian war. After 4 years in exile, Khwānsārī returned to his home town and later on, because of the establishment of Shaykh ʿAbd al-Karīm Ḥāʾirī Yazdī [see ḤĀʾIRĪ in Suppl.] of the Circle for Religious Studies in Arāk (Iran), he moved to that city to attend Ḥāʾirī's lectures. In 1922, when Ḥāʾirī moved to Ḳum in order to re-establish its Circle for Religious Studies, Khwānsārī accompanied him. In both Circles he also undertook a series of lectures on Islamic subjects. After Ḥāʾirī's death in 1937, Khwānsārī was recognized as a *mardjaʿ-i taḳlīd* by a considerable number of people and, in co-operation with two other *mudjtahid*s (Ṣadr and Ḥudjdjat), he took the responsibility of the Ḳum Circle, whose students had by then exceeded 700. In 1941 he took the initiative in leading the Friday Prayer, a tradition which had long been abandoned among the Shīʿa in Iran. Khwānsārī's name has also been associated with the 1943 prayer for rain, which was led by him and attended by some 20,000 people in Ḳum; "his prayer resulted in a heavy rainfall which astonished both Iranians and foreigners." (Mullā ʿAlī Wāʿiẓ Khīyābānī, *Kitāb-i ʿulamāʾ-i muʿāṣirīn*, Tabrīz 1947, 211-13).

In the arena of politics also, we see Khwānsārī quite active. He supported the pro-Palestine movement in 1947-8 (cf. *Ustuwār* of those years); he issued a *fatwā* against a feudal candidate from Ḳum for the 17th Iranian Parliament in 1952 (Abdul Hadi Hairi's series of articles in *Ustuwār*, *Ḳānūn*, and *Paykār-i Mardān* of 1952); and he sanctioned Dr. Muḥammad Muṣaddiḳ's measures towards the nationalisation of the Persian Oil in 1952. In his *fatwā*, which gained him an overwhelmingly popular support, Khwānsārī declared that supporting the measures taken by Muṣaddiḳ was a most urgent Islamic duty of every Iranian Muslim (see *inter alia*, *Iṭṭilāʿāt*, *Kayhān*, and *Bākhtar-i Imrūz* of the period).

KHĀN-ZĀDA BĒGUM, the title ("Princess") of Sevin Beg, a grand-daughter of Özbeg, the ruler of the Golden Horde, and the wife successively of Tīmūr's eldest son Djahāngīr and his third son Mīrānshāh. After Mīrānshāh's outbreak of madness at Tabrīz she came in person to Samarkand to report his behaviour to Tīmūr. Dawlatshāh describes the interview with their father-in-law "with colourful details which are not in the other sources and can hardly be true".

KHANZĪT (Grk. Antizene, in Yākūt Hinzīt), name of the province and of the basin enclosed between the great bend of the Euphrates to the NNW of Malaṭya and the Djabal Baharmaz, with the "little lake" Göldjük (Ar. al-Buḥayra) of Dzovk (Ar. al-Baḥīratān) at its foot; one of the great communication routes of history passes from here towards the Tigris sources. This region of Khanzīt was for long Armenian (in the 6th/12th century the Catholicos of the Armenian Church resided at Dzovk); after being conquered by the Arabs it was reconquered by the Byzantines in the 4th/10th century. Then towards the end of the next century it was incorporated in the Turkish territories, first of the Ḥiṣn Kayfā branch of the Artukids for more than a century, and then *ca.* 628/1230, of the Saldjūks of Asia Minor. Its principal town was Khartpert (in Yākūt, Khartabirt, sometimes wrongly read as Khartput, Kharput), situated on a rock, as this Armenian name evokes, near the modern al-ʿAzīz; its Arabic name was Ḥiṣn Ziyād.

KHAPUTS (Russian designation—Khaputtsï, Gaputlintsï, Khaputlintsï (from the aul Khaput); other designation—Khaputli), a small Caucasian ethnical group, forming with the Krïz [*q.v.*] and the Dzhek the Dzhek subdivision of the Samurian group (Lezhgin, Agul, Rutul, Tsakhur, Tabasaran, Budukh, Dzhek) of the Northeastern Ibero-Caucasian language family.

According to the Soviet census, in 1926 there were ethnically 12 Khaputs, and linguistically 4,284 (including speakers of Dzhek and Krïz dialects); in 1933 (estimation) there were 3,000 Khaputs, living in several auls in the Shakhdagh area, southwest of Konakhkend (Azerbaidjan S.S.R.). The Khaputs are Sunnī Muslims of the Shāfiʿī rite.

The traditional economy of the Khaputs was based on sedentary animal husbandry, agriculture, and horticulture. The Khaput language is only a variant of Dzhek (as is Krïz), which is a purely vernacular language; Azeri is used as the literary language, and the Khaputs are being culturally and linguistically assimilated by the Azeris.

KHʷĀR, a group of villages in northern Persia, at present in the *shahristān* of Garmsār in the Central Province (*ustān-i markazī*), centred on approximately lat. 35° 15′ N. and long. 52′ 20′ E. and lying at an altitude of 2776 feet. It is bounded on the north by the mountain districts of Damāwand and Fīrūzkūh, on the east by Simnān, on the west by Varāmīn and on the south by salt desert stretching away to Kāshān and Ardistān. It was often called Khʷār-i Ray to distinguish it from another Khʷār in Fārs about which little is known. As a district, Khʷār was generally considered to include the historically known villages of Ārādān and Dih Namak (earlier Karyat al-Milḥ), but not Lasgird to the east or Ayvānikay (Ayvān-i Kayf) to the west.

Khʷār lies on the plain just east of the pass which is now identified with the Caspian Gates of the Ancient World, and constitutes a stage on the old arterial route that skirts the southern slopes of the Alburz from Rayy to Khurāsān. It was reckoned as three marches from Rayy and three from Simnān. An important route to the Caspian Sea leads north from Khʷār up the valley of the Ḥabla Rūd, and the stone road (*sangfarsh*) that was built under Shāh ʿAbbās to shorten the route from Iṣfahān to Khurāsān starts some 10 km. to the south of the fields of Khʷār and leads south over salt mud flats (*kavīr*) to Siyāh Kūh. Much of the *sangfarsh* is still intact. The name Khʷār was characteristically applied both to the district and to the primary village; today, the name Garmsār is similarly applied to both. Historically, the present centre was known as Kishlāk, and this lies 114.5 km. from Tehrān by the railway line that was completed in 1938. Kishlāk remains the formal name of the *bakhsh* (administrative division) of the district. The name derived from the fact that Khʷār has historically served as the *kishlāk* ("winter quarters") for the population of Fīrūzkūh in the mountains to the north, with which it has always been closely connected. Garmsār is probably simply an iranicisation of Kishlāk, although *garmsīr* is the more common equivalent. Paradoxically, Khʷār was considered to be the coldest part of the province of Kūmiṣ.

Khʷār was a flat, well-watered plain surrounded by mountains on the north and west and looking out on to the great salt desert on the south and east. Alberts, in *Social structure and culture change in an Iranian village* (see bibliography), estimates the total area of the district at 2,000 km.² of which 230 km.² were the cultivable lands of 73 villages, and 185 km.² were cultivated in 1956. Twenty of the villages were *khāliṣa* [*q.v.*]. According to the 1966 Census, the population of the district was 35,678, an increase of some 2,000 over the figure given in the first Census a decade earlier. This population was by no means homogeneous. Apart from Persian-speaking cultivators and transhumants from Fīrūzkūh—some of whom are said to speak a Simnānī dialect—there are several tribal groups which are mostly Turkish speaking. Of these the most significant are Pazuki, Osanlu, Alikahi, and Koti (transliteration uncertain). The Pazuki were traditionally a landowning élite in Ārādān, and appear to have split from a larger Pazuki grouping and settled in Khʷār at the beginning of the 19th century (see Houtum-Schindler, cited in bibliography). The other groups are pastoralist, and in 1958 the Koti still lived exclusively in tents (see Alberts).

Khʷār owed its existence as an agricultural centre

to the Ḥabla Rūd which flows down from Fīrūzkūh. Curzon, *Persia*, i, 293, writes of an "abundant stream" that "descends from the mountains and separates into many channels, of which I must have crossed twenty in the space of half a mile. Cultivation improves in the same ratio, and at Kishlak ..., which is *khalisah*, or Crown property, is responsible for the grain and fodder with which the royal stables are supplied at Teheran".

In the late 1950s, 59 of the 73 villages of Khwār took all their water from the river. Three were supplied exclusively from *ḳanāts* while the remainder used both. There were 30 functioning *ḳanāts* and 15 in disrepair. The water was regulated for irrigation purposes by the Independent Irrigation Authority (*Bungāh-i mustaḳill-i ābyārī*). Regulation and supervision were apparently essential; when the water was low during the summer season, the villages would send representatives to watch upstream distribution points to prevent theft, and during the spring floods, damage was common (see Alberts).

Khwār provides an excellent example of a small-river irrigation system from the Iranian Plateau. The annual statistics of the *Bungāh-i mustaḳill-i ābyārī* for the 1950s show that the average monthly flow of the Ḥabla Rūd at the point where it enters the plain varied between a low in late summer of 2.2 and a high in spring of 22.6 cubic metres per second. (For comparison: during the same period the most important river on the Plateau, the Zāyanda Rūd at Iṣfahān, showed a low of 13 and a high of 202 cubic metres per second).

The existence of such a good and reliable supply of water at an isolated point on a major arterial route makes it *a priori* likely that Khwār would have been one of the earliest centres of agricultural development on the Iranian Plateau. This hypothesis is corroborated by the known antiquity of the name Khwār and the abundance not only of ruins but of impressive archaeological mounds; unfortunately, however, no intensive archaeological research has yet been undertaken that might confirm it.

Because of its position as a stage on the route to Khurāsān, most travellers' accounts, geographies and histories from the earliest times to the present contain some reference to Khwār, yet it seldom seems to have stimulated more than a passing reference to its pleasantness or unpleasantness. It may never have supported a town large enough to engage the traveller's attention, although Ibn Ḥawḳal does use the term *shahr* to describe it. Generally, its fortunes seem to have varied with the long-term trends of the Plateau. Before it was occupied and plundered by the incoming Oghuz in the first half of the 5th/11th century, it was considered populous and fertile. It generally had an independent but low-ranking governor, and much of it became *khāliṣa* under the Ṣafawids. Under Riḍā Shāh, the district became a *bakhsh* of Tehran, and was only restored to its relatively independent status as a *shahristān* during the 1960s.

The district of Khwār is unique as the site of the only detailed village study that has yet been carried out on the Iranian Plateau (by Alberts, see bibliography).

Bibliography: Significant information from early travellers and geographers is assembled in P. Schwarz, *Iran im Mittelalter nach den arabischen Geographen*, and G. Le Strange, *The lands of the Eastern Caliphate*. Among later sources, very few add useful information, but see M. Ḍanssy, *Mémoire sur les observations faites en 1307 par M. le capitaine du génie Truilhier, dans son voyage en Perse*, in *Bulletin de la Société de Géographie*, Deuxième Série, xv, 94-114; C. Clerk, *Notes on Persia, Khorassan, and Afghanistan*, in *Journal of the Royal Geographical Society*, xxxi (1861), 37-65; A. Houtum-Schindler, *Eastern Persian Irak*, London 1896; G. N. Curzon, *Persia and the Persian question*, London 1892 (the most detailed account); and A. Gabriel, *Durch Persiens Wüsten*, Stuttgart 1935. Administrative information for the Ṣafawid period is assembled in K. M. Röhrborn, *Provinzen und Zentralgewalt Persiens im 16. und 17. Jahrhundert*, Berlin 1966. Finally, R. Alberts, *Social structure and cultural change in an Iranian village* is a detailed study of Dāvarābād, one of the major villages of the *shahristān* of Khwār (Ph.D. thesis, University of Wisconsin, 1963, unpublished).

(B. SPOONER)

KHARĀDJ, a word derived, via Syriac, from Greek χορηγία, but attached by the Arabs to the native root *kh. r. dj*. Contrary to its original meaning, the word seems, in the current usage of the Near East, to have denoted "tax" in general, and is in fact found with reference to various specific taxes, thus causing considerable confusion [see DJIZYA]. Arabic technical and legal literature uses it more specifically, at least in the period before the formation of Turkish states, in the sense of land tax, and it is this sense which is exclusively discussed in the present article. For other taxes, see BAYT AL-MĀL, ḌARĪBA, ḌAYʿA and DJIZYA.

I.—IN THE CENTRAL AND WESTERN ISLAMIC LANDS.

At the outset of their conquests, the Arabs—whatever agreements had been made with the conquered towns—were in general careful to levy some kind of tribute which would reflect their own sovereignty and overlordship, whilst leaving to the indigenous authorities the task of raising the taxation according to their own traditions, as being the only authority capable of doing this. Even when a financial organisation more integrated with the new régime was set up, they were unable, or were largely unwilling, to do anything but follow the old traditions here, which were adapted to local geographical traditions and inherited from a long background of bureaucratic state organisations. It was of little importance that for the Arabs, these taxes were an acknowledgement of Islamic domination; for the populace, it was simply a case of the old taxes going to new masters. Because of this continuity, the Islamic fiscal system varied from region to region in such a way that it would never be able entirely to absorb the conceptualisation of the *fiḳh* or the centralising efforts of the ʿAbbāsid administration. It is accordingly all the more necessary to bear this basic truth in mind, since the paucity of information means that there is a risk in applying the state of affairs in certain regions which were privileged in this respect, above all ʿIrāḳ and Egypt, to other parts of the Islamic world, whose individual characteristics must on the contrary be brought out.

Whether the texts of treaties handed down by later authors like al-Balādhurī are completely authentic or whether they have been put together later in order to explain the actual existing differences of organisation, known as such but not actually explicable, they undoubtedly convey the ideas of the first generations of Muslims. Some general principles emerge from amongst the particular practices. The first is the guaranteeing of their lands to all proprietors—at this time non-Muslim—in such a way as

to assure their value. They paid tax on these lands, apart from certain groups of owners on the frontiers, from whom some form of military service was required in lieu of tax, and apart from some pastoralist groups who paid in other ways, e.g. in slaves, beasts, manufactured products, etc. It is true that at the outset, there was a feeling amongst the Arabs that they should acquire the lands, which would then be liable only to the voluntary precept (*zakāt*) paid by the Muslim to the Islamic community; but the first caliphs assured the victory of the principle of the *fayʾ* [*q.v.*], the collective plunder made into a kind of pious or beneficial trust for the benefit of the whole community, present and future, over those who would have treated real property on the same basis as the movable property distributed as *ghanīma* to the individual warriors. The land became therefore normally liable to tax, as it had been under the previous régimes.

Three points should be noted clearly, if one is to understand the future developments. Firstly, at the side of the non-Muslims' individual possessions, the new Islamic state allotted to some leading Muslims grants (*ḳaṭāʾiʿ*) in emphyteusis out of lands inherited from the previous régimes or from the territories of the old landlords who had since disappeared, and these grants were substantially the same as the properties already held by the Muslims in Arabia. From the fiscal point of view, these lands were henceforth only liable to the *zakāt* covering all the Muslims' possessions, taking here the form of a tithe (*ʿushr*); the difference between this tithe and the payments exacted from the cultivators, analogous to the ordinary land tax of the *kharādj*, which was much higher, constituted the beneficial interest of this class of Muslim notables. This distinction must be borne in mind, as will appear later.

Secondly, there had existed under the previous régimes, more or less clearly, the idea of a land tax specifically conceived thus plus that of a poll tax levied on inferior strata of the population. In fact, the levying of the two taxes seems frequently to have been combined in the Byzantine empire, though less frequently, it appears, among the Sāsānids.

Finally, under the Muslims as previously, the tax was in general levied not directly upon individual properties but—outside the suburban areas of the cities—collectively upon the villages, according to the amount and state of the cultivated lands there. Hence the shortfall from an individual in no way reduced the obligations of the collectively responsible body.

Bearing these points in mind, we can study how the *kharādj* system was organised and developed under the new administration, and especially, when conversion of the indigenous peoples began to increase. It is often said that the heavy incidence of the land tax was one of the causes of conversion to Islam, but in practice, this movement of conversion, which was a slow one, took place in a much more complex fashion. The cultivation of village land and the payment of taxation to the treasury were in practice collective responsibilities, so that individual conversions were only possible by means of flight to the towns, this being against the will and interest of the remaining peasants, who were held responsible for the taxation lacking. When the attraction of the towns caused an increase in flight to them, the state, afraid of the loss of revenue involved, forbade flight and sent the fugitives back to their villages, paradoxically arriving at a state in which this type of conversion was stopped (al-Ḥadjdjādj's policy in ʿIrāḳ). Moreover, the idea soon evolved that conversion, if it entailed liberation from tax of a personal character, did not involve freedom from a tax which was a kind of beneficial foundation in perpetuity for the Muslim community. In this case, a distinction was made, wherever it was not clear, between the personal *djizya* and the *kharādj* land tax, and since the convert had to pay the *zakāt* [*q.v.*], the benefit allowed for in the whole operation became very debatable. It was only later, under the pressure of an evolution of the state of affairs, that conversions took place collectively, by whole villages, without the fiscal structure being however changed.

From the technical point of view, there were two great problems in the administration of the *kharādj*: those of perception of the tax and of its method of collection. In all directly administered districts, a land survey or cadaster had been made [see ḲĀNŪN]. But whilst in the lands under the Sāsānid tradition and in others like Egypt, the basis was a fixed unit of land surface, the *djarīb* in the East and the *faddān* in Egypt, in other, former Byzantine lands—as in the greater part of Europe—the unit was the amount of land which could be ploughed by a pair of oxen, which meant differences in actual area involved, according to the differing geographical conditions. In the latter case, the same amount of tax could be levied on two different amounts in area of land; but in the first case, the unit of surface area had to be adjusted in order to fix a level of taxation suitable to the land's potential. The factors involved here were essentially those of irrigation, natural or artificial, but also the general fertility which could be estimated experimentally through a periodic survey of the average yield over a certain number of years, with reductions and even exemptions being granted in the case of natural disasters; this procedure of estimating was called *ʿibra*.

This question was, in fact, linked with that of the method of payment of the tax. In ancient times, there had been, *grosso modo*, no other possibility except the sharing of the crop, according to fixed proportions, between the cultivators and the state. But, as a money economy developed, the inconveniences of this procedure began to be felt, e.g. transport difficulties, fluctuation of prices and consequently, of the real income accruing to the state, profits for speculators and injustices for the tax-payers. Hence the Roman and Sāsānid governments introduced a system involving a fixed tariff of payment, and where possible, payment in money. Conversely, the disadvantages of the new system were not long in appearing: the peasants, rarely having immediately at hand the monetary sums demanded by the treasury, were obliged to borrow, often under ruinous conditions, and grain merchants could speculate on the difference between the low prices at harvest times and the high prices of the stocks of grain subsequently released. The Muslim régime at first retained as they were the Roman and Sāsānid usages which they found in the conquered countries, but under the first ʿAbbāsids there was a reversion, at least in the Sawād of Baghdād, to a proportional payment in kind, which furthermore best corresponded to the requirements of provisioning the great city; whatever one may say, it does not seem that this reform was generally applied elsewhere, and especially not in Iran. Indeed, in many provinces there was a mixed system, i.e. proportional payment in kind was exacted on certain products of the ground (especially grain), whilst others were taxed on a monetary basis (especially plants used in manu-

facturing, hence of more commercial utility). Moreover, even in the case of payment in kind, there was allowed, by means of a table of equivalences (*taʿsīr*), the substitution, at least in certain cases, of one product for another, e.g. a quantity of wheat for a double quantity of barley (barley cost usually only half that of wheat), etc. The system of payment in kind had various names, the most general being *muḳāsama* (lit. "sharing"), that of *kharādj* itself, and at the same time others specially connected with a particular technical term or usage (in Egypt, *mufādana*, taxation by *faddān*), meaning taxation in kind generally. In effect, *muḳāsama* brought the tax-payer into the same status as the share-cropper, especially the share-cropper on state lands, because the latter always paid his dues to the landholder in kind on a basis of proportional sharing-out. It is possible that the *muḳāsama* system spread *pari passu* with that of the military *iḳṭāʿ* [*q.v.*], since in general the *muḳṭaʿ* was a person already accustomed in other circumstances to control property exploited by métayage, and found the direct delivery of grain useful for his animals. Various lesser taxes were added to the *kharādj* proper, despite the lawyers' protests, in order to compensate and remunerate the different officials involved in the perception and collection of the tax.

In Egypt, where various authors dispute whether there ever was properly speaking any *kharādj*, taxation in all forms had its own special features, due especially to the rise and fall of the Nile floods and the use of them by the state since the time of the Pharaohs. In Egypt, the survey made at the time of the seasonal fall of the waters showed not only the area of land involved but also the necessary amount of cultivation to be done in regard to the level to be attained by the floods, whence the amount of taxation that could normally be expected. It is because of the misunderstanding of this system that it has been thought, on the basis of a passage in Ibn ʿAbd al-Ḥakam, that this involved a tax system by apportionment, with a global total fixed arbitrarily in advance and then divided out by quotas on the districts and then villages. It was in fact nothing of the kind, but it was possible to calculate in advance the expected total, and for the process of perception, the accountancy offices of the time noted first of all the total and then the details.

In districts where administration was difficult, or simply when it was desired to favour some exalted person, *īghār* [*q.v.*] reductions or *muḳāṭaʿa* tax-farming contracts were granted to be set against the *kharādj*. In many cases, and especially in Egypt, where the system worked to the benefit of the army leaders, a notable guaranteed in advance the sum of taxation which the area was obligated to pay the exchequer (the *ḳabāla* [*q.v.*] system). In Egypt, there was a kind of adjudication process, and the sum handed over was not that of the tax, but of the tax with the subtraction of the equivalent of a salary for the beneficiary, an original local adaptation of what was elsewhere the *ḳaṭīʿa* [*q.v.*] which was to lead to the *iḳṭāʿ*. Furthermore, it appears that the peasants were compelled to cultivate certain lands belonging to the state, on which they paid taxes (*rusūm*) distinct from the *kharādj*, and this was also the case with pasture grounds. There was also added to the tax proper, on all the village, various small exactions in kind (straw, chickens, etc.). Inevitably, many places were in part or wholly bankrupt; in that case, the remaining amount (*bāḳī*) was noted down and carried over to the next assessment. Since this in itself reduced the chances of attaining solvency, a compromise was usually reached after a certain time. In regard to collection of taxation in kind, it often happened that the peasant had not enough seed left from his own share of the crop to sow for the following year; he might then be lent, perhaps as a simple advance, a quantity of seed (*taḳāwī*). The later development of the *iḳṭāʿ* system was to affect the levying of the *kharādj* but not its organisation, which the *muḳṭaʿ* had to respect. A tax paid in kind or narrowly dependant on the harvests was naturally paid according to the solar year; but in the case of tax-farming by contract or of a fixed amount, the exchequer made as many as possible of its demands by the lunar year, as with all other taxes not linked with the land. It appears also that payments were often made not all at once, but e.g. in three instalments; this was especially the case for taxes paid in cash, which the tax-payer had more latitude in obtaining. But apart from this, the taxes levied in kind or in cash on cultivated land were naturally paid over at different times as the crops ripened at various points of time.

For the ʿAbbāsid caliphate, we possess four budgets, bearing almost exclusively on the land tax, and leaving aside the other taxes. These budgets have been discussed in the article BAYT AL-MĀL (add to the Bibl. there Ṣ. al-ʿAlī in the present Bibl., below).

The various modes of tax-levying have already been alluded to. In general, administration and perception of taxation by a state agent (*ʿāmil*) was distinguished from tax-farming (*ḍamān*), which, as explained, should be distinguished from *ḳabāla*. Whatever régime was involved, the tax-collector arrived accompanied by police officers and various technical staff, such as the surveyor (*māsiḥ*) and the assayer-money changer (*djahbadh*), for whose benefit the minor taxes mentioned above were exacted. Naturally, these all had to be given hospitality, which was also done according to a tariff. The various operations stretching from the preliminary survey to the actual collection generated mounds of papers setting forth the situation from the exchequer's point of view on one side, and the tax-payers' one on the other, and the final demand handed over to the payer had to be paid and a receipt obtained.

All that has been said so far rests on a purely eastern documentation and thus concerns the Muslim east exclusively. In the west, the information available and the studies so far made do not seem to admit such precision. A fairly strong impression may nevertheless be gleaned that at the time of the Arab conquests there was not so strong a division made between the possessions left to the indigenous peoples and the Muslim share of property, and that very often the Arabs and Berbers had to acquire lands to which they would have had no right in the east. Whence there resulted, it seems, both in terminology and in practice, a certain confusion between *ʿushr* and *kharādj*, as much in the Maghrib as in al-Andalus. It does not appear—unless perhaps for a while under the Fāṭimids in Ifrīḳiya—that the efforts of the Spanish Umayyads or the Almohads in Morocco and Spain had any result in this direction. The word *kharādj* itself is only used rarely outside Fāṭimid and Zīrid Ifrīḳiya, and only in a vague sense. Other terms appear instead, whose precise meaning is uncertain, and it seems that the tax-payers had in fact to pay much more than an *ʿushr*. In regard to Sicily, al-Dāwūdī's treaty bears witness to the confusion of the jurists themselves.

Further confusions appear to have resulted in the

east itself, in the Anatolia wrested from the Byzantines by the Saldjūḳ Turks. Since most of the lands there were considered as state property, there was no *kharādj* properly speaking, but the peasants, assimilated in some degree to the share-croppers on public lands, did not thereby pay any the less taxation, which was combined with the *djizya* which they had to pay as non-Muslims. In practice, the term *djizya* came to denote the whole complex of their obligations, essentially pertaining to the land, and the word *kharādj*, taken at first in a vague sense, was applied progressively to the personal poll-tax. This inversion of the state of affairs in classical Islamic times was to be extended in time and area all over the Ottoman empire. One is tempted to conclude that, in the general context of the Muslim east, where the Turks were nurtured and formed, the meaning of terms in current usage never corresponded exactly to the official definitions; one may find a confirmation of this in the preservation in Syrian usage of the Byzantine *dīmūs/dēmosion* to denote the basic taxation, which one never finds used thus in official texts before the Crusades, but after then till the Ottoman conquest.

Bibliography: 1. Sources. The first specialist treatises devoted to the *kharādj* and related questions which have come down to us are those of Yaḥyā b. Ādam, ed. Juynboll, Leiden 1896, Abū Yūsuf (written for Hārūn al-Rashīd) and, on a larger scale, the *K. al-Amwāl* of Abū ʿUbayd b. Sallām, ed. Cairo 1353. To these should be added, from a century later, the *K. al-Kharādj* (with a wider range of contents, but incompletely preserved) of Ḳudāma b. Djaʿfar, unedited. The essential core of these three works, from the point of view of taxation, has been tr. by A. Ben Shemesh, *Taxation in Islam*, i (Leiden 1958), ii (1965) and iii (1969), but with a commentary of very unequal value. Abū Yūsuf has been tr. into French by E. Fagnan, Paris 1921. There is a whole chapter on the land tax in Māwardī's *al-Aḥkām al-sulṭāniyya* (5th/11th century). Apart from these, there is important information in various other types of work: historical, like Balādhurī's *Futūḥ al-buldān* and Miskawayh's *Tadjārib al-umam*; encyclopaedic, like Khwārazmi's *Mafātīḥ al-ʿulūm* (ʿIrāḳī and Khurāsānī material); mathematical, like the *K. al-Manāzil* of Abu 'l-Wafāʾ al-Būzadjānī (see Ehrenkreutz, *Al-Būzajānī on the maʾṣīr*, in *JESHO* (1965), 90 ff.) and the *K. al-Ḥāwī*, studied by Cahen in *AIEOAlger* (1952); administrative, like the histories of viziers by al-Djahshiyārī [*q.v.*] and Hilāl al-Ṣābiʾ [*q.v.*] and the *Taʾrīkh-i Ḳumm*, preserved only in Persian, by Ḥasan b. Muḥammad al-Ḳummī, ed. Tehran 1934; and finally, all the great classical geographers, especially Iṣṭakhrī for Fārs. For ʿIrāḳ in the 8th century, see also the Syriac *History* of Dionysius of Tell-Mahré, analysed by Cahen from this point of view in *Arabica* (1954). We further have some versions of official correspondence archives like those of Abū Isḥāḳ al-Ṣābiʾ, and especially of the Ṣāḥib Ibn ʿAbbād, for the Būyid period. In the last century, A. von Kremer brought together from various sources four ʿAbbāsid budgets and studied them, partly in his *Culturgeschichte*, and partly in the *Denkschr. der Akad. der Wiss. Wien*, Phil.-Hist. Cl., xxxvi (1888); on the oldest of these, see now Ṣāliḥ al-ʿAlī, *A new version* . . ., in *JESHO* (1972). H. A. R. Gibb derived material from the *Sīrat ʿUmar b. ʿAbd al-ʿAzīz* of Ibn ʿAbd Ḥakam (brother of the historian) for his *The fiscal rescript of ʿUmar II*, in *Arabica* (1955). See also, Ibn al-Muḳaffaʿ's *Risāla fi 'l-ṣaḥāba*, ed. and tr. Ch. Pellat, Paris 1976.

Egypt is a special case, partly because of the preservation of numerous papyri (or paper documents), and partly because of the original nature of its administrative literature. The interest of the papyri for the study of taxation was first demonstrated by C. H. Becker in regard to his publication of the Papyrus Schott-Reinhardt. Most of the subsequent publications emanate from A. Grohmann, who has himself published a commentary concerning this and has commissioned the economist C. Leyerer to make a synthesis, in *ZDMG*, ciii (1953), 40-69. Some complementary information can be found in the subsequent papyrological works of A. Dietrich (*Arabische Briefe aus* . . . *der Hamburger* . . . *Bibliothek*, 1955), and of J. David-Weill (*JESHO*, 1965, 1971). Finally, Greek papyri should be taken into account (see especially, Bell in *Isl.* (1911-13) and Rémondon in *Chronique d'Egypte*, 1965).

Furthermore, the centralised character of Egyptian administration allowed the composition of highly-detailed administrative and financial treatises which fill out for us the information of the published papyri, especially the *Minhādj* of al-Makhzūmī (6th/12th century), financial content analysed by Cahen in *JESHO* (1962), and the *Ḳawānīn al-dawānīn* of Ibn Mammātī (Saladin's period), of which the administrative passages have been tr. and studied by R. S. Cooper in his unpublished 1973 Berkeley doctoral thesis. Their information may be completed by the *K. al-Fayyūm* of al-Nābulusī, ed. Moritz, cf. Cahen in *Arabica* (1956); Nuwayrī's *Nihāya*, viii *in fine*; and Maḳrīzī's *Khiṭaṭ*. The *Secretary's guide* early used by Sauvaire for his researches on money and numismatics (= ms. arabe, B.N. Paris 4445) and the ch. on finance and administration of the *Rawḍat al-arīb* of Muḥammad b. Ibrāhīm al-Ḥamawī set forth by M. al-Ḥīla in the *Cairo millenary volume*, ii, 1043-95, are adaptations from the Mamlūk period of Ibn Mammātī.

There is important information on the Yemen in the *Mulakhkhaṣ al-fitan* studied by R. B. Serjeant and Cahen in *Arabica* (1957), and also in other administrative documents in the hands of the first of these two authors.

For the Maghrib, there are extracts from the *K. al-Amwāl* of al-Dāwūdī by ʿAbd al-Wahhāb and F. Dachraoui, in *Études d'orientalisme Lévi-Provençal*, ii (1962), 401-44.

2. Modern studies. Some pre-1950 works may still be mentioned: M. van Berchem, *La propriété territoriale et l'impôt foncier*, 1886; Becker, *Die Entstehung von ʿUšr- und Ḫarāǧland in Ägypten*, in *ZA* (1904), 301-19, also in *Islamstudien*, i, 218-33 (see also his papyri studies mentioned above); and A. N. Poliak, *Classification of land in the Islamic law*, in *AJSLL* (1940).

The basic contemporary works are F. Løkkegaard, *Islamic taxation in the classic period*, and D. C. Dennett, *Conversion and poll-tax in early Islam*, both from 1950, of whose existence Ḍiyāʾ al-Dīn al-Raʾīs, *al-Kharādj fi 'l-dawla al-islāmiyya*, Cairo 1957, is unfortunately unaware. A. K. S. Lambton's *Landlord and peasant in Persia*, London 1953, has an interest, for the pre-Mongol period, which goes beyond Iranian territory. The main corrections or partial additions to these works have been given in the course of studies on the texts by the authors mentioned above. One might add, for

the transitional period between the Djāhiliyya and Islam, Grignaschi's communications at the Congress *La Persia nel medio evo*, Accad. dei Lincei 1970-1, and of M. Morony at the Economic History Colloquium at Princeton, 1974. On the origins, see further A. A. Dūrī, *Note on taxation in early Islam*, in *JESHO* (1974), and A. Noth, *Die literarisch-überlieferten Verträge . . .*, in T. Nagel *et alii*, *Studien zum Minderheitenproblem*, 1973. For the ʿAbbāsid period, see Makoto Shimizu, *Les finances publiques de l'état abbaside*, in *Isl.* (1965), and the communications of Hinds and Lapidus at the Princeton colloquium mentioned above. There is a good synthesis in D. Sourdel, *Le vizirat ʿabbāside*, 1960, Part 4, ch. 2. See also the more general works on the period by Dūrī and Sāmarrāʾī, *al-Muʾassasāt al-idāriyya fi 'l-dawla al-islāmiyya*, 1971; that of Mez, *Renaissance*, 1920, is outmoded.

On Egypt in the Ayyūbid period and the beginning of the Mamlūk one, there is now a fine synthesis by Hassanein Rabie, *The financial system of Egypt*, London 1972 (cf. Cooper, cited above). For Syria, see a forthcoming article by Cahen in *JESHO*.

On Saldjūḳ Anatolia, see Cahen, *Pre-Ottoman Turkey*, London 1968.

For the Muslim west, see the classic works of Lévi-Provençal for Spain and R. Brunschvig for Ḥafṣid Tunisia, to be completed by H. R. Idris, *Les Zīrides*, 1959; R. Arie, *L'Espagne musulmane au temps des Naṣrides*, 1973; and J. F. P. Hopkins, *Medieval Muslim government in Barbary*, 1960.

(Cl. Cahen)

II.—In Persia.

Terms. *Kharādj* was the basic term for land tax in mediaeval Persia, as in earlier times. By extension, it sometimes came to mean tax or taxes in general. *Kharādj-i abrīshum* in the sense of a tax on silk, or possibly a tribute paid in silk, is found in Īlkhān and later times (Ḥamd Allāh Mustawfī, *Tārīkh-i guzīda*, ed. ʿAbd al-Ḥusayn Nawāʾī, Tehran 1957-60, 607; Ḥāfiẓ Abrū, *Dhayl-i tārīkh-i Rashīdī*, ed. Khān Bābā Bayānī, Tehran 1971, 76). *Kharādj* is also used in mediaeval Persian in the sense of tribute; and *kharādj-gudhār*, which in mediaeval Persian occurs in the meaning of one who pays tribute (Minhādj-i Sirādj-i Djūzdjānī, *Ṭabaḳāt-i Nāṣirī*, ed. ʿAbd al-Ḥayy Ḥabībī, Kābul 1963-4, i, 273, and cf. Niẓām al-Mulk, *Siyāsat-nāma*, ed. C. Schefer, Paris 1891-3, Persian text, 7), in modern Persian means a taxpayer in the broad sense (not simply one who pays tribute or land-tax).

By Īlkhān times the terms *māl*, *māliyyāt* and *māliyyāt-i arḍī* were also used to denote land-tax (though *māl* had in addition a wider significance). In Djalāyirid and Tīmūrid documents the phrases *māl wa mutawadjdjihāt* and *amwāl wa mutawadjdjihāt* occur and (probably) mean land tax(es) and other taxes (cf. Muḥammad b. Hindūshāh Nakhdjiwānī, *Dastūr al-kātib*, ed. A. A. Ali-zade, Moscow 1971, ii/1, 150, and *passim*, *Maṭlaʿ al-saʿdayn*, ed. Muḥammad Shafīʿ, Lahore 1941, i, 322-3), while in Ḳarā Ḳoyunlu, Āḳ Ḳoyunlu and Ṣafawid documents the phrase *māl wa djihāt wa wudjūhāt* is commonly found. Its precise meaning is not clear, but is probably land tax(es), other taxes, and dues (or fees). The phrase *māl wa manāl*, first found in Īlkhān times and in frequent use thereafter, means the tax on a landed estate and that which remains (for the owner) after the tax has been paid. Under the Ḳādjārs, the terms *māl* and *māliyyāt* signify "regular" or "fixed" taxation, consisting of taxes on the land, animals, flocks, herds, shopkeepers, artisans and trade (cf. Sir John Malcolm, *History of Persia*, London 1829, ii, 336 ff., and see also Great Britain, Public Record Office, F.O., 881/7364, Report on the Persian Army by Lt. Col. H. P. Picot, Jan., 1900 (pt. 1, chs. 1 and 2, written by Sir A. Houtum Schindler), 11; C. H. Markham's statement that *māliyyāt* meant "fixed" revenue derived from the land, i.e. that it was exclusively derived from land taxes, is probably an error due to the fact that land taxes formed the major part of the "fixed" taxes, *A general sketch of the history of Persia*, London 1874, 561). Curzon, writing towards the end of the 19th century, defines *māliyyāt* as fixed revenue deriving from (i) regular taxation, i.e. land tax, taxes on animals, flocks and herds, and taxes on shopkeepers, artisans, and trade, (ii) revenues of crown lands, (iii) customs, and (iv) rents and leases (*Persia and the Persian question*, London 1892, ii, 470). By about 1900, *kharādj*, as distinct from *māliyyāt*, no longer appears as a separate entry in the revenue accounts (Report on the Persian army, *op. cit.*, 11).

Land taxes and the theory and practice of government. Until modern times agriculture was the main economic activity of the country. The governing classes sought their material foundation in landed property and animal husbandry. The wellbeing of the land was closely affected by the existence or otherwise of "good" government and stability. Further, since the revenue of the state was derived primarily from taxes on the land, the financial wellbeing of the state was dependent upon agriculture prosperity. Governments were concerned to raise as much revenue as possible, but the fact that the ability of the land to provide revenue on a long term basis depended upon its being cultivated and upon the wellbeing of those who tilled it, set, in normal times, a limit to their demands. The peasant was not a serf and was free, at least in theory, to leave his land, though some rulers attempted to curb his freedom. If the burden imposed upon the peasant by the government's demands became intolerable, they would have recourse to flight and leave their lands uncultivated. The state could, in theory, lease the land to someone else or cultivate it itself at the expense of the public treasury (for which cases the jurists laid down certain conditions). But often neither course offered a practical alternative. The possibility of flight was, therefore, to some extent a restraining factor (see further below).

Many writers on the theory of government recognised the connection between stability and the financial wellbeing of the state. The tradition "no *kharādj* on land in a bad (ruined) condition", although not accepted by all schools of law, was widely held and demonstrates the general recognition of the financial dependence of the state on agriculture, and also, implicitly, the importance of "good" government, because one of the most common reasons for the land being left uncultivated was the flight of the peasants provoked by extortion. Ḥamīd al-Dīn Aḥmad b. Ḥāmid Kirmānī, addressing Ḳawām al-Dīn Zawzanī, who took possession of Kirmān *ca.* 613/1216-17, states "The king of Islam (may God exalt his dignity) has acquired an extensive kingdom and there is no question but that it will prosper and that produce and benefit from it will accrue to his treasury". He then warns him that there could be no security or prosperity in the province or wellbeing among the peasants "as long as every six months or every year a new governor or *muḳṭaʿ* comes, because

every *muḳṭaʿ* who arrives will take possession of any produce or stocks he sees and will demand *kharādj*, in advance, or by force on produce not yet to hand; and when another *muḳṭaʿ* comes, hungry and unclothed, with an empty pocket to fill, he, too, will impose similar burdens and begin to torment the peasants all over again" (*al-Muḍāf ilā badāyiʿ al-zamān fī waḳāyiʿ Kirmān*, ed. ʿAbbās Iḳbāl, Tehran 1952-3, 16). ʿAbd Allāh b. Muḥammad b. Kiyā al-Māzandarānī, writing in the middle of the 8th/14th century, makes a similar point. He states, though hardly with complete accuracy if one considers the arbitrary nature of Īlkhānid taxation practices in the 7th/13th and 8th/14th centuries, "Formerly the custom was that no alteration should be made [in the tax] of any place for which an assessment had been made, so that the subjects (*raʿāyā*) paid to the *dīwān*, year by year, the tax as laid down in the assessment (*māl-i muḳannan*) and, with their minds at ease, occupied themselves in agriculture and the development of the country. Now, since the assessed tax is not permanently fixed [by the *dīwān*] and every year the tax-collectors, when they come, demand the tax in a different way, the subjects, since they have no confidence, withhold their hands from cultivation and the provinces are becoming ruined" (*Die Resālä-ye falakiyya*, ed. W. Hinz, Wiesbaden 1952, 172).

Writers on the theory of government stress the need for justice by the government in the levy of land taxes and other taxes on both practical and ethical grounds. Their exhortations were frequently, perhaps usually, disregarded. The saying attributed to the caliph al-Manṣūr (136-58/754-75) to the effect that one of the four pillars of kingship was a *ṣāḥib kharādj* who would demand the taxes without oppressing the people (Ṭabarī, *Annales*, iii, 398), underlines the importance attached to the land tax as the sinews of the administration and to the observance of justice in its collection. Ḥusayn Wāʿiẓ Kāshifī, writing in 900/1494-5 under the Tīmūrids, makes a similar statement, but substitutes for the *ṣāḥib kharādj* a *wazīr* "who regulates financial affairs", which suggests a decline in the relative importance of *kharādj* compared to other forms of taxation, even though it was still, no doubt, the largest single item (*Akhlāḳ-i muḥsinī*, ed. Ibrāhīm Tādjir Shīrāzī, lith. Bombay 1890-1, 265). A 19th century writer, Nadīm Bārfurūshī (d. 1241/1825-6), asserts that one of the main causes leading to the destruction of a kingdom was the demand for the payment of taxes when the rains failed (*Mufarriḥ al-ḳulūb*, B.M. Or. 3499, f. 203a), from which it is to be inferred that agriculture still provided the economic basis on which the state rested.

Many writers recognise the fundamental importance of proper order in the assessment and levy of *kharādj*. The advice alleged to have been given by ʿAlī b. Abī Ṭālib to Malik al-Ashtar when he was appointed governor over Egypt in 38/658-9 is frequently quoted as a model to be followed (cf. Waṣṣāf, *Tārīkh-i Waṣṣāf*, ed. Muḥammad Mihdī Iṣfahānī, lith. Bombay 1852-3, 440). This was to the effect that he should give greater attention to the development of the land than to the collection of *kharādj*, because the latter depended upon the former, and whoever demanded *kharādj* without developing the land, destroyed the country and the people. If the people complained of the heaviness of taxation, or of some natural calamity, the interruption of irrigation, misfortune, or that the land had become waterlogged or parched, their burden was to be lightened so that their affairs might recover (*Nahdj al-balāgha*, Beirut 1890-1, ii, 45. See further, A. K. S. Lambton, *Landlord and peasant in Persia*, repr. Oxford 1969, xx ff.). Rashīd al-Dīn Faḍl Allāh, Ghāzān Khān's *wazīr* (d. 718/1318), recommends that men of wealth and those with high aspirations should be appointed over the collection of the taxes, because such persons, being themselves satisfied, would not act extortionately against the taxpayers, or at least would not be covetous in small things (*Mukātabāt-i Rashīdī*, ed. Muḥammad Shafīʿ, Lahore 1945, 118), while Muḥammad b. Hindūshāh Nakhdjawānī urges the need for consultation in the administration of taxes (*Dastūr al-kātib*, 181-2).

Land taxes and land tenure. In the early centuries the jurists attempted to fit the tax practices of the conquered territories into the framework of Islamic law (see also BAYT AL-MĀL, II. HISTORY). In the theory, as worked out by them, there was a close connection between taxation and tenure. According to their expositions various factors were taken into account in the assessment of the land tax: the mode of conquest, which affected the tenure of the land, the geographical situation of the land, the manner of its irrigation, the crops grown, their yield, and price levels. In practice, however, local custom (which was itself also clearly influenced by most of these factors), was often the decisive factor. It follows, therefore, that there were wide variations from province to province and often from district to district.

In mediaeval times, although conditions were in many respects different from the early centuries, the influence of the *ʿulamāʾ* with the ruling classes and the population in general ensured that the legal theories would not be forgotten and made it possible to reactivate particular issues should circumstances so demand. Thus the principles laid down by the jurists continued to have more than simply theoretical importance. The mode of conquest was, it is true, no longer of crucial importance, but the tenure of the land still affected the levy of *kharādj*. Land fell broadly into four categories: private property (*milk*), crown lands including the personal estates of the ruler which were not always clearly distinguished from crown lands proper [see KHĀLIṢA], *awḳāf*, and dead lands (*mawāt*). In the case of private property, *kharādj* was regarded as a tax on the land or its produce. In the event of a concession being granted on private property, the *kharādj* was paid not to the state but to the concessionaire, who might or might not have been granted exemption from its payment to the state (see further below). Crown lands, the extent of which varied greatly at different times, strictly speaking did not pay *kharādj*, the whole produce belonging to the state. However, they were often conceded to individuals on temporary or life grants, in which case the holder, unless granted exemption, paid *kharādj*, which was regarded as a rent rather than a tax, and the rate of which often differed from that paid on neighbouring estates.

In the 19th century, experience showed that crown lands often tended to be neglected and failed to provide the state with revenue (cf. *British Parliamentary Papers 58* (1862) *Persia*. Report by Mr. Eastwick, Her Majesty's Secretary of Legation, Camp near Tehran, 5 July 1861, p. 70). Accordingly they were sometimes transferred to individuals in the hope of encouraging the spread of cultivation. This was the case in the latter part of the reign of Nāṣir al-Dīn Shāh, when, in view of the decay then prevailing in *khāliṣa* land, it was decided to sell them to individuals. In some cases special rates of tax were laid down (Ḥasan Khān Shaykh Djābirī Anṣārī, *Tārīkh-i niṣf-i*

dj̲ahān wa hama dj̲ahān, lith. n.d., 65 ff., Lambton, *Landlord and peasant in Persia*, 147 ff.).

Lands immobilised as *waḳf* for charitable purposes were frequently granted exemption from the payment of land tax and other dues. Naṣīr al-Dīn Ṭūsī (d. 672/1274), in an essay on finance written for his patron Hūlāgū (or Abāḳā), states that kings considered it ill-omened to levy *k̲h̲arādj̲* on *awḳāf* and ordered their proceeds to be spent entirely on the purposes for which they had been constituted (*Madj̲mūʿa-i rasāʾil az taʾlīfāt-i K̲h̲wādj̲a Naṣīr al-Dīn Ṭūsī*, in *Publications of the University of Tehran*, 308 (1956), 34. This was first published by M. Minovi and V. Minorsky, *Naṣīr al-Dīn Ṭūsī on finance*, in *BSOS*, X/3 1940-2). In fact, practice probably varied. Under the Īlk̲h̲āns it seems that immunities were extended to *waḳf* land by an extension of Mongol custom, which happened in this case to coincide with local custom. Bāydū is said to have reaffirmed on his accession in 694/1295 an old regulation (*yāsā*) of Čing̲h̲īz K̲h̲ān, which exempted *awḳāf* from taxation (*Tārīk̲h̲-i Waṣṣāf*, 284). Later rulers also granted immunities to *waḳf* land. The Ṣafawid shrine at Ardabīl, for example, enjoyed exemptions and immunities from the 9th/15th century, if not before (cf. V. Minorsky, *A soyūrg̲h̲āl of Jahāngīr Āq-Qoyunlū*, in *BSOS*, ix (1937-9), 956-8, and *Landlord and peasant*, 104. See also H. Busse, *Untersuchungen zur islamischen Kanzleiwesen*, Cairo 1959, for various grants relating to *waḳf* land). Curzon's statement that all religious endowments were exempt from land tax under the Ḳādj̲ārs (*Persia and the Persian question*, ii, 470) is rather too sweeping. Only those *awḳāf* which had been granted exemption by a special decree were exempted, but it is probable that many *awḳāf* came into this category.

A third category of land was formed by dead lands (*mawāt*) which had no owner, and had fallen into disuse. In view of the close dependence of the state upon *k̲h̲arādj̲*, the desirability of bringing such lands under cultivation is clear. The jurists laid down special regulations for their revival (cf. sections on *iḥyāʾ mawāt* in *fiḳh* literature). These provide for the acquisition of ownership and are clearly designed to encourage individuals to undertake the revival of dead lands. Temporary exemptions from the payment of land tax and special rates of tax were moreover frequently granted to those who revived dead lands. Invasion and the overthrow of dynasties were often followed by a spread of dead lands. Perhaps the most striking case was that which occurred at the time of the Mongol attack in the 7th/13th century, which brought disaster to agriculture. When finally G̲h̲āzān K̲h̲ān (694/703-1295/1304) began to reorganise the finances of the state, realising that a rehabilitation of agriculture was a necessary basis to reform, he laid down regulations for the revival of dead lands and gave reductions, which varied from district to district, in the amount of *k̲h̲arādj̲* to which they were liable (see further Ras̲h̲īd al-Dīn Faḍl Allāh, *Tārīk̲h̲-i mubārak-i G̲h̲āzānī*, ed. K. Jahn, *GMS*, London 1940, 353-4, cf. also 303 ff.).

The status of lands which had fallen into disuse or been abandoned (*bāyirāt*) but whose owners could not be deemed to have died without heirs (in which case the land became *mawāt*) was more shadowy. The main issue was whether such lands should pay *k̲h̲arādj̲* or not. Ḥanafī jurists argued that since *k̲h̲arādj̲* was levied according to the productivity of the land, it was due whether the owner cultivated the land or not, since by not cultivating it, the owner deprived the beneficiaries of *k̲h̲arādj̲* of their revenue. Mālikīs, however, rejected this view. They held that the owner did not pay *k̲h̲arādj̲* if the land was not cultivated. If, however, the reason for the land being uncultivated was that the owner lacked the means to cultivate it, the *imām* was entitled to lease the land to another person on a *muzāraʿa* contract and to collect the tax from the owner's share of the produce, to lease the land to a tenant and collect the *k̲h̲arādj̲* from the rental, or to have the land cultivated at the expense of the public treasury and collect the tax from the owner's share. Abū Ḥanīfa held that if *k̲h̲arādj̲* payers abandoned their lands, the *imām* might have them cultivated at the public expense or let them on a *muḳāṭaʿa* contract, the entire income from this belonging to the public treasury (see further N. P. Aghnides, *Mohammedan theories of finance*, Lahore 1961, 384-5).

The problem of abandoned lands was a perennial one. It is illustrated by the following incident related by Faḍl Allāh b. Rūzbihān K̲h̲undj̲ī. He describes how Muḥammad S̲h̲aybānī K̲h̲ān, the Uzbeg ruler, asked the *ʿulamāʾ* at his court to give a *fatwā* in 914/1509 on the status of certain lands in the neighbourhood of Samarḳand. These lands had been abandoned by their owners for over thirty years. There was no one left in Samarḳand to cultivate them on behalf of the owners and ensure that the country did not fall into ruin and that the land became liable to tax. They had become virtually dead lands. What, Muḥammad S̲h̲aybānī asked, would be the position if someone revived them? Would ownership be established thereby (as was the case with dead lands)? one of the jurists present said that it would be difficult to give a decree annulling the ownership of those who had abandoned them, but if it was known that the owners had left the land, a decree could be given to make the cultivation of the land permissible (*ibāḥat-i zirāʿat*). The K̲h̲ān replied that this would not solve the problem which he had in mind. *K̲h̲arādj̲* land if cultivated paid *k̲h̲arādj̲*. If its cultivation was abandoned, it was the duty of the governor to impose upon the owner a sum for its *k̲h̲arādj̲* and to ask him why he had allowed the assets of the Muslims to be wasted by letting the land fall out of cultivation. Thus, if the land had an owner, he could be made subject to one of two rulings: either he would cultivate the land (and pay *k̲h̲arādj̲*) or he would pay *k̲h̲arādj̲* by estimation (*bi taḳdīr*) on the land which had fallen out of cultivation. Two objects would be achieved: the land would be brought back into cultivation and it would be made liable to *k̲h̲arādj̲*. By simply declaring the cultivation of the land permissible these objects would not be achieved, because in order for the cultivation of the land to be permissible, it was necessary for the right to demand rent to lapse; in other words if the owner made the land free for cultivation (*mubāḥ*), his right to demand rent ceased, and the ruler could not make it incumbent upon him to cultivate the land or to pay *k̲h̲arādj̲*. Muḥammad S̲h̲aybānī K̲h̲ān then explained that this object in putting the question was that the owners of the abandoned lands should be subjected to one of the two rulings mentioned above.

Finally, Faḍl Allāh b. Rūzbihān, who was also present, stated that if someone became the owner of a property by purchase, his ownership, being based on a contract, was not affected by lapse of time, even if he did not take effective possession of the property. It did not follow from the abandonment of land by reason of a journey that the cultivation of the land became free (*mubāḥ*). The people who had left their estates had clearly done so by force of necessity:

excessive injustice had made it impossible for them to live in their homeland, and the imposition of extortionate dues by the *dīwān* had prevented them from exercising effective ownership over their estates and so they had departed into different regions. It did not follow from the fact that they had left their estates that it was permissible for others to take possession of them (*ibāḥat-i taṣarruf*). Then, in order to show that lapse of time did not affect ownership he related how the Atābeg Abū Bakr Saʿd b. Zangī had been persuaded to restore to their owners estates which he had seized in Fārs (see *Tārīkh-i Waṣṣāf*, 163, for an account of this event), and advised the khan to seek conciliation with the owners of the estates in question, if they were known, so that they would return, and once they had returned, to treat them well, so that they would resume possession of their estates. In this way, the land would be cultivated, the kingdom prosperous, and the land liable to *kharādj*. If, however, the owners were not known, the ruler should take possession of the estates, cultivate them, reap their produce by virtue of the axiom "what is cultivated belongs to the cultivator even if he is an usurper" while purposing in his heart that he would give the owners, should they be found, the rent for their land from the public treasury. In this way also the land would be cultivated and be liable to *kharādj*, while the rights of the owners would not be annulled or lost (Faḍl Allāh b. Rūzbihān Khundjī, *Mihmān-nāma-i Bukhārā*, ed. Manūčihr Sutūda, Tehran 1962, 295-9).

The state, however, clearly was not always bound by the letter of the law. Under the Īlkhāns it would appear that taxes were frequently demanded from land which had fallen out of cultivation (cf. *Tārīkh-i Waṣṣāf*, 446, 631).

The rates of kharādj. The jurists were generally agreed in the early centuries that the *imām* could increase or decrease the rate of *kharādj* according to the ability of the land to pay and the taxable capacity of the land to pay and the taxable capacity of the payees. It was tacitly assumed that the temporal rulers had similar prerogatives. By the 7th/13th century a tradition appears to have evolved, perhaps deriving from the original theory of *ʿushr* land, that the proper rate for land tax was one-tenth of the produce. Mention of this as the basic rate is found from time to time. There is also frequent reference in documents to a tax or due called *ʿushr*, but whether this was land tax levied at the rate of one-tenth of the produce or a special due is not clear. Rashīd al-Dīn Faḍl Allāh in a letter to Aḥmad Turka states that he had laid down that the people of Iṣfahān should pay as land tax one-tenth on their cultivated lands (apart from orchards which paid different proportions according to the kind of produce) and that he had sent officials to other provinces to make a similar assessment (*Mukātabāt-i Rashīdī*, 33-4). In a letter to his son Shihāb al-Dīn, when governor of Shushtar and Ahwāz, it is again mentioned that *kharādj* should be taken at a rate of 10% and should be levied in kind (*ibid.*, 121). There is nothing however in the *Tārīkh-i mubārak-i Ghāzānī* to suggest that uniform rates were established over the whole country. In the late 18th century or early 19th century the rate is alleged to have been 10% (see below), and in the 19th century it was, in theory, one fifth of all agricultural produce, or its value in money. According to a report by Mr. R. F. Thomson, dated 1868, this was, as a general rule, somewhat exceeded and 25% could be taken to be the average assessment (excluding dues levied on cattle and flocks and duties exacted for provisions brought to market in the principal towns) (*British Parliamentary Papers*, 69 (1868), *Persia*). Report by Mr. Thomson, Her Majesty's Secretary of Legation, on the population, revenue, military force and trade of Persia, 250-3. Extracts from this report are given in C. Issawi, *The economic history of Iran 1800-1914*, Chicago and London 1971). There was in practice at all times great variety in the rate levied in different districts and on different crops.

The law-books laid down the purposes upon which *kharādj* was to be expended and those who had a right to its proceeds. Control over these matters, as over the rate at which *kharādj* was levied, was similarly tacitly assumed to have passed to the temporal rulers. Naṣīr al-Dīn Ṭūsī states that *kharādj* was levied for the expenses of the kingdom (*djihat-i maṣāliḥ-i pādishāhī*, 31). So far as the temporal rulers expended the *kharādj* on the payment of the army (which, in theory, if not in practice, was for the defence of the lands of Islam) and on the officials concerned in its collection, on pensions to the religious classes and the needy, and on public and charitable works, they could be regarded as expending it on the interests of the Muslims (*maṣāliḥ-i muslimīn*). Public opinion did not sanction the expenditure of reserves of *kharādj* on other purposes or the accumulation, a factor which, perhaps, militated against long-term economic development.

Assessment and collection. *Kharādj* was assessed in three main ways, by *masāḥa*, *muḳāsama*, and *muḳāṭaʿa*. These methods, known in the early centuries, continued to be used down to modern times. Under the first the amount due was based on the measurement of the land. Under the second it depended upon the crop yield, while under the third the tax was compounded for a lump sum in cash or kind or both, and did not vary with the area sown or the amount of the crop. Assessment by *masāḥa* did not, however, involve a comprehensive cadastral survey. Usually only the land sown was taken into account, which practice was sanctioned by the tradition "no *kharādj* on land in a bad (ruined) condition", and the tax demand was based on the average yield from good, bad and medium land. There was, however, a difference of opinion among the jurists on the matter of land not under cultivation. Where a part was fallow, some held that *kharādj* should be levied on the whole area but at half the normal rate. The issue turned on the question whether *kharādj* was a tax on the produce of the land or a rent for the land. If the latter, the holder of the land paid whether the land was cultivated or not, provided he was not prevented by *force majeure* from cultivating it. Gardens, vineyards, and date groves were assessed either according to the extent of the land sown or the number of trees on the land, the number of years it had been planted being taken into account. Irrigated crops paid a higher rate than unirrigated, and in the case of the former the rate varied with the method of irrigation. The quality of the land was also taken into account, and to meet the variety of physical conditions a number of tax schedules (*waḍīʿa*, *ṭisḳ*) were sometimes drawn up. The *masāḥa* method of assessment was thus in fact concerned not so much with the extent of the land as with its produce. It differed from the *muḳāsama* system in that the tax demand did not vary in a good year or a bad year. In districts where the climate was capricious this was to the disadvantage of the taxpayer, unless he was able to accumulate reserves to tide him over a bad year. So far as the peasants were concerned, this was probably seldom the case. This may well have been

one of the reasons why assessment by *masāḥa* tended to be replaced by *muḳāsama*.

This method was simpler in that it did not involve a calculation of the area under cultivation. It also had the merit of safeguarding the taxpayer in the event of partial or total crop failures—an important consideration in districts where these were of common occurrence. On the other hand, it was a disincentive to the extension and improvement of cultivation, since the heavier the crop the greater the tax. An added disadvantage was that the taxpayer could not remove the crop until the government's share had been taken, while budgeting was made difficult for the government since its revenue fluctuated and was not known until harvest time.

Valuation or *ʿibra* may have originated simply as an extension of *masāḥa* and *muḳāsama*, the average annual value of the crop over a number of years, usually three, assessed by whatever method, being taken as the basis on which the tax was calculated. The term *ʿibra* is not met with after the early centuries and appears to have been replaced by *ḥarz*, which, in the later centuries, seems usually to have meant not an average calculation made on the basis of three or more years, but an arbitrary valuation arrived at by the tax-collector, sometimes, but not always, after an inspection of the crop during growth or harvest time. Arbitrary valuation, in the 7th/13th and 8th/14th centuries, under the Īl̲kh̲āns, and also in the 19th century, appears to have been common. The tax-collector, or his agent, would examine the crop *in situ* and estimate the tax due. Some were skilled in the task and made fair estimates, others did not. As the practice grew of assessing the provincial revenue at the centre and leaving its collection to the discretion of the provincial governor, who was then responsible for the remission of whatever sum remained after the deduction of provincial expenses, arbitrary valuation at the local level became increasingly common, whatever the assessment may have been according to the tax rolls drawn up at the centre (see further below).

The *muḳāṭaʿa* method probably prevailed over other methods in the more remote districts and in tribal areas. With the extension of the *iḳṭāʿ* [*q.v.*] from the 4th/10th century onwards, as more and more land became alienated from the direct control of the state, the *muḳāṭaʿa* method became increasingly adopted. Under this system, the landlord, since he knew the demand which the state made upon him, was not deterred from developing the land, while budgeting by the state was facilitated because its income from the land was also known. On the other hand the *muḳāṭaʿa* assessments were frequently out of date: land which had been improved or newly brought into cultivation sometimes paid a very low rate of taxation or was omitted altogether from the assessment, and conversely land which had deteriorated or fallen out of cultivation was assessed too highly. The same, however, was also true of land assessed by other methods, since an assessment once made tended to remain in force irrespective of changed conditions. The *muḳāṭaʿa* assessments, so far as they remained in force for a number of years, did not take account of changes in cropping. With the increase in the cultivation of cash crops in the 19th century this was disadvantageous to the government.

Naṣīr al-Dīn Ṭūsī asserts that under just kings in the past valuation (*ḥarz*) had replaced other methods of assessment. They had ordered the tax to be assessed in kind at the rate of 10% or 5% of the annual produce of land and gardens, the figure for which was to be obtained by taking the average annual produce of a good year, a bad year and a medium year. This was the old tradition of *ʿibra* (though Naṣīr al-Dīn does not use the term). The amount in kind was then to be converted into cash at a medium rate, "neither high (dear) nor low (cheap)". He continues, "if the land is not cultivated every year or the garden does not bear fruit every year, the *kh̲arādj̲* is taken at half rate [the variant "*kh̲arādj̲* is not levied" reflects the conflicting views held by different schools of jurists, see above]. Every few years the lands and gardens are re-examined: if land in good condition (*ābādān*) has fallen into bad condition (*kh̲arāb*), its *kh̲arādj̲* is removed on the grounds of 'no *kh̲arādj̲* on (land) in a ruined condition', and if land in a ruined condition has been brought into cultivation (*maʿmūr*), it is to be treated in two ways. If it has been out of cultivation for thirty years, it is exempted from tax for three years and then for the following ten years pays half rate so that its prosperity may be firmly established and men be encouraged to develop it. If it has recently become ruined and been brought back into cultivation, this should be taken into account when fixing the *kh̲arādj̲*. Similarly if land is converted into orchards or orchards are converted into ordinary agricultural land the tax demand should be according to the value of its produce neither less nor more" (30-1).

In actual practice, however, in spite of what Naṣīr al-Dīn Ṭūsī says, it is clear that assessment by *masāḥa*, *muḳāsama* and valuation, together with *muḳāṭaʿa*, continued side by side under the Īl̲kh̲āns and later rulers. Ras̲h̲īd al-Dīn Faḍl Allāh alleges that valuation (*ḥarz*) and *muḳāsama* predominated in those provinces in which the tax was levied in cash and kind, and that G̲h̲āzān K̲h̲ān determined in 703/1304 to abolish these methods in certain categories of land (Ras̲h̲īd al-Dīn Faḍl Allāh, *Tārīk̲h̲-i mubārak-i G̲h̲āzānī*, 267, 354). According to Waṣṣāf, as a result of G̲h̲āzān's reform of the *kh̲arādj̲* the people were relieved from demands for extra payments when the crops were valued (*taksīr dar ḥarz*) and when the tax-collectors drew up the assessments and obtained the acknowledgement of the taxpayers of their liability (*taḳrīr*), from additional payments when the tax was demanded in advance (*tafāwut-i taḳdima*), from excess payments extorted when the amount due for taxes assessed in kind was converted into cash (*zawāʾid-i taʿṣīr*) (see below), and from payment of the expenses and allowances of officials. They were also freed from the control and ascendancy of the *massāḥ* and *ḥarrāz*, whom he described as tyrants towards the peasants (*Tārīk̲h̲-i Waṣṣāf*, 386).

The various methods of assessment mentioned above were, to a greater or less extent, recognised by the jurists. Another method, based on custom, and probably in use in many districts from early times, was to take the ploughland (*dj̲uft*, *zawdj̲*, *kh̲īs̲h̲*) as the fiscal unit. This, in a sense, had something in common with *masāḥa* in that it was concerned with the area cultivated. The size of the ploughland, however, varied with the method of cultivation, the type of soil, the configuration of the land, and the pressure of the population on the land. It corresponded roughly to a single agricultural holding, and sometimes consisted of dispersed plots, and might be fragmented into smaller fractions such as halves or quarters. The amount of the tax and the dues levied on the ploughland varied. In the tax regime of the Āḳ Ḳoyunlu ruler, Uzun Ḥasan, drawn up between the years 874/1470 and 883/1477, mention is made of dues levied on the ploughland (see W. Hinz, *Das Steuer-*

wesen Ostanatoliens im 15. und 16. Jahrhundert, in *ZDMG* c/1, New series, xxv (2950), 177-201, and V. Minorsky, *A civil and military review in Fars in 881/1476*, in *BSOS*, xii (1939), 142. Cf. also P. M. Sykes, *Report on the agriculture of Khorasan*, Simla 1910, 3).

By whatever method the tax was normally assessed, it was paid partly in cash and partly in kind. If assessed by *masāḥa* (except in cases when the whole area, cultivated an uncultivated, was taken into consideration) or by *muḳāsama*, both of which methods were closely concerned with the actual amount of the crop, the assessment was according to the solar year (also known as *sāl-i kharādjī*), which began at the vernal equinox. *Muḳāṭaʿa* contracts, on the other hand, were usually according to the lunar year (see BAYT AL-MĀL, II. HISTORY, and also *Tārīkh-i Waṣṣāf*, 403). The general tendency was for the tax, when assessed by measurement, to be paid predominantly in cash. Under the *muḳāsama* method, the tax on grain crops was usually paid in kind but on vegetables and summer crops it was converted into cash. The tax demand in a *muḳāṭaʿa* contract frequently included some grain to be paid in kind. There was, however, great variation in practice in different districts and at different times. In districts which were not self-supporting in grain the tax, although assessed in cash and kind, was paid wholly in cash, the part assessed in kind being converted into cash at one of several prescribed rates of conversion. This was also sometimes the case in districts from which, owing to their remoteness, the removal of grain was impractical (cf. Sykes, *op. cit.*, 3). Malcolm, writing in the early 19th century, states that according to the general rule taxes ought to be paid in cash and kind in equal proportions, but in practice the proportion varied. About the middle of the century the proportion of the total paid in kind was rather less than one-eighth but there were many local variations (see below). Some villages, where the inhabitants were poor, paid almost entirely in kind; but where the landowner was wealthy he preferred to pay in cash, thereby avoiding the interference of minor revenue officials (Malcolm, *History of Persia*, ii, 338-9). In 1844, Abbott noted that the revenue in Māzandarān was raised in money instead of money and produce as formerly, the difference being that what had formerly been collected in kind was priced and demanded in cash (F.O. 60: 108. Abbott, *Journey along the shores of the Caspian*, incl. in Abbott to Aberdeen, No. 8, Encampment near Tehran, 29 June 1844, also quoted in Issawi, *op. cit.*, who refers the quotation, wrongly, to Gīlān).

From the point of view of the peasants, it was to their advantage to pay *kharādj* in kind. If the tax was demanded in cash, having small reserves, or no reserves at all, they were often forced to sell their produce immediately after harvest when prices were at their lowest, in order to realise the cash to pay the tax. It was also in the government's interest to collect the tax partly in kind, because it could use the stocks of grain thus accumulated to provision its armed forces, hold grain against a rise in prices, thus providing itself with additional funds, or, perhaps more importantly, release the grain on to the market in times of shortage or famine thereby lessening the danger of bread riots and forestalling shortages artificially engineered for political purposes. Karīm Khān Zand is alleged to have taken great care to replenish the government granaries regularly in order to ensure supplies of bread at low prices (cf. Muḥammad Hāshim Rustam al-Ḥukamāʾ, *Rustam al-tawārīkh*, ed. Muḥammad Mushīrī, Tehran 1969, 421-2). In the early 19th century also, government granaries were well stocked, and those who had flocked into Tehran as a result of the famine of 1247/1831-2 were fed for seven months from government stores until the new harvest came to hand (Muḥammad Taḳī Lisān al-Mulk Sipihr, *Nāsikh al-tawārīkh*, ed. Djahāngīr Ḳāʾim Maḳāmī, Tehran 1958-9, i, 296; cf. also R. B. M. Binning, *A journey of two years' travel in Persia, Ceylon, etc.*, 1857, ii, 276-7, who alleges that Fatḥ ʿAlī Shāh bought up grain and retailed it at ruinous prices). It was also customary for the government in the 19th century, and probably in earlier centuries also, to pay part of the salaries of its officials in kind.

So far as *kharādj* was assessed in cash, from the end of the 3rd/9th century, when an attempt was made to establish a unified system of accounting on the basis of the gold standard with a legal tariff for the exchange of the dirham [see BAYT AL-MĀL, II. HISTORY], it was usually assessed in gold *dīnār*s or some "standard" coin. Actual payment, however, was made in silver coins. There were many different coins in circulation, sometimes of greatly debased value, and the rates of exchange for them against gold *dīnār*s or "standard" coins were subject to fluctuation. By manipulating the conversion rates to its own ad' antage, the government could raise the amount of the tax without changing its nominal rate. In later centuries also the tax continued, for the most part, to be assessed in gold or a "standard" coin, and to be paid in some other coin (see further B. Spuler, *Die Mongolen in Iran*[3], Berlin 1968, 300 ff. for a discussion of Īlkhānid practice). In the 19th century there were still a number of coins in circulation of varying values in different parts of the country, which made for difficulty over the payment of taxes (see H. L. Rabino di Borgomale, *Coins, medals and seals of the Shahs of Iran, 1500-1941*, London 1945, 61 ff.; cf. also F.O. 60: 165 K. Abbott, *Report on the commerce of the South of Persia*, Trade report, Notes on the trade, manufacturers and productions of various cities and centres of Persia visited by Mr. Consul Abbott in 1849-50).

Frequently the tax when assessed in kind was converted into cash by a procedure known as *taṣʿīr*. Ideally, as Naṣīr al-Dīn Ṭūsī stated, a medium price was taken, but in practice a number of rates were fixed arbitrarily and often bore little relation to prevailing prices. Rashīd al-Dīn mentions the heavy burdens placed upon the peasants (*raʿāyā wa muzāriʿān*) by this system (*Tārīkh-i mubārak-i Ghāzānī*, 267). It not only enabled the government, if it so wished, to raise or lower the amount of tax paid, it also provided an opportunity for the tax-collector or provincial governor to misappropriate sums of money which should rightfully have been paid into the central treasury. It also gave rise to innumerable wrangles between the central government on the one hand and the tax officials and governors on the other when their accounts were being cleared, a process which often ran over one tax year into succeeding years. Waṣṣāf cites numerous cases of officials who were forced to spend time and money over the clearing of their accounts during the reign of the Īlkhāns, and similar instances are frequently met with in later times. ʿAbd al-Fattāḥ Fūminī mentions the case of Mīrzā ʿĀlamiyān, who was for twelve years *wazīr* of Gīlānāt, Māzandarān, Gaskar and Āstārā, and then *wazīr* of Ḳazwīn and later *wazīr* of Khurāsān in the reign of Shāh ʿAbbās (985-1038/1587-1629). He was accused of not including in his

revenue accounts money which he was alleged to have taken from the taxpayers of Lāhīdjān when converting the tax assessed in rice into cash (*tafāwut-i taʿṣīr-i birindj*), and was finally made to pay this sum (*Tārīkh-i Gīlān*, ed. Manūčihr Sutūda, Tehran 1970, 183 ff.).

Responsibility for the payment of taxes in general, including the land tax, was, in the early centuries, the collective responsibility of the taxpayers of a given district [see ḲABĀLA]. They were required, as a body, to make good the tax due from defaulters. This continued to be the case in practice, since so far as the tax was assessed on provinces and districts at the centre and partitioned locally among the villages and individual taxpayers, in effect those who remained had to make good the taxes of any who had left the district. Arrears were common. J. B. Fraser, writing in the early 19th century, states that there was a continual struggle between the governor of a province and his myrmidons on the one side, and villagers, *ḍābiṭ*s (revenue collectors), and *kadkhudā*s on the other. Few villages paid without requisition. The giving and accepting of douceurs was common (*Narrative of a journey into Khorasan in the years 1821 and 1822*, London 1825, 221). The situation was probably not very different in earlier times.

If assessed in cash, or assessed in kind and converted into cash, the tax was often levied in two or more instalments. So far as it was paid in kind, the division of the crop was normally made at harvest time on the threshing floor. The responsibility for transporting the grain to government granaries was usually that of the landlord. If the land was worked by him under a crop-sharing agreement, the responsibility for the payment of *kharādj* was, according to the law-books, both Sunnī and Shīʿī, the landlord's (cf. Abū Yūsuf, *Kitāb al-kharādj*, tr. E. Fagnan, Paris 1921, 137, Bahāʾ al-Dīn ʿĀmilī, *Djāmiʿ-i ʿAbbāsī*, Bombay lith. 1884, 162). In practice, so far as the tax was levied on the threshing floor before the division of the crop between the landlord and the peasants, the tax liability was shared between the two parties. Ghāzān Khān laid down special regulations in 703/1304 for the payment of *kharādj* and the delivery of the amount due in kind on summer and winter crops. The dates when payment fell due in the *garmsīr* and the *sardsīr* respectively differed. The taxpayer was responsible for the transport of the tax quota to the government storehouses within a fixed period (*Tārīkh-i mubārak-i Ghāzānī*, 264 ff.). There was, however, in the matter of the date when payment fell due and the number of instalments, a variety of practice. For example, in Kāshān, under the assessment made in 1233/1817-18 the tax due in kind in barley was collected from crown lands (*khāliṣadjāt-i dīwānī*) towards the end of May (when the grain harvest had been reaped), and the tax due in cash was levied in three instalments, towards the end of June, September and January (ʿAbd al-Raḥīm Ḍarrābī, *Tārīkh-i Kāshān*, ed. Īradj Afshār, Tehran 1956, 286-7). In Khurāsān at the beginning of the 19th century the revenue in cash was paid in three instalments, the first during the first month of the Persian solar year beginning on 21 March, the second four months later and the third towards the end of the tenth month. Revenue in kind and cash combined was paid in two instalments (Sykes, *op. cit.*, 5).

Extortion by government officials over the collection of land taxes was common. Often the tax was demanded before the harvest was reaped, a practice of which Niẓām al-Mulk disapproved as leading to the ruin and dispersal of the peasants (*Siyāsat-nāma*, 18). In times of financial stringency and military campaigns, it was not only common to demand the taxes in advance but also to demand them several times over (cf. *Tārīkh-i Waṣṣāf*, 326, 438, *Tārīkh-i mubārak-i Ghāzānī*, 267). The arbitrary exactions of government officials were, indeed, often more oppressive than the burden of taxation itself (see also below). The difficulties were, however, not all on one side. Governments and their officials were frequently extortionate, and the peasants feared that unless they counterfeited poverty, they would be supposed to be rich and become a mark for extortion (cf. F.O. 60: 194. Sheil to Shah, n.d.). Perennial difficulties were experienced over tax collection. Arrears were common. Sometimes they were the result of a series of bad years or some natural disaster for which no remission had been granted, and sometimes the result of heavy demands made on the taxpayers; but they were also at times due to the recalcitrance of the taxpayers. There were doubtless village communities other than that of Sīmakān in Fārs whom Mīrzā Muḥammad Kalāntar's statement that they "were never in the habit of paying taxes" would have fitted (*Rūznāma-i Mīrzā Muḥammad Kalāntar*, ed. ʿAbbās Iḳbāl, Tehran 1946, 20). Estates were not infrequently temporarily taken control of by the *dīwān* until outstanding claims had been settled, while others were confiscated to the *dīwān*. Much of the *khāliṣa* land held by the Ḳādjārs was acquired in this way (see further *Landlord and peasant*, 147; see also Aghnides, *op. cit.*, 389-90).

Remissions of taxation. Tradition demanded that remissions of *kharādj* should be granted in the event of natural disasters, such as flood, drought, and the destruction of crops by pests (see also Aghnides, *op. cit.*, 388), and there is frequent mention in the chronicles of remissions and demands for remission of taxation. Waṣṣāf records that the *kharādj* had not been paid in Fārs in 705/1305-6 as a result of a dry year coupled with the extortion of officials. Accordingly Uldjāytū, who had succeeded in 703/1304, recalled Djamāl al-Dīn Ibrāhīm b. Muḥammad Shaykh al-Islām to Shīrāz from Kīsh, whither he had retired after having been in charge of the financial administration of Fārs for a period, to take control of affairs again. Djamāl al-Dīn gave orders for the sums outstanding for *kharādj* to be recorded but not to be demanded from the taxpayers, and for seed and advances to be given to the peasants (*Tārīkh-i Waṣṣāf*, 507; cf. also 446). He died shortly afterwards, apparently in 706/1306 (Aḥmad b. Zarkūb, *Shīrāz-nāma*, ed. Ismāʿīl Wāʿiẓ Djawādī, 1971-2, 99, *Tārīkh-i Waṣṣāf*, 446), and there is no record of the results achieved by these measures. Fatḥ ʿAlī Shāh gave remissions to the governors of Iṣfahān, Gīlān and Māzandarān in 1247/1831-2 on account of heavy loss of life from cholera and the severe winter of 1830-1, and a decline in silk production (Muḥammad Taḳī Lisān al-Mulk Sipihr, *Nāsikh al-tawārīkh*, i, 296). Despite the disastrous outbreak of silk-worm disease in Gīlān in 1864-5, the tax assessment of the province remained unchanged until 1868 when it was reduced by about 20%, though the relative decline in silk output and in the population's income had been greater (see further G. G. Silbermann, *Persian constitutional revolution: the economic background, 1870-1906*, unpublished Ph.D. thesis (London), 1974, 149 ff.).

Remissions were also sometimes granted as a reward for services already performed, to mark a military victory, the birth of a son, or to encourage future support. Shāhrukh b. Tīmūr in a *fatḥ-nāma*

issued after his defeat of Ḳarā Yūsuf (823/1420-1) announced the remission of one-third (*dū dāng*) of the taxes of the kingdom (*māl-i mamālik-i maḥrūsa*) as a favour (*suyūrg͟hāl*) for his subjects (ʿAbd al-Ḥusayn Nawāʾī, *Asnād wa mukātabāt-i tārīk͟h-i Īrān*, Tehran 1962-3, 214). It is not clear whether this was intended to be a temporary remission or a permanent reduction. S͟hāh ʿAbbās remitted the taxes (*māl wa manāl*) of Iṣfahān for one year after his successful campaign in K͟hurāsān in 1007/1595 (Iskandar Muns͟hī, *Tārīk͟h-i ʿĀlamārā-yi ʿAbbāsī*, Tehran 1956, i, 587) and in 1025/1616 he is said to have remitted one month's *k͟harād͟j-i dīwānī* (i.e. the instalment due in Ramaḍān) from the S͟hīʿīs in all provinces (*ibid.*, ii, 895). Nādir S͟hāh after his Indian campaign in 1151/1738-9 ordered the taxes to be remitted for three years (Mīrzā Mihdī Astarābādī, *D͟jahānguṣ͟hā-yi Nādirī*, ed. ʿAbd Allāh Anwār, Tehran 1962-3, 334). He subsequently revoked this order (*ibid.*, 422. Cf. also D͟jābirī Anṣārī, *Tārīk͟h-i niṣf-i d͟jahān*, 122).

Charges on the land taxes. In mediaeval Persia, as in earlier times, the main charge on the land tax and the revenues in general was the payment of the army and officials. In times of peace the tax regime tended to be milder than in times of war or when the numbers and influence of the military were increasing. Waṣṣāf's account of Kirmān and Fārs in the late 6th/12th and early 7th/13th centuries illustrates how military adventures and defence affected the revenues. When the governor of Kirmān complained to the Salg͟hurid ruler of Fārs, Saʿd b. Zangī, who had taken the province in 605/1208-9, that the revenues (*ḥāṣilāt*) of Kirmān were not enough for the needs of the administration and the wages of the army (*maṣāliḥ-i salṭanat wa mawād͟jib-i las͟hkar*), the latter issued a decree for an additional levy of one-tenth from landed estates. The people complained of this levy, which was called *fidyat al-mulk*, and so, after his victory in Luristān, Saʿd b. Zangī abolished it (*Tārīk͟h-i Waṣṣāf*, 151). Later, for somewhat similar reasons, the rate of taxation in Fārs, which had been lightly assessed at the beginning of Saʿd b. Zangī's reign, was raised. Warned by his *wazīr* that more revenue would be required to satisfy the greed of Mongol *amīr*s, the expectations of the Mongol princesses and the obligation to provide for their expenses (*ik͟hrād͟jāt*) on the one hand, and to provide for the administration and the military needs of the country on the other, and encouraged by ʿImād al-Dīn Mīrāt͟hī, the head of the *dīwān al-ins͟hāʾ*, who pointed out that the *s͟harīʿa* permitted those in authority to levy sums from the rich for the defence of Islam, Saʿd b. Zangī increased the land tax and imposed a variety of new taxes upon the townspeople. Under this settlement, which was known as the Mīrāt͟hī settlement after ʿImād al-Dīn Mīrāt͟hī, who was responsible for drawing it up, half of the produce was taken from land irrigated by streams and exploited by tribes and peasants, a quarter, fifth, sixth or tenth, according to the situation of the land and the status of its owners, from estates watered by *ḳanāts* or wells, and from orchards, while dues were levied on those who had crop-sharing agreements and on fruit-bearing trees on the basis of measurement of valuation. Waṣṣāf alleges that great severity was practised in the collection of the revenue under this settlement (*Tārīk͟h-i Waṣṣāf*, 161-2).

Additional cesses. Land taxes were not limited to the payment of the basic *k͟harād͟j*. Numerous additional cesses (*farʿ*, pl. *furūʿ*, *ṣādir*, pl. *ṣādirāt*, *ṣādiriyyāt*) for "occasional" purposes were added to the basic tax. Rustam al-Ḥukamāʾ, writing at the end of the 18th or the beginning of the 19th century, states that the traditional rate for the basic tax was one-fifth of the produce from privately owned lands and one-third from land owned by the ruler (*amlāk-i pādis͟hāhī*) and that in either case additional cesses (*ṣādiriyyāt*) should not exceed one-fifth of the tax (*Rustam al-tawārīk͟h*, 172-3, 325). It is not clear whence he derived this theory. It was frequently transgressed if, indeed, it ever existed. The additional cesses in fact sometimes equalled or even exceeded the basic tax.

One of the most common of the additional cesses was that made for the payment of the tax-collectors. Whereas the jurists had laid down that those who collected the *k͟harād͟j*, of whom they required special qualifications, should be paid out of the proceeds of *k͟harād͟j*, sums for their pay were in practice commonly levied in addition as a proportion of the basic tax. They were subject to arbitrary increase or decrease, and varied from province to province, sometimes exceeding the basic tax. Naṣīr al-Dīn Ṭūsī states that the additional cess (*farʿ*) for the dues (*marsūm*) of officials had recently been raised and that a cess of 10% or 20% was levied on this account (*az mālhā-yi dah yāzdah davāzdah mīsitānand*) (*op. cit.*, 32). Under the Ṣafawids the additional cess for the expenses of officials was sometimes known as *ʿamalkard-i ḥukkām*. Iskandar Muns͟hī states that in ʿIrāḳ (from the text it is not clear whether he means ʿIrāḳ-i ʿArab or ʿIrāḳ-i ʿAd͟jam or both) an additional cess of five *dīnār*s per one *dīnār* had, in the course of time, been added to the basic tax for the perquisites of the *tuyūldār* and *dārūg͟ha* (*manāfiʿ-i tuyūldārī wa dārūg͟hagī*). This was contrary to both the old assessment and the assessment of S͟hāh Ṭahmāsp, and so S͟hāh ʿAbbās, after his victory in K͟hurāsān in 1007/1595, remitted it (*ʿĀlamārā-yi ʿAbbāsī*, i, 587; see also K. Röhrborn, *Provinzen und Zentralgewalt Persiens im 16. und 17. Jahrhundert*, Berlin 1966, 59-60), thus reducing it from 20% to 16%. Under the Ḳād͟jārs the costs of collection and administration were levied locally under the general head of *tafāwut-i ʿamal* over and above the basic tax (*aṣl*) and additional cesses (*furūʿ*). Bizot, the French financial adviser appointed by the Persian government in 1907, states in a report dated 15 March 1909 that the *tafāwut-i ʿamal* was levied in the form of a percentage of the *māliyāt* and varied from province to province and often exceeded the basic tax. When he was writing it was more or less fixed and where there was a surplus under this head it had to be remitted to Tehran (*Further correspondence respecting the affairs of Persia*, Pt. xviii, April to June 1909, Report by M. Bizot on the financial situation in Persia, Tehran, dated 15 March 1909, incl. in No. 388, Sir George Barclay to Sir Edward Grey, Tehran, 8 April 1909).

The surveyor (*massāḥ*), like the *ʿāmil-i k͟harād͟j*, received his pay from the proceeds of the *k͟harād͟j*, according to the theory of the jurists, but in the course of time dues for the surveyors also were levied in addition to the *k͟harād͟j*. G͟hāzān K͟hān, as stated above, attempted to do away with the need for the surveyor and the valuer, but his efforts were only temporarily, if at all, successful. In a document dated 904/1498-9 for a *suyūrg͟hāl*, the grantee is given exemption from the payment of the due for measurement and valuation (*rasm al-ḥarz wa masāḥa*) (*Landlord and peasant*, 103). According to the Ṣafawid manual, the *Dastūr al-mulūk*, a small sum was levied as a due for the surveyor (*massāḥ*) of Iṣfahān (M. T. Dānis͟hpaz͟hūh, *Dastūr al-mulūk-i Mīrzā Rafīʿā wa tad͟hkirat al-mulūk-i Mīrzā Samīʿā*, in *Rev. de la fac.*

des lettres et des sciences humaines (University of Tehran), XVI/5-6, 552).

Malcolm states that the sum derived from *ṣādir* had been calculated at two-fifths of the fixed revenue (i.e. double the rate mentioned by Rustam al-Ḥukamā'), and ought to have been levied according to definite rules, each person paying in the same proportion as he paid the basic tax. But the governors of provinces, he alleges, usually exercised an arbitrary discretion in collecting the *ṣādir*. It bore most heavily on "the proprietors of estates and citizens" (*History of Persia*, ii, 342-3). Once an additional cess was added for whatever purpose, the tendency was for it to become in due course part of the "fixed" tax (cf. *Landlord and peasant*, 144-5). Fraser relates that not long before his visit to Persia in 1821-2 various additional cesses, which had been imposed to make good the deficiency of the revenue, had been compounded for a figure of 10% of the produce and added to the basic rate, which was also 10%, so that the regular government dues, when he was writing, were one-fifth of the produce. The government, he alleges, had kept ill-faith over the matter and *ṣādirāt* were still levied in capricious and arbitrary forms (*Narrative of a journey into Khorasan*, 211). Thomson reported in 1868 that "It is impossible to discover what people really do pay in excess of the fixed assessment. Some pretend that the irregular exactions amount to a sum equal to the legal assessments, and there does not appear to be any reason for supposing that this is an exaggeration" (Report on Persia, *op. cit.*, 254-5. Cf. also Sykes, *op. cit.*, 4 ff.).

The term *ṣādirāt* covered not only additional cesses assessed in the same way as the basic tax (*aṣl-i māl*), i.e. on the produce or ploughland, but also extraordinary or "occasional" requisitions made on the occasion of the progress of the ruler of a governor through the country, or to meet the expenses of a military expedition, or for some other purpose (cf. J. Morier, *Journey through Persia, Armenia, and Asia Minor, to Constantinople in the years 1808 and 1809*, London 1818, 237, and Malcolm, *op. cit.*, ii, 342). Such reliefs also tended to become part of the fixed revenue.

Pasture taxes and taxes on flocks and herds. In addition to the additional cesses and "occasional" requisitions, there were many other taxes and dues which those who lived on the land were required to pay. Some of these were known in the early centuries; many more were added in Īlkhān times and continued to be levied thereafter. They included cattle and sheep taxes, pasture taxes, poll-taxes, dues for officials other than those specifically concerned with revenue collection, together with a great variety of other dues and services. Although they were not paid only by those living on the land, yet since the latter formed the main body of taxpayers, it was upon them that these levies bore most heavily.

Pasture taxes and taxes on flocks and herds (*marā'ī, mawāshī, mawāsh*), in contradistinction to the land tax, appear to have been paid mainly in cash. With the advent of the Mongols and the increase in the numbers of the nomads and their flocks, sheep and cattle taxes assumed greater importance. One of the meanings of the tax introduced by the Mongols and known as *ḳūbčūr* (see below) was a tax on flocks and herds. *Čūpānbegī*, which was levied in the 9th/15th century, was possibly synonymous with *ḳūbčūr* in its meaning as a tax on flocks and herds (cf. Minorsky, *Tadhkirat al-mulūk*, *GMS*, London 1943, 177). Shāh 'Abbās, after his victorious campaign in Khurāsān is alleged to have abolished it in that province in 1007/1595. It amounted at that time to nearly 20,000 'Irāḳī *tūmān*s per annum (*Tārīkh-i 'Ālamārā-yi 'Abbāsī*, i, 587). It is unlikely, however, that the exemption was permanent or that it was extended to other provinces. The Muḳaddam tribe of Ḳarābāgh still paid it in the reign of Shāh Ṣafī (1038-52/1629-42) until they were exempted from its payment (Muḥammad Yūsuf, *Dhayl-i tārīkh-i 'ālamārā-yi 'abbāsī*, ed. Suhayl Khwānsārī, Tehran 1938, 286), and it was, according to the *Tadhkirat al-mulūk*, one of the dues collected by the *ḍābiṭa-niwīs* (f. 68b).

It is not clear how *marā'ī* and *mawāshī* differed from *čūpānbegī*. Iskandar Munshī states that Shāh Ṭahmāsp abolished them in most provinces (*mamālik*), especially in Shī'ī districts (i, 123; see further Röhrborn, 58). This, again, was not permanently effective. In 19th century usage in Kāshān *marā'ī* was a tax on sheep and goats levied at so much per animal which bore young and was in milk. *Mawāshī* (*mawāsh*) was levied on cows, mules and asses at so much per head. The fiscal unit was the village, and only those living in the village and benefiting from its grazing, water and firewood were in theory liable to these taxes. Anyone cultivating land elsewhere and grazing his flocks elsewhere was exempt from these taxes in the village in which he resided. Similarly a difference was made in the incidence of land and water taxes between those who lived in the village and owned land there and absentee landlords. A due known as *nassādjī* was also levied on every man or woman living in the village who had a loom ('Abd al-Raḥīm Ḍarrābī, *Tārīkh-i Kāshān*, ed. Īrādj Afshār, Tehran 1956, 91).

Malcolm states that for the most part the pasture lands allotted to the tribes in Ḳādjār times were considered as a payment in part for their military service, but that a tax was levied upon families according to their wealth and the number of their cattle and flocks (*History of Persia*, ii, 339. See also *Landlord and peasant*, 158, 163-4).

Poll-taxes and dues. Poll-taxes (*sar-shumārī, sar-shumār, sarāna*), and, less frequently, hearth taxes (*rasm-i dūdī, zar-i dūdī, khāna-shumārī, khāna-shumār*) became common after the Mongol conquest (see below). These poll-taxes had nothing to do with the poll-tax (*djizya*), sanctioned by Islamic law and levied on *dhimmīs*, but like the *djizya* they implied an element of subjection. 'Abd al-Razzāḳ records the levy of a hearth tax by Abū Sa'īd in 859/1454-5 and 874/1469 (*Maṭla' al-Sa'dayn*, ed. Muḥammad Shafī', Lahore, ii, 1087, 1410). In the 19th century a poll-tax of one kran was exacted from each male over 18 years of age. The inhabitants of towns did not pay this tax (Report by Mr. Thomson, *op. cit.*, 253). In some villages, however, *sarāna* was exacted from the age of fourteen (*Tārīkh-i Kāshān*, 91).

Djuwaynī, describing the organisation of the Mongol horde, mentions certain contributions to which they were liable, including various dues (*'awāriḍāt*), sums for the maintenance of travellers (*ikhrādjāt*), the furnishing of mounts (*ulāgh*), and provisions (*'ulūfāt*) (*Tārīkh-i Djahāngushā*, ed. Muḥammad Ḳazwīnī, *GMS*, London/Leyden 1912, i, 22). With the spread of the Mongol conquests, these contributions and many others were laid upon the conquered population (see also below). Rashīd al-Dīn mentions various levies made for the provisions of Mongol officials and the establishments of the Mongol princes and princesses—*sūsūn* (provisions for travellers), *'alafa, 'ulūfa, sāwarī,* and *targhū*, among others—which he alleges were abolished under

Ghāzān's reforms (*Tārīkh-i mubārak-i Ghāzānī*, 255). Uldjāytū, on his accession, announced his intention of continuing Ghāzān's policy and forbade the demand of irregular dues (Abū 'l-Ḳāsim ʿAbd Allāh b. Muḥammad al-Kāshānī, *Tārīkh-i Uldjāytū*, ed. M. Hambly, Tehran 1969, 96). In fact, however, similar levies continued to be made for the ruling classes, and large numbers of different dues and services are mentioned in documents granting *tuyūl*s and *suyūrghāl*s in the 9th/15th century and later (see further *Landlord and peasant*, and H. Busse, *Untersuchungen zum islamischen Kanzleiwesen*. See also documents in T. M. Musevi, *Orta ésr Azérbaijan tarikhiné dair Fars dilindé yazilmish sénédlér*, Baku 1956, and idem, *Baki tarikhiné dair orta ésr sénédléri*, Baku 1967).

One of the most grievous levies was *suyūrsāt* (purveyance), claimed not only by the officials known as *mihmāndār*s, who conducted foreign envoys through the countryside, but also by all great men or messengers travelling on behalf of the ruler. This first reached extortionate proportions under the Īlkhāns (cf. *Tārīkh-i mubārak-i Ghāzānī*, 270 ff.), and continued to be demanded under later rulers. Clavijo described its levy in the time of Tīmūr (*Embassy to Tamerlane*, ed. G. le Strange, London 1933, 166). Abel Pinçon, writing *ca.* 1605, mentions the ill-treatment of peasants who did not provide supplies for ambassadors, who were conducted through the country by soldiers furnished by the shah (*Antony Sherley, his Persian adventure*, ed. E. D. Ross, London 1933, 166). Under the Ḳadjārs a similar system existed and provisions by way of *suyūrsāt* were extorted from the private stores of the villages. "The villager", wrote Morier, "groans under the oppression, but in vain shrinks from it; every argument of his poverty is answered, if by nothing else, at least by the bastinado" (*Journey through Persia*, 37. Cf. also Fraser, *Narrative of a journey into Khorasan*, 88, 113, 115). The abolition of *suyūrsāt* was announced in the official gazette on 21 February 1851 except for soldiers on the march (F.O. 60: 158. Sheil to Palmerston, No. 29, Tehran, 21 February 1851), but there is no reason to suppose that this prohibition was effective. Sir Justin Sheil, writing in 1854, states that its exaction was attended by violence and oppression. *Muḥaṣṣil*s were the chief offenders. Governors and other functionaries travelling to and from their posts were also a scourge to the country (F.O. 60: 194. Sheil to Shah, n.d.).

The tax assessment and the levy of troops. The provision of troops, so far as this was connected with the grant of *iḳṭāʿ*s and *tuyūl*s, was closely connected with the assessment of the land tax. In 1851, under measures introduced by Mīrzā Taḳī Amīr Niẓām, Nāṣir al-Dīn's first minister, this connection became even closer. The basis of Mīrzā Taḳī Khān's reform was that a certain quota of soldiers or government servants (*nawkar-i dawlat*) should be provided under the group assessment (*bunīča*) of each village, district or tribe, proportionate to the amount of its revenue assessment. The men served in theory for six months of the year and returned to their villages for the other six months. Their pay for this latter period was a charge on the village, as also was the small allowance paid to their families while they were away on service (ʿAbd Allāh Mustawfī, *Sharḥ-i zindagī-i man*, Tehran 1945-6, i, 91-2). A decree issued in 1307/1889-90 laid down that one man per 180 male Muslims in each village was to be taken for military service and 150 *tūmān*s for every 180 non-Muslims, but this was probably never fully operative (see further *Landlord and peasant*, 168 ff.). According to the report on the Persian army dated 1900, quoted above, nominally for every 12-20 *tūmān*s of the assessment one recruit was to be provided. *Dhimmī*s, *sayyid*s, *ʿulamāʾ*, the inhabitants of towns, and peasants on crown lands were exempted. In practice, however, recruitment was fixed in an arbitrary fashion. A village of 500 might furnish the same quota as one with only 50, while a village whose revenue might have declined was still required to provide the same number of men as when its revenue had been much greater (Report on the Persian army, *op. cit.*, 97).

Assignments on the land taxes: iḳṭāʿs, suyūrghāls and tuyūls. The jurists in the early centuries had sanctioned the practice of making assignments on the *kharādj*. Naṣīr al-Dīn Ṭūsī had, perhaps, such assignments in mind when he states that there were people whose *kharādj* had been remitted and others to whom a specific sum was allotted as a pension (*idrār*) or for other expenses and put against their *kharādj*. These privileges, he asserts, could be transmitted by sale and inheritance (*op. cit.*, 31), though it is not clear what exactly he meant by "sale" in this connection. Al-ʿUmarī also states that he had been informed that pensions (*idrārāt*), whether in the form of money or villages, remained, like landed property (*milk*), in the possession of the holder, who could dispose of them by sale or gift, or constitute them into *waḳf*, as he pleased (*Das mongolische Weltreich*, ed. K. Lech, Wiesbaden 1968, Ar. text, 96).

The practice of assigning the fiscal rights of the state to the military as *iḳṭāʿ* [*q.v.*], which became common from the 4th/10th century onwards, was, to some extent, an extension of the earlier assignments on *kharādj*. From about the 7th/13th century there was a change in terminology, and the term *iḳṭaʿ* tended to be restricted to land grants made to soldiers (cf. the grants made by Ghāzān, *Tārīkh-i mubārak-i Ghāzānī*, 303 ff.), though it was also used from time to time in other senses. The beneficiaries had no authority over the peasants except to see that they cultivated their lands or their villages and to collect from them the *dīwān* taxes (*māl wa mutawadjdjihāt-i dīwānī*). The grants could be transmitted by inheritance to a member of the holder's family or followers, provided he was prepared to bear arms, but could not be transferred by sale (*ibid.*, 307). Ḥamd Allāh Mustawfī mentions *iḳṭāʿ*s in Ādharbāydjān, Shīrwān and Khurāsān (*Nuzhat al-ḳulūb*, ed. G. le Strange, *GMS*, London/Leyden 1915, Persian text, 83, 92, 93, 147).

In the 8th/14th century the term *suyūrghāl* came to be used for other aspects of the institution formerly designated by the term *iḳṭāʿ*, and was itself replaced in the 9th/15th century by the term *tuyūl* so far as the institution designated earlier by the "provincial" *iḳṭāʿ* was concerned (see further I. P. Petrushevsky, *K istorii instituta soyurgala* in *Sovetskoe Vostokovedenie*, vi (1949). The grants of *suyūrghāl*s by Tīmūr would appear to have been very much like the earlier "provincial" *iḳṭāʿ*s. In post-Tīmūrid times, however, the term *suyūrghāl* for the most part designated a grant of immunity, often hereditary, from the payment of taxation, and frequently, though not by any means always, granted to members of the religious classes. If the grantee held land the grant might include not only immunity from the payment of taxation, but also the right to receive the taxes from the local population and sometimes to exercise rights of jurisdiction. *Suyūrghāl*s were also attached to institutions. Thus, Shāh Sulṭān Ḥusayn (1105-35/

1694-1722) constituted six hamlets (*mazra*ʿ*a*) in Barāʾān into a *waḳf* for the Sulṭānī *madrasa* in Iṣfahān and granted their revenues (*māl wa d̲j̲ihāt wa k̲h̲āridj al-māl wa sāʾir-i d̲j̲ihāt*) as a permanent *suyūrg̲h̲āl* to the administration of the *madrasa*. No drafts for taxes or other sums (*māl wa d̲j̲ihāt wa sāʾir-i wud̲j̲ūhāt*) were to be made on those hamlets or their peasants on any account (ʿAbd al-Ḥusayn Sipintā, *Tārīk̲h̲-i awḳāf-i Iṣfahān*, Iṣfahān 1967, 223).

*Tuyūl*s, on the other hand, were primarily temporary grants in return for services. They frequently carried with them the right to collect (as well as to receive) the taxes, and rights of jurisdiction. They were often in practice, and sometimes in name, hereditary. In theory, however, they had to be regranted on the accession of a new ruler. For example in Ṣafawid times, when the empire was divided into directly administered land known as *k̲h̲āṣṣa* [see K̲H̲ĀLIṢA] and indirectly administered land known as *mamālik*, the taxes, including the land tax, were collected by the provincial governor or *tuyūldār* and retained by him for provincial and other expenses. One of the crucial differences between *k̲h̲āṣṣa* and *mamālik* was that *tuyūl*s were granted on the latter but not normally on the former. ʿAbd al-Fattāḥ Fūminī quotes Mīrzā ʿĀlamiyān as saying, "in *k̲h̲āṣṣa* districts (*dar ulkā-yi k̲h̲āṣṣa*) the existence of a *tuyūl* has no meaning" (*Tārīk̲h̲-i Gīlān*, 232). This statement, however, does not necessarily hold good throughout the Ṣafawid period. The *tuyūl* granted to Fak̲h̲r al-Dīn Aḥmad Bāfḳī (see below) was on *k̲h̲āṣṣa* land.

S̲h̲āh ʿAbbās in 1019/1611 appointed Burhān al-Dīn *k̲h̲alīfa* of the district of Dizmār in succession to his father and allotted to him, as had been allotted to his father, 34 *tūmān*s 7938 Tabrīzī *dīnār*s on account of the taxes (*māl wa d̲j̲ihāt wa wud̲j̲ūhāt*) of Dizmār as his *tuyūl* and *suyūrg̲h̲āl* from the date of the death of his father. The *kadk̲h̲udā*s and peasants (*ra*ʿ*āyā*) of Dizmār were to recognise him as the holder of the *suyūrg̲h̲āl* and their *tuyūldār* and to pay to him their taxes year by year and to refer to him their affairs, apart from cases of murder (*siwā-yi ḳaḍiyya-i k̲h̲ūn*). The Ṣūfīs (i.e. the Ḳizilbās̲h̲) of Dizmār and Uzumdil were to serve him as messengers and military followers (? *bi d̲j̲ār wa yāsāk*) as they had served his father. The governors (*ḥukkām*), *dārūg̲h̲a*s, *tuyūldār*s, and tax-collectors (ʿ*ummāl*) of Ād̲h̲arbāyd̲j̲ān in general and Dizmār in particular were not to interfere in any way in his *suyūrg̲h̲āl* or *tuyūl* or to make any drafts or allocations on account of expenses (*ik̲h̲rād̲j̲āt*) or dues (ʿ*awāriḍāt*), in particular the dues of the *dārūg̲h̲a*, the wazir, or the *kalāntar*, etc., which according to the decree of the late sultan (Ṭahmāsp) were not levied on the *suyūrg̲h̲āl*s of the Ṣūfīs (Sarhang Bāyburdī, *Tārīk̲h̲-i Arasbārān*, Tehran 1962, 160).

In the case of most *tuyūl*s and some *suyūrg̲h̲āl*s the grantee was required to perform certain services or to provide military forces. For example Fak̲h̲r al-Dīn Aḥmad Bāfḳī was ordered by S̲h̲āh ʿAbbās to provide 300 men from Bāfḳ and Yazd to serve as attendants in the *k̲h̲āṣṣa* administration and to accompany the royal train on military expeditions. He collected 300 *tufangčī*s from the aforementioned places and returned with them to the capital. S̲h̲āh ʿAbbās then ordered Bāfḳ, Yazd, Sar Yazd, Fahrad̲j̲ (in the Yazd district), some of the districts of Kirmān, districts in the desert regions (*mafāza*), D̲j̲andak-i Nawḳāt and elsewhere to be his *tuyūl*, and he also appointed *suyūrg̲h̲āl*s for his children. Fak̲h̲r al-Dīn attained freedom of action and authority in those regions and spread justice among the people (Muḥammad Mufīd, *D̲j̲āmi*ʿ*-i Mufīdī*, ed. Īrad̲j̲ Afs̲h̲ār, Tehran 1961, iii, 276). S̲h̲āh Sulṭān Ḥusayn granted a *suyūrg̲h̲āl* to Amīr Bāyandur Sulṭān, the governor of Ḳarad̲j̲a Dāg̲h̲, in 1113/1702 allotting to him the sum of 6 *tūmān*s 3,096½ *dīnār*s from the taxes (*māl wa d̲j̲ihāt wa wud̲j̲ūhāt*) of the Dizmār district. After his death this was to pass to his son on condition that he provided seven men for the shah's service (*bi d̲j̲ār wa yāsāḳ-i s̲h̲āhī*). The headman and peasants of Dizmār were to remit the taxes (*māl wa d̲j̲ihāt wa wud̲j̲ūhāt*) and government dues to the grantee (*A soyūrg̲h̲āl of Jahāngīr Āq-Qoyunlū*, 158-60). Nādir S̲h̲āh similarly granted a *tuyūl* in 1156/1743 to Sulṭān Muḥammad Beg, the *ḳurčībās̲h̲ī*, on one of the villages of Burk̲h̲ʷār, which was his private property, so that it should be free of *dīwān* drafts (*hawālad̲j̲āt-i dīwānī*) and he should expend its revenues on his livelihood and perform whatever was demanded by way of service (*lawāzim-i čākirī wa d̲j̲ān-sipārī*) (B.M., Or. 4935, No. 17).

The assumption appears to have been made that the obligation to service was a permanent one and that the *tuyūl* would therefore also be permanent, and it was, in fact, frequently regranted to the original holder's sons and descendants. The following example illustrates this. Muḥammad Mīrzā (later Muḥammad S̲h̲āh), when governor of Ād̲h̲arbāyd̲j̲ān, granted a *tuyūl* to Ḥād̲j̲d̲j̲ī D̲j̲āmī Beg Bāyburdī in 1242/1827, allocating to him the taxes of the village of Nuḳdūz, in the district of Ahar, which was assessed at a lump sum of 15 *k̲h̲arwār*s of rice, as his permanent *tuyūl* just as it had been granted by ʿAbbās Mīrzā in former years to his late father, Ḥusayn Sulṭān, so that he should year by year collect the *dīwān* taxes (*mutawad̲j̲d̲j̲ihāt-i dīwānī*) of that village, expend them on his expenses and perform what was demanded of him by way of service (*bi lawāzim-i k̲h̲idmat-gud̲h̲ārī wa bandagī*) (*Tārīk̲h̲-i Arasbārān*, 260).

The degree to which a district on which or in which a *tuyūl* had been granted was removed from the control of the central government varied. In 1014/1605 S̲h̲āh ʿAbbās sent Mīrzā ʿĀlamiyān to K̲h̲urāsān because peculation and extortion had been reported and ordered that the levy of taxes in *tuyūl*s should be under his supervision (Īvāg̲h̲lī Ḥaydar, *D̲j̲āma*ʿ*a-i murāsilāt ūlu 'l-albāb*. Add. 7688 f. 200b, quoted by Röhrborn, 106-7). For the most part, however, with the grant of a *tuyūl*, especially if this was in the form of a specific amount of cash and/or grain granted to an individual on his own land, the land and its taxes were removed from the control of the central or provincial government. For example, a *farmān* dated 1252/1836 from Muḥammad S̲h̲āh granted to Ḥasan K̲h̲ān Bāyburdī Ḳarad̲j̲a Dāg̲h̲ī as a *tuyūl* the village of Razīn in the district of Ahar, which was his own estate, and gave him its taxes, in cash and kind, as pay, which he was to collect every year and spend on his living expenses. The *farmān* commands Ḳahramān Mīrzā, the governor of Ād̲h̲arbāyd̲j̲ān, to hand the village over to Ḥasan K̲h̲ān as his *tuyūl* and to consider it immune from the entry of officials (*Tārīk̲h̲-i Arasbārān*, 264). Some years later in 1272/1856 Nāṣir al-Dīn S̲h̲āh issued a *farmān* to the commander-in-chief (*sardār-i kull*), ʿAzīz K̲h̲ān, stating that the 184 *tūmān*s 7300 *dīnār*s in cash and 47 *k̲h̲arwār*s and 50 *mann*s of grain (*d̲j̲ins*) as wages (*mawād̲j̲ib wa mustamarrī*) had been granted to Ḥasan K̲h̲ān Bāyburdī Ḳarad̲j̲a Dāg̲h̲ī on account of the taxes of Bohol and his other estates (*amlāk*) and debited against the revenue of Ād̲h̲arbāyd̲j̲an in the assessment (*dastūr al-*ʿ*amal*). Since Ḥasan K̲h̲ān had

been appointed to serve in Fārs, ʿAzīz Khān was to order his *tuyūl*s to be paid (*wā gudhār namūda*) to him as before and to forbid anyone to interfere in them (*Tārīkh-i Arasbārān*, 268).

The amount of land or its revenue alienated from the crown as *tuyūl*s varied. Rawlinson, writing about 1838, states that it was calculated that about one-fifth of the whole land revenue of Persia was then alienated from the crown (*Notes on a journey from Tabríz through Persian Kurdistán to the ruins of Takhti-Soleïmán*, in *JRGS* (1841), 5, n).

Apart from *suyūrghāl*s and *tuyūl*s, grants known as *hamasāla* were also common. These were allocations on the revenue of specific villages or districts, according to which the taxpayers paid their taxes, up to the amount stipulated, to the holder of the *hamasāla* instead of to the government tax-collector. Since the holders were usually military men or government officials, they were not usually resident in the district on which their *hamasāla* was allotted. It was perhaps for this reason that the local people were sometimes required to certify their consent to the grant of pay (*hamasāla*) on the revenues of their village. A *farmān* from Shāh Sulṭān Ḥusayn dated 1122/1710 states that Pīrī Beg b. Kalb ʿAlī Beg, the deputy (*nāʾib*) of Nadjaf Ḳulī Beg Yūzbāshī Bāyburdlū, who claimed that his wages (*mawādjib*) were paid by draft, part of which was paid by the people of the villages of Almān and Bohol (both near Ahar) out of their taxes (*māl wa djihāt*), had asked that these sums should be paid as his *hamasāla* in accordance with the certificate (*ridānāmča*) sealed by a group of the people of those villages. The *farmān* orders this to be done with the approval of the department (*sarkār*) of the *ḳurčī*s (*Tārīkh-i Arasbārān*, 251; text also in Ḳāʾim Maḳāmī, *Yak ṣad wa pandjāh sanad-i tārīkhī*, Tehran 1969, 74-5).

Two earlier *fārman*s issued by Shāh Sulṭān Ḥusayn in respect of Pīrī Beg also concern the payment of his *hamasāla*. The first dated Shawwāl 1113/1702 states that the peasants (*raʿāyā*) of Usnur in the district of Kandawān of Karahrūd were to pay, according to the attestation of the register of the *ḳurčī*s, 6 *tūmān*s annually on account of the annual grant of the *ḳurčī*s. The sum due to Pīrī Beg from this was in arrears. His presence (on duty) having been testified to and confirmed by the *ḳurčībāshī*, his pay was to be made available. The second document, dated Muḥarram 1114/1702 orders the peasants (*raʿāyā*) of the districts mentioned on the back of the document to pay, according to the statement and attestation of the *ḳurčī* register, 1,466 *dīnār*s in cash and 3 *kharvār*s and 50 *mann*s in grain, according to their individual assessments, in respect of the annual wages (*mawādjib-i hamasāla*) of Pīrī Beg, this sum being included in the total sum of 36,000 *tūmān*s odd (due to the *ḳurčī*s) (Ḳāʾim Maḳāmī, *op. cit.*, 63-4).

Under the Īlkhāns, personal immunities, known as *tarkhān*, were granted to Mongol princes and princesses, and also to members of the religious classes and scribes (cf. Djuwaynī, i, 27-8 for the supposed origin of these grants). The historian Waṣṣāf claims to have held such an immunity, though it did not, in fact, protect him from the extortions of the tax-collectors (*Tārīkh-i Waṣṣāf*, 631). It is possible that the hereditary grants of immunity made to the religious classes and others as *suyūrghāl*s (see above) developed out of the *tarkhān*.

The grants known as *muʿāfī* and *musallamī* were also personal immunities. So far as the persons to whom they were granted held land, the immunity included, presumably, immunity from the payment of *kharādj*. Such grants are met with in the early centuries and continued to be made down to modern times.

So far as the *tuyūl* was simply a device for the payment of salary the tendency was, according to Tavernier, for the *daftarkhāna* to allocate the sums due to an official on different places in small sums so that it was uneconomical for the recipient to collect them in person and *taḥṣīldār*s would buy the drafts at a discount and collect them together making a great profit (*Voyages en Perse*, Geneva 1970, 249-50). Chardin, however, states that ʿAbbās II had reformed this practice (v, 422). Under the Ḳādjārs such grants were usually made as block grants and the *tuyūldār* would, as Sheil wrote in 1854, "by some means not very intelligible" make himself the temporary owner of the land to the exclusion of the real proprietor. Almost everyone holding a certain position at court, from the prime minister downwards was, he states, a *tuyūldār* (F.O. 60: 194, Sheil to the Shah, n.d.).

Drafts on the revenue. An even more harmful practice than the alienation of the fiscal rights of the state in the form of *iḳṭāʿ*s and *tuyūl*s was the practice of writing drafts on the revenue. This also arose because of the difficulties experienced in revenue collection and tended to reach high proportions in periods of financial stringency. It first became common under the Būyids and more especially under the Īlkhāns (cf. *Tārīkh-i mubārak-i Ghāzānī*, 244). The practice was highly detrimental to agricultural prosperity and to the wellbeing of the cultivators, who could never be certain that new demands for sums of money or supplies of grain and other crops would not be made upon them. Not infrequently the drafts made on the revenue exceeded the income. ʿAbd Allāh b. ʿAlī Falak ʿAlā-yi Tabrīzī in his handbook on financial administration, the *Saʿādat-nāma*, written during the reign of Ghāzān Khān or Uldjāytū, describes how drafts for salaries and other purposes were drawn on the revenue, and states that drafts in favour of the ruler, the princesses, the princes, and the amirs had priority in that order on available funds (Mirkamal Nabipur, *Die beiden persischen Leitfäden des Falak ʿAlā-yi Tabrīzī über das staatliche Rechnungswesen im 14. Jahrhundert*, Göttingen 1973, Persian text, 52b).

Ghāzān Khān attempted to lessen the evils of the practice. He prohibited the indiscriminate writing of drafts by the officials of the central government and forbade its practice altogether by provincial officials. He appointed a *bitikčī* to be in charge of each province in the supreme *dīwān* and made him responsible for writing drafts on that province, village by village, in accordance with the assessment (*ḳānūn*). These measures were only partially successful. It was found that the village headmen continued to levy more than they ought from the taxpayers. The next step was to require them to send detailed lists of the liabilities of each taxpayer to the *dīwān* so that the taxpayer would know what he was supposed to pay, and the headmen could not make demands on those whose names were not entered in the registers (*ibid.*, 253 ff., and cf. *Landlord and peasant*, 82 ff.).

Under the Ṣafawids and Ḳādjārs it was also common practice to write drafts on the revenue for the salaries of officials, and for pensions and government debts. Under Muḥammad Shāh (1834-48) the issue of *barāt*s or bills on the provincial treasuries in payment of his army, servants and other creditors exceeded tenfold the amount of the revenue. Their value was thus merely nominal, and none but a favoured few,

or those who bribed highly, actually received payment. Sheil, writing in 1846, states that scarcely any portion of the revenue from the provinces reached Tehran. Most of the holders of drafts were therefore glad to sell them at any price. The principal governors had their agents in Tehran to purchase these bills drawn on their respective provinces. The full amount was then afterwards charged in their accounts with the government although perhaps only a fifth or a tenth might have been really paid (F.O. 60: 125, Sheil to Palmerston, No. 117, Tehran, 20 November 1846. See also Lady Sheil, *Glimpses of life and manners in Persia*, London 1856, 386-7). This state of affairs was, in some respects reminiscent of that which prevailed under the Īlkhāns prior to Ghāzān Khān (cf. *Tārīkh-i mubārak-i Ghāzānī*, 243 ff.).

Revenue farming. Another practice which closely affected the collection of *kharādj* was that of revenue farming. Partly because of a frequent shortage of funds and partly because of the perennial difficulties experienced over the collection of taxes governments frequently had recourse to this practice. The revenue farm [see ḌAMĀN], which might be for a single tax such as *kharādj*, or for all the taxes of a district or province, had some outward resemblance to the *muḳāṭaʿa* contract. In fact, however, it was something different. The latter in the early centuries was for the most part made with the local landowner or tribal leader, who became responsible for the payment of the taxes, apportioned them among the local peasants, collected them and paid them to the government. The taxfarmer, on the other hand, contracted to pay annually to the state, for a stipulated period, a certain sum of money for a specific tax, or all the taxes, of a district or province, which sum he recovered on his own account from the taxpayers. In many cases he bid for his contract. There are cases of local landowners farming the revenue of their own land under a *ḍamān* contract, but in general the revenue farmer was a middleman whose only interest in the land was its revenue.

The system was open to great abuses. Its spread was usually symptomatic of a breakdown in the administration and the finances of the state. The revenue farm became increasingly common with the decline of the ʿAbbāsid empire, but by the 5th/11th century it had largely given way to the *iḳṭāʿ*. After the fall of the Great Saldjūḳs, it again increased. Ibn Djawzī states, under the year 556/1160-1, that the *kharādj* of ʿIrāḳ was put up to contract (*al-Muntaẓam*, Haydarābād, Deccan 1939-40, x, 200). Under the Īlkhāns, especially prior to the reign of Ghāzān Khān, revenue farming, now known by the term *muḳāṭaʿa*, which had lost its original sense, became very common (cf. Maḥmūd-i Āmulī, *Nafāʾis al-funūn*, ed. Abu'l Ḥasan Shiʿrānī, Tehran 1958, i, 328, who defines *muḳāṭaʿa* as *ḍamān-i walāyat*, the farming of a province). In a specimen document (*taslīm-nāma*) for a *muḳāṭaʿa* contract quoted by ʿAlā-yi Tabrīzī, the tax-farmer undertakes to pay by a certain date the sum agreed upon, and is given immunity from interference. He is forbidden to impose new dues or to take more than the customary amount from the taxpayers, while the *dīwān* is enjoined not to make drafts in excess of what is laid down or to send tax-collectors to the province (*Die beiden persischen Leitfäden*, f. 56a. Cf. also *Nafāʾis al-funūn* for a specimen *taslīm-nāma*, i, 312-13).

Expenses for the post (*yām*), *ʿulūfa* and *ulāgh* were allowed against the sums due from the tax-farmers. The fact that the establishments of the Mongol princes, princesses and amirs and the *ortāḳs* (trading establishments attached to the court) also made frequent and unauthorised demands on the peasants for provisions, fodder, and animals complicated the system (cf. *Tārīkh-i mubārak-i Ghāzānī and Tārīkh-i Waṣṣāf*). In theory a trial balance could be struck at any moment, but the checking of the tax-farmers' accounts was often a lengthy business, as the numerous references to the prolonged investigation of their accounts show (see especially *Tārīkh-i Waṣṣāf*). Although money may often have changed hands at the time of the award of a contract, it appears to have been unusual for payments of the amount due from a farm to have been made in advance. Waṣṣāf records that the Shaykh al-Islām Djamāl al-Dīn Ibrāhīm b. Muḥammad, who received a *muḳāṭaʿa* contract for the *indjū* and *dalāy* of Fārs for four years from 692/1292-3 for 1,000 *tūmān*s less 114 *tūmān*s expenses (*ikhrādjāt*) allowed him per annum, paid the money due for one year in advance together with various presents for the Īlkhān, the princesses, and amirs so that "no financial demands would be made on the poor peasants nor would the burden of the coming and going of *ilčīs* be laid upon them" (*Tārīkh-i Waṣṣāf*, 168). This was, to judge from Waṣṣāf's account, probably an exceptional case.

In the early years of Īlkhān rule many of the outlying provinces were farmed to the local rulers. The Saldjūḳ rulers of Rūm, ʿIzz al-Dīn Kay Kāʾūs and Rukn al-Dīn Ḳilidj Arslān and their successors, who acted as governors on behalf of the Īlkhāns, appear to have held their governments, nominally at least, on a *muḳāṭaʿa* tenure (cf. Maḥmūd b. Muḥammad *Musāmarat al-akhbār*, ed. Osman Turan, Ankara 1944, 62). Kirmān, after paying tribute for some years, was finally fully incorporated into the Īlkhān empire under Djalāl al-Dīn Suyūrghatmish, the Ḳutlugh Khānid, who succeeded to the government of Kirmān in 681/1282. He farmed all the taxes of Kirmān for 600,000 *dīnār-i zar-i rāʾidj*. He was allowed as regular expenses (*ikhrādjāt-i muḳarrarī*) 390,000 *dīnār*s. This sum was broken down as follows: 100,000 *dīnār*s for his personal expenses as governor, 120,000 *dīnār*s for the wages of the army, 10,000 *dīnār*s for guards (*ṭalāya wa ḳarāwulī*), 10,000 for the repair of fortresses, city walls, and the digging of *dīwānī ḳanāt*s, 30,000 *dīnār*s for pensions (*idrārāt*), 90,000 *dīnār*s for provisions (*sūsūn*), 10,000 *dīnār*s for the post (*yām*), 10,000 *dīnār*s for provisions (*ḥawāʾidj*) and *ḳahwa* (? = "wine"), 10,000 *dīnār*s for the wages of the officials of the *dīwān* (Nāṣir al-Dīn Munshī, *Simṭ al-ʿulā*, ed. ʿAbbās Iḳbāl, Tehran 1939-57).

Fārs had a varied fiscal history in the second half of the 7th/13th century. In 662/1263, on the death of the Muẓaffarid Saldjūḳshāh, with the succession of Abish Khātūn, the daughter of Saʿd b. Abū Bakr, who was married to Tāsh Mangū, Hūlāgū's son, it came under direct Mongol rule. The Mongols were unable to establish an effective administration, and some three years later, in 665/1266-7, after an abortive rising led by Sharaf al-Dīn Ibrāhīm, the *ḳāḍī al-ḳuḍāt* of Fārs, a *bitikčī* came to Shīrāz to collect the taxes. He was unable to accomplish his task and in 667/1268-9 Abāḳā sent Inkiyānū to Fārs as governor. He restored order and established an administration. The taxes were collected and the province prospered (*Tārīkh-i Waṣṣāf*, 193). Intrigues led to his dismissal and he was succeeded by Sughundjak Noyan in 670/1271. After investigating the accounts of the province, Sughundjak concluded *muḳāṭaʿa* contracts for the districts of Fārs with the local leaders (*aṣḥāb wa mulūk-i bulūk*) from the beginning of the *kharādjī* year 671/1272-3 on condition that each one should rule

independently in his own district and meet whatever requisitions were made on the revenue of the district by the *dīwān* (*ibid.*, 195). Waṣṣāf states that although there were abundant surpluses under these contracts, yet owing to the numerous dues and requisitions made upon the revenues and the envy and strife prevailing among the local leaders, the revenue was not paid, the holders of drafts were unable to collect their money, the peasants were ruined, and the country lost its prosperity. Finally, in 676/1277-8 Shams al-Dīn Muḥammad b. Malik, a rich merchant with extensive trade connections with the east and the west, accepted a *muḳāṭaʿa* contract for the whole of Fārs. Because of the failure of the local leaders (*arbāb-i bulūkāt*) to pay the sums due to him, all his reserves were rapidly dissipated in this venture (*ibid.*, 197-8). In 678/1279-80 Sughundjak was again sent to Fārs by Abāḳā to investigate the accounts and collect the revenue (*ibid.*, 204). He abrogated the *muḳāṭaʿa* contracts for the districts, demanded arrears and gave his wazīr Khʷādja Niẓām al-Dīn charge of all the districts (*bulūk*s). However, as a result of the intrigues of rival factions, in which some of the revenue farmers were also involved, Sughundjak and Niẓām al-Dīn fell from favour.

Meanwhile Abāḳā died (680/1281) (*ibid.*, 206-8). The next two years were a period of confusion. A Mongol *amīr*, Būlūghān, who had been sent to Shīrāz as a provincial revenue official (*bāsḳāḳ*), succeeded in maintaining his position in that town while refusing, at the same time, to pay the taxes and arrears demanded by the *muḥaṣṣilān* sent by Arghūn, the new Īlkhān. Tāsh Mangū was then sent to Shīrāz as governor with orders to remove Būlūghān. The latter on the approach of Tāsh Mangū set out for Khurāsān. Tāsh Mangū entered Shīrāz and during the next year accumulated much wealth. In or about 682/1283-4 Abish, Tāsh Mangū's wife, was appointed governor by Tegūdār (*ibid.*, 210-11). Partly, perhaps mainly, because of three years of drought and famine in which over 100,000 people were said to have died (*ibid.*, 212, 217-18), little revenue reached the central treasury during her government. She was accordingly summoned to Tabrīz; she and her supporters after examination agreed to pay the arrears of taxation and various other sums. She died, however, almost immediately (685/1286-7) (*ibid.*, 222). A *yarlīgh* was then issued to the governors of Fārs, who had come to Tabrīz with Abish, on their promising to pay 5,000,000 gold *dīnār*s on account of arrears for several years, and they set out with a number of Mongol officials and *amīr*s for Fārs to collect the arrears. Although the governors, tax-collectors and wealthy people were mercilessly mulcted, it proved impossible to collect the full sum and the Īlkhān was forced to reach a compromise with the governors of Fārs (*ibid.*, 224-5).

Fārs may have been an extreme case. But it seems likely that the revenue farmers all over the empire committed abuses. Rashīd al-Dīn states that they extracted double the amount for which they contracted but paid nothing into the treasury (*Tārīkh-i mubārak-i Ghāzānī*, 258). Ghāzān Khān, who sought to bring the financial administration of the empire under stricter control, considerably decreased revenue farming. It nevertheless continued on a modified scale. Bayāt in Khūzistān, for example, was farmed to the local leaders for a fixed sum which was to be used for the salaries of amirs of four hundred provided that they demanded their dues at harvest time (*Mukātabāt-i Rashīdī*, 179).

Under the Ḳādjārs, revenue farming again became widespread. ʿAbbās Mīrzā, when governor of Ādharbāydjān, is said to have made some progress in abolishing the practice and fixing the revenues of the province on a systematic scale and enforcing their collection (J. B. Fraser, *Travels in Koordistan*, London 1840, i, 8, and cf. Morier, *Second journey through Persia*, 240-1), but his reforms were limited and short-lived, and towards the end of the reign of Fatḥ ʿAlī Shāh and under his successors revenue farming was again common. It was of two kinds. The first resembled the early Islamic *muḳāṭaʿa* contract, according to which powerful landowners farmed the duty of their estates to prevent the vexatious interference of the subordinate officials of the revenue (cf. Malcolm, ii, 338). The second, and more pernicious, was the system by which governors bid for their districts.

The tax administration: central government records. At the level of the central government, land revenue matters went through the department known as the *dīwān al-istīfāʾ*, which was part of the supreme *dīwān* [*q.v.*]. Its elaborate procedure concerned with the assessment, collection and expenditure of the taxes was transmitted to posterity by the *mustawfī*s [*q.v.*]. However, because of the widespread practice of farming the revenue, of the alienation of land from the control of the central government as *iḳṭāʿ*s, *tuyūl*s, and *suyūrghāl*s, and of the writing of drafts on the revenue, the registers of the *mustawfī*s often bore little relation to the way in which the taxes were actually partitioned and collected in the provinces. The practical steps needed to keep the assessments up to date were seldom taken.

The two handbooks by ʿAlā-yi Tabrīzī, the *Ḳānūn al-saʿādat* and the *Saʿādat-nāma*, which have come down to us (see Mirkamal Nabipur, *op. cit.*), show that in spite of the introduction of new taxes, notably *ḳūbčūr* and *tamghā* (see below) by the Mongols, there was a marked continuity in accounting practice (cf. also Maḥmūd-i Āmulī, *Nafāʾis al-funūn*, whose description of the art of accountancy (*ʿilm-i istīfā*) is largely the same as ʿAlā-yi Tabrīzī's exposition, though less detailed). There were some minor differences in vocabulary and dating, the Khānī solar year having come into operation under Ghāzān Khān (see further *Tārīkh-i Waṣṣāf*, 404), and also certain minor modifications, made, according to ʿAlā-yi Tabrīzī, with a view to a simplification of the accounts for the benefit of the Mongols (f. 33b).

The tax assessments were entered in two registers. One, the *daftar-i māl*, which was concerned with the "fixed" taxes of the villages, included land taxes. The other, *daftar-i ḍarība*, recorded dues and commercial transactions (*muʿāmilāt*), and included *tamghā* taxes, etc. (f. 62b; cf. also *Nafāʾis al-funūn*, i, 324). ʿAlā-yi Tabrīzī's description of the subsidiary registers (*ṣūrat-i mufrid-i wilāyāt*) throws considerable light on the sources of revenue, including land taxes, and their expenditure (see also below). Taking the case of the *tumen* (province) of Kāshān as an example, he sets out the total revenue in cash from (i) "fixed" taxes from *muʿāmilāt* (taxes on production other than agriculture), sheep and cattle taxes (*al-marāʿī*), and land tax (*al-ʿushr*) according to the ancient assessment (*fīʾl-ḳadīm*), and (ii) *tamghā* taxes, responsibility for which had been accepted by a certain *malik*, Nāṣir al-Dīn, for a given year, as from the Naw Rūz. The revenues from "fixed" taxes are set out under taxes from (i) the town (*al-balada*), these being levied on craftsmen (*al-mutaḥarrifa*), who were sub-divided into those who paid 5 per cent *tamghā* and those who did not (and presumably paid higher *ad hoc* rates),

and *dhimmīs* (Jews and Armenians), and (ii) the outlying districts (*al-nawāḥī*), sub-divided under villages. Against this he sets out the sums to be deducted under various heads. These were (a) the expenses of the province (*maṣāliḥ al-wilāya*) as laid down by the supreme *dīwān*, namely allowances (*al-rusūmāt*) for the *bāsḳāḳ*, the *malik* and the scribe (*ḳātib*) and sums for the upkeep of the roads, listed under two districts, and (b) drafts made on the revenue by the court for the upkeep of the establishments of two Mongol princesses (*āsh-i khawātīn*), drafts (*al-iḥtisābiyya*) for a Mongol princess for one year on specific villages, allocations for military personnel (*al-ʿasākir*) attached to falconers (*al-ḳūshiyya*), partly in cash and partly in kind, and partly as expenses (*taghār*), and for post-stations (*al-yām*) and forage for them (*al-sūsūn*) for six months. The revenue from *tamghā* is similarly set out under (a) brokerage (*dallālkhāna*), camel-markets (*khaṭīra*), slave-markets (*nakhkhāsiyya*), cattle and sheep markets (*sūḳ al-dawābb*) and slaughterhouses (*al-sallākhiyya*), and (b) districts, together with the expenses charged against their revenue for various Mongol officials and amirs (ff. 67a-68b). Cf. also Maḥmūd-i Āmulī, who divides the taxes entered in the *daftar-i mufrid wa djāmiʿ* into *māl*, *ḳūbčūr* levied on craftsmen and on districts (*ḳūbčūr-i mutaḥarrifa wa ḳūbčūr-i har nāḥiyatī*), and *tamghā* on transactions (*tamghā-yi har muʿāmila*, i, 326-7).

At the local level in the early centuries the officials placed in charge of the *kharādj* in the different provinces seem to have made some attempt to establish records of villages and cultivated lands. Under the Būyids and the Saldjūḳs copies of these appear to have been held in the *dīwān al-istīfā'* and the *dīwān al-djaysh* and to have served as the basis on which districts were assigned to the *amīrs* and soldiers as *iḳṭāʿs*. But it is doubtful whether these records were kept up-to-date. Once the collection of the *kharādj* and other taxes had ceased to be the direct concern of the central government, there was no great incentive to it to bring the records up-to-date, even had it had the facilities to do so. The existence of seasonal capitals and the fact that when the sultan or shah went on an expedition, military or otherwise, the court and the principal administrative officials frequently went with him, did not favour the accumulation of records. Further, the overthrow of one dynasty by another was sometimes accompanied by the destruction of existing records.

From time to time, partial or complete lists of villages and their lands were made by later rulers. Rashīd al-Dīn Faḍl Allāh mentions the existence of registers of the income and expenditure of former times (*Tārīkh-i mubārak-i Ghāzānī*, 187-8). He alleges that consequent upon Ghāzān Khān's despatch of *bitikčīs* to the provinces to register all the villages, many places which had never before been registered became subject, for the first time, to assessment so that detailed lists of the villages were made available in the *dīwān* (*ibid.*, 258, 260, 262. Cf. also *Mukātabāt-i Rashīdī*, 33-4).

Uzun Ḥasan made an assessment between 874/1470 and 883/1477 under which the taxes, as in Īlkhān times, were grouped under three main headings: (i) land taxes, (ii) taxes on industrial production, and (iii) dues. The first consisted of a tax levied in cash on the ploughland (*djuft*) and due in spring; taxes in kind on the grain harvest, the rate varying and rising in some districts to 20 percent; a tax on vineyards, assessed usually in cash, and on nut trees at the rate of one-tenth of the produce; in some districts a levy in firewood and honey; and cattle and sheep taxes levied at the rate of so much per animal. Cesses for government officials were included under the heading of dues. There were considerable local variations (see further *Das Steuerwesen Ostanatoliens im 15. und 16. Jahrhundert, op. cit.*). These regulations were apparently still in operation under Shāh Ṭahmāsp, according to the *Khulāṣat al-tawārīkh* of Ḳāḍī Aḥmad (quoted by Röhrborn, *op. cit.*, 58), and until the end of the 9th/16th century in parts of ʿIrāḳ, Fārs and Ādharbāydjan, according to Sharaf al-Dīn Bidlīsī, (*Scheref-namah*, ed. Veliaminof-Zernof, St. Petersburg 1860-2, ii, 120). They are mentioned in the *Tadhkirat al-mulūk* in connection with the dues of the *ṣāḥib djamʿ* of the *rikābkhāna* (f. 100b). Nevertheless, it is unlikely that Uzun Ḥasan's assessment was put into operation over the whole country, and it cannot, in any case, have operated efficiently during the fratricidal struggles between his son, Khalīl, who succeeded him, and Sulṭān Yaʿḳūb. A considerable part of the country was at that time alienated from the control of the central *dīwān*. Shīrāz was given to the Amīr Alwand, the son of Khalīl, for his expenses (*khʷurish*); the Shabānkāra, on the other hand, was brought directly under the supreme *dīwān* (V. Minorsky, *Persia in A.D. 1478-1490, an abridged translation of Faḍlullāh b. Rūzbihān Khunjī's Tārīkh-i ʿĀlam-ārā-yi Amīnī*, London 1957, 40). Sulṭān Yaʿḳūb after his defeat of Khalīl in 894/1489 made an abortive attempt to reaffirm the authority of the *sharīʿa* in matters of land tenure "in which the limpid clarity of the commandments of the faith had become clouded with the opaqueness of the Chingizian *yāsā*" (*ibid.*, 92. See also Minorsky, *The Āq Qoyunlū and land reforms*, in *BSOAS*, xvii (1955), 449-62). His intention was apparently to collect additional revenue from legal taxes (*abwāb-i kifāyat*) so that the various *tamghā* taxes could be repealed. Accordingly on 4 Rabīʿ I 894/5 February 1489 Ḳāḍī ʿĪsā and Shāh Sharaf al-Dīn Maḥmūd Daylamī, an inspector of the *dīwān*, set out for ʿIrāḳ and Fārs to revise the *kharādj* in conformity with the *sharīʿa* and collect the land taxes. Their main activities appear to have been to resume *suyūrghāls*; their operations were cut short by the death of Yaʿḳūb in 896/1490 (*Persia in A.D. 1478-1490*, 93 ff.).

Under the Ṣafawids there would appear to have existed detailed records of the revenue of the tax districts of the empire and the charges made upon it. These were probably based on earlier records, notably the assessment of Uzun Ḥasan mentioned above. Faḍlī Iṣfahānī records under the years 963/1555 in the *Afḍal al-tawārīkh* that a new assessment (*dastūr al-ʿamal*) was made by the *ṣadr*, Mīr Zayn al-Dīn ʿAlī, and that it was based on "the customs of good administration and care for the subjects, designed to achieve the embellishment of armies (*ḳushūnārā'ī*) and to contribute to the pomp of sovereignty, and founded upon good treatment of the subjects and soldiers (*sulūk bā raʿiyyat wa sipāhī*), and concerned the levy of taxes (*māl wa djihāt wa wudjūhāt*) from every district and tribal region (*ulūs*), even [capital] offences and the fining of criminals" (quoted by Röhrborn, 58). Detailed statements of the individual taxpayer's liabilities were in theory, if not always in practice, entered in the registers of the *dīwān* (see *Dastūr al-mulūk* and *Tadhkirat al-mulūk*). There is nothing, however, to show that the revenue records of the Ṣafawids were regularly revised, any more than earlier records had been.

Nādir Shāh in or about 1736 ordered an assessment of all landed properties in Fārs to be made. Their income and expenses were to be estimated, together

with the dues of the peasants (*bāzyārān*). No difference was to be made between *khāliṣa* land in possession of the supreme *dīwān*, land held by sayyids, *ʿulamā* and notables, and private property made into *waḳf* for mosques or *madrasas*. The facts were to be recorded in the registers and a report submitted to Nādir so that the *dīwān* taxes and dues might be justly fixed. He arranged for similar assessments to be carried out in all the provinces of Persia (Fasāʾī, *Fārs-nāma-i Nāṣirī*, lith. Tehran 1894-6, i, 181). The assessment for Fārs appears to have been submitted to Nādir in Kābul in 1738-9, whereupon he issued an order for the resumption of *tuyūl*s and *awḳāf* in Fārs (*ibid.*, i, 183). Similar orders were given in respect of Iṣfahān, but Nādir was assassinated in 1160/1747 before the operation was completed (see further *Landlord and peasant*, 131-2; see also Fasāʾī, *op. cit.*, i, 200-1). In 1739 and 1741 officials were sent to review the revenue assessments of Ādharbāydjān. It is not clear whether their work was ever completed (Nādir Mīrzā, *Tārīkh wa djughrāfiyā-yi dār al-salṭana-i Tabrīz*, ed. Lisān al-Mulk Sipihr, Tehran lith. 1905, 281 ff.). Rustam al-Ḥukamāʾ alleges that Nādir's registers were more accurate than any others, and that those of Karīm Khān Zand (1163-93/1750-79) were also accurate (*Rustam al-tawārīkh*, 325). His registers appear to have remained in force, broadly speaking, until Mīrzā Taḳī Khān Niẓām, Nāṣir al-Dīn's *ṣadr-i aʿẓam*, carried out a new assessment in 1851, many alterations in the value of the land having meanwhile taken place.

In the second half of Nāṣir al-Dīn's reign, between about 1878 and 1882, a number of reports were compiled on the villages, lands and population of most of the provinces of Persia, presumably with a view to achieving greater efficiency in the assessment and collection of the revenue and the levy of troops. New assessments were made in various districts during his reign and under those of his successors (cf. ʿAbd Allāh Mustawfī, *Sharḥ-i zindagī-i man*, Tehran 1945-6, ii, 651-2). Curzon, who visited Persia in 1889-90, however, records that for the most part the assessments were obsolete in date and character (*Persia and the Persian question*, ii, 472). A land survey planned to be carried out under the Ministry of Finance in 1889-90 proved abortive (see further *Landlord and peasant*, 168 ff.).

There were perennial difficulties over the actual collection of taxes, and what happened at the local level often had little relation to the assessment drawn up at the centre. Ghāzān Khān, when he attempted to reform the tax system, found that the local authorities continued to exact more than they should. He sought to remedy this by demanding full returns from the provinces (see below). Although such steps under a strong government may have reduced abuses, the peasants and small landowners were for the most part unable to resist the demands of the tax-collectors, the provincial governors and the military. In the nineteenth century, although the central government continued to draw up the provincial assessments, the provincial governors, instead of collecting the taxes as authorised by the central government, followed a different procedure. Thomson describes this as follows: "In practice, a very complicated and irregular system of taxation is pursued, the main feature of which appears to be that it is designed solely with a view to take as little as possible from the wealthy and influential classes, and to get as much as possible from the hard-working peasant. The object, indeed of all Persian Governors and their subordinates, as well as of the landowners generally, is to avoid simplicity; for the more intricate and uncertain the method employed for levying taxes, the greater are the opportunities afforded to extortion and all sorts of illegal exactions. Instead, therefore, of simply adhering to the above rates, by which the revenue is made to depend upon the actual produce from the land, a sum, often arbitrarily fixed, is demanded from each village, without any reference to failure of crops, insufficiency of water for irrigation, disease amongst their flocks, or other losses to which the peasant may be subjected. The amount to be demanded is determined from time to time by Government assessors, "momeiyez", who are despatched to the various districts to assess the taxes whenever the authorities may feel disposed to alter their amount. The assessor is supposed to perform this duty in accordance with the rates authorised by Government, but great injustice is done on such occasions, as he invariably demands a large fee before giving his decision, and over-estimates the taxes if it is refused, or undervalues them when liberally paid. If the land belongs to an influential person, when taxed at all, the amount is made very trifling, and, in numerous instances, villages which have not been assessed for many years, continue to pay only a nominal sum, though they may have increased in size and wealth, simply on account of the proprietor's high position, while others, which have become impoverished are compelled to pay all the taxes imposed under more prosperous conditions" (report by Mr. Thomson, *op. cit.*, 253).

Revenue from land taxes. It is difficult to estimate the proportion of the revenue provided by land taxes over the centuries. Quantitative data is not available even for the nineteenth century and such records as we have frequently do not distinguish land taxes from other forms of "regular" taxation, while the practice of alienating districts from the control of the central government as *iḳṭāʿ*s and *tuyūl*s, writing drafts on the revenue and the removal of land made into *khāliṣa* or *waḳf* from the control of the revenue authorities make it extremely difficult to interpret the available information. As stated above, agriculture was the main economic activity of the country and land taxes the largest single item of revenue. This continued to be the case even though the Mongol invasion in the 7th/13th century brought about a great increase in the numbers of the nomadic population. The immediate result of this change in the balance of the population, together with the depopulation caused by the massacres accompanying the invasion, and the introduction of a new system of taxation (although this became in due course assimilated to existing tax practices), was to disrupt the financial administration of the country (see further I. P. Petrushevsky, *The socio-economic conditions of Iran under the Īl-khāns*, in *The Cambridge history of Iran*, v, ed. J. A. Boyle, Cambridge 1968, 483-537). A higher proportion of the wealth of the ruling classes was now derived from flocks than was the case formerly, and probably also from trade, but this was not reflected to any marked extent in the revenue which reached the central treasury. The decline in the amount of land under cultivation, on the other hand, adversely affected the revenue from land taxes.

The Īlkhāns. The Mongol system was based on a census (*shumāra*) of the population (cf. Djuwaynī, *Tārīkh-i Djahāngushā*, i, 25, ii, 261, iii, 74, and also V. Minorsky, *Pūr-i Bahā and his poems*, in *Charisteria orientalia*, Prague 1956, especially verse 15) and not, as was the system in Persia, on the land. Further, the Mongol system appears to have

made a distinction between taxes levied on Mongols (who were nomads) and non-Mongols (who were sedentary), a dichotomy which was to some extent paralleled by the differences between taxes paid by Muslims and *dhimmīs* in the Islamic system. The nomad taxes were "occasional", whereas those levied on the sedentary population, were "fixed" or "regular". The precise form of these two groups of taxes varied with the nature of Mongol rule and the role of the nomads in the state at different times and in different places (see further J. Masson Smith, *Mongol and nomadic taxation*, in *Harvard Journal of Asiatic Studies* (1970), 46-85).

Under the Mongol system there were apparently three main taxes, *ķūbčūr*, *ķalān* (*ķilān*) and *tamghā*. The last named was a tax on commercial goods. What the precise difference was originally between the first two, *ķūbčūr* and *ķalān*, is not entirely clear. According to Bartold *ķūbčūr* was originally levied mainly on nomads. As Quatremère has shown, it was also applied to a 1 per cent tax levied on animals raised in the *yaylāķ*, and, until the collapse of the Mongol empire, also to the poll-tax collected from the *raʿiyya* (the settled population) (*Hist. des Mongols de la Perse*, Paris 1836, i, 256 n.). Bartold concludes that although *ķūbčūr* was originally levied on nomads, it came to mean taxes imposed on cultivators and nomads in contradistinction to taxes levied on commercial goods under the name of *tamghā* (see further Bartold, *The financial situation in the Ilkhanid period*, and Zeki Velidi Togan, *Mongollar devrinde Anadolu'nun iktisadî vaziyeti*, in *Türk hukuk ve iktisat tarihi mecmuası*, i (1931), 1-42 and 135-59, respectively and Ahmet Caferoğlu, *Uyğurlarda hukuk ve maliye istilahları*, in *Türkiyat mecmuası*, iv (1934), 1-45).

According to Djuwaynī, the Mongols, "when they brought countries and peoples under their dominion, followed their established custom and imposed a census entering everyone in tens, hundreds, and thousands, and required of them the needs of the army, the post, expenses (*ikhrādjāt*) and fodder (*ʿulūfāt*) apart from ordinary taxation (*khāridj az māl*) and over and above these burdens they imposed upon individuals a *ķūbčūr* (? *bar bālā-yi in athķāl ķūbčūrī nīz burīda kardand*)" (i, 25). Although Djuwaynī later defines *ķūbčūr* as a tax on flocks and herds (iii, 79), it would appear to have the meaning of some kind of poll-tax, in the passage quoted, a meaning which it could also bear in a passage in Naṣīr al-Dīn Ṭūsī's essay on finance (*op. cit.*, 33), which states that five classes were exempt from *ķūbčūr*, namely (i) *tarkhān*s (persons enjoying certain immunities granted by the Great Khān), such as religious leaders, (ii) the old, (iii) the sick, (iv) the poor and (v) children. Rashīd al-Dīn similarly states that according to the *yāsā* of Čingiz Khān, judges, learned men, and ʿAlids (*sic*) did not pay *ķūbčūr* or *ķalān* (*Tārīkh-i mubārak-i Ghāzānī*, 218). The references to *ķūbčūr* in Pūr Bahā's poems also suggest that it was in the nature of a poll-tax. Further, it is clear from the passage in the *Djahāngushā* describing the *amīr* Arghūn's report on Arrān in 656/1258, and the subsequent reassessment of *ķūbčūr* at 1 *dīnār* for the poor rising to 500 for the wealthy, that *ķūbčūr* was in this instance some sort of poll-tax (ii, 261, and cf. also ii, 256). Again from the description which ʿAlā-yi Tabrīzī gives in the *Saʿādat-nāma* of the tax registers, it would seem that *ķūbčūr* was not a tax on flocks and herds, but rather a poll-tax paid by villagers at so much per head per solar year. The registers contain separate entries for *al-māliyya* and *al-ķūbčūriyya*, and under the former sub-entries for *al-ʿushr*, *al-marāʿī* and *al-muʿāmilāt* (f. 62b). Maḥmūd-i Āmulī also states that there were subsidiary ledgers for *māl*, *ķūbčūr* and *tamghā* for each province; he sub-divides *ķūbčūr* into *ķūbčūr-i mutaḥarrifa* and *ķūbčūr-i har nāḥiyat* (*Nafāʾis al-funūn*, i, 326-7). The inference to be drawn is that whereas *al-māliyya* included land taxes and taxes on flocks and herds, *al-ķūbčūriyya* consisted of poll-taxes.

There is, however, no reason to suppose that *ķūbčūr* meant the same thing throughout the Īlkhān period. Most probably, it was used at different times to mean respectively a poll-tax and a tax on flocks and herds, and also to cover respectively "fixed" or "regular" taxes and "occasional" or "casual" imposts. Rashīd al-Dīn on one occasion speaks of *ķūbčūr-i mawāshī* levied on the Mongol tribes (*ulūs-i mughul*) (*Tārīkh-i mubārak-i Ghāzānī*, 304), by which he presumably meant a tax levied at so much per head on flocks and herds or an "occasional" tax on flocks and herds. Muʿīn al-Dīn Natanzī referring to the administration of Ķazaghān in Central Asia in the 8th/14th century, states that because of his justice no amir or wazir could take a single *dīnār* from anyone under any pretext except by way of *ʿushr-i djins* and *ķūbčūr-i rasmī* (*Muntakhab al-tawārīkh*, 200). The former presumably meant a land tax levied in kind, but it is not clear what was meant by the latter; perhaps it was a poll-tax or a tax on flocks and herds. In documents issued by Yaʿķūb Beg and Alwand dated 884/1479 and 904/1490 respectively granting certain immunities and exemptions to sayyids descended from ʿAlī b. Mūsā al-Riḍā, *ķūbčūr* does not seem to mean a flock tax. The relevant passage reads, "*mawāshī*, *marāʿī* and *tamghā* shall not be taken from them and their peasants (*barzigarān*) shall not be ordered to perform forced labour (*bīgār*) or to beat on hunting expeditions (*shikār*) and *ķūbčūr* shall not be taken from them" (*Untersuchungen*, 159, 166).

So far as the Mongols became in the course of time agricultural proprietors and town-dwellers, they presumably became liable to the "regular" taxes levied on the sedentary population, which, in turn, were assimilated, or had already been assimilated, to the taxes to which the Persian population were traditionally subject. With this the Mongol terms underwent modifications in their meanings. *Ķūbčūr* lost its meaning of an "occasional" tax paid by Mongols. *Ķalān* (a term not found in Djuwaynī) also probably underwent modification. Bartold thinks that it was a tax levied on sown lands and on the peasantry in general. Caferoğlu accepts this view with some reserve. Masson Smith, following Bartold, thinks that *ķalān* meant the pre-Mongol and essentially sedentary taxation of the conquered people and that it designated in the early Īlkhān period *māl*, "fixed" or "regular" taxation paid by non-Mongols (*Mongol and nomadic taxation*, 55). This may be so, but in many of the passages in which the word occurs it could carry a different interpretation. Al-ʿUmarī, quoting al-Djuwaynī on the Mongol army, states that the ruler took from them *ķalān*, *ķūbčūr*, *ulāgh*, and *badraka* (*Masālik al-abṣār wa mamālik al-amṣār*, 11). The passage in Djuwaynī reads *ķūbčūr wa ʿawāriḍāt wa ikhrādjāt-i ṣādir wa wārid wa tartīb-i yām wa ulāgh wa ʿulufāt* (i, 22). This suggests that al-ʿUmarī understood *ķalān* in the sense of occasional levies (*ʿawāriḍāt*), which meaning it could bear in many, if not most, of the passages in which it appears; (cf. also the passage in Sayfī Harawī's *Tārīkh-nāma-i Harāt*, ed. Muḥ. Zubayr al-Ṣiddīķī, Calcutta 1943, 439, which states that Fakhr al-Dīn, the Kurt *malik* of Harāt, gave exemption to the people of Harāt from

ḳalanāt and *ʿawāriḍāt-i dīwānī* in 698/1298-9).

In Ghāzān's *yarlīgh* on the grant of *iḳṭāʿāt* to the Mongol army, although the term *ḳalān* could bear the interpretation of sedentary taxation levied on the conquered peoples, it could equally well mean occasional taxes (*ʿawāriḍāt*), and this is, perhaps, more likely since the passage clearly refers to the Mongol army and not to the population in general. It reads, "It is known to everyone that formerly in the time of our good fathers the Mongol *ulūs* used to demand every kind of requisition (*muṭālibāt*) and vexatious demand (*muzāḥimāt*), such as *ḳūbčūr* on flocks, the upkeep of the great post stations, the bearing of the heavy burdens of the law (*yāsāḳ*) and *ḳalānāt*, which in these days we have once and for all removed" (*Tārīkh-i mubārak-i Ghāzānī*, 304). On the other hand, the phrase which occurs later in the same document, *mardum-i čirīk ki bi ḳalān dar āmada and wa kūč dihand* (308) could be plausibly explained as "soldiers who have been brought into the assessment for sedentary taxes but [still] perform military service", though it need not necessarily bear this interpretation. If *kūč* means, as Minovi suggests, money paid by someone to the *dīwān* in lieu of performing military service as irregulars (*čirīk*), then the phrase could mean, 'soldiers who have been brought into the assessment for sedentary taxes and give money to the *dīwān* in lieu of service as irregular forces (cf. Badīʿ al-Zamān Fīrūzānfar, *Kulliyyāt-i Shams*, Tehran 1966, pt. vii, 404-5), but this interpretation is not in keeping with the general tenor of the *yarlīgh* in question.

The term *ḳalān* occurs in the *Mukātabāt-i Rashīdī*. In a letter from Rashīd al-Dīn to his son Shihāb al-Dīn, governor of Shushtar, in which the tax lists for Khūzistān are set out, there are separate headings for *tamghā*, *kharādj-i arbāb*, *māl wa kharādj-i dīwānī*, *mawāshī*, *nimār wa ḳappānī*, *niḥāla*, *čirīk*, and *ḳalān bi djihat-i umarā-yi khān ṣādiran wa wāridan* (122-3). Clearly *ḳalān* does not mean in this document either "regular" taxes or land taxes, but rather, possibly, some sort of corvée or service (cf. also Ibn Bazzāz, *Ṣafwat al-ṣafāʾ*, ed. Aḥmad b. Karīm Tabrīzī, Bombay lith. 1911, 68).

The Mongols, when they took possession of Persia, did not establish a uniform administration over the whole empire. Part of the country, as stated above, was farmed. Like the Arabs and Saldjūḳs before them, they largely took over the existing administration, but with this difference that they remained as conquerors living a separate existence from the conquered population to a far greater degree than had been the case with the Arabs, to whom the conquered peoples became assimilated by conversion to Islam, and the Saldjūḳs, who had been converted to Islam before they overran Persia. The Mongols divided their empire into provinces (*mamālik*) or *tumen*s, which broadly followed the lines of the provinces of the former great empires. They relied heavily upon local officials for the financial administration of their empire, and under their influence the Mongol system in the course of time became assimilated to the system which was current in the conquered territories. The Mongols, in the early years of the conquests, were a privileged class. How far, if at all, they were subject to taxation is by no means clear. So far as the revenue assessments were drawn up at the centre by the officials of the *dīwān*, it seems probable that they continued to be based primarily on the land, though, as shown by ʿAlā-yi Tabrīzī, there would appear to have been an increase in poll-taxes and taxes on industry. When, however, these assessments were partitioned locally, it may be that this was sometimes done on the basis of a poll-tax.

Rashīd al-Dīn's account of the Īlkhānid administration prior to Ghāzān Khān suggests that considerable variety prevailed in the fiscal administration. In assessing his account it must be remembered that his object was, in part at least, to show that the administration was in a state of disorder and that extortion had ruined the peasants. He states "before describing how the Lord of the World (Ghāzān Khān) reformed conditions in ʿIrāḳ-i ʿAdjam, Ādharbāydjān, and the provinces whose *dīwān* taxes consisted of *ḳūbčūr* and *tamghā*, I will mention briefly what a state of confusion had prevailed prior to this. The situation was such that these provinces were given on a *muḳāṭaʿa* contract to governors (*ḥukkām*), each one being assessed at a fixed sum, "regular" expenses (*ikhrādjāt-i muḳarrarī*) being debited against it. The governor used to levy two *ḳūbčūr* from the subjects (*raʿiyyat*) and in some places twenty or thirty *ḳūbčūr*. The governor's instructions were to allocate among the individual taxpayers the sum due on account of *ḳūbčūr* according to the revenue assessment (*djamʿ*) given to him [reading *bunīča sākhtī* for *natīdja sākhtī*]. When an *ilčī* came to the province on account of some matter or to demand a tax or something that was needed, the governor, on that pretext, would impose a *ḳūbčūr* on the individual taxpayers (*ḳūbčūrī ḳismat kardī*), and although many *ilčī*s would come and their expenses (*ikhrādjāt*) and demands (*multamisāt*) would be unlimited, the governor would nevertheless be happy at their arrival and make requisitions upon the taxpayers, now for some important affair, now for the forage and expenses (*ʿulūfa wa ikhrādjāt*) of the *ilčī*s, and now for some special undertaking or demand (*taʿahhud wa multamisāt*). Part of what he collected he would expend on those matters, part he would appropriate himself, and part he would give to the *shiḥna* and the *bitikčī*s so that they would become his accomplices and support him in his lies. Of all the taxes taken from the subjects nothing would be transmitted to the treasury and the taxes of the province (*amwāl-i wilāyāt*) would all be absorbed by "regular" expenses (*ikhrādjāt-i muḳarrarī*) and drafts (*ḥawālāti cand*)" (*Tārīkh-i mubārak-i Ghāzānī*, 243-4). Unfortunately, it is impossible to tell from the Persian text whether ʿIrāḳ-i ʿAdjam and Ādharbāydjān were among the provinces whose *dīwān* taxes consisted of *ḳūbčūr* and *tamghā* or whether they fell into another category of provinces.

Ḥamd Allāh Mustawfī's account in the *Nuzhat al-ḳulūb* also suggests that considerable variety prevailed. He states that the important province of Khurāsān enjoyed a special status. This was because most of the wazirs and scribes of the supreme *dīwān* were Khurāsānīs, and so they had constituted Khurāsān, Ḳuhistān, Ḳumis, Māzandarān and Ṭabaristān into a separate province (*mamlakat*), the accounts of which were kept apart from those of other provinces. Ḥamd Allāh alleges that they put 200,000 *dīnār*s annually against the revenues nominally for the expenses of the army of Khurāsān, thus reducing the amount due to the central treasury. This situation continued until the reign of Abū Saʿīd, when Ghiyāth al-Dīn Muḥammad b. Rashīd al-Dīn found out and stopped the practice. He had intended to draw up an account of the taxes of the province, deduct from the total the regular expenses of the province, sums for the *iḳṭāʿ*s of the soldiers and other local expenses, and to have the rest remitted to the treasury, but he died before he was able to implement these reforms (Persian text, 147. Cf. also *Tārīkh-i mubārak-i*

Ghāzānī which states that prior to Ghāzān's reforms 80% of the drafts on the revenue of Khurāsān were unpaid, 244).

In his account of the revenue of the different provinces and districts, Ḥamd Allāh makes a difference between the revenues of certain towns and their surrounding districts (*wilāyāt*), the former being provided by *tamghā* taxes and the latter by *dīwān* dues (*ḥuḳūḳ-i dīwān*). Among the towns and districts described in this way, all of which were along the main trade routes, were Baghdād, Kūfa, Wāsiṭ, Ḥilla, Iṣfahān, Sulṭāniyya, Ḳazwīn, Ḳumm, Kāshān, Hamadān, Yazd, Tabrīz, Ūdjān, Ahar, Shushtar, Āwa, Sāwa, Zandjān, Marāgha, and Shīrāz. The *tamghā* of the last five were farmed. Writing of Fārs, Ḥamd Allāh states that the *dīwān* dues were in his time 2,871,200 currency *dīnārs* (*dīnār-i rāʾidj*) and that in the provinces (*wilāyāt*) they were levied for the most part in kind (*maḥṣūl*), but in the towns they were fixed as *tamghā* (113). The inference to be drawn is that the taxes outside the towns were mainly land taxes. Ḥamd Allāh makes no mention of *tamghā* or other taxes in his description of the provinces of Kirmān, Khurāsān, Māzandarān or Ṭabaristān. So far as the last three are concerned this may have been because of the special situation which prevailed in Khurāsān. In ʿIrāḳ-i ʿArab, what survived of the assessment of Ḥadjdjādj b. Yūsuf was known as *kharādj-i rātib* and was included, when Ḥamd Allāh was writing, among the sums due to the *dīwān* (*mutawadjdjihāt-i dīwānī*), which amounted in the Khānī year 35 (A.D. 1335) to 300,000 currency *dīnārs*. He points out that if the same amount of land had been under cultivation as in the time of ʿUmar double this amount would have been yielded (29). In Kūfa *kharādj* was paid at the rate of one-third of winter and summer crops, the remaining two-thirds being equally divided between the tenant [reading *tānī*] and the cultivator (reading *barzigar*). The province (*wilāyat*), at the time he was writing, was assessed by the *dīwān* (? *muḳarrar bi dīwān ast*, 31). Orchards (*bāghistān*) in ʿIrāḳ-i ʿArab paid *kharādj*, either according to the old assessment of Ḥadjdjādj or according to a new assessment (*kharādj-i ḥādith*) (31).

There is very little doubt that this "double" system of taxation bore heavily upon the people and also that it was the additional "Mongol" taxes which were felt to be especially onerous (cf. the poems of Pūr Bahā quoted above). Ḥamd Allāh Mustawfī alleges that most of the districts of ʿIrāḳ-i ʿAdjam were ruined because of *ḳūbčūr* and that the people had abandoned their homes, "so much so that in Ḳazwīn the Friday prayers were not performed" (*Tārīkh-i guzīda*, 603-4). The tax officials brought up in pre-Mongol traditions, probably disapproved of the new taxes, just as the *ʿulamāʾ* had earlier disapproved of the *mukūs*. They were unable to abolish them altogether. The most that they could do was to limit them, or sometimes to abrogate them temporarily. In a letter to his son, Amīr Maḥmūd, when the latter was governor (*ḥākim*) of Kirmān, Rashīd al-Dīn states that it had been reported to him that he (Amīr Maḥmūd) had committed oppression against the people of Bam and had ruined them by imposing upon them additional cesses, *dīwān* dues (*tafāwut wa takālīf-i dīwānī*) and repeated royal drafts (*ḥawālāt-i sulṭānī*), and by the levy of *ḳalān*, *ḳūbčūr*, [money for] soldiers (*čirīk*) and various expenses (*ikhrādjāt-i mutafarriḳa* (*Mukātabāt-i Rashīdī*, 11). He instructs him to remit for three years *ḳalān*, *ḳūbčūr*, *ṭayyārāt* (occasional taxes) and the *dīwān* dues levied for Kirmān and the Great Urdu, so that prosperity might return to the deserted places and uncultivated lands, and agriculture be resumed. As for his own estates in Bam, seed and advances for the purchase of draught oxen and food were to be given to the peasants if they so desired (*ibid.*, 12).

The reforms of Ghāzān Khān may have succeeded to some extent in ameliorating the condition of the peasants: certainly Rashīd al-Dīn alleges that prosperity returned during his reign. Ḥamd Allāh Mustawfī, on the other hand, while he gives due emphasis to Ghāzān's reforms, shows that the change in agricultural conditions was not dramatic, though he alleges further improvement under Uldjāytū (*Tārīkh-i guzīda*, 606).

Such figures as are given by Ḥamd Allāh Mustawfī and Waṣṣāf, incomplete though they are, suggest that the improvement was only marginal and that there was a striking fall in revenue compared to Saldjūḳ times. Prior to the reign of Ghāzān, the *dīwān* received annually, according to Waṣṣāf, 18,000,000 *dīnārs*, or according to Ḥamd Allāh Mustawfī 17,000,000. After Ghāzān's reforms, the figure rose to 21,000,000 but fell in 1335-40 to 19,203,800. It is not clear whether these figures include the sums which were deducted for the expenses of local administration or not. Under the Saldjūḳ ruler, Malikshāh, *dīwān* revenue had amounted to 215,000,000 red gold *dīnārs*, the equivalent according to Ḥamd Allāh of 500,000,000 currency *dīnārs* (see further Petrushevsky, who estimates the *dīwān* revenue for the pre-Mongol period on the basis of figures in the *Nuzhat al-ḳulūb* to have been 100,580,000 currency *dīnārs*, *op. cit.*, 479 ff.). The figures for the two periods are not necessarily strictly comparable, because the extent of the land alienated from the control of the *dīwān* and of crown lands was not identical. The evidence, fragmentary though it is, would, nevertheless, seem to point to a marked decline in the revenue reaching the *dīwān*, though the decline was not equal in all provinces. If the revenue was still derived largely from land taxes, as would seem to have been the case, such a decline could be largely accounted for by first a decrease in the amount of land under cultivation consequent upon depopulation and the increase in the number of nomads, and secondly the removal of large areas of the country from the fiscal control of the agents of the central government.

Ṣafawids and Ḳādjārs. Under the Ṣafawids, there was a revival both of agriculture and trade, and it seems likely that the sums reaching the *dīwān* from *kharādj* once more increased, but the proportion which they formed of the total may have fallen somewhat. Such figures as are available do not give a detailed breakdown (though an examination of Ottoman records for those provinces which from time to time came under Ottoman domination would doubtless throw further light), while the fluctuation in the extent of *mamālik* and *khāṣṣa* land [see KHĀLIṢA] together with the changing distribution of *tuyūls*, *suyūrghāls*, and *awḳāf* further obscures the situation. Minorsky, on the basis of the figures in the *Tadhkirat al-mulūk*, puts the revenue towards the end of the Ṣafawid period at 800,000 *tūmāns*, excluding revenue directly collected by the *khāṣṣa* administration. He suggests that land taxes may have been responsible for 61% of the total. This may be an under-estimate. He also analyses the estimates of the revenue given by European travellers, which, he points out, were, in the absence of official statistics and the secrecy surrounding the question of state revenue, purely hypothetical. Chardin, who gives the

fullest account, puts forward, with some reserve, a total figure of 32,000,000 *livres* or 70,000 *tūmāns*. This figure is not far short of that given in the *Tadhkirat al-mulūk*, but Chardin's figure includes 14,000,000 *francs* from demesnes, i.e. *khāṣṣa*, and only 2,000,000 *francs* from provincial revenues (*Tadhkirat al-mulūk*, 173 ff.).

In the 18th century there was a period of recession. Rustam al-Ḥukamā' puts the revenue, excluding *pīshkash*, under Karīm Khān (whose writ did not run in Khurāsān) at 550,000 *tūmāns* (*Rustam al-tawārīkh*, 322). In the nineteenth, the general trend was again towards expansion, although the total area under the control of Persia had greatly diminished. In the absence of statistics, however, it is not possible to give detailed figures, though an examination of the records of the *mustawfīs* would, no doubt, yield further information. Macdonald Kinneir, writing about 1813, states that the total revenue did not much exceed three million *tūmāns*, of which the land taxes and revenue from crown lands probably amounted to two-thirds (*A geographical memoir on the Persian empire*, London 1813, 47). According to Malcolm the "fixed" revenue amounted, in 1810, to some £ 3,000,000. This derived chiefly from first the produce of crown and government lands, secondly taxes and imposts on landed property (i.e. real estate in towns and villages), rents of houses, caravansarais, baths, shops and water mills, and thirdly duties on goods and merchandise. The last two items had greatly increased under the Ḳādjārs (*History of Persia*, ii, 336, 340).

At the end of the reign of Fatḥ ʿAlī Shāh (1797-1834), the revenue is reported to have amounted to 2,081,532 *tūmāns* in cash and payments in kind worth 379,217 *tūmāns*. The main constituents of the latter were 163,084 *kharwārs* (675 lbs each) of wheat, at 2 *tūmāns* each, 12,850 *kharwārs* of rice, at 3 *tūmāns* each, and 965 *manns* of silk, at 6 *tūmāns* each. (Revenues of Persia ordered by the late Shah to be paid to the General credit of Government, India Office, LP and S/9, vol. 53, quoted by C. Issawi, *The economic history of Iran*, 361-2.)

By about 1868, despite the sharp fall in silk production in Gīlān, the total revenue had increased by 3½ crores of *tūmāns* (or £ 694,000) and amounted to 4,361,660 *tūmāns* (or £ 1,744,664) in money, most of which was from land tax, besides payments in kind in barley, wheat, rice, and silk valued at 550,840 *tūmāns* (or £ 220,336) (Thomson, *Report*, *op. cit.*, 250-1). The revenue of Khurāsān, which towards the end of the reign of Fatḥ ʿAlī Shāh had been *ca.* 200,000 *tūmāns* in money and 46,000 *kharwārs* in grain, was about the year 1876, although the population had decreased (because of the contraction of the frontiers), some 340,000 *tūmāns* in money and 46,000 *kharwārs* in barley and wheat, 620 *kharwārs* in rice and 83 *kharwārs* in tobacco. The whole of this was absorbed in payments for military service, pensions, salaries and other local disbursements (F.O. 60: 379. *Report on the Toorkoman tribes occupying the districts between the Caspian and the Oxus by Mr. Ronald Thomson, Secretary of Legation*, incl. in W. Taylor Thomson to Lord Derby, Tehran, No. 22, 29 February 1876, p. 211). From the fragmentary evidence available it is not clear to what extent this increase may have been due to more effective revenue collection, increased cultivation including more cash crops (which paid a higher rate of taxation), a decrease in the areas of land alienated from the control of the government or other causes.

The great famine of 1869-72 adversely affected the collection of revenue, especially from the southern, central and northeastern provinces, which were the most severely affected by famine and cholera and took several years to recover. Only in and after 1884 did the total revenue from direct taxes surpass, in nominal terms, the total revenue of the pre-famine years. Assessments, however, were not adjusted to the growth in agricultural production which took place in many districts or to the fall in the real value of the kran, and as a result, government revenue from direct taxes at constant prices compared to the pre-famine years had fallen by the late 1890s (see further G. G. Silbermann, *op. cit.*). The figures given by Curzon for the 1888-9 budget show an apparent increase due to the depreciation of the silver currency. The total revenue was calculated at 55,369,516 krans (10 krans = 1 *tūmān*). *Māliyyāt* contributed 54,177,740 krans (taxes paid in cash 36,076,757 krans, taxes paid in kind 10,100,983 krans, and customs 8,000,000 krans), and revenue from other sources 1,191,776 krans (*Persia and the Persian question*, ii, 480-1). By the year 1900 total revenues had ostensibly risen to 7,000,000 *tūmāns* (*Report on the Persian army*, *op. cit.*, 11-12). The proportion of the whole formed by land tax was, however, probably slightly less than had been the case earlier. In 1905, the year preceding the grant of the Constitution, the total revenue was put at roughly £ 1,425,000. *Māliyyāt* (which consisted mainly of land taxes) amounted to £ 800,000. The percentage which it formed of the whole had thus considerably dropped, but it was still the largest single item and almost double the next highest item, which was customs (F.O. 416/26, App. (A) in Hardinge to Grey, London, 23 December 1905, separate and confidential). Thus agriculture still retained in the early 20th century its importance as the main economic activity of the country, and the state still depended, as it had in earlier times, upon land taxes for its current expenditure. Basically, the old patterns of land revenue assessment and collection, which had shown a striking continuity over the centuries, lived on and rulers still looked to the land—and this, in effect, meant to the peasants—to provide them with the material resources to support themselves and their governments.

III.—In Ottoman Turkey.

This term denoted in Ottoman usage both the land tax and the poll-tax on the state's non-Muslim subjects. In some documents the term *kharādj ruʾūsu* refers to the *djizya* [*q.v.*] payers (M. T. Gökbilgin, *XV-XVI. asırlarda Edirne ve Paşa livası*, Istanbul 1952, 158; the *ḳānūnnāme* of Ḳandiya dated 1081/1670, in Ö. L. Barkan, *XV ve XVI asırlarda Osmanlı imperatorluğunda zirai ekonominin hukuki ve mali esasları*, i. *Kanunlar*, Istanbul 1943, 351), whereas the word *kharādj* was only used for the tax put on the land. In the early period, both the *kharādj* and *djizya* were collected by the *kharādjdji*, an official appointed to collect the *kharādj*, so that the officials collecting the *djizya* were also called *kharādjdjis* (Başbakanlık Arşiv Genel Müdürlüğü, Maliyeden müdevver defterler, no. 2775, p. 455). This state of affairs can also be seen in a *kharādj* register showing the records of *kharādj* and *djizya* between the years 954-6/1547-9 (Maliyeden müdevver defterler, no. 191).

The lands of the Ottoman Empire were, in financial theory, divided into three categories: (1) *arāḍī-ʿoshriyye*; (2) *arāḍī-i kharādjiyye*; and (3) *arḍ-i*

memleket, but in practice there was a great variety of application. *ʿÖs̲h̲ur* land was the land given to the Muslims at the time of the conquests in return for a tithe. *K̲h̲arādj* land was the land retained by the non-Muslims in return for a tithe or greater proportion levied on its product, the *k̲h̲arādj-i muḳāsama*, plus an annual requirement in cash.

The so-called *arḍ-i memleket* (that is, state or *mīrī* land) was not the property of the subjects (*reʿāyā*) but cultivated by them on a temporary basis; they paid *k̲h̲arādj-i muḳāsama* instead of *ʿös̲h̲ur*, according to the amount of produce obtained from the land, and *k̲h̲arādj-i muwaẓẓaf* instead of the *čift aḳčesi* (Barkan, *Kanunlar*, 4, 66, 297-8, *Ḳānūn-name-i Sulṭān Süleymān ve Ebu's-Suʿūd Efendi'niñ maʿrūḍāt risālesi*, in *MTM*, i (Istanbul 1331), 109).

The 1081/1670 *taḥrīr defteri* of the island of Crete, newly added to the Ottoman Empire in 1080/1669, is the latest and perhaps the last register showing what the *k̲h̲arādj* lands were and how this tax was applied. It was decided that one-fifth should be taken as *k̲h̲arādj-i muḳāsama* from the produce of the lands retained by the non-Muslims. Those harvesting two crops a year would pay *k̲h̲arādj* twice. The vineyards and orchards were surveyed and a *dirham-i s̲h̲arʿī* was taken annually from every *djarīb* of them. *K̲h̲arādj-i muḳāṭaʿa* was a tax taken from the land even if the owner did not sow it. *K̲h̲arādj* lands were the full property of their owners, and therefore they had right to sell them as they liked; when the owner of the land died, it was divided between his heirs. If the non-Muslim owner of *k̲h̲arādj* land abandoned his land and fled, then his land was rented out and its *k̲h̲arādj* was taken from its produce (Barkan, *Kanunlar*, 351-2). The financial difficulties of the Christian *reʿāyā* in a newly-conquered land were taken into consideration. For example, in the island of Cyprus, immediately after its conquest in 980/1572, a register was made, and as a result of it, the non-Muslim subjects, taking into consideration their financial situation, were classified into three groups: the rich, people with average incomes (the middle class), and the people with lower incomes (Barkan, *op. cit.*, 349).

The *k̲h̲arādj* taken from the non-Muslim subjects varied according to the productivity of the land and the type of agriculture practised on it. While 3 *aḳčes* were taken from every 100 vine-stems of a vine-yard in the region of Malatya, 10, 8, 6 or even 4 were taken in the Arab lands (966/1559 *ḳānūnnāme* of Malatya *sandjaḳ*). In Aleppo, 40 *aḳčes* were taken from every 100 fruit trees and 40 from every 1000 vine-stems (978/1570 *ḳānūnnāme* of Aleppo). In Damascus and Jerusalem, one *aḳče* for every 2 olive trees, 2 *aḳčes* for every date palm and walnut tree, one *aḳče* for every 5 other fruit trees, and 10 *aḳčes* for every 100 vine stems, were paid as *k̲h̲arādj* (*ḳānūnnāmes* of Damascus and Jerusalem, in Barkan, *Kanunlar*, 116-7, 207, 217, 220). The money taken from non-Muslims as *k̲h̲arādj* varied because of changes in the value of money, but it does not seem that there was a substantial variation in the amount of annual *k̲h̲arādj* paid by the Christian subjects around the end of the 9th/15th and the beginning of the 10th/16th centuries; the amount of the *k̲h̲arādj* varied between 40 to 50 *aḳčes* during the middle years of the 10th/16th century (Barkan, *op. cit.*, 23, 57, 96, 101, 105, 240, 301, 303). But in some regions, for example in Karadağ (Montenegro), the amount of *k̲h̲arādj* remained at 33 *aḳčes* for a long period between the years 934/1529 to 978/1570 (*Kanuni i Kanunname, Za Bosanski, Hercegevaski, Zverniski, Kliski, Crnegorski, Skadarski sandzak*, Serajevo 1957, 169, 173). However, some groups were exempted from the payment of the *k̲h̲arādj*, including certain groups serving in the army such as the *voynuḳs*, Christian cavalrymen in the Balkans (H. Inalcık, *Stefan Duşan'dan Osmanlı imperatorluğuna*, in *Fatih devri üzerinde Tetkikler ve Vesikalar*, i, Ankara 1954, 173-4), and the *Eflāḳān* or Wallachians serving as guards and watchmen in the fortresses and outposts of such places as Semendre (Smedereve), Vidin and Eramişeva (*Ḳānūnnāme-i Āl-i ʿOt̲h̲mān*, ed. Meḥmed ʿĀrif, Istanbul 1329, 63-4). Also exempted were miners and quarrymen together with their sons (*Ḳānūnnāme-i liwā-i Bosna* (*Kanuni i Kanunname*), 15, 41, 170), and the Christians employed in public service, e.g. as *derbenddjis* (guardians of internal security in the provinces) (Inalcık, *op. cit.*, 224, document dated 12th Djumādā II 860/18th May 1456).

The *k̲h̲arādj* collectors (*k̲h̲arādjdjiler*) had registers listing the amounts of tax required (Topkapı Sarayı Müzesi Arşivi, no. 10140, *defter* dated 959, 1552), and the annual *k̲h̲arādj* was collected according to this *defter*. Local officials were required to help the *k̲h̲arādj* collectors (*Kanuni i Kanunname*, 41, 103). The *reʿāyā* acquired a receipt from the collector, which they had to keep. These receipts (*K̲h̲arādj kāg̲h̲ïtlarï*, *k̲h̲arādj tedhkireler*) recorded such information as the name of the tax payer and the name of his father, his country, the colour of his hair, beard and skin, plus his physical description, together with the year, month and day on which the tax was paid (for an example dating from 1765, see Henry Granville, *Observations sur l'état actuel de l'Empire Ottoman*, ed. A. S. Ehrenkreutz, Ann Arbor 1965, 36-7). Because of the incidence of disputes and disagreements between the subjects and the *k̲h̲arādj*-collectors, the activities of the latter were controlled and inspected by officials from the group of *čāwus̲h̲s* of the Imperial court, and in the light of their findings, a new *defter* might be drawn up (Topkapı Sarayı Müzesi Arşivi, No. 1531, *defter* of 937/1531, No. 9691, document dated 932/1526). These inspections were made every three years. In the course of them, names of dead persons (*mürde*) were removed from the *defter*, and the names of those who had become old enough (*bālig̲h̲*) to pay *k̲h̲arādj* were added as *nev-yāfte* (Başbakanlık Arşiv Genel Müdürlüğü, Maliyeden müdevver defterler, no. 7534, 389; Barkan, *Kanunlar*, 44). Women and children did not pay *k̲h̲arādj*, but male children paid it when they were mature (Granville, *op. cit.*, 36).

The instructions given to the *k̲h̲arādjidjs* defined their duties and sphere of authority. Of these, the oldest document is dated 880/1475-6. According to this, if some of the *reʿāyā* on *tïmār* land ran away, the half of the *k̲h̲arādj* of that land was to be taken from the *tïmār*-holder and the other half from the remaining *reʿāyā*. If one of the *k̲h̲arādj* payers died, then his yearly *k̲h̲arādj* was taken from his family and relatives; if they were not able to pay this, then it would be taken once only from the other villagers, and afterwards his name would be removed from the *k̲h̲arādj* register. *K̲h̲arādj* was collected by the *k̲h̲arādj-emīn* and his staff at the latest before the month of S̲h̲aʿbān every year, with the help of the local officials. The *k̲h̲arādj* money collected each day would be counted up in front of those concerned, weighed and set down in a special register with the help of the local *ḳāḍī*, and recorded village by village. These registers were forwarded with the money to Istanbul through the agency of one of the *k̲h̲arādj* collectors (*Ḳānūn-nāme-i Sulṭānī ber mūdjeb-i ʿörf-i*

ʿOthmānī, ed. R. Anhegger and H. Inalcık, Ankara 1956, 76-8). The heads of Christian villages, and their notables such as priests, were charged with the responsibility of collecting the *kharādj*, *angaria* and the other taxes (cf. *Polonyalı Simeon'un seyahat namesi* (*1608-1619*), tr. H. D. Andreasyan, Istanbul 1964, 134).

The Christian dependent provinces like Ragusa or Dubrovnik, Moldavia and Transylvania were counted among the tributary *reʿāyā* because they paid an agreed, fixed amount every year (the *kharādj maḳṭūʿ*) in gold (cf. N. H. Biegman, *The Turco-Ragusan relationship*, The Hague 1967, 132-3, 138, 140, 142 and C. Orhonlu, *Osmanlı tarihine ait belgeler: Telhisler* (*1597-1607*), Istanbul 1970, 35); but the situation of Ragusa, because it accepted the payment of *kharādj* as a result of a peace agreement and not after conquest, was somewhat different to that of Moldavia, Wallachia and Transylvania. The tributes taken from the peace agreements made after the victories of the Ottoman Empire in the west, at the times when it was powerful, were also described as *kharādj*, e.g. those paid at certain times by Austria and Venice (L. Fekete, *Die Siyāqat-Schrift in der türkischen Finanzverwaltung*, Budapest 1965, i, 481). In the 11th/17th century, when there was a dispute over the question of borders, the Ottomans claimed (basing their argument on the *defters*) that the villages and towns in dispute belonged to the empire because of the presence there of *kharādj*-paying non-Muslim subjects (Fekete, *Türkische Schriften aus dem Archive des Palatins Nikolaus Esterhazy, 1606-1645*, Budapest 1932, 65 ff., 82 ff.).

From the end of the 12th/18th century, the task of collecting *kharādj* in the largely non-Muslim regions passed into the hands of the non-Muslim local élite (priests, headmen, etc.). From this time, too, the word *kharādj* came to be linked with the word *bādj* in the phrase *kharādj we bādj*, which was current till the *Tanẓīmāt* period (K. Schwarz, *Osmanische Sultansurkunden des Sinai-Klosters in türkischer Sprache*, Freiburg-in-Breisgau 1970, 149 (dated 1112/1700), 162 (dated 1194/1780) 185 (dated 1254/1838). The officers charged with collecting the *kharādj* were everywhere called *kharādj-emīnis*, and at the beginning of the 19th century there was established an office of *kharādj* which looked after various problems involved in the tax and which later also took care of the *djizya* at the same time.

The *Tanẓīmāt* decree of 1839 brought a new concept of citizenship into the society of the Ottoman state, the idea that both the Muslims and the Christians living in the Empire were to be treated as equal before the law. This involved the question of taxation, including the *kharādj*, for the abolition of which there was pressure from Western diplomats in Istanbul.

A decision on this was only taken after the 1856 reforms, when both *kharādj* and *djizya* were abolished, and instead, non-Muslim subjects were to pay a tax in lieu of military service (*bedel-i ʿaskerī*) (cf. G. Muir Mackenzie and A. P. Irby, *Travels in the Slavonic provinces of Turkey-in-Europe*, London 1866, 13, 67); the tax is also mentioned under the names *ʿaskerī*, *kharādj*, *djizya*, *imdādiyye*, *niẓāmiyye*, *bedelāt* (cf. James Barker, *Turkey*, New York 1877, 384; for the *bedelāt-i ʿaskeriyye*, see *Düstür*, Istanbul 1289, ii, 26-33, and see also BADAL).

(CENGİZ ORHONLU)

IV.—IN THE INDIAN SUB-CONTINENT

In India, the term *kharādj* was less common in the administrative literature, being replaced by other expressions such as *ḥāṣil* or *maḥṣūl*, meaning revenue or land-revenue. As in other Muslim lands, the *kharādj* in Muslim India also had two distinct forms, to which names of *muḳāsama* and *muwaẓẓaf* or *waẓīfa* were given. The former is defined as an impost which depended on the actual produce of the land, and was leviable only when the land was cultivated; the latter depended on the return that the land was capable of yielding, and was due whether the land was tilled or not. It is the *waẓīfa* which is meant when the term *kharādj* is mentioned by the Muslim writers or historians of India, unless the *muḳāsama* is specifically named.

The earliest record of the imposition of the *kharādj* in Muslim India relates to the reign of Sultan ʿAlāʾ al-Dīn Muḥammad Khaldjī (695-715/1296-1316), who fixed the standard of the revenue-demand at one-half of the produce, an arrangement which set the pattern for the agrarian system in the 7th/13th and 8th/14th centuries. A notable aspect of the implementation of the *kharādj* was a remarkable degree of harmony in the relation between the Sultan and the tribute-paying Hindu chiefs.

The system initiated by ʿAlāʾ al-Dīn was never completely put into effect and soon fell into desuetude; it was not till the time of Shēr Shāh that any effort was made to revive it. The changes which the Dihlī sultans endeavoured to introduce were afterwards perfected in the system which the Mughal administration under Akbar adopted concerning the imposition of the *kharādj*. Akbar first established a uniform standard of length which he termed *gaz-i-ilāhī* [*q.v.* in Suppl.] (corresponding to the Arab *dhirāʿ* [*q.v.*]) and having adopted the *djarīb*, which he called *bīgha*, as the measure of surface area, he fixed it at 3,600 square *gaz*. The land was divided into four kinds on the basis of its potential fertility. Of these four kinds, only the category called Perowty, i.e. land kept out of cultivation for a short time to regain its strength, was in reality the *kharādj-i*

waẓīfa of the Islamic law which Akbar imposed, and the person immediately liable for the *kharādj* was the husbandman, who was assured of all required assistance by the state. In terms of the principles of this kind of *kharādj*, the cultivators who paid taxes direct to the state received proprietary rights from the conquerors in respect of the lands which they tilled.

Akbar's system of *kharādj* revenue collection did not cover his entire dominion, for the outlying *ṣūba*s contained large tracts of land which were left unmeasured; hence, in such cases, the Emperor himself, in accordance with the rules of *kharādj-i muḳāsama*, retained ownership of the land. The tenure and the position of the cultivators under Djahāngīr and Shāhdjahān was pretty much the same as was in vogue under Akbar's policy of settlement. The ownership rights of the husbandmen to the land of the *kharādj-i waẓīfa* continued to prevail even throughout Awrangzīb's puritanical reign. Under Awrangzīb, the religious jurists on whose *fatwā*s or pronouncements the royal orders were issued, sought guidance not from the rules or orders of Shēr Shāh or Akbar, but from the standard Islamic law books or commentaries written at an earlier period in the Arab lands. Standard authorities such as Abū Ḥanīfa and Abū Yūsuf were closely consulted when *farmān*s regarding the *kharādj* were drafted, with the result that Islamic terms, ideas and institutions, which were not in accordance with the facts of indigenous Indian life, were imported into the Muslim Indian system more vigorously.

In the midst of the chaotic political conditions following Awrangzīb's death in 1118/1707, when some strong-armed adventurers took over the reins of rulership as *ṣūbadār*s in outlying areas of the empire, the regular institution of the *kharādj* fell into disruption. The exigencies and characters of the rulers in particular territories brought about various pressures on the land, so that in some localities the cultivator, who was normally left with two-thirds of the produce of the land after paying one-third as *kharādj*, had to remain content with the bare minimum necessary for his and his family's subsistence. This state of affairs continued to prevail in the country till the British rulers brought about a settlement of the land revenue in 1793.

KHĀRAG (usually shortened to Kharg; Khārak in Arabic), a coral island in the Persian Gulf off the coast of Persia at lat. 29° 16′ N, long. 50° 19′ E. Lying 55 km. northwest of Būshahr [*q.v.*], the island is 8 km. long from north to south and 4 km. broad. Much of it is covered by treeless hills with a maximum height of 75 m. Four km. to the north is the smaller island of Khārgū (Arabic Khuwayrik). Between the two islands and also west of Khārag are banks where pearls of exceptional value were sometimes found until commercial pearling withered away in the present century.

Whether Khārag is to be identified with one of the islands in the Persian Gulf mentioned in the Greek and Roman sources remains uncertain. An examination of burial caves and rock carvings has indicated that a Christian community existed on the island in the 3rd century A.D.

The early Muslim geographers list Khārag as belonging to the *kūra* of Ardashīr Khurra [see FĪRŪZĀBĀD]. It is also described as lying opposite the town of Djannāba [*q.v.*]. According to Ibn Khurradādhbih, Khārag as a port of call on the route from al-Baṣra to ʿUmān and India was known for its cereals, grapes, and dates.

Yāḳūt, who visited Khārag more than once, saw the shrine pilgrims believed to be the tomb of Muḥammad b. al-Ḥanafiyya [*q.v.*], a belief Yāḳūt declares unhistorical. Yāḳūt quotes Abū ʿUbayda as saying that Abū Ṣufra, the father of the renowned Umayyad general al-Muhallab [*q.v.*], was a native of Khārag who, for his military prowess, was adopted by the tribe of al-Azd. Abu ʿUbayda's statement is corroborated by verses of al-Farazdaḳ.

In modern times Khārag first became prominent in the second half of the 12th/18th century, when the Dutch East India Company made it the main base for its commercial activities in the Persian Gulf. The company's factor, the Prussian Baron von Kniphausen, secured the cession of the island by Mīr Nāṣir, the lord of Bandar Rīg on the mainland 35 km. to the northeast. Building a fort on the northeastern side of the island, the Baron proceeded to develop a flourishing community, described in detail by the Englishman E. Ives and the German C. Niebuhr, who stayed there in 1171/1758 and 1178-9/1765 respectively. Shortly after Niebuhr left, the Dutch were driven out by Mīr Muhannā of Bandar Rīg, who took up residence on the island. Karīm Khān Zand [*q.v.*] then invested the island and forced Mīr Muhannā to flee to al-Baṣra, where he met his end. Karīm undertook to turn Khārag over to the French East India Company, but the suppression of the company prevented the arrangement from being consummated. Again during the reign of Fatḥ-ʿAlī Shāh [*q.v.*], Persia was on the point of giving Khārag to the French but was thwarted by British pressure.

In 1247/1832 bubonic plague on the Persian coast impelled the British Political Residency in the Gulf to move temporarily from Būshahr to Khārgū, and consideration was given to making Khārag its permanent site. When Persian arms advanced against Afghānistān, the British landed troops on Khārag in 1254/1838 and held it until 1259/1842, during part of which time the Residency was headquartered on the island. Lord Auckland, the Governor General of India, dreamed that "Karrak ... could become the Singapore of the Persian Gulph". The initial Russian protest against the occupation of Khārag had failed to sway the British government, but prolonging the British presence there would have run the risk of giving Russia an excuse to move against Persia in the north, and in 1260/1844 the British coal depot was removed from the island.

Britain at the outset of its war with Persia in 1273/1856 again seized Khārag, whose Persian garrison had already been withdrawn. This time the grip on the island was kept for only a little more than a year. General Sir J. Outram, commander of the expeditionary force, advocated without success transferring the Political Residency from Būshahr to Khārag. For years thereafter the island's importance derived in the main from the skill of the pilots it provided for the upper Gulf and from its quarries for stone used in road building.

The growth of the oil industry has given Khārag a newly significant place on the map. The waters off the mainland coast of Persia (now Iran) are too shallow to accommodate large ships, while the island, lying 30 km. away from the coast, has waters deep enough

for this purpose. When Iran's production of oil for export mounted in the mid-20th century, Khārag was selected as the new terminal for shipping crude oil. Pipelines were laid to bring crude in from the producing fields as well as refined products from Ābādān [*q.v.*]. Huge storage tanks were built on Khārag to hold millions of barrels of oil. Tankers coming to carry the oil away berth at a jetty or a sea island; the largest of these vessels displace 500,000 tons. Khārag itself also lies within a recently-discovered area for the production of oil, with the Darius field stretching westwards from the island into the waters of the Persian Gulf. Moreover, the National Iranian Oil Company has constructed on Khārag one of its most elaborate petrochemical complexes. Besides the oil installations, the new prosperity has brought to the island greenhouses for the cultivation of vegetables.

KHARAĶĀNĪ, Abu 'l-Ḥasan ʿAlī b. Aḥmad, Persian mystic who died on the 10th Muḥarram 425/5th December 1033 at the age of 73. The *nisba* refers to the village of Kharaḳān situated in the mountains to the north of Bisṭām on the road to Astarābād (modern Gurgān). There are several variants for the vocalisation of this place-name even in the early sources for the life of this mystic. This confusion may very well be the result of the existence of other place names with the same consonant outline, such as Kharḳān near Samarḳand and Kharraḳān between Hamadān and Ḳazwīn. In the poems of ʿAṭṭār, the name of the mystic is consistently treated as a word with a closed first syllable (*Kh. rḳānī*). The form preferred in this article is based on the explicit statement by Samʿānī, who seems to have had a first-hand knowledge of the area (cf. Yāḳūt, ii, 424; see further on this question, Le Strange, 23, 366; Schwarz, *Iran*, vi, 822; R. A. Nicholson, *The Mathnawī . . . , Commentary to Book iv*, 348, *Heading* [2]). Instead of the patronymic "Ibn Aḥmad", which is supported by all the early sources, "Ibn Djaʿfar" is given by Djāmī and by many subsequent writers who were dependent on him.

The few details which are reported concerning the external life of Kharaḳānī point to a humble origin. He is said to have been a donkey-driver at the time when he was called to the mystic path (Samʿānī). As a youngster, he tended the cattle for his parents. But even in his later years he lived very close to the peasants of his home country. He seems to have travelled very little. There are no reports about his formal education, and he claimed to be an illiterate (*ummī*) who was ignorant about the correct pronunciation of even the most commonly used Arabic formulae (Anṣārī, *Ṭabaḳāt*, 510); some of his sayings show traces of a local dialect.

Kharaḳānī described himself as a resident (*muḳīm*) *shaykh* who only travelled in the spirit. The renown of his high spiritual rank, gained after long years of extreme ascetism, attracted a great number of pilgrims to the hostel which was attached to his hermitage. Among his visitors were the most prominent representatives of Ṣūfism in his time. The meeting between Abū Saʿīd b. Abi 'l-Khayr and Kharaḳānī in the latter's *khānaḳāh* has been recorded with many details in the hagiographies of both *shaykhs*. ʿAbd ʿAllāh al-Anṣārī al-Harawī, who was much impressed by Kharaḳānī, regarded him as an adept (*muntahī*) and chose him as his spiritual guide. Other well-known visitors were Abu'l-Ḳāsim al-Ḳushayrī, and from outside the mystic circles, Abū ʿAlī Ibn Sīnā and Sulṭān Maḥmūd of Ghazna. Whereas the genuineness of the reports about the last two visits is questionable, the attention paid to Kharaḳānī by the great Ṣūfīs of his time is undoubtedly historical, and fits very well into the pattern of Khurāsānian mysticism in the beginning of the 5th/11th century. The learned Ṣūfī *shaykhs* of the larger cities, in particular of Nīshāpūr, took a lively interest in the single-minded and uncompromising spirituality of local mystics who stayed within the geographically, as well as intellectually, much more restricted realm of the small towns and villages where they were born. Another mystic of this type was Abu'l-ʿAbbās al-Ḳaṣṣāb of Āmul, a butcher turned into a mystic, who enjoyed a similar reputation as Kharaḳānī. He is reported as having predicted that his "little bazar" (*bāzārak*) would, after his death, be taken over by Kharaḳānī (Anṣārī, *Ṭabaḳāt*, 308). There is no evidence, however, of a formal initiation in the form of the bestowal of a *khirḳa*, as Ḳaṣṣāb did in the case of Abū Saʿīd (cf. Ibn al-Munawwar, 50 f.). Kharaḳānī laid claim to a direct succession to the spiritual essence (*rūḥāniyyat*) of Abū Yazīd Ṭayfūr al-Bisṭāmī [*q.v.*] in spite of the great interval between his lifetime and that of his teacher. Abū Yazīd is said to have announced the coming of Kharaḳānī and to have initiated him in a dream after he had made a series of miraculous nightly visits to the tomb of Abū Yazīd in Bisṭām. A spiritual relationship of this kind, in which the normal requirement of personal contact between *pīr* and *murīd* is disregarded, is often designated as an "Uwaysī"-relationship. Its archetype is the influence exerted by the Prophet on the pious Yemenī Uways

al-Ḳaranī [*q.v.*] in spite of the fact that they never actually met. The line of mystic tradition which runs through al-Bisṭāmī and Kharaḳānī was later in the same century attached to the classic *silsila* of Ṣūfism by Abū ʿAlī al-Fārmadī (d. 477/1084). In addition to his regular affiliation to Abu 'l-Ḳāsim al-Gurgānī (d. 469/1076-7), al-Fārmadī chose also Kharaḳānī as his initiator, although it is hardly likely that both men ever met personally. In this way, Kharaḳānī has become a spiritual ancestor of the *ṭarīḳa* of the Khwādjagān out of which the Naḳshbandiyya order developed in the 8th/14th century. The interest of later generations in Kharaḳānī's mysticism is also shown by the use of anecdotes about him in Ṣūfī epic poetry, notably in the works of ʿAṭṭār and of Mawlānā Djalāl al-Dīn Rūmī. Shihāb al-Dīn Yaḥyā al-Suhrawardī, the *Shaykh al-Ishrāḳ* (d. 587/1191), inserted Kharaḳānī after al-Ḥallādj and Abū Yazīd in the line of *Khusrawāniyyūn* who transmitted ecstatic mysticism to him from a pre-Islamic Iranian source (cf. H. Corbin, *En Islam iranien*, ii, Paris 1971, 36).

It appears from some of the stories told about Kharaḳānī's relationship to contemporary mystics that his claim to the spiritual succession of Abū Yazīd made him into a rival of the leading *shaykh* of the Ṭayfūriyya tradition in Bisṭām, Abū ʿAbd ʿAllāh Muḥammad al-Dāstānī (d. 417/1026), who is often referred to as *Shaykh al-Mashāyikh* (cf. Hudjwīrī, tr. Nicholson, 164; Djāmī, *Nafaḥāt*, 338 f.).

According to his hagiographer, the *shaykh* expressed the wish to be buried in Bisṭām near the tomb of his teacher. In the 8th/14th century his grave was visited there by Ibn Baṭṭūṭa (iii, 82; Beirut 1379/1960, 390). But al-Ḳazwīnī (*Āthār al-bilād*, ed. Wüstenfeld, Göttingen 1848, 243) asserts that his grave was to be found in Kharaḳān itself. Recently, a mausoleum of Kharaḳānī has been discovered in the village of Ḳalʿa-yi Naw, north-east of Bisṭām; it was not, it seems, erected earlier than the Mongol period (see R. Hillenbrand, in *Iran*, ix (1971), 161).

Apart from the reflection of his personality in the accounts of his contemporaries, a considerable number of the sayings of Kharaḳānī have been preserved. There is no question of a systematic exposition of a coherent mystic doctrine. These sayings contain the account of a direct mystic experience expressed in bold and terse statements which sometimes possess a great poetic force. The influence of the celebrated utterances of Abū Yazīd is unmistakable. A sharp distinction is made between the profane or the "created beings" (*khalḳ*) who remain attached to the created world, and the "brave ones" (*djawānmardān*) who venture out strive for a return to the world of the Command (*ʿālam al-amr*) to which they really belong. The path of the latter goes through severe ascetic training and should end with the total extinction of the self (*fanāʾ*) and the subsequent permanence in the will of God. The ascetic preparation has no value in itself. The attainment of the goal is entirely an act of Divine Grace. This idea is linguistically expressed by the use of passive verbal forms whenever there is a reference to the fulfilment of the mystic's aim. At that stage, the mystic ceases to be the actor of his own deeds and the speaker of his own words. The highest gift granted to the adept is gnostic knowledge (*maʿrifa*) which is to be distinguished from the positive knowledge (*ʿilm*) of the theologians. When the former kind of knowledge has been attained to its full extent, it appears to be identical with the contents of the religious Law. Kharaḳānī emphasizes that he would refuse to travel any path that would deviate from that of the Prophet. In spite of this adherence to Islamic orthodoxy, he dares to discourage other mystics to travel on to Mecca once they have "crossed the deserts of Kharaḳānī", i.e. after they have visited him and have accepted his teaching. The way of Kharaḳānī is a path of sorrow (*andūh*) and anxiety (*ḳabḍ*) which is contrasted to the joyfulness (*shādī*) and relaxation (*basṭ*) of mystics like Dāstānī and Abū Saʿīd. Humility and self-glorification are curiously mixed in the utterances of Kharaḳānī. He claims to be one of the rare true servants of God, and many of his sayings have the form of direct revelations from the Unseen. There are also some accounts of experiences in the higher world. One of his pupils recognises him as the *ḳuṭb* of his age. The superior status of the *shaykh* enables him to act as a mediator for other people before the Divine Judge. On the other hand, Kharaḳānī takes great pains to conceal the graces bestowed on him. Neither his ascetic merits nor his miraculous powers, which in the case of Kharaḳānī consist in particular of the gift of foresight (*firāsa*), should mislead the true mystic into false pretentions. It is therefore to be regarded as a special favour of God to His friends that He helps them to conceal these graces from the eyes of the profane. (On the characteristics of Kharaḳānī's mysticism, see also S. de Beaurecueil, *Ansari*, 65-67).

The sayings of Kharaḳānī have been collected by one of his followers in the *Kitāb Nūr al-ʿulūm*. Of this work, only an abstract seems to have survived in the so far unique manuscript British Museum Or. 249, dated 698/1299 (cf. Rieu, *Catalogue of the Persian manuscripts in the British Museum*, i, 342a; ed. by E. E. Bertel's, in *Iran*, iii (1927), 155-224 = *Izbrannïe Trudï. Sufizm i sufiyskaya literatura*, Moscow 1965, 225-78; the linguistic particularities of this text have been studied in the Introduction to Bertel's edition as well as in M. Taḳī-Bahār, *Sabkshināsī*, ii, Tehran n.d., 226-8 and G. Lazard, *La langue des plus anciens monuments de la prose persane*, Paris 1963, 123-4 and *passim*). Considerably more of the contents of the original has been preserved in the long section on Kharaḳānī in the Supplement to ʿAṭṭār's *Tadhkirat al-awliyāʾ*, ii, ed. Nicholson, Leiden-London 1907, 201-55. The *Nūr al-ʿulūm* was divided into ten chapters, the last of which contained hagiographic stories (*manāḳib*) about the *shaykh*. Another chapter was devoted to the prayers (*munādjāt*) of Kharaḳānī. A small separate collection of prayers is also known to exist (cf. H. Ritter, in *Isl.* xxv (1939), 63). The attribution of the edition of the *Munādjāt* of Abū Yazīd al-Bisṭāmī to Kharaḳānī (cf. L. Massignon, *Essai sur les origines du lexique technique de la mystique musulmane*², Paris 1968, 274) needs to be verified. Two short *risāla*s attributed to Kharaḳānī have recently come to light in Pakistan (cf. A. Munzawi, *Fihrist-i nuskhahā-i khaṭṭī-i fārsī*, ii, Tehran 1349 sh., 1101 (nos. 10165-10166). There are also a few quatrains attributed to him (see, e.g. Nadjm al-Dīn Dāya, *Mirṣād al-ʿibād*, ed. Tehran 1337/1377, 25, 28; Amīn-i Aḥmad-i Rāzī, *Haft Iḳlīm*, ed. Dj. Fāḍil, Tehran 1340 sh., iii, 335; Riḍā-Ḳulī Khān Hidāyat, *Riyāḍ al-ʿārifīn*, Tehran 1305/1887-8, 28-9; idem, *Madjmāʿ al-fuṣaḥāʾ*, ed. Tehran 1295/1878, i, 66; Ethé, *Catalogue of the Persian manuscripts in the India Office Library*, i, Oxford 1903, no. 1747, fol. 1b). A commentary to one of the sayings was written by Nadjm al-Dīn Dāya (cf. F. Meier, in *Isl.* xxiv (1937), 38 n.). One of the divinely-inspired utterances (*shaṭḥiyyāt*) of Kharaḳānī has been studied by Rūzbihān Baḳlī.

(J. T. P. de Bruijn)

AL-KHARAḲĪ, Abū Bakr Muḥammad b. Aḥmad b. (Abī) Bishr, Bahāʾ al-Dīn and Shams al-Dīn (and also Abū Muḥammad ʿAbd al-Djabbār b. ʿAbd al-Djabbār b. Muḥammad) al-Thābitī al-Ḥusaynī al-Marwazī, Persian mathematician, astronomer and geographer, who also concerned himself with philosophical questions. He seems to have been a native of Kharaḳ (see Yāḳūt, s.v.) near Marw, whence his *nisba* (which Ḥādjdjī Khalīfa, *Kashf*, Tehran 1947, 338, reads as al-Khiraḳī). He lived in Marw, whither he had been summoned by the Khʷārazm-Shāh Ḳuṭb al-Dīn Muḥammad (490-521/1097-1127) or by Atsïz (521-51/1127-56), and he also lived in Nīshāpūr. He died at either Marw or Kharaḳ in 533/1138-9.

Amongst his works, *al-Risāla al-shāmila*, on arithmetic, and *al-Risāla al-maghribiyya* are lost, but there are extant manuscripts of his works on cosmography: (1) *Muntahā 'l-idrāk fī taḳsīm* (or *taḳāsīm*) *al-aflāk*, which included, according to Ḥādjdjī Khalīfa, 1852-3, three parts—(a) the structure of the spheres, the movements of the heavenly bodies, etc. (b) the shape of the earth, with its division into an inhabited zone and an uninhabited zone, the differences in the ascendants (*ṭāliʿ*) and the ascensions (*maṭāliʿ*), according to geographical position (c) chronology; the conjunctions, especially those of Saturn and Jupiter; and the periods of revolution (*adwār*). In this work there is a description of the five seas borrowed from al-Djayhānī (301/913-14), in which it is asserted that the Atlantic communicates with the Indian Ocean, just as the Black Sea communicates by means of the Don (Ṭānīs) with the Baltic (ed. and tr. C. A. Nallino, *Albatenii Opus astronomicum*, Milan 1903-7, i, 169-75). (2) *Kitāb al-Tabṣira fī ʿilm al-hayʾa*, a work basically concerned with astronomy, and shorter than the preceding work. According to Ḥādjdjī Khalīfa 338, it was dedicated to the minister Abu 'l-Ḥusayn ʿAlī b. Naṣīr al-Dīn, and contained two parts concerning the celestial spheres and the earth respectively. In it, the author shows the positions of the apogees for the beginning of the year 1444 of the Seleucid era (1 October 1132), and he brought the longitudes of al-Battānī down to his own time (Nallino, *op. cit.*, i, 240).

In these two works, al-Kharaḳī develops the theory that the celestial bodies do not move along imaginary circles, but are drawn along by material spheres. The antecedents of this view can be found in Ptolemy's *Planetary hypotheses*, and the same idea was set forth by al-Khāzin [*q.v.*] and by Ibn al-Haytham [*q.v.*]. Ḳuṭb al-Dīn al-Shīrāzī (633-710/1236-1311) airs this view in his *Nihāyat al-idrāk fī dirāyat al-aflāk*, referring both to al-Kharaḳī and to Ibn al-Haytham, and in Europe, it was known to Roger Bacon (*ca.* 1214-92).

KHĀRĀN, a former native state of western Balūčistān, now incorporated in Pakistan. Geographically, it comprises a wide basin, that of the Mashkel river in the west and the Baddo in the east, between high ranges of mountains, the Raʾs Kūh rising to 9,900 feet; the valley terrain includes an extensive *rīgistān* or sand desert. The population is largely Balūč, with some Brahūīs in the eastern part.

The early history of Khārān is very obscure. Local tradition says that the Nawshīrwānī chiefs entered Khārān in the 8th/14th century. Over the ensuing centuries, these chiefs gave a vague allegiance to rulers in Persia, Kalāt and Afghānistān at different times; up till the period of Nādir Shāh Afshār (mid-18th century), Khārān seems generally to have been considered as an extension of the Persian province of Kirmān. The energetic Naṣīr Khān of Kalāt [see kilāt] brought Khārān under his suzerainty, until conflicts in the latter half of the 19th century between Mīr Khudādād Khān of Kalāt and Āzād Khān of Khārān inclined the latter to the Afghān side. In 1884, Sir Robert Sandeman, the pacifier of Balūčistān, visited Khārān and arranged a settlement between the rival rulers. Khārān continued to acknowledge Kalāt's general suzerainty, but now received an annual subsidy from the Government of India and referred disputes to the British Political Agent in Quetta (see T. N. Thornton, *Colonel Sir Robert Sandeman: his life and work on our Indian frontier*, London 1895, 101, 180-2). It was around this time also that the frontier on the west of Khārān and the adjacent parts of Balūčistān with Persia was demarcated. Few travellers visited Khārān before Sandeman's time; one of the few who did, H. Pottinger (1810), alludes to the fine camels of Khārān and to the fact that the local chief, Sardār ʿAbbās Khān Nawshīrwānī, had recently declared himself independent of Maḥmūd b. Naṣīr Khān of Kalāt (*Travels in Beloochistan and Sinde; accompanied by a geographical and historical account of those countries*, London 1816, 129-30).

Disputes and conflicts with Kalāt in 1940 led to an agreement whereby Khārān was recognized as a separate native state under its own Nawāb. The latter immediately acceded to Pakistan in 1947. In 1952

Khārān was merged into the Balūčistān States Union, till in 1955 the whole of Balūčistān was incorporated in the single unit of West Pakistan. Khārān now forms a District of Pakistan (area 18,553 sq. miles) under a Deputy Commissioner; the population in 1961 was 42,483.

(C. E. Bosworth)

KHARĀNA, a fortified building, usually referred to as Ḳaṣr Kharāna. It is strategically located in the Transjordanian desert, 60 km. SE of ʿAmmān in lat. 31° 42′ N. and long. 36° 79′ E., on the edge of a *wādī* at the meeting of several desert tracks. The land is stony, infertile and geologically basaltic (whence conceivably a connection of its name with Arabic *ḥarra* [*q.v.*]), and there is no obvious water supply; 2 km. to the WSW is an Upper Palaeolithic-Mesolithic site, with an abundance of flint implements. The entrance to Ḳaṣr Kharāna (see Plate xxix a) incorporates two stone blocks with part of a Greek inscription, suggesting that there was an earlier building nearby, of the late Roman or Byzantine period.

The building is approximately 35 m. square, and is two stories high; it is built of rough masonry with decorative brick inserts and plaster details. The outer wall has a round tower at each corner, and semi-circular towers at the centre of the N, E and W sides. The single entrance is on the S side, flanked with quarter-round projections, with a large window above and a row of decorative niches. The walls are pierced with loopholes of unusual design, the vertical opening topped by a single stone against which two bricks are set diagonally. Between the two rows of loopholes and an upper row of rectangular openings are horizontal bands of decorative brickwork inserted in the masonry, the bricks being placed diagonally to produce a herringbone pattern.

Inside, the covered entrance leads to a central courtyard, surrounded on all sides by *bayts* of varying dimensions, on two floors. Round the courtyard there was once a gallery, which has now disappeared (see Plate xxix b). Access to the gallery, and to the rooms on the upper level opening off it, was by means of two sloping ramps. The larger rooms on the upper floor are roofed by transverse vaults of stones set end to end, supported on triple engaged columns without bases or capitals, all plastered over. Two of these rooms have semi-domes at the far end, supported at the angles by squinch arches (see Plate xxx a). The rooms are plastered, with simple decorative mouldings, and a number of carved roundels with formal, symmetrical plant designs.

Important evidence for the date of Ḳaṣr Kharāna was the discovery by B. Moritz in 1905-6 of a *graffito* inscription on the wall of one of the upper rooms (see Plate xxx b). This inscription in eleven lines, and another three-line inscription nearby, are amongst the earliest extant painted Arabic texts. The last three lines contain the statement, "ʿAbd Allāh ibn ʿUmar wrote [it] on Monday three [nights] remaining from Muḥarrem of the year two and ninety" (tr. N. Abbott). This date corresponds to Monday, November 24th, 710 AD. It has been conjectured that ʿAbd al-Malik b. ʿUmar (whose name is given thus at the beginning of the inscription) was a member of al-Walīd's entourage, returning from a visit to Mecca in 91/710. Whilst the inscription cannot be interpreted in any way as evidence for the Muslim origin of the building, it does provide a useful *terminus ante quem*. Most authorities, and notably K. A. C. Creswell, have identified the building as Sāsānid, and have associated it with the Persian occupation of 614-28 A.D. Creswell, and others, have observed that many of the structural and decorative features, such as the use of elliptical arches, the squinches, the engaged columns supporting transverse arches, and the quarter-round entrance towers, find their parallels in Sāsānid and Mesopotamian architecture; Creswell has also pointed out that the obviously defensive nature of the structure sets it apart from the majority of the later Umayyad desert palaces, which were seldom fortified.

Bibliography: A complete bibliography is given by K. A. C. Creswell in his note on Ḳaṣr Kharāna, *Early Muslim architecture, Umayyads, A.D. 622-750*, Oxford 1969, ii, 44-49. The most important works include the first account of the building by Gray Hill, *Palestine Exploration Fund Quarterly Statement*, 1896; J. A. Jaussen and R. Savignac, *Les châteaux arabes de Qeṣeir ʿAmra, Ḥarâneh et Ṭûba*, Paris 1922, contains a detailed description; B. Moritz, *Ausflüge in der Arabia Petraea*, in *MFOB*, iii, (1908); A. Warren, *A Sasanian attribution of two buildings in Jordan*, in *Art and Archaeology Research Papers*, xi, London 1977, discusses the relationship with the *ribāṭ* on the citadel in ʿAmmān; for the painted inscription, see *RCEA*, i, 1931, and the discussion of it by N. Abbott, *The Ḳaṣr Kharāna Inscription of 92H (710 A.D.) a new reading*, in *Ars Islamica*, xi-xii (1946).

(J. Carswell)

KHʷĀRAZM, in post-Mongol times increasingly known as Khīwa, the province lying along the lower course of the Amū Daryā [*q.v.*] or Oxus, classical Chorasmia. In the early Islamic period, the southern boundary of Khʷārazm was considered to be at Ṭāhiriyya, five days' journey downstream from Āmul-i Shaṭṭ (modern Čārdjūy), the crossing-place of the Khurāsān-Bukhārā caravan route. Ṭāhiriyya lay just to the south of the gorge of the "lion's mouth", Dahān-i Shīr, where the river narrows at modern Düldül Atlaghān near Pitnyak. However, the Ghaznawid historian Bayhaḳī (5th/11th century) reckoned Darghān (in post-Mongol times, Darūghān-Atā), to the north of the gorge, as the beginning of Khʷārazm. Below the gorge, the Amū Daryā fans out into an extended delta plain, with numerous river channels and irrigation canals (*arīḳ*s), as far as the shores of the Aral Sea. This plain forms an island of fertility and cultivation within the surrounding steppe and desert, linked only with Transoxania by the strips of agricultural land along the Amū Daryā banks, and one would expect that in such a well-watered region, comparable in many ways to the habitat of the Nile and Mesopotamia, a sedentary, agrarian society would early arise. Soviet archaeology has in fact shown that the Kelte Minar Late Neolithic culture was characteristic of the region in the fourth millenium B.C., whilst in the second millenium B.C. the Taza Bagh Yab culture was typical of the Khʷārazmian Bronze Age (see S. P. Tolstov, *Drevniy Khorezm*, Moscow 1948, and A. L. Mongait,

a. General view, showing the main entrance with quarter-round towers (upper section restored)

b. The internal courtyard. Note the springing of arches and the traces of a gallery, now disappeared, on the first floor.

a. Upper floor room, with a semi-dome supported on squinch arches.
b. Squinch arch in upper room, with *graffito* inscription between the springing of the arch and the angle of the walls, dated 91/710.

Archaeology in the U.S.S.R., Moscow 1959, 263-77).

The etymology of the name Khwārazm has evoked much speculation. In his article *Khwārazm* in the *Muʿdjam al-buldān*, ed. Beirut 1374-6/1955-7, ii, 395-8, Yāḳūt offers a folk-etymology relating to two outstanding features of the province, the food gained for the Khwārazmians from the Amū Daryā and its channels, sc. the fish, and the trees and bushes which probably covered some part at least of the region in early times and supplied fuel for cooking; the traveller Ibn Faḍlān (309/921-2) remarks on the cheapness and easy availability of firewood there. Hence, Yāḳūt says, *khwar* = "flesh" (*laḥm*), and *r.z.m.* = "firewood" (*ḥaṭab*). Outside the realm of fancy, an obvious meaning for the name might well be "lowlands", if the *-zmi-* element of the Achaemenid name for Khwārazm, Huwārazmiš, reflects Middle and New Persian *zamīn* "land" and the first element in New Persian *khwār* "low, abject". Another suggestion has connected the first element with *khūrshīd* "sun" and has explained it as "the land of the rising sun", reflecting Khwārazm's position on the north-eastern periphery of the Iranian heartlands; and a further explanation has been that of "fruitful land", linking the first element with New Persian *khwurdan* "to eat". Tolstov has even explained it as "the land of the people Khwarri or Kharri", connecting these with the Hurrians who founded the Mitanni kingdom in northeastern Mesopotamia and the Lake Van region in the middle of the second millenium B.C., presumably positing a migration of the proto-Hurrians westwards from Central Asia. Whether Khwārazm is to be identified with the *Airyanem vaeǰo* "Aryan range" of the Avesta, sc. with the homeland of the old Iranian sacred books, as was maintained by, e.g. Marquart, is unproven but not unlikely; W. B. Henning suggested a possibility that the Gāthās, the oldest part of the Avesta, were composed in northern Khurāsān, the region of Marw and Harāt, perhaps then part of the pre-Achaemenid kingdom of Khwārazm.

It certainly seems that in Achaemenid times Khwārazm was a flourishing land, and on the evidence of the Behistun and Persepolis inscriptions, was subject to some degree of Achaemenid control. Khwārazm or Huwārazmiš provided a "dark-blue stone" (? turquoise) for decorating the palace of Darius at Susa. Herodotus alludes to what he calls "the plain of the Akēs River", i.e. the Oxus, as part of the Achaemenid dominions, and mentions the presence of Chorasmian and Parthian troops in the army of Xerxes as a special division under Artabazus son of Pharnaces; he further says that these soldiers were equipped in the same fashion as the Bactrians, sc. with Median caps, bows and short spears. By the time of Alexander the Great, however, the Khwārazmians had somehow thrown off Persian control, and when Alexander was in Bactria in 328 B.C. he received a visit from the King of Chorasmia, Pharasmanes, and his retinue of 1,500 cavalrymen. Apparently Pharasmanes claimed sovereignty over all the steppes westwards from Chorasmia to Colchis on the Black Sea shores—by no means an impossible boast, given the long-standing political, commercial and cultural connections of Khwārazm with the Volga basin and South Russia.

Once the exiguous Greek sources become silent, we are dependent for literary evidence about the next centuries on the equally fragmentary information from the Khwārazmian Islamic scholar Bīrūnī (d. after 442/1050) [*q.v.*], a Khwārazmian patriot who was clearly conscious of the ancient glories of his homeland. In his *al-Āthār al-bāḳiya*, ed. Sachau, Leipzig 1878, 35-6, tr. idem, *The chronology of ancient nations*, London 1879, 40-2, he has a section on the ancient history and rulers of Khwārazm and on its era. He also wrote a special history of the province, the *Kitāb al-Musāmara fī akhbār Khwārazm*, cited by Yāḳūt (who visited Khwārazm personally in 616/1219-20, travelling from Marw in the depths of the harsh steppe winter) and utilised by Bayhaḳī in the closing section of his *Mudjalladāt* (*Taʾrīkh-i Masʿūdī*, ed. Ghanī and Fayyāḍ, Tehran 1324/1945, 665-91, tr. Arends, *Istorya Masʿuda* (1030-1041)[2], Moscow 1969, 805-36); it is regrettable that no parts of this work on the pre-Ghaznavid history of Khwārazm have survived.

Until recent decades, we have had to depend largely on Bīrūnī for the history of the semi-legendary and pre-Islamic past of Khwārazm. He says that the land was first colonised 980 years before Alexander the Great, sc. before the Seleucid era, i.e. in 1292 B.C., when the hero of Iranian epic Siyāvush came to Khwārazm, and his son Kay Khusraw was established on the throne 92 years later, in 1200 B.C. He starts giving names only with the Afrīghid line of Khwārazm-Shāhs, having placed the ascension of Afrīgh in 616 of the Seleucid era, i.e. in 305 A.D.

The oldest Chinese name for Khwārazm, Yue-kien, given in the annals of the Earlier Han (first and second centuries B.C.), suggests as the centre of Khwārazmian power Gurgāndj [*q.v.*], earlier form Urgāndj, on the left bank of the Amū Daryā in lower Khwārazm. However, Ptolemy mentions that this centre lay on the right bank of the river, corresponding to the position of the royal palace excavated by Tolstov at Toprak-kala and that of the later capital of the Afrīghids, Kāth [*q.v.*] or al-Fīr/al-Fīl, and this seems both historically and archaeologically more probable. The remarkable results of Soviet archaeological work have indeed vastly widened our knowledge of the pre-Islamic history of Khwārazm. Well over 1000 pre-Islamic and early-Islamic coins have been found, together with many inscriptions in the Khwārazmian language and script on vessels, documents, etc. (see on these, below). In general, these results show that Bīrūnī's dates and names are not to be relied upon, for he was writing about matters which he could not verify. Thus V. A. Livshits has shown from dated Khwārazmian artefacts that Bīrūnī's eras from the Siyāvushid foundation of the kingdom and from the establishment of the Afrīghids, were never in actual use; instead, there was an official era beginning in the opening years of the Christian era, and probably to be connected with the rise of the new, pre-Islamic line of Shāhs and the achievement of independence from Parthian control, a control which seems to be attested by the clear Arsacid influence in coin designs, etc. (*The Khwarezmian calendar and the eras of ancient Chorasmia*, in *Acta antiqua academiae scientarum hungaricae*, xvi (1968), 433-46, and see KHWĀRAZM-SHĀHS).

We are wholly dependent on archaeology for any information at all on social and economic topics. Soviet research has provided much basic data, though these may be capable of various interpretations. It has shown the presence of extensive agricultural estates, with outlying field systems irrigated by networks of *arīḳs* or canals, and with central concentration points and fortified citadels, within which the peasants and their herds could take refuge. It is likely that, as at all times in its known pre-modern history, Khwārazm's borders were under pressure from the pastoralist nomads of the surrounding

steppes, probably by peoples like the Massagetes and Sakas in early times, and certainly by Turkish tribes like the Oghuz, Ḳïpčaḳ, Pečenegs, etc. in Islamic times. Bīrūnī speaks in his *Āthār*, 236, tr. 224, of annual expeditions led by the Khwārazm-Shāhs against the Oghuz, so that there was an autumn festival in Khwārazm called *faghburiyya* "that of the King's expedition" (*faghbur* = Iranian *baghpur*). It seems certain that in the 4th/10th century a group of Oghuz, perhaps semi-sedentarised and practising some agriculture and fishing but still inclined by nature to plundering and rapine, were established near the mouth of the Syr Daryā or Jaxartes only ten stages from Khwārazm, and their *Yabghu* or leader spent his winters at their settlement of Yengi-kent (Dih-i naw, al-Qarya al-djadīda, modern Djānkent-kala). The fortified nature of the Khwārazmian agricultural domains can thus be easily explained by this need for security against external marauders. It is less certain that these fortified enclosures were, as Soviet authorities have suggested, designed also for internal defence purposes, in the shape of peasant revolts against the "feudal" landowners of the province.

Tolstov adduces in support of his argument the events surrounding the Arab conquest of Khwārazm in 93/712 by Ḳutayba b. Muslim al-Bāhilī, the lieutenant in Khurāsān of the great governor al-Ḥadjdjadj b. Yūsuf. There had been attempts by the Arabs in the early Umayyad period to extend their raids through Transoxania to Khwārazm, and historians like Balādhurī, Ṭabarī and Ibn al-Athīr mention various raids, such as that led by Salim b. Ziyād in 61/681 against a town on the borders of Khwārazm (possibly Hazārasp) where the local Iranian princes of Soghdia had banded together to resist the Arabs. Ḳutayba was able to intervene in internal Khwārazmian politics because he was summoned in from Marw by the Afrīghid Shāh, unable by himself to make headway in a civil war with his younger brother Khurrazād ("the sun-born one"), who had seized power. Tolstov interprets Khurrazād's movement as one of social protest, of the Neo-Mazdakite type familiar in the disturbed countryside of Persia at this time, a rising of the urban and rural masses against the Khwārazm-Shāh and the landed aristocracy (what Ṭabarī, ii, 1237, calls "the *dihḳān*s and *marzbān*s"). He bases himself on Ṭabarī's information that Khurrazād confiscated the slavegirls, fine horses, precious articles, etc. of those connected with the royal court; but the social implications of all this, if there were any, are not really explicit in the Arabic sources. See H. A. R. Gibb, *The Arab conquests in Central Asia*, London 1923, 42-3; Tolstov, *Auf den Spuren der altchoresmischen Kultur*, Berlin 1953, 239-45; B. Spuler, *Iran in früh-islamischer Zeit*, Wiesbaden 1952, 31.

At all events, the two Arab invasions of this year, entailing the killing by the Arabs of the Khwārazm-Shāh himself, brought the province for the first time into the Arab orbit, and the Arabs were able to exact the payment of tribute and the supplying of auxiliary troops. Much damage seems to have been wrought by the incoming Arabs. Bīrūnī says that Ḳutayba slaughtered all those who knew the old Khwārazmian script and who knew the old historical traditions. This is doubtless an exaggeration. The requirement of tribute lapsed, and Islam was certainly not implanted immediately. The Afrīghids themselves did not become Muslim till three generations or so later, perhaps in the caliphate of al-Ma'mūn. The Shāhs continued to join with the Soghdian rulers of Transoxania in common hostility to the Arabs, encouraging intervention by the Turks and Chinese; in 133/751 we hear from Chinese sources of an embassy from the Shāh Shāwushfar(n) (whose name is also known from coins) to the Imperial Court (Chavannes, *Documents sur les Tou-kiue (Turcs) occidentaux*, St. Petersburg 1903, 145). The Khwārazmian language survived for several centuries to come, and so must some at least of the culture and lore of ancient Khwārazm, for it is hard to see the commanding figure of Bīrūnī, a repository of so much knowledge, appearing in a cultural vacuum.

The persistence of the Khwārazmian language was, in fact, an outstanding manifestation of Khwārazmian ethnic and cultural vitality. Linguistically, this eastern Iranian language occupies a position midway between Soghdian on the east, known to us from a large number of Manichaean, Buddhist and other texts, and the rather less well-known Parthian on the west; an especially interesting feature of Khwārazmian is its conservative character in preserving many Avestan words (cf. the hypothesis, mentioned above, that the Gāthās were composed in northern Khurāsān, then part of the pre-Achaemenid state of Chorasmia). It was a written language well before the Arab conquest, utilising, like Pahlavi, Parthian and Soghdian, an alphabet ultimately derived from the Aramaic one. This early stage of the language is known to us from the finds of Soviet archaeology, coin inscriptions, legends on pottery and silver vessels, documents on wood and leather, and many funerary inscriptions from ossuaries, but few of these texts have so far been satisfactorily published. It seems likely, however, that the Khwārazmian script emerged around the first century B.C. and was probably influenced by the practice of the Arsacid Parthian chancery. Ḳutayba's invasions may have ended the old scribal tradition, but the language itself persisted, now written in the Arabic alphabet but with several characters modified to render the characteristic sounds of Khwārazmian, e.g. ۋ for the labiodental fricative *v* or β, and څ for the africate *ts* (as in Pashto) and probably for its voiced equivalent *dz*; these modified characters are to be found, for instance, in several manuscripts of Bīrūnī's works where Khwārazmian names and terms are cited. It may be that Bīrūnī knew something of the old Khwārazmian script, but this is uncertain. Khwārazmian speech struck the Muslim geographers and travellers to the province as particularly queer and harsh; Ibn Faḍlān compares it to the chatter of starlings and the croaking of frogs (A. Z. V. Togan, *Ibn Faḍlāns Reisebericht*, Leipzig 1939, text 7, tr. 12).

The main sources for our rather exiguous knowledge of later Khwārazmian are the glosses in the Khwārazmian scholar Zamakhsharī's Arabic dictionary the *Muqaddimat al-adab*, together with Khwārazmian sentences in a series of Arabic legal works adapted for use in Khwārazm, in particular, the *Ḳunyat al-munya* of Mukhtār b. Maḥmūd al-Zāhidī (d. 658/1260). Khwārazmian culture and speech felt the pressure of Turkish infiltration from northern Khwārazm southwards, leading to the disappearance of the original Iranian character of the province and its complete turkicisation today, but Khwārazmian speech probably lasted in upper Khwārazm, the region round Hazārasp, till the end of the 8th/14th century. See on the Khwārazmian language, W. B. Henning, in *Handbuch der Orientalistik*, 1. Abt., 4. Band, 1. Abschnitt, *Iranistik*, Leiden-Cologne 1958, 25, 56-8, 81-4, 109-20, and D. N. MacKenzie,

in *Cambridge history of Iran*, iii, *The Seleucid, Parthian and Sasanid periods*, ch. xxv(f); the Khwārazmian dictionary on which Henning was working till his death remains unpublished, but a section of it has now been edited by MacKenzie, *A fragment of the Khwarezmian dictionary* . . . , London 1971.

The religious pattern of early Islamic Khwārazm shows the gradual permeation of Islamic faith and learning, so that Khwārazm became, like Khurasān and Transoxania, a bastion of Sunnī orthodoxy and scholarship, attested by the large number of traditionists, lawyers, theologians, etc. with the *nisba* "al-Khwārazmī". The great mathematician Muḥammad b. Mūsā al-Khwārazmī (d. after 232/847) [*q.v.*] flourished at a time when the Khwārazm-Shāhs were only just becoming Muslims themselves, and in the following century we have such outstanding figures as the poet and prose stylist Abū Bakr Muḥammad b. al-ʿAbbās al-Khwārazmī (d. 383/993) [*q.v.*], and the Sāmānid secretary and official Abū ʿAbd Allāh Muḥammad b. Aḥmad al-Khwārazmī [*q.v.*], author of the pioneer encyclopaedia of the sciences, the *Mafātīḥ al-ʿulūm*. The Arabic literary and philological sciences flourished there, as is shown by the section on the *fuḍalāʾ Khwārazm* in Thaʿālibī's anthology, the *Yatīmat al-dahr*, ed. Cairo, iv, 194-255, and by the figure of Bīrūnī himself. Bīrūnī normally used Arabic for his learned and scientific works, but he must have been trilingual in Khwārazmian, Arabic and New Persian. One manifestation of the orthodoxy of Khwārazm was, according to Ibn Faḍlān, the customary cursing of ʿAlī at the end of the daily prayers. Muʿtazilism was specially linked in the popular mind with Khwārazm (cf. Yāḳūt, *Irshād*, vi, 155), and according to Ibn Baṭṭūṭa, Muʿtazilī ideas were still held by Khwārazmian scholars long after they had disappeared from the Muslim lands further west. We may also suppose that Khwārazm was, like Transoxania, a jumping-off point for dervishes and other enthusiasts to undertake missionary work within the steppes, and Khwārazmian *ghāzī*s manned *ribāṭ*s or frontier posts on the steppe fringes against the marauding Turks.

Zoroastrianism seems to have lasted in Khwārazm till the 5th/11th century, though Bīrūnī, *Āthār*, 235 ff., tr. 223 ff., says that the Zoroastrians were then only a small remnant, who went through the outward forms of their religion and observed its festivals, without knowing much about its inner spirit. Christianity was more flourishing. Bīrūnī again tells us, *Āthār*, 288, tr. 282-3, that the Christians of Khwārazm were Greek Orthodox Melkites, their connections with the Byzantine world being made doubtless via the overland route to the Caspian and South Russia. Although the Christianity of Iran and Central Asia was strongly Nestorian, with its metropolitan centre at Marw, Bīrūnī also mentions a Melkite metropolitan for Iran based on Marw also. There were, moreover, some Jacobites or Monophysites in Khwārazm. An 8th century Melkite *Notitia episcopatum* shows that the Melkite bishopric of Khwālis or Khwārazm fell administratively within the archidiocese of Doros in the Crimea, see the map in Tolstov, *Auf den Spuren*, 247. In the mid-7th/13th century, Latin travellers mention the Christians of Urgenč (Gurgāndj) as stemming from Khazar, Alan and Russian communities, and shortly afterwards, the Armenian king Haiton mentions that the Khwārazm Christians came under the Patriarchate of Antioch (see Barthold, *Zur Geschichte des Christentums in Mittel-Asien bis zur mongolischen Eroberung*, Tübingen-Leipzig 1901, 32-4). In the early Islamic period, we hear of Khwārazmian Christians playing a rôle as officials and secretaries; Ibn Faḍlān found that the faithful intendant of the ʿAbbāsid vizier Abū 'l-Ḥasan Ibn al-Furāt's estate at Artakhushmīthan was a Christian.

The Arab geographers of the 4th/10th century give detailed accounts of the topography and climate of Khwārazm (with much emphasis on the intense cold of the winters) and of the flourishing economic and commercial condition of the province. The political division between the local governors controlling Gurgāndj in the northwest and the Afrīghid Shāhs ruling the ancient capital Kāth in the east, a division which may conceivably go back to Ḳutayba's conquest, though this is uncertain [see KHWĀRAZM-SHĀHS], was a reality in the early 4th/10th century; the rise to power at the end of the century of the Maʾmūnid family in Gurgāndj is probably to be connected with the commercial florescence of the town, situated as it was at the end of the trade route to South Russia and the northern forest zone. The extent of this trade may be gauged by the implanting of colonies of Khwārazmian traders (on the evidence of toponomy) in South Russia and eastern Europe, and by the fact that Ibn Faḍlān, on his mission to the King of Bulghār, left Gurgāndj in a caravan of 3,000 camels and 5,000 people. Kāth itself nonetheless still prospered, and the *Ḥudūd al-ʿālam*, tr. 121, describes it as "the emporium of the Turks, Turkistān, Transoxania and the Khazars". A detailed account of the topography and geography of Khwārazm at this time can be found in Barthold, *Turkestan down to the Mongol invasion*[2], 142-55, see also Le Strange, *The lands of the eastern Caliphate*, 443-59. The geographers' accounts show that cultivation and the pattern of settlement there were still to some extent dependent on the position of the Amū Daryā and its frequently-changing channels; the citadel and palace of the Afrīghid Shāhs in Kāth was gradually undermined by the river waters, and by the mid-4th/10th century the citadel and old city had been abandoned and a new city built to the east. As for the products of Khwārazm, the sources mention fruit (especially melons, which in the Caliphates of al-Maʾmūn and al-Wāthiḳ were exported in leaden, snowpacked containers as far as Baghdād, and which Ibn Baṭṭūṭa also praises as ones of incomparable quality), dried fish, textiles, cheese, snow, bows, etc.; whilst imports from the steppes and forests included sheep, camels, furs, hides, honey, hardwoods, and above all, Turkish and Ṣaḳlabī slaves.

In the 4th/10th century Khwārazm was nominally under the suzerainty of the Sāmānid Amīrs of Bukhārā, but little is known of the internal history of the province during these last few decades of Afrīghid rule. In 385/995 the Maʾmūnids of Gurgāndj overthrew the ancient dynasty and themselves assumed the title of Khwārazm-Shāhs, but in 408/1017 the province passed to the Ghaznawids; this control by Sulṭān Maḥmūd meant the end of political power in Khwārazm exercised by local dynasties, just as the extinction of the Sāmānids in Transoxania meant the end of direct Iranian rule there. In the cases of both regions, the assumption of power by Turkish rulers and the breaking-down of the northeastern bulwark of the Iranian world against pressure from the steppes inaugurated an accelerating process of ethnic and linguistic turkicisation; Khwārazm became wholly Turkish, and in Transoxania, only the restricted district of Tajikistan survives of the formerly vast *Iran extérieur*. Khwārazm came into the Saldjūḳ orbit after the downfall of Ghaznavid power in Khurāsān,

and was ruled by Turkish slave governors on behalf of the Saldjūḳ Sulṭāns. In the last years of the 5th/10th century, the governor Anūshtigin Gharčaʾī succeeded in founding an hereditary line in Khʷārazm, whose members also took the title of Khʷārazm-Shāhs and who were, after the middle years of the 6th/12th century, virtually independent (for details of the history of these three centuries before the Mongol invasions, see KHʷĀRAZM-SHĀHS).

The extensive empire built up by this last line of Khʷārazm-Shāhs nevertheless crumbled before the Mongol onslaught, and the Shāh ʿAlāʾ al-Dīn Muḥammad's capital of Urgenč (the former Gurgāndj) fell to Čaghatay and Ögedey in 618/1221 after a valiant defense. After this, the northern part of Khʷārazm and the lower Syr Daryā region came within the lands of the Golden Horde for 140 years, with only the southern part, including Kāth and Khīwa, coming within the Čaghatayid *ulus*; till *ca.* 751/1350 Khʷārazm was directly ruled by the Golden Horde Khāns, and after the collapse of the Il-Khānids in Persia, Khʷārazm formed the base for military operations against Khurāsān. Thus the greater part of Khʷārazm was politically linked under the Golden Horde with the region with which it had so many ancient links, that of the Volga basin and South Russia, and this unity favoured the growth of commerce across the steppes connecting the two regions; *ca.* 740/1340 Ibn Faḍl Allāh al-ʿUmarī found prices almost identical in the Golden Horde centre of Sarāy on the Volga and in Urgenč, and the same weights and measures were in use in both cities (see Spuler, *Die Goldene Horde, die Mongolen in Russland 1223-1502*[1], Leipzig 1943, 275, 390). The capital Urgenč was rebuilt in 628/1231 on a new site some distance from the old Gurgāndj (Ibn al-Athīr, xii, 323, who calls the capital *madīnat Khʷārazm*, in accordance with the tendency to name a capital after the province or region in which it is situated), and Ibn Baṭṭūṭa, who travelled from Sarāy to Khʷārazm and Transoxania a century later, expatiates on its flourishing state, its fine markets and its populousness; Kāth, on the other hand, had sunk to the status of a village. Khʷārazm also became once more a home of learning and the arts, so that ʿAbd al-Razzāḳ Samarḳandī describes it in his *Maṭlaʿ al-saʿdayn* as "the rendez-vous of the most distinguished figures of the world", *madjmaʿ-i aʿyān-i djihān*. Ibn Baṭṭūṭa again praises the charitable foundations of Khʷārazm, the *madrasas*, hospitals, etc., some of which had been built by Özbeg Khān's governor there, Ḳutlugh Tīmūr, and he visited the hospice at the tomb of the great Ṣūfī shaykh Nadjm al-Dīn al-Kubrā, killed by the Mongols when they captured Urgenč, and the tomb of Zamakhsharī (*Riḥla*, iii, 3 ff., tr. Gibb, iii, 541 ff.). The tomb of Ḳutlugh-Tīmūr's wife Turā Beg Khānum, which Ibn Baṭṭūṭa mentions, still survives in the ruins of Old Urgenč, Kunya Urgenč, as does that of Nadjm al-Dīn al-Kubrā (see *Āthār al-Islām al-taʾrīkhiyya fī 'l-Ittiḥād al-Sūfiyyitī*, Tashkent *ca.* 1962, Pls. 18, 19).

Two or three decades after Ibn Baṭṭūṭa's visit, there arose in Khʷārazm an independent minor dynasty, the Ṣūfids, of a Ḳongrat Turkish tribe; the coins in Khʷārazm for the Khāns of the Golden Horde cease in 762/1361, and those of Ḥusayn Ṣūfī, founder of the line, commence in 765/1364. Ḥusayn Ṣūfī displaced the Čaghatayids from Kāth and Khīwa, and held off Tīmūr from Khʷārazm till 781/1379. The line revived after a temporary submergence under the Tīmūrids, with help from the Golden Horde Khān Toḳtamīsh, but in 790/1388 Sulaymān Ṣūfī was defeated and this time Tīmūr razed Urgenč to the ground. Khʷārazm never really recovered from this blow, and it seems henceforth to have lost its former importance in both the cultural and commercial life of Central Asia.

In the 9th/15th century, possession of Khʷārazm alternated between the Golden Horde Khāns and the Tīmūrids, but members of the Ṣūfī family seem to have retained local power as governors; ʿUthmān b. Muḥammad Ṣūfī is mentioned in 868/1464 as vassal of the Khān Muṣṭafā. In 911/1505 Khʷārazm passed to Muḥammad Shaybānī, founder of the Özbeg amīrate in Transoxania, and in 916/1510 briefly to the Ṣafawid Shāh Ismāʿīl, the opponent of Shaybānī.

A new local Özbeg dynasty now appears in Khʷārazm, like the Shaybānids of Transoxania descended ultimately from Djoči, son of Čingiz Khān, but only remotely connected with the main line of the Shaybānids. This was the dynasty of ʿArabshāhids (917-end of the 11th century/1511-end of the 17th century), whose genealogy (conjectural in parts) is given by Zambaur, *Manuel de généalogie et de chronologie*, 274-5. The centre of the new principality lay at Khīwa, which from Tīmūrid times onwards becomes the principal city of Khʷārazm, and the ʿArabshāhid capital from the amīrate of ʿArab Muḥammad I (1011-32/1602-23) onwards. Khīwa must be an ancient, pre-Islamic Khʷārazmian settlement. Khīwa, older form Khīwaḳ, is already described as a place of fair importance by the 4th/10th century geographers, and became further celebrated as the birthplace of Shaykh Nadjm al-Dīn al-Kubrā [*q.v.*]. Yāḳūt says that its people were in this time still Shāfiʿīs, whereas the rest of Khʷārazm had become Ḥanafī. Now, reversing the older process, the city of Khīwa began to give its name to the whole province, henceforth usually known as the Khānate of Khīwa. The old city of Urgenč, only partly rebuilt by Tīmūr, must have become deserted, for a new Urgenč arose 20 miles northeast of Khīwa, and soon became the most important commercial centre of Khīwa; the ancient capital Kāth, by then very shrunken, had to be completely abandoned when the channel on which it was situated dried up. However, the ʿArabshāhid Khān Muḥammad Anūsha (1074-85/1663-74) built a new Kāth on the left bank of the Amū Daryā below New Urgenč.

The ʿArabshāhids exercised direct rule in Khʷārazm, and held suzerainty over a considerable area beyond it, extending to the northern rim of Khurāsān and to the eastern shores of the Caspian Sea, the regions known as "the side of the mountains", as opposed to "the side of the water", those regions lying along the Amūr Daryā. Two of the Bukhārā Özbeg Amīrs, ʿUbayd Allāh b. Maḥmūd in 945/1538 and ʿAbd Allāh b. Iskandar in 1001/1593 and 1003-05/1595-7, managed briefly to occupy Khʷārazm, but on the whole the ʿArabshāhids maintained themselves against their Transoxanian neighbours, and at times carried warfare as far as Bukhārā itself, as did Muḥammad Anūsha in 1076/1665. Nevertheless, the cultural level of the ʿArabshāhid kingdom was perceptibly lower than that of Transoxania. The best-known ruler of the dynasty was Abu 'l-Ghāzī Bahādur Khān [*q.v.*] (1054-74/1644-63), the author in Čaghatay or Eastern Turkish of the *Shedjere-yi Terākime* on the history of the Mongols and the *Shadjarat al-Atrāk* on the history of the Shaybānids, completed by his son Muḥammad Anūsha; but Abu 'l-Ghāzī states at the outset in the latter work that he was forced to write the history of his land because none of his subjects was educated enough to undertake this task.

After the end of the ʿArabshāhid line, there fol-

lowed various *fainéant* khāns of Čingizid lineage but little competence or power, who were summoned from the steppes; the real holder of power in Khīwa was generally the Inaḳ (i.e. senior member and military chief) of the Ḳongrat tribe, who simply sent these *khāns* back to the steppes when they proved inadequate for his purposes. It was in the 12th/18th century that relations between the Khānate of Khīwa and the expanding power of Russia began to assume some importance. Already, the Ural Cossacks had been attracted by the famed richness of Khwārazm and had raided New Urgenč. In 1717 Peter the Great, drawn by the possibility of opening up an overland trade to Bukhārā and India, and acting on a pretext that was to be much used in the process of the Russian reduction of Central Asia, viz. the release of Russian prisoners, sent a military expedition against Khīwa under the Circassian adventurer Bekovič. The attempt failed, but in 1153/1740 the Persian conqueror Nādir Shāh Afshār conquered Bukhārā and Khīwa temporarily; however, Nādir's nominee to the throne in Khīwa, Tagir, did not long survive the Shāh's withdrawal.

From now onwards, the Khīwa Khānate in general and the topography of the capital begin to be well-known from the accounts of Russian and western European travellers and visitors. Khīwa suffered badly from the raids from the south of the Yomut Türkmens of the Ḳara Ḳum desert, who almost completely destroyed the city shortly before 1184/1770; these Türkmens were however driven off and the city restored in that year by the Inaḳ Muḥammad Amīn. In 1219/1804 the Inaḳ Iltüzer, grandson of Muḥammad Amīn, assumed the title of Khān, and the remaining Khāns of Khīwa were all from his line. Warfare with the Khāns of Bukhārā continued in the early 19th century, and in an expansionist phase under the Khān Muḥammad Raḥīm (1221-41/1806-26) and his son Allāh Ḳulī (1241-58/1826-42), the Khīwa Khānate assumed its greatest extent, from the shores of the Aral Sea and the Syr Daryā mouth, to the south of Marw.

But Russian expansionism now assumed serious proportions. The winter expedition of 1839-40 from Orenburg under General Perovski failed miserably, but soon afterwards, the Khān had to accede to a set of Russian demands, after vainly trying to open up relations with Great Britain. The Russians founded a fort named Kazalinsk at the mouth of the Syr Daryā in 1847, used subsequently as a base against the Khānate of Khoḳand and Tashkent, but also constituting a threat to the flank of Khīwa. The Khānate was prosperous enough internally at this time, as is shown by the *Sifārat-nāma-yi Khwārazm*, the account of the Persian envoy Riḍā Ḳulī Khān, who visited Khīwa in 1267/1851 to negotiate the freeing of Persians captured by the Türkmens in Māzandarān and Khurāsān and then sold in the slave markets of Khīwa (French tr. by Ch. Schefer, *Relation de l'ambassade au Kharezm de Riza Qouly Khan*, Paris 1879). It continued, however, to be harassed by Türkmen depredations, and was at odds with the Khānate of Bukhārā. When in 1873 Russian forces from Orenburg, Krasnovodsk on the eastern shore of the Caspian, Perovski on the lower Syr Daryā and Tashkent, advanced simultaneously on Khīwa, the Khān had to capitulate after some fighting. Sayyid Muḥammad Raḥīm lost all his territories on the right bank of the Amū Daryā to Russia, and in his truncated Khānate on the left bank, was to be under the protectorate of Russia, to consider himself as "the obedient servant of the Emperor of all the Russias", and was to pay a heavy war indemnity. The Khāns of Khīwa were never considered by the Tsarist government to be on the same level as those of Bukhārā. Internal dissensions within Khīwa and attacks by the Türkmens still continued, but the last Khān, Sayyid ʿAbd Allāh (1918-20) faced an invasion by Bolshevik troops and had to abdicate in February 1920 in favour of a nominally independent Khwārazmian People's Soviet Republic. This lasted only till 1924, when the internal frontiers of Central Asia were redrawn by the USSR government on ethnic lines, so that the right-bank areas of the old Khīwa Khānate were incorporated in the Uzbek SSR and the left-bank ones in the Turkmen SSR.

(C. E. Bosworth)

KHWĀRAZM-SHĀHS, the ancient title of the rulers of Khwārazm [*q.v.*], used regularly in the early Islamic period (cf. Ṭabarī, ii, 1238, events of 93/712) until the Mongol invasions, and sporadically thereafter; hence as with the designations Afshīn and Ikhshīd [*q.vv.*], this is an example of the survival of what was probably an ancient Central Asian Iranian title well into Islamic times.

The Khwārazmian scholar Bīrūnī gives the names and genealogical sequence of the first line of Khwārazm-Shāhs, the house of Afrīgh, which began, so he says, in 305 A.D. and continued until its overthrow by the Maʾmūnids in 385/995; these Afrīghids followed a semi-legendary line of the Siyāvushids, progeny of the Iranian hero Kay Khusraw. Bīrūnī mentions 22 of these Afrīghids, whose average reign spans neatly 31 years, a generation. This fact alone is suspicious, especially as all the 22 may not have ruled successively anyway, and Bīrūnī's reliability for topics relating to the pre-Islamic past of Khwārazm, topics which he could not personally verify, has recently been called in question [see KHWĀRAZM]. A large number of pre-Islamic Khwārazmian coins (i.e. coins dated up till the 8th century A.D.) have been found by Soviet archaeologists, and the archive of the royal palace at Toprak Kala on the right bank of the Amū Daryā or Oxus has yielded some documents. The typical pattern of these coins, adhered to for nearly a millenium, is of the ruler's head on the reverse and of a cavalryman on the obverse, with the ruler's name in the Aramaic-derived Khwārazmian script and the titles *MLKʾ* "king" and later, *MRʾY MLKʾ* "sovereign king". Unfortunately, few of the coin names correspond with those in Bīrūnī's list as we have it (there is, of course, always the possibility of scribal errors in copying these unfamiliar Iranian names), and nothing like the eponym *ʾf.rīgh* of Bīrūnī; perhaps therefore our designation of the first line of Khwārazm-Shāhs as the Afrīghids is more one of convenience than accuracy.

One Shāh who appears on coins as Khusraw is not

mentioned at all by Bīrūnī. However, there are one or two tentative confirmations of Bīrūnī's names, e.g. of the Arthamūkh, Shāh in the time of the Prophet Muḥammad, according to Bīrūnī. At the time of Ḳutayba's two invasions of 93/712 (when the Arabs were invited in by the Shāh to aid him in a succession dispute, but eventually turned on him and killed him), the then Shāh is named by Bīrūnī as Askadjamūk son of Azkādjawār, the form of the latter's name being confirmed on a coin as Askatsvar (in this particular case, the coin of an earlier Shāh of the same name). Askadjamūk's own son Shāwushfar(n) seems to appear on coins, and must in any case be identical with the ruler Shao-she-fien mentioned by the T'ang annals as sending an embassy to China in 133/751 asking for assistance against the Arabs (Chavannes, *Documents sur les Tou-kiue (Turcs) occidentaux*, St. Petersburg 1903, 145). See for an analysis of these coins legends V. A. Livshits, *The Khwarezmian calendar and the eras of ancient Chorasmia*, in *Acta Antiqua Academiae Scientarum Hungaricae*, xvi (1968), 439-44.

The first Islamic name of Bīrūnī is that one typical of the convert, ʿAbd Allāh b. Turkasbātha, whose reign should probably be placed in the early 3rd/9th century. However, even amongst the last Shāhs with Islamic names, Ibn al-Athīr, viii, 310, mentions a Shāh not included by Bīrūnī, ʿAbd Allāh b. Ashkām, who rebelled against his nominal suzerain, the Sāmānid Amīr of Bukhārā, Nūḥ b. Naṣr, in 332/943-4. It seems that the Sāmānids had extended their authority over Khʷārazm by the early 4th/10th century. When Ibn Faḍlān came from Baghdād in 309/921 accompanying the mission from the Caliph al-Muḳtadir to the King of the Volga Bulghārs, his party went firstly to Naṣr b. Aḥmad's court before proceeding to Khʷārazm; and in the operations of 309/921-2 against the Sāmānid rebel Laylī b. Nuʿmān in northern Persia, the Khʷārazm-Shāh joined the Amīr's forces. In practice, the Shāhs were little disturbed except when they sheltered Sāmānid rebels, and in the last years of Sāmānid rule, Khʷārazmian authority extended southwards as far as the northern fringes of Khurāsān and such frontier posts as Farāwa and Nasā. There are extant some coins of the penultimate Afrīghid Shāh, Aḥmad b. Muḥammad, from the years 348/959-60 and 366/976-7, see Markov, *Inventarniy katalog*, 295, 975.

One obscure aspect of the post-Islamic conquest history of Khʷārazm is the growth of a rival power to the Afrīghid Shāhs in the west of the province at Gurgāndj (the later Kunya Urgenč, Arabic al-Djurdjāniyya) [*q.v.*]. Gurgāndj is mentioned in the accounts of Ḳutayba's conquest as one of the three main cities of Khʷārazm, together with Kāth and Hazārasp [*q.vv.*], and its rise as a rival to Kāth is probably explicable by its growing commercial prosperity as an entrepôt for steppe and South Russian trade; Gardīzī, *Zayn al-akhbār*, ed. Nāẓim, 57, speaks of "ancient hostility", *taʿaṣṣubī ḳadīm*, between the people of the two cities. Bīrūnī describes how, whilst the Afrīghids retained the royal authority (*shāhiyya*), another line exercised governorship (*wilāya*) in Gurgāndj at times. The actual relationship between these two lines of power holders is obscure, and there is not enough evidence to assert, as Sachau did, that the Gurgāndj *amīrs* exercised power continuously from the Arab invasion onwards, with a dual system of authority in Khʷārazm. Nor it is clear who was the "Amīr of Khʷārazm" at the time of the ʿAbbāsid Revolution, ʿAbd al-Malik b. Harthama, mentioned in Narshakhī, *Taʾrīkh-i Bukhārā*, tr. Frye, *The history of Bukhara*, 62. It is further strange that so percipient an observer as Ibn Faḍlān, who first visited the Shāh Muḥammad b. ʿIrāḳ in his capital Kāth and then stayed over three months in Gurgāndj waiting for the winter ice and snow to end, does not mention anything of the political situation in Gurgāndj or the existence there of a rival governor. Yet towards the end of the 4th/10th century, Gurgāndj was certainly in the hands of the Maʾmūnid family of *amīrs*, for the *Ḥudūd al-ʿālam* (372/982), tr. 122, describes the town as "formerly belonging to the Khʷārazm-Shāhs", but now under the control of a separate *pādishāh* or ruler, the Amīr of Gurgāndj.

This *amīr*, Abu 'l-ʿAbbās Maʾmūn b. Muḥammad, in 385/995 overthrew the Afrīghids of Kāth and killed the last Shāh, Abū ʿAbdallāh Muḥammad b. Aḥmad, whom Bīrūnī accordingly calls *al-Shahīd* "the martyr". Abu 'l-ʿAbbās Maʾmūn assumed the historic title and founded a brief-lived second line of Khʷārazm-Shāhs (385-408/995-1017), and the Maʾmūnid court of Gurgāndj became a centre of learning and point of attraction for scholars and literary men from all over the eastern Islamic world. The Shāh Abu 'l-ʿAbbās Maʾmūn II b. Maʾmūn (? 399-407/? 1009-17) and his Vizier Aḥmad al-Suhaylī were surrounded by a brilliant concourse of figures like the philosophers Ibn Sīnā and Abū Sahl al-Masīḥī, the mathematician Abū Naṣr al-ʿArrāḳ, and the medical man Abu 'l-Khayr al-Ḥasan b. al-Khammār. The philologist Abū Manṣūr ʿAbd al-Malik al-Thaʿālibī moved to Khʷārazm from his home town of Nīshāpūr, impelled by the unsettled conditions there consequent upon the fall of the Sāmānids, and became an intimate of the Shāh, to whom he dedicated various works, including a "Mirror for Princes", the *Kitāb Adab al-mulūk al-khʷārazmshāhī*, ed. and tr. by T. R. Topuzoğlu, unpublished Manchester Ph.D. thesis, 1975. The Maʾmūnids also adorned their capital with fine buildings, and a minaret now preserved in the ruins of Kunya Urgenč has an inscription describing how Maʾmūn II ordered its building in 401/1011 and supervised the laying of its foundations (see Barthold, *Turkestan down to the Mongol invasion*[2], 147 n. 4).

The Maʾmūnids unfortunately came up against the expansionist policies of the Ghaznawid Sulṭān Maḥmūd b. Sebüktigin, who aimed at turning the flank of his enemies the Ḳarakhānids by securing possession of Khʷārazm. In 405/1014 Maḥmūd demanded that Maʾmun II place the Sulṭān's name in the *khuṭba* of the Khʷārazmian territories, i.e. in effect recognise him as overlord of Khʷārazm. Maḥmūd's sister Kah-Kaldjī was successively wife of two of the Shāhs, and when Maʾmūn was assassinated in 407/1017 by a patriotic reaction against his submissiveness to the Ghaznawid, Maḥmūd had a pretext for intervention, the avenging of his brother-in-law. Maḥmūd's army invaded Khʷārazm, defeated the local forces at Hazārasp, unleashed a reign of terror in Gurgāndj against the regicides, and carried off large numbers of slaves to Ghazna. See for these events, Barthold, *Turkestan*[2], 275-9; Nāẓim, *The life and times of Sulṭān Maḥmūd of Ghazna*, 56-60, 184-5; Sachau, in *SBWAW*, lxxiv (1873), 290-301.

Thus from 408/1017 onwards, Khʷārazm was incorporated in the immense Ghaznawid empire, and possession of it gave Maḥmūd the preponderance in Central Asia against the Ḳarakhānids. It was difficult to control so distant a province as Khʷārazm dirtcely from Ghazna, hence the Sulṭān appointed as governor there his slave commander Abū Saʿīd Altuntāsh [*q.v.*], with the traditional title of Khʷārazm-Shāh, and

Altuntāsh and his two sons form the short third dynasty of Shāhs (408-32/1017-41). Altuntāsh was the loyal servant of Maḥmūd and his son Masʿūd, defending the frontiers of Khʷārazm by the recruitment of auxiliary troops from the Ḳipčaḳ, Küdjet and Čaghrat Turks, and he died in battle fighting for Maḥmūd against the Ḳarakhānid ʿAlītigin in 423/1032. His son Hārūn succeeded as *de facto* ruler in Khʷārazm, though Masʿūd conceded to him only the title of his representative, *khalīfat al-dār*. The interests of Altuntāsh's line were now clearly divergent from those of the Ghaznavids. Hārūn sought the alliance of the Saldjūḳ Türkmens and the Karakhānids, but Masʿūd procured his murder in 425/1034. His brother and successor Ismāʿīl Khandān became the Sulṭān's bitter foe, and at this time when Masʿūd had his hands full coping with the Saldjūḳ incursions, was able to rule as an independent ruler. Ismāʿīl was expelled from Khʷārazm in 432/1041 by Masʿūd's ally, the Oghuz Yabghu of Djand at the Syr Daryā mouth, Shāh Malik, but by then, Masʿūd himself was dead, and the whole Ghaznawid position in the west had collapsed. See Bosworth, *The Ghaznavids, their empire in Afghanistan and eastern Iran 994-1040*, 238-9; Sachau, *op. cit.*, 301-12; and GHAZNAWIDS.

Shāh Malik's occupation of Khʷārazm was ended when the Saldjūḳ leaders Ṭoghrïl and Chaghrï came to Khʷārazm and Djand in 433/1042 and drove him out (see O. Pritsak, *Der Untergang des Reiches des Oğuzischen Yabğu*, in *Fuad Köprülü armağanı*, Istanbul 1953, 405-10). Khʷārazm was incorporated into the Saldjūḳ dominions, coming within the eastern half ruled by Čaghrï Beg. Over the next decades, the Sulṭān Alp Arslan had to come twice to the Khʷārazm-Djand region to restore order, and his son Arslan Arghun and a son of the vizier Niẓām al-Mulk were at times governors of Khʷārazm for Alp Arslan and Malik Shāh respectively; Khʷārazm and the surrounding steppes were of particular importance to Saldjūḳs as recruiting grounds for their professional Turkish slave troops or *ghulāms* and as a source for frontier auxiliaries.

Malik Shāh appointed his slave Anūshtigin, keeper of the royal wash bowls (*ṭast-dār*), as titular governor at least of Khʷārazm, but it is not till Berk-Yaruḳ's sultanate that we find another Turkish *ghulām*, Ekinči b. Ḳočḳar, appointed with the actual title of Khʷārazm-Shāh (490/1097). This last was killed in this same year, and the governorship and title were given by the governor of Khurāsān to Anūshtigin's son Ḳuṭb al-Dīn Muḥammad. Ḳuṭb al-Dīn's appointment inaugurates the fourth and most brilliant dynasty of Khʷārazm-Shāhs (490-628/1097-1231), under whom Khʷārazm became for a while the centre of the most powerful military empire in the eastern Islamic world during the decades between the decline of the Great Saldjūḳs and the appearance of the Mongols. Ḳuṭb al-Dīn Muḥammad (490-521/1097-1127) governed Khʷārazm as the faithful vassal of Sulṭān Sandjar, being assiduous in his attendance at the Saldjūḳ court. It was his son ʿAlāʾ al-Dīn Atsïz (521-51/1127-56) who was the real founder of the dynasty's splendour. Though he remained nominally subject to Sandjar right down to the end, he in fact pursued relentlessly his aim of Khʷārazmian autonomy and virtual independence and of enlarging his territories; notable here was the extension of Khʷārazmian rule over the Türkmens of the eastern Caspian shores and the Manghïshlāḳ peninsula. He skilfully balanced his own interests against those of the Saldjūḳs in Khurāsān and the Ḳara Khiṭay [*q.v.*] in Transoxania, and took maximum advantage of Sandjar's difficulties with the Ḳarakhānids and the Oghuz tribesmen of Khurāsān; for details, see ATSÏZ B. MUḤAMMAD B. ANŪSHTIGIN.

Atsïz's successors, beginning with Tādj al-Dunyā wa'l-Dīn Il-Arslan (551-67/1156-72) had greater freedom of action after the death of Sandjar and the collapse of Saldjūḳ power in the east, in so far as relations with the Ḳara Khiṭay allowed, for the latter claimed suzerainty over the Ḳarakhānids in Transoxania and over Khʷārazm. However, provided that tribute was forwarded regularly to the Gür-Khān's *ordu* or military camp in Semirečye, the Ḳara Khiṭay were little disposed to interfere in internal matters. The Khʷārazm-Shāhs especially coveted the Transoxanian possessions of the Ḳarakhānids, and intervened with profit in the quarrels of the Khāns of Samarḳand and their turbulent Ḳarluḳ tribal troops; hence in 553/1158 Il-Arslan invaded Transoxania on the latter's behalf.

The reign of Il-Arslan's son and successor ʿAlāʾ al-Dīn Tekish (567-96/1172-1200) brought the Shāhs to new heights of their power, and Tekish was able to check the ambitions of the Ghūrids [*q.v.*] in Khurāsān and to bring about the final demise of the Great Saldjūḳ sultanate in western Persia. Tekish was placed on the throne with Ḳara Khiṭay help, but he soon rebelled against these last, and managed to ward off the Ḳara Khiṭay army which invaded Khʷārazm by the traditional expedient of opening the dykes of Khʷārazm and flooding the land lying in the invaders' path. Over the ensuing years, he was involved not only against the Ḳara Khiṭay again but also against his brother and rival for power Sulṭān Shāh, who had established himself in northern Khurāsān, and against the Ghūrids. He secured his northern frontiers by conciliation of the Ḳïpčaḳ and other Türkmen tribes along the lower Syr Daryā, and the Khʷārazmian armies which came to terrorise Persia and to earn an unenviable reputation for cruelty and barbarity there, included large numbers of steppe Türkmens, many of them still pagan. Tekish first came westwards to Ray in 588/1192 and demanded that the Saldjūḳs and Ildegizid Atabegs of western Persia should place his name in the *khuṭba* immediately after the ʿAbbāsid caliph's one. A year later he mounted a further invasion, and in 590/1194 defeated Ṭoghril b. Arslan, the last of the Great Saldjūḳ line, thus extinguishing this dynasty in Persia. Tekish was now able to occupy all Djibāl as far west as Hamadān, so that his territories became coterminous with those of the resurgent ʿAbbāsid caliphs, and in 595/1199 the caliph al-Nāṣir deemed it prudent formally to invest Tekish with the sultanate of ʿIrāḳ (sc. ʿIrāḳ-i ʿAdjamī, western Persia), Khurāsān and Turkistān; however, when Tekish died in the next year, the population of Djibāl rose and massacred all whom they could find of the hated Khʷārazmian occupying troops.

Tekish's son ʿAlāʾ al-Dīn Muḥammad (596-617/1200-20) continued his father's anti-caliphal policy, but for many years he was preoccupied in the east with his opponents, the Ghūrids, the Ḳara Khiṭay, the Ḳïpčaḳ of the northern steppes, and ʿUthmān Khān, the last Ḳarakhānid ruler in Samarḳand. For long, he was careful not to break with the Ḳara Khiṭay, and welcomed their support in ejecting Muʿizz al-Dīn Muḥammad Ghūrī from Khurāsān in 601/1204. After the Ghūrid sulṭān's death two years later, the Ghūrid empire fell apart, and much of its territories fell briefly into the hands of the Khʷārazm-Shāhs. ʿAlāʾ al-Dīn could now dispense with Ḳara Khiṭay support, and when the latter became increasingly

distracted from Transoxanian affairs by the revolt in Semirečye of the Mongol chief Küčlüg, he was by 608/1212 able to kill ʿUthmān Khān and succeed to the remainder of the Ḳarakhānid heritage in Transoxania. ʿAlāʾ al-Dīn was now assured of commanding prestige throughout the eastern Islamic world, though like his father, he continued to be satisfied with the circumscribed territorial designation of Khʷārazm-Shāh and with that of Sulṭān. ʿAlāʾ al-Dīn knew from captured correspondence that the ʿAbbāsid caliph had in the past incited the Ghūrids against him; and he denounced al-Nāṣir as unfit to rule and proclaimed an ʿAlid as anti-caliph. He began to march on Baghdād, but in the winter of 614/1217-18, snowstorms of unusual severity halted his forces in Kurdistān and Luristān, and news of unrest among the Ḳîpčaḳs compelled him to return to the Khʷārazmian frontiers. The menace of the advancing Mongols, successors to Küčlüg in Semirečye and Kashgharia, coincided with ʿAlāʾ al-Dīn's closing years, and this new factor in Middle Eastern affairs was to occupy the attention of his son Djalāl al-Dīn (?)Mingburnu (617-28/1220-31) and to lead to the downfall and complete disintegration of the extensive but transient empire of the Khʷārazm-Shāhs. For these last events, see ČINGIZ-KHĀN and DJALĀL AL-DĪN KHʷĀRAZM-SHĀH, and for the general history of this fourth dynasty of Shāhs, see Bosworth, in *Cambridge history of Iran*. v. *The Saljuq and Mongol periods*, ch. i.

The Mongol governors of Khʷārazm do not seem to have employed the title of Khʷārazm-Shāh, nor did the line of Ṣūfid local rulers in the post-Il-Khānid period adopt it (see for these rulers, KHʷĀRAZM). However, the title was revived sporadically, or at least used in semi-official parlance, for the Tīmūrid Shāh Rukh's governor in Khʷārazm, Shāh Malik (815-29/1413-26) is given it in Faṣīḥ al-Dīn Khʷāfī's anthology, the *Mudjmal-i Faṣīḥī*, and his son and successor Nāṣir al-Dīn Sulṭān Ibrāhīm also bore it until he was driven from Gurgāndj in 834/1430-1 by the Özbeg Khān Abu 'l-Khayr [*q.v.*]. The title is sometimes applied to the Özbeg Khāns of Khīwa, the ʿArabshāhids and their successors, in documents and literary works, but does not seem ever to have been formally adopted by them. Abu 'l-Ghāzī applies it to no rulers later than the Khʷārazm-Shāhs displaced by the Mongols, and even when his son and successor Muḥammad Anūsha (1074-85/1663-74) assumed the title of Shāh after his conquest of Mashhad from the Ṣafawids, he did not add to this the element "Khʷārazm". The Inaḳ Iltüzer, who formally assumed the title of Khan of Khīwa in 1219/1804 and founded the line of Khāns which endured down to the Russian occupation and the Bolshevik Revolution, called himself on his coins (which were never issued, because of his premature death in battle in 1221/1806) "heir of the Khʷārazm-Shāhs" (*wārith-i Khʷārazm-Shāhān*), but this appears to be the last official usage of the title.

(C. E. Bosworth)

AL-KHʷĀRAZMĪ, ABŪ ʿABD ALLĀH MUḤAMMAD B. AḤMAD B. YŪSUF AL-KĀTIB, author of the *Mafātīḥ al-ʿulūm* ("Keys of the sciences"), on which his fame rests. His origins were in the north-eastern part of the Iranian world, either in Khʷārazm, south of the Aral sea [*q.v.*], or, as al-Maḳrīzī would suggest, in Balkh in what is now northern Afghanistan (*Khiṭaṭ*, Būlāḳ 1854, i, 258); of course, he may have been born in Balkh while his family came from Khʷārazm.

The *Mafātīḥ* is dedicated to Abu 'l-Ḥasan ʿUbayd Allāh b. Aḥmad al-ʿUtbī, vizier to the Sāmānid Nūḥ II b. Manṣūr (366/976-387/997), at whose court in Bukhārā al-Khʷārazmī appears to have served.

Addressed to the class of secretaries (*kuttāb*) to which al-Khʷārazmī himself belonged, the *Mafātīḥ* is an introduction (*madkhal*) to the elements of the sciences (*awāʾil al-ṣināʿāt*) which explains the key terms used by the various groups of scholars, artisans and government officials, in particular those terms which were left out of current lexica. Al-Khʷārazmī did not set out to write an essay on the aim and structure of the sciences, as al-Fārābī (d. 339/950) had done in the *Iḥṣāʾ al-ʿulūm*, or present a *Weltanschauung*, as the Ikhwān al-Ṣafāʾ were doing in their *Epistles* at about the same time. As a dictionary of basic technical terms drawn from many disciplines, and as a description of contemporary practices in the sciences and in the chanceries, the *Mafātīḥ* is of considerable value for the study of Islamic culture.

The book is divided into two roughly equal *maḳālas* or discourses dealing respectively with (i) the religious sciences (*ʿulūm al-sharīʿa*) and the Arabic sciences associated with them, and (ii) the "foreign" sciences (*ʿulūm al-ʿadjam*). Each discourse is divided into sections (*bābs*) and further into chapters (*faṣls*). The subjects of the sections in the two discourses are the following: (i) 1. jurisprudence, 2. dialectical theology (*kalām*), 3. grammar, 4. the secretarial art (*kitāba*), 5. poetry and prosody, 6. history; (ii) 1. philosophy, 2. logic, 3. medicine, 4. arithmetic, 5. geometry, astronomy and astrology, 7. music, 8. mechanical devices, 9. alchemy. Al-Khʷārazmī's book shows that to call the philosophical, natural and mathematical sciences "foreign" was not at that time a sign of rejection of these disciplines, but simply a statement of the fact that they had been developed by non-Arabs (*ʿadjam*). The book clearly implies the conception that to be considered educated, one had to be acquainted with both major branches of learning.

Bibliography: The standard critical edition of *Mafātīḥ al-ʿulūm* is that of G. van Vloten, Leiden 1895, repr. 1968. There are other oriental prints. C. E. Bosworth describes six Istanbul manuscripts not used by van Vloten in *Some new manuscripts of al-Khwārizmī's Mafātīḥ al-ʿulūm*, in *JSS*, ix (1964), 341-5, and comes to the conclusion that they do not add much to the elucidation of the text.

A useful general account is C. E. Bosworth,

A pioneer Arabic encyclopedia of the sciences: al-Khwārizmī's Keys of the Sciences, in *Isis*, liv (1963), 97-111. A number of E. Wiedemann's *Beiträge zur Geschichte der Naturwissenschaften bei den Arabern* deal with various parts of the *Mafātīḥ*. Originally published in *Sitzungsberichte der Physikalisch-medizinischen Sozietät in Erlangen* between 1906 and 1923, they are now conveniently reprinted in E. Wiedemann, *Aufsätze zur Arabischen Wissenschaftsgeschichte*, ed. W. Fischer, Hildesheim-New York 1970, 2 vols. The following is a list of them: Beitr. VI, *Zur Mechanik und Technik bei den Arabern*, in *SBPMS Erlg.*, xxxviii (1906), esp. 16-56 = *Aufsätze*, i, 188-228, translation and discussion of discourse ii, sec. 8, on mechanical devices; Beitr. X, *Zur Technik bei den Arabern*, in *SBPMS Erlg.*, xxxviii (1906), esp. 307-13 = *Aufsätze*, i, 272-8, deals with disc. i, sec. 4, ch. 7, terms related to irrigation; Beitr. XIV, *Über die Geometrie und Arithmetik nach den Mafâtîḥ al-ʿUlûm*, in *SBPMS Erlg.*, xl (1908), esp. 1-29 = *Aufsätze*, i, 400-28, tr. of disc. ii, secs. 4 and 5; Beitr. XVIII, *Astronomische Instrumente*, etc., in *SBPMS Erlg.*, xli (1909), esp. 32-5 = *Aufsätze*, i, 550-3, disc. ii, sec. 6, ch. 4; Beitr. XXII, *Stücke aus den Mafâtîḥ al-ʿUlûm*, in *SBPMS Erlg.*, xlii (1910), 303-10 = *Aufsätze*, i, 669-76, terms for weights and measures (disc. i, sec. 1, ch. 5, sec. 4, ch. 6, disc. ii, sec. 3, ch. 7) and terms used in the postal administration (disc. i, sec. 4, ch. 4); Beitr. XXIV, *Zur Chemie bei den Arabern*, in *SBPMS Erlg.*, xliii (1911), 72-113 = *Aufsätze*, i, 689-730, tr. of disc. ii, sec. 9; Beitr. XXVII, *Geographische Stellen aus den Mafâtîḥ al-ʿUlûm*, in *SBPMS Erlg.*, xliv (1912), 37-40 = *Aufsätze*, i, 812-15, disc. ii, sec. 6, ch. 2, on the construction of the spheres and the regions of the earth; Beitr. XLVII, *Über die Astronomie nach den Mafâtîḥ al-ʿUlûm*, in *SBPMS Erlg.*, xlvii (1915), 214-42 = *Aufsätze*, ii, 186-214; Beitr. LXVI, *Zur Geschichte der Musik*, in *SBPMS Erlg.*, liv-lv (1922-3), 7-22 = *Aufsätze*, ii, 580-95, disc. ii, sec. 6.

Disc. ii, sec. 3, on medicine, is fully dealt with in Ernst Seidel, *Die Medizin in Kitâb Mafâtîḥ al-ʿUlûm*, in *SBPMS Erlg.*, xlvii (1915), 1-79, with a useful index of terms. A translation of disc. 1, sec. 2, is given by C. E. Bosworth, *al-Ḫwārazmī on theology and sects: the chapter on* kalām *in the* Mafātīḥ al-ʿulūm, in *Hommage Henri Laoust*, *BEO*, xxix (1978); and one of disc. i, sec. 4, with extensive commentary, is given by idem, *Abū ʿAbdallāh al-Khwārazmī on the technical terms of the secretary's art: a contribution to the administrative history of mediaeval Islam*, in *JESHO*, xii (1969), 113-64. For a translation of disc. i, sec. 6, chs. 6 and 7, on terms used in historical reports about the Persians and the Arab conquests, see J. M. Unvala, *The translation of an extract from Mafâtîḥ al-ʿUlûm of al-Khwârazmî*, in *Jnal. of the K.R. Cama Inst.*, xi (Bombay 1928), 76-110, with comments on the Persian, Turkish and Indian terms there; and for one of ch. 7, with detailed analysis, see Bosworth and Sir Gerard Clauson, *Al-Xwārazmī on the peoples of Central Asia*, in *JRAS* (1965), 2-12; and for one of ch. 8, with detailed commentary, see Bosworth, *The terminology of the history of the Arabs in the Jāhiliyya, according to Khwārazmī's "Keys of the sciences"*, in *Festschrift for Prof. S. D. Goitein*, Folklore Research Center Studies of the Hebrew University No. 7, Jerusalem 1978. For a translation of disc. ii, sec. 7, see H. G. Farmer, *The science of music in the Mafâtîḥ al-ʿUlûm*, in *Trans. Glasgow Univ. Oriental Soc.*, xvii (1957-8), 1-9. See also Brockelmann, I, 282-3, S I, 434-5.

(A. I. SABRA)

AL-KH͟WĀRAZMĪ, ABŪ BAKR MUḤAMMAD B. AL-ʿABBĀS, Arabic poet and writer (323-83/934-93). Since he alleged that his mother was the sister of the historian al-Ṭabarī, he fabricated for himself the *nisba* of al-Ṭabarkhazī. He was born in Khwārazm and spent his youth there, but left it at an early date. It is difficult to trace his peregrinations, but he seems to have sought out, above all, the company of great men in order to live off their munificience. Hence we find him at Aleppo, in the service of Sayf al-Dawla; at Bukhārā, with the vizier Abū ʿAlī al-Balʿamī, with whom he quarreled, however; at Nīshāpūr for the first time, where he eulogised the *amīr* Aḥmad al-Mīkālī; in Sidjistān with the ruler Ṭāhir b. Muḥammad, who ended up by throwing him into prison; in Gharčistān, where he had similar misadventures; at Arradjān, in the entourage of the Ṣāḥib Ibn ʿAbbād; and finally at Nīshāpūr again, where he settled down and died, it was said, of chagrin from a defeat which he suffered at the hands of Badīʿ al-Zamān al-Hamadhānī in a literary contest. If Abū Ḥayyān al-Tawḥīdī is to be believed (*Mathālib al-wazīrayn*, ed. M. ibn Tāwīt al-Ṭandjī, index), he enjoyed a privileged position with the Ṣāḥib Ibn ʿAbbād, acting as an envoy and a spy for him, and the gifts which he received from the vizier were more for his secret activities than for his panegyrics. However, it was not long before the two persons fell out with each other, perhaps in part because al-Khwārazmī admired al-Mutanabbī, whose poetic work he did much to make known in the eastern parts of Islam.

The critics agree in considering al-Khwārazmī as one of most knowledgeable authorities on the Arabic language amongst the ʿAdjam. He was further considered an authority on genealogies, but was above all famed for his prodigious memory, which allowed him, according to an anecdote recorded by many of his biographers, to know by heart a vast number of poems and to transform himself into a teacher of literature. Naturally, he wrote poetry, which has been judged rather severely by his critics; he nevertheless left, besides a *Dīwān*, a collection of *Rasāʾil* (ed. Istanbul; see Brockelmann, S I, 150) which made him famous. One can therefore consider him as a letter-writer of talent, addressing these to great men, princes, viziers, commanders, scholars and officials on the most diverse, and often the most banal, subjects; the documentary value of these letters is by no means insignificant (cf. A. Mez, *Renaissance*, index). They reflect a considerably disturbed life and are written in a rhymed prose embellished with all the rhetorical devices, but in a personal style which is, every thing considered, simpler than that of his great adversary Badīʿ al-Zamān.

Bibliography: Hamadhānī, *Rasāʾil*, Istanbul 1298, *passim*; Tawḥīdī, *Muḳābasāt*, 102; idem, *Mathālib*, index; Thaʿālibī, *Yatīma*, iii, 54, 110, iv, 114-54; Marzubānī, *Muʿdjam*, 316; Ibn Khallikān, *Wafayāt*, no. 664; Samʿānī, *Ansāb*, 24, 209; Ḳifṭī, *Inbāh*, ed. 1950, i, 277; Yāḳūt, *Irshād*, i, 104 ff. = *Udabāʾ*, ii, 175 ff.; idem, *Buldān*, index; Ṣafadī, *Wāfī*, iii, 191; Ibn al-Djawzī, *Muntaẓam*, vii, 266; Ibn al-Athīr, ix, 127 (*sub anno* 393); Ibn al-ʿImād, *Shadharāt*, iii, 105; Suyūṭī, *Bughya*, 51; Khwānsārī, *Rawḍāt*, iv, 165; Ziriklī, *Aʿlām*, vii, 52; Zakī Mubārak, *La prose arabe au IVe siècle de l'hégire*, Paris 1931, 156-70; idem, *al-Nathr al-fannī*, ii, 256-76; Wahhābī, *Marādjiʿ*, i, 146-50. (CH. PELLAT)

AL-KHWĀRAZMĪ (often written AL-KHUWĀRIZMĪ), ABŪ DJAʿFAR MUḤAMMAD B. MŪSĀ, mathematician, astronomer and geographer, who utilised the Arabic language. He lived in the first half of the 3rd/9th century (*ca.* 184-*ca.* 232/800-47), and should not be confused with two other important persons with the same *nisba* [*q.vv.*]. We know that in his youth, during the caliphate of al-Maʾmūn, he worked in the *Bayt al-Ḥikma* [*q.v.*] of Baghdād, but we know very few other biographical details. However, his main works are well known to us, since many of them were translated into Latin in Spain and exercised a powerful influence on the development of mediaeval thought. If the attempts at dating put forward by C. J. Toomer (*Dictionary of scientific biography*, vii (1973), 358b) are correct, almost all these works were composed during the reign of al-Maʾmūn.

His Algebra, called *al-Mukhtaṣar fī ḥisāb al-djabr wa 'l-muḳābala* (ed. with Eng. tr. F. Rosen, *The algebra of*..., London 1831, repr. New York 1969; ed. ʿAlī Muṣṭafā Musharrafa and M. Mursī Aḥmad, Cairo 1939) was translated partially by Robert of Chester as *Liber algebras et almucabola* (ed. with Eng. tr. L. Ch. Karpinski in *UMS*, xi (New York 1915), shortly afterwards, Gerard of Cremona made a second version of it, *De jebra et almucabola* (perhaps the anonymous work published by G. Libri in his *Histoire des sciences mathématiques en Italie*, i, Paris 1858, 253-97; see B. Boncompagni, in *Atti ... Lincei*, iv (1851), 412-35, and A. A. Björnbo, in *Bibliotheca mathematica*, vi (1905), 239-41, which is better and even surpasses Rosen. In this way, there was introduced into Europe a science completely unknown till then, and with it, a terminology which was still capable of growth but already completely developed. This discipline was called by the two technical terms which appear in the titles of the first Latin translations, until the time when Canacci (14th century) began to use only the first one, *algebra*, and two centuries later, this innovation became predominant and the word *al-muḳābala* fell completely into disuse. The term *djabr* may derive, according to Gandz, from Assyrian *gabrū*; this etymology may be feasible, since, in the hundred or so mathematical tablets going back to the second millenium B.C., there appear algebraic problems parallel to those put forward by al-Khwārazmī and which, according to Bruins (*Computation in the old Babylonian period*, in *Acts of the XIIIth International Congress on the History of Science*, held in Moscow 1971), show that the Assyrians knew the six model equations [see DJABR] used by the Muslim scholar. However, from the strictly historical point of view, there is the problem that the word is not attested in any intervening language, such as Greek, and it is difficult to hold that it could have survived solely in Aramaic till the time of al-Khwārazmī. It is more likely that the word comes from medical terminology where *djabr* has the idea of resetting a dislocated limb, just as today, in the dictionary of the Real Academia Española, *algebra* designates an algorism and *algebrista* is a synonym for a specialist in wounds and broken limbs. On the various mathematical operations involved in algebra and on the typical equations used in it, see DJABR and also G. A. Saliba, in *Centaurus*, xvii (1972), 189-204.

Almost at the same time as the *Algebra* was being translated, John of Seville made known the Latin version of an adaption made either by himself or by some Muslim author of al-Khwārazmī's *Arithmetic*, lost in the Arabic but which must have been called *Kitāb Ḥisāb al-ʿadad al-hindī* or *K. al-Djamʿ wa'l-tafrīḳ bi-ḥisāb al-Hind*. John of Seville's work was called *Liber alghoarismi de practica arismetrice* (ed. B. Boncompagni, *Trattati d'aritmetica*, ii, Rome 1857; K. Vogel, *Mohammed ibn Musa Alchwarizmi's Algorismus*, Aalen 1963; A.-P. Juschkewitsch, *Über ein Werk des Abū ʿAbdallāh Muḥammad ibn Mūsā ... zur Arithmetik der Inder*, in *Homage to G. Harig*, 1964, 21-63, with an appendix containing a photographic reproduction of the Cambridge ms.). The connections between the various mediaeval works deriving from al-Khwārazmī's one are not well established, but all of them have the common characteristic that they explain how to work with the numbers which we today call "Arabic" and which were known in the 3rd/9th century in the Iberian peninsula. Concerning these numbers, mediaeval scholars invented all sorts of etymologies and legends. Gaspar of Tejada asserted that "zero is not a sign, but an empty space" (cf. G. Menéndez Pidal, *Los llamados numerales arabes en Occidente*, in *BRAH*, cxlv/2 (1959), 179-208), an idea that one finds much earlier in the *Mafātīḥ al-ʿulūm*, ed. van Vloten, 58, ll. 1-4, in regard to *tarḳīn*, a line brought into a calculation to indicate "nothing", i.e. to keep the order, and whose value is expressed in Latin by *nulla figura* or in German by *Null*. On the other hand, this same sign appears in Abraham ben ʿEzra to separate the whole number from the fraction. Other popular etymologies of the time derive algorithm from the name of a hypothetical Algor, king or philosopher, or from the coupling of the Arabic article *al-* with Greek *arithmos*, when in reality these technical terms come from the name "al-Khwārazmī", as Reinaud showed (*Mémoire* ..., in *Mém. Acad. Inscr. et Belles-Lettres*, xviii/2 (1849), 303-4).

The actual form of the numbers is unimportant for the operations described in the *Liber alghoarismi*, but the existence of operations carried out by means of nine or ten symbols implies a knowledge of the rules expounded by al-Khwārazmī. In Spain, these were known by the 4th/10th century, proving the existence of a system of numeration by position. In regard to the form of the numbers used at that time, this is still debated. Destombes (*Un astrolabe carolingien et l'origine de nos chiffres arabes*, in *Archives intern. d'hist. des sciences*, lviii-lix (1962), 3-45) suggests that the monk Vigila of Albelda was present at the consecration of the monastery of Tipoll in 977 and that he knew the system of numeration by position, which he refers to in the appendix to Book iii of St. Isidore when he cites the skill of the Indians as able to create the nine figures described in the Escorial ms. d. I.2; the numbers are given from right to left and must therefore be incontrovertibly of Arabic origin, and their form derives, according to Destombes, from that of the Visigothic letters used in the second half of the 10th century as they appear on the Carolingian astrolabe. Given the fact that at this time of the appearance of this system of numeration by position, there must have existed various systems of representing the numbers, the need for tables of equivalents becomes evident, such as those of Alvaro of Oviedo. It also explains why in 1229 the Senate of Florence forbade their usage and imposed the practice of expressing numbers wholly in letters in order to avoid the possibility of a minor corruption in the form of the numbers or in the usage of different systems simultaneously, thus giving rise to errors.

The *Liber alghoarismi* and similar works all explain the operations of adding, subtracting, multiplying and dividing; they show how decimal and

sexagesimal fractions should be used; and they use the so-called Egyptian fractions, sc. those with 1 as the numerator and from which one can obtain the others by means of addition (e.g. 1/3 + 1/15 = 2/5; 1/4 + 1/28 = 2/7). This type of fraction already appears in the Rhind papyrus and developed over the ancient and mediaeval periods, especially when the system of Ḳurʾānic inheritance rules gave rise to the *ʿilm al-farāʾiḍ* [see FARĀʾIḌ] and made necessary the perfecting of arithmetical operations using fractional numbers. The system, by now completely developed, was introduced into Europe through the intermediacy of various Spanish versions and through that of Fibonacci.

The operations with sexagesimal fractions, necessary for astronomical computations, are even more interesting. Al-Khwārazmī gives some rules (*Algorismus de minutiis*) which, through an adaptation in a work called *De numero indorum* and above all by John of Seville, were speedily taken into the courses of instruction of the universities. We know that the Arabic works of the 3rd/9th century devoted to these topics contained a table for multiplying in the sexagesimal system, of 59 × 59 or 60 × 60 (= 3,600) cases, parallel to the multiplication table which we call Pythagorean but which first appears in the *Arithmetic* of Boethius (Augsburg 1488); it has been reproduced in *Osiris*, v (1938), 138, and its antecedents can be found in the similar Arabic tables of an earlier period and triangular in shape. A sexagesimal table of the type just mentioned was to be found in the work of Kūshiyār b. Labbān (*ca.* 360-420/971-1029) called *Kitāb fī uṣūl ḥisāb al-Hind* (facs. edn. M. Levey and M. Petruck, *Principles of Hindu reckoning*, Madison 1965; E. S. Kennedy and W. R. Transue, *A medieval iterative algorism*, in *AMM*, lxiii (1956), 80-3), but is unfortunately lost, and the oldest version preserved is that in the Latin version of the *Astronomical tables* of al-Khwārazmī translated by Adelard of Bath (f. 57b). Tables of this type recall those of the cuneiform tablets.

Another of al-Khwārazmī's works which had a great influence in the birth of western science was his *Zīdj al-Sindhind*, astronomical tables translated into Latin by Adelard of Bath (ed. H. Suter, *Die astronomischen Tafeln des Muḥammad ibn Mūsā al-Khārizmī*, Copenhagen 1914; Eng. tr. and excellent study by O. Neugebauer, *The astronomical tables of al-Khwārizmī*, Copenhagen 1962). This work became the subject of a commentary by a certain Ibn al-Muthannā, lost in Arabic but preserved in Latin (ed. E. Millás Vendrell, Madrid-Barcelona 1963) and in Hebrew (ed. and tr. B. R. Goldstein, New Haven-London 1967), from which it appears that al-Khwārazmī's work had two rescensions; Adelard used the minor one, corrected by Maslama al-Madjrīṭī for the position of Cordova. Some complementary pieces of information on the transmission and the contents of the Tables can be found in *El libro de los fundamentos de las tablas astronómicas* of Abraham ben ʿEzra (ed. and study by J. M. Millás, Madrid-Barcelona 1947) and in the monographs of J. J. Burckhardt, in *Viertel-jahrsschrift der Naturforschenden Gesellschaft in Zürich*, cvi (1961), 213-31, of E. S. Kennedy and M. Janjanian, in *Centaurus*, xi (1965), 73-8, of Kennedy and W. Ukashah, in *ibid.*, xiv (1969), 86-96, and O. Neugebauer, in *A locust's leg, studies in honour of S. H. Taqizadeh*, 209-12.

It is in this translation that the first mediaeval mathematical symbols appear, sc. three tildes in a triangular arrangement followed by a number and placed above another indicate the sum of the first and second; if, on the other hand, there is a single dot, it indicates a remainder. These notation systems as found in the West stem from the Arab world, and their connections with older systems, e.g. those of Diophantus, remain to be studied. An analysis of the *Tables* reveals their mixed character and the multiplicity of sources used. Thus the theory of the moon comes from an intermediate source which did not know the *Almagest*; the methods used for determining the true longitude of a planet stem from the *Sūrya Siddhānta* and the *Janda-Jādyaka*; the values of the movement come from Brahmagupta; and in the ms. of Corpus Christi College (which comes from Adelard's version) there is an allusion to the to-and-fro movement explained at length by Azarqui [see AL-ZARḲALĪ], which stems equally from Indian sources. A similar origin can be recognised in the equation of the sun and in the primitive sine tables with R = 150 (Ibn al-Muthannā alludes to this value) replaced in Maslama's adaptation by others with a base = 60, a number of Hellenistic origin. On the other hand, the methods used to determine the direct and the retrograde movements of the planet stem, directly or not, from the manual *Tables* of Theo. Other elements stem from the *Zīdj maʾmūnī* and the *Zīdj al-shāh*. In the determination of the parallax, the repetitive algorism deriving from the *Janda-Jādyaka* is used, and this presents a certain parallelism with the method used by Kepler to determine the excentric anomaly.

Al-Khwārazmī's other works were not known in the mediaeval world. His geography or *Kitāb Ṣūrat al-arḍ* (ed. H. von Mzik, Leipzig 1926), has been the object of a detailed study by C. A. Nallino, *al-Khuwārizmī e il suo rifacimento della Geografia di Tolomeo*, in *Raccolta di studi*, v, Rome 1944, 458-532. It consists of lists of co-ordinates of the main towns and geographical features, which are sometimes, but not always, in harmony with those of Ptolemy. His source of inspiration might possibly have been the mappa mundi constructed for al-Maʾmūn by a team of geographers in which al-Khwārazmī himself would have been included. The *K. Ṣūrat al-arḍ* depends, even if in an indirect manner, on the *Geography* of Ptolemy, some of whose errors he corrects, e.g. the excessive length of the Mediterranean.

His *Istikhrādj taʾrīkh al-Yahūd* (ed. in *al-Rasāʾil al-mutafarriḳa fi'l-hayʾa*, Hyderabad 1948) has been studied by E. S. Kennedy in *Scripta mathematica*, xxvii (1964), 44-9; internal evidence dates it to 208/823. This richly-documented work forms one of the oldest pointers which we possess concerning the Jewish calendar, and it necessitates the revising of many things previously written on the subject. Al-Khwārazmī was further the author of two works on the astrolabe (see J. Frank, *Die Verwendung des Astrolabs nach al-Chwārizmī*, in *AGNM*, iii (Erlangen 1922), of a historical chronicle, *Kitāb al-Taʾrīkh*, and a book on sun-dials, *Kitāb al-Rukhāma*, both these latter lost. In regard to the first of the two, it may be surmised that it gave an astronomical explanation of history like that later given by Abū Maʿshar, al-Nawbakhtī and the writer in al-Andalus Ibn al-Khayyāṭ (d. 447/1055).

(J. VERNET)

KHARBGA, a type of the game of draughts

played in North Africa. Although the root *kh.r.b.g.* is known, yet the origins of this game are lost in the mists of time (squares marked out for it have been found at the tops of pyramids in Egypt). *Kharbga,* which is one of the four games brought into Ifrīḳiya by the Banū Hilāl, is played on a square board made up of holes marked out in the ground or in rock and has 49 component squares or "houses" (*bīt, ḍār*); the board can equally be traced out on a stone slab or on a sack covered over with sand. According to the number of holes along each side, the game is called by the following names, *khamūsiyya* if there are 5, and *sabūʿiyya* if there are 7. The central square is called *ḍār al-wasṭ*, and is remarkable by the fact that after the first move of the first piece it remains unoccupied all through the game; other squares of special note or with particular functions surround the central one and serve in the game as places of security.

The game is played by two people, and once the game is set up (*manṣūb*), the players (*kharbāg* or *kharbāgī*) are surrounded by an audience of interested people who follow the game and offer advice. After having placed on the board, two by two, the different-coloured pieces called *klāb* (sing. *kalb* "dog"; this term is known in the Egyptian, Greek and Arab cultures, see Dozy, *Supplément*, s.v.), the players move them in turn. The substance and nature of the pieces varies according to the place where the game is played. They are black and white; the white ones are pebbles or snail shells, and the black ones are dried lumps of camel dung, peach stones blackened by the sun or even date stones. There are 24 of each colour for the games. The first stage is the placing of the pieces two-by-two in the places chosen for this by the players. The course of the game depends on this; each player moves his pieces whilst endeavouring to foresee his opponent's moves, and good players can plot the course of the opponent's moves as far as eight future moves. The game consists of "eating up" the opponent's "dogs" up to the last one by inserting them between two pieces and not going beyond them. In practice, the pieces can in principle be placed anywhere, and the player can move them in any direction, except, it seems, along diagonals. *Kharbga* is played in the spring and out-of-doors, in a specified place between the tents and left vacant for this very purpose. Elderly men come and play the game in the afternoon until sunset. At the backs of shops, *kharbga* is played on sacks, and the shop-owner, who sets out four or five games of the pieces, serves drinks at the same time. Shepherds, whilst out on the job, play on sloping and uneven terrains from where they can keep an eye on their flocks. This social pastime is difficult, and tournaments in it take place, for which *kharbga* enthusiasts travel round from place to place with their own provisions. A stake, called *khṭār* or *sharṭ* or *muḳābil,* is chosen before the play begins, and this stake might be a beast (sheep, goat or camel); in the Hilālian epic, the loser may be liable to more savage stakes, going as far as physical nudity, and even, through tying up, the killing of a near relative.

A different game may be found under this same name of *kharbga* (e.g. with a rectangle on which diagonals are traced), and conversely, the game described above may bear differing names (e.g. the game of *gaṭra* in the Ḥidjāz).

AL-**KHĀRDJ** [see KHARAG].

AL-**KHARDJ**, a district in Nadjd [*q.v.*], the central province of Saudi Arabia. Al-Khardj stretches from al-ʿĀriḍ [*q.v.*] in the north southwards to the area east of the oasis of al-Ḥawṭa [*q.v.*] in Wādī Burayk (Wādī 'l-Ḥawṭa). To the west the crags of ʿUlayya, a section of the range of Ṭuwayḳ [*q.v.*], rise above the vale of al-Khardj, which is closed in on the east by the steppe desert of al-Bayāḍ.

As the confluence of many *wādī*s (also called *shaʿīb*s), al-Khardj is one of the most fertile places in Saudi Arabia. Wādī Ḥanīfa (classical al-ʿIrḍ) and Wādī 'l-Sulayy flow down from the north to meet at the northwestern corner of the district. Just south of these two, Wādī Nisāḥ, which cuts its way due east through Ṭuwayḳ, empties its flood along with theirs into Wādī 'l-Sahbā', the large valley running east-wards to the sands of al-Dahnā'. From the south, al-Khardj is watered by Wādī 'l-Sawṭ, the northern extension of the trans-Ṭuwayḳ gorges Birk and Burayk, and by Wādī 'l-ʿAḳīmī, which runs parallel to the western edge of al-Bayāḍ.

Besides the water brought by the *sayl*s of these valleys, al-Khardj contains four unusually deep spring-fed pools (*ʿuyūn*), three clustered together in the northern part of the district and the fourth, Khafs Daghra, in the southern part. A channel called al-Sayḥ provides water for irrigation from ʿAyn Samḥā in the north.

The two most important towns in the north are al-Salamiyya and al-Yamāma. The name al-Yamāma [*q.v.*], which in earlier times was applied to much of what is now called Nadjd, has become restricted geographically to this one town, though the older usage has been revived by giving the name to a hotel and other establishments in al-Riyāḍ. Farther south lie Naʿdjān, al-Dilam, and Zumayḳa. The largest of all the towns is al-Dilam (or al-Dalam; al-Daylam in a verse by ʿAntara).

Many of the names given above occur in the literature of the Djāhiliyya and the early Islamic period. The dominant element in the population of al-Khardj then was the Banū Ḳays b. Thaʿlaba, a branch of Bakr b. Wā'il [*q.v.*]. Today the settled people of the valley belong in the main to Āl ʿĀyidh (said to be of Ḳaḥṭān), the Dawāsir, Banū Tamīm, and Banū Khālid [*qq.v.*]. Bedouins are from Subayʿ, the Suhūl, and Āl Shāmir.

The district as such does not figure prominently in historical records until the 12th/18th century, in the middle years of which the men of al-Khardj stood forth among the principal opponents of the new movement of the Wahhābiyya [*q.v.*]. In 1187/1773 Āl Suʿūd of al-Dirʿiyya [*qq.v.*], the secular champions of the Wahhābiyya, captured the foremost enemy town, al-Riyāḍ, which had held the ground between al-Dirʿiyya and al-Khardj. Zayd b. Zāmil, the lord of al-Dilam, took up the gauntlet against the Wahhābiyya and paid a large sum in gold to the Ismāʿīlī chief of Nadjrān [*q.v.*] to join him and others in a campaign against Āl Suʿūd which ended however in failure. In 1190/1776 ʿAbd al-ʿAzīz b. Muḥammad Āl Suʿūd defeated Zayd and secured the submission of al-Dilam. The first *amīr* sent to al-Khardj by Āl Suʿūd was Sulaymān b. ʿUfayṣān, who held office for sixteen years and whose family

remained associated with the district long thereafter.

After Ibrāhīm Pas͟ha of Egypt occupied al-Dirʿiyya in 1233/1818, his lieutenant Ḥusayn D̲j̲awk͟hdār pillaged al-Dilam. When the "Turks" from Egypt withdrew, Turkī b. ʿAbd Allāh Āl Suʿūd made al-Riyāḍ the new Wahhābī capital and reincorporated al-K͟hard̲j̲ in the state. The *ḳāḍī* of al-K͟hard̲j̲ under Turkī was the noted Ḥanbalī divine, ʿAbd al-Raḥmān b. Ḥusayn, a grandson of the founder of the Wahhābiyya.

The "Turks" from Egypt returned to Nad̲j̲d and took al-Riyāḍ. Fayṣal, who had succeeded his father Turkī as the Wahhābī *Imām*, based himself on al-K͟hard̲j̲, where K͟hūrs͟hīd Pas͟ha pursued and overcame him in 1254/1838 in a battle at al-Dilam and Zumayḳa and sent him a prisoner to Egypt, whence he eventually escaped to resume his rule in Nad̲j̲d. Fayṣal appointed a younger son of his, Suʿūd, as *amīr* of al-K͟hard̲j̲. On the death of Fayṣal in 1282/1865, Suʿūd's challenge of the right of his older brother ʿAbd Allāh to the succession precipitated a long civil war that enfeebled Āl Suʿūd and opened the way for the ascendancy of Āl Ras͟hīd of Ḥāʾil. The forces of Muḥammad b. ʿAbd Allāh Āl Ras͟hīd caught three of Suʿūd's sons in al-K͟hard̲j̲ and put them to death.

The fortunes of Āl Suʿūd were revived by ʿAbd al-ʿAzīz, son of Fayṣal's youngest son ʿAbd al-Raḥmān. ʿAbd al-ʿAzīz recovered al-K͟hard̲j̲ in 1320/1902 and then repulsed an attack against al-Dilam by ʿAbd al-ʿAzīz b. Muḥammad Āl Ras͟hīd. About ten years later the grandsons of Suʿūd b. Fayṣal, still closely connected with al-K͟hard̲j̲, launched an abortive rebellion against their cousin ʿAbd al-ʿAzīz b. ʿAbd al-Raḥmān. In the end, ʿAbd al-ʿAzīz forgave them and took into his entourage their leader, known as Suʿūd al-Kabīr ("the Older", to distinguish him from Suʿūd b. ʿAbd al-ʿAzīz, who later became King Suʿūd). Suʿūd al-Kabīr was married to ʿAbd al-ʿAzīz's favourite sister, Nūra. As King of Saudi Arabia ʿAbd al-ʿAzīz was fond of visiting al-K͟hard̲j̲ for diversion. He kept his stud of Arabian horses there, and a model farm run by Americans provided him with fresh produce.

K͟HARD̲J̲A [see MUWAS͟HS͟HAḤ].

K͟HĀRD̲J̲E, K͟HĀRGA [see AL-WĀḤĀT].

K͟HARGIRD, or K͟hard̲j̲ird, has been the name of at least two different places in north-eastern Persia but is at present only current for one of them.

1. K͟hargird in the *s͟hahristān* of Turbat-i Ḥaydariyya, or, more precisely, the *dihistān* of Rūd-i miyān K͟hʷāf, is situated at about 6 km. to the south-west of the latter place. It is now a small settlement, the inhabitants of which live on the growing of cereals and cotton as well as on weaving. Archaeological remains point, however, to a much more prosperous past when K͟hargird was one of the main urban centres of the district of K͟hʷāf [*q.v.*]. Many mediaeval geographers (e.g. Iṣṭak͟hrī, 267 f.; Ibn Ḥawḳal, 440; Muḳaddasī, 298) make mention of it among the cities of the district of Būs͟hand̲j̲ [*q.v.*]. As Būs͟hand̲j̲, identified with modern G͟hūriyān, lay at quite a distance from K͟hʷāf, it is not certain that the latter-mentioned K͟hargird was identical with the K͟hargird which Yāḳūt, ii, 486, counts among the *mudun* of the *ḳaṣaba* of K͟hʷāf, as Le Strange, 357 f., seems to have understood. It is possible that this name, the constituent parts of which occur in several geographic names, was a common appellation for townships of secondary importance in this part of K͟hurāsān.

The modern renown of K͟hargird rests upon the presence of two remarkable monuments of Islamic architecture. The oldest of these is an *īwān* with a *miḥrāb* which, as A. Godard has found, constitutes the remaining part of a *madrasa* built on a symmetric scheme of four *īwāns*. E. Herzfeld read the inscription in floriated Kūfic as a reference to the foundation of the building by the Sald̲j̲ūḳ vizier Niẓām al-Mulk [*q.v.*] (cf. *Isl.* xii (1922), 98-101). It would, then, be the only surviving specimen of the famous Niẓāmiyya *madrasas*. The second building, also a *madrasa*, is a splendid and well-preserved example of Tīmūrid architecture. Two inscriptions contain the records of its foundation by two ministers of Sultan S͟hāhruk͟h, Aḥmad b. Isḥāḳ and Fak͟hr al-Dīn K͟hʷāfī, and the completion of the construction by Ḳiwām al-Dīn S͟hīrāzī, who was the leading architect of the period, and G͟hiyāt͟h al-Dīn S͟hīrāzī in 848/1444-5. The building is remarkable on account of several original features of its outline and its fine decoration of glazed tiles and mosaics.

2. K͟hargird in the district of D̲j̲ām, which is mentioned in the biographies of three prominent mystic poets of the Tīmūrid period, is certainly not identical with the former place. Ḳāsim-i Anwār [*q.v.*] died at K͟hargird of D̲j̲ām in 837/1433-4 and was buried there in the garden of his estate. A mausoleum was erected at this spot to the order of Mīr ʿAlī-S͟hīr Nawāʾī [*q.v.*] in *ca.* 892/1487 (cf. Dawlats͟hāh, 348 f.). In 817/1414 ʿAbd al-Raḥmān D̲j̲āmī [*q.v.*] was born here and his nephew Hātifī [*q.v.*] spent his life in the vicinity of the tomb of Ḳāsim-i Anwār, where he found the inspiration for one of his *mat͟hnawī*-poems. At present, there no longer exists a place by the name of K͟hargird in the area of D̲j̲ām. Several Persian travellers and scholars have since the last century identified its site with modern Langar which lies on the road from Mas͟hhad to Turbat-i S͟hayk͟h-i D̲j̲ām. As a common noun, *langar* of *langark͟hāna* was used to denote an almshouse, as it was frequently attached to the tomb of a holy man. Sometimes it has developed into a place name, and there are quite a few instances of this to be found in K͟hurāsān. A similar development may very well have taken place in the case of K͟hargird. The shrine, which now exists at Langar and which contains no clues for its identification, has been ascribed to an unknown saint of of the 12th/18th century by E. Diez on the basis of a popular tradition recorded by Khanykov.

al-**KHARGŪSHĪ**, Abū Saʿd (or Saʿīd) ʿAbd al-Malik b. Muḥammad, a celebrated preacher (and therefore nicknamed al-Wāʿiẓ) and ascetic, was born in the Khargūsh street of Nīshāpūr: the arabicised form of his name is al-Kharkūshī. He went to Baghdād in the year 393/1002 on his way to perform the pilgrimage, and thereafter resided at Mecca for a while, returning to Nīshāpūr to die there in 406/1015 or 407/1016. Three works are ascribed to him (Brockelmann, I², 218, S I, 361). The first is a biography of Muḥammad, or rather a classified collection of traditions relating to him, in 8 volumes, variously entitled *Sharaf al-Nabī* (*al-Muṣṭafā, al-nubuwwa*) or *Dalāʾil al-nubuwwa*; a Persian translation of this, by Maḥmūd b. Muḥammad al-Rāwandī, is extant (Storey, *Persian literature*, i, 175-6). The second is a treatise on oneiromancy entitled *al-Bishāra wa ʾl-nidhāra fī taʿbīr al-ruʾyā*, a pietistic compilation. The third, and most important work, is a systematic account of Ṣūfism in 70 chapters, *Tahdhīb al-asrār*, which has survived in a single manuscript (Berlin, No. 2819). This last work derives not directly from al-Khargūshī himself, but from the recension of Abū ʿAbd Allāh al-Shīrāzī, a notorious charlatan who led a rising against the governor of Ādharbaydjān and died in 439/1047. For this and other reasons the value of the book cannot be rated very high, and it has been shown (cf. A. J. Arberry in *BSOS*, 1938, 345-9) that it is not entirely original, but plagiarises to a considerable extent the *Kitāb al-lumaʿ* of Abū Naṣr al-Sarrādj. Nevertheless it contains material for the history of Ṣūfism not extant elsewhere, and cannot therefore be entirely disregarded.

Bibliography: In addition to the works mentioned in the article see Sezgin, *GAS*, i, 670-1.

(A. J. Arberry)

wādī al-**KHĀRID** or Ghayl al-Khārid, one of the principal watercourses of the Yemen. It originates about twenty km. north of Ṣanʿāʾ, near Ḥadaḳān in Arḥab, and runs inland in a north-by-north-easterly direction, draining the eastern scarp of the highlands, towards the oasis of the Djawf, where it is joined by the Wādī Madhāb and veers to the south-east. After leaving the oasis, it unites with the Wādī al-ʿAṭf and is lost in the sands of Ramlat Sabʾatayn. According to popular belief, it reappears in the Ḥaḍramawt. Just east of Shirāʿ, in Nihm, where there are hot and mineral springs, it becomes a perennial river, one of the few in South Arabia, and is noted for supporting good-sized fish (*Barbus arabicus*), even in a dry summer. These provide a livelihood to the local inhabitants, who supply them to the Ṣanʿāʾ market. Otherwise, little is known of this part of the *wādī* because of the bad reputation of the inhabitants of Arḥab, and the Ṣanʿāʾ—Djawf road avoids the region. It is, however, well cultivated by the inhabitants, the Dhū Ḥusayn. In the Djawf itself an efficient agriculture is possible only by means of extensive irrigation schemes. This part of Wādī al-Khārid is presumably the river where Aelius Gallus in 24 B.C. fought a battle with the Arabs six days after leaving Negrana (Nadjrān). The *wādī*, however, does not feature with this name in the South Arabian inscriptions, and indeed is not so named till the time of al-Hamdānī, who describes it and its many tributaries in some detail.

KHĀRIDJA b. Zayd b. **THĀBIT** [see fuḳahāʾ al-madīna al-sabʿa, in Suppl.].

KHĀRIDJITES (*al-Khawāridj*, sing. *Khāridjī*), the members of the earliest of the religious sects of Islām, whose importance lies particularly, from the point of view of the development of dogma, in the formulation of questions relative to the theory of the caliphate and to justification by faith or by works, while from the point of view of political history the principal part they played was disturbing by means of continual insurrections, which often ended in the temporary conquest of entire provinces, the peace of the eastern part of the Muslim empire during the two last years of the caliphate of ʿAlī and during the Umayyad period, and involuntarily facilitating first Muʿāwiya's victory over ʿAlī, then that of the ʿAbbāsids over the Umayyads.

I. The origins of the Khāridjī movement.

Opportunity for the schism was given by the proposal presented to ʿAlī by Muʿāwiya during the battle of Ṣiffīn (Ṣafar 37/July 657) [*q.v.*] to settle the differences arising out of the murder of ʿUthmān, which had provoked the war, by referring it to two referees who would pronounce judgment "according to the Ḳurʾān". While the majority of ʿAlī's army readily adopted this proposal, either because they were tired of war or because the "Ḳurʾān-readers" (*ḳurrāʾ*) hoped there would emerge from this Ḳurʾānic judgment the justification of the furious campaign they had conducted against ʿUthmān which had ended in the latter's assassination, one group of warriors, mainly of the tribe of Tamīm, vigorously protested against the setting up of a human tribunal above the divine word. Loudly protesting that "judgment belongs to God alone" (*lā ḥukma illā li-llāhi*) they left the army, and withdrawing to the village of Ḥarūrāʾ [*q.v.*], not far from Kūfa they elected as their chief an obscure soldier, ʿAbd Allāh b. Wahb al-Rāsibī [*q.v.*]. These first dissenters took the name *al-Ḥarūriya* or *al-Muḥakkima* (i.e. those who repeat the above phrase; cf. *RSO*, viii, 789, note 1), which is often applied by an extension of meaning to the later Khawāridj also. This little group gradually increased on account of successive defections, especially when the arbitration ended in a verdict quite contrary to what the *ḳurrāʾ* expected (probably in Ramaḍān or Shawwāl 37/Feb.-March 658); on this occasion a large number of partisans of ʿAlī, including a number of *ḳurrāʾ* "went out" (*kharadja*) secretly from Kūfa (to which the army had gone during the truce) to join the camp of Ibn Wahb, who in the meantime had gone to the Djūkhā country on the left bank of the Tigris, to a place

which commanded the exits of the roads from Fārs and the bridge-head, at which in those days stood the little village of Baghdād, which later was to become the capital of the empire. The rebel camp lay along the Nahrawān canal. It is to this episode of the exodus from Kūfa that the Khawāridj owe their name ("those who went out"), more probably than to a general epithet expressing the idea that they had gone out of the community of the faithful, as it was later interpreted, probably at quite an early period (cf. the name of the Jewish sect of the Pharisees, which Ed. Meyer, *Ursprung und Anfänge des Christentums*, ii, 283-4, derived from the incident of their separation from the partisans of Judas Maccabeus in 163 B.C., quoting in support of his explanation the name of the Khawāridj). Another name given to those first Khawāridj (which has also been extended to their successors and seems to be the one which they gave themselves) is *al-Shurāt* (pl. of *shārī*), the "vendors" i.e. those who have sold their soul for the cause of God (this idea is found in several contemporary verses).

The extreme fanaticism of the Khawāridj at once manifested itself in a series of extremist proclamations and terrorist actions: they proclaimed the nullity of ʿAlī's claims to the caliphate but equally condemned ʿUthmān's conduct and disclaimed any intention of avenging his murder; they went farther and began to brand everyone infidel and outside the law who did not accept their point of view and disown ʿAlī as well as ʿUthmān. They then committed many murders, not even sparing women. Little by little the strength of the Khāridjī army grew by the accession of other fanatical and turbulent elements, including a number of non-Arabs, attracted by the principle of equality of races in the faith that the Khawāridj proclaimed. ʿAlī, who had so far tried to avoid dealing with the rebels, in order to avoid a war in his rear so long as he had to face the army of Muʿāwiya, after the rupture of the preliminaries of peace was obliged to take steps to avert the growing danger. He attacked the Khawāridj in their camp and inflicted a terrible defeat on them in which Ibn Wahb and the majority of his followers were slain (battle of al-Nahrawān, 9 Ṣafar 38/17 July 658 [*q.v.*]). But the victory cost ʿAlī dear. Not only was the rebellion far from suppressed and was prolonged in a series of local risings in 39 and 40, but ʿAlī himself perished by the dagger of the Khāridjī ʿAbd al-Raḥmān b. Muldjam al-Murādī [see IBN MULDJAM], the husband of a woman whose family had lost most of its members at al-Nahrawān. The tradition that a conspiracy of Khawāridj had aimed at killing simultaneously ʿAlī, Muʿāwiya and the governor of Egypt, ʿAmr b. al-ʿĀṣ, is almost certainly apocryphal.

It should be noted that the narratives of Arab historians on the origin of the Khāridji movement are very confused and contradictory, and seem to have lost sight of the real connection between it and the arbitration; on the other hand the nature and date of the latter are quite uncertain. The reconstruction which is given above is that proposed by the writer of this article (see Bibl.) against the view of Wellhausen (followed by Lammens and Caetani), who thinks that the Khāridjī rebellion and the arbitration are independent of one another and even dates the battle of al-Nahrawān before the verdict of the arbiters.

II. The wars of the Khawāridj under the Umayyads.

The wise and energetic administration of Muʿāwiya, succeeding the feeble and vacillating rule of ʿAlī, prevented the agitation of the Khāridjīs from breaking out, but it did not succeed in extinguishing it any more than it succeeded in suppressing the feelings and aspirations of the Shīʿa. Our sources mention several risings that broke out in Kūfa and Baṣra during the twenty years of Muʿāwiya's reign (40-60/660-80), but they were promptly put down and only served to increase the roll of martyrs, the worship and avenging of whom became one of the features of the Khāridjī movement. It is at Baṣra in particular, under the governors Ziyād b. Abīhi and his son ʿUbayd Allāh, that we find most risings and suppressions of risings. These insurrections, of which the most formidable was that of Mirdās b. Udayya al-Tamīmī Abū Bilāl [*q.v.*], settled the tactics of the Khawāridj, whose raids henceforth took the form of guerilla warfare and owed their successes mainly to the rapidity—which soon became legendary—of their cavalry (the names of some of their horses are preserved in Arabic works on hippology). They mobilised unexpectedly, swept through the country, surprised undefended towns and then retired rapidly to escape the pursuit of the government troops. The centres of concentration of the Khawāridj were the marshy country of the Baṭāʾiḥ around Baṣra (see AL-BAṬĪḤA) and around Djūkhā, on the left bank of the Tigris, where their movement had originated, from which they could, if defeated, rapidly gain the mountainous lands of the Irānian plateaus.

It was only with the great civil war that broke out after the death of Yazīd I, that in the midst of the general disorder the Khāridjī movement assumed serious dimensions and contributed more than anything else to render precarious the hold of the pretender ʿAbd Allāh b. al-Zubayr [*q.v.*], on the territory that he had at first been able to subdue. After the fall of Ibn Zubayr, it was the Umayyad governors who had to wage a hard struggle with these indomitable rebels, enemies alike of victors and vanquished. It is at this time that we begin to distinguish among the Khawāridj half-political and half-theological subdivisions, the origin of which is not at all clear, for the tradition which makes them appear at the same time quite suddenly at Baṣra on the death of Yazīd has probably altered the real succession of events. In any case, we henceforth find the Khawāridj breaking out throughout the eastern part of the empire (Syria was always free from them and Africa only knew them under the ʿAbbāsids) into serious rebellions, at the head of which they placed individuals who have given their names to the *Azāriḳa* or *Azraḳīs*, to the *Ibāḍiyya* and to the *Ṣufriyya* [*q.vv.*]. Of all these movements the most dangerous to the unity of the Muslim Empire and the most terrible on account of its ferociously uncompromising character was without doubt that led by Nāfiʿ b. al-Azraḳ [*q.v.*], which gave the Khawāridj temporary control of Kirmān, Fārs and other eastern provinces, constituted a permanent threat to the security of Baṣra and surrounding country, and which al-Muhallab b. Abī Ṣufra at first, and later al-Ḥadjdjādj b. Yūsuf only overcame (in 78/698 or 79/699) after long years of effort which ended in the defeat and death of the last and most remarkable of the Azraḳī leaders, the valiant Ḳaṭarī b. al-Fudjāʾa [*q.v.*]. Less serious and less extensive and prolonged, but quite as stubborn as the Azraḳī movement, was the insurrection which was called after Shabīb b. Yazīd al-Shaybānī (76-7/696-7), although he did not begin it but was only its most distinguished leader; it began in the high Tigris country between Mārdīn and

Niṣībīn and its object was the conquest and devastation of Kūfa. The partisans of Shabīb, who advanced only in little bands of several hundred horsemen, but who often gathered round them large bands of malcontents, sowed terror throughout ʿIrāḳ, and having several times defeated al-Ḥadjdjādj's troops were only destroyed by the help of an army of picked troops summoned from Syria. Shabīb himself perished, drowned in the Dudjayl, while trying to reach the mountains of Kirmān; his successors caused a certain amount of trouble to the governors of Yazīd II and Hishām but never again were a serious danger.

Arabia was another field of Khāridjī activity, where during the rule of Ibn al-Zubayr between the years 65/684-5 and 72/691-2 their leaders Abū Ṭālūt, Nadjda b. ʿĀmir and Abū Fudayk captured in succession Yamāma, Ḥadramawt, Yaman and the town of al-Ṭāʾif, and were only restrained by religious scruples from taking the holy cities. They were only destroyed after the intervention of al-Ḥadjdjādj, but they left the seeds of future movements, especially in the eastern part of the peninsula.

Owing mainly to the energy of al-Ḥadjdjādj, Khāridjism seemed definitely quelled. Another factor contributed considerably to its failure, namely the fanaticism and intolerance of the rebels, whose religious disputes ended in splitting their ranks and sometimes resulted in the removal of their ablest leaders on the charge of having on some occasion failed to observe the absolute irreconcilableness of their principles. Another cause of weakness may be recognised in the eternal feud between the Arab element and that of the *Mawālī* which brought fatal consequences along with it, especially among the remnants of the Azraḳīs after the death of Ḳaṭarī b. al-Fudjāʾa. But under the last Umayyads, in the midst of the irreparable collapse of the central government, the Khawāridj again raised their heads, and resumed their exploits, this time not in little bands but in large bodies. While the two most serious risings of this period, those of al-Ḍaḥḥāk b. Ḳays al-Shaybānī [*q.v.*] in the Djazīra and ʿIrāḳ and that of ʿAbd Allāh b. Yaḥyā, surnamed *Ṭālib al-Ḥaḳḳ*, and of Abū Ḥamza [see AL-MUKHTĀR B. ʿAWF] in Arabia (in the course of which Medina itself was occupied), ended in defeat, it is nevertheless true that the anarchy which they provoked destroyed the eastern rampart of Umayyad power and enabled the ʿAbbāsid insurrection to penetrate more easily to the heart of the empire.

Under the ʿAbbāsid caliphs, the Khāridjī movement may be said to be practically extinct in ʿIrāḳ and adjoining regions. Except for a few local risings, promptly suppressed, Khāridjism no longer presented any serious danger and only survived as a religious sect, without, however, any remarkable vitality or wide dissemination. In Eastern Arabia, on the other hand, in North Africa and later on the eastern coast of Africa, one of the principal branches of the Khawāridj, that of the Ibāḍiyya, played an important part in politics, and even after this role was ended it continued to be of importance from the religious point of view. It survives in our day with its dogmas, its rites and its special laws.

III. The political and religious theories of the Khawāridj.

The Khawāridj, who, as we have seen, never had any true unity of military and political action, did not have either a uniform body of doctrines. Their teachings seem to us like the particular views of a number of independent sub-sects (the heresiographers number not less than a score including principal and subsidiary together), some of which represent theological schools as well as political movements of a collectivist character, while others confine themselves to expressing differences of individual opinions among the theorists of the sect. One article is common to all: it is that which treats of the question of the caliphate, a question which has been the starting point of all the religious divisions in Islām. On this question, the Khawāridj are opposed equally to the legitimism of the Shīʿa and the quietism of the Murdjiʾa. On the one hand they assert what Wellhausen aptly calls their "non-conformity" i.e. the obligation on believers to proclaim illegitimate and ipso facto deposed the *imām* who has gone off the right path (this is how they justify their abandonment of ʿAlī after his acceptance of the arbitration); on the other hand they declare every believer who is morally and religiously irreproachable to be capable of being raised by the vote of the community to the supreme dignity of the imāmate, "even if he were a black slave". The result is that each of their leaders has been recognised by them as *amīr al-muʾminīn*, although none of them had, among other things, the qualification of Ḳurashī birth. Consequently the only other caliphs besides their own that they recognise as legitimate are Abū Bakr and ʿUmar (the latter is particularly venerated by them); ʿUthmān only during the first six years of his reign; and ʿAlī till the battle of Ṣiffīn.

Another capital article of Khāridjī heterodoxy is the absolute rejection of the doctrine of justification by faith without works. They push their moral strictness to the point of refusing the title of believer to anyone who has committed a mortal sin and regarding him as a *murtadd* (apostate); and their extreme wing, represented by the Azraḳīs, says that he who has become an infidel in this way can never re-enter the faith and should be killed for his apostasy along with his wives and children. Of course all non-Khāridjī Muslims are regarded as apostates. Here we have the principle of *istiʿrāḍ* (religious murder [*q.v.*]) which we find applied from the beginning of the Khāridjī movement, even before it had been formulated in theory, and which found its completest application during the war of the Azraḳīs. This ferocious principle forms a strange but not illogical contrast with the spirit of tolerance shown by the Khawāridj to non-Muslims and which in some of their schools goes so far as to recognise as equal to Muslims in every way those Jews or Christians who will pronounce the *shahāda* with the modification: "Muḥammad is the Apostle of God to the Arabs and not to us." The tendency to the levelling of the Arabs and the *Mawālī* (which was already a result of their attitude to the problem of the imāmate) was pushed so far by one of the theorists of Khāridjī doctrine, Yazīd b. Abī Anīsa (founder of the *Yazīdīya*), that he says that God will reveal a new Ḳurʾān to a prophet among the Persians and that he will found a new religion for them, divine in the same sense as Judaism, Christianity and Islām, which will be no other than that of the Ṣābiʾūn mentioned in the Ḳurʾān.

The same Puritanism which characterises Khāridjism in its conception of the state and of faith is found in its ethical principles: it demands purity of conscience as an indispensable complement to bodily purity for the validity of acts of worship; one of their sects goes so far as to remove Sūra XII from the Ḳurʾān (*Sūrat Yūsuf*) because its contents

are worldly and frivolous and make it unworthy to be the Word of God. If, on the other hand, they seem to be less strict than the orthodox in the punishment they inflict on adulterers, for whom they do not allow stoning, this is due simply to the fact that they do not recognise the authenticity of the famous verses added by ʿUmar to the primitive text of the Ḳurʾān (cf. Nöldeke-Schwally, *Gesch. d. Qorāns*, i, 248-52).

Outside of general principles and a few particular cases, the law and dogmatics of the Khawāridj are not known to us in their totality except for the Ibāḍīyya, whose survival to the present day has preserved in its integrity their religious tradition. The Ibāḍiyya represent (as do the Ṣufriyya on the other side) a comparatively moderate school and their present views, in dogma as well as law, have been to some degree influenced by other Muslim schools. Attention has recently been drawn (by C. A. Nallino, in *RSO*, vii, 455-60) to the very close connection between the dogmatics of the Ibāḍiyya and of the Muʿtazila. It may also be supposed that it was the latter which, in certain points at least, received a stimulus from Khāridjism. What seems beyond doubt is that, as Wellhausen points out, Khāridjism played a very important part in the development of Muslim theology, either directly or by the impetus which it gave to reflection on the problems of the faith.

Although Khāridjism seems to us an essentially popular movement in its origins, we must be careful not to think of it as devoid of intellectualism. On the contrary, the very radicalism of its theories must have exercised an attraction on many cultivated minds, much as similar doctrines have done in other times and countries. It is particularly at the time of the early ʿAbbāsids, under the influence of and at the same time in opposition to the refined and sceptical culture of the period, that we find many scholars and men of letters who were thought to cherish Khāridjī views, without this preventing their frequenting high society and enjoying the favour of the court. The best known of these Khawāridj *sub rosa* was the famous philologist Abū ʿUbayda Maʿmar b. al-Muthannā [*q.v.*], regarding whose fanaticism, in conversation at least, a rather piquant anecdote is recorded by Ibn Khallikān (i, 107 of the 1310 edition; the poetic quotation should be corrected from the *Amālī* of al-Murtaḍā, iii, 88-9). Poetry and eloquence were also cultivated among the Khawāridj, which is explained by the fact that the majority of their leaders, especially in the early days, belonged to the Bedouin element in the military camps of Kūfa and Baṣra. Collections were compiled of the *khuṭab* pronounced by the Khāridjī leaders, and what survives of them, besides giving an excellent idea of their views, gives us a fairly high opinion of their oratorical talent. We also possess numerous fragments of their poetry (which had also been collected in particular *dīwāns*), especially of those of ʿImrān b. Ḥiṭṭān [*q.v.*] (who is at the same time considered one of the founders of the Khāridjī *fiḳh*). A long list of Khāridjī orators, poets and jurists was prepared by Djāḥiẓ (see Ch. Pellat, *Djāḥiẓ et les Khāridjites*, in *Folia Orientalia*, xii (1970), 195-209).

The wars of the Khāridjīs had been recorded from the beginning of Arabic historiography in several works which have not come down to us in their entirety; we know, however, the substance of the more important among them, the authors of which were Abū Mikhnaf, Abū ʿUbayda and al-Madāʾinī from the extracts which have been preserved in the historical sources given below.

Bibliography: Mubarrad, *al-Kāmil*, ed. Wright, *passim* (scattered throughout this work, in no sequence or order, are abundant literary and historical references to our subject; they have been translated by O. Rescher, *Die Kharidschitenkapitel aus dem Kāmil*, Stuttgart 1922); Ṭabarī, i, 3341 ff., ii, *passim*; Balādhurī, *Ansāb al-Ashrāf*, in *RSO*, vi, 488-97 (résumé and specimens of the text for the period of the caliphate of ʿAlī; errata: *ibid.*, 925); idem, ed. Ahlwardt, 78-96, 125-51 (for the period of the caliphate of ʿAbd al-Malik); Masʿūdī, *Murūdj*, iv-vi, *passim*; L. Caetani, *Annali dell' Islām*, ix, 541-56, x, 76-151, 168-95, and *passim* (translation by the author of this article of the historical texts for the period of the caliphate of ʿAlī and of other material relating to the Khawāridj, taken from the collections of *ḥadīth*, etc.); idem, *Chronographia Islamica*, i; R. KHARĪṬA (or **KHĀRIṬA**), "map" in modern Arabic, derived from French "carte", (see I. I. Krachkovsky, *Istoria Arabskaya geografičeskaya literatura* (Moscow-Leningrad 1957), with Arabic tr.

by Ṣalāḥ al-Dīn ʿUthman Hāshim as *Taʾrīkh al-adab al-djughrāfī al-ʿArabī*, i (Cairo 1963), 59, n. by translator; cf. Ibrāhīm Shawkat, *Kharāʾiṭ djughrāfiyyī al-ʿArab al-awwal*, in *Madjallat al-Ustādh*, (Baghdad 1962), 2.). In mediaeval Arabic several terms were used for "a map" or "map of the earth", e.g. *djughrāfiyā* or *djaʿrāfiyya* (Greek Γεωγραφία), translated into Arabic as *ṣūrat al-arḍ*; then *rasm al-arḍ*, *ṣifat al-dunyā*, *ashkāl al-arḍ*, *lawḥ al-rasm*, etc.

Cartography had been practised in the Middle East since ancient times, but with the advent of Islam it received a new impetus due to the political and administrative requirements of the expanding Islamic world. Thus in the 2nd/8th century a map of al-Daylam was prepared for al-Ḥadjdjādj b. Yūsuf (d. 95/714); then a map of the Swamps of Baṣra is said to have existed during the reign of the ʿAbbāsid caliph al-Manṣūr (136-58/754-75). (Krachkovsky, *op. cit.*, i, 59, 206; cf. Shawkat, *op. cit.*, 2, 3). Whatever the quality of such maps, the Arabs' direct knowledge of the region gathered during their early campaigns, coupled with indigenous methods of drawing maps, probably enabled them to draw these.

It is not, however, until the early decades of the 3rd/9th century that we come across the first detailed world maps drawn in Arabic. This became possible through the introduction to the Islamic world of the Greek, Indian and Iranian astronomical and geographical works in the 8th and the early 9th centuries A.D. Thus from this period until the 17th century, cartography was practised as a science and passed through several stages of development. Muslim astronomers and geographers drew world maps and regional maps, as well as sea-charts, following various traditions until their mediaeval techniques of cartography were replaced by the modern ones.

The first world map, the original form of which is not extant, was constructed by the scholars of Baghdād who worked in the *Bayt al-Ḥikma* "House of Science" [*q.v.*] there under the patronage of the caliph al-Maʾmūn (198-218/813-33). This map was named after the caliph as *al-Ṣūrat al-Maʾmūniyya*. According to al-Masʿūdī (d. 345/956), who had seen this map, it depicted "the universe with spheres, the stars, land and the seas, inhabited and barren (regions of the world), settlements of peoples, cities, etc." It was, he says, more exquisite than the world maps of Claudius Ptolemy, Marinos and others, (al-Masʿūdī, *Tanbīh*, 33; cf. al-Masʿūdī, *Murūdj*, i, 183-205). According to al-Zuhrī (lived *ca.* 532/1137), al-Fazārī had made a copy of the map, and al-Zuhrī's own work, the *Kitāb al-djaʿrāfiyya*, was based on this copy of *al-Ṣūrat al-Maʾmūniyya* (al-Zuhri, *Kitāb al-Djaʿrāfiyya*, ed. Muḥammad Hadj-Sadok, Damascus 1968, 306; cf. Krachkovsky, *op. cit.*, 86/7, 279). As the arrangement of the geographical material in al-Zuhrī's work follows the ancient Iranian *kishwar* system [see DJUGHRĀFIYA], it is possible that *al-Ṣūrat al-Maʾmūniyya* represented a synthesis between the Iranian system and the Ptolemaic system according to which the inhabited world was divided into seven climes running parallel to the equator and divided according to the length of the day. It is evident, therefore, that while much of the data of the map was derived from Ptolemy's *Geography*, a substantial amount of it and its arrangement must have come from non-Greek sources.

It was during this period that Muḥammad b. Mūsā al-Khwārazmī (d. after 232/84 [*q.v.*]) wrote his geographical work entitled *Kitāb Ṣūrat al-arḍ*. Though essentially based on Ptolemy's *Geography*, the work gives in a tabulated form the co-ordinates of places (cities, mountains, rivers, etc.) arranged according to the Ptolemaic climes. There is little doubt that the work must have been originally accompanied by regional maps of each of the climes or by a single world map, but none of these seem to have survived. The four maps produced in the printed edition of the work seem to be later recensions of the original maps depicting *djazīrat al-djawhar*, a map of the seas, gulfs, etc., of the Nile and the Sea of Azov drawn by the author. (For the maps, see *Kitāb Ṣūrat al-arḍ*, ed. H. von Mžik, Leipzig 1926, Tafel I (*djazīrat al-djawhar*); Tafel II (shapes of the seas, gulfs, etc.); Tafel III (Map of the Nile); and Tafel IV (Map of the Sea of Azov). Shawkat reasons that since al-Khwārazmī wrote a brief work, he did not draw a complete map of the world but confined himself to drawing the four maps as an illustration, see *op. cit.*, 7-8). Al-Khwārazmī's maps have now been fully reconstructed by S. Razia Jafri on the basis of the data given in his *Ṣūrat al-arḍ* (*A critical revision and interpretation of Kitāb Ṣūrat al-ʾarḍ by Muḥammad b. Mūsā al-Khwārizmī*, thesis, Aligarh Muslim University, unpublished). A comparison of these maps with those of the extant maps of Ptolemy (see E. L. Stevenson, *Geography of Claudius Ptolemy*, New York 1932; cf. the map of Afrika by al-Khwārazmī as interpreted by von Mžik (reproduced by Youssouf Kamal, *Monumenta Cartografica Africae et Aegypti*, iii (Époque Arabe), Fasc. I, 1930, 525), shows their close resemblance to each other, just as the maps reproduced in al-Khwārazmī's work resemble those of Ptolemy.

Thābit b. Ḳurra (d. 288/901 [*q.v.*]), who was credited with an excellent translation of Ptolemy's *Geography* into Arabic, also drew a world map called *Ṣifat al-dunyā* (Krachkovsky, i, 206), but it has not survived.

The maps enumerated above followed what may be called the Greco-Muslim tradition in cartography, yet they differed from the maps of Ptolemy in several aspects. First, they did not follow the Ptolemaic technique of conical projection. The cartographers drew their maps with latitudes and longitudes as straight lines as though on a plane surface, and without any regard to the spherical shape of the earth. Al-Bīrūnī (d. after 442/1050 [*q.v.*]), criticising Marinos for some assumptions in his map of the earth, and also al-Battānī (d. 317/929 [*q.v.*]) for his determination of the direction of the *ḳibla*, says that "They treated the meridian circles as parallel straight lines and the parallels of latitudes as straight lines. Thus they have fallen into this outrageous error," (al-Bīrūnī, *The determination of the co-ordinates of positions for the correction of distances between cities*, tr. of *Kitāb Taḥdīd nihayāt al-amākin li-taṣḥīḥ masāfāt al-masākin*, by Djamīl ʿAli, Beirut 1966). Similarly, al-Zuhrī was critical of the scientists who had constructed *al-Ṣūrat al-Maʾmūniyya*, for, he says, while the earth was in fact spherical in shape, they drew the map of the earth on a plane, a method followed in the construction of the astrolabe (*op. cit.*, 304). Again, while in the Ptolemaic maps the inhabited world is divided into seven climes (subdivided into 21 parallels north of the equator and 4 parallels south of it), in the Greco-Muslim maps only the broader division of the climes is followed, while the subdivision into the parallels is neglected. Thirdly, differences in the physical features as depicted on the Ptolemaic and the Greco-Muslim maps can also be noticed. For instance, in the Ptolemaic maps the Indian Ocean is shown as a lake, while on the Greco-Muslim maps it

is shown as having water communication with the Pacific (the "Encircling Ocean") in the south-east. Again, Ceylon in the Greco-Muslim maps is much smaller in size than that shown in the Ptolemaic maps. These and similar dissimilarities were partly due to the more intimate knowledge of Asia and Africa enjoyed by the Muslim geographers and cartographers. Moreover, the Muslim astronomers of the later period had revised the astronomical tables of the Greeks as well as those of the early Muslim astronomers in the light of their own observations, which must have helped the cartographers to draw more accurate maps (for details, see Shawkat, 11, 5).

During the 4th/10th century, Abu 'l-Ḥasan Ibn Yūnus (d. 399/1009 [*q.v.*]), along with al-Ḥasan b. Aḥmad al-Muhallabī, prepared a world map for the Fāṭimid caliph al-ʿAzīz (365-86/975-96). It was drawn on a Tustarī silk cloth and woven in gold and different colours in silk. On it were shown the climes, mountains, rivers, cities, seas and the different routes, and Mecca and Medina were prominently depicted on it. It cost 22,000 *dīnārs*. Except for some differences in the south-eastern coast of Arabia and the northern coast of Africa, it conformed to the map of al-Khwārazmī (*ibid.*, 12-13).

Also in this century, Abū Zayd Aḥmad b. Sahl al-Balkhī (d. 322/934 [*q.v.*]) initiated a new tradition in Islamic cartography which exercised a deep influence on later cartographers and became the most popular style of cartography in the Islamic world. Al-Balkhī wrote a geography of the Islamic world entitled *Ṣuwar al-aḳālīm*, in which he described each of the various provinces, calling it an *iḳlīm*. Though brief, the work was a description of the maps of the provinces drawn by the author with their boundaries, main cities and towns, rivers, mountains and the main roads connecting the cities. He also drew maps of the Indian Ocean, the Mediterranean and the Caspian and a world map in which Mecca occupied the central position. Neither the geographical treatise nor the maps of al-Balkhī have survived independently. However, his maps were copied and probably improved by al-Iṣṭakhrī (*ca.* 340/951 [*q.v.*]) and his treatise incorporated in the latter's work. Al-Iṣṭakhrī drew 21 provincial maps (including one of the world) which are found attached to his *Kitāb Masālik al-mamālik.* (For the maps, see *al-Masālik wa 'l-mamālik*, ed. Muḥammad Djābir ʿAbd al-ʿĀl al-Ḥīnī, Cairo 1961; see also *ibid.*, 195-205, for a discussion of the maps by the editor; see also coloured maps in a Persian translation of al-Iṣṭakhrī's work entitled *Masālik wa mamālik*, ed. Īradj Afshār, Tehran 1340/1961). Another geographer who followed the cartographical tradition of al-Balkhī was Ibn Ḥawḳal (*ca.* 367/977 [*q.v.*]). One of the outstanding geographers of the time, Ibn Ḥawḳal produced an excellent work on the geography of the Islamic world, his *Kitāb Ṣūrat al-arḍ.* Though essentially based on the Balkhī-Iṣṭakhrī tradition, the work includes the rich personal experiences and observations of the author. For his work, Ibn Ḥawḳal drew 22 maps, including a world map. In his opinion, some of the maps of al-Iṣṭakhrī were excellent, whereas others were confused and full of defects. Hence, on al-Iṣṭakhrī's own request, he revised some of the former's maps (Ibn Ḥawḳal, *Kitāb Ṣūrat al-arḍ*, ed. J. H. Kramers, Leiden 1939, ii, 329-30). A glance at the maps of Ibn Ḥawḳal shows that they are superior to those of al-Iṣṭakhrī. A third follower of this school was al-Muḳaddasī (*ca.* 375/985 [*q.v.*]), who was perhaps the most original of the geographers of mediaeval Islam. In his *Kitāb Aḥsan al-taḳāsīm fī maʿrifat al-aḳālīm* he gave a systematic account of the geography and the cultural aspects of each of the provinces of the Islamic world. Having rearranged the provinces, he drew the maps of 12 of them (for al-Muḳaddasī's maps, see Kamāl, iii, fasc. I, 672-7), and claimed to have drawn a more accurate map of the sea round Arabia in the light of his own experiences and the information derived from experiences of sailors whom he had met (al-Muḳaddasī, ed. M. J. de Goeje, *BGA*, iii, Leiden 1877, 10-1). It seems therefore, that the cartographers of the Balkhī school continuously endeavoured to improve the maps of their predecessors.

This new tradition of cartography differed fundamentally both in approach and content from the Greco-Muslim tradition, and could be described as reflecting the Islamic political point of view of the time. As against the Greco-Muslim maps in which ʿIrāḳ was usually placed in the central clime (i.e. the fourth), in the world maps belonging to the Balkhī school, Mecca occupied the central position. Another interesting feature of these round world maps is that south is placed at the top and north at the bottom, for which religious reasons are assigned (Shawkat, 21, n. 3, is of the view that the geographers put south at the top of their maps because of reverence for the cities of Mecca and Medina in Arabia, beyond which there was no land). Again, land is surrounded by the "encircling Ocean" (*al-Muḥīṭ*) and practically the whole of the southern quarter of the earth is shown covered by land, following the Greek concept of *terra incognita* as an extension of the African continent. Then, the Mediterranean and the Indian Ocean are depicted as two "gulfs" coming out of the "Encircling Ocean" and reaching nearest to each other at the Isthmus of Suez, thus conforming to the Ḳurʾānic concept of the two gulfs meeting at al-Barzakh [*q.v.*] ("the barrier", XXV, 55/53). Thus the Indian Ocean, though connected with the Pacific in the south-east, has no water communication with the Atlantic. The separate sea maps are usually geometrical in shape, and resemble a bird or some other figure, which are again based on ideas of Muslim traditionists. In these world maps, arbitrary boundaries of the provinces (*iḳlīms*) of the Islamic world, as well those of the non-Islamic regions, are drawn so as to convey an overall picture of the political and the ethnographic divisions of the world. It is, above all, in their provincial (*iḳlīm*) maps that these cartographers display their originality. In each of these maps, the boundaries, cities and towns, rivers, mountains and roads are shown with great dexterity. Obviously, the main purpose of the author was to highlight the Islamic world. These maps, therefore, may be taken as a distinctive achievement on the part of the cartographers of the Balkhī school and an improvement on the mathematical division of the climes of the Greco-Muslim maps.

K. Miller attributed some maps which have traces of the Balkhī school in them to the famous Sāmānid *wazīr* Abū ʿAbd Allāh Muḥammad b. Aḥmad b. Naṣr al-Djayhānī, the author of the lost work called *Kitāb al-Masālik wa 'l-mamālik* (written *ca.* 310/922) (*Mappae arabicae*, Stuttgart 1931, Islam Atlas, Band v, Tafel 66-70, 72v and 73r). It is unlikely, however, that these maps were drawn by him, for in his work he followed the Ptolemaic arrangement of the seven climes.

One of the earliest Persian geographical works produced in this century was the anonymous *Ḥudūd al-ʿālam* (compiled in 372/982-3). According to V. Minorsky, the author "worked on the basis of some previous map", probably a modified form of Abū

D̲j̲aʿfar al-K̲h̲āzin's maps, upon which he seems to have made some improvements. However, the map upon which the anonymous author worked has not survived. (Minorsky based his view on Barthold's suggestion that al-Balk̲h̲ī's book on geography may have actually been an explanation of Abū D̲j̲aʿfar al-K̲h̲āzin's maps, see *Ḥudūd al-ʿālam*, tr. 18, n. 5; for Minorsky's view, see *ibid.*, p. xv). It might have belonged to the tradition of the Balk̲h̲ī school.

It was, however, left to al-Bīrūnī to introduce new concepts in physical geography which resulted in innovations in the world maps hitherto drawn by the Muslim cartographers. He was the first to propound the theory that the Indian Ocean must have a connection with the Atlantic through certain channels south of the Mountains of the Moon, the traditional sources of the Nile. He argued that just as *al-Baḥr al-Kabīr* (the Indian Ocean) penetrated into the northern continent (Asia) on the east and entered it in many places, creating many islands there, similarly, the continent, to keep up the balance jutted out into *al-Baḥr al-D̲j̲unūbī* (the Southern Sea) in the west. He continues that in this region, the sea had entered the mountains [of the Moon] and the valleys, with a continuous ebb and flow, and was stormy, causing shipwrecks and preventing sailing, but in spite of this it was still connected with the *Uḳiyānūs* (the Atlantic) through these narrow passages. He then says that towards the south and beyond these mountains, signs of the connection of these two seas have been discovered, even though no-one has personal experience of their connection. Thus al-Bīrūnī conceived of the inhabited continent as being surrounded by the "Encircling Ocean" (*al-Ḳānūn al-Masʿūdī*, Hyderabad 1955, ii, 538); and in his map of the seas, the traditional *terra incognita* is replaced by sea which covers most of the southern quarter, the Indian Ocean is connected with the Atlantic, and Africa acquires a small size (for al-Bīrūnī's map of the sea, see Fig. 1). Al-Bīrūnī's theory was adopted by many a later geographer and cartographer. (For example, see Abu 'l-Fidā, *Taḳwīm al-buldān*, ed. J. Reinaud, *Géographie d'Aboulféda*, Paris 1840, 12-13; Yāḳūt, *Muʿd̲j̲am*, i, 506, and the map of the seas based on al-Bīrūnī, cf. Wadie Jwaideh, *The introductory chapters of Yāqūt's Muʿjam al-Buldān*, Leiden 1959, 30-2). The absence of the *terra incognita* in many of the later world maps and the changing shape of the African continent in them may have been due to the influence of this theory.

Fig. 1. Map of the seas by al-Bīrūnī as contained in his *Kitāb al-Tafhīm li-awāʾil al-tand̲j̲īm* (written in 420/1029), British Museum, MS. Or. 8349, f. 58.

During the 5th/11th centuries, Maḥmūd al-Kās̲h̲g̲h̲arī [*q.v.*] drew a rather unusual world map with a linguistic basis, giving prominence to the Turkish-speaking regions and placing Kās̲h̲g̲h̲ar at the centre of the world, with other regions receding to the periphery. (For his map, see Kamāl, iii, fasc. II, 741; cf. Miller, *op. cit.*, Arabische Welt- und Länderkarten, Band v, Weltkarten, 142-8.)

While the Balk̲h̲ī school was gaining popularity with the cartographers in the east, in Europe some of the most outstanding maps in the Greco-Muslim tradition were still being produced. In Sicily, the well-known geographer al-S̲h̲arīf al-Idrīsī (d. 560/1166 [*q.v.*]), who lived at the court of Roger II, produced a series of world and sectional maps at the orders of the king. Taking the Ptolemaic maps as the basis, he constructed a large silver map. He then draw a world map and by dividing each of the seven climes into ten longitudinal sections, he drew a separate and detailed map of each of these sections. Into these he incor-

porated the geographical information collected from Arabic as well as Norman sources. The maps form a part of his monumental geographical work *Kitāb Nuzhat al-mus͟htāḳ fi 'k͟htirāḳ al-āfāḳ*, and except for the silver map, all have fortunately survived the vicissitudes of time. (For his maps, see Miller, Band i, Heft 2, Heft 3; and Band vi). Al-Idrīsī's maps represent the best example of Arabo-Norman co-operation in cartography.

An interesting world map belonging to the middle of the 6th/12th century exists in an anonymous work entitled *Muk͟htaṣar Ibn Ḥawḳal*, in which the shape of the inhabited world is drawn elliptically rather than round. The Indian and the Atlantic Oceans are separated by a narrow isthmus of land near the sources of the Nile, which is connected with the *terra incognita* and which is partly visible (of the three mss. of this, two carry the title *Kitāb Hay'at as͟hkāl al-arḍ wa-miḳdāruhā fi 'l-ṭūl wa 'l-ʿarḍ al-maʿrūf bi-d͟jug͟hrāfiyā*, Kamāl, iii, fasc. II, 804-17. Kamāl reproduced all the maps belonging to the various mss. of this work. One of these (B.N. No. 2214), according to Kramers, is an abridgement of Ibn Ḥawḳal's ms. Top Kapu Saray No. 3346, which was copied in 479/1086 with supplementary annotations relating to the period of the epitomiser, i.e. 534-80/1139-84, see Ibn Ḥawḳal, ed. Kramers, Introd. pp. v-vi). Among the various maps belonging to the manuscript of this work, there is a map of the Nile reproduced by Kramers in his edition, i, 149, but it differs in detail from the map of the Nile by al-K͟hʷārazmī (see above).

To this century also belong the six maps of Aḥmad al-Ṭūsī, one of the earliest Muslim cosmographers and author of the Persian work *Kitāb ʿAd͟jā'ib al-mak͟hlūḳat* (written *ca.* 576/1180); these were probably drawn in the Balk͟hī tradition, and are the maps of the Caspian (*Baḥr Ḳazwīn*), the Mediterranean, al-D͟jibāl, al-Sind and the Persian Gulf (Krachkovsky, 325).

During the 7th/13th century, a number of world maps were produced, some of which belonged to the Greco-Muslim tradition and others to that of the Balk͟hī school. A peculiar world map belonging to the former tradition and dated 646/1248 is found in a fragment of a Persian geographical treatise. In this map, the Indian Ocean passes south of the Mountains of the Moon and then turning northwards joins the Atlantic and the Mediterranean, thus surrounding what appears to be the continent of Africa. However, the *terra incognita* is also shown covering part of the southern quarter of the earth and then extending northwards around Africa where it joins Spain (see Kamāl, iii (1935), fasc. V, 996; the volume containing the Persian geographical treatise (Leiden ms. Ar. 1899) also contains an astronomical treatise by Aḥmad al-Sid͟jzī copied in 646/1248). The author seemed to have been influenced by al-Bīrūnī, but at the same time persisted in retaining the *terra incognita* on the map, and it was this which led him to connect it with the European mainland. To the Greco-Muslim tradition also belonged the Syriac world map of Bar Hebraeus (Ibn al-ʿIbrī, A.D. 1226-86 [*q.v.*]), Miller, i, 9; v, 169; cf. Krachkovsky, 373-4.

The elliptical world maps attributed by Miller to Ibn Saʿīd al-Mag͟hribī (d. 673/1274 or 685/1286), see Miller, Band v, Tafel 71, and i, 1, 21-2, are more likely to be the work of the anonymous author of the *Muk͟htaṣar Ibn Ḥawḳal.* Ibn Saʿīd's world map, on the other hand, follows the Greco-Muslim tradition, but the *terra incognita* is replaced by sea in the southern quarter of the earth and the Indian Ocean is connected with the Atlantic south of Africa, whose southern part is fork-shaped. However, the author seemed to be confused with regard to the outlines of the continents and the islands. (For the world map of Ibn Saʿīd, see L. Bagrow and R. A. Skelton, *History of cartography*, London 1964, Pl. xxvi).

The maps drawn by the cosmographers of the 7th/13th and 8th/14th centuries present some special and interesting features. For instance, the world map of Zakariyyā b. Muḥammad al-Ḳazwīnī [*q.v.*] (d. 682/1283) follows the tradition of the Balk͟hī school, but the "Encircling Ocean" is shown as being surrounded by the legendary *d͟jabal ḳāf*, from the southern side of which the legendary *ʿayn al-ḥayāt* ("the Fountain of Life") flows into the *terra incognita.* (Miller, Band v, Tafel 80 (2. Kazwini Gotha). However, his map of the seas is based on that of al-Bīrūnī and the climatic world map is in the Greco-Muslim tradition (*ibid.*, Weltkarten, 129-32). The world map of Sirād͟j al-Dīn Abū Ḥafs ʿUmar, called Ibn al-Wardī [*q.v.*] (d. 861/1457 or 850/1446), is similar to that of al-Ḳazwīnī, following the Balk͟hī tradition of cartography and depicting the legendary *d͟jabal ḳāf* surrounding the "Encircling Ocean" and the *ʿayn al-ḥayāt* (*ibid.*, Band v, Tafel 75-9; Weltkarten, 134-8). On the other hand, al-Dimas͟hḳī (d. 727/1327 [*q.v.*]), drew diagrams, distinctive in their nature, of the relative distribution of various races in the inhabited parts of the world (*ibid.*, Band v, Weltkarten, 139-41).

By this time, new trends seemed to be appearing in Islamic cartography. Of great interest are some maps in which the Muslim cartographers used a grid of horizontal and vertical lines representing latitudes and longitudes, which form small squares within which place names are shown to indicate their geographical positions. Whether this new experiment in Islamic cartography was due to any influence of Chinese cartography, in which the rectangular grid was used as a scale to indicate distances, or whether it was indigenous to Muslim cartographers, is not certain. We have some examples of Mongol maps of this design produced in China during this period; for instance, the Mongol map of A.D. 1329 which formed part of the *History of the Yuan Shih* used the rectangular grid. Krachkovsky believed that this map may have been drawn by a representative of the Iranian-Arab school of cartography and that the place names given on the map were possibly in the Mongolian language initially, and the map later translated into Chinese (Krachkovsky, 398-9). However, since the Islamic maps of this category differ fundamentally from their Chinese prototypes, in that the former use the horizontal and the vertical lines to represent the latitudes and the longitudes, while the latter use them to form squares to indicate distances, it is not unlikely that the concept of using a grid was originally borrowed from the Chinese by the Muslim cartographers, considering the fact that Mongol rule at this point covered much of the region between Iran and China.

A notable example of this class of maps is the world map of Ḥamd Allāh al-Mustawfī (d. 750/1349 [*q.v.*]), in which the inhabited world is divided into 18 equal longitudinal divisions and the longitudes are drawn as straight lines as through on a plane surface, without converging at the poles; similarly, the inhabited world is divided into 9 parallel divisions beginning from the equator and going northwards. Thus, the squares formed are approximately of 10° × 10°, each degree being equal to 56 2/3 Arabian miles (according to al-Ma'mūn's astronomers). Place names are then arbitrarily written within each of the squares, and so are the names of the seven climes around the circum-

ference of the inhabited world. The map shows traces of al-Bīrūnī's concept of sea covering the southern quarter of the earth, and southern Africa is fork-shaped, as in some of the maps discussed above. In his detailed map of Central Asia, Iran, etc. called by Miller "Irankarte", al-Mustawfī used a rectangular grid in which each of the squares represents 1° × 1° and the names of the main cities and towns are given in each of the squares. The map covers longitudes from 64° to 111° from west to east and latitudes from 16° to 45° north of the equator (the Muslim astronomers generally calculated their longitudes beginning from the Canary Islands (0°) to China (180°)). Again, according to al-Mustawfī, his map spreads between the 1st and the 6th clime north of the equator, but these are arbitrarily mentioned and seem to have no relation with the actual astronomical divisions of the climes as worked out by the astronomers. With an arbitrary division of the parallels of latitudes and with no regard for the sphericity of the earth in drawing the longitudes, it was hardly to be expected that the places would find correct geographical positions as known to the Muslim astronomers (Miller, Band v, Tafel 83-6; Band v, Weltkarten, 178-82).

Another example of this category of maps is the world map of Ḥāfiẓ-i Abrū (d. 833/1430 [*q.v.*]). While the three regional maps accompanying his work on geography are drawn after the tradition of the Balkhī school, his world map belongs to the category under discussion and resembles in many respects that of al-Mustawfī. The world map is superimposed on a grid of squares of 5° × 5° with vertical lines representing the longitudes and horizontal lines representing the latitudes. The longitudes begin at 0° (passing through the west coast of Africa) and then go eastwards up to 180° which crosses a place called Kankdūz and are drawn as straight lines; the latitudes begin at 0° at the equator and go up north up to 90°. The climes indicated along the margins, each of which is divided into two parts arbitrarily, have no relation to the actual astronomical divisions of the climes. The southern quarter of the earth is covered by sea and the southern coast of Africa is round in shape, which is an advance upon some of the earlier maps depicting it as forked (*ibid.*, Band v, Weltkarten, 111-12, 122-3, 178; Band v, Beiheft, Tafel 72, 82. "Kankdūz" (Kang-diz), was a legendary town which, according to the Persians, was built by Kay Kā'ūs or Djam in the most remote east, behind the sea, Minorsky, *Ḥudūd al-ʿālam*, 189).

Muslim astronomers also drew maps of cities and towns and the direction of the *ḳibla* [*q.v.*, 2. Astronomical aspects], of which quite a few examples are extant, see Miller, Band v, 149-54 for the *ḳibla* maps.

In the 10th/16th century, the members of the al-Sharafī al-Sifāḳsī family of Tunisia distinguished themselves by drawing several maps between 958/1551 and 1009/1601. The oldest member of the family, ʿAlī b. Aḥmad b. Muḥammad, compiled an atlas in eight sheets in 958/1551 (ms. preserved in the Bibliothèque Nationale, Paris), to which is probably related the world map of al-Sharafī (Oxford, Uri, 1787, I, see Miller, v, 176) belonging to 979/1571-2. The atlas contains several maps: a map of the *ḳibla*; a general map of the world based on al-Idrīsī; and maps of the various coastal regions of the Black Sea and the Sea of Azov. To the atlas is also attached an agricultural calendar for each month. The atlas was probably drawn for some sea captain who sailed on the Mediterranean and the Black Sea in Christian and Syrian shipping. The same cartographer was probably responsible for the world map dated 987/1579, which according to Miller, was an attempt to combine the Catalonian sea map with that of al-Idrīsī to produce a new Arabic sea map. Another member of the family, Muḥammad b. ʿAlī al-Sharafī, produced a world map in 1009/1601, the eastern half of which was based on al-Idrīsī and the western half (Mediterranean and the Atlantic coast) and the Black Sea on Catalonian portolanos (Krachkovsky, 455-7; cf. Miller, Band v, Weltkarten, 175-7).

Turkish maps and sea-charts.

During this century, Turkish cartographers made some very significant contributions to Islamic cartography. In fact, they may be said to have formed a bridge between mediaeval Islamic and modern cartography. Among the most prominent examples are the maps of Pīrī Re'īs [*q.v.*] (d. 962/1554). He drew a world map, completed in 919/1513, only the western part of which has been preserved. This portion depicts the Iberian peninsula, north-west Africa, the Atlantic Ocean and the coasts of the islands of America. Drawn on a gazelle hide, it includes coloured pictures and notes about the countries, peoples, animals and plants. It was presented to Sulṭān Selīm in 923/1517. A portolano chart, the map has a mathematical basis, and Pīrī Re'īs used some twenty maps in constructing it, four of which were by Portuguese explorers, including the lost map of Christopher Columbus recording the discoveries made by him during his third voyage (A.D. 1498). In 341/1528, Pīrī Re'īs drew a second map showing the northern part of the Atlantic Ocean and the newly-discovered regions of North and Central America. Sevim Tekeli points out that a comparison of the two maps shows that Pīrī Re'īs followed the new discoveries very closely. His sailing manual for the Mediterranean, the *Baḥriyye*, included numerous maps after the fashion of the Italian portolanos and probably based on them, each representing the portion of the Mediterranean coast treated in the respective chapter (see DJUGHRĀFIYA, vi. The Ottoman geographers (Taeschner); cf. Sevim Tekeli, *Pīrī Rais*, in *Dictionary of Scientific Biography*, New York 1974, x, 616-9).

It may be pointed out here that the world map hitherto attributed to Ḥādjdjī Aḥmad of Tunis and dated 967/1559 (preserved in Marciana, Venice) has now been proved by V. L. Ménage to be of European origin (Taeschner, 2; Ménage, *The map of Ḥājjī Aḥmed and its makers*, in *BSOAS*, xxi (1958), 291-314; cf. Krachkovsky, 457-8; G. Kish, *The suppressed Turkish map of 1560*, Ann Arbor 1957).

We may finally mention the maps of Kātib Čelebī [*q.v.*] (1017-67/1609-57), drawn by him in the first manuscript of his *Djihān-nümā*; these were mainly based on modern European cartography (Taeschner, 2; cf. Abdülhak Adnan Adıvar, *La science chez les Turcs ottomans*, Paris 1939, 107-8). Also, a manuscript of the Near and Middle East was printed by Ibrāhīm Müteferriḳa, dated 1139/1726-7 or 1141/1728-9 (Taeschner, *loc. cit.*).

Arab Sea-charts of the Indian Ocean

Although there are no direct references to the existence of Arab sea-charts in the works of the Arab navigators, Ibn Mādjid [*q.v.*] (d. after 905/1500) and Sulaymān al-Mahrī (first half of the 10th/16th century) (see G. R. Tibbetts, *The navigational theory of the Arabs in the fifteenth and sixteenth centuries*, in *Agrupamento de estudos de cartografia antiga*, xxxvi (Coimbra 1969), 19), one does find references to Arab sea-charts of a type in the Portuguese and other sources. At an earlier date, according to Marco Polo,

the "Arabs had good charts" (Tibbetts, *Arab Navigation in the Indian Ocean before the coming of the Portuguese*, London 1971, 4; cf. A. Teixeira da Mota, *Méthodes de navigation et cartographie nautique dans l'Océan Indien avant le XVIe siècle*, Centro de Estudos Históricos Ultramarinos, in *Studia*, xi (January 1963), 72-5). Two references are of some interest here. One of these is the sea-chart described by João de Barros which Ibn Mādjid had shown to Vasco da Gama during his meeting with the latter in East Africa. The chart, according to João de Barros, depicted the entire coast of India and had the meridians and the parallels drawn on it in the Moorish (i.e. Arab) way but had no rhumbs of the winds indicated on it. The squares formed by these lines were very small, hence the coast traced between the two rhumbs of north-south and east-west was very exact. In the opinion of Teixeira da Mota, the parallels may have represented the altitudes of the stars and were probably traced in the scale 1/4 by 1/4 of an *iṣbaʿ* (1° 36′), conforming to the altitudes given in the works of Ibn Mādjid and Sulaymān al-Mahrī, and the meridians could have been lines of equal distance, east-west, at an interval of perhaps 24 hours or 8 *zāms* (1 *zām* being equal to 3 *farsakhs*) (op. cit., 64-5, 69-72; on the value of 1 *zām* (= 3 *farsakhs*), see *ibid.*, 57, n. 9). Teixeira da Mota further points out that according to *Le Livro de Marinharia d'André Pires* (*ca.* 1550), 5 *iṣbaʿ*s of the Moorish maps were to be taken as being equal to 8 parts which was 8° (i.e. 1 *iṣbaʿ* represented 1° 36′, whereas the correct value is 1° 37′ (*ibid.*, 74-5).

The second example is that of the nautical map possessed by a skilled navigator of Mogadishu met by Sir Thomas Roe. Drawn on a parchment, this map was lined and graduated in an orderly fashion. But Teixeira da Mota believes that the map may have actually belonged to the European type, for the pilot spoke Portuguese and the Portuguese had since long established themselves in East Africa and maintained close relationships with the local navigators (*ibid.*, 72-3).

From the above example, it may be concluded that the Muslim navigators of the Indian Ocean did evolve an indigenous technique of drawing sea-charts with graduated lines in which the parallels represented the altitudes of the stars in *iṣbaʿ*s and "the meridians", the fixed distances. According to Tibbetts, the Arab navigators of the Indian Ocean had followed a system of measuring the *masāfāt* or distances (*The navigational theory of the Arabs in the fifteenth and sixteenth centuries*, 16). These could have been represented by the vertical lines on the charts.

Finally, it may be said that Islamic cartography, despite its technical drawbacks, as pointed out by scientists like al-Bīrūnī, did serve the purpose of the conqueror, the traveller and the scholar alike throughout the Middle Ages. The mistakes initially made persisted, even though in certain aspects like regional maps there were signs of progress. Its influence in the Islamic world lasted until the 11th/17th century, when it seems to have been replaced by modern cartography.

Bibliography: given in the article.

(S. Maqbul Ahmad)

KHʷĀRIZM, KHʷĀRIZMĪ, etc. [see khʷārazm, khʷārazmī etc.].

KHARLUKH [see karluk].

KHARM [see ʿarūḍ].

KHARPŪT, wrong spelling for khartpert [*q.v.*].

al-**KHARRĀZ**, Abū Saʿīd Aḥmad b. ʿĪsā, mystic of the school of Baghdād. Born in Baghdād probably early in the 3rd/9th century, he joined al-Nibādjī, Abū ʿUbayd al-Busrī, Sarī al-Saḳaṭī, Bishr al-Ḥāfī, Dhu'l-Nūn al-Miṣrī, Muḥammad b. Manṣūr al-Ṭūsī and other Ṣūfī shaykhs. He travelled extensively from an early age, though only few details about his itineraries are known from his own statements. His final departure from Baghdād may be connected with the wave of persecution of the Ṣūfīs instigated by the Ḥanbalī Ghulām al-Khalīl during the co-regency of al-Muwaffaḳ (257-78/871-91), for he is reported to have been accused of infidelity by a group of *ʿulamāʾ* for some daring expressions in his *Kitāb al-sirr*. According to his own testimony, he visited al-Ramla, Jerusalem, and Ṣayda and lived in Mecca for eleven years, regularly visiting Medina in order to perform the pilgrimage from there. He was expelled from Mecca by the governor because of his teaching. During the last part of his life, and perhaps during an earlier period, he lived in Egypt. From there he travelled to al-Baṣra in order to meet the Ṣūfī Abū Ḥātim al-ʿAṭṭār, and he also visited Ḳayrawān. According to the best attested report, he died in 286/899.

Like his contemporary al-Djunayd [*q.v.*], al-Kharrāz strove to combine a doctrine of ecstatic mysticism with orthodox support of the religious law. He affirmed that any esoteric (*bāṭin*) doctrine that contradicts the apparent meaning (*ẓāhir*) of the law is false. Upholding the superiority of the prophets over the saints (*awliyāʾ*), he argued that every prophet is a saint before becoming a prophet. He addressed a letter to a group of Ṣūfīs in Damascus, refuting their heretical view that they could see God with their hearts as the inhabitants of Paradise will see Him with their eyes. In a book on proper conduct in the canonical prayer (*adab al-ṣalāt*), he described the significance of its rites for the Ṣūfī. Al-Kharrāz is credited by al-Sulamī and others with having been the first one to speak about the states of annihilation (*fanāʾ*) and subsistence (*baḳāʾ*) [*q.v.*]. This is not literally correct, for these concepts had been used by earlier Ṣūfīs and were commonplace among his contemporaries. They appear, however, as fundamental in his doctrine and designate the highest stages of the mystic "beyond which no created being can reach". He defined *fanāʾ* as "annihilation of the consciousness of manhood" and *baḳāʾ* as "subsistence in the contemplation of Godhead". At the highest stage, so he stated in his *Kitāb al-ḍiyāʾ*, the mystic loses his (human) attributes and attains the attributes of God, a doctrine disputed by al-Djunayd and expressly condemned as heretical by al-Sarrādj.

KHARRŪBA [see MAKĀYĪL].

KHĀRṢĪNĪ (Persian *khār čīnī* "hard substance from China"), also *ḥadīd ṣīnī* "Chinese iron" (J. Ruska, *Tabula Smaragdina*, Heidelberg 1926, 70, tr. 75), to which corresponds the Persian *āhan čīnī* (*Āyīn-i Akbarī*, tr. H. Blochmann, i, 40) is not zinc, as often assumed, but a hard, highly-esteemed alloy, the constituents of which have not been established with certainty. According to the physical qualities attributed to it, *khārṣīnī* would best correspond with hard lead, i.e. an alloy consisting of a mixture of lead, antimony and small quantities of copper, iron and tin. Next to gold, silver, iron, copper, lead and tin, *khārṣīnī* is mentioned as the seventh "metallic substance" (Khwārazmī, *Mafātīḥ al-ʿulūm*, ed. van Vloten, 258; Djābir, *K. al-Khawāṣṣ al-kabīr*, see M. Ullmann, *Die Natur- und Geheimwissenschaften im Islam*, Leiden-Cologne 1972, 141; Dimashkī, *Nukhbat al-dahr*, ed. Mehren, 1866, Arab. text 48, tr. 52) and called "mercury" (*ʿuṭārid*) by the alchemists. In his *K. al-Sirr al-rabbānī fī ʿilm al-mīzān*, an alchemical treatise on the theory of the proportions to be mixed, Iznīkī deals with this metal in a separate section (Mss. cited by Ullmann, *op. cit.*, 243). Rāzī compares it with the "Chinese mirrors" (*al-marāyā al-ṣīniyya*) and Djābir with lead (both following al-Bīrūnī, who in his *K. al-Djamāhir*, Hyderabad 1355, 261 f., deals with *khārṣīnī* in a special chapter). This "strange substance" (*djawhar gharīb*) was "all but unknown" to the Arabs: this is probably the meaning of *shabīh bi 'l-maʿdūm* (Khwārazmī, *loc. cit.*); van Vloten's interpretation "colourless" is less likely, since occasionally the yellow colour of *khārṣīnī* is mentioned.

Bibliography: in addition to the references in the article, see E. Wiedemann, *Aufsätze zur arabischen Wissenschaftsgeschichte*, ed. W. Fischer, Hildesheim-New York 1970, i, 49 f., 120, 697, 703 f., 707, 833, ii, 599. (A. DIETRICH)

KHARTABIRT [see KHARTPERT].

KHARTPERT, a stronghold of eastern Anatolia situated on a rock (Armenian, *pert*) 350 m./1,100 ft. above the plain of Khanzit [*q.v.*], to be identified with the Ḥiṣna Zayt of the Aramaic texts (and already in Ammianus Marcellinus, *castellum Ziata*, whence, through a confusion, the Arabic Ḥiṣn Ziyād, a term in use till the 16th century). The corrupted form Kharput is found in colloquial Armenian (whence already in the Byzantine author Cedrenos, ii, 419) and in modern Turkish. The Latin and French authors at the time of the Crusades use forms like Quart-Pierre. Al-Dimashkī, ed. Mehren, 190, thought that Khartpert was the name of the fortress and Ḥiṣn Ziyād that of the settlement as a whole, but this appears to be a personal interpretation.

Khartpert was situated on the Arab-Byzantine borders, which were frequently crossed and re-crossed by armies from both sides. It is mentioned by Ibn Khurradādhbih, but is nevertheless not apparently cited in the Islamic historical sources before 367/977-8, when the Ḥamdānid Abū Taghlib took refuge there with a brother-in-law, a Byzantine vassal. In the 6th/12th century, after the Turkish invasions, it fell temporarily to a Turkmen called Djubuk, and soon afterwards to the Artukids, amongst whom was the celebrated Balak, who imprisoned there Jocelyn of Edessa and Baldwin II of Jerusalem. When Diyār Bakr was partitioned between rival branches of this dynasty, Khartpert fell within that centred on Ḥiṣn Kayfa, and then under a subordinate branch of these last Artukids in 581/1185. The town played a big part at the time of the Ayyūbid al-Malik al-Kāmil's expedition of 631/1234 against the Rūm Saldjūk Kaykubād, who annexed it directly. It passed subsequently into the hands of all the powers who transiently held power over the region during the Mongol period, and in the 9th/15th century the Banū Eretna, the Dulghadir, the Ak Koyunlu [*q.vv.*], and finally, after an interval of Ṣafawid control, into the grip of the Ottomans in 921/1515. The Ottoman governors established themselves at the foot of the rock at Mezere, now named Maʿmūrat al-ʿAzīz (a name later extended to all the province, along both banks of the Euphrates). In the 9th/15th century Khartpert had been visited by Joseph Barbaro (*Viaggi*, ed. Venice 1545, 48-9), and it was described in the 11th/17th one by Ewliyā Čelebi.

The population, partly Armenian until the massacres of the present century, had nevertheless been largely Turkicised and Kurdicised over the preceding centuries. According to the register from 936/1530 published by Ö. L. Barkan, its revenue at that time was about 250,000 *akčes*. The town possessed an old mosque and a more recent one built by Uzun Ḥasan, a *madrasa* and 50 (?) schools. Amongst the industries mentioned were saddle-making, silk production, wax, dyeing, and at least in the 6th/12th century, coins were minted here. The 19th century travellers who visited Khartpert give population estimates from between 20,000 (Cuinet's figure) to over 40,000; in 1945 it had a mere 2,095. At the end of the 19th century, Khartpert also had an American mission station.

Bibliography: This is given essentially in the arts. of *EI*¹ (Kramers) and *İA* (Besim Darkot, s.v. *Harput*). It is named in most of the Arabic geographers from Ibn Khurradādhbih and Ibn Serapion onwards (information summed up in Le Strange, *Lands*, 116-17), till the time of Ewliyā Čelebi, ed. 1314/1896-7, iii, 216-17, and the 19th century travellers, Moltke, Brant, Hommaire de Hell, Saudredzki, Taylor, Tozer, Lynch and Lehmann Haupt (summed up in Ritter, *Erdkunde*), and finally Cuinet (cf. Darkot in *İA*). The most important Muslim and other mediaeval historians include Ibn al-Athīr; Ibn al-Azrak al-Fārikī, *Taʾrīkh Mayyāfārikīn*, Marwānid period ed. B. A. L. Awad, 1959, Artukid one resumed by Cl. Cahen in *Le Diyar Bakr au temps des premiers Urtukides*, in *JA* (1935); the historians of the campaign of 631/1234, especially Ibn Wāṣil and Ibn Bībī; those of Jocelyn and Baldwin's captivity (Foucher of Chartres, Matthew of Edessa); and Michael the Syrian and Bar Hebraeus. The inscription of 561/1166 (*REA*, No. 3271) has now been more satisfactorily published by Sauvaget in his *Quatre décrets seldjukides*, Damascus 1947; another unedited inscription has been brought to light. For archeology, see especially A. Gabriel, *Voyages*, 257-8. There is an Artukid coin given in İ. and C. Artuk, *Istanbul ... sikkeler katalogu*, i, 396. (CL. CAHEN)

BANŪ KHARŪṢ, a tribe which has played an important role in the history of the Ibāḍiyya [*q.v.*] in ʿUmān. Descendants of Yaḥmad, a branch of al-Azd [*q.v.*], members of the tribe migrated to ʿUmān in pre-Islamic times and established themselves in a valley which came to bear their name. Wādī Banī Kharūṣ runs down from the heights of the western mountain range of al-Ḥadjar to join Wādī al-Farʿ before debouching on the plain of al-Bāṭina and then

into the Gulf of ʿUmān. On the right bank not far below the juncture of the two valleys is the famous Ibāḍī stronghold of al-Rustāḳ [*q.v.*].

Yaḥmad provided most of the Ibāḍī *Imām*s of ʿUmān before the advent of the Yaʿrubī dynasty in the 11th/17th century, and of these a goodly share were Kharūṣīs. The first Kharūṣi to be elected to the high office appears to have been al-Wārith b. Kaʿb (179-92/795-808), during whose tenure of power the centre of the Ibāḍiyya is believed to have moved from al-Baṣra to ʿUmān. Hārūn al-Rashīd sent an expedition against al-Wārith's Ibāḍīs, who won a signal victory over it near Ṣuḥār. In the words of Wilkinson, the period of rule of al-Wārith and the other early *Imāms* was "in many ways Oman's golden age."

Saʿīd b. Khalfān al-Khalīlī al-Kharūsī was largely instrumental in the choice of ʿAzzān b. Ḳays of Āl Bū Saʿīd, the only Ibāḍī *Imām* elected in the 13th/19th century. When the Imāmate was revived in 1331/1913, Sālim b. Rāshid al-Kharūṣī became the head of the community. Upon his assassination in 1338/1920, the succession went to Muḥammad b. ʿAbd Allāh, a grandson of Sāʿīd b. Khalfān, who reigned until his death in 1373/1954. For the careers of these later Kharūṣīs, see ʿUMĀN.

Ruzayq translated by Badger is in the Cambridge University Library); J. Wilkinson, in D. Hopwood, ed., *The Arabian peninsula*, London 1972; G. Rentz, ed., *Oman and the southern shore of the Persian Gulf*, Cairo 1952. (G. RENTZ)

AL-**KHAṢĀṢĪ**, ABU 'L-FAḌL ḲĀSIM B. AL-ḤĀDJDJ ḲĀSIM B. ḲĀSIM AL-KHAṢĀṢĪ, a Moroccan saint, member of the Djazūliyya order [*q.v.*]. Originally from Andalusia, he owed his ethnic name to the town of al-Khaṣāṣa, which was situated on the al-Ḳalīʿa mountain on the Mediterranean coast. He was born at Fez in *ca.* 1002/1593-4, where he studied and had, in particular, Aḥmad b. ʿAbd Allāh Maʿn al-Andalusī as his pupil. Al-Ḳādirī [*q.v.*] devoted a work called *al-Zahr al-bāsim* to his *manāḳib*. He died at Fez on 19 Ramaḍān 1083/8 January 1673 and was buried in the mausoleum of al-Ashyākh.

Ibn Sūda, *Dalīl*, i, 255. (M. LAKHDAR)

KHASHAB (A.), wood. In the major part of the Muslim world, wood is fairly scarce and for this reason plays a relatively minor rôle in the material life of its populations in comparison with that of societies in which it is more plentiful. However, precisely because its use is limited, it occupies an important place in artistic creation, for example in private furniture and the appurtenances of mosques. Architecturally, it is employed for doors, roofs, arches, etc. and ceilings; it is also used in the galleries of mines, the construction of numerous implements such as presses and hydraulic machines (there are few "vehicles"); brushwood is often used as fuel and its gases (often produced from scrub) provide sufficient heat for metal-working, glass-blowing and ceramics; for cooking, straw is often used. The uses of most interest to the authorities were in the arms-making (archery, javelins and above all siege engines) and naval construction vital to their political ends. See further the articles on the various related techniques, such as NADJDJĀR, DĀR AL-ṢINĀʿA, etc.

Woods and thickets, though generally of less importance in the Middle Ages than in antiquity because of deforestation, were nevertheless more numerous than today. Lebanon was criss-crossed by oaks, prolonged into northern Syria and Asia Minor (Byzantine and then Turkish), where some Turkmens combined the tasks of shepherd and woodman. In Iran, the major forest zone was the mountain slopes region along the Caspian shores which stretched to Armenia on one side and the mountains of Khurāsān and Afghānistān on the other. In the Saldjūk era, the wood carvers of Marw and Ādharbaydjān had a semi-corporate organisation which was far in advance of its time (Cl. Cahen, *Y a-t-il eu des corporations dans le monde musulman médiéval?*, in *The Muslim City*, ed. A. Hourani and S. M. Stern, Oxford 1970, 59). Egypt, which was obviously devoid of conifers, conserved her acacia thickets (*sant*), used particularly for small river craft, and care was taken that they were intelligently managed (cf. Ali Bey Baghat, *Les forêts en Egypte*, in *BIE* (1901), 41-58). The central and western Maghrib (not Ifrīḳiya), Spain and the Mediterranean islands still had fine coniferous forests and various species of oak, etc. Palms and fruit trees were naturally looked after as much as possible for their fruit. The northern regions, especially of Central Asia, were the home of the high-growing poplar (*khalandj*), which was greatly prized for bows. The African and Asian coasts (beyond Arabia and Iran) of the Indian Ocean supplied precious timber such as teak, which was excellent for ships and widely used even for the construction of houses in ports like Sīrāf [*q.v.*]. Archipelagos like the Maldives provided the coconut palm which was used for many nautical purposes (hulls; masts, especially; ropes; etc.).

The practical possibilities of the use of timbers in places other than their native habitats obviously depended on transport. Carriage by land on the backs of animals was almost impossible in the case of large blocks; these were therefore floated over the sea, especially the Indian Ocean, in calm weather. It was also vital that the ports of embarkation should not be too far from the forests, which was the reason for the importance of the little ports in the Gulf of Alexandretta, among others. Smaller blocks and resin pitch could be brought from greater distances (the forest zone of Russia). The urban and craft development of Muslim countries in the classical period and the allied development of agriculture and consequently of irrigation increased the demand for different types of timber, and accentuated the dependence of most Muslim countries on trade with the outside world; the striking maritime activity in southern Arabia and the Persian Gulf, for example, could only be maintained by materials for ship-building furnished by India, Africa and the Maldives. The Mediterranean fleets, inasmuch as they remained important, were provisioned more and more from Italian merchants.

These considerations explain the attention paid to this trade by the authorities. In the documents on Egyptian-Italian trade, for example, the facilities accorded to Italian merchants in Alexandria and likewise Cairo were made dependent in large part on their promise to supply wood for ship-building at a discount (as well as iron), and it had to be delivered to the trading office of the state (*matdjar*) and not to private buyers. The state undertook to

buy in full, without any authorisation for re-exportation. Thus in the time of the Crusades there was a kind of "war of wood" with the Latin East which was sustained by conciliar decrees as clear-cut in intention as they were useless in practice. As early as the 10th century the Byzantine emperor John I Tzimisces had forbidden the sale of timber to the Muslims of the Maghrib, but they managed to buy already-constructed ships at Amalfi or to re-use the valuable parts of unseaworthy vessels. It has been said that the decline in Muslim shipping at the end of the Middle Ages resulted from the scarcity of wood. This idea cannot be accepted in its entirety, since the Byzantines, who had a wealth of wood, still allowed the Italians to achieve mastery of the sea, but this scarcity undoubtedly played a part.

Bibliography: For topics on which the information is both scattered and tenuous, it is impossible to provide a proper bibliography. The essential facts on the production of wood and naval arsenals can be found in the articles by Maurice Lombard (reproduced in a posthumous collection, *Espaces et réseaux au haut Moyen Âge*, Paris and The Hague 1972), *Arsenaux et bois de marine dans la Méditerranée musulmane* (*VIIe-XIe s.*), in *Le Navire and l'économie maritime*... Second colloquium on Maritime History, Paris 1958, 53-106) and *Le bois dans la Méditerranée musulmane*, in *Annales ESC* (1959), 234-54, with good bibliographies up to these dates. For trade, see the histories of Levantine trade and the Crusades, and Cl. Cahen, *Douanes et commerce dans les ports méditerranées de l'Égypte Médiévale*, in *JESHO* (1965), and the few references cited in this article.

(Cl. Cahen)

al-KHASHABĀT, pl. of Arabic *khashaba* "wooden beam", the name given to wooden pillars which in mediaeval times were driven into the seabed at the place where the Shaṭṭ al-ʿArab empties into the Persian Gulf. These beacons were placed at six miles' distance from ʿAbbādān, and were meant to guide sailors in danger of been drawn into a dangerous whirlpool and also on occasion to signal the approach of pirates. Al-Masʿūdī, *Murūdj*, i, 230, 330-1 = §§ 242, 361-2, mentions three pillars, and al-Khwārazmī, *Mafātīḥ*, 124, states that lamps were lit on their upper parts. Nāṣir-i Khusraw, *Safar-nāma*, ed. Schefer, text 90, tr. 246, gives a more exact description. They consisted of four teak columns set obliquely in the water and supporting, at some 60 feet above water-level, a platform with a little shelter for the watchman. This last at night lit up lamps which were protected by glass casings. Al-Idrīsī, *Nuzha*, 3rd clime, 6th section, adds that the watchmen had a boat in order to get back to land.

Bibliography: In addition to the sources mentioned in the article, see Iṣṭakhrī, 32; Muḳaddasī, 12; Ibn Khurradādhbih, 60; *BGA*, iv, *Gloss.*, 225; Mez, *Renaissance*, 479, Eng. tr. 513; E. Wiedemann, *Über Leuchtfeuer bei den Muslimen*, in *Archiv fur Gesch. der Naturwiss. und der Technik*, ii (1909), 151-4, describing the places where beacons of this type were to be found.

(E. Wiedemann*)

KHASHABIYYA, "men armed with clubs", was originally an abusive name for the Mawālī [see mawlā] of Kūfa, who were armed with clubs (*khashab*, sing. *khashaba*) and formed the main part of the followers of al-Mukhtār [*q.v.*] and took the field under his generals, for instance Ibrāhīm b. Mālik al-Ashtar (Ibn Ḳutayba, *Maʿārif*, ed. Wüstenfeld, 300; Ibn Rusta, *al-Aʿlāḳ al-nafīsa*, *BGA*, vii, 218, tr. Wiet, 259; al-Ṭabarī, *Taʾrīkh*, ii, 684, 1798; *Aghānī*[1], v, 155; al-Masʿūdī, *Murūdj*, v, 226-7 = §§ 1990-1; idem, *al-Tanbīh*, *BGA*, viii, 313; Muṭahhar b. Ṭāhir al-Maḳdisī, *al-Badʾ wa'l-taʾrīkh*, v, 133; Ibn al-Athīr, iv, 207; Madjd al-Dīn Ibn al-Athīr, *al-Nihāya fī gharīb al-ḥadīth*, Cairo 1311, i, 294; *LA*, *TA*, s.v.).

The troops which marched upon Mecca by al-Mukhtār's order and released Muḥammad b. al-Ḥanafiyya [*q.v.*], who was imprisoned by ʿAbd Allāh b. al-Zubayr [*q.v.*], are called *khashabiyya* (al-Ṭabarī, ii, 693; Ibn Saʿd, *Ṭabaḳāt*, v, 74, cf. 76; Ibn al-Athīr, iv, 206-7). They themselves apparently called their cudgels *kāfir-kūbāt* [*q.v.*].

The remark in Ibn al-Athīr's chronicle (iv, 207) that the liberators of Ibn al-Ḥanafiyya bore cudgels in order to avoid the use of swords in the *ḥaram*, is as improbable as is the interpretation which connects the name *Khashabiyya* with the wood piled up by Ibn al-Zubayr beside the prison of Ibn al-Ḥanafiyya with the threat to have him and his fellow-prisoners burned.

With reference to a *ḥadīth* of ʿAbd Allāh b. ʿUmar in which the performing of the *ṣalāt* behind the *Khashabiyya* is mentioned, the latter name was explained as denoting people who reverently kept the pole or tree-trunk (*khashaba*) on which Zayd b. ʿAlī [*q.v.*] had been executed. But, as Madjd al-Dīn Ibn al-Athīr (*loc. cit.*) observes, this explanation is chronologically untenable.

According to an observation made by Ibn Ḥazm (*Fiṣal*, cf. I. Friedländer, *The Heterodoxies of the Shiites according to Ibn Ḥazm*, in *JAOS*, xxviii (1909), 63, note 1), the *Khashabiyya* regarded the bearing of iron weapons as forbidden till the expected Mahdī had appeared.

The fact that "Revenge for al-Ḥusayn!" (*yā la-thaʾrāt al-Ḥusayn!*, e.g. al-Ṭabarī, ii, 694) was the rallying cry of the *Khashabiyya* possibly tended to replace this name by *al-Ḥusayniyya*, which is graphically only slightly different; the latter is, however, to be retained in places like Ibn ʿAbd Rabbihi, *ʿIḳd*, Cairo 1317, i, 190, and Ibn Badrūn, *Sharḥ Ḳaṣīdat Ibn ʿAbdūn*, ed. Dozy, 187).

Moreover, *al-Khashabiyya* was another name for the Kaysāniyya [*q.v.*] and then was applied to the adherents of the doctrines which were current among the latter, like that of the return (*radjʿa* [*q.v.*]) and that of metempsychosis (*tanāsukh* [*q.v.*]). The poetical representative of these doctrines, Kuthayyir, is called a *Khashabī* and is said to have been gained for the *Khashabiyya* by the poet Khindif al-Asadī (*Aghānī*, viii, 33-4, xi, 47, where *Khindif* is to be read instead of *Khandaḳ*).

According to Muḥammad b. Aḥmad al-Khwārizmī (*Mafātīḥ al-ʿulūm*, ed. van Vloten, 29), the name *al-Khashabiyya* was used for a group of the Zaydiyya [*q.v.*] known as *Ṣurkhābiyya* after a certain Ṣurkhāb al-Ṭabarī, of whom nothing seems to be known; it might be possible to think of the Ṣurkhāb who played a part in Ṭabaristān in the time of Ḥasan b. Zayd [*q.v.*] (cf. Ibn Isfandiyār, Engl. tr. E. G. Browne, Leiden-London 1905, Index). It must be left undecided whether they were called *Khashabiyya* after their weapons or perhaps on account of Kaysānī doctrines which asserted themselves among them. The same statement occurs in Abu 'l-Maʿālī, *Bayān al-adyān*, in *Chrestomathie persane*, ed. Ch. Schefer, i, Paris 1833, 157, where *Ṣurkhāb* is to be read instead of *Ṣ-rḥāt*.

According to a statement given on the authority of al-Layth (apparently Ibn al-Muẓaffar), al-Khasha-

biyya was also the name of a section of the Djahmiyya [*q.v.*], which maintained that Allāh does not speak and that the Ḳur'ān is created (*LA* and *TA*, s.v.).

(C. van Arendonk*)

KHĀṢĪ (a.), pl. *khiṣyān* "castrated man, eunuch".

I.—In the central Islamic lands.

From the 4th/10th century especially, several euphemisms were applied to eunuchs, who were numerous in the palaces and frequently invested with important functions: notably *khādim* (coll. *khadam*, pl. *khuddām*), *mu'allim*, *shaykh*, *ustādh* (see M. Canard, *Akhbâr ar-Râdî* . . . , i, 210-1, note), later on *ṭawāshī* (which, according to al-Maḳrīzī, *Hist. des Sultans Mamlouks*, tr. Quatremère, 1/2 (1849), 132, comes from the Turkish *ṭābūshī* = Osmanlī *tapughčī* "servant" and also designating in the administrative language of Egypt a military position in the body-guard), all in the Arabic-speaking world; in Turkish, *khādim/hadīm*, *khwādja/khōdja/hoca* and *agha*, in Persian *khwādja* and *agha/āḳā* [*q.vv.*] were employed. Placed before or after the name of the person concerned, these terms are not generally ambiguous, but employed on their own, in the sing. or the pl., most of them can cause confusion, particularly the first, *khādim* [*q.v.*], equally frequent in the ancient texts to designate normal slaves, and even free servants; it is the same, in Muslim Spain and other parts, with *fatā*, *ghulām* [*q.vv.*], etc., and one never knows exactly what an author intends by these words when the real state of the person cited is not known from other sources. On the other hand, eunuchs were often named Yāḳūt, Kāfūr, 'Anbar, etc. (see in al-Ḳalḳashandī, *Ṣubḥ*, v, 489, the honorific titles corresponding to these names), but nevertheless these appellations are not sufficient to identify them as such. *Khaṣī*, by contrast, is never equivocal, and the same can be said of *makhṣī* (passive participle particularly frequent in the passages of al-Mutanabbī about Kāfūr [*q.v.*]); these terms, as well as *khādim*, are opposed to *faḥl* "stallion", and there is a characteristic example in the distinction between the two famous homonyms, Mu'nis al-Faḥl and Mu'nis al-Khādim [*q.vv.*].

Even so, the use of the preceding terms and of the word *khaṣī* itself allows an uncertainty to continue, for it does not permit the distinction to be made between the two fundamental categories of eunuchs: in Arabic, *khaṣī* designates, properly speaking, the man or animal who has undergone the ablation of the testicles (called among other things *khiṣy/khuṣy*, *khiṣya/khuṣya*, the operation being called *khiṣā'*), whereas the complete eunuch, deprived of all his sexual organs, is a *madjbūb* (pl. *madjābīb*); this latter word, which rhymes with *maslūb* "castrated by evulsion" (al-Mas'ūdī, *Murūdj*, viii, 149 = § 3290), while distinguished from it, rarely appeared in the texts, as is the case with the verb *djabba* and the verbal noun *djibāb*; one encounters at times one or the other in the account of a mutilation inflicted on a slave by his master or even on a free man by a flouted husband who takes vengeance on his rival. With regard to this, one of the most frightful stories is that of a Sindī slave surprised by his master in the company of his wife and punished by the latter in the following manner: *djabba dhakara-hu*; taking the sons of his tormentor as hostages, he forced their father to mutilate himself (*djabba nafsa-hu*) with a knife, after which he threw the children from the top of the house (al-Mas'ūdī, vi, 264-5 = 2472; al-Ibshīhī, *Mustaṭraf*, Cairo n.d., ii, 103).

Similar acts of cruelty enter into the arsenal of folkloric themes, and the *Thousand and One Nights*, where the person of the eunuch plays a certain role (notably 3rd, 7th, 27th, 107th, 237th, 719th nights; see N. Elisséeff, *Thèmes et motifs des Mille et une Nuits*, Damascus 1949, index), offer several examples of the mutilation of a man by a mistress (113th night) or a jealous husband (33rd night), or to punish the seducer of a young girl (39th night); even a schoolmaster is seen depriving himself of his virility (403rd night), and a slave who refuses to be freed, is castrated and sold at a very high price (39th night). Independently of more or less legendary traditions, the case is cited of 'Alḳama b. Sahl, emasculated by a king of Yemen (al-Djāḥiẓ, *Ḥayawān*, i, 120-1), which caused perhaps the epithet of al-Faḥl to be added to the name of 'Alḳama b. 'Abada [*q.v.*]. The famous story is also reported of the letter of Hishām (*Ḥayawān*, i, 121) or of Sulaymān (*al-Aghānī*, ed. Beirut, iv, 275) or of al-Walīd (*ibid.*, iv, 278) b. 'Abd al-Malik ordering the governor of Medina or Mecca to take a census of (*aḥṣi*) the effeminate men of the two holy towns; having read *ikhṣi*, the official had two (or nine of them) castrated, notably the singer al-Dalāl (*al-Aghānī*, iv, 273 ff.), by one named Badarāḳus/Bardarāḳus, who was a circumciser; this last detail does not figure in al-Djāḥiẓ and, despite the traditions which tend to make it an historical fact, the whole account is, by all appearances, nothing other than a pleasing anecdote, forged to provide evidence of the inconveniences of the Arabic script, but later exploited by anti-Umayyad authors. Some cases of accidental castration were also related, and it seems that some doctors practised from early on such an operation, when the state of an illness made it necessary (*Ḥayawān*, i, 121-3).

At all events, the vocabulary used rarely permits the specification of the exact nature of the emasculation undertaken, and in a famous passage (*Aḥsan al-taḳāsīm*, 242; ed.-tr. Pellat, *Descr. de l'Occident mus. au IVe = Xe siècle*, Algiers 1950, 57-9 (where "inciser", p. 57, should be replaced by "trancher"); Germ., Engl., Span. tr. in A. Mez, *Renaissance*, and on the transl. of this work, ch. xx), al-Muḳaddasī uses the collective *khadam* and the verb *khaṣā* in the part of his description which applies to complete eunuchs, i.e. to the *madjābīb*. To judge by this text, two methods were used for the emasculation of eunuchs that the author has been able to encounter: simultaneous ablation of the testicles (*mizwad*) and the penis or incision of the scrotal sheath (*ṣafan*) and evulsion of the testicles first of all, then cutting of the male member; after this operation a rod of lead was placed in the urethra and replaced after each urination, until the healing was complete, in order to prevent the tissues from joining.

However, this horrible mutilation was not general, and it is probable that the majority of eunuchs were not actually *madjābīb*, but *khisyān* properly so-called, who had undergone a *khiṣā'* consisting, for the operator (*khāṣī*), of incising and at the same time cauterizing the scrotum by means of a red-hot blade

of iron and removing (*sall*, *salb* or *imtilākh*) the testicles. This emasculation is also called *mals* or *matn*, since it is especially associated with rams. As for *widjā'*, another form of castration, it consisted of binding the cord supporting the testicles and making them gush out, when they underwent a crushing (*raḍḍ*) and atrophied naturally; twisting of the cord (*ʿaṣb*) was also known. Al-Djāḥiẓ (*Ḥayawān*, i, 130-1) gives us to understand that the first of these processes was applied to men and speaks immediately afterwards of animals, but it is highly likely that, never having had the opportunity to see the operation practised on a human being, he generalised, although the word *widjā'*, probably deprived of its technical meaning, is also used for a man (see below).

In fact, if curious investigators were able easily to interrogate stock-breeders and obtain exact information on the castration of animals, they were less well informed on emasculation of men, and, as far as we know, al-Muḳaddasī alone reports at first hand the information supplied by eunuchs whom he says he had questioned. Speaking of the *khadam* of Byzantine origin who fell into the hands of the Muslims at the time when the latter made incursions into the territory of Byzantium, this author states that he had come across children whose parents had had them castrated in order to consecrate them to the service of the Church; he also demonstrates that the religious origin of emasculation was not unknown. In fact, the Council of Nicea (325 A.D.) had clearly prohibited eunuchs from the priesthood, but they could be choristers and even priests in the Oriental Church. Moreover, al-Masʿūdī (*Murūdj*, ii, 354 = 771) asserts that Romanus Lecapenus had made his son [Theophylactus], who succeeded in occupying the patriarchal see of Constantinople, undergo this operation. For his part, al-Djāḥiẓ already knew that some nations possessing a régime founded on a religious law (*ahl al-milal*) consacrated castrated children to the service of temples, and he cites the example of the Rūm and the Sabaeans (*Ḥayawān*, i, 124, 125, 128). Concerning Islam, the texts are discreet in this respect, but it is of some interest to note that at a much later period, Nūr al-Dīn [*q.v.*] instituted in 557/1161 a body of ministers of the *ḥudjra* of the Prophet: it consisted of twelve Abyssinian eunuchs, whose number was then doubled by Saladin (N. Elisséeff, *Nūr al-Dīn*, Damascus 1967, ii, 559). In the period of Ibn Baṭṭūṭa (i, 278 = tr. Gibb, i, 175), the servants and door-keepers of the Mosque of the Prophet at Medina were also eunuchs of Abyssinian or other origin, under the orders of the *shaykh al-khuddām* (see the text of a decree of nomination in al-Ḳalḳashandī, *Ṣubḥ*, xii, 260 ff.). In the 19th century, J. L. Burckhardt (*Travels in Nubia*, 294) mentions that some eunuchs of Dārfūr were sent by the African kings to the Friday Mosques of Mecca and Medina, and reports (*Voyages en Arabie*, Paris 1835, i, 211-14) that at Mecca, after the *nā'ib al-ḥaram*, came the *agha* of the *ṭawāshī*s; the latter, numbering more than forty and mainly blacks, were entrusted with the policing and cleaning of the Kaʿba and its periphery; a *ṭawāshī 'l-nabī* could not enter the service of an individual after having been attached to the temple. These eunuchs engaged furthermore in commerce and disposed of considerable revenues resulting particularly from the tips that they wrung from the faithful. It might be imprudent to translate by "eunuchs" the word *khadam* employed by Ibn al-Faḳīh (*Buldān*, 100; tr. Massé, 123) as early as the year 278/891 to designate the personnel serving the Mosque of Jerusalem, but this same town possessed, in the 10th/16th century, a *zāwiyat al-ṭawāshiyya* (H. Sauvaire, *Hist. de Jerusalem et Hebron*, Paris 1876, 162 [see also AL-KHALĪL]).

The Arab authors do not seem to have been aware of the existence of "private" eunuchs in the oriental societies of antiquity, as well as in Greece and Rome. Al-Djāḥiẓ considers besides that the Rūm, although Christians, were the first in the world, despite their pretention to charity, to practise this mutilation and adds, an important detail, that it only affected the testicles (*Ḥayawān*, i, 124). With regard to the white slaves of European origin (Slavs, Franks, Galicians, etc.) included under the word Ṣaḳāliba [*q.v.*], al-Muḳaddasī states that they were taken to Spain to be castrated there; the operation was carried out by Jews in a town situated around Pechina (probably Lucena), and the eunuchs who recovered were sold in al-Andalus or sent on to the Orient. This detail confirms the note of Ibn Ḥawḳal (2nd ed., i, 110; French tr. Kamers-Wiet, i, 109) who asserts that "all the slave eunuchs that are found on the surface of the earth originate from Spain. They are made to undergo castration in this land". Moreover, the trade in these slaves was said to be related to the activity of the famous Rādhāniyya [*q.v.*], and it seems apparent that Verdun had been an important centre for the creation of eunuchs (see E. Lévi-Provençal, *Hist. Esp. Mus.*, ii, 125; Ibn Khurradādhbih, 153, ed.-tr. M. Hadj-Sadok, *Descr. du Maghreb et de l'Espagne au III^e/IX^e siècle*, Algiers 1949, 21 and n. 198).

Al-Djāḥiẓ also knew (*Ḥayawān*, i, 113, 118-9) some eunuchs originating from Khurāsān and Sind (the latter castrated by one named Mūsā b. Kaʿb) and above all, like al-Muḳaddasī, some blacks from Africa described as Abyssinians; al-Masʿūdī (*Murūdj*, viii, 148 = § 3288) adds there some Chinese (with regard to China, the author of *Akhbār al-Ṣīn wa'l-Hind*, ed.-tr. J. Sauvaget, Paris 1948, 37, remarks that the Chinese eunuchs are natives of the country who have been castrated (*maslūl*) and gives us to understand that is is not the same in Islam, where all are foreigners).

While one may estimate that the majority of white eunuchs, besides being less and less numerous as the centuries progressed, originated from Spain in the Middle Ages, there is a scarcity of information for a much later period, and it is not known exactly where the operations were performed on those who were found further afield in the harems and courts of the sovereigns of Iran and Turkey.

Concerning the blacks, their origin is sufficiently well-known, for it is evidently identical to that of the slaves [see ʿABD], on which, moreover, there is some precise information. Al-Muḳaddasī distinguishes three kinds: the first, which is, he says without any other specification, the best, was exported to Egypt; the second, that of the Berbers, was sent to Aden; the third "resembles" the Abyssinians. Al-Iṣṭakhrī, 40, remains equally vague in saying that the eunuchs sold in the Muslim lands are neither Nubians, nor Zandj, nor Ethiopians, nor Bedja, but belong to a still blacker race; al-Maḳdisī (*Bad'*, iv, Ar. text 69, tr. 65) speaks of the Zaghal (?) and Zaghāwa; al-Idrīsī (tr. Dozy-de Goeje, 3; partial edn. Pérès, Algiers 1957, 4; ed. Naples-Rome, i, 1970, 18) cites Takrūr [*q.v.*], i.e. Lower Senegal, as a region from which the Moroccan merchants imported gold ore and *khadam*. (It is a fact that the Takrūrīs, besides the Rūm, Indians and Ḥabash, belonged to one of the four races which supplied the Mamlūk sultanate with eunuchs, see D. Ayalon, *Names, titles and 'nisbas' of the Mamlūks*, in *Israel Oriental Studies*, v

(1975), 220.) For his part, Ibn Baṭṭūṭa (iv, 441; partial tr. H. A. R. Gibb, London ²1957, 336) says that they came from Bornu, via Zawīla [*q.v.*], to the Mediterranean world. But given that emasculation was practised secretly, it is difficult to know the centres where it was carried out in the Middle Ages. According to the *Ḥudūd al-ʿālam*, 165, the Sūdān is, without doubt, the land from which the majority of eunuchs came; in a lively passage, the author adds that the Egyptian merchants stole children there—or bought them from blacks that they had themselves stolen—took them, castrated them and imported them into Egypt where they sold them. A. Mez (ch. xx) mentions that in the 6th/12th century, the town of Hadya, in Abyssinia, ranked as the only place where eunuchs were produced, but the region of Asyūṭ [*q.v.*], in Upper Egypt, is also cited. L. Frank (*Mémoire*, 13-14) estimates, at the beginning of the 19th century, at 100 or 200 the number of young Africans castrated each year in Upper Egypt, at Abūtīdj, to the South of Asyūṭ, on the caravan route leading from Sudan to Egypt. Several years later, Burckhardt who, in 1813-14, visited Upper Egypt and Sudan, was able to discover two centres of production, one in the Borgo district to the west of Dārfūr, the other, more important, at Zāwiyat al-Dayr, also near Asyūṭ (*Travels in Nubia*, 294-6). In the detailed account that he has left, he specifies that the operation was carried out, for a sum of 40 to 60 piastres, by two Coptic monks, under the protection of the government, to whom an annual tax was paid. Contrary to what other authors have said (notably E. Lévi-Provençal, *Hist. Esp. Mus.*, ii, 125; E. W. Bovill, *Golden trade*, 244: 10% of survivors; H. von Maltzan, *Wallfahrt nach Mekka*, Leipzig 1865, i, 48-9), the Swiss traveller claims that the children (from 8 to 12 years) who died were a very small number. These young eunuchs were valued at 1,000 piastres at Asyūṭ, whilst they had been bought for 300 piastres. The annual figure (150) that Burckhardt gives corresponds to that of Frank; he adds that two years previously Muḥammad ʿAlī had had 200 young slaves from Dārfūr castrated to offer them to the Ottoman Sultan. Until recent times, slavers from Muslim states situated further to the north raided Central Africa; women slaves and eunuchs passed clandestinely via Djibouti to people the harems of the Ḥidjāz (L. Massignon, *Annuaire du monde musulman*, 4th edn, Paris 1955, 357, 385).

A priori, these practices hardly appear legal. Before Islam, although some isolated cases of castration were reported (see above) and although the Arabs of the period without doubt possessed some eunuchs (it is sometimes thought that a reference to them appears in the Ḳurʾān, xxiv 31, where it is said that women can show their finery to their male servants who have no carnal desire, *al-tābiʿīn ghayr ūlī l-irba*), they cannot have had them produced regularly on their territory, so that the question of knowing whether emasculation of men was permitted was not put clearly to the first Muslims. With regard to this, the *ḥadīth* is not very explicit, and we must once more place a certain amount of confidence in al-Djāḥiẓ, who reports a reply of Muḥammad to ʿUthmān b. Maẓʿūn: the latter having expressed the desire to mutilate himself, the Prophet is said to have replied to him that it was fasting (*ṣawm*) that had replaced castration (*khiṣāʾ*; var. *widjāʾ*) in Islam (*Ḥayawān*, i, 128-9); in the collections of *ḥadīth*, it is said simply that Ibn Maẓʿūn wanted to devote himself to celibacy (*tabattul*) and that the Prophet forbade him to do it; Saʿd b. Abī Waḳḳāṣ allegedly cried out, "If he had permitted him to do it, we would have castrated ourselves." (Abu'l-Djārūd al-Nīsābūrī, *K. al-Muntaḳā*, Cairo 1382/1963, 226, and the main collections, in particular al-Bukhārī, *Ṣaḥīḥ*, *K. al-Nikāḥ*, *bāb* 7). The word *widjāʾ* appears in another *ḥadīth* (*ibid.*), according to which the Prophet is said to have recommended fasting for young men who were unable to get married, adding that fasting was a *widjāʾ*. All this evidence confirms the tendency of certain pious Muslims to deprive themselves of the pleasures of the flesh, and illustrates the reaction of the Prophet against the weakening of the community that would have resulted from it. In any case, there is no text forbidding the possession of eunuchs, and it has been noted that Muḥammad received them and accepted one who was offered him by the Muḳawḳis [*q.v.*] at the same time as Mary the Copt (*Ḥayawān*, i, 163). Neither can the Ḳurʾān serve to enunciate a rigorous prohibition. The verses 118/119 of Sūra IV certainly read: "Let God curse (the demon) who said: '... I will ordain them to modify the creation of God' ", but it is open to divergent interpretations: for Anas b. Mālik, Ibn ʿAbbās, ʿIkrima, it is definitely *khiṣāʾ* (of animals rather than of men) that is visualised, whereas for Saʿīd b. Djubayr and Mudjāhid, it is a matter simply of "the religion of God" (in *Ḥayawān*, i, 179). Besides, it is notable that al-Masʿūdī (*Murūdj*, viii, 149 = § 3290) endeavours to demonstrate that castration does not prevent a eunuch from remaining a man. In conclusion, from the juridical point of view, prohibition of practising emasculation appears to have proceeded by a sort of tacit consensus: moreover, it was unnecessary, for it was left to Christians and Jews, preferably outside the *dār al-Islām*, to produce eunuchs, which the Muslims could then acquire without contravening their Law.

As regards animals, the problem is different, since the operation took place within the Islamic world and it was Muslims who were able to practise it. Some forbade the castration of horses only (*Ḥayawān*, i, 159), whereas others relied on a *ḥadīth* according to which the prohibition extends to horses, cattle and sheep, which assure the survival of the species and without the existence of which the females would have no reason for being (*ibid.*, i, 178). ʿUmar b. al-Khaṭṭāb was also opposed to the castration of horses and other domestic animals (*ibid.*, i, 178), but it is certain that the breeders could not respect these prohibitions; in fact they dreaded the battles between camel stallions and, although they spared some males that they tied up during the mating season (see *LA*, s.v. *al-sadīm al-muʿannā*), they had a tendency to keep whole only the good stallions who produced mainly females; gelded horses were always very much appreciated, notably for war, for their endurance, their pace and silence (*Ḥayawān*, i, 180); in the same way, in the stock-breeding regions, calves were castrated, for it is extremely difficult to make bulls work, and it was always considered that the flesh of oxen and castrated steers was more tender and tasty (cf. al-Ḳayrawānī, *Risāla*, ed.-tr. Bercher, 323); it was the same with capons (*Ḥayawān*, i, 131). In addition, a special reasoning to justify it was to compare *khiṣāʾ* improperly with the mark of the red-hot iron practised on flocks and herds (*ibid.*, i, 160).

If, in the final reckoning, the castration of domestic animals was always tolerated, and the legality of the possession of eunuchs does not seem to have given rise to serious discussions, considerations on the behaviour of the latter must certainly have sustained conversations (cf. al-Masʿūdī, *Murūdj*, viii, 148-9 =

§ 3288-90); but al-Djāḥiẓ is probably the first author to have recorded his observations on their characteristics and the transformations that they undergo physically, morally and intellectually (*Ḥayawān*, i, 106 ff.; in a more condensed form in *Mufākharat al-djawārī wa'l-ghilmān*, ed. Pellat, Beirut 1957, 52-5; ed. Hārūn, Cairo 1965, ii, 123-5; cf. al-Bayhaḳī, *al-Maḥāsin wa'l-masāwī*, ed. Schwally, Giessen 1902, 609-12; al-Thaʿālibī, *al-Laṭā'if wa'l-ẓarā'if*, Cairo 1300, 74). He remarks rightly that if emasculation takes place before puberty—which is the most frequent case—the beard and body hair do not grow, but the hair of the head, eyebrows and lashes remain and never fall, exactly as with women, who do not experience baldness (i, 108, 114; cf. al-Tawḥīdī, *Imtāʿ*, i, 160-1). Eunuchs have soft skin, a florid complexion, but they become lined and thin very quickly with advancing age, which does not prevent them from enjoying a great longevity, for they do not use their strength to copulate (i, 137). Their voice, having changed after the operation, is recognisable (i, 113) by everyone (which allows *ḥākiya*s to include them easily in their imitations; al-Masʿūdī, viii, 162, 164 = §§ 3300, 3302). They have long feet, knotted fingers in their old age, long limb bones, and by contrast with castrated animals, thick (which is an error, for they are thin), their muscular tonicity is weak and their flesh is flaccid; their walk is ungainly (*Ḥayawān*, i, 116) due to the weakness of their nerves. Because of the fetidness of their sweat, they give off a peculiar odour, contrasting on this point with the animals who, after castration, smell no longer bad (i, 106; al-Masʿūdī, viii, 149 = § 3290, asserts on the contrary that their armpits do not give off a fetid odour); finally, urinary incontinence is their lot (*Ḥayawān*, i, 158). If the operation takes place in adulthood, the pilary system disappears, with the exception of the pubic hair (i, 113), and strength diminishes (i, 115).

The character of eunuchs is comparable with that of women and children (i, 135-6); like them, they particularly like playing with birds. Finding in food and drink (they appreciate wine especially; i, 158) a kind of compensation for the deprivation of other pleasures, they have a tendency to eat and drink heavily, which, with their continence (vii, 223), explains their obesity (i, 111). They are avaricious, indiscreet, as quick to lose their temper as to show their joy or to weep (i, 135), inclined to gossip and slander. They despise the common people and accept only the powerful and the rich as masters (i, 136, 159). They like domestic work, but are ill-adapted to arduous trades (i, 117); on the other hand, they endure long horse rides better than the Turks and Khāridjīs (i, 136) and are excellent at archery; especially devoted to that are white eunuchs who deploy their warlike qualities against the Byzantine to avenge themselves for the mutilation that the latter have made them undergo; they dedicate themselves to harbouring an implacable hatred (i, 124-5, 173-4). Appreciating the value of that which they have lost (i, 125), they are jealous of and hate the *fuḥūl* (i, 173), and do not lack cruelty; this trait of character shows itself in their taste for cockfights (i, 118).

Intellectually, they are superior to their normal brothers and are better at their trade, but one must not demand of them too much reflection (i, 117); those from Khurāsān are highly appreciated (i, 118), but for the blacks of Abyssinia, Nubia and other parts, castration entails a complete physical as well as moral decline (i, 119).

Eunuchs are often sexually obsessed, and al-Djāḥiẓ speaks (i, 125-8) of a Sabaean who, although he had been castrated in his youth, vowed at a very advanced age that women still excited him. The same author asserts (i, 136) that they are not effeminate—which astonishes him—but that they are frequently homosexuals (i, 136, 172). He even cites the case of one of them who gave himself up to bestiality (i, 172).

However, according to current opinion, *khiṣā'* is associated with the total loss of the sexual faculties, and it is from this point of view that certain Muslims of early times had envisaged it (see above; cf. e.g. al-Maʿarrī, *Luzūmiyyāt*, Beirut 1381/1961, ii, 42; *al-khiṣā' khayr min al-zawādj*); al-Muḳaddasī thinks that emasculation, among the Rūm consecrated to the Church, was intended to spare them the tortures of lust; but, given that mutilation was incomplete, al-Djāḥiẓ (i, 124) reckons that it was intended simply to prevent the monks from impregnating the nuns. In fact, the sexual act remained possible and even provided the eunuch with a durable and profound pleasure. Moreover, according to the same author (i, 166), women like partners whose "erection is swift and ejaculation slow in coming" (*sarīʿ al-ifāḳa, baṭī' al-irāḳa*; i, 167), to such a point that they particularly appreciate their guardians, for with them the embrace lasts a long time (*muṭāwala*) and the dangers of conception are nil (see below), since the eunuch is *ma'mūn al-ilḳāḥ*; furthermore, they can abandon themselves to their pleasure, whereas with their husband they have to show themselves modest and reserved (i, 167); to all these advantages is added the attraction of forbidden fruit. It is known already through Juvenal that the Roman women did not deprive themselves of entering into sexual relationships with their eunuchs, and one may consider as likely, in the light of the details that precede, the orgy that in the prologue of *Thousand and One Nights* drives Shahriyār to avenge himself on the women by having a new wife executed each morning. The amours between the female slaves and eunuchs of Khumārawayh [*q.v.*] appear to have been the cause of his assassination (Ibn al-Athīr, viii, 191; Mez, ch. xx) and it is understandable that Muʿāwiya had decided to send only old eunuchs to his wives (al-Masʿūdī, viii, 148-9 = § 3289) and that the Ottomans preferred as harem attendants negroes who had been completely castrated and who were physically ugly. Besides, al-Muḳaddasī records that, according to Abū Ḥanīfa, eunuchs could marry (and take concubines, adds al-Djāḥiẓ, i, 123, 166); however, it must in practice have been very rare (see e.g. Ibn al-Athīr, ix, 39, with regard to a eunuch of ʿAḍud al-Dawla who has as wife an Abyssinian slave), but Burckhardt (*Travels in Arabia*, London 1829, 158-9) asserts that "Extraordinary as it may appear, the grown-up eunuchs [of the Kaʿba] are all married to black slaves." The paternity of the children that their wives brought into the world was naturally attributed to them: this curious assertion is explained by the automatic application of the principle according to which *is pater est quem justae nuptiae demonstrant* and also by the fact that a *khaṣī* is not always *ma'mūn al-ilḳāḥ*: in fact, during the operation, the child might experience such fear that one of his testicles would rise up into his body and escape mutilation (cf. *Ḥayawān*, i, 129, where this statement is followed by the remark that a *madjbūb*, in these conditions, preserves a testicle and remains neither a man nor a woman nor even an eunuch); if it is the left (for it is popularly held that this is the procreative one; *Ḥayawān*, i, 123), the half-eunuch secretes sperm

and can engender children; if it is the right one only, the beard grows, but the case has been known of a man deprived of his left testicle who had a child whom he could not repudiate because he looked exactly like him (i, 123-4).

Generally, eunuchs lived with their master, whether he was a private individual or a ruler, and did not mingle much with the population, especially as they were easily recognisable and as the humbler people did not refrain from hurling gibes at them (al-Ṭabarī, iii, 2164; al-Masʿūdī, viii, 180 = § 3318). In the palaces of the caliphs, in Cordoba as in the East, they were always numerous, despite the high price that was asked for them; by way of example, Leo Africanus (tr. Épaulard, 139, 209) states that in Morocco a slave girl was worth 15 *dīnārs*, a man, 20 and a eunuch, 40; in general, it is double the price of an ordinary slave that is mentioned by the sources. The historians charge al-Amīn (al-Ṭabarī, iii, 950 ff.; cf. Abū Nuwās, *Dīwān*, 188: rhyme *-nā* and *nī*) with having bought many more eunuchs than his predecessors and with having had them constantly in attendance at his side, associating them even in the affairs of state. His successors largely imitated his example, and the figures supplied, although to be treated with caution, remain very high; in the time of al-Muktafī (289-95/902-9), there were in the palace 10,000 *khadam*, blacks and whites (*Ṣaḳāliba*), and that of al-Muḳtadir (295-320/908-32) sheltered 11,000, comprising 7,000 blacks and 4,000 whites (Hilāl al-Ṣābiʾ, *Rusūm dār al-khilāfa*, ed. M. ʿAwwād, Baghdad, 1964, 8). It is remarkable that al-Ḳalḳashandī (v, 92) also mentions the figure of 10,000 for the court of Dihlī, but precise details of this kind are rare and are clearly exaggerated. However, the organisation of the corps of eunuchs is well-known, particularly under the Fāṭimids (see below). In the Islamicised lands of West Africa, the custom of surrounding oneself with Turkish slaves and eunuchs bought in Cairo also spread (Ibn Faḍl Allāh al-ʿUmarī, tr. M. Gaudefroy-Demombynes, 65, 90-1); the king of Gao owned a eunuch as early as the end of the 4th/10th century (R. Mauny, *Tableau géographique*, 341) and six centuries later, Leo Africanus (471) encountered at the palace of his distant descendant an indeterminate number who were appointed to guard the women. In the middle of the 10th/16th century, the *askia* Dāwūd maintained 700 (*Tarikh El-Fettach*, 208) and in 1008/1599, the *pasha* Djawdhar [see AL-MANṢŪR] brought back a large number to Morocco (R. Mauny, *op. laud.*, 342; H. de Castries, *Sources inédites, Angleterre* iii, 1925, 146). In the 19th century still, Denham counted 200 of them in the harem of the Sultan of Bornu (E. W. Bovill, *Golden trade*, 245) but Burckhardt (*Travels in Nubia*, 296) states that the number had considerably diminished in Syria and also in Egypt, where there were no more than 300 belonging to the aristocracy who, alone, could afford such a luxury; the whites were extremely rare. Similarly, in the Persian Gulf, even the black eunuchs were very few in number (see B. Lewis, *Race and color*, 84 and bibl. cited there). By the force of circumstances, the white eunuchs were always less numerous than the blacks and, from the 16th century, they became more rare at the Ottoman court (see below); the supply ceased completely with the annexation of the Caucasian regions by the Russians at the beginning of the 19th century (see B. Lewis, *op. laud.*, 81).

In a general way, the eunuchs were authorised to circulate freely in the harems and served as intermediaries between their master and his wives and concubines. This freedom of movement permitted a number of them to become accomplices of the women who hatched plots (see for example M. Talbi, *Émirat aghlabide*, index) and to participate in the political life of the state. Although Hilāl al-Ṣābiʾ (*Rusūm*, 91) says only that some [white] eunuchs used to surround the throne of the Caliph, brushing away the flies, while others, armed with cross-bows, killed the birds of ill-omen or those that were too noisy, it is certain that not all were assigned domestic functions, and history provides us with evidence of the political and military rôle that a number of them, as in Greece, Rome or Byzantium, succeeded in playing throughout the centuries.

As early as the 3rd/9th century, al-Djāḥiẓ (*Ḥayawān*, i, 125) reports that some rich eunuchs bought estates in the marches [see ʿAWĀṢIM, THUGHŪR] recruited fighting men and made attacks on the Byzantines to revenge themselves (see above) for their very serious injuries. It may not be by chance that several governors of Ṭarsūs [*q.v.*], notably Bishr, *mawlā* of Ibn Abi'l-Sādj, were white eunuchs who launched expeditions against the Rūm (see Vasiliev-Canard, *Byzance et les Arabes*, ii/1, Brussels 1968, 130) and that Thamal, commanding the naval forces in the Mediterranean, was also one (*ibid.*, index). In the same way, in 307/919 the admirals commanding the Fāṭimid and Byzantine fleets respectively were both eunuchs (al-Kindī, *Judges*, 276). At this period, moreover, there were numerous generals who were *khiṣyān* (for example Masʿūd, Mufliḥ al-Muḳtadirī, etc.; see Vasiliev-Canard, ii/1, index); similarly, some of them were leaders of the Ḥudjariyya [*q.v.*]. Without doubt, the most famous and successful in his enterprises was Kāfūr [*q.v.*], who died in 357/968 after he had been master of Egypt and Syria; it will be noted that he was black. Under the first Fāṭimids, Ustādh Djawhar [*q.v.*] who was a Slav eunuch, played a role so important that he merited a special biography. A little later, Bardjawān [*q.v.*] who was also white, was the tutor of the caliph al-Ḥākim; having assumed the functions of regent of the Fāṭimid Empire, he was killed by another eunuch, Raydān, on the orders of the caliph. The organization of a body of a thousand eunuchs (al-Ḳalḳashandī, *Ṣubḥ*, iii, 477) under this dynasty will be noted below. In the 6th/12th century a number were to be found in charge of various forces, directing rival states and governing important towns (see, for example, N. Elisséeff, *Nūr al-Dīn*, ii, 327, 340, 385, 484, 557, 657); in the reign of the Fāṭimid al-ʿĀḍid, the black eunuchs exercised a considerable influence (B. Lewis, *op. laud.*, 71-2) it was his *muʾtamin al-khilāfa*, Djawhar, who, in 564/1169, hatched a plot against Saladin (Ibn al-Athīr, ix, 103). Eunuchs were still found among the troops of the latter (ʿImād al-Dīn, *al-Fatḥ al-ḳussī*, 324; tr. H. Massé, 287) who took Ḳarāḳūsh completely into his confidence (Bahāʾ al-Dīn [*q.v.*]). It would be easy to multiply the examples.

In Persia, a notable case cited is that of Manūčihr Khān Muʿtamid al-Dawla, sometime governor of Iṣfahān during the reign of Nāṣir al-Dīn Shāh; he had been taken prisoner in Fatḥ ʿAlī Shāh's wars with Russia and castrated. On his death, his property was claimed by the Persian crown on the grounds of his having been a slave, though this was disputed (Great Britain, Public Record Office, F.O. 60/29. Murray to Clarendon, No. 69, Baghdad, 8 August 1856). Āḳā Muḥammad Khān, the founder of the Ḳājār dynasty, was a eunuch, having been castrated in childhood by ʿĀdil Shāh, the nephew of Nādir Shāh, into whose hands he had fallen.

It goes without saying that such accession to the throne, which was exceptional, is in contradiction to the law of Islam which demands the physical integrity of the ruler. A. Mez (ch. xx) mentions that a eunuch functioned as a *ḳāḍī* at Damietta, but it is certain that the *khiṣyān*, from the sole fact of their mutilation, were normally excluded from the magistrature [see ḲĀḌĪ]. However, Niẓām al-Mulk (*Siyāsat-nāma*, ed. Schefer, Paris 1891-3, 41) considers that it is preferable to confer the functions of *muḥtasib* on a eunuch and it will be noted that, under the Ottomans, the control of the *waḳf*s of the Holy Cities and most of the mosques was assured up to the 16th century by the *ḳapî aghasî* [*q.v.*], in the 17th century by the latter and the *ḳîzlar aghasî*, respectively the Chief White Eunuch and the Chief Black Eunuch, in the 18th century by the *ḳîzlar aghasî* alone, after the weakening of the power of the whites (see below).

It should be noted that, in different courts of Muslim rulers, the eunuchs were organised in a body at an early date. According to the account of the Byzantine embassy received by al-Muḳtadir at Baghdād on Monday 24 Muḥarram 305/17 July 917 (see Vasiliev-Canard, ii/1, 238 ff.), the Ḥudjariyya and eunuchs of the Caliph were to be seen positioned between the latter and the soldiers; some of them accompanied ambassadors during all their visits. At the court of the Fāṭimids (see al-Ḳalḳashandī, *Ṣubḥ*, iii, 480-1), the eunuchs (*ustādh*) used to come immediately after the *amīr*s. The officials in private service were eunuchs, of whom those of greatest dignity wore a turban passing under the chin and were therefore called *muḥannak*. "The most exalted rank among the *muḥannak* eunuchs was held by the one who had the charge of wrapping a special crown round the head of the Caliph for ceremonial occasions ... Next [came] the *ṣāḥib al-madjlis* or master of the audience hall; the *ṣāḥib al-risāla*, or master of correspondence; the *zimām al-ḳuṣūr*, the intendant of the palaces; the *ṣāḥib bayt al-māl*, or director of the Treasury; the master of the registry (*ṣāḥib al-daftar*) who directed the general offices (*dīwān*); the bearer of the inkwell (*ḥāmil al-dawāt*); the superintendent of the Caliph's kinsmen (*zamm al-aḳārib*); the intendant of the table (*ṣāḥib al-māʾida*). Important household offices held by non-eunuchs included the deanship of the descendants of ʿAlī b. Abū Ṭālib ... and the intendancy of the different corps of *ṣibyān*, young men, and other regiments of the army" (M. Canard, *Cérémonial fatimite ...*, in *Byzantion*, xxi/2 (1951), 367 ff.; cf. B. Lewis, *Islam from the Prophet Muhammad to the capture of Constantinople*, New York, etc. 1974, i, 202, 204-5).

For eunuchs at the Ottoman court, see below.

II.—IN PERSIA.

In Persia, it was only under the Ṣafawids that the eunuchs (*Khwādjagān*, *Khwādja-sarāyān*) in charge of the women's apartments in the royal palace began to play an important role in political affairs. Chardin placed the number of eunuchs at court at *ca.* 3,000, and says that these were mainly white persons coming above all from the Malabar coast (*Voyages*, Amsterdam 1711, 283-5). But under Shāh ʿAbbās (985-1038/1587-1629) it became common practice to enslave and castrate Georgian and other captives taken in war and to use them as palace servants, especially in the royal *ḥaram*. According to the *Tadhkirat al-mulūk*, he was the first shah to introduce white eunuchs into the palace alongside the black eunuchs (f. 31a ff.). He also initiated the practice of immuring the royal princes in the *ḥaram*. This practice unfitted them for rule and in due course enabled the palace eunuchs to dominate affairs of state. On the death of Shāh ʿAbbās II in 1077/1667, the palace eunuchs contrived the succession of Shāh Sulaymān and seized control of the state. On the latter's death in 1105/1694, with the connivance of Maryam Begum, Shāh Sulaymān's aunt, they placed Shāh Sulṭān Ḥusayn on the throne. He left the management of affairs of state entirely to them. They succeeded in extending their influence over military as well as civil affairs, the only check on their power being the faction which prevailed in their own ranks and the rivalry of the religious party under Muḥammad Bāḳir Madjlisī. The irresponsible character of their government and the faction to which it gave rise was one of the main causes of the decline of the Ṣafawid dynasty. The *ḥaram* of Shāh Sulṭān Ḥusayn, and with it the number of eunuchs, reached enormous proportions and swallowed up a large part of the revenue.

After the fall of the Ṣafawids, the eunuchs never again achieved political importance or large numbers. In 1887 it was reported that there were only thirty-eight eunuchs in the royal *ḥaram* (Iʿtimād al-Salṭana, *Rūznāma-i khāṭirāt-i Iʿtimād al-Salṭana*, ed. Iraj Afshār, Tehran 1966, 644).

(A. K. S. LAMBTON)

III.—IN TURKEY.

It is believed that there were eunuchs in the palaces of the Saldjūḳs of Rūm or Anatolia, and in those of the beyliks of the Čandaroghullarî [see DJANDĀRLÎ] in Ḳastamonu in the 8th/14th century (see Fuad Köprülü, *Bizans müesseselerinin Osmanlı müesseselerine tesiri hakkında mülâhazalar*, in *Türk Hukuk ve Iktisat Tarihi Mecmuası*, i (Istanbul 1931), 208-11). Their first appearance in the Ottoman state was in the first half of the 9th/15th century, and these eunuchs

were of two kinds: white (*aḳ agha*) and negro (*ḳarā agha*). According to tradition it was Murād II (824-55/1421-51) who first employed the *khādim aghas* (chief eunuchs) in the palace; during his reign the *aḳ khādim aghas* (white chief eunuchs) in the harem occupied the offices of *ḳapu aghasī* (chief white eunuch in the Imperial Palace), *khazīnedār-bashī* (the title of the fourth officer of the white eunuchs) and *sarāy aghasī* and *ḳilārdjī-bashī* (chief clerk of the imperial pantry); above them all was the *Dār al-saʿāda aghasī* (chief eunuch of the palace) (Ṭayyār-zāde ʿAṭā', *Ta'rīkh-i Enderūn*, Istanbul 1292, i, 34). Later, some eunuchs of particular ability were employed outside the palace. The mention of some well-known government officials bearing the title of *khādim* or *ṭawāshī* in the first half of the 9th/15th century may indicate an earlier date for the employment of white chief eunuchs in the palace. For instance, the appointment on several occasions of Shihāb al-Dīn Pasha (Kula Shāhīn, d. 853/1454) during the reign of Murād II to the office of *beylerbey* of Rumelia means that his early life and upbringing should be placed in the reign of Čelebi Meḥemmed (805-24/1403-21). (Neshrī, *Djihān-numā*, ed. Taeschner, Leipzig 1951, i, 170, 181, 230; M. Tayyib Gökbilgin, *XV ve XVI inci asırlarda Edirne ve Paşaeli livası*, Istanbul 1952, 255-7). The use of negroes, that is black eunuchs, in the palace started during the reign of Meḥemmed the Conqueror (855-86/1451-81) and from the beginning of the 10th/16th century we find black eunuchs employed alongside the white ones. In 918/1513 there were 10 white and black *khādims* (eunuchs) serving in the palace (Topkapı Sarayı Müzesi arşivi, N.D. 10052). The head of the eunuchs in charge of the Bāb al-saʿāda of the palace was called the *ḳapī aghasī* or *Bāb al-saʿāda aghasī*, which was the highest office in the harem. But in 990/1582 the superintendence of the harem and the office of *Dār al-Saʿāda aghasī* passed into the hands of Ḥabashī Meḥmed Agha and the black eunuchs, and the white eunuchs were relegated to second place and had to be content with the office of *ḳapī aghasī*. However, among the white eunuchs there were some who rose to the office of Grand Vizier, such as Khādim ʿAlī Pasha (first time, 906-8/1501-3, second time 912-17/1506-11) under Bāyezīd I; Khādim Sinān Pasha (922-3/1516-17) in the reign of Selīm I; Khādim Süleymān Pasha (948-51/1541-4) in the reign of Süleymān the Magnificent; Khādim Mesīḥ Pasha (994-6/1585-6) in the reign of Murād III; Khādim Ḥasan Pasha (1005-6/1597-8) in the reign of Meḥemmed III; and Khādim Meḥmed Pasha (1031-2/1622-3) in the reign of Muṣṭafā I.

Although the majority of the eunuchs in the harem were now negroes, there were also some white chief eunuchs amongst them. In the period 990-1087/1582-1676 there were 35 black eunuchs and *ca.* 20 *farrāshs* or servants under them (Topkapı Sarayı Müzesi Arşivi, N.D. 1059, 1027, 10181, 6205). The number of *ḳapī aghasīs* or chief white eunuchs varied from 32 to 37 between these same years, but their number fell to 24 in 1676 (Topkapı Sarayı Müzesi Arşivi, N.D. 34, 10181, 6205). The absolute supremacy of the negroes in the harem continued until the end of the Ottoman Empire (see Safiye Ünüvar, *Saray Hatıraları*, Istanbul 1964). Outside the Imperial Palace there were also great personages who kept eunuchs, the majority of them black, in their palaces and residences, and indeed, throughout many levels of Ottoman society (see E. W. Lane, *The Manners and Customs of the modern Egyptians*, London 1954, 137).

These black eunuchs were imported from Egypt, often as children between the ages of 8 and 11. The negroes employed in the Ottoman palace were chosen and sent by the *beylerbey* of Egypt. Although as mentioned above, the operation of castration was often done in Upper Egypt, there was also a professional group of *djerrāḥ-ī djellābīs* in 11th/17th century Egypt (Ewliyā Čelebi, *Seyāḥatnāme*, Istanbul 1938, x, 376). Mortality was low among those children who had the operation before puberty, but high among those castrated after the age of maturity (cf. Penzer, *The Harem*, 142, 145; M. Çağatay Uluçay, *Harem*, Ankara 1971, 128). The negroes brought to Istanbul as children were brought up in the palace, and those in the Harem formed a corps, the *aghalar odjaḳī*, trained by the senior eunuchs; often they were given flower names. After a strict training and education, they were sent to the palace and to the residences of princes and other great men of state for a kind of probationary period (see Safiye Ünüvar, *op. cit.*, 77). As stated above, castration was normally done outside the heartlands of the empire, e.g. in Upper Egypt. A private person had no legal right in the empire to castrate his slave (M. Ertuğrul Düzdağ, *Şeyhülislam Ebussuud Efendi fetvaları ışığında 16. asır Türk Hayatı*, Istanbul 1972, 120). Thus in 967/1560 an *alaybeg* in Prizren in Serbia attempted to castrate three children from the local *reʿāyā* by force, but caused their deaths; he was thereupon dismissed from his office and punished by being deprived of his *zeʿāmet* (Başbakanlık Arşiv Genel Müdürlüğü, Kâmil Kepeci catalogue, Ruus defteri, no. 216, 11).

In 1127/1715 the Grand Vizier Shehīd ʿAlī Pasha tried to remove the black *khādim aghas* from the palace because of their maleficent influence there. He succeeded in getting a decision that negroes were not to be castrated from then onwards and sent his decision to the *odjaḳs* of Egypt and the west in the form of an imperial *firmān*; and he gave strict orders that existing eunuchs should not be brought into Rumelia under any circumstances. But he was killed in the battle of Peterwardein, and the possibility of enforcing this decision was then lost in 1129/1717 (Rāshid, *Ta'rīkh*, Istanbul 1282, iv, 175-6; Derwīsh ʿAbd Allāh, *Risāle-i Ṭabardāriyye*, Köprülü Kütüphanesi, ii, 233, ff. 66a-b). The process of abolishing slavery and the negro slave trade in the Ottoman Empire started during the reign of Maḥmūd II, and in Djumāda II 1273/February 1857 a *firmān* was issued prohibiting slavery and the slave trade in the Ottoman lands (*Dustūr*, Istanbul 1299, 1st series, v, 368, 396, etc.). After this, slavery and the use of eunuchs gradually disappeared, their use persisting longest in the harem of the palace.

AL-**KHAṢĪB** [see IBN AL-KHAṢĪB].

AL-**KHAṢĪBĪ**, name given to AḤMAD B. ʿUBAYD ALLĀH B. AḤMAD B. AL-KHAṢĪB, vizier of al-Muḳtadir and al-Ḳāhir, who was probably the grandson of al-Muntaṣir's vizier Aḥmad b. al-Khaṣīb [see AL-DJARDJARĀʾĪ]. He was originally secretary to the caliph's mother, and then suddenly was made vizier after the fall of al-Khāḳānī, but only filled this office for a few months (Ramaḍān 313-Dhu 'l-Ḳaʿda 314/Nov. 925-Jan. 927). Faced with the hostility of the military leaders, and treating administrative affairs in a very perfunctory way, he immediately ran into serious difficulties which he was unable to surmount. He re-appears in 318/930 as a financial official in the Persian provinces, and then as one of the caliph's counsellors who brought about the fall of the vizier al-Ḥusayn b. al-Ḳāsim. He became vizier for the second time under al-Ḳāhir, from Dhu 'l-Ḳaʿda 321/Oct. 933 till Djumādā I 322/April 934, but was unable to prevent the intrigues of the former vizier Ibn Muḳla [*q.v.*] nor to put down the discontentments of the palace guards, who ended up by imprisoning the caliph.

Under al-Rāḍī, al-Khaṣībī still held important functions in the central administration, but was exiled for some time to ʿUmān by the vizier Ibn Muḳla, upon whom he was later able to take vengeance. He helped ʿAbd al-Raḥmān b. ʿĪsā during his short vizierate (324/936), and died in Baghdād in Shawwāl 328/ August 940.

AL-**KHĀSIR** [see SALM AL-KHĀSIR].

KHĀṢṢ (A.) and its fem. *khāṣṣa* "personal, private, pertaining to the state or ruler". In Ottoman administration and society, *khāṣṣ* and *khāṣṣa* were generally used interchangeably, with pls. *khāṣṣahā* and *khawāṣṣ*, see on these various forms, Meninski, ii, 530-1. It appears in Turkish literature for "a person close to the ruler", "something personal to the ruler", in the 7th/13th century, see Mecdud Mansuroğlu, *Sultan veledʾin (1226-1312) türkçe manzumeleri*, Istanbul 1958, vv. 26, 48-9, 53-4, 143-5, 149. The word, used for describing the palace services of a ruler, first appear in the Ghaznawid state (*Taʾrīkh-i Bayhaḳī*, ed. Ghanī and Fayyāḍ, Tehran 1324/1945, 235, 253, 271 and *passim*), and then was used in the Great Saldjuḳ state in regard to the Sultan's personal estates (Niẓām al-Mulk, *Siyāsat-nāma*, ed. Ḳazwīnī, Tehran 1334/1955, 95, 105-6). Under the Khʷārazm-Shāhs and Mamlūks of Egypt, the officer in charge of the ruler's estates was called the *Nāẓir al-khāṣṣ* (al-Ḳalḳashandī, *Ṣubḥ al-aʿsha*, iv, 30). In the Il-Khānid state, the property and the land belonging to the ruler were called *indju*, and sometimes *khāṣṣ-i indju* (see Z. Velidi Togan, *Umumî türk tarihine giriş*, Istanbul 1946, 278-9). The words *khāṣṣ* and *khāṣṣa* were used synonymously during the first period of the Ottoman empire. Then *khāṣṣa* came to be used for the services and matters concerning the ruler and his palace (*khāṣṣa bostandjilari*, *khāṣṣa doghandjilari* etc.), whilst *khāṣṣ* was used rather for the private estates of the ruler; hence we find from the end of the 9th/15th century terms like *khāṣṣ-i pādishāhī*, and sometimes *khāṣṣ-i humāyūn*, *khawāṣṣ-i humāyūn* or *khāṣṣ-i shāhī*, meaning the imperial lands (see Ö. L. Barkan, *Osmanlı imparatorluğunda ziraî ekonominin hukukî ve mali esasları. I. Kanunlar*, Istanbul 1943, index).

The *Khāṣṣ* lands followed a course similar to that of the *timār* system. From the existing *timār defters*, it appears that the *khāṣṣ* lands stretch back to the reign of Bāyezīd I (791-805/1389-1403) (Başbakanlık arşiv Genel Müdürlüğü, tapu defteri, 1/1, Mis. 331, 332) and beyond. The term *khāṣṣ*, pl. *khawāṣṣ*, in the Ottoman *timār* system was used for the more extensive *timār*s. There were only *timār*s during the first period of the Ottoman state (for the 804/1402 and 807/1405 *timār* entries, see Süheyl Ünver, *Yıldırım Bayezidʾin oğlu Isaʾnın bir emri*, in *Belleten*, xlii (1944), 335, 337), but at the beginning of the 9th/15th century the term *khāṣṣ* was also used for some personal *timār*s worth 46,208, and 50,702 *aḳčes*. (H. Inalcik, *Hicri 835 tarihli suret-i defter-i sancak-i Arvanid*, Ankara 1954, 33-55). Hence at this time the *timār* included the *khāṣṣ*; the *timār*s of begs which were called *khāṣṣ* and *zeʿāmet* were also alike called "great *timār*s". The *ḳānūn-nāme*s show how the *khāṣṣ* was used. In the *ḳānūn-nāme* of Meḥemmed Fātiḥ, it is indicated that the most productive lands in the provinces were to be included in the *khāṣṣ* of the Sultan, and that the *defterdār*s or treasurers had the authority to confiscate the lands of a person, if they discovered that he had very productive land, and give him less productive land as a *khāṣṣ*. The viziers, it was stipulated, were to have *khāṣṣ* lands with an income of 1,200,000 *aḳčes*, the *beglerbeg*s those with an income of 1,000,000, the *defterdār*s those with an income of 600,000 as long as they remained in office; for this see *Fātiḥ ḳānūn-nāmesi*, Istanbul 1330, 28. Because the *sandjaḳ*s, rather than the *eyālet*s, constituted the basis of the administrative system, the *khāṣṣ* lands assigned to a *sandjaḳ* beg were more numerous during the 9th/15th century (for the *khāṣṣ* of the *sandjaḳ beg* of Üsküp, see *Hicri 859 tarihli suret-i defter-i mücmel-i vilayet-i Yeleč ve Izvečan ve Hududide ve Seniča ve Res ve Üsküp ve Kalkandelen ve tevabiha*, ed. H. Sabanovič, Sarajevo 1964, 7). After the organisation of a *sandjaḳ*, the villages and *khāṣṣ* lands there could be terminated as *khāṣṣ* land with the permission of the *sandjaḳ beg*, if it was thought to be necessary, or some of the *timār* land could be made into *khāṣṣ* (M. Tayyib Gökbilgin, *XV. ve XVI. asırlarda Edirne ve Paşa livası*, Istanbul 1952, 74; *Hicri 835 tarihli suret-i defter-i sancak-i Arvanid*, pp. xxiii, xxiv, xxviii, 12, 39, 100).

Khāṣṣ lands were granted to the members of the upper ranks of the administration, the *Dīwān-i Hümāyūn*, such as the Grand Vizier and the viziers, and to high officials such as *sandjaḳ beg*s and *beglerbeg*s as long as they held their posts. The *khāṣṣ* lands might be scattered throughout a *sandjaḳ* or province. The *khāṣṣ* holders, when going on a campaign, would take with them one *djebelü* for every 5,000 *aḳče*s of revenue from their *khāṣṣ*, while the *eyālet*s or provinces of Bosnia (739,000 *aḳče*s), Aleppo (700,000 *aḳče*s), Ḳaramān (633,000 *aḳče*s) were the administrative units with the highest *khāṣṣ* income in 933-4/1527-8, the *sandjaḳ beg* of Semendere (622,000 *aḳče*s) had the highest income among the *sandjaḳ beg*s; in contrast to this, the *sandjaḳ beg* of Voynak (52,000) and that of Ḳirḳkilise or Ḳirḳlareli (81,000) had the lowest *khāṣṣ* incomes (for the other provinces, and the *khāṣṣ* lands of *beglerbeg*s and *sandjaḳ beg*s in general, see Barkan, *1527-1528 yılı bütčesi*, 25-8; for the *khāṣṣ* lands of the Grand Vizier, the *Ḳubbe-altı* viziers and retired viziers in 1070/1660, see Hezārfen Čelebi, *Telkhīṣü 'l-beyān fī ḳawānīn-i āl-i ʿOthmān*, 45b, 46a, 47a ff., and cf. Kâmil Kepeci tasnifi, Haslar kalemi defteri, no. 3069).

The *khāṣṣ* lands were administered on the basis of registers made up annually, and according to the sources were divided into three: (1) *khawāṣṣ-i*

humāyūn; (2) the *khāṣṣ* lands of Viziers, *amīrs*, *beglerbegs* and other high officials of the imperial Chancery or *Dīwān*; and (3) the *khāṣṣ* lands called *pashmaklık* which were appropriated to the needs of the Sultan's wives.

Any surpluses from all these at the end of each financial year were added to the *khawāṣṣ-i humāyūn* treasury. The *khāṣṣ* lands given to the Sultan's wives were awarded for life, and could not be transferred to anyone; if the holder of a *pashmaklık khāṣṣ* died or had no further need for it, then it would be transferred to the *khāṣṣ-ı humāyūn* (*Kanun-ı Osmanı mefhum-i defter-i hakani*, ed. I. H. Uzunçarşılı, in *Belleten*, lix (1951), 386; *Rasprava Ali cauşa iz Sofija i timarskoj organizacij u XVI stoljecu*, in *Glasnik Zemal'kog Muzeja u Sarajevo*, Nova seria, ii (Sarajevo 1947), 152).

The *khawāṣṣ-ı humāyūn* and the *khāṣṣ* lands of high officials and administrators formed an important part of the revenues of every province; for example, they constituted 48% of the general revenue of Rumelia, 26% of Anatolia, Ḳaramān, Dhulḳadriye and Rūm (Sivas), 31% of Diyārbekir, 48% of Aleppo and Damascus, and 86% of Egypt. Out of all the Ottoman provinces, they formed 277,244,782 *akčes*, 51% of the total revenue; the other *khāṣṣ* lands and *timārs* comprised 200,186,394 *akčes*, 37% of the total revenue (Barkan, *H. 933-934 (M. 1527-28) mâlî yılına ait bir bütçe örneği*, in *Iktisat Fakültesi Mecmuası*, xv (Istanbul 1955), 277). According to the calculations made from the 1071/1660-1 budget, about three-quarters (1 billion, 800 million)of the total revenue of the state (2 billion, 400 million) went to the officials in charge of *khāṣṣ*, *timār* or *wakf* lands; the revenue from *khāṣṣ* lands was not always sent to the capital, but could be spent on the spot (Barkan, *Osmanlı bütçelerine ait notlar*, in *Iktisat Fakültesi Mecmuası*, xvii (1960), 190).

The value and extent of *khāṣṣ* lands would vary according to the productivity of the provinces and *sandjaks*. Although the most productive lands were already included in the *khāṣṣ* estates at the beginning of the 10th/16th century, their boundaries and the revenue accruing from them tended to increase by a considerable amount (for the situation in the *sandjak* of Szegedin, see L. Fekete, *Die Siyāḳat-Schrift*, i, 402, 610, 612; for the situation in the *sandjak* of Mārdīn, see Nejat Göyünç, *XVI. yüzılda Mardin sancağı*, Istanbul 1969, 142-7). Apart from the agricultural produce of arable fields, vineyards, orchards etc., there were, also, revenues from the *djizya*, sheep tax, *yaylak* tax, *kishlak* tax, firewood and hay tax, bride tax, *bād-i havā* or irregular taxes, *fudju* tax, pasture tax, *tapu* tax, *čift* tax, taxes on the produce of nomads and revenues from some of the *muḳāṭaʿas* in the towns, all of which constituted the income of the *khāṣṣ* lands. In the cities, such items as taxes on the *bashkāne* (slaughter-houses), *kirishkāne* (catgut factory), the *iḥtisāb* tax, *bozakhāne*, rents from shops, etc., formed part of the revenues of the *khāṣṣ*; however, agricultural products constituted the greater part of the *khāṣṣ* revenues. According to the comparisons made between the years 1550 and 1650-70, there was a 50% decline in the revenues from agricultural products, hence the revenues of the *khāṣṣ* lands were topped up by other means. Accordingly, some of the *timārs* and *zeʿāmets*, and even the *khāṣṣ* lands of viziers, *beglerbegs* and *sandjak begs*, were added to the *khāṣṣ-ı humāyūn* lands (see Kâmil Kepeci tasnifi, haslar kalemi, no. 3064). When a vizier or a *beglerbeg* retired, some of his *khāṣṣ* was added to the *khawāṣṣ-ı humāyūn*, but some was left to him as a retirement *khāṣṣ* (Kâmil Kepeci Tasnifi, no. 3065). From the 10th/16th century onwards, the number of viziers and *beglerbegs* increased, but the *khāṣṣ* lands allotted to them became insufficient and inadequate, and henceforth there was *khāṣṣlar muḍāyaḳası* ("scarcity of *khāṣṣ* lands") in the financial system (Orhonlu, *Osmanlı tarihine ait belgeler, telhisler (1595-1605)*, Istanbul 1970, 13-14, 131; see also Kâmil Kepeci tasnifi, ahkâm defteri, no. 70, p. 214). As a result of this decrease in agricultural income, the *khāṣṣ* lands of viziers, *beglerbegs* and *sandjak begs* began to be transferred to the *khāṣṣ-ı humāyūn* (*Kitāb-ı Müsteṭāb*, Ankara 1974, 40; for various records regarding this, see Kâmil Kepeci tasnifi, haslar kalemi defteri no. 3064).

During the period of the empire's expansion, there were—in accordance with the ordinances regarding *mīrī* land—*khāṣṣa* farms and *khāṣṣa* pastures called *ḳılıč yeri* which were run by the *sipāhīs* and which belonged to a system different from that of the farms of the *reʿayā*; in some places there are records of *khāṣṣ* vineyards, *khāṣṣ* mills, etc. The *sipāhīs*' share in *khāṣṣa* vineyards and orchards was a third or a quarter. Because it was against the law for a *sipāhī* to buy, with acquisition of title-deed, land from his own *timār*, for himself or his family, the *khāṣṣa* farms eventually decreased in the empire (Barkan, *Toprak işçilerinin organizasyon şekilleri*, in *Iktisat Fakültesi Mecmuası*, v/i (1939), 213 ff.). The *khāṣṣa* farms which were, in a way, estates of the *sipāhīs*, were run by themselves by way of partnership (see *Ḳawānīn-i ʿörfiyye-i ʿOthmānī*, ed. N. Beldiceanu, Wiesbaden 1967, 14-15). When the register of a province was made up, vineyards, pastures, farms, fruit trees and mills which were recorded among the *khāṣṣ* lands were not sold with title deeds to them, and could not pass into private possession (*Kanuni-i Kanunname*, Sarajevo 1957, 38, 52). Thus lands recorded as *khāṣṣa* would not normally be given with a title deed, and if they were thus given to a *sipāhī*, and then passed into the hands of another *sipāhī*, then title-deeds would be abolished and they would be transformed into a *khāṣṣalıḳ*. The *khāṣṣa* lands were exempted from all taxes and from the entry of officials. The *khāṣṣa* lands could be sold in some regions, but only by obtaining special permission from the government (Barkan, *Osmanlı imparatorluğunda ziraî ekonominin hukukî ve mâlî esasları*, I, *Kanunlar*, 143, 314, 321, 343, 399).

From the 10th/16th century onwards, the term *khawāṣṣ-i humāyūn* started to be used as equivalent to that of *mīrī muḳāṭaʿa*. The officials supervising the *khāṣṣ* lands of *sandjak begs* and *beglerbegs* could not therefore interfere with the revenues of *mīrī muḳāṭaʿa* or *khawāṣṣ-ı humāyūn* in any way (Halit Ongan, *Ankara'nin iki numaralı şer'iye sicili*, Ankara 1974, 128-9). During the middle years of the century, because of financial and administrative difficulties, *mīrī muḳāṭaʿas* and *khāṣṣ-ı shāhī* began to appear as two different types of entities (M. Akdağ, *Türkiye'nin iktisâdî ve içtimâî tarihi*, Ankara 1972, ii, 92-3, 299).

Khāṣṣ-i pādishāhī or *khāwaṣṣ-i humāyūn* and *khāṣṣ* lands were managed by a *voyvoda*, who had under their command the *sekbān* soldiers in order to carry out their duties (M. Çağatay Uluçay, *XVII. asırda Saruhanda eşkıyalık ve halk hareketleri*, Ankara 1944, 319). In some places the *voyvodas* who were in charge of recording the shares of state and of individuals from *khāṣṣ* revenues (Kâmil Kepeci tasnifi, haslar kalemi defteri, no. 3065) were called *khāṣṣ ḍābiṭi* or "*khāṣṣ* officers" (Şikayet defteri, i,

160). However, the taxes on the *reʿāyā* living and working on the *khāṣṣ* lands were collected by *emīns*, who had nothing to do with the *voyvodas* (Maliyeden müdevver defterler, no. 7534, pp. 1047, 1229). Beside the *voyvodas*, there were also some other officials, including the *khāṣṣ kātibis* or clerks, appointed by a decree (Maliyeden müdevver defterler, no. 7534, p. 567). These officials were in charge of managing the imperial *khāṣṣ* lands, with authority to pursue runaway cultivators and safeguard the interests of the imperial treasury in the *khāṣṣ* lands. They also had such duties as ensuring the transference to the treasury of heirless estates and abandoned properties, the inheritors of which had disappeared and had not returned within 6 months (*Kānūn-nāme-i sulṭānī ber mūdjeb-i ʿörf-i ʿOthmānī*, ed. H. Inalcik and R. Anhegger, Ankara 1956, 70-1).

In earlier times permission was not given for the *khāṣṣa* lands to be farmed out on *iltizām* [*q.v.*] (H. Inalcik, *Arvanid livası*, 123-5), but this was not adhered to in later applications (Halit Ongan, *op. cit.*, 8, 43, 85; cf. *Arazi Kanunnâmesi ve Ebusuud Efendi'nin araziye müteallik fetvalarî*, in *MTM*, 1/2 (Istanbul 1331), 324). Although the principle of not giving out *khāṣṣ* lands thus still existed at the beginning of the 11th/17th century, the actual practice had become established (M. Çağatay Uluçay, *op. cit.*, 211). In 1658/1069 the *khāṣṣa* lands of eight viziers, amounting to 23,507,943 *akčes*, were given out as *iltizām* for the sum of 26,272,485 *akčes* (see Kâmil Kepeci tasnifi, haslar kalemi, no. 3069).

During the composition of the register, the children on the *khāṣṣ* lands were not registered as such (*khāridj ez defter*), but were assumed to be registered through the registration of their fathers. Natural calamities such as drought and epidemics affected the *khāṣṣa* lands, leading to the emigration of *reʿāyā* from their villages and farms to other places (Başbakanlık arşiv genel müdürlüğü, maliyeden müdevver defterler, no. 7534, pp. 560, 1661).

Gradually, the *khāṣṣ* lands belonging to the ranks of viziers, *beglerbegs*, and *sandjak begs*, were abolished and were added to the *mīrī muḳāṭaʿāt* lands, and payment in cash was made in lieu of these lands (Maliyeden müdevver defterler, no. 14525, pp. 14 ff.). After the treaty of Ḳarlovca [*q.v.*] in 1110/1699, new *khāṣṣ* lands were allotted to some of the *beglerbegs*, and in some places they were given the right of collecting taxes called *ḥaḍariyye* and *seferiyye*. The government office which existed from the 11th/17th century onwards and was charged with recording matters relating to the *khāṣṣ* lands of the various government officials in the *Dīwān-ī Humāyūn* was called *Khāṣṣlar Muḳāṭaʿasî ḳalemi*. In 1833 this office was combined with the *Bash Muḳāṭaʿadjîlîḳ* and the office of the official historiographer, and then was added to the *Ḥarameyn muḳāṭaʿadjîlîk* under the name of "the three offices", *aḳlām-i thalāthe* (A. Vefīk, *Tekālīf ḳawāʿidi*, Istanbul 1328, i, 217). In 1838 the department of the *Khāṣṣlar Ḳalemi* was in the same room as the *Bash Muḳāṭaʿadjî* in Istanbul and his subordinates below the rank of treasurer (Maliyeden müdevver defterler no. 8999, p. 4). Later, only the *khāṣṣ* lands belonging to the offices of the vizierate, the High Admiral and the *Nishāndjî* were retained, and the rest were added to the *Mīrī muḳāṭaʿāt* or *khāṣṣahā-i humāyūn*. The *zeʿāmets* allotted to other government officials came under the legal ambit of offices given for life, that is as *malikāne*, owned property; but because the revenues appropriated were insufficient, certain revenues were provided, in various ways, for the high officials in Istanbul and in the provinces. Through the *malikāne* system thus established, some advantages, such as the protection of the sources of taxation and the provision of surplus income from the treasury and the maintenance of the productivity of the *muḳāṭaʿas*, were gained. Since no *khāṣṣ* land was allotted to new appointments (in other words, because of the abandonment of this system), provincial governors (*beglerbegs*) considered a *sandjaḳ* as providing a good income if in that region there was more of *muḳāṭaʿat-i mīrī* and less of *timār*, *zeʿāmet* and *waḳf* land (Muṣṭafā Nūrī Pasha, *Netāyidjü 'l-wuḳūʿāt*, Istanbul 1328, iii, 76, 79-80). The *muḳāṭaʿat-i mīrī* lands, with their values recorded in the *defters*, were given to the governors as personal property, and they would give them to the *mültezims* by adding a surplus amount of income. From 1790/1205 onwards, all the *khāṣṣ* lands, including those belonging to the Sultans' wives, were transferred to the jurisdiction of the newly-founded *Īrād-î djedīd* treasury (Djevdet, vi, 60 ff.; Kâmil Kepeci tasnifi, no. 3205). After the *Tanẓīmāt*, the principle evolved of settling every kind of expenditure from the treasury; the *khāṣṣ-i humāyūn* revenues were now given to governors and *mültezims* from the Imperial Mint, and *Muḳāṭaʿat-î mīrī* revenues from the treasury. After 1838, instead of the old system of revenues set apart for the support of officials, a monthly salary was allotted to each of them. In 1839 the *muḳāṭaʿāt* treasury was combined with the *mīrī* treasury, and placed under the control of the Ministry of Finance (Maliyeden müdevver defterler, no. 8999, pp. 6 ff., 38; cf. Muṣṭafā Nūrī Pasha, *op. cit.*, iv, 102, 105 ff.).

Even after the old system was abolished, its memory survived in the names of certain places; for example, one of the names of the Eyyüb *ḳaḍā'* in Istanbul was *Khawāṣṣ-î refīʿa* or *Khāṣṣlar Ḳaḍāsî*; the name Khāṣṣ-köy as the name of villages in Rumelia and Anatolia shows their former status (see *Türkiye'de meskûn yerler kılavuzu*, Ankara 1946, i), the most famous ones having this name being the town of Khāṣṣköy (Haskova) in Bulgaria and the town of Khāṣṣa, founded in 1865, in the Hatay province of Turkey.

The terms *Khāṣṣ-î humāyūn* and *Khāṣṣ-î pādishahī* gradually disappeared after the *Tanẓīmāt*, as explained above, but continued to be used for the services related to the Imperial Palace and to the Sultan, e.g. the *khāṣṣa* treasury, *khāṣṣa avčîlarî* or infantry, *khāṣṣa bostandjîlarî*, *khāṣṣa süvārileri* or cavalry, *khāṣṣa-i kitābet*, *khāṣṣa ordusu* or imperial guard regiments, *khāṣṣa müezzinleri*, *khāṣṣ-î ʿaskeriyye*, *khāṣṣa taburlarî* or battalions, *khāṣṣ ākhur*, treasury for the imperial stables, *khāṣṣ oda*, *khāṣṣ baghče*, *maṭbakh-î khāṣṣ* or imperial kitchen (for the other terms, see Uzunçarşılı, *Osmanlı devletinin saray teşkilâtı*, Ankara 1945, index).

KHAṢṢ, KHĀṢṢA in Persia [see khāliṣa].

KHĀṢṢ BEG or Arslan Beg b. Balangirī (d. 547 or 548/1153), Turkmen *amīr* under the Great Saldjūḳs of ʿIrāḳ and western Persia. The name Khāṣṣ Beg seems to have been bestowed on him because of his favoured position under Sulṭān Masʿūd b. Muḥammad (529-47/1134-52); it is used in similar contexts in the works of Djalāl al-Dīn Rūmī and in the *Kitāb Dede Ḳorḳut*. During the latter years of Masʿūd's reign, Khāṣṣ Beg secured an ascendancy in the state, disposing of such rivals as Togha Yürek's son ʿAbd al-Raḥmān, governor of Arrān (541/1147), and Boz-aba, governor of Fārs (542/1147). On the sultan's death, Khāṣṣ Beg raised his nephew Malik Shāh b. Maḥmūd to the throne (547/1152), but seeing his incompetence, Khāṣṣ Beg and the other Turkish *amīrs* deposed him in the next year in favour of his brother Muḥammad. However, the new sultan was ill-disposed to tolerate this over-mighty subject, and Khāṣṣ Beg was murdered, together with the *amīr* Djāndār, three days after Muḥammad reached Hamadhān (end of 547 or Ṣafar 548/winter-spring 1153).

KHĀṢṢ ODA, the "Privy Chamber" of the Ottoman palace organisation and the most important of the four departments comprising the *Enderūn* or Inside Service (the others being, in decreasing order of importance, the Treasury or *Khazīne* [*q.v.*], the Privy Larder or *Kilār-ī Khāṣṣ* and the Great and Little Chambers or *Büyük ve Küčük Odalar*.

The *Khāṣṣ Oda* as we know it was created by Meḥemmed the Conqueror, who in his *Ḳānūn-nāme* mentions by title its four chief officers and its staff of 32 pages or *Ič Oghlans* [*q.v.*], who became known as the *Khāṣṣ Oda ghilmānī* or *Khāṣṣ Odalīlar*. Selīm I increased their number to what became the classic one of 40, and entrusted to them *inter alia* the duty of guarding the Prophet's mantle [see khirḳa-i sherīf]; in the 12th/18th century, according to d'Ohsson, they still numbered 40.

The principal ones of these 40 pages waited on the Sultan personally in the *Mā-beyn* apartments [*q.v.*] of the palace, becoming thereby known as the *Mābeyndjis*; their duties included helping him to dress, shaving him, etc. The chief page was the *Silāḥdār* or Sword-bearer, but the supervision of the *Khāṣṣ Oda* was the responsibility of the White Eunuchs, the particular one in charge being known as the *Khāṣṣ Oda Bashī*. In Meḥemmed's *Ḳānūn-nāme*, one of his duties was as *Ṣāḥib-i ʿArḍ* or presenter of petitions to the Sultan. By the 18th century, however, the *Khāṣṣ Oda Bashī*'s duties were, according to d'Ohsson, restricted to certain ceremonial duties as Master of Ceremonies of the Inside Service (*Enderūn Teshrīfātdjī*).

(C. E. Bosworth)

KHĀṢṢA, plur. *khawāṣṣ*, also *khāṣṣiyya*, plur. *khāṣṣiyyāt*, "sympathetic quality" is a recurring theme in magic and occult sciences indicating the unaccountable, esoteric forces in animate and inanimate Nature. The conception that everywhere in Nature such forces are active or can be activated, developed during the Hellenistic period. It was believed that all objects were in relation to one another through sympathy and antipathy—as is evident in the mysterious forces of the magnet—and that diseases could be caused and cured, good and ill fortune be brought about as a result of the relations of these tensions. Unlike peripatetic philosophy, this way of thinking renounces a rational explanation of phenomena. It was voiced in the Φυσικά of Bolos of Mendes (*ca.* 200 B.C.), the Λιθογνώμων of Xenocrates (see M. Ullmann, *Das Steinbuch des Xenokrates von Ephesos*, in *Medizinhistorisches Journal*, vii (1972), 49-64; idem, *Neues zum Steinbuch des Xenokrates*, in *ibid.*, viii (1973), 59-76), the *Cyranides* and other hermetic treatises, in the Book of Animals of Timotheos of Gaza and in the books of agriculture. These views also entered into medical and pharmacological literature (see Galen, viii, 421; xi, 823; xii, 192 Kühn; Dioscorides, *passim*) and gained a theoretical foundation in the Neo-platonic doctrine of the graded structure of the world.

The translation of the above-mentioned Greek works carried the doctrine of the occult qualities of Nature to the Arabs, among whom it found an extraordinarily fertile soil and called forth an extensive literature. Muḥammad b. Zakariyyāʾ al-Rāzī, "Djābir b. Ḥayyān", Ibn al-Djazzār, Abu 'l-ʿAlāʾ Zuhr, ʿAlī b. Aydamir al-Djildakī and others wrote books with the title *Khawāṣṣ al-ashyāʾ* (or the like). Furthermore, there is hardly any Islamic work on the natural sciences in which the *khawāṣṣ* are not treated at greater or shorter length. The "Books of stones" by Aristotle and Tīfāshī, the "Books of animals,' by Ibn Abi 'l-Ḥawāfir and Damīrī, the "Books of plants" by Ibn Waḥshiyya, the "Books of poisons" by Ibn al-Biṭrīḳ and Ibn al-Mubārak, the encyclopaedias of Ḳazwīnī and Nuwayrī and the manual of medicine by ʿAlī b. Rabban al-Ṭabarī, are all full of information on the most remarkable effects of "sympathy".

Finally, abstract entities were also believed to possess mysterious forces: al-Būnī, al-Djīlī, al-Nadrumī and others wrote about the *khawāṣṣ* of letters and numbers, of the names of Allāh and of the verses of the Ḳur'ān.

AL-**KHĀṢṢA** WA 'L-ʿ**ĀMMA** (A.), two antithetical terms which, as here, and also in the plural *al-khāwaṣṣ wa'l-ʿawāmm*, denote in a general way the élite and commonalty, the notables and the plebs, or the aristocracy and the masses. It is, however, extremely difficult to be more precise about these two elements of the population. Despite the equalitarianism preached by Islam, the existence of social classes within the community is indisputable, and it is certain that the use of these two general terms, by both ancient and modern writers, clearly conceals a much more differentiated social reality. The combination of ideas of religion, race and legal status very soon shook up the structure of Bedouin society and resulted in four basic social groups: the Arab conquerors and their clients from a long time back; the non-Arab converts; the non-Muslims; and the slaves (cf. A. von Kremer, *Kulturgeschichtliche Streifzüge auf dem Gebiete des Islams*, Leipzig 1873, 15, who does not take the slaves into account). However, economic development quickly brought about a social mixture of classes and a new society, organised on different lines, comprising the pure-blooded Arab aristocracy; the bourgeoisie, embracing Arab and non-Arab, Muslim and non-Muslim elements; the people; and the slaves (cf. Ch. Pellat, *Le milieu baṣrien*, 224 ff.). In the succeeding period, the composition of these different classes underwent various more or less profound changes, but authors nevertheless continued to speak about the *khāṣṣa* and the *ʿāmma*; thus, whilst affirming the complexity of Islamic society, a 19th century writer, Ḥusayn al-Marsafī (d. 1890), still uses only these two terms, whilst at the same time he tries to distinguish internal categories and sub-divisions of these two great groups, which nevertheless remain fairly blurred.

Although Sāsānid society had possessed four estates divided into several classes (cf. A. Christensen, *L'Iran sous les Sassanides*[2], Copenhagen 1944, 97 ff.), it is not impossible that Persia (and possibly Greece; cf. al-Fārābī, *K. al-Ḥurūf*, 133-4) exercised an influence on the division adopted by the Muslims (cf. al-Thaʿālibī, *Histoire des rois de Perse*, 469, 608, 730; Ibn Nubāta, *Sarḥ al-ʿuyūn*, Cairo 1903, 44-5, ed. 1964, 67), but the aristocratic spirit of the Arabs is enough to account for this dichotomy. All the same, one of the earliest authors to speak about the *khāṣṣa* and *ʿāmma* is Ibn al-Muḳaffaʿ, who in various of his writings uses the terms in the general sense mentioned above, but gives to them a different timbre in one passage of *al-Adab al-ṣaghīr* (ed. Kurd ʿAlī, in *Rasā'il al-bulaghā'*[2], 1946, 13) where he is pointing out the attitude which one should adopt according to whether one is in the presence of a member of the *khāṣṣa*, understood as comprising people of merit and quality, or of the *ʿāmma*, a thousand times more numerous; in practice, this author divides mankind, in relation to himself, into two categories, and in this passage alludes to a personal *khāṣṣa* made up of friends having outstanding moral qualities.

If the same conception is transferred to the level of the rulers, one finds already the idea of a *khāṣṣa* confined to their intimates and confidants. The historians often mention the persons who were closest (*khāṣṣ*) to the caliphs and sultans. Thus Ḳabīṣa b. Dhu'ayb al-Khuzāʿī in relation to ʿAbd al-Malik (see al-Djahshiyārī, *Wuzarā'*, 34); Yazīd b. al-Muhallab had a specially favoured position (*khāṣṣa*) at Sulaymān b. ʿAbd al-Malik's side, who allowed his protégé to sit next to him on his throne (*ibid.*, 50); Sālim al-Suddī was part of ʿUmar b. ʿAbd al-ʿAzīz's *khāṣṣa* (al-Masʿūdī, *Murūdj*, v, 419 = § 2172); al-Masʿūdī goes as far as saying that Muʿāwiya had his *khāṣṣ al-khāṣṣ*, without however naming anyone specifically. Under the ʿAbbāsids, ʿĪsā b. ʿAlī, al-ʿAbbās b. Muḥammad and ʿAbd al-Malik b. Ḥumayd were the *khāwāṣṣ* of al-Manṣūr (al-Djahshiyārī, 37, 97), Abū ʿAbbād Thābit b. Yaḥyā was the *khāṣṣ* of al-Ma'mūn (*Murūdj*, vii, 3, 35 = § 2695, 2723) and Ibn al-Zayyāt was one of the *khawāṣṣ* of al-Muʿtaṣim (Ibn al-Tiḳṭaḳā, *Fakhrī*, 233). Many other examples could be cited of these persons, officials or courtiers, who enjoyed the sovereign's special favour. Naturally, there were amongst all these, a certain number of parasites (cf. al-Khaṭīb al-Baghdādī, *K. al-Taṭfīl*, Damascus 1927, 99).

In another sphere, the word *khāṣṣ* was applied to "royal" institutions and estates. Under the ʿAbbāsids and Fāṭimids, landed estates belonging to the caliphs and especially to members of their families were called *ḍiyaʿ al-khāṣṣa*. Similarly, the productions of the *ṭirāz* manufactories were sometimes called *khāṣṣ* (cf. Serjeant, *Materials for a history of Islamic textiles*, Beirut 1972, 158). The *bayt al-māl al-khāṣṣa* was created at a later period by the ʿAbbāsid caliphs in order to distinguish the privy treasury from the public one supplied by state revenues; a department called the *dīwān al-nafaḳāt al-khāṣṣa* was set up during the reign of al-Mutawakkil to take charge of the royal household expenses.

Various viziers, high officials and rebel chiefs who occupy an important place in Islamic history also had their *khāṣṣa* (cf. Ibn al-Athīr, *Lubāb*, Beirut n.d., i, 412; Ibn al-Djawzī, *Muntaẓam*, x, 143; Ibn al-Fuwaṭī, *Madjmaʿ al-adab fī muʿdjam al-alḳāb*, Baghdād 1967, iv, 756; al-Azdī, *T. al-Mawṣil*, 67; al-Djahshiyārī, *op. cit.*, 67; Ibn Abi 'l-Ḥadīd, *Sharḥ Nahdj al-balāgha*, Beirut 1963, iii, 17; etc.).

The *khāṣṣa* described so far had a personal character and only merited being called thus in relationship to the person who had chosen it; whatever its unofficial role may have been, it had no legal status. However, one part at least of the ruler's entourage made up a wider *khāṣṣa*, which was itself able to intervene, or had the right to intervene, in affairs of state, e.g. to share in the designation of an heir presumptive or the installation of a new caliph, without taking into account the fact that certain of its members had precisely-defined functions. It is unfortunately difficult to discern its exact composition, since the sources give hardly any details in this regard. The oath of allegiance called *bayʿat al-khāṣṣa* was given to the caliph, before the *bayʿat al-ʿāmma*, by a group of which we do not know the criteria for its membership. Nor can we enumerate those persons who were privileged to pass through the *bāb al-khāṣṣa* into the palace at Baghdād or at Sāmarrā, who were allowed into the *madjlis* or *dār al-khāṣṣa* (*dīwān-i khāṣṣ* amongst the Mughals of India), or who could be cited before the tribunal of *maẓālim al-khāṣṣa* set up for them (cf. al-Ṣābi', *Wuzarā'*, 20, 22, 27; D. Sourdel, *Vizirat*, 338). One is tempted to render *khāṣṣa* or *khawāṣṣ* by "court" or "courtiers", which are terms

vague enough as a blanket designation for what is hard to pinpoint precisely in reality; but one may nevertheless try and define further this idea of *khāṣṣa*.

It is quite probable that the *khāṣṣa* in the east was not substantially different, at least in early times, from that described by E. Lévi-Provençal: "The *khāṣṣa* at Cordova [was] originally composed above all of aristocrats of Arab stock, and more particularly, of relations more or less distant from the prince in power". In official ceremonies "these Ahl Ḳuraysh took first place; they were followed by successive groups of high officials in the central administration" and by the legal and civil magistrates included within the *khāṣṣa*, "whether they were members of the Arab nobility or slave officials", as well as by "the holders of more or less honorific posts, which their riches, old-established or recently-acquired, had allowed them to purchase for money, in order to acquire in this fashion a place in the most privileged social class" (*Hist. Esp. musulmane*, iii, 188 ff.).

For its being placed in an eastern context, this institution ought probably to be given some altered touches (cf. A. Mez, *Renaissance*, ch. x) and to be rounded out by various pieces of information derived particularly from the descriptions of official ceremonies (e.g. see M. Canard, *Le ceremonial fāṭimide et le ceremonial byzantin. Essai de comparison*, in *Byzantion*, xxi (1951), 355-420) or by lists of notabilities and officials (e.g. see al-Ḳalḳashandī, *Ṣubḥ*, iii, 480-8, tr. B. Lewis, in *Islam from the Prophet Muhammad to the capture of Constantinople*, New York 1974, i, 201-8), but prudence is still necessary.

Lévi-Provençal's last remark provides an easy transition allowing us to pass from the *khāṣṣa* of the state to that of the nation, for without thinking in any way of the venality of appointments, Ibn al-Faḳīh, *Buldān*, 1, tr. Massé, 1, proposed precisely to take it, following here al-Faḍl b. Yaḥyā, as the rich and cultivated people, at the side of the rulers and their ministers, with the rest of humanity making up a completely uninteresting *ʿāmma*. If the categories of the rulers and their ministers are only to be expected, the other two are remarkable because this writer includes in the *khāṣṣa* a higher class (*ʿilya*) which has been raised to a higher level through riches, and "people of middling status whose education has made them assimilated to the previous class", i.e. the bourgeoisie, which is largely made up of merchants who have grown rich (and these were often scholars also) and the intellectual élite. The idea of a bourgeoisie is very recent, and al-Marsafī himself still places the middle class amongst the *khāṣṣa*, but one would like to know more about the *shurṭa wusṭā* set up in al-Andalus and probably responsible for ferreting out crimes committed by this intermediate class (cf. Lévi-Provençal, *Hist. Esp. musulmane*, iii, 156-7). As for the intellectual élite, it would require an unusual amount of modesty for authors to place themselves in the *ʿāmma* when they talk of the two great social classes. In practice, the secretaries of the administration tend to apply the term *khawāṣṣ* to the ruler's entourage, of which they were a part, whilst literary men and the authors of religious works apply it to an ill-defined élite which corresponds to the educated people mentioned by Ibn al-Faḳīh. It would probably be unfair to base oneself on the criterion adopted by the philologists who wrote works on the *laḥn al-ʿāmma* [*q.v.*], because all the people utilising this medium of expression, not in classical Arabic at all but in dialect, *ʿāmmiyya*, were part of the *ʿāmma*, including gross and untutored rulers. This linguistic criterion cannot then be upheld, especially as authors recognise that the *khawāṣṣ* generally use a language which is different, and in any case, more correct than that of the *ʿawāmm*, even if they may at times commit the faults which, for instance, al-Ḥarīrī has brought out in his *Durrat al-ghawwāṣ fi awhām al-khawāṣṣ*.

If writers do not seem to have composed much else on the *khāṣṣa* and were content to address themselves to it as did Sibṭ Ibn al-Djawzī with his *Tadhkirat khawāṣṣ al-umma*, the *ʿāmma* is a theme of Arabic literature which was treated from a critical point of view. Thus al-Djāḥiẓ has left a *Risāla fī waṣf al-ʿawāmm*, and Abu 'l-ʿAnbas al-Ṣaymarī was the author of the *Masāwī 'l-ʿawāmm wa-akhbār al-sifla wa 'l-aghtām*, etc. (cf. C. E. Bosworth, *The mediaeval Islamic underworld*. i. *The Banū Sāsān in Arabic society and literature*, Leiden 1976, 30 ff.).

The title given to his opuscule by Abu 'l-ʿAnbas [*q.v.* in Suppl.] shows revealingly a mentality current at that time which tended to make no differentiation between the various elements making up the *ʿāmma* and which tended to assimilate this last to the mass of population which was, in greater or lesser degree, turbulent. Hence the terms *ghawghāʾ*, *awbāsh*, *sifla*, *aghtām*, etc. were applied to the *ʿāmma*, all of these being pejorative expressions inspired by an aristocratic vision which an Abu 'l-ʿAnbas would have been the last to exploit. Whilst the *khāṣṣa* in its proper sense was—justifiably—the recipient of only praises for its moral and intellectual qualities and for the *adab* [*q.v.*] of which it had a monopoly (cf. for example, Abū Ḥayyan al-Tawḥīdī, *Imtāʿ*, iii, 61, 151-2), all possible sins were fathered on to the *ʿāmma*. It was ignorant, without any morality, unrespecting of religious obligations, and let itself be easily manipulated by the *khāṣṣa*, whose play-thing it was (but the two classes then needed each other). It was conformist for some, but easily won over to heterodox teachings for others, and it was the *ʿāmma* which made up the hordes of extremist sects, all the more so because it was incapable of distinguishing the true from the false, hence acted without due reflection and easily rallied to mischief-makers. It does not seem necessary to dwell any further upon this unattractive picture which writers sketch out, but this general picture does not prevent there occuring also in their works more cheering references and examples of praiseworthy deeds accomplished by members of the *ʿāmma*.

KHĀṢṢAKIYYA (under the Mamlūks). These were the sultan's bodyguard and select retinue. Most of them usually belonged to the corps of the reigning sultan's freedmen (*mushtarawāt, adjlāb, djulbān*). Most of the commanders (*amīrs*) rose from the *khāṣṣakiyya*. They were considered to be the most prestigious body within the Mamlūk military aristocracy, and were the closest to the sultan. Frequent reference is made to their being sent on special missions inside and outside the Mamlūk sultanate, their being appointed governors of some of the Syrian provinces, and their being dispatched to arrest and imprison rebellious amirs and governors. There were amongst them pen-box holders (*dawādāriyya*), cup-bearers (*suqāt*), treasurers (*khāzindāriyya*), masters of the robe (*djamdāriyya*), armour bearers (*silāḥdāriyya*) and shoe-bearers (*bashmaḳandāriyya*). The rest of the *khāṣṣakiyya* held no offices and were inferior in status to the office holders.

The numbers of the *khāṣṣakiyya* varied considerably. The minimum number was 40 and the maximum 1,200. The increase of the number of the *khāṣṣakiyya* was a clear symptom of the decline of the military aristocracy in the later years of the Mamlūk sultanate, but attempts to curb that process met with only partial and temporary success.

Bibliography: D. Ayalon, *Studies on the structure of the Mamluk army*, in *BSOAS*, xv (1953), 213-16, and the bibliography on p. 213, n. 7; Ismail Hakkı Uzunçarşılı, *Osmanlı devleti teşkilâtına medhal*, Ankara 1970, 347-8. (D. AYALON)

KHĀṢṢEKĪ, Turkish form of Persian *khāṣṣagī* from Arabic *khāṣṣ*, "private, special, confidential", applied to persons in the personal service of mediaeval Turco-Islamic rulers [see further KHĀṢṢAKIYYA].

The term was used in the Ottoman palace service from the 10th/16th to the 13th/19th centuries and in military organisation. The first of these usages was as applied to the Sultan's concubines who were known by the title of *khāṣṣekī*. Their number varied between 4 and 7 (Maḥmūd I had 6, and Selīm III had 7), and these were the special favourites of the sultan, above all other concubines, and honoured by the title of *ḳadın* with their own private apartments and attendants. Those bearing a child to the sultan were called *khāṣṣekī sulṭān*. Thus Khurrem Sultan [*q.v.*], one of the Süleymān the Magnificent's *ḳadıns*, *Khadīdje* Turkhān Sulṭān, one of the seven *khāṣṣekīs* of Sultan Ibrāhīm, Gülnüsh Emetü'llāh Sulṭān, one of the *ḳadıns* of Meḥemmed IV, were all therefore called by the honorific title of *Khāṣṣekī Sulṭān* (for this last lady, see Topkapı Sarayı Müzesi Arşivi, N.D. 2081, 33/10). When a sultan died, some of the *khāṣṣekīs* who were childless or whose children had died might be given in marriage to one of the ministers or high officials. (For documentation on the *Khāṣṣekī Sulṭāns* in the period 936-1223/1530-1809 see Topkapı Sarayı Müzesi Arşivi, Unpublished Catalogue, N.E. 6425.)

The 14th, 49th, 66th, 67th companies or *ortas* of the Janissary corps were called *khāṣṣekī ortaları*. Each one of the *khāsseki* companies was headed by an *agha*, the most senior of these *aghas* bearing the title of *Bash Khāṣṣekī* "Chief *Khāsseki*"; these *khāṣṣekīs*, according to tradition, were introduced during the reign of Meḥemmed the Conqueror. Just as it was customary for the sultan's attendants, together with the greyhounds, to accompany him on his hunting expeditions, so there were four senior *aghas* of the *khāṣṣekī ortas* who walked, two on the sultan's right and two on his left, when he went to the mosque; these *aghas* of the four companies were therefore given the title of *khünkār khāṣṣekī*. The most senior of them, when promoted, became the *Turnadjī bashı* (*ḳawānīn-i yeničeriyān*, Süleymaniye, Esat Efendi Kütüphanesi, no. 2068, ff. 85, 86 etc.). The number of the four *khāṣṣekī* companies amounted to 1,018 in 1032/1623 and 1,210 in 1074/1664 (Uzunçarşılı, *Osmanlı devleti teşkilâtında kapıkulu ocakları*, Ankara 1943, i, 205). These *khāṣṣekī* companies were dispersed with the abolition of the Janissary corps in 1241/1826.

There were also the *bostāndjī khāṣṣekīs*, numbering 500 in the 12th/18th century, who formed a group within the larger organisation of the *Bostāndjīs* which were looking after the palace gardens and orchards as well as undertaking certain other palace services.

These *khāṣṣekīs* were chosen from among the *bostāndjīs*, and 60, of them acted as escorts for the ruler round the imperial boat, with a *khāṣṣekī agha* in charge of the boat. The *bostāndjī khāṣṣekīs* also acted as diplomatic couriers (Topkapı Sarayı Müzesi Arşivi, N.D. 2939, Meḥmed ʿAṭā', *Ta'rīkh-i Enderūn*, Istanbul 1292, i, 293 ff.). One should also mention the *bostāndjī khāṣṣekī* (also called *wezīr ḳaraḳulaghī*), who performed the duty of carrying correspondence between the sultan and the Grand Vizier, and others who held such offices as *kirečči bashı* "Chief lime burner", *balıḳ emīni* (collector of dues on fish brought to market in Istanbul), *sharāb emīni* or *emīn-i khamr* (collector of dues on wine). The *bostāndjī khāṣṣekīs* were abolished in 1244/1829 (Uzunçarşılı, *Osmanlı devletinin saray teşkilâtı*, Ankara 1945, 474).

(CENGİZ ORHONLU)

KHAṬA' (A.), a mistake, which is made in thought, speech or action (a fault which one has is called *ʿayb*), the opposite of *ṣawāb*, what is correct; hence in the field of knowledge, error; in that of action, omission, failure, all this, of course, unintentional. From the last meaning develops that of wrong which one commits, transgression; whether this is to be regarded as unintentional or—as in *khaṭi'a* and *khiṭ'*—deliberate (sc. a sin) is a disputed point with the lexicographers. *Khaṭa'* and *khaṭ'* (the latter is found only in the *Ḳāmūs*, so that it is hardly classical) are synonymous (or phonetic variants?). *Khaṭa'* is sometimes regarded as an infinitive of *khaṭi'a* used as a substantive (which it originally was and still is), sometimes as a substantive from *akhṭa'a* (which it has become through linguistic usage), and sometimes as belonging to both. The lexicographers have the most diverse opinions regarding the more accurate definition of the meaning

of these two verbs, within the sphere of ideas above outlined. *Khaṭa'* and *khaṭā'* are exceedingly rare in classical poetry (e.g. Abu 'l-ʿAtāhiya, ed. 1888, 120 "sin" (parallel with *dhanb*); also Ḳurʾān, XVII, 33: "sin", as a variant of *khiṭ'*; IV, 94: "transgression"); more frequently only the verbal forms *khaṭi'a* and *akhṭa'a* are used as synonyms.

The use of *khaṭa'* as a technical term is in keeping with the general use of the word; the principal uses of it are as follows:

1. Error in logic (opposite of *ṣawāb*), synonymous with *bāṭil*, the "invalid" (opposite of *ḥaḳḳ*); the former pair of concepts ought to be used in questions of *idjtihād* [*q.v.*] and the latter in questions of *iʿtiḳād* [*q.v.*] (this may be the result of the corresponding use of the word in the Ḳurʾān), so that Islam and the other religions are contrasted with one another in *ḥaḳḳ* and *bāṭil*, opposite views in the *furūʿ* of the *fiḳh* [see FIḲH], as *ṣawāb* and *khaṭa'*; but there is only one verb for each, *aṣāba* and *akhṭa'a*, which points to the artificiality of this distinction, and in reality the rule is often not observed; in other branches of learning also *khaṭa'* and *bāṭil* are used promiscuously, as indeed are *ṣawāb* and *ḥaḳḳ* also. The works which deal with the *uṣūl al-fiḳh* [see UṢŪL] discuss the question whether the *mudjtahid* [*q.v.*] *muṭlaḳ* can err. In the orthodox community, the opinion has prevailed that the *mudjtahid* can err and in cases of difference of opinion only one can be right at a time, and a tradition is even cited on this point; the Muʿtazilīs asserted that every *mudjtahid* is right, and even celebrated orthodox teachers held this view, e.g. Abū Yūsuf, Muḥammad b. al-Ḥasan al-Shaybānī, Ibn Suraydj, al-Muzanī, al-Ashʿarī and his school, al-Bāḳillānī, al-Ghazālī; Abū Ḥanīfa adopts a middle view. The champions of the orthodox view believe, in keeping with this, that Allāh has already come to a definite decision before every *idjtihād* and that the correctness or otherwise of the decision of the *mudjtahid* results from its agreement or not with that of Allāh; those of the Muʿtazila assume either different decisions by Allāh which coincide with those of the individual *mudjtahids* and are valid for them and their *muḳallids* [*q.v.*], so that all differing decisions of the *mudjtahids* are equally justified, or they consider one decision more justified than the others and believe that Allāh has taken no decision in such cases but "if He did do so", would express quite a definite one: this supposed decision by Allāh is then compared with those of the *mudjtahids*, and the *mudjtahid* who agrees with it is considered in the right in every respect; but those which differ from it are considered in the right with respect to the basis, the *idjtihād* (*ibtidā'an idjtihādan*), as the *mudjtahid* has endeavoured with all his power to find the decision, in the wrong with respect to the result, the decision itself (*intihā'an ḥukman*). The representatives of the orthodox view, who are essentially in close agreement with this form of the Muʿtazilī view, make the same distinction (the opinion is rejected that the *mudjtahid* who makes a mistake is completely in the wrong); the other Muʿtazilī view, however, is in sharp contrast to this. But this difference only exists in questions of the derivation of legal rules from the *uṣūl al-fiḳh* (*fi 'l-sharʿiyyāt*) and only in the case when no clear decision is given in the *uṣūl*; if there is one, but it has not been regarded by the *mudjtahid*, he is, of course, wrong. In the domain of the *uṣūl al-dīn*, of *kalām* [*q.v.*], particularly in reasoned deductions (*fi 'l-ʿaḳliyyāt*), according to the general consensus, only one view can be right in a case of differences of opinion. Only a few Muʿtazilīs, as whose representatives Abu 'l-Ḥasan ʿAbd Allāh al-ʿAnbarī and al-Djāḥiẓ are cited, asserted that here also in dogmatics every *mudjtahid* (the word is used in a wider sense, meaning everyone who does all in his power to solve a problem) is right; while al-ʿAnbarī adds so long as he can be still described as a Muslim, and al-Djāḥiẓ without limitation. Tradition on this point is no longer certain, as is apparent in differences in detail and in a certain irresolution; in this Muʿtazilī teaching, however (as in the polemics regarding the *mudjtahid fi 'l-sharʿiyyāt*), the other meanings of *khaṭa'* come into consideration, so that it is doubtless correctly explained that by "being right" is not meant agreement with the actual facts, but that the *mudjtahid* has duly fulfilled the task imposed on him and therefore cannot be punished (while according to the orthodox consensus, every non-Muslim is doomed to the pains of hell eternally), and that that to which his *idjtihād* leads him is what is right for him by Allāh's decree itself. This ambiguity in terminology must have contributed to the ambiguity in tradition. That, taken purely logically, several differing views could be right at the same time, has never been asserted. The *mudjtahid* in the wrong is not punished for his error and is not considered as being in a religious error (*ḍalāl*), but is regarded as excused and is rewarded, since he has done everything that is demanded of him if he has really used all his energy for the derivation of the legal rule. If he has not done this, he is punished for his error; others say that every error of a *mudjtahid* is a sin, but this view is rejected. All this holds only of the *mudjtahids* of the Sunnīs; those of the "Twelver" Shīʿīs are infallible.

2. Unintentional action (opposite of *ʿamd*); this use comes from Ḳurʾān, IV, 94-5 (cf. ḲATL, section i, I; passages like II, 286 and XXII, 5 may have also had an influence). This is of interest here, in so far as it is illegal. It may be more accurately defined as an act contrary to law, in which the intention of committing an illegal act is lacking, while the action itself may be deliberate; any negligence is left quite out of the question in the juridical appreciation. The Muʿtazilīs asserted that one could not be punished by Allāh for it, for punishment is only conceivable for a deliberate illegal act. Orthodoxy on the contrary teaches that, while *khaṭa'* is not a sin (*ithm*), any negligence, however, is something deliberate, and the *khaṭa'*, as its result, is liable to be punished (it was regarded as belonging to the *ʿawāriḍ muktasaba*, happenings only indirectly intended, in themselves not deliberate, for which man can equally be made responsible); but Allāh in his mercy will overlook the punishment in the next world. The *khaṭa'* is thus considered as an ameliorating, often even exonerating, circumstance in the infliction of punishment in this world (*shubha* [*q.v.*]); it cannot be punished by *ḥadd* [*q.v.*]. But not all of Allāh's rights are waived: anyone who, contrary to the prohibition, kills an animal in the *ḥaram* [*q.v.*], the sacred territory of Mecca, whether with *ʿamd* (deliberately) or from *khaṭa'* (unintentionally), has in the opinion of all four *madhhabs*, to make the prescribed atonement. Dāwūd al-Ẓāhirī alone in this case considers *khaṭa'* as an excuse. This is doubtless connected with what is ultimately a pre-Islamic idea, that Allāh has an especial right of ownership to the *ḥaram*, its plants and animals (cf. Gaudefroy-Demombynes, *Le Pèlerinage à la Mekke*, 7, 10). It follows that an unintentional infraction of this right of property is to be atoned for like an intentional one (the substance of this is also found in the following difference of opinion: Mālik and Aḥmad

b. Ḥanbal do not require a special compensation if the animal has an owner—who, of course, must be compensated—i.e. does not belong to Allāh; Abū Ḥanīfa and al-Shāfiʿī demand it in every case, so that they extend their area of application). In *khaṭaʾ* there also is a full liability for any injury done to another. Here *ḳiṣāṣ* [*q.v.*] is a special case; its application is excluded when *khaṭaʾ* is present; and instead, the *diya* [*q.v.*] is to be paid and the *kaffāra* [*q.v.*] to be performed. For further details, see the article ḲATL, Section i, 5, 6, where the variations of *khaṭaʾ* in the meaning of an unintentional act are given. From them it will be seen that this terminological use of the word is based on the two meanings "error" (in the case of *khaṭaʾ fi 'l-ḳaṣd*) and "failure", "accident" (in the case of *khaṭaʾ fi 'l-fiʿl*) and is no more uniform than the use dealt with under I.

Bibliography: The statements of the dictionaries are collected in Lane, *Arabic-English lexicon*, i/2, 761; on its use as a technical term, see *Dictionary of the technical terms used in the sciences of the Musulmans*, i, 401-2; Dschordscháni, *Definitiones*, ed. G. Flügel, 104; for further details the works on *uṣūl* and the *fiḳh*-books are indispensable. See also ḲATL. (J. SCHACHT)

KHAṬĀʾĪ [see ISMĀʿĪL SHĀH].

KHAṬAK, a Pashtūn tribe living in the Kohāṭ and Peshāwar Districts of the North-West Frontier region of former British India, now Pakistān, estimated at about 200,000 individuals; for their genealogy, see the table in AFGHĀN. They are Ḥanafī Sunnī Muslims, and their original home appears to have been the Shawāl valley in Wazīristān. In the early 8th/14th century they were driven by other Pashtūn tribes to the southern portion of the Ṭēri mountains of Kohāṭ, where the main body still lives as neighbours of the Bangash tribe. They speak the so-called "soft" dialect of Pashto [see AFGHĀN, ii. The Pashto language], but a section of this tribe, the Akora Khaṭaks, live in Nowshera *Taḥṣīl* of the Peshāwar District, and they have adopted the "hard" dialect. The Khaṭak are the only major Pashtūn tribe which is divided into the two main Pashto dialects.

Although not mentioned in the *Bābur-nāma*, the Khaṭaks do appear in 10th/16th century documents. Malik Ako (or Akōṛay) led his clan of Khaṭaks to the land they occupy to this day west of the confluence of the Kābul and Indus Rivers. He was granted the land from the Indus to Nowshera (1586) by the Mughal Emperor Akbar, and given the right to levy ferry tolls at the Attock crossing [see ATAK], in return for keeping open this part of the road to Kābul, then a province of the Mughal Empire. This stretch formed part of the famous Grand Trunk Road from Hindustān to Khurāsān. Control of the Attock crossing brought the Khaṭaks into conflict with the neighboring Yūsufzay tribe living north of the Kābul River, who had, at this time, been resisting Mughal encroachments into their areas. The Khaṭaks took advantage of Akbar's attempted suppression of the Yūsufzays to occupy part of their lands. Later, the Khaṭak-Yūsūfzay rivalry was caught up in the struggle for succession between Aurangzīb and his competing brothers (1068/1658). The Khaṭaks were then hard hit by the abolition of the Indus ferry tolls. During most of the second half of the 11th/17th century the Khaṭak and some other tribes were in constant rebellion against Aurangzīb, a resistance in which Khushḥāl Khān [*q.v.*] was the guiding force. He secured the assistance of the Afrīdīs (led by Malik Daryā Khān and Aymal Khān), but failed with the Yūsufzays because of the historic Khaṭak-Yūsufzay feud. There was no major resistance by the Khaṭaks against the Mughals after Aurangzīb. In 1823 the Khaṭaks, in confederation with the Yūsufzays, formed a tribal army under Akbar Shāh, Sayyid of the Pīr Bābā family, and gallantly resisted the advance of the Sikh Mahārādjā, Randjīt Singh. In 1828, Khaṭak tribesmen joined the forces of Sayyid Aḥmad of Barēlī (supported by the family of the Pīr Bābā Sayyids), who defeated the Sikhs. The British found the Khaṭaks "industrious" and "happy folk", strict in the observance of Islam, adhering to the Afghān code of honour, the *Pashtūnwalay* (Col. E. "Buster" Goodwin). The tribe could munster 32,000 able-bodied men, of which 12,000 were in Peshāwar Valley and the rest of Kōhāt (Sir William Barton). Today, Khaṭak individuals play important rôles in politics and business in the North-West Frontier Province. The Khaṭak dance, a version of the traditional *atan* of the Afghan tribes, plays a great part in festivities and folklore.

(RAVĀN FARHADI)

KHĀTAM, KHĀTIM (A.) (P. *muhr*), seal, signet, signet-ring, the impression (also *khatm*) as well as the actual seal-matrix; it is applied not only to seals proper, engraved in incuse characters with retrograde inscriptions, but also in the very common seal-like objects with regular inscriptions of a pious or auspicious character; for the latter, which are amulets and further readily distinguished from seals by the absence of a personal name, see ṬILSAM; indeed anything with an inscription stamped upon it may be called *khātam*. Here we are only concerned with seals in the strict sense of the word. The word *khātam* is said by Nöldeke, *Mandäische Grammatik*, 112 to be of Aramaic origin, and in this he is followed by Fraenkel, *Aram. Fremdw.*, 252, who also recognises a loan word in *ḳarḳas*, seal-clay.

The part played by the signet-ring in the east cannot be better illustrated than by the following quotation from Lane (*Modern Egyptians*,[5] 1860, 31). Describing the dress of a Muslim Egyptian he says:

"On the little finger of the right hand (it is allowable to wear it on a finger of the left hand) is worn a seal-ring (*khâtim*), which is generally of silver, with a carnelian, or other stone, upon which is engraved the wearer's name; the name is usually accompanied by the words "His servant" (signifying "the servant, or worshipper, of God"), and often by other words expressive of the person's trust in God, etc. The Prophet disapproved of gold; therefore few Muslims wear gold rings: but the women have various ornaments (rings, bracelets, etc.) of that precious metal. The seal-ring is used for signing letters and others writings; and its impression is considered more valid than the sign-

manual. A little ink is dabbed upon it with one of the fingers, and it is pressed upon the paper; the person who uses it having first touched his tongue with another finger, and moistened the place in the paper which is to be stamped. Almost every person who can afford it has a seal-ring, even though he be a servant".

The use of seals dates from remote antiquity in the east, and they have never been supplanted by the spread of a knowledge of the art of writing and the use of the signature, as has happened in the west. In the east, the seal takes the place of the signature and it is the former that gives validity to a document even if the latter is also used. The seal is also much used as a guarantee that property will be kept intact and thus takes the place of locks and keys. Goods are simply roped up in a packet and the knots sealed with the owner's seal, a plan which to Chardin, for example, appeared more reliable than the western system, owing to the practical impossibility of counterfeiting a seal. It is also used to stamp property as a mark of ownership (e.g. books and bindings) and in this way corresponds to a coat of arms in the west. The possession of another person's seal is evidence that the latter has delegated his authority. There is abundant evidence of these usages in the east from very early times. Pharaoh, for example (Gen. xli, 42), gives to Joseph his signet, as a sign of authority, just as the Sultan of Turkey did to his grand vizier. Jezebel (I Kings, xxi, 8) forges a letter in Ahab's name and seals it with his seal to give it validity. The books of Esther and Daniel give similar examples of the power of the Persian king's seal. Herodotus (i, 195) tells us that every Babylonian carried a seal and the abundance of seals, usually cylindrical in form, that have survived from ancient times in Mesopotamia, illustrates this statement. Seals of the Sāsānid period still exist in large numbers, whether made for mounting in rings or pierced for suspension. In South Arabia also the pre-Islamic civilisation has left numerous specimens of its signets.

No seals of the pre-Muslim Arabs are known. The earliest Arab seals come from Egypt with papyri and belong to the period soon after the conquest. Whether we accept or not the story that only seventeen men in Mecca could write in the time of Muḥammad, we must suppose that seals were in common use in this important commercial centre as in other parts of the east. Tradition, in any case, has a certain amount to tell about the Prophet's *k͟hātam*. Al-Buk͟hārī, *Ṣaḥīḥ*, Būlāḳ 1311-13/1894-6, vii, *libās*, 48, says that the Prophet wished to write to the Byzantines. He was told they would not read his letter unless it had a seal, so he adopted one of silver with the inscription *Muḥammad rasūl Allāh*. According to al-Masʿūdī, he adopted this ring in Muḥarram of the year 7/May-June 628. The Prophet is also said to have originally worn a *k͟hātam* of gold, but gave it up when he forbade the wearing of gold rings and silk and brocade (Buk͟hārī, *loc. cit.*). Women did not observe the prohibition of gold rings and ʿĀʾis͟ha for example wore them (*ibid.*). The Prophet wore his signet on his right hand and used to take it off when he went to the privy (al-Tirmid͟hī *Ṣaḥīḥ*, Būlāḳ 1242/1826-7, i, *libās*, 324). Opinions differ as to the proper hand and finger for the ring, and there is no established rule. Later stories illustrate the Prophet's disapproval of metals other than silver for signet-rings. He is reported to have said that a brass ring savoured of idolatry, that an iron one was emblematic of souls condemned to eternal fire, while words could not express his horror of a gold ring; meeting the wearer of one, he cast upon him a terrible frown and turned away as if he had encountered a dog or an infidel. The Prophet's seal was handed on and used by his successors, who had however also their own seals, until ʿUt͟hmān lost it in a well at Aris, or in Zamzam, or according to others in the Tigris near Mawṣil. The Prophet's interdiction has been generally observed, and it is exceedingly rare to find signet-rings of the more precious metals or mounted with the more valuable precious stones, upon which there was no embargo.

The earliest known seal of a Muslim is that of ʿAmr b. al-ʿĀṣ, conqueror and governor of Egypt whose signet was a bull (Rainer, *Führer*, No. 556). Whether this is due to local influence, or whether the representation of an animal was not unusual with the pre-Muslim Arabs, is impossible to say. Other Arab seals bearing animals are known of this period, but the rigorous avoidance of images of living things was soon applied to seals also, for we soon find seals in Egypt of the Muslim type, although as late as 88/707, we find the governor Ḳurra b. S͟harīk using a wolf (Rainer, *Führer*, No. 593). The seals of Abū Hāʾim b. Yaḥyā (No. 572) and of the head of the Treasury Rās͟hid b. K͟hālid "who trusts in God" (No. 577) are already of the style that became stereotyped. A notable seal from Egypt is that of the tax-collector Nad͟jd b. Muslim which bears his name in Greek and Arabic (No. 589). Bilingual seals are again found in Syria and Asia Minor in the 4th/10th century (cf. Schlumberger, *op. cit.*, and Halil Edhem, *op. cit.*). Here also under Byzantine influence we find double sided impressions of seals in lead (*bullae*); of these the most notable is that of the Kākūyid ʿAlāʾ al-Dawla of 430/1038-9 with a horseman on the obverse (Halil Edhem, No. 30). Another remarkable seal from the same region is that of the Hamdānid Muḥammad b. Saʿd al-Dawla Abu ʾl-Maʿālī S͟harīf with obverse a bust of St. Theodore and his name in Greek characters (*op. cit.*, No. 31).

The materials of these early impressions are the same as in later times, a special kind of clay (*ḳarḳas*), or lead, appended by cords to the documents as in the mediaeval west also. When the seal is stamped on the documents itself, it is done with a special thick kind of ink and the paper is moistened before receiving the impression; red wax is also used where the climate permits it. As in mediaeval Europe, there are instances recorded in the east of *bullae* of the precious metals, silver and even gold for very special occasions (Reinaud, *op. cit.*, i., p. 112).

Charles White (*op. cit.*) deals very fully with the use of seals among the Turks and the guild of engravers in Istanbul. The latter have, he says, a special quarter in the bazaar called after them *ḥakkāklar čars͟hī*. The members of the guild are Muslims (in contrast to the dealers in stones, who are usually Jews) of fair education conversant with Arabic, Persian and Turkish. A few can decipher the Kūfic character. Their training is a long one. Apprentices after a good education take lessons from the best calligraphers of the day and then serve seven years with a master-engraver. When their indentures have expired, they become journeymen (*kalfa*), until they can acquire a business of their own and be admitted into the guild as master-members (*usta*), the number of whom is limited to fifty. Their shops are regularly searched by the police lest they be tempted to put their skill to illegal uses, such as the engraving of false coin-dies. Such great care is taken to ensure the genuineness of a seal that the trade are forbidden to engrave two seals exactly the same for the same person. When a seal is lost the owner has some trifling alteration made in the new one, such as a change in

an ornament or the date, so that the forgery can be detected if his first seal should fall into evil hands.

The Istanbul engravers date the origin of their art in the time of the caliph ʿU͟thmān and say the first engraver was a certain Muḥammad al-Ḥid͟jāzī who engraved seals for ʿU͟thmān and ʿAlī bearing their names with the additional epithet *ʿabd Allāh*; the rings were of silver and the stones were bloodstones.

White's account of the seals of the sultan and dignitaries of the Ottoman empire follows d'Ohsson. The sultan has three seals of different sizes, all of emerald set in gold with the same inscription, the *tug͟hrā* [*q.v.*] and a religious legend. The first is a small seal always carried by the sultan and handed to his secretary as required. The second is somewhat larger and is entrusted to the grand treasurer of the harem, who uses it for all matters relating to the harem—the Mug͟hal Emperor Akbar similarly had a special seal for all documents relating to the harem. The third imperial Ottoman seal is the seal of state confided to the grand vizier of the day, who is supposed to keep it in his bosom day and night. The head of each department of state has also his own seal for matters relating to his office.

Persons of distinction do not usually wear signet-rings on their fingers. Great dignitaries have a confidential seal bearer (*muhrdār*) who carries the signet in a small bag in his breast pocket and produces it when required inked for the stamp or clean if wax is used. People of humble rank carry their seal in the breast pocket or suspended round the neck. The impression of the signet stands for a signature, although for documents of importance the latter is also necessary. In the case of the sultan, the seal used and the presence or absence of the signature vary with the importance of the document, as does the format of the latter.

Chardin's account of the seals used by the S͟hāh of Persia is similar. There are three seal-keepers (*muhrdār bas͟hī*) but they only affix the seals, which are kept in a box in the palace sealed with the king's own seal. Friday is the usual day for sealing documents; the *muhrdār* prepares the seal and the paper and makes the impression on a sign from the Shah, who does not usually do it himself. There are three great seals, used for military, civil and foreign affairs, and two small seals used for the palace accounts etc. The same inscription is in the centre of the three large seals, *banda S͟hāh wilāyat Sulaymān ast 1080* (A.H.); the small seals have *dīn* in place of *wilāyat*. One of the large seals has a quatrain round it and another has the names of the 12 S͟hīʿī *Imāms*. At the king's death his name is erased and that of his successor engraved on it. Of the general use of seals, Chardin observes that it would not be easy to steal one, as they are worn around the neck and only taken off in the bath; they are also worn on rings. It is rarer to find a seal counterfeited than a signature in Europe. The seal engravers used a drill and a small wheel with emery.

Abu 'l-Faḍl in the *Āʾīn-i Akbarī* devotes a special chapter to the Emperor's seals, which are used in the three branches of the government—"indeed every man requires them in his transactions". (Here we may note that English officials in India in the 18th and 19th centuries found it necessary to have a seal with their names in Persian characters).

At the beginning of his reign, Akbar had a circular seal bearing his name and those of his ancestors back to Tīmūr in the *riḳʿa* characters; later he had a simpler one with his name only in the *nastaʿlīḳ* character. The former was at first used for letters to foreign kings and the latter (known as *uzuk*) for home affairs but the distinction was not maintained. A second seal used for juridical business was lozenge-shaped (*miḥrābī*) and bore an appropriate verse in praise of justness, round his majesty's name. For other business a small square seal with the legend *Allāh Akbar, d͟jalla d͟jalāluhu* was used and the harem, as already stated, had its own special seal.

The great figures of Muslim tradition had of course their seals. That of Sulaymān b. Dāwūd is particularly famous and plays an important part in many of the stories of his miraculous exploits. It was held in particular awe by the *d͟jinn*. D͟jams͟hīd, the Solon of Persia, according to Saʿdī, was the first person to wear his signet on the left hand. In Firdawsī's story of S͟hāpūr II's escape from captivity in Rūm, he reveals his return by sending an impression of his signet to the grand *mōbed*.

Coming to more historical periods, we have a record of the seal inscriptions of all the early caliphs (e.g. in Masʿūdī, *Kitāb al-Tanbīh*, under each caliph; collected by Hammer-Purgstall and von Murr); specimens of the seal impressions of several early Caliphs still exist; (cf. Halil Edhem, *op. cit.*). Tīmūr's seal bore his special mark, three small circles arranged in a triangle, and the motto *rastī rustī*, and an impression still exists in the Bibl. Nationale (de Sacy, *op. cit.*). Joinville mentions a ring of "moult fin or" bearing his signet which was among the presents sent to St. Louis by the S͟hayk͟h al-D͟jibāl. Specimens of the seals of sultans of Turkey and other high Turkish dignitaries are given by Hammer-Purgstall (*op. cit.*). Of these, the most remarkable is the original seal of Sultan Muṣṭafā II of 1106/1694-5 found on the battle field of Zenta (1697) where its bearer, the Grand Vizier Elmas Meḥmed Pas͟ha, was killed. A special medal was struck by the Austrians to commemorate this trophy. The *ṭug͟hrā* is a feature of the imperial Turkish seals; it is said to be an imitation of the impression of the hand, because Ork͟hān's sign-manual was the impress of his hand in red ink. Tīmūr is also said to have used this primitive signature, but we know that he was not illiterate. The *tug͟hrā* is also traced back to the Prophet himself.

Muslims have followed the example of the Prophet in having simple inscriptions on their seals. Sometimes the name alone is used, sometimes it is accompanied by a brief pious inscription, often indicative of humility; if the owner has the name of a person mentioned in the Ḳurʾān, the reference is frequently worked into the seal inscription. The name is given in a simple form and titles are as a rule avoided, in keeping with the general modesty of the signet; for examples of legends, see Reinaud and Hammer-Purgstall; in later times in Persia and India seals became much more elaborate and the seal of a minor official of the Mug͟hal court of the end of the 18th century often has several lines of bombastic inscription and forms a striking contrast to the seal, for example, of the great Sinān Pas͟ha, five times Grand Vizier of Turkey, with its modest inscription "O God Thou art full of mercy, pardon poor Sinān, son of ʿAlī".

The commonest materials for rings are silver or copper; and if a stone is mounted in it with the seal, it is one of the less valuable stones, cornelian, garnet, jacinth, agate, coral; the turquoise is not uncommon and one often sees them carved as amulets with inscription inlaid with gold. When not worn on a ring, the seal is mounted on a handle and carried in a bag; sometimes the stone itself is pierced for suspension and worn round the neck. The shapes of Arab seals

vary; oval is naturally the commonest, but they are also square, hexagonal or octagonal; a round shape is not common except for the largest sizes.

The art of the seal engraver was at its best, like that of calligraphy, in the 16th and 17th centuries. Its decline in the 18th was followed by the practical extinction of the art in the 19th. The names of few celebrated engravers have been preserved. Altun at the court of Tīmūr was reckoned a master of his art. Abu 'l-Faḍl gives the names of four masters of the craft at Akbar's court, each of whom was a specialist in a particular bracnh.

For the *Dīwān al-Khatam*, the department of state, allegedly founded by Mu'āwiya as a precaution against the falsification of letters and documents, see DĪWĀN. i. The caliphate. (J. ALLAN)

The stamp which every ruler in the Islamic lands utilised in order to authenticate documents sent out in his name, had a design peculiar to each ruler, and was the symbol of his power. Hence when a caliph proved to be in a physical state unfitting him to govern, his seal was taken from him. Moreover, it was his seal which the caliph entrusted first of all to his confidants, i.e. usually to his successive viziers. Nevertheless, it seems that the caliph always retained a personal seal, quite distinct from the official seal which he used to authenticate his letters.

In the central administration of the 'Abbāsid period, there was an organisation of state specially charged with the task of gathering together the documents, letters and investiture patents prepared by the chancery or *Dīwān al-Rasā'il* and then ready to receive the caliphal seal. This was the *Dīwān al-Khātam*, which played on these occasions a crucial rôle, since it had to be certain in advance that the documents prepared for sealing were in conformity with the caliph's and vizier's instructions on the one hand, and in conformity with the administrative rules then in force on the other hand. In the first decades of the 'Abbāsid caliphate, there were at times bitter contests for control of the *Dīwān al-Khātam*. In practice, the vizier, at a time when his duties and sphere of competence were not clearly defined, could not exercise his powers properly unless he controlled this office; hence it happened that its head might, out of animosity towards the vizier, hold back deliberately the execution of orders and in this way bring all the administrative machine to a standstill. It was at a later period, from the opening of the 3rd/9th century, the custom to give the vizier direct control over the office of the seal, and the chroniclers note generally, in this connection, that the viziers received "the seal and the vizierate". If this detail no longer appears at the end of the century, it is because by that time the vizier's control over the whole of the offices making up the caliphal administration was firmly recognised, and the office of the seal could no longer function except under his direct orders.

Bibliography: D. Sourdel, *Le vizirat 'abbāside*, Damascus 1959-60, index. (D. SOURDEL)

In the Maghrib, at the present time, *khātam* (dialectical, *khāt'm*) denotes not only seal-rings, but any kind of ring worn on the finger. The seal itself, whether mounted on a ring or on a stem, is called *ṭāba'*. Its impress, stamped with thick black or violet ink, served until a recent time for the authentification of official documents, whether emanating from the *banīkas* of the Sharīfian *Makhzen* or from the tribal *ḳā'ids*. For judicial acts, the *ṭāba'* is rarely used; the complicated flourishes of the signatures of the adouls (*'udūl*) and the *ḳāḍīs* take its place. The impresses of most of the royal seals of the Sa'did and 'Alawid houses have been preserved. They are usually circular in shape, but sometimes oval. Reproductions of them can be seen in Nehlil, *Lettres chérifiennes*, Paris 1916, and in H. de Castries, *Sources inédites de l'histoire de Maroc*, Paris 1905 ff. In general, the sultans used two seals, a large one and a smaller one, and the vizier of *ḥādjib* was left with the responsibility of affixing it. The same procedure doubtless obtained in Muslim Spain; the historians of the Umayyad caliphs and *mulūk al-ṭawā'if* often give, after a physical sketch of the ruler and a list of his honorific titles, the legend inscribed on his seal (see Lévi-Provençal, *Hist. Esp. Mus.*, iii, 15). (ED.)

KHATH'AM, an Arab tribe (the name is triptote, although in several European editions of Arabic texts we find it wrongly vocalised as a diptote). They inhabited, at least from the 6th century A.D., the mountainous territory between al-Ṭā'if and Nadjrān along the caravan route from Yemen to Mecca. Historiographical theory on the migrations of the tribes, which is bound up with their genealogical systematisation, makes them settle, at the time of the separation of the sons of Ma'add, in the mountains of al-Sarāt [*q.v.*], from which the Azd are said to have driven them at the time of the migration of the South Arabian tribes after the bursting of the dam of Ma'rib, to the lands they occupied in historical times (al-Bakrī, *Mu'djam*, ed. Wüstenfeld, 28, 38, 41-2 = Wüstenfeld, *Die Wohnsitze u. Wanderungen d. ar. Stämme*, in *Abh. G. W. Gött.*, xiv, 39, 53, 58 = *Mufaḍḍalīyāt*, ed. Lyall, 113-14, following Ibn al-Kalbī; Yāḳūt, *Mu'djam*, i, 464, ii, 326-7; Wüstenfeld, *Register z. d. genealog. Tabellen*, 130-1). According to this theory, the Khath'am (like the Badjīla [*q.v.*] who figure everywhere as their brethren) were part of the tribes of 'Adnān, their descent being Khath'am b. Anmār b. Nizār (Ibn Hishām, *Sīra*, ed. Wüstenfeld, 49-50; Ibn Ḳutayba, *Ma'ārif*, ed. Wüstenfeld, 50; al-Maḳdisī, *Bad'*, iv, 110-11, who all attribute this view to "the genealogists of Muḍar"). But another theory (Ibn al-Kalbi-Caskel, *Ğamharat an-nasab*, Leiden 1966, table 221) connects them with a branch of the Saba' according to the genealogy: Aftal, surnamed Khath'am b. Anmār b. Irāsh b. 'Amr b. al-Ghawth (the latter is also the father of the Azdī tribes) or more

simply, Khath'am b. 'Amr b. al-Ghawth (see also Ibn Durayd, *Ishtiḳāḳ*, ed. Wüstenfeld, 302; Ibn Ḳutayba, 50; Ibn Hishām, 50; *Aghānī*, xv, 151; Wüstenfeld, *Geneal. Tabellen*, 9; Hamdānī, *Djazīrat al-'Arab*, ed. Müller, 116, gives the isolated genealogy: Khath'am b. Rabī'a b. 'Āmir [?]; and Ibn Ḳutayba, 50, makes Anmār the son of Saba', cf. Reiske, *Primae lineae*, 133; Mas'ūdī, iii, 148 = § 998, replaces Irāsh by Iyād). These contradictory statements seem to indicate that, like so many other tribes, the Khath'am do not represent an ethnic unit but rather a confederation of clans of different origins. This seems also to be deducible from the etymology of their name, which connects it with the verb *takhath'ama* "to smear oneself with blood" on the occasion of a pact of alliance (on this custom, cf. J. Pedersen, *Der Eid bei den Semiten*, 21-2, 25-6 and the bibl. cited there). Other etymologies which make Khath'am the name of a mountain or of a camel are not worthy of consideration (Ibn Durayd, 302, 304; *Ḥamāsa*, ed. Freytag, 72, 375; *LA*, xv, 56). In any case we always find the Khath'am associated with tribes of the south, either in alliances made on the occasion of expeditions (e.g. *al-Aghānī*, ix, 17; xii, 47-8; xviii, 35-6) or during the *ridda* (al-Ṭabarī, i, 1985-6), or latterly in the grouping of the tribes stationed in the military camps of Baṣra and Kūfa (al-Ṭabarī, i, 2495, 3074; ii, 122; but in ii, 1382, we find them also grouped with the Kināna, Ḳays 'Aylān, Muzayna and even Ḳuraysh, all tribes of the north, under the general denomination of *Ahl al-'Āliya*. It seems that at this time (101/720) the territorial principle had prevailed over the ethnic one). Their principal clans were the Shahrān, Nāhish and Aklub, the latter, according to the South Arabian genealogy, was of another origin (Aklub b. Rabī'a b. Nizār) and was late in entering the tribe (cf. al-Bakrī, 53), but Ibn al-Kalbī (Caskel, table 224) makes him nevertheless descend from Khath'am.

We have no authentic information on the Khath'am for the remote period in the history of the Arabian peninsula (the identification proposed by Blau, *ZDMG*, xxii, 658; xxiii, 561, n. 6 with the Ἀτραμῖται *Adramitae* of Uranios and Pliny, who are to be distinguished from the Χατραμωτῖται of Ḥaḍramawt, is quite untenable). From the 6th century we find them inhabiting, along with other tribes of diverse origins, the districts of Bīsha, Turaba, Djurash and Tabāla; this last was the centre of the cult of the God Dhu 'l-Khalaṣa (on him see Wellhausen, *Reste*₂, 45-8, and T. Fahd, *Panthéon*, 61-8), whom the Khath'am, like the Badjīla, Daws, Bāhila etc., worshipped (Yāḳūt, i, 791; ii, 461, 703; iv, 62, 567 [= *Aghānī*, xi, 152], 578, where there are numerous references to the neighbours of the Khath'am and to the assignation of the part of the territory of Bīsha at the end of the 1st century A.H. to some members of the Umayyad and Hāshimī families; Hamdānī, 135-6; Ibn al-Kalbī, *Kitāb al-Aṣnām*, ed. and tr. Atallah, 29-30).

Among the numerous guerilla wars in which the Khath'am were involved (cf. *Aghānī*, vii, 119; xii, 47, 51-2; xiv, 25; xviii, 35-6; *Naḳā'iḍ*, ed. Bevan, 46; Yāḳūt, ii, 735; iv, 56; Hamdānī, 170), the best known is that of Fayf al-Rīḥ in which their chief Anas b. Mudrik (or Mudrika), allied to the greater part of the Madhḥidj, defeated the Banū 'Āmir b. Ṣa'ṣa'a commanded by 'Āmir b. al-Ṭufayl [*q.v.*], who lost an eye in the battle (*Naḳā'iḍ*, 468-72; Ibn al-Athīr, i, 474; *'Iḳd*, ed. 1293, iii, 102-3; *Dīwān* of 'Āmir, ed. Lyall, Introd., 82-3, nos. x, xi [= *Mufaḍḍalīyāt*, no. cvi.], xii, xix, xxv, xxvii, Suppl., nos. i, 19). Anas b. Mudrik, famous also as a poet, was the hero of another enterprise of the Khath'am, sc. that against the Banū Djusham (*Aghānī*, ix, 17), and that in which he killed the famous poet-brigand Sulayk b. Sulaka (*Ḥamāsa*, 415-16; *Aghānī*, xviii, 137-8; Ibn Ḳutayba, *Shi'r*, ed. de Goeje, 217). The biographical notes on Anas, who lived for several years after the introduction of Islam, have been collected by Levi della Vida in Caetani, *Annali dell' Islām*, x, 499-500 (year 40 A.H., § 347).

The position of the lands of the Khath'am enabled them to play a part in the Abyssinian expedition against Mecca. They tried to oppose Abraha's advance, but beaten by him, they were forced to guide the enemy's army as far as al-Ṭā'if (see the sources collected in Nöldeke, *Gesch. d. Pers. u. Araber*, 206-17). The spread of Islam at first left them indifferent (no heed need be paid to the story in al-Ṭabarī, i, 1079-80, of the Khath'amī *kāhina* of Tabāla, Fāṭima bint Murr, who saw a divine light on the face of 'Abd Allāh b. 'Abd al-Muṭṭalib, the future father of the Prophet. The only interesting feature of the story is the epithet "Judaising", *Mutahawwida*, conferred on the *kāhina*). Their first relations with Muḥammad were certainly hostile (Wāḳidī, tr. Wellhausen, 387; al-Ṭabarī, i, 1730-1), but they ultimately sent him an embassy and recognised him, and accepted a letter from him which declared all the blood-feuds previous to Islam abolished (Ibn Sa'd, i/2, 34, 78; *Annali dell' Islām*, ii, 330, year 10 A.H., § 28, cf. also § 23, 326-7).

On the death of the Prophet, only a section of them rebelled (*Annali*, ii, 573-4, 581, 585, year 11 A.H., § 87-8, 98, 104). The destruction of the sanctuary of Dhu 'l-Khalaṣa by 'Abd Allāh b. Djarīr al-Badjalī must have broken their resistance, along with that of other tribes who were grouped round this turbulent centre (al-Ṭabarī, i, 1985-6). During the wars of conquest we find them in the army of Syria (Ibn 'Asākir, in *Annali*, iii, 588, year 15 A.H., § 66*a*, cf. also al-Ṭabarī, i, 3287, 3408), as well as in those of 'Irāḳ (al-Ṭabarī, i, 2188), and as we have seen, they formed part of the tribes quartered at Baṣra (Pellat, *Milieu*, index) and Kūfa.

Several Khath'amī women were married to Ḳurashīs. One of them played rather an important part in the early history of Islam, Asmā' bint 'Umays [*q.v.* in Suppl.]. Her sister Salmā was the wife of Ḥamza b. 'Abd al-Muṭṭalib (*Annali*, *loc. cit.*, § 285, Ibn Sa'd, viii, 209); a daughter of Anas b. Mudrik, Asmā', was the wife of Khālid b. al-Walīd (Ibn Ḥadjar, *Iṣāba*, Cairo, ed., viii, 6, no. 39; *Annali*, ix, year 37 A.H., § 412; x, 499).

The Khath'amī poets were few in number; the most notable is Ibn al-Dumayna [*q.v.*].

Bibliography: Given in the article.

(G. Levi Della Vida)

KHAṬĪ'A (pls. *khaṭāyā* and *khaṭī'āt*), moral lapse, sin, a synonym of *dhanb* (pl. *dhunūb*). The root *kh ṭ '* means "to fail, stumble" (in Hebrew, Prov. xix, 2), "make a mistake" (e.g., one says *akhṭa'a* of an archer whose arrow misses the target); [see KHAṬA'].

The form *khaṭī'a* appears five times in the Ḳur'ān, and the root *kh ṭ '* is frequently found there. It combines within itself the three meanings of "error" (*khaṭa'*, e.g., XVII, 33), "culpable lapse" (*khiṭ'*, e.g., XVII, 31; cf. *khāṭi'a*, XCVI, 16), and "sin" (*khaṭī'a*, II, 81, IV, 112, VII, 161; XXVI, 82; LXXI, 25). However, "sin" is more often conveyed by *dhanb*, *dhunūb*; a *sayyi'a* is an evil action, and an *ithm* a very grave sin, a crime against God.

We likewise find sometimes *khaṭī'a*, but more often *dhanb*, and occasionally *ithm* or *sayyi'a*, in works on *'ilm al-kalām*, *fiḳh* and *taṣawwuf*. It would be tedious

to study each of these terms separately; sufficient to say that in endeavouring to pin down the idea and the theological aspect of sin in Islam, reference should be made above all to the article DHANB rather than to that on *khaṭīʾa*.

I. *Ḳurʾānic references*. On one hand, sin brings down divine anger and punishment (for *khaṭīʾa*, see II, 81; IV, 112; LXXI, 25), but on the other hand, it nevertheless remains within the operative sphere of the divine mercy. Thus Abraham says, "It is He whom I ardently desire to forgive me my sins (*khaṭīʾāti*) on the Day of Judgment" (XXVI, 82; cf. VII, 161). God, through His apostles and prophets, summons mankind to Himself in order to pardon their sins (XIV, 10; XLVI, 31; LXXI, 4). If a man avoids grave sin (*ithm*) and depraved actions, he will receive pardon from his Lord (LIII, 32). God gives absolution from sin (*dhanb*) and accepts repentance (XL, 3), and He forgives sins (*dhunub*) completely (XXXIX, 53).

God is the All-Pardoning One whose power to pardon is endless, *al-ghafūr al-ghaffār*, two of the "Most beautiful names" upon which pious Muslims like to meditate [see AL-ASMĀʾ AL-ḤUSNĀ]. However, one sin is unpardonable, sc. the rejection and the disavowal of God and His Oneness (IV, 48, 137; XLVII, 34). Impious persons, guilty of *kufr* and *shirk*, will only receive pardon if they repent (VIII, 38). Those who have perpetrated an evil action (*sayyiʾa*) and remain "encompassed" within their sin (*khaṭīʾa*) will bring down on themselves the torments of everlasting hell-fire (II, 81).

Thus there are three types of sins mentioned in the text of the Ḳurʾān: (1) minor sins, not affecting a man's faith, which can be submitted to the divine mercy (LIII, 32); (2) grave sins (*kabāʾir al-ithm*, according to XLII, 37) and "depraved actions" which God may pardon immediately or may punish for a specific period, according to His mysterious will (cf. II, 284; III, 129); and (3) *kufr* and *shirk*, attacks on the Divine Oneness, which cannot be wiped out except through repentance (*tawba*) and which, failing this last, remain under the threat of eternal hell-fire: "those guilty of *kufr* will be rounded up in Gehenna" (VIII, 36).

II. *The traditions*. There are numerous *ḥadīths* which stress the idea of sinfulness and the fate reserved for the sinner, out of which two main themes emerge:

(1) *Faith and sinfulness*. There is a certain amount of self-contradiction here. (a) Some traditions stress salvation through faith. The divine pardon is assured, provided that there is not rejection of faith in the One God. Thus the Prophet related that Djibrīl appeared before him and comforted him by this assurance: "Every member of your community who dies professing the Oneness of God will enter paradise". The Prophet replied, "Even if such a person is guilty of adultery and theft?" Djibrīl replied, "Even if he is guilty of adultery and theft" (Muslim, *Īmān*, 113). Certain *ḥadīths* (*ibid.*, 201-8) go so far as to affirm that God "does not take into account" sins of simple intention, seeing that the thoughts involved are not expressed in words not realised in deeds. The delicate conscience of the believer who discovers in himself "evil thoughts" which he is "too scrupulous to express", is praised as an act of faith (*ibid.*, 209). (b) However, according to another chain of traditions, "grave sins" are considered as an attack against faith itself: "The Messenger of God said that whoever is guilty of fornication is not a believer, any more than he who steals or drinks wine" (*ibid.*, 100, cf. 101-5, and al-Bukhārī, *Ḥudūd*, i, 6, 20, etc.). (c) In any case, the Prophet's intercession at the Last Judgment for the sins of his community is emphasised in many *ḥadīths* [see SHAFĀʿA].

(2) *What are the "grave sins"*? The Ḳurʾān mentions clearly and on several occasions the *kabāʾir* or "grave sins", grave sinfulness (*ithm*) and "depraved actions" (*faḥshāʾ*), and gives various examples of each class, but without setting forth a precise table. One *ḥadīth*, which has been seen as a version of the "seven capital sins" of Christian morality, enumerates them thus: "The Messenger of God said, Avoid the seven deadly [sins] (*mūbiḳāt*). When he was asked what these were, he replied, 'Associating others with God (*shirk*); sorcery; unlawful homicide (except when there is a legal reason); despoiling an orphan of his property; practising usury; flight from a battle being waged against the enemy; and taking advantage of the weakness and credulity of virtuous women (*muḥṣanāt*)' " (Muslim, *Īmān*, 144; al-Bukhārī, *Waṣāyā*, *bāb* 23). The tendency towards a laxity which tends to blur the distinction between grave and lesser sins is condemned: "Anas related: Indeed, you commit sins which are only a single hair's weight according to your own view, but in Muḥammad's time we used to consider them as grave sins" (al-Bukhārī, *Riḳāḳ*, *bāb* 32).

III. *Tafsīr* and *ʿilm al-kalām*. Discussions and elaborations went on through the course of the ages, emphasising such-and-such Ḳurʾānic verse or such-and-such *ḥadīth*, according to the tendencies of the different schools of thought.

(1) *The distinction between grave sins and lesser ones* (*kabāʾir* and *ṣaghāʾir*). This distinction, which appears in both the Ḳurʾān (e.g., LIII, 32) and *ḥadīth*, was developed at great length by the various schools. The exact definition of *kabāʾir* remained variable. It can be said that the generally-accepted idea of moral lapse or sin was one of disobedience (*maʿṣiya*) to the prescriptions of the divine law, to the point that *maʿṣiya* often becomes a synonym for *khaṭīʾa* or *dhanb*. It was then readily explained that it was the hardening of the heart and persistence in evil-doing which constituted the seriousness of the sin, expressed by Ibn ʿAbbās as "Everything forbidden by God, once persisted in, becomes a grave sin". Moreover, it is related from ʿUmar and Ibn ʿAbbās (text cited by al-Nawawī) that "No sin is a grave one, if one asks pardon for it; but no sin is a venial one if the sinner persists in it". In other words, persistence in minor sins makes them become grave ones.

Is there, then, only a difference of degree between great and small sins? Muʿtazilī tradition, as represented by the *ḳāḍī* ʿAbd al-Djabbār, states that a man whose acts of disobedience (*maʿṣiyāt*) on the whole outweigh his acts of obedience (*ṭāʿāt*) is guilty of "grave sin", whereas, on the other hand, a man whose acts of obedience outweigh his acts of disobedience is only guilty of "lesser sin" (*Sharḥ al-uṣūl al-khamsa*, ed. ʿAbd al-Karīm ʿUthmān, Cairo 1384/1965, 789). For the Ashʿarī al-Djuwaynī (Irshād, ed. Luciani, Paris 1938, 331), every sin is necessarily grave, in relationship to the divine Majesty. Sin is a failure of duty towards God, and every failure of duty towards God is necessarily grave. However, there are sins of greater or lesser degrees of gravity. The two views expressed here are certainly completely divergent, but it seems that one might posit a simple difference of degree amongst the "acts of disobedience".

The leading members of the various schools nevertheless attempted to lay down different kinds of sins.

(a) For the Khāridjīs and Muʿtazilīs, the "actions of the limbs" form an integral part of faith [see ĪMĀN, 1170-1, §§ 1, 3]. Consequently, grave sins which are destructive of faith are deliberate acts of disobedience against the Ḳur'ānic injunctions, above all, against the *ʿibādāt* "pillars of Islam", and against those prescriptions whose non-performance is punishable by the *ḥudūd*. (b) The usual Sunnī trend of thought seeks to establish a list of sins which are, as such, grave, but even here, there is some variation. The Shāfiʿī jurist Taḳī 'l-Dīn al-Shahrazūrī puts forward this tautology: "Every sin which has grown so grave that one can call it a grave sin is in fact a grave sin" (cf. al-Bādjūrī, *Ḥāshiya ʿalā ... Djawharat al-tawḥīd*, ed. Cairo 1352/1934, 114). As for lists of *kabā'ir*, these vary amongst writers; al-Bādjūrī's popular manual gives two differing enumerations, and asserts the validity of both (*ibid.*, 102, 104). These lists refer almost invariably to the *ḥadīth* about the *mūbiḳāt* mentioned above, and to Ḳur'ān, VI, 151, and they freely admit that the number seven is not a limiting one. One may state that the following are unanimously considered as "grave sins": apostasy from the faith, *kufr* and *shirk*, insults to the Prophet, fornication and adultery, sins against nature, murder, usury and black magic; very often, the use of fermented liquors, theft on a serious scale, and flight from the battle field, are added to these.

Al-Nawawī relies on Muḥammad b. ʿAbd al-Salām in his commentary (ii, 170) in order to set forth this criterion: if there is any doubt about the gravity or lightness of any sin which has been committed, it should be compared with the "seven capital sins" of the *ḥadīth*. If it proves to be less serious than the least grave of those, it belongs to the *ṣaghā'ir*; in the opposite case, to the *kabā'ir*. Other authors define these last as sins connected by the Ḳur'ān with hell-fire, the divine anger, malediction or punishment. Others stress the subjective attitude of the sinner: every sin is grave which is committed without signs of fear or circumspectness, or committed in a heedless fashion; only involuntary acts of negligence in the domain of the control of speech or the passions can be accounted *ṣaghā'ir*. Finally, others (such as Abu 'l-Ḥasan al-Wāḥidī) note that the sacred law itself calls certain sins "grave" and describes others as venial, but that it omits to apply either description to several other sins mentioned in it. The prudent believer should therefore eschew all sin, lest he suddenly finds that he has committed one of the gravest possible ones.

(2) *Sinning and repentance.* The idea of repentance (*tawba*) is common to the varying schools. For example, we find it expressed in identical terms in ʿAbd al-Djabbār (*Sharḥ al-uṣūl*, 791), just as in al-Īdjī-al-Djurdjānī (*Sharḥ al-mawāḳif*, ed. Cairo 1325/1907, viii, 314). This formulation is "regret for an act of disobedience (against God) in itself, combined with the firm intention of avoiding it in the future". Cf. also in the *Taʿrīfāt* of al-Djurdjānī, ed. Flügel, Leipzig 1845, 74, the two definitions of *tawba* and sincere *tawba*. But although the notion of repentance is shared, the degree of the necessity to repent is formulated variously by the different schools.

(a) The Khāridjīs and Muʿtazilīs, relying on Ḳur'ān, II, 81, condemn to hell-fire everyone who remains "encompassed" by his own sin, and for those who have committed grave sins, only repentance accepted by God can avoid eternal hell-fire. When a moderate Muʿtazilī like al-Zamakhsharī comments on the words "He pardons whomsoever He wills (Ḳur'ān, III, 129), he explains, "... in *tawba*, for God is only inclined to extend His pardon to those who repent"; and he strongly opposes the interpretation attributed to Ibn ʿAbbās—"God extends His pardon for grave sins to whomsoever seems good to Him, and punishes whomsoever seems good to Him in regard to venial sins". According to the Muʿtazila, it is not that the *tawba* is efficacious in itself, but because of his justice, God is bound to accept it when it is sincere. The Muʿtazilīs of Baghdād explain in general that He remits the punishment on the grounds of repentance (cf. ʿAbd al-Djabbār, *op. cit.*, 790).

(b) The Ashʿarī school, on the contrary, insists on absolute freedom of action by the Almighty. Only the sins of *kufr* and *shirk* necessitate a "turning-back" of the heart before they can be pardoned. If one wanted to establish an equivalence with Christian terminology, one would have to say that, according to the dominant Sunnī trend of thought, only these last-named sins really merit being called "mortal sins" (though the ideas at work here do not really correspond).

A comparison with the "capital sins" certainly fits the *kabā'ir* better, and every "capital sin" is not in itself (in Christianity) a "mortal sin". In Sunnī Islam, God, in His mercy, can therefore either pardon every "grave sin" apart from *kufr* and *shirk*, or else, in His justice, punish it by a period in hell-fire. It is for these sins that the Prophet's intercession can be invoked. Must the believer repent of them? Certainly, if he wishes to remain faithful to the divine prescriptions and regain complete purity of heart and intentions (*ikhlāṣ*). The rules concerning *tawba* [*q.v.*] are very numerous. In regard to perfecting the purity of a man's faith, it is necessarily required. Furthermore, if *tawba* for grave sins is strongly urged, these last can nevertheless be "wiped away" by *istighfār* "asking for pardon". Thus al-Bādjūrī, for instance, states that it can be achieved by repeating 1000 times "He is God, the One", and this is the "great act of achieving release"; by making the pilgrimage to Mecca; or by "fighting in the way of God" (*djihād*). In regard to venial sins, these can be wiped out by the single act of abstaining from grave sins (or by repenting of them); by faithfully observing the religious obligations (*ʿibādāt*); or by ritual ablutions. In regard to these, *tawba*, whilst doubtless praiseworthy, is not required, even for purity of faith.

All this concerns judgments made on the perfection of the believer's status. But one must point out that according to the consensus of Sunnīs, and contrary to the Khāridjīs and Muʿtazilīs, *tawba* for grave sins is not necessary for salvation. If the sinner repents, and if God accepts his repentance, the sin is "wiped out"; it requires neither reparation nor penitence, for it no longer exists. For, as al-Djurdjānī remarks, if God's pardon "were to come into effect after (the sinner's) repentance, it would no longer be an act of pardon" (*Sharḥ al-mawāḳif*, viii, 311). It is when "grave sins" are wiped out neither by *tawba* nor *istighfār* that God can, if He wills, show Himself as Pardoner. To sum up: on one hand, divine punishment of grave sins which have not been repented of is not necessarily obligatory (cf. Fakhr al-Dīn al-Rāzī, *Mafātīḥ al-ghayb*, on Ḳur'ān, II, 82), and on the other hand, if the punishment does not come into effect, it can only be temporary. Consequently, "it is untrue that *tawba* is necessary for the pardoning of sins, with the exception of *shirk*" (*ibid.*, v, 455), and one finds the same teaching in other Sunnī *tafsīrs*. According to al-Bayḍāwī on Ḳur'ān, II, 81, the "encompassing" by sin of those threatened with (eternal) hell-fire refers only to those impious per-

sons guilty of *kufr* or *shirk*. Those believers who have committed grave sins do not come under the verdict of this verse.

On all these points, the Ḥanafī-Māturīdī trend of thought is very close to the Ashʿarī attitude, with one difference, however (cf. L. Gardet, *Dieu et la destinée de l'homme*, Paris 1967, 304 and ref.). For the Ashʿarīs, everything is submitted to the inscrutable Divine Will which may, just as it pleases, pardon straight away or punish for a period of time the believer who is guilty of prevarication; and there are no reservations here. It is therefore *possible* that for a *certain* period of time, there will be sinning believers in hell-fire, but it is not certain. For the Ḥanafī-Māturīdī theologians, God's promises must always come into effect, and God has threatened punishment for grave sins, even when committed by a believer. Hence it is "obligatory that certain individuals out of those who have committed grave sins will be punished" (Māturīdī thesis adopted by the Ashʿarī al-Laḳānī, *Djawharat al-tawḥīd*, verse 117). It is uncertain whether such a prevaricating believer will be condemned to spend some time in hell-fire, but it is certain that some sinning believers will spend some time there.

IV. *Taṣawwuf—a few examples.* We find in the works on the spiritual life and on mysticism abundant classifications and analyses of the various kinds of moral sins. In Ṣūfism also the most frequently-employed term is *dhanb, dhunūb*, rather than *khaṭīʾa* (e.g. al-Kalābādhī, *Kitāb al-Taʿarruf*, ed. Arberry, Cairo 1934, 64). One may cite as an example al-Ghazālī, who in his *Iḥyāʾ ʿulūm al-dīn* (iv, treatise on *tawba*, ed. Cairo 1325/1933, 2-53), takes over the analyses in Abū Ṭālib al-Makkī's *Ḳūt al-ḳulūb* and endeavours to classify these sins according to their nature and to lay down a precise list of *kabāʾir*:

(1) *The classification of sins* (*dhunūb*). According to Abū Ṭālib al-Makkī and al-Ghazālī, these are of four kinds (a) the "lordly" (*rabbūbiyya*) ones, such as pride, scorn, boastfulness, arrogance, love of praise, love of life, ambition and despotic behaviour; (b) the "satanic" (*shayṭāniyya*) ones, such as envy and deceitfulness; (c) the "bestial" (*bahīmiyya*) ones, such as greed, covetousness, anger and concupiscence; and (d) those attributable to "wild beasts" (*sabuʿiyya*), such as furious anger, lust for battle and murder.

(2) *The enumeration of the "grave sins"*. Al-Ghazālī firmly maintains the distinction between grave and lesser sins (*Iḥyāʾ*, *ibid.*, 28 ff.). The list of grave sins which he puts forward is not governed by the number seven for the *mūbiḳāt* in the *ḥadīth*. He proposes lists varying between four and eleven, and cites al-Makkī's view that there are seventeen. In this last case, they can be grouped as follows: four come from the heart, sc. the sin of *shirk*, persistence in evil-doing, lack of confident belief in God's Mercy and lack of any fear of His power to punish; four come from the tongue, sc. bearing false witness, misusing an upright man (*muḥṣan*), perjury and sorcery; three stem from the belly, sc. drinking wine and intoxicants, despoiling orphans of their wealth and practising usury; two are connected with the genitalia, sc. fornication and homosexuality; two with the hands, sc. murder and theft; one with the feet, sc. flight from the battle field; and finally, one is connected with the whole body, sc. disobeying one's parents.

In regard to moral sin, certain extremist Ṣūfī traditions oscillate between two attitudes which are opposed in principle, but which are at the same time often apparently mixed together in fact. An attitude of laxity carried to excess, with which one might accuse those called the *Ibāḥiyya*, asserts that anyone who attains to union with God no longer has to worry about the fear of sinning, nor about the prescriptions, injunctions and prohibitions of the law. Opposed in this is the rigorism of a special variety of the *Malāmatiyya*, which is characterised by a deeply-rooted care to shun the praise and admiration of men; in order to achieve this, such a person will make no attempt to avoid actions which seem to be scandalous, but will indeed indulge in them. In the first case (the attitude of laxity), we have the abandonment of all asceticism, and in the second "rigorism"), we have ascetic behaviour which goes to the point of being perfectly content with disdain and disapproval, shunning what are undoubtedly sins, but embarking on acts which look like sins in the eyes of men.

However, the dominating fact in the counsels and adjurations of the Ṣūfī masters is the necessity of avoiding any kind of voluntary sin, and this goes to the point of a refined scrupulosity of heart (*waraʿ*). Man, the *ʿabd*, is fallible and a sinner before God, hence he must take account of this feebleness and his small stature as a created being, in relationship to the greatness of the Almighty. Self-control, awareness of one's spiritual condition (*murāḳaba*), is necessary. From the time of al-Muḥāsibī onwards, examination of one's conscience (*muḥāsaba*) is willingly prescribed, and al-Ghazālī insists upon it (*op. cit.*, 336-61, esp. 346; cf. Asín Palacios, *La espiritualidad de Algazel*, iii, Madrid-Grenada 1940, 80-103). Al-Ghazālī goes on to say that the heart is like a mirror which is pitted and spoilt by rust, and which must therefore be cleaned and polished, so that the superior world can be reflected in it.

Bibliography: given in the article.

(A. J. Wensinck — [L. Gardet])

KHAṬĪB (A.), plur. *khuṭabāʾ*, was, among the ancient Arabs, the name for the spokesman of the tribe. The *khaṭīb* is therefore often mentioned along with the *shāʿir*, the poet (Ibn Hishām, *Sīra*, ed. Wüstenfeld, 934, 938; Yāḳūt, *Buldān*, iv, 484), and, like the *kāhin* and the *sayyid*, was one of the leaders of the tribe. The character and significance of his office is clearly explained by Djāḥiẓ, *Kitāb al-Bayān wa 'l-tabyīn*, Cairo 1332, i. The distinction between *khaṭīb* and *shāʿir* is not absolutely definite, but essentially is that the *shāʿir* uses the poetic form while the *khaṭīb* expresses himself in prose, often, however, also in *sadjʿ* [*q.v.*] (cf. Djāḥiẓ, *op. cit.*, i, 159); his speech is introduced with *ammā baʿdu* (al-Ḥarīrī, ed. de Sacy, 1822, 42). According to Djāḥiẓ, there were only a few *khuṭabāʾ* who were also *shuʿarāʾ* (i, 27). In the *Djāhiliyya* the *shāʿir* is said to have been more highly esteemed than the *khaṭīb*, but when the numbers of poets gradually increased and the latter's art declined and they became beggars, the *khaṭīb* obtained more prestige (i, 136; iii, 227). The *khaṭīb* is also associated with the story-teller, the *ḳāṣṣ* [*q.v.*], and with the *aṣḥāb al-akhbār wa 'l-āthār* (Djāḥiẓ, i, 167-8 and *passim*); the office was sometimes hereditary in the same family. The *khuṭabāʾ* did not form a gild or caste; they were the men who had the ability to be spokesmen. They appear not only at the head of a *wafd* to negotiate as representatives of their tribe, as we know from the *Sīra* (cf. Goldziher, *Abhandl. zur arab. Philol.*, i, 20), but, like the poets, they were also the leaders in the war of wits with the enemy (*mufākhara*). The *khaṭīb* had to be able to extol the glorious deeds and the noble qualities of his tribe and to narrate them in perfect language and to be able likewise to expose the weaknesses of his opponents. He had therefore to be *faṣīḥ* and know how to employ *balāgha* [*q.v.*] and

in this way to overcome his opponents (cf. *The Mufaḍḍalīyat*, ed. Lyall, xci, 22-3, xcvi, 9; al-Ḳuṭāmī, ed. J. Barth, xiv, 20; Ibn Ḳays al-Ruḳayyāt, ed. Rhodokanakis, *S.B. Ak. Wien*, xliv (1902), 19; *Kāmil*, ed. Wright, 20). Lampoons give the following characteristics of a poor *khaṭīb*: his pronunciation is bad, he turns to and fro, stammers, coughs, strokes his beard and twists his fingers, a sign of cowardice (*Ḥamāsa*, ed. Freytag, 650, verse 5; *Kāmil*, 20). It is in keeping with the character of the ancient Arab *khaṭīb* that he is included among the fighting knights and nobles (al-Ḳuṭāmī, *op. cit.*; Djāḥiẓ, i, 134, 172), indeed, *khaṭīb* itself is used as a name for a brave warrior (Djāḥiẓ, i, 129). When the *khaṭīb* makes a public appearance his insignia are lance, staff or bow (*al-makhāṣir*), just as a man taking an oath carries tokens of masculine honour; he often strikes the earth with it (cf. al-Ḳuṭāmī, xxvii, 6; Labīd, *Dīwān*, ed. al-Khālidī, 27, 45; Djāḥiẓ, i, 197-8, iii, 3 ff., 61-2).

In the earliest days of Islām the *khaṭīb* retained much of his old character. "The prophet came foreward as a *khaṭīb*" after the conquest of Mecca (Ibn Hishām, ed. Wüstenfeld, 823) and spoke publicly with ceremony and authority. But the *khuṭba* now became solely an address to the Muslims, not a part of the war against the enemy and *mufākhara* was no longer part of the activities of the Muslim *khaṭīb*. But it is quite in keeping with the nature of early Islam and with that of the Arab *khaṭīb* that the ruler himself was spokesman and that he not only made edifying speeches from the *minbar* as *khaṭīb* but also issued orders, made decisions and pronounced his views on political questions and particularly questions of general interest. This was the case under the first four caliphs and the Umayyads (cf. Djāḥiẓ, i, 190), and the governors appointed by them also acted as *khuṭabā'* (e.g. al-Yaʿḳūbī, ed. Houtsma, ii, 318; Djāḥiẓ, i, 179). The local governors, appointed by the latter were also entrusted with the control of the *minbar* and of the *ṣalāt* (al-Ṭabarī, ii, 929). Diatribes against and curses on the enemy were part of their *minbar* speeches, e.g. the curses on ʿAlī and occasionally on Ṭalḥa and al-Zubayr (Djāḥiẓ, i, 165). *Khaṭīb* was therefore still synonymous with "leader"; a poet of the Khawāridj says: "There will be no peace so long as there is a *khaṭīb* from Thaḳīf on the *minbar*s of this world" (Djāḥiẓ, iii, 135). An inheritance from the ancient Arab spokesman is the staff or lance which the Muslim *khaṭīb* holds in his right hand during the *khuṭba*, a custom which provoked the scorn of the Persians (Djāḥiẓ, iii, 135). But the close connection between the *khuṭba* and divine service gave the Muslim *khaṭīb* a specifically religious character. After the conclusion of the wars of the first generations, this element became more predominant and in the time of the ʿAbbāsids, as early as Hārūn al-Rashīd, the caliph left it to the *ḳāḍī*s to deliver the sermon at the service while he himself was simply a listener (Djāḥiẓ, i, 161). But in theory, the leaders of divine service in the great mosques are representatives of the caliph (cf. Ibn Khaldūn, *Muḳaddima*, Cairo 1322, 173).

The Egyptian Faṭimids still occasionally preached themselves (behind a veil), namely three times in the month of Ramaḍān and at the great festivals (Ibn al-Taghribirdī, ed. Juynboll, ii, 482-6; ed. Popper, 331 ff.; al-Maḳrīzi, *Khiṭaṭ*, Cairo 1334, ii, 322, 327, 329). On this occasion his highest dignitaries stood on the steps of the *minbar* (*op. cit.*, 327, 329), while on the other hand the *ra'īs* of a district often stood on the *minbar* if the *khaṭīb* was preaching, a custom which testifies to the original high rank of the *khaṭīb*, but was later condemned by strict authorities on morals (Ibn al-Ḥādjdj, *Kitāb al-Madkhal*, Cairo 1320, ii, 74). Special *khuṭabā'* were everywhere appointed. There were three of them in Cairo during the earlier Fāṭimid period (for the ʿAmr, Ibn Ṭūlūn and al-Azhar mosques); cf. al-Maḳrīzī, *Khiṭaṭ*, ii, 348; as a rule it seems to have been the honorary office of a *ḳāḍī*; cf. *op. cit.*, 224. On the *ʿĪd al-Ghadīr*, a special *khaṭīb* pronounced the *khuṭba* on a *minbar* with nine steps in the sanctuary of Ḥusayn in Cairo, while the chief *ḳāḍī* conducted the *ṣalāt*; the *khaṭīb* on this occasion was given a silk robe and 30 or 50 *dīnār*s (al-Maḳrīzī, *Khiṭaṭ*, ii, 224-5). On other occasions also the *khaṭīb* received a robe of honour (*op. cit.*, ii, 387). The *khaṭīb* usually was also the conductor (*imām*) of the Friday *ṣalāt* at which he preached and, according to Abū Ḥanīfa and a tradition of Mālik, he must actually do so unless there were special reasons for a deviation from the rule. The daily *ṣalāts* are as a rule conducted by other *imāms* (al-Māwardī, *al-Aḥkām al-sulṭāniyya*, ed. Enger, 181). According to al-Shāfiʿī and Mālik, the Friday worship with *khuṭba* can only be held in one mosque in each town, if the size of the town does not make it impossible, while Abū Ḥanīfa has no such rule. The *khuṭba* was therefore delivered, for example, in Cairo after the end of the Fāṭimid period in the mosque of al-Ḥākim only, because Saladin appointed a Shāfiʿī chief *ḳāḍī*. This state of affairs was altered by Baybars when he appointed a Ḥanafī chief *ḳāḍī* (al-Maḳrizī, *Khiṭaṭ*, iv, 53). Abū Ḥanīfa on the other hand allows the worship in which a *khaṭīb* takes part only in a large town (*miṣr*), in which the ruler of his deputy is present in person. The other schools are less rigorous on the point. But the *imām-khaṭīb* of the Friday service is, according to the other schools also, in theory the representative of "the highest *imām*". Several *imāms* can be chosen, if necessary with their exact functions defined. According to al-Māwardī, 172, the Sulṭān appoints the *imāms* of the larger mosques, in keeping, with the theory of their representative character. But, according to al-Ḳalḳashandī (*Ṣubḥ al-aʿshā*, Cairo, iv, 39), each mosque under the Mamlūks had its own *khaṭīb* while the Sulṭān only concerned himself with the larger mosques. The office of *khaṭīb* of the important mosques was a very distinguished one. Thus, according to Ibn ʿAbd al-Ẓāhir, the Shāfiʿī chief *ḳāḍī* himself was *khaṭīb* of the great mosque in the citadel of Cairo (cf. P. Ravaisse, *Zoubdat kachf el-mamâlik*, 1894, 92) and it was regarded as a special distinction, anxiously coveted, when Saladin after the conquest of Jerusalem chose the *ḳāḍī* Muḥyī al-Dīn Abu 'l-Maʿālī to act as first *khaṭīb* in the Aḳṣā mosque (Shihāb al-Din, *Kitāb al-Rawḍatayn fī akhbār al-dawlatayn*, Cairo 1288, ii, 108 ff.). The document confirming his appointment under the Mamlūks is further evidence of the *khaṭīb*'s dignity (cf. al-Ḳalḳashandī, *op. cit.*, ii, 222-5; al-ʿUmarī, *Kitāb al-Taʿrīf bi 'l-muṣṭalaḥ al-sharīf*, Cairo 1312, 126-7). He is the natural authority to whom new converts announce their conversion to Islām (Ibn al-Ḥādjdj, *Kitāb al-Madkhal*, 76); the people touch his robe *li 'l-tabarruk*, etc. (al-Shaʿrānī, *Kitāb al-Mīzān*, i, 169). According to al-Māwardī, 185, the *khaṭīb* ought preferably to wear black clothes, according to al-Ghazālī, white, while the first mentioned would be *bidʿa* (*Iḥyā'*, Cairo 1322, 131 ff.). His insignia are *al-ʿūdāni*, the "two things of wood" i.e. the *minbar* and the staff or wooden sword which he has to hold in his hand during the sermon, according to the *fiḳh* books also. According to the law of 1911 applied to al-Azhar, art. 59, every one who has passed through the second of the three divisions of the institute can become a

khaṭīb. While in al-Azhar itself only one *khaṭīb* is appointed (al-Zayyāti, *Ta'rīkh al-Azhar*, Cairo 1320, 207), there were in 1909 in the mosque of the Prophet in Medīna 46, in Mecca 122 *khuṭabā'*, besides their deputies. They enjoy certain benefactions and the office is on the whole hereditary (al-Batanūnī, *al-Riḥla al-Ḥidjāziya*², Cairo 1329, 101, 242).

Beside the official *khaṭīb*, the *wā'iẓ* exercised the function of an edifying preacher, when he pleased (cf. A. Mez, *Die Renaissance des Islams*, 1922, 318 ff.).

(J. PEDERSEN)

AL-KHAṬĪB AL-BAGHDĀDĪ, ABŪ BAKR AḤMAD B. 'ALĪ B. THĀBIT B. AḤMAD B. MAHDĪ AL-SHĀFI'Ī, known as AL-KHAṬĪB AL-BAGHDĀDĪ, was born on 24th Djumādā II 392/10th May 1002 (*Ta'rīkh Baghdād*, xi, 266) in Hanīḳiyā, a village in the neighbourhood of the Nahr al-Malik below Baghdād (Ṣafadī, *Wāfī*, vii, 191; see M. Streck, *Die alte Landschaft Babylonien*, Leiden 1900, i, 27). According to Ibn al-Nadjdjār (see Y. al-'Ishsh, *al-Khaṭīb al-Baghdādī*, Damascus 1364/1945, 17) he was born in Ghuzayya, a hamlet about half-way between Kūfa and Mecca. The son of the preacher (*khaṭīb* [*q.v.*]) of Darzīdjān, a large village on the west bank of the Tigris below Baghdād, he began his studies very early with his father and other *shaykh*s (*Ta'rīkh Baghdād*, xiv, 75-6; iv, 393; i, 351-2). Proceeding from the Ḳur'ān he occupied himself primarily with *ḥadīth*, a science which remained all his life the centre of his interest, even when he extended his learned studies to other branches of science, above all to *fiḳh*, and also after he had become famous as preacher far beyond the walls of Baghdād. At the age of twenty, in the year in which he lost his father (*ibid.*, xi, 359), he set out for Baṣra in search of *ḥadīth*, on which occasions he seems to have stayed also in Kūfa. Three years later, in 415/1024 (Yāḳūt, *Udabā'*, i, 246), he set out on a second journey which brought him to the north and east as far as Nīshāpūr. On the way, either on the outward or the return journey, he collected further *ḥadīth* material in Rayy and Iṣfahān, whither his teacher from Baghdād al-Barḳānī (*Ta'rīkh Baghdād*, iv, 373-6) had given him a letter of introduction to Abū Nu'aym [*q.v.*] (preserved in Ibn 'Asākir, *al-Ta'rīkh al-kabīr*, Damascus 1329/1922, i, 400; Yāḳūt, *Udabā'*, i, 258 f.; cf. al-Dhahabī, *Ḥuffāẓ*, iii, 276; ²1093), as well as in Hamadān and Dīnawar. How long he remained en route is not known in detail; according to his own testimony (*Ta'rīkh Baghdād*, iv, 374) he was back in Baghdād in 419/1028. In the following years his preaching secured him great fame and he became an authority in *ḥadīth* because of his profound erudition in this field. One of his biographers (al-Dhahabī, *Ḥuffāẓ*, iii, 317; ²1141) says that preachers and teachers of tradition usually had to submit the traditions they had collected to his expert opinion before quoting them in their sermons and lectures. On the other hand, al-Khaṭīb seems to have suffered from the hostility of the Ḥanbalīs, who were numerous and powerful in Baghdād at this period. After having been at first a Ḥanbalī himself like his father, his preference for the Shāfi'ī school—probably definite after a journey to Nahrawān in 430/1038-9 (*Ta'rīkh Baghdād*, xiii, 157)—and his theological opinions, which were quite uncompromising in their Ash'arism, attracted to him the hatred of Imām Aḥmad b. Ḥanbal's pupils who were enemies of all bold theological speculation. In spite of the Ḥanbalī opposition and thanks to the protection of Caliph al-Ḳā'im and the vizier Ibn al-Muslima [*qq.v.*], he succeeded in opening a course of lectures on *ḥadīth* in the al-Manṣūr mosque (Yāḳūt, *Udabā'* i,, 246 f.). Retaining a bitter resentment at the enmity shown to him, al-Khaṭīb seems never to have lost an opportunity in his lectures and writings of making malicious insinuations against Aḥmad b. Ḥanbal and the Ḥanbalīs and of even attacking them openly (cf. al-'Ishsh, *op. cit.*, 210-17). On that account, later generations accused him of *ta'aṣṣub* (legal and theological bias) (Ibn al-Djawzī, *al-Muntaẓam*, Hyderabad 1359/1940, viii, 267 f.) and there is a body of polemical literature against him (al-'Ishsh, *op. cit.*, 229-45). Apparently al-Khaṭīb entered upon these direct relations with the court only after his pilgrimage in 445/1053-4 (Ibn 'Asākir, *op. cit.*, i, 398), which directed him on the outward journey to Syria (*Ta'rīkh Baghdād*, ii, 361) and, after a rather long sojourn in Mecca (*ibid.*, vi, 174; viii, 29), on the return journey in 446/1054-5 via Jerusalem (*ibid.*, vi, 316) and several Syrian towns. When the successful rebellion of al-Basāsīrī [*q.v.*] brought about the fall of Ibn Muslima, al-Khaṭīb fled in 451/1059 (*ibid.*, ix, 403) to Damascus. During eight years the highly esteemed al-Khaṭīb was intensively lecturing, above all in the Umayyad mosque (Yāḳūt, *Udabā'*, i, 254 f.; al-'Ishsh, *op. cit.*, 92-119). His teaching activities brought him occasionally also to other Syrian towns like Ṣūr (Tyre), known to him from earlier journeys (R. Sellheim, *Arabische Handschriften, Materialien zur arabischen Literaturgeschichte*, Wiesbaden 1974, i, 69-73, no. 20). A personal mishap enraged suddenly the Shī'ī circles in Damascus against him. Arrested by order of the Fāṭimid governor, he had a narrow escape from execution only through the intercession of a distinguished Shī'ī personality and by a precipitous flight to Ṣūr. Returning to Baghdād via Ṭarābulus (Tripoli) and Aleppo after the Saldjūḳs had restored order there, al-Khaṭīb, the "Ḥāfiẓ of the east", died in Baghdād on Monday 7 Dhu 'l-Hidjdja 463/5 September 1071 (Ibn 'Asākir, *op. cit.*, i, 401), in the same year as Ibn 'Abd al-Barr [*q.v.*], the "Ḥāfiẓ of the west". In the presence of a great crowd he was buried beside the tomb of the venerated Bishr al-Ḥāfī [*q.v.*].

Al-Khaṭīb's fame is in general based on his biographical encyclopaedia of more than 7800 scholars and other personalities, among whom were also included women, connected with the cultural and political life of Baghdād. He seems to have corrected and completed it right up to the year he died (cf., e.g. *Ta'rīkh Baghdād*, iii, 108, 336). It is known under the title *Ta'rīkh Baghdād* and there is a printed edition in 14 volumes: Cairo, 1349/1931 (reprint Beirut 1968). Praiseworthy as al-Khaṭīb's monumental work indeed is, it should not be overlooked that he intended to

produce with his biographical work a reference book for traditionists, through which chains of transmitters (*isnād*), relations between teachers and pupils, questions on the reliability of a *ḥadīth*-scholar etc. can be ascertained, checked and established. The arrangement and contents of the biographies, set down in a not strictly alphabetical order, show also that a traditionist rather than a biographer has been at work. A look at the rest of al-Khaṭīb's extensive scientific production makes it clear that his works on *ḥadīth* have made him the great critical systematiser of *ḥadīth* methodology. In addition to Brockelmann, I, 401 and S I, 563 f., there are mentioned here: *al-Kifāya fī maʿrifat uṣūl ʿilm al-riwāya*, on the ideal *rāwī* (transmitter) (printed Hyderabad 1357/1938, Cairo 1972; cf. al-Albānī, *Fihris makhṭūṭāt* ..., 268, no. 947; Goldziher, *Muh. Stud.*, ii, 183 f.); *al-Djāmiʿ li-akhlāḳ al-rāwī wa-ādāb al-sāmiʿ* (al-Albānī, *op. cit.*, 267, no. 938); *Taḳyīd al-ʿilm*, with the central question whether it is forbidden or permitted to determine traditions in writing (ed. by Y. al-ʿIshsh, Damascus 1949; on this see A. Ateş, in *Ilâhiyat Fakültesi Dergisi* [Ankara], i (1952), 91-103; ʿA. al-ʿAzzāwī, in *MMIA*, xxviii (1953), 330-2; M. Weisweiler, in *Oriens*, vii (1954), 193-4); *Sharaf aṣḥāb al-ḥadīth*, a work on the prominent significance of the traditionists (ed. by M. S. Hatîboğlu, Ankara 1971; cf. al-Albānī, *op. cit.*, 268, no. 942; al-ʿIshsh, *op. cit.*, 212, 219); *al-Sābiḳ wa 'l-lāḥiḳ*, a biographical dictionary of traditionists (only known in the Chester Beatty ms. 3508, dating from the 7th/13th century); *al-Muʾtanif fī takmilat al-Muʾtalif wa 'l-mukhtalif*, on the correct spelling and pronunciation of resembling proper names, gentilic names and nicknames, with biographical data, in addition to al-Dāraḳuṭnī's [*q.v.*] *al-Muʾtalif* (cf. al-ʿIshsh, *op. cit.*, 133-4, no. 74); *al-Muttafiḳ wa 'l-muftariḳ*, a biographical lexicon of traditionists who, according to their name, seem to be one and the same person, but in fact are different persons (cf. al-ʿIshsh, *op. cit.*, 131 f., no. 71); *Talkhīṣ al-mutashābih fi 'l-rasm wa-ḥimāyat mā ashkala minhu min nawādir al-taṣḥīf wa 'l-wahm* (al-Albānī, *op. cit.*, 267, no. 937); *al-Asmāʾ al-mubhama fi 'l-anbāʾ al-muḥkama*, a work concerning 171 (?) *ḥadīth*s arranged in alphabetical order according to the personalities who remain anonymous in these *ḥadīth*s, concerning whose identification there exists confusion or difference of opinion, but who are now ascertained by the author (al-Albānī, *op. cit.*, 266, no. 933; R. Sellheim, *op. cit.*, 69-73, no. 20); *Mūḍiḥ awhām al-djamʿ wa 'l-tafrīḳ*, quoted by the author in his *Taʾrīkh Baghdād*, xi, 429, 4 (printed in 2 vols., Hyderabad 1378/1959 f.; Hatîboğlu, *op. cit.*, 10; al-ʿIshsh, *op. cit.*, 133 no. 75); *al-Riḥla fī ṭalab al-ḥadīth* (al-Albānī, *op. cit.*, 267, no. 940; cf. Goldziher, *Muh. Stud.*, ii, 175 ff.); *Iḳtiḍāʾ al-ʿilm al-ʿamal* (ed. by al-Albānī, cf. al-Albānī, *op. cit.*, 266, nos. 934 and 941; A. Ateş, in *RIMA*, iv (1958), 14, with table); *al-Faḳīh wa 'l-mutafaḳḳih* (ed. by I. al-Anṣārī, 2 vols., Riyāḍ 1389/1969; cf. al-ʿIshsh, *op. cit.*, 126, no. 34); for further short works on *ḥadīth*, see al-Albānī, *op. cit.*, 266-9. Next to his *Amālī*, which he dictated in the Umayyad mosque at Damascus (al-Albānī, *op. cit.*, 266, no. 935; cf. al-ʿIshsh, *op. cit.*, 121, no. 1), special mention should be made of three other works which in their own way are characteristic for the famous preacher: (1) *al-Taṭfīl wa-ḥikāyāt al-ṭufayliyyīn*, a collection of often delightful stories and verses built around the rich *adab*-theme of the "self-invited guest", naturally provided—as in all the works of the author—with detailed chains of traditions (printed Damascus 1346/1927 and al-Nadjaf 1966; ms. of the 6th/12th century, Chester Beatty 3851); (2) *al-Bukhalāʾ*, (ed. by Aḥmad Maṭlūb *et alii*, Baghdād 1384/1964) is parallel to al-Djāḥiẓ's well-known "Book of misers"; (3) a *Risāla fī ʿilm al-nudjūm hal al-shurūʿ fīhi maḥmūd aw madhmūm*, a treatise on the "permitted" astronomy, including the astronomical chronology, and on the "forbidden" astrology, including the prediction of astronomical events like eclipses (cf. M. Plessner, in *Islamica*, iv (1931), 532 f.). According to al-Samʿānī (d. 562/1167), al-Khaṭīb's works amount to 56 (in al-Dhahabī, *Ḥuffāẓ*, iii, 316; [2]1139). Ibn al-Nadjdjār (d. 643/1245) numbers more than 60 (in al-Subkī, *Ṭabaḳāt*, iii, 13), and Ibn Khallikān (d. 681/1282) *ca.* 100, *Wafayāt*, Cairo 1367/1948, i, 76 f.). According to a register of al-Khaṭīb's writings up to 453/1061 (cf. Brockelmann, S I, 564), the assertions of biographers and bibliographers and his own research in libraries, al-ʿIshsh, *op. cit.*, 120-37, records a total of 81 titles. He completes and enlarges Brockelmann's list with 23 items referring to manuscripts of hitherto known and also unknown writings of al-Khaṭīb. His inventory can further be completed and enlarged from statements in al-Albānī, *op. cit.*, and others, as indicated above. Finally, the two surveys by al-ʿIshsh, *op. cit.*, 79-91 and 92-119, on al-Khaṭīb's *shaykh*s, colleagues and pupils, one hundred in number, and on the works he read in Damascus, are also helpful.

(R. SELLHEIM)

KHAṬĪB DIMASHḲ [see AL-ḲAZWĪNĪ].

KHĀTIM [see KHĀTAM].

KHATMA, KHITMA (A.), pl. *khitām*, the technical name for the recitation of the whole of the Ḳurʾān from beginning to end, the verbal noun from *khātama*, denominative verb from *khātam* [*q.v.*]. The complete recitation of the Ḳurʾān is, especially if it is done within a short time, a meritorious achievement, e.g. in eight nights, as Ubayy b. Kaʿb is said to have done (Ibn Saʿd, iii/2, 60, 23; cf. on ʿUthmān, *ibid.*, iii/1, 53, 3). It is related of Sulaymān al-Aʿmash

that he accomplished the *khatma* at times according to ʿUthmān's recension and at times according to the reading of Ibn Masʿūd. For a dead man, the reciters were asked to recite the *ḳirāʾat al-khatamāt* (e.g. in the *1001 Nights* in the story of the merchant Ayyūb and his son). In Egypt the *khatma* was used as an entertainment for guests. In modern Mecca the so-called *iḳlāba* is celebrated when a boy has read through the whole of the sacred book (the ceremony after the half or one-third is called *iṣrāfa*). In South Arabia a *khātam* is presented to one who has recited the whole book for the first time.

Bibliography: Snouck Hurgronje, *Mekka*, ii, 146, 272; Landberg, *Arabica*, v, 126 ff.; Lane, *Arabian Nights*, i, 382; Goldziher in *Isl.*, vi (1915), 214, on *khatm al-Bukhārī*. (Fr. Buhl*)

KHAṬṬ (a.), writing.

i. — In the Arab world.

The Arabic writing used, according to tradition, as early as the lifetime of Muḥammad, for setting down the sacred text of the Ḳurʾān, subsequently underwent a diffusion corresponding to the expansion of the Islamic faith and to the development of the Islamic civilisation in which it came to full fruition.

A script of alphabetic and phonological type, belonging to the vast family of Semitic scripts, it shows in this capacity the characteristics of a consonantal script, with vocalisation signs added in the form of accents, and thus belongs to the category of scripts of which "the orthography always comprises an element of interpretation by the reader, an ideographic element" (M. Cohen). Its conditions of use and development were therefore determined by its association with the language which it was required to express, in terms of social facts to which we shall have to return, for the Arabic language became very quickly a major academic and literary language, while experiencing here and there divergencies of articulation and pronunciation which belonged to the sphere of colloquial usage and were consequently ignored at the level of orthography. This very individual script was also applied to other languages where the conditions thereby created do not concern us here.

On the other hand, in the evolution of Arabic script, the shapes of the letters themselves underwent changes in appearance which were not only linked to the rare attempts at orthographic adaption imposed by the cultural milieu, but were also determined by other influences, technical, aesthetic and psychological, within Arabo-Islamic society during its evolution in the course of the centuries, not the least of these influences being the assimilation of graphic writing to an art-form.

It would be impossible here to make a proper study of either the nature or the evolution of Arabic writing in its many different manifestations, while taking into account the principal studies dealing the subject, without some preliminary and indispensable remarks, regarding both its scope and its propagation. These remarks can only be brief and inconclusive, because the perspective has been insufficiently pursued to this day: it appeals in fact more to the curiosity of the historian and the sociologist than to that of the specialists who have hitherto interested themselves in decipherment or in stylistic analysis of Arabic writings. It nevertheless opens up directions of research which can only prove to be fruitful, inviting us to consider, behind the simple observation of palaeographic facts, the meaning and the value of the evidence carried by the documents themselves. Here we encounter some of the questions of a general order which have been posed by the linguist Marcel Cohen when he has reflected on the conditions of birth, expansion and transference of different types of script, and has been obliged to envisage them in the terms of the axiom affirming that "the use of the script is a function of its utility in a given society" (see *La grande invention de l'écriture et son évolution*, Paris 1958, *passim*).

The first point to be underlined in this sense is, without doubt, the incomparable prestige which has constantly been enjoyed, in the world of Islam, by an Arabic script borne, it could be said, by the expansion-movement of the religion with which it had been associated from the beginning. As the instrument of materialisation and transmission of a message identified with the Divine Word, this script permitted, among the members of the first Muslim community, the precise conservation of the letter of the revelation and, thus facilitating its study as well as its memorisation, obtained a sort of "sacred character". The reality of this "consecration" is confirmed by the textual Arabic sources; the data regarding this subject, found in the Ḳurʾān itself and the *ḥadīth*, also in personal opinions of various authors, deserve a more extensive and systematic exploration than has been undertaken hitherto (see, for example, the attempt made by F. Rosenthal, *Significant uses of Arabic writing*, in *Ars Orientalis*, iv (1961), 15-23; cf. idem, *Abū Ḥaiyān al-Tawḥīdī on penmanship*, in *Ars Islamica*, xiii-xiv (1948), 1-30).

At the same time, the Arabic alphabet benefited in its diffusion outside Arabia, from the rapid propagation of Arabic as a liturgical and cultural language of the Arabo-Islamic empire, itself constituted shortly after the conquest to which Muḥammad had given the first impulse and which followed almost immediately upon his death. The various usages, profane as well as religious, for which the Arabic script was henceforward adopted, conferred upon it a considerable expansion in its territorial scope: not only did it take the place of local scripts previously employed, in the same way that Arabic was to some extent substituted for the autochthonous languages temporarily reduced to an inferior role; but it was also offered to all Muslims, by means of the teaching of the Ḳurʾān, first written and read in Arabic, as the means of graphic representation of various non-Arab languages, those which continued to be employed or which were gradually revived, in various provinces of this rapidly-fragmented empire, or even those which were introduced, in differing circumstances, by new ethnic elements, but which all encountered, in the course of the centuries, a preferential treatment linked to the development of states and of national feelings. Thus the Arabic script became the script of Iranian languages (such as Persian and Pashto or Afghān) or Turkish languages (such as the ʿOthmānlı Turkish of the Ottoman Empire and other Turkish dialects then current in Ādharbāydjān, in the Caucasus, in Turkestan and as far away as China) languages of the Indian (the Urdu variety of Hindustani) and Malayan peninsulas (the ancient script of Malay, as well as languages belonging to Madagascar and the Comoro islands), languages of North Africa (Berber), of mediaeval Spain (literature of the *al jamia* [*q.v.*]), of Slavonic Europe (the Croat language, for example), and of Black Africa (languages of the Bantu family, such as Swahili, or Sudanese languages, such as Hausa, Peul and Kanouri from the Chad region). At the same time, it was the object of other episodic usages (for more precise details and essential bibliography, see M. Cohen, *Grande invention*, 184-6, and doc. 109-11).

It would thus not only appear difficult to distinguish formally from the Arabic script the various scripts of the Islamic domain which borrowed its alphabet, but it is even more difficult to draw with precision, over the course of the centuries, the contours of the geographical area marked by its usage. The historical mutations of the Muslim world, losing some of its provinces, making gains in other directions and attaining its actual limits by the device of proselytism and peaceful conversion, provoked constant modifications in the parallel developments of a language, a religion and a script, whose contour-lines did not necessarily coincide. There were of course some absolute regressions on the part of Islam and of Arabic speaking (the reconquests of Spain and of Sicily, for example), resulting in a similar abandonment of Arabic graphisms, except in the case of ornamental inscriptions; but there were also cases where the spoken Arabic language declined, ceasing to cope adequately with the administrative or literary requirements, but the Arabic script survived, linked to the maintenance of the academic Arabic languages in circles still Islamised. Also, there were cases of Islamic gains, at once territorial and demographic, especially notable in South-East Asia and Black Africa, which resulted in an expansion of Arabic graphisms surpassing that of the language, to correspond with that of the Muslim faith itself; on the other hand, areas Islamised in ancient times, where Arabic retained its prestige as a religious language, have seen in modern times a decline in the use of the Arabic script, as decisions have been taken favouring the phonetic notation of, for example, Turkish, Malay, Malagasy or African languages into the Latin, and sometimes the Cyrillic alphabet.

The consequences of these various phenomena of replacement, or on the contrary, of adoption, of the Arabic script cannot be evaluated quantitively in a precise manner, any more than can the effects of the recent tendency to an increased utilisation of this script, in the Arab countries, for the practical reasons of the proliferation of documentary material and especially of the progress of education and the spread of literacy, familiarising the vast masses of the population with the alphabet.

This progress at least seems clear-cut, and the crystallisation of sentiments linked to a new consciousness of Arabism and of its cultural patrimony even today reinforces the vogue and the universality of a script which has never ceased to transcend, as a mode of symbolic expression, the frontiers of the Arabic-speaking world. We know in fact to what extent its characters, privileged symbols of a true politico-religious unity, were able, by emotional as well as practical means, to impress upon the minds of Muslims of every race and every country that recognised them, from the classical period of Islam onwards, their superior and incontestable artistic worth.

In that period, in fact, when the triumphant society which had adopted the Arabic characters used them for utilitarian ends (archives, historical inscriptions, coinage, writings of all kinds) or for sacred purposes (copies of the Ḳur'ān, pious inscriptions, religious texts), the script was tending through its use in these media towards a high degree of aesthetic and decorative accomplishment in accordance with certain rules of formal beauty, as well as with the exigencies of literal meaning. The practice of writing Arabic was from that time onward an art, as well as a science, reserved for initiates. All the same, the experts in calligraphy were judged worthy, and this has remained the general rule in every Muslim society, to attain to the double distinction of artist and respected sage, acceding sometimes to the rank of masters of the "science of letters" (see ḤURŪF), itself a branch of the divinatory science of *d̲j̲afr* [*q.v.*] and an instrument of a talismanic art linked to certain aspects of mystical speculation.

This exceptional situation regarding the Arabic script over the centuries, in a particularly vast world where the "thing written" was at once admired and preserved, is insufficient alone to explain the abundance and the variety of documents on which today all knowledge of the forms belonging to this script, and their history, must rely. Developments of another order must also be invoked, among them one factor which in its way considerably influenced the development of Arabic civilisation, viz. the widespread manufacture of paper in the lands of Islam from the 3rd/9th century onward (see KĀG̲H̲ID). The expansion of this industry, which was not without effect in the sphere of economic exchanges and the transmission of sciences, facilitated the manifestations of the art of writing in providing the most convenient medium, with the smoothness of its surface and its lightness, a medium that was durable and not too costly. Sheets of paper of various formats, which could be carried, rolled up, folded and sealed, thus supplied the indispensable material for innumerable letters and archives, the latter sometimes enriched with artistic and illuminated signatures, which came to supersede the rare and costly specimens previously represented by pieces of tanned skin or parchment [see D̲J̲ILD] as well as by papyri [see ḲIRṬĀS]. Their use permitted hand-written books, preserving in Arabic the texts of literary or academic works so that they proliferated at such a rate that the profession of copyis̲t-cum-book-seller became, in the mediaeval Islamic cities, a profitable occupation in the context of the growth in popularity of "reading-rooms" and of private libraries [see K̲H̲IZĀNA]. It was not only intellectual life that gained a fortunate boost; but from that time on, the educated Muslim became a indefatigable writer, recording the oral tradition of his masters through the medium of the written word, never hesitating to comment upon or summarise, pen in hand, his own works as well as those of his predecessors, from whom he gladly reproduced extracts and quotations.

In the same line are the effects of another technical invention, which came much later to the Islamic world, that of printing with movable characters. From its expansion in the Near East in the second half of the 19th century—four centuries after its invention and diffusion in western Europe (although impressions on blocks of wood had made their appearance in the ʿAbbāsid period, in the 4th/10th century for the reproduction of prayers in Arabic and of talismanic formulas; cf. M. Cohen, *Grande invention* pl. 53)—dates a new transformation in the conditions of usage of Arabic writing, which have recently been further aided by the advent of typing and other industrial processes. The phenomenon, interesting to consider in itself, could have resulted in a radical normalisation of Arabic writing, an undertaking which is still recommended in some quarters today in the form of various projects for the improvement or even the replacement of the traditional alphabet. In fact, it resulted only in the hardening of some types of usage, halting, in favour of the most widespread cursive, that is the "oriental" cursive, the evolution of signs which have preserved to this day in printed texts the features of a handwritten script.

We must return to the various functions supplied by Arabic writing in the mediaeval world in order to understand the abundance of stylistic varieties which corresponded, in spite of its constant orthography, to successive or concomitant stages of its development in the course of the centuries.

The writing practised by government scribes in their compilation of archives or their official documents could not be the same as that of calligraphers working to satisfy the taste for luxury of some patron, nor that of pious people copying the texts of the Ḳurʾān, nor that of scholars making rough drafts or taking down speeches and discussions as dictation, nor that of merchants writing private letters and statements of account, nor that of makers of amulets and magical diagrams, for example. The greater or lesser degree of legibility required in each case—whether it was a case of documents intended to be widely read or appreciated solely from an artistic angle, or designs of limited, technical and sometimes even esoteric usage—intervened to modify the types of letters used; thus certain types of script reserved for certain uses are differentiated, scripts of diplomacy or of business accounts, for example, but also artistic scripts illustrated by inscriptions on objects of common usage, such as the illegible anthropomorphic scripts whose letters, on precious objects of inlaid metal, are disguised as the gesticulations of small figures (see on this subject, D.S. Rice, *The Wade Cup in the Cleveland Museum of Art*, Paris 1954, 22-33), or on the contrary, the rigid and simple "kūfic" or "astronomical" scripts used particularly for the figures and other markings born by astrolabes (see for example, M. Destombes, *Les chiffres coufiques des instruments astronomiques arabes*, in *Physis*, ii (1960), 197-210).

Other types may have been given shape by the influence of the many different regional milieux and national temperaments which coexisted in the world of Islam and whose heritages it is difficult to define with certainty. Even if our remarks on this subject may be connected with reflections concerning other families of scripts (see the collective work devoted to *L'écriture et la psychologie des peuples. XXIIe Semaine de Synthèse*, Paris 1963), the ethnico-linguistic procedures which are often applied to these local schools of writing should not be handled without caution. It may be admitted, for example, that the resources of artistic imagination belonging to Iranian and Turkish artisans were the origin of some of the finest compositions which have ever been executed in angular Arabic characters, and it is fashionable to give the credit to the ornamental artists of the eastern provinces. Living in the semi-independent kingdoms of Khurāsān and Sīstān, as well as in the Iranised Baghdād of the Būyids, for example, they could be counted among the artisans most active in the embellishment of ornamental writing, their efforts being parallel to those which they pursued in imposing their own style upon the intricacies of the arabesque. They must also often have been the initiators of the styles which subsequently spread towards the western regions of the world of Islam, and they must have contributed to the popularity there of motifs at once calligraphic and floral, enriched with geometric embroidery, which were adopted there after a short lapse of time. But the exact role played by ethnic association cannot be appreciated any more than the relations uniting, as some scholars express it, the melodic line of Arabic music or song and the almost undulating and dynamic rhythm towards which the most elegant Arabic cursive scripts are always obliged to tend.

At other levels, other technical factors were involved, regarding notably the length of time required to execute a certain specimen of calligraphy one or more times, according to the material and the process chosen, according to the originality peculiar to the "hand" of each artist, and the opportunity he had of transferring inflections or inspiration from different styles. It was often the opportunities offered to the artisans, to the stone-cutters or the scribes, by the material at their disposal, according to the periods and according to the areas, which determined the birth of different styles, attributed also to the personality of the famous calligraphers who invented them or illustrated them and who are mentioned in the accounts traditionally repeated or amplified by the ancient Arab authors. As regards the handling of the pen, echoes are found in western works having taken as the basis of their developments, in the Europe of the 19th century, information still alive in the Ottoman empire (see for example, ch. ii of A. Herbin, *Essai de calligraphie orientale*, Paris 1803). Each time there is stressed the importance of the *ḳalam* [*q.v.*] and of the manner of cutting it; attention is also drawn to the types of ink used; the other items of equipment of the copyist are listed (see the precise details supplied on this subject by A. Grohmann, *Arabische Paläographie*, i, Graz-Vienna-Cologne 1967, completed by the more recent commentaries supplied by J. Sadan, *Encore du nouveau sur scribes et copistes*, in *REI*, xlv (1975). But we should not at the same time forget the influence exerted by the utilisation of different techniques, which were prevalent both for monumental and furniture inscriptions and could range from incision and sculpture in champlevé, in stone and stucco, to painting on plaster or pottery, to carving on metal, to inscriptions in relief or to the complex construction of mosaics with cubes of glass and especially, with fragments of brick and ceramic.

Actual fact does not allow us to establish, as has sometimes been suggested, that there are two separate categories of Arabic characters, one represented by epigraphic documents of every genre and the other by manuscript texts. It is known, in fact, that the eminent calligraphers often provided, by setting them down on paper, the models for inscriptions subsequently executed in every other manner and that a trait peculiar to the artisans of the mediaeval Muslim world was that they loved to prove their virtuosity by transposing, from one material to another, and from painting to sculpture, or from metal to ceramic, or conversely, worked. It seems, on the other hand, that the supple involutions of rounded letters, sometimes credited solely to the talent of the copyist, are found from the 6th/12th century onward in monumental inscriptions and that there is, on the other hand, no shortage of ancient manuscript having recourse to the angular characters incorrectly described as "lapidary". But in any case, it must be admitted that the nature of the technique practised is often sufficient to explain the variations, at the same time multiple and concurrent, without being of exactly simultaneous usage, that are to be found among inscribed compositions, of the same date and of the same origin, established on different material bases. There is no doubt that here we find the determining cause of much in the way of subsequent stylistic ramifications, of which the birth would otherwise appear fortuitous.

Here should be added the effects of choices which are more difficult to discern in their motivations, for they were linked with the very attitude of mediaeval Muslim society to artistic invention, to its taste for the repetition of formulas and the conventions of workshops, to its admiration for redundance and sumptuousness which developed under the aegis of patrons motivated as much by love of ostentation as by concern for their own glory, and which gave rise to the refinement of sumptuous manuscripts which multiplied in the same way as that of monumental and movable epigraphs. These last factors in the differentiation of shapes acted, however, without going against the spirit of conservatism which marked Arabic writing on the level of orthography and which held to a great extent to the spirit of an Arabo-Islamic civilisation conscious of its superiority, at the same time reserving to a small élite the monopoly of a written communication of limited accessibility and destined to remain thus.

For all these various reasons (more extensively developed by J. Sourdel-Thomine, *The development of Arabic script*, in *Cambridge History of Arabic Literature*, i, ch. 1), the Arabic script was abundantly used in an Islamic milieu over the course of the centuries, and innumerable documents bear witness to it. Such wealth excites admiration, but it also explains the difficulties always encountered by those wishing to study it methodically: the world of Arab palaeography remains that of scattered and unevenly accomplished exploratory studies, where general surveys of sufficient completeness are lacking as well as systematic inventories of such-and-such a series of specimens and the information they provide.

In the absence of any means of ameliorating this deficiency, we shall content ourselves here with presenting a provisional survey of the results obtained. On the one hand we shall stress the defects in orientation of the scanty working-material that exists, and on the other hand we shall indicate the principal opportunities that present themselves for tackling this vast question, pursuing a double approach: bringing out on the one hand the specific traits of an Arabic script remarkable to the present day for the consistency of its system of transcription, whilst drawing attention on the other hand to important chronological phases discernible in the evolution of its shapes. Furthermore, it should never be forgotten that in addition to these major stages, there were secondary phases, linked together. following one another in succession or on the contrary overlapping, in a somewhat anarchic process of development, according to the changing modalities of usage and the great artistic flowering to which allusion has been made above.

As the science of studying Arabic graphisms, which figures among the modern disciplines of orientalism but remains a science in its infancy, Arabic palaeography has not yet given birth to a single manual or introductory work other than one major publication, which after many years of planning remains incomplete. The idea for this work first occurred to Adolf Grohmann when he attended the lectures given on this subject by Josef von Karabacek in 1910 and 1912 at the University of Vienna. Only two volumes have appeared to this date (A. Grohmann, *Arabische Paläographie*, Teil i, Vienna 1967; Teil ii, Vienna 1971), which there is little hope of ever seeing completed. The historical summary of the first efforts devoted to the study of Arabic writing, first in the Islamic world (i, 4-32), then among a growing group of western orientalists from the beginning of the 17th century to the present day (i, 32-65) is followed, after remarks bearing on materials of writing (*Die Beschreibstoffe*, i, 66-131) only by analyses concerning the types of writing defined by the author as "lapidary" (*Das Schriftwesen. Die Lapidarschrift*, ii, 3-290), types whose study is certainly of vital importance, but whose various aspects are not sufficient to characterise the evolution of Arabic writing in its entirety.

There is also the survey, meticulous but of limited scope, compiled by B. Moritz in 1910 in the first edition of the Encyclopaedia of Islam [s.v. ARABIA]. Other similarly hasty surveys followed, which attempted notably to place Arabic writing among the various systems known of notation of language signs (thus M. Cohen, *Grande invention*, esp. 181-6, 234-8, and 328-30, where the previous works are mentioned and remarks of a methodological order made; see also J. Sourdel-Thomine, *L'écriture arabe et son évolution ornementale*, M. Rodinson, *Le monde islamique et l'extension de l'écriture arabe*, in *L'écriture et la psychologie des peuples*, 249-61, 263-77, and D. Divinger, *The alphabet, a key to the history of mankind*³, London and New York 1968, i, 210-15), or which attempted to place it before a more extensive public by increasing the number of illustrations (thus E. Kühnel, *Islamische Schriftkunst*, Berlin 1942; A. M. Schimmel, *Islamic calligraphy*, in *Iconography of religions*, section xxii/1, Leiden 1970; N. Zayn al-Dīn, *Muṣawwar al-k͟haṭṭ al-ʿarabī*, Bag͟hdād 1968, or idem, *Badāʾiʿ al-k͟haṭṭ al-ʿarabī*, Bag͟hdād 1972). Yet others have been content to place the accent on certain aspects of the problem (thus M. Minovi and Ph. Ackermann, *Calligraphy. An outline history*, in A. U. Pope, *A survey of Persian art*, ii (1939), 1707-42; N. Abbott, *Arabic palaeography* in *Ars Islamica*, viii (1941), 67-104, which combined with a critical study of the preceding account, replies to certain positions adopted by A. Jeffery on the possibilities of identification of ancient Arabic scripts). Finally, there have been others who have confined themselves, either to a geographical area (for example O. Houdas, *Essai sur l'écriture maghrébine*, in *Nouveaux mélanges orientaux*, 1886, 85-112) or to a period (S. al-Munad͟jd͟jid, *Dirāsāt fī taʾrīk͟h al-k͟haṭṭ al-ʿarabī mund͟hu bidāyatihi ilā nihāyat al-ʿaṣr al-umawī*, Beirut 1972), or to both of these at once (S. Y. al-D͟jabūrī, *al-K͟haṭṭ al-ʿarabī wa-taṭawwuruhu fi 'l-ʿuṣūr al-ʿabbāsiyya fi 'l-ʿIraḳ*, Baghdād 1962), or even to the work of a single calligrapher (D. S. Rice, *The unique Ibn al-Bawwāb manuscript in the Chester Beatty Library*, Dublin 1955). Here there are only to be found provisional elements and incomplete syntheses upon groups of graphical variations which seem, by their very volume, to have dampened the enthusiasm of the specialists, who, although a list of their works might give the impression that each of these subjects was covered at length, have never dealt with more than a small part of an immense and still partially unknown field.

But these sometimes superficial works have nevertheless surpassed in ambition the tentative endeavours to which other scholars too often confined themselves, collecting and regrouping, in the form of simple books of plates, specimens considered as typical of Arabic writing used, here or there, in such-and-such a period. Hence the several albums, often with ambitious titles, of which the most important since the end of the 19th century are easily listed (W. Wright, *Facsimiles of manuscripts and in, scriptions*, Oriental series, Palaeographical Society-

London 1875-83; B. Moritz, *Arabic palaeography*, Cairo 1905; E. Tisserant, *Specimina codicum orientalium*, Bonn 1914; A. J. Arberry, *Specimens of Arabic and Persian palaeography*, London 1939; G. Vajda, *Album de paléographie arabe*, Paris 1959; S. al-Munadjdjid, *al-Kitāb al-ʿarabī al-makhṭūṭ ilā 'l-ḳarn al-ʿāshir al-hidjrī*, i. *al-Namādhidj*, Cairo 1960), and to which may be added collections of exercises in decipherment conceived at any early date (such as M. Bresnier, *Eléments de calligraphie orientale*. Algiers-Paris 1855, or L. Cheikho, *Spécimens de cent écritures arabes pour la lecture des manuscrits anciens et modernes*, Beirut 1885 and 1895).

In fact a search has to be made in works belonging to disciplines other than palaeography, in the narrow sense of the term, in order to find some of the most positive results regarding the study of Arab characters. Thus we may mention the important data obtained concerning the writing of the first centuries, through the progress of the science of papyrology. To the conclusions, today considered obsolete, reached by a Silvestre de Sacy and forming the basis for subsequent researches (as in his *Nouveaux aperçus sur l'histoire de l'écriture chez les Arabes du Hedjaz*, in *JA*, x, (1827), 209-31), there have succeeded the publications of results owed to the experience of Adolf Grohmann or of N. Abbott, as well as several other specialists (see on this subject the synthesis-data in A. Grohmann, *From the world of Arabic papyri*, Cairo 1952, esp. 69-93, and *Einführung und Chrestomathie zur arabischen Papyruskunde*, i, Prague 1955, esp. 88-103; cf. *Arabische Papyruskunde*, in *Handbuch der Orientalistik*, i/2, Leiden-Cologne 1966). These permit appreciation of the true value of such texts, difficult to decipher but of unquestionable historical authenticity, of which however only most incomplete series have yet been published, in occasional articles or in the catalogues of some great collections.

Also, there is the information provided by works of numismatics, starting with monetary materials (pieces of all kinds, jetons, glass weights and even seals) most often datable with certainty, emanating from equally identifiable mint centres and bearing inscriptions composed invariably in carefully executed scripts. These types of information have seldom been collated as they deserve, though mention should be made of the first results in this field, contained either in catalogues compiled according to modern rules (see the table of letter-forms set out by J. Walker, *A catalogue of the Arab-Byzantine and Post-Reform Umayyad coins*, London 1956, p. cii), or in specialised *Corpus* essays (see for example, the remarks of a palaeographic order contained in G. C. Miles, *Early Arabic glass weights and stamps*, New York 1948, 29).

Studies which have proved particularly fruitful, from the viewpoint of palaeography, are the works devoted by epigraphists to this decorative aspect of Arabic inscriptions and to the ornamental distortions of their characters, which constitute one of the most significant features. Not only has the system inaugurated by Samuel Flury concerning certain artistic schools locatable in time as in space (see for example, his *Islamische Schriftbänder, Amida-Diyarbekr XI. Jahrhundert*, Basel-Paris 1920; idem, *Le décor épigraphique des monuments de Ghazna*, in *Syria*, vi (1925), 60-90; idem, *Le décor épigraphique des monuments fatimides du Caire*, in *Syria*, xvii (1936), 365-76; and *Ornamental Kufic inscriptions on pottery*, in A. U. Pope, *A survey of Persian art*, ii, 1743-69) have continued to be followed for other periods or other places (thus V. A. Kratchovskaya, *Notices sur les inscriptions de la mosquée Djoumʿa à Véramine*, in *REI*, v (1931), 25-38; idem, *Ornamental Naskhi inscriptions*, in A. U. Pope, *Survey*, ii, 1770-85, and *Evolyuisia kufiçeskogo piśma v Sredney Azii*, in *Epigrafika Vostoka*, iii, (1949), 46-100; J. Sourdel-Thomine, *Epitaphes coufiques de Bâb Saghir*, in *Les monuments ayyoubides de Damas*, iv, Paris 1950; idem, *Le coufique alépin de l'époque seljoukide*, in *Mélanges L. Massignon*, iii, Damascus 1957, 301-17, and *Le style des inscriptions arabo-siciliennes à l'époque des rois normands*, in *Études d'orientalisme dédiées à Lévi-Provençal*, i, Paris 1962, 307-15; M. Ocaña Jiménez, *El cúfico hispano y su evolución*, Madrid 1970), but a similar method has been applied to the study of inscriptions on movable objects (L. Volov-Golombek, *Plaited Kufic on Samanid epigraphic pottery*, in *Ars Islamica*, vi (1966), 107-33). Then the procedure used for precise cases has also on occasion received particular attention (thus J. Sourdel-Thomine, *Quelques réflexions sur l'écriture des premières stèles arabes du Caire*, in *Annales islamologiques*, xi (1972), 23-35). Elsewhere, observations of this type have been collected and linked together in an ambitious treatment, such as that which was attempted by Adolf Grohmann, starting from a truly encyclopaedic knowledge of the question, but in a manner too diffused to allow a clear perspective of the evolution of the whole phenomenon (see A. Grohmann, *Arabische Paläographie*, ii, cited above, of which the plan of research has been announced by the author in *The origin and early development of floriated Kufic*, in *Ars Orientalis*, ii, (1957), 183-213).

Finally, the studies brought to fruition more specifically under the disciplines of codicology, the science of manuscripts and their dating, utilising with profit the examination of their various external characteristics, must in their turn not be forgotten, even if they are still far from attaining a degree of scientific precision sufficient to bring to palaeography the elements of certainty that might be expected. There is, in fact, a contrast between the minute care taken by the scribes, users and owners of every copy of an Arabic text to add to it notes supplying its history, on the one hand, and the insufficient use, on the other hand, made of these notes in modern times to establish the dating of these copies and, thereby, the classification and verification of their scripts.

Certainly, the details recorded in modern catalogues, details supplied by the title pages or the final pages of manuscripts and enabling us to date them by means of their colophons as well as by the various marks of ownership, certificates of donation such as *waḳfs* [*q.v.*], seals, reading marks and certificates of audition that they contain, have served as points of reference, in the case where they have been noted: introductions to critical editions of good quality, presentations of collections, studies bearing on the conditions of transmission of ancient texts, announcements of discoveries shedding new light on opinions previously held (see for example, J. Schacht, *Sur quelques manuscrits de la bibliothèque de la mosquée d'al-Qarawiyyin à Fès*, in *Mélanges Lévi-Provençal*, Paris 1962, 271-84, or S. M. Stern, *A Manuscript from the library of the Ghaznawid Amir ʿAbd al-Rashīd*, in *Paintings from Islamic lands*, *Oriental Studies* no. 4, Oxford 1969).

Nor has use ever been made for purposes of systematic classification nor of description of series of manuscripts belonging to such-and-such a type of

script, for there has been no attempt, on sufficiently broad bases, to make recensions with the purpose of establishing the chronological sequences of dated specimens, which would themselves be subjected to necessary palaeographic analyses. Two difficulties are encountered here: these are (1) the extraordinary quantity of copies of Arabic texts preserved to this day and (2) the insufficient knowledge that we have of them, the resources of some public libraries being incompletely studied in the West as well as in the East, and the relative importance of the contents of private libraries not yet catalogued or even sometimes noticed. It is to be hoped that in the future such inventories will be put to proper use; this will have to depend on a previous recension of the accessible Arabic manuscripts, an enterprise which is at present impossible in spite of the results contained in the monumental collections of works written in Arabic owed to C. Brockelmann and, more recently, to F. Sezgin. These inventories will enable us to fix with confidence the exact moment of appearance of a certain palaeographic feature, belonging to a certain local milieu or a certain well-known workshop. This is not yet possible, but one may at least use for first approximations the remarks supplied by the best catalogues of manuscripts and, by listing autograph signatures or references to contemporary copyists, enlarge considerably the actual field of research of the palaeographers.

To these data may profitably be added the results gleaned from thorough searches of archives containing official or private documents of all kinds (see remarks on the documentary wealth of a source of this type in J. Sourdel-Thomine and D. Sourdel, *Nouveaux documents sur l'histoire religieuse et sociale de Damas au moyen âge*, in *REI*, xxxii (1964), 1-2; *A propos des documents de la grande mosquée de Damas conservés à Istamboul. Résultats de la Seconde Enquête*, in *ibid.*, xxxiii (1965), 73-85). Here there is to be found palaeographic evidence of the first importance, ranging from notary acts [see WATHĪḲA] to requests or personal letters (for publications of letters of this kind see, for example, A Dietrich, *Arabische Briefe aus der Papyrussammlung der Hamburger Staats- und Universitäts-Bibliothek*, Hamburg 1955; S. M. Stern, *Petitions from the Mamluk period*, in *BSOAS*, xxix (1966), 233-76, with reference to his previous articles on the requests on the Fāṭimid or Ayyūbid epoch; D. Sourdel, *Deux documents relatifs à la communauté hanbalite de Damas*, in *BEO*, xxv (1972), 141-51).

But the most abundant source of elements immediately of use for a rational knowledge of Arabic writing still remain, amid all these manuscripts relics, these copies of the Ḳur'ān, which have already supplied the material for a special chapter of philological and palaeographic research. In the same way that the modalities of recension of the Ḳur'ānic text and the divergencies of reading to which certain of its passages can give rise led to the development, during the early centuries of Islam, of the first grammatical as well as exegetical studies. Hence copies of the Ḳur'ān offer the most solid base that we have to this day for describing the evolution of fine Arabic characters.

Catalogued since the end of the 19th century in the major western collections of which they were a part, these copies were the source of the studies of "hieratic" angular calligraphy which form the basic material for G. Bergsträsser and O. Pretzl (*Geschichte des Qorans*, iii, Leipzig 1938), who summarise in this volume their previous essays and especially for the series of new hypotheses subsequently expressed by N. Abbott (*The rise of the North Arabic script and its Kur'anic development*, Chicago 1939), A. Jeffery (review in *The Moslem World*, xxx (1940), 191-8), R. Blachère (*Introduction au Coran*, Paris 1947, 83-9), and G. Levi Della Vida (*Frammenti coranici in carattere cufico nella Biblioteca Vaticana*, Vatican 1947), without forgetting the very illuminating note by A. Grohmann (*The problem of dating early Qur'ans*, in *Isl.*, xxxiii (1958), 213-31) taking the discovery of a new fragment of the Ḳur'ān on papyrus as a basis for proposing the attribution to the 1st/7th century copies of the style previously called *ḥidjāzī*.

Certainly, the conclusions reached till now, especially concerning the calligraphic material in ornamental "kūfic" known as "lapidary", remain fragile and imprecise. There is no scientifically defensible position other than to suspend in this regard all judgement until there have been made, with the most minute observations of detail, regroupings by families, which comparisons and careful indexing will perhaps enable us to apportion chronologically and geographically. There is no guarantee even that the points of reference established then will not appear to be deceptive in regard to the work of research and analysis which they will require and which would have to take account of extensive collections not yet inventoried like that of the Damascus Ḳur'āns of Istanbul (cf. J. Sourdel-Thomine and D. Sourdel, *Nouveaux documents*). But, in spite of these reservations, the several working hypotheses already adopted, according to which were recently classified in an approximative manner the 164 exhibits of a remarkable exhibition of Ḳur'āns of all kinds (see M. Lings and Y. H. Safadi, *The Qur'an. Catalogue of an exhibition of Qur'an manuscripts at the British Library, 3 April — 15 August 1976*), prove themselves to be indispensible in enabling the reconstruction, by means of Ḳur'anic scripts alone, of the history of Arabic manuscript writing and its enrichment through elaboration of forms and the introduction of illuminations sometimes foreign to the shapes of the letters.

Beside these various scientific considerations, there are furthermore the data supplied by the ancient textual sources which have for a long time served as a basis for the reflections of the specialists and which should not be neglected. Even if most often they do no more than repeat one another and thereby ensure the permanence, to the modern milieux of calligraphers, of notions which were enunciated by the authors of the mediaeval period and which seem to have been subsequently perpetuated without being always fully understood, they show the interest felt by an erudite traditional society in the writing which it used, and they reflect in this sense the fruits of an instructive and solid experiment.

Certainly, the ideas which to this day have been extracted and expressed in western surveys correspond to a view of the problems at once formal and incomplete. What has been largely extracted from them is either the names of famous scribes considered to be the heads of schools and presented in the course of accounts of an anecdotal character, or enunciation of rules of calligraphy remaining obscure in the absence of an adequate terminology, or lists of technical terms, especially those which were in use to designate the styles of writing which scholars were content to enumerate. Even when an approach has been made on a more critical level, and attempts

made to determine the exact bearing of the terms adopted, to this day it is rare for sure conclusions to be reached. Whence arise the discussions which are still pursued among modern authors; and whence certain divergencies of interpretation concerning the text of the *Fihrist* of Ibn al-Nadīm (end of the 4th/10th century), regarding the *ḥidjāzī* and *kūfī* styles in the writing of the first Ḳur'āns, may be chosen as examples (on this question, see e.g. N. Abbott, *North Arabic script*, 17-18, 23-25, 29-30). Researches such as have been pursued regarding the expression *al-khaṭṭ al-mansūb* or any other expression borrowed from the mediaeval vocabulary of copyists have in fact regularly ended in an impasse, the arguments used succeeding only in producing literary statements devoid of a direct link with the reality of the written documents: the deficiency, which was only accentuated progressively with the transmissions and transpositions of the same formulae from one author and one text to another, already affected the definitions of the most ancient historical sources accessible to us, of which the developments were never accompanied by explicit illustrations.

Nevertheless, this deficiency, which should be stressed, does not prevent the specialised Arabic literature from having a unique position in shedding a light, in certain cases on the past of a writing which forms the subject of the first *kitāb al-khaṭṭ*, *kitāb al-kuttāb* and *kitāb al-kitāba*, dealing with the types of script themselves, the presentation of the letters, the orthography, the grammar, the style, and the administrative techniques. The most ancient of these treatments date back to the 3rd/9th century, such as that of al-Baghdādī, where there are significant links with different passages included in the works of a contemporary polygraph like Ibn Ḳutayba (see D. Sourdel, *Le Livre des secretaires de ʿAbdallāh al-Baġdādī*, in *BEO*, xiv (1952-4), 115-63; cf. J. Sadan, *Encore du nouveau sur scribes et copistes*).

The encyclopaedic enterprises which such endeavours represented, and which sometimes came to give the tinge of a more literary research when they were conducted by an author like al-Tawḥīdī, were constantly reviewed and enriched throughout the mediaeval period until the works of the Mamlūk period which paid particular attention, as previously had the *Fihrist* of Ibn al-Nadīm, to various types of script or *khuṭūṭ*. The chapter which al-Ḳalḳashandī devotes to these (*Ṣubḥ al-aʿshā*, ed. Cairo, ii) wonderfully illustrates the importance of information thus gathered by a man of secretarial training, calling upon his own experience of chancellery practices to present a survey in which he enumerates the six principal types of Arabic script, which he designates by the names *al-Ṭūmār al-kāmil*, *mukhtaṣar al-Ṭūmar*, *al-Thulth*, *al-Tawḳīʿ*, *al-Riḳāʿ* and *al-Ghubār*. But one could equally well cite the text, recently published, of an author of the 10th/16th century, Muḥammad b. al-Ḥasan al-Ṭībī (*Djāmiʿ maḥāsin kitābat al-kuttāb*, ed. S. al-Munadjdjid, Beirut 1962).

All the commentaries thus attached to ancient calligraphic varieties, themselves classed in groups and sub-groups according to a system varying somewhat according to the authors, furnish in fact the elements of a traditional science which preserves its diffuse historical validity and whose ambiguities certain western palaeographers have partially succeeded in surmounting. Not only have they seen there a means of access to details of protocol put into practice in various periods by the bureaucracy of the Muslim states for their official correspondence, but the chronological indications developed in this manner have permitted them to determine, from Ibn Muḳla (273-328/886-940) to Ibn al-Bawwāb (d. 418/1022 or 432/1032) and to Yāḳūt al-Mustaʿṣimī (640-58/1242-58) the most logically-supposed phases of a progression towards the elegance and suppleness which characterised, over the centuries, the evolution of the Arabic writing practised by scribes and copyists.

Such are the works on which at present our knowledge of the history of Arabic writing rests. The provisional assessments which may be drawn from them can conveniently be grouped under a small number of rubrics.

The first of these rubrics concerns the archaic Arabic writing which is seen to appear in the 1st/7th century and the importance of which rests on two fundamental features: the coherence, on the one hand, of its system of consonantal notation based on the existence of an alphabet, defective perhaps but already well established; and on the other hand, the normative quality accorded to it from that time, which was to enable its form to be maintained under the most elaborate of later graphical variations.

This archaic or primitive Arabic writing was employed in Arabia at the very beginning of Islam, from the lifetime of Muḥammad and during the caliphates of his immediate successors. The most ancient sources of evidence other than literary at our disposal are firstly, rare and uncertain: fragments of undated copies of the Ḳur'ānic text or letters of Muḥammad on parchment of which the authenticity has not yet been firmly demonstrated. Subsequently, some inscriptions are found on coinages of the type known as Arabo-Sāsānid or Arabo-Byzantine, and of greater importance are various lapidary remains, notably an epitaph from 31/652 preserved on a stele in the Cairo museum, of which the alphabet has already been extensively studied, and a historical inscription from 58/677-8 in the name of Muʿāwiya found in Arabia near al-Ṭā'if on a dam out in the countryside. These texts permit a clear knowledge of the crude forms, so simple in fact as later to cause confusion, of the seventeen characters which constitute its alphabet, eighteen if we are to include the double letter *lām-alif*, still more counting the variations imposed on the isolated, initial, medial or final letters, put forward by the grammarians, from the 2nd/8th century, according to an original scheme taking account both of their appearance and of their phonetic characteristics. The shapes thus used had been inherited from earlier Semitic scripts, but according to a line of descent which cannot easily be established. They required in any case an orthography which was the object of some later improvements, by the addition of supplementary signs, but which always demanded a reading of the Arabic based on the recognition of the words themselves and thus permitted only to trained scholars to do this.

This orthography was first based on the small number of signs adopted to designate the twenty-eight phonemes of the Arabic language, twenty-five consonants and three semi-vowels, without counting the long vowels *ā*, *ī*, *ū*, corresponding to the three vocalic tones of classical Arabic, and the short vowels which, in a Semitic language are generally considered as foreign to the "skeleton of the word" but which require no less a special system of notation, which became evident, according to the textual sources, before the end of the 1st/7th century. The same sign having been assigned to two or three phonemes, these were subsequently differentiated by the

adjunction, above or below the line, of one, two or three of those diacritical points which have been preserved to this day and to which was added also a special sign, the *shadda* or *tashdīd*, to mark the doubling of a consonant. Thus it became possible to distinguish letters such as *bāʾ*, *tāʾ*, *thāʾ*, *nūn* and *yāʾ*, in their initial and medial forms, or *ḥā*, *khā* and *djīm*, *dāl* and *dhāl*, *rāʾ* and *zāy*, *sīn* and *shīn*, *ṣād* and *ḍād*, *ṭāʾ* and *ẓāʾ*, *ʿayn* and *ghayn* as well as *fāʾ* and *ḳāf*. The introduction of this practice, which in general may be seen as the imitation of a process put into practice by Syriac writing, cannot be dated with certainty, especially as the pointing appeared to be more or less necessary according the difficulty of the words transcribed and according to the more or less hieratic and stylised character required for the writing; but the example supplied by the inscription of Muʿāwiya mentioned above would seem to prove that its use in moderation, in the form elsewhere of little oblique strokes rather then points, dates back to the same antiquity as the use of the Arabic alphabet in the ancient Muslim era. Then, later in the same century, appeared special signs for vowels.

As for the shapes themselves, we should emphasise not only the simplicity of the contours and the irregularity of proportions, but also the abundant use made of ligatures, which joined the letters between themselves in the interior of the words, so as to give the illusion of a continuous line in which the letters were placed. This fact would seem to prove that the Arabic script derives from a "well-worn" script in which characters already degenerate were preferred to facilitate the joining of cursive script; but the question remains open as to where or when this derivation took place, and by means of which models drawn from the vast family of Aramaean writings which was formerly spread over the entire Near East.

The question of origins, for which the basic documentation continues to be limited to the rare inscriptions known as "Proto-Arabic", has excited a number of theories from the statements of Bernhard Moritz, re-examined by Nabia Abbott, to the recent hypotheses of J. Starcky (see on this subject J. Sourdel-Thomine, *Les origines de l'écriture arabe à propos d'une hypothèse récente*, in *REI*, xxxiv (1966), 151-7; cf. on the same point the reservations of A. Grohmann, *Arabische Paläographie*, ii, 7-33), but to this day the question cannot be considered settled. The ancient Arabic sources, which attribute the invention of the Arabic script to persons of legendary nature, presented, according to the accounts in question, in different contexts, are on this point of very little help: they content themselves with affirming that the script was in use in the Arab kingdom of the Syria-Mesopotamia region as well as in Mecca in the 6th century A.D. On the other hand, the researches of modern scholars have as yet produced only controversial approximations. The opinion which has prevailed for more than fifty years would have it that there was a progressive transformation, in Arabic characters, of the symbols used, several centuries earlier, by the Nabataeans of the kingdom of Petra. The *petitio principi* on which this opinion rests and which consists in assimilating to the inscriptions known as "Proto-Arabic" the "Nabataean-Arabic" inscription of al-Namāra, quite different in appearance and two centuries earlier, has recently been vigorously opposed by specialist scholars of Nabataean who deny the existence, in its cursive forms, of the least resemblance to the future Arabic forms. These same specialists insist on the total hiatus that would in fact exist, as regards writing, between the distant period of the zenith of the Nabataean kingdom, in the 2nd century A.D., and the birth, in the 1st/7th century, of the Islamic state whose development ensured that of Arabic writing. So there arises for them the necessity to search out the prototypes of the Arabic characters in the symbols which served for the notation of other languages used, between the 3rd and the 6th centuries A.D., in the pre-Islamic Near East, especially in the Christian Arab kingdoms of Lower Mesopotamia, around the famous intellectual centre of al-Ḥīra [*q.v.*]. These symbols are not known to us today through any relics, but there remains as a clue the fact that the archaic Arabic script, this "linked cursive with reduced bodies for letters", as it has been strikingly defined, obeys the same principles as the Syriac script, of which some varieties no longer in use could well have been in practice in al-Ḥīra and in its surroundings.

Distinguished from archaic Arabic writing by its concern for equilibrium and regularity—this will be the second rubric—is "the imperial script" of the following period, which deserves the dynastic title of Umayyad. While remaining faithful to the preceding orthographic system, eventually improved in copies of the Ḳurʾān by the notation of short vowels, in the most anciently attested form, that of coloured dots, this script was in fact modelled, from a stylistic point of view, by the taste of the sovereigns who distinguished themselves in this sense by various innovations. Such was the official decision of the caliph ʿAbd al-Malik imposing the use of Arabic on the scribes of the central as well as of the provincial administration, and ordering the composition in that language of the legends on coinage, which represented henceforth a new type, without any décor other than calligraphic. One notes that from his reign date the first specimens of Arabic writing worthy of comparison with Greek inscriptions previous to the conquest, and it is no accident that these specimens are found on milestones, themselves erected according to ancient usages. It subsequently fell to the lot of the son of ʿAbd al-Malik, al-Walīd, to leave on the walls of the first prestige monument of Islam, the Dome of the Rock in Jerusalem, an epigraphic band of hitherto unequalled importance.

Thus there rapidly came to be felt in full force the effects of a quest for equilibrium imposing on the various letters of the alphabet a stricter form, and permitting their classification into three series based on simple geometric schemes: tall and straight letters producing, above the base line, perpendicular or oblique strokes of variable dimensions; those which develop, on the level of this central axis or slightly above it, loops formed like little circles or like quadrangular figures of variable dimensions; and those finally which exhibit, still in a timid manner, below this same axis, curves which are more or less open and generally treated as simple fragments of almost perfect circumferences. These results had been obtained by the vertical elongation of the *alif*, the horizontal extension of the *dāl* and especially of the *ṭāʾ* or the *kāf*, the harmonisation of the shape of the letters with loops, the extension of the terminal curves of the *rāʾ* and especially of the *kāf* or of the final *nūn*, the eventual turning towards the right of the termination of the final *yāʾ*. The same shapes could be inscribed in a rigid manner on stone or rough parchment, for texts slowly copied and intended to last on account of their religious or historical value (manuscripts of the Ḳurʾān or

royal inscriptions, for example), or on the contrary copied more casually, with rounding and modification of forms, when it was a question of less important texts and of private or even official letters, and written with light pens on the uniform and smooth surface of sheets of papyrus.

Differences in treatment thus began to engender observable graphical variations, without, however, permitting a distinction at that stage between a utilitarian and cursive script, marked solely by the requirements of legibility and speed, and a more dignified script aimed purely at the requirements of art or of prestige. These differences none the less indicate the two directions which were soon to be followed and on the basis of which certain specialists formerly considered themselves authorised to insist on a supposed ancient duality of Arabic writing of which the two equally primitive forms, the angular form known as "kūfic" and the flexible known as "*naskhī*", would correspond to different systems destined to be perpetuated side-by-side. Today emphasis should be laid, contrary to such a hypothesis, on the fundamental unity of the earliest Arabic writing, which Bernhard Moritz and Adolf Grohmann agreed in recognising; but it is nevertheless correct to place in the Umayyad period the individualisation of the currents which subsequently led to the ramification of its styles according to two principal branches.

It is to the nature and the vitality of the first of these currents that the third rubric should then be devoted, envisaging an angular script, at the same time slow of execution and naturally ornamental, whose aesthetic value and nobility always prevailed over convenience, but whose taste for the most varied usages no less characterised the ancient ʿAbbāsid period. Not only were copies of the Ḳurʾān transcribed in this style until the middle of the 4th/10th century, but it was also used to preserve works of erudition or pious texts of all kinds which were written on parchment, while monumental inscriptions owed to it their astonishing decorative quality.

Thus we may speak of a constant flowering of kūfic over several centuries, simple kūfic at first when writers contented themselves with reproducing, in relief and with increased breadth, the thin lines of the Umayyad compositions, subsequently ornamental when the means for enriching and adding to it appeared favourable. The successes at once artistic and epigraphic, whose achievement it permitted while observing the priority of the textual quality of the inscription, became diversified up to the turn of the 6th/12th century, in the form of various styles often deserving to bear the names of regional dynasties which had favoured them individually: one may in fact speak of Aghlabid, Ṭūlūnid, Fāṭimid or Ghaznawid kūfics for example, each presenting its répertoire of calligraphic embellishments, corresponding especially to so many historical and geographical stages in the transformation of Arabic writing in the context of an immense and soon fragmented Islamic empire.

To give an idea of these various styles and of their nature, it is not sufficient to recall the fundamental rules according to which kūfic scripts evolved, obeying a common tendency, that of combatting, by various devices, the imbalance originally present in every epigraphic band, between an upper section that was too empty and a lower section weighed down with characters crammed together. In such cases, a common tendency was to expand into palmettes the upper extremities of characters while their lower teminations little by little gave birth to slender or daring curves returning to the level of the high strokes. Other tendencies subsequently showed themselves, according to which the artists had recourse either to elongations or flexions of the letters themselves, or to casual motifs associated with the characters and situated in their backgrounds.

From the judicious use of these various procedures were born all the various types of "ornamental kūfic" which one may begin to distinguish and classify by means of the systems of analysis of alphabets brilliantly inaugurated by the works of Samuel Flury. There were, for example, the inscriptions where the letters were placed on a background entirely covered with ornamental arabesques, of which the stems could develop into asymetrical branches passing at random over the empty spaces or on the contrary crossing the characters without ever becoming confused with them, then following their coils by means of an independent and more or less involved foliated scroll. There were also techniques of developing, while starting from the letters themselves and their terminal points, either leafed or even flowered stylisations arranged regularly in a festoon, or networks of articulated lines in the style of a more or less important geometric border, capable of being extended into an unbounded knotwork pattern. Some daring experiments went so far as to insert within the letters figures of living creatures, rows of human heads for example or mixed groups of animals and humans. All these decorative processes are evoked, in modern classifications and definitions, by the terms of kūfic, leafed or flowered with ripple scroll, with floral border, with geometric border and finally anthropomorphic border. But at the same time, modifications were made of the outline of the letter itself, sometimes to the point of distorting its appearance and making one forget that the symbols in question could retain an alphabetic function under the distortions to which they were subjected. Thus there came about a proliferation of vertical strokes with counter-curves applied in the guise of "rising tails" to continue, in the upper part of the band, the final letters which originally finished below the base line. Use was already also made of breaks with rectangular turns, of elongations of all kinds, of braiding, indentations, ornamental ligatures and folding knots which characterise especially the multiple varieties of braided kūfic, although such a succinct enumeration cannot possibly take into account the gifts of imagination which made of every new decorative kūfic inscription a work of art that was unique, because based on the previous establishment of an alphabet and of an ornamental répertoire belonging to it.

Now these are precisely the typical details of this genre which marked the specific styles of the local schools which should be distinguished if one is to follow with any advantage the history of kūfic writing. Thus we observe the Syrian character of certain types of *djīm*, *ḥāʾ* or *khāʾ*. Similarly, the taste for braiding certain letters which might be, according to local tradition, the *dāl*, the *kāf* or the *hāʾ* for example, the taste also for superimposed motifs such as knots on tall strokes inserted between neighbouring letters such as the two *lāms* of the word Allāh, would distinguish the works from Khurāsān where, in the 5th/11th century, particularly refined specimens are noted. In still another context, the direct decoration of letters with flowers would have prevailed especially in an Egyptian milieu, and the perfection attained in this respect by Fāṭi-

mid inscriptions, belonging to the style to which the name *Ḳarmaṭī* "Carmathian" was for a long time erroneously applied, would crown the success of efforts begun in the mid-3rd/9th century. Finally, the sobriety which for many years remained in use in the western provinces of the Empire, in Andalusia as well as the Maghrib—which should be interpreted as a sign of artistic regionalism—concealed in the 4th/10th century, at the time of the apogee of the Umayyad caliphate in Spain, the nature of a kūfic script that was already scholarly beneath an archaic appearance of the inscribed line.

In this fashion, one may understand the fragmentation and proliferation of the local schools to which reference should be made in order to supply even a concise picture of the varieties of angular writing practised during the first centuries of Islam. Such a precise picture has never yet been drawn; but only this would enable us to understand the stylistic developments and variations which are seen subsequently to become blurred in the latter phase of this evolution, when kūfic became, after the 6th/12th century, a script set in its purely ornamental role and in some respects outdated. If in fact it continued to be used for the ornamentation of architectural surfaces, it no longer had any other role—and this would be the final phase of its evolution—except to supply controlling outlines to purely decorative compositions, which could without any geographical restriction call upon all the formulae previously tried, mingle them in the most imaginative fashion, and in particular, set a seal on their transfer from East to West. But these compositions, while continuing to be legible, were no more than symbolic, henceforth used only for transcribing short religious invocations without historical counterpart. Aesthetic quality and concealed religious sense were all that counted, and they explain the birth of varieties such as "square kūfic" which had been influenced by certain Chinese characters and which succeeded in engendering, from Central Asia to Turkey, complex and rigid types of lace-work where the distinctive fundamental features of ancient Arabic writing are barely recognisable.

It is, however, this writing whose original aptitudes for flexibility and speed are immediately revealed when one tackles, under the fourth and last rubric, the success gradually enjoyed, in the post-Umayyad period, by a rounded script whose use soon spread well beyond the offices of the administration. Not only, in fact, did this favourite script of the scribes continue to be employed for all purposes, of which there survive especially Egyptian specimens, sometimes with striking contrasts between the more carefully written, hence semi-rigid script used for the text of the document itself and the irregular cursive employed for the signatures of the witnesses; but copyists of widely differing "hands" also used it, after the end of the 3rd/9th century, for the commonest of manuscripts, and the new style came to dominate, in the 4th/10th century, the sphere of copies of the Ḳur'ān. It was the expansion of this hybrid script which has sometimes been called "broken kūfic" or *naskhī* kūfic and which seems to have spread first in the far Iranian provinces, where it was used especially for personal inscriptions on pottery. The emphasis on the play of full and slender strokes obtained by the elegant handling of the pen led to the pre-eminence of triangular as well as diagonal elements, the cursive character of which did not cease to be stressed. Soon this "transitional" script, which itself underwent a number of slightly differing regional interpretations, encountered a new vogue in the Muslim West, where it lasted longer than elsewhere and where it inspired many of the features of later writings in the Maghrib.

At the same time, there came to light in the East the first manifestations of the successive styles of writing of those copyists who appear to enjoy such prestige in the accounts of Arab authors, evoking for each one among them the studies of eminent masters and their pupils. Thus it is known that it was the vizier Ibn Muḳla [*q.v.*] who, in the first half of the 4th/10th century, took the initiative in codifying for the first time in a precise manner, by measuring them with pointing, the relationships of relative proportions binding together the various letters of the alphabet; it also fell to him to make the first systematic treatment of the best-known "six styles". A little later his reputation as a theorist of calligraphy was eclipsed by that of such accomplished artists as the great Ibn al-Bawwāb [*q.v.*] at the start of the 5th/11th century—the period in which cursive writing was judged of sufficiently high prestige to be employed subsequently in copies of the Ḳur'ān—and the no less famous Yāḳūt al-Mustaʿṣimī [*q.v.*] towards the end of the 7th/13th century. This was the period of the apogee of the rounded script often known by the convenient dynastic name of "Ayyūbid *naskhī*", before the scribes of the Mamlūk period turned towards redundant forms and a taste for thick interweavings of vertical strokes, and also before the appearance of novel tendencies, belonging especially to Iran and Turkey, which had two principal objects: on the one hand, the deliberate segmentation of the written line into sections "suspended" obliquely, in the true sense, one above the others according to a new art of writing which developed under the aegis of Īlkhānid and Tīmūrid princes before coming triumphantly into its own with the works of Mīr ʿAlī of Harāt; on the other hand, the methodical pursuit of a "monumentalisation" of cursive writing applied to vast surfaces, as was the rule for example in the schools of Shaykh Ḥamd Allāh in the 10th/16th century or of Ḥāfiẓ ʿUthmān more than a century later.

The rounded graphic forms thus ultimately held sway in the majority of Islamic lands, at all levels of the art of writing, and supplanted the hieratic forms for which they became substituted, since the 6th/12th century, in the lapidary inscriptions themselves. In this context, one could return to some of the remarks previously made in response to the more beautiful and baroque realisations of ornamental kūfic, while bearing in mind that a chronological and geographical classification has not yet been made of the most original schools according to which they flourished. Nevertheless, we should not forget the relative consistency of shapes which remains an essential characteristic and which justifies in a sense the sentimental attachment still shown today by every literate Arab, the attachment to a script of which the apparent variations have never been an obstacle to legibility while being the source of constantly renewed aesthetic achievements.

(J. Sourdel-Thomine)

ii. — In Persia

The calligraphy which developed in Baghdād culminated in Yāḳūt al-Mastaʿṣimī (d. 697/1298), the last great calligrapher at the ʿAbbāsid court. Thereafter Baghdād lost its importance, and in such

calligraphic styles as *muḥaḳḳaḳ*, *riḥān*, *thuluth*, *naskh*, *tawḳīʿ*, *riḳāʿ*, all of which made up the "six styles", *aḳlām-i sitta*, gave place to Harāt, Mashhad, Tabrīz and eventually Tehran in Persia. Persian calligraphers, under the influence of Yāḳūt al-Mustaʿṣimī, carried these six types further, and created a Persian style of calligraphy by writing in them in a way suited to their own taste, and furthermore increased the number of styles by adding their own invention of *taʿlīḳ* and *nastaʿlīḳ*.

Although in the section on *khuṭūṭ al-maṣāḥif*, Ibn al-Nadim's *Fihrist* says that the Persians, in the first period of Islam's appearance, used a type of calligraphy called *kīrāmūz* (read *pīrāmūz*? See *Aṭlas-i khaṭṭ*, 126-30) for writing their copies of the *Ḳurʾān*, yet there is no early-enough attested surviving manuscript here. Badrī Atābāy, on pp. 299-300 of his work *Fihrist-i Ḳurʾānhā-yi khaṭṭī-yi kitāb-khana-yi salṭanatī*, Tehran 1351/1972, gives a Ḳurʾān page as an example of this *pīrāmūz* style of calligraphy, yet this seems hard to prove or disprove. Some Persian scholars, e.g. Bayānī and Rukn al-Dīn Humāyūn-Farrukh have argued that this style of calligraphy emerged during the Sāsānid period and continued until just after the advent of Islam (see *Aṭlas-i khaṭṭ*, 397-8).

In order of their development, the different styles of calligraphy are as follows:

Kūfī. *Kūfī* script continued to be in use for some five centuries after the advent of Islam, especially for writing Ḳurʾāns. Moreover, it was used for writing the titles of manuscripts and their sections and the *basmalas* at their beginnings until almost the end of the 7th/13th century, often as an element of decoration.

The oldest extant Ḳurʾān written in Persian is dated 198/813, and appears to have been written for the ʿAbbāsid caliph al-Maʾmūn, see Muḥsin Shāmlū, *Sahm-i Īrān dar nashr u tawṣīʿa-i maʿārif-i islāmī*, in *Wāḥid*, no. lxxxvii, Tehran 1971, 75-85. The Ḳurʾān copied by Zayn al-ʿĀbidīn Sharīf in 1323/1905 during the reign of the Ḳādjār Muẓaffar al-Dīn, in *kūfī* and *naskh* script, represents a harking-back to the ancient *kūfī* style of calligraphy.

The *Djalī* type of *kūfī* script was often used, together with *thuluth*, as a decorative element on buildings until recent times. Good examples of *kūfī* writing, in various types, are the inscriptions of the Pīr ʿAlamdār tomb (built in 418/1027) in Dāmghān, and the Ḥaydariyya Mosque (built in the 6th/12th century) in Ḳazwīn.

Muḥaḳḳaḳ ("strongly expressed [word], tightly-woven [cloth]") has as its main characteristic the feature that the left corner of the letters ت پ ب
ی و ن م ل ك ق ف ض ص ش س ژ ز ر ذ د ث
are angled. This script was used for long-page format Ḳurʾāns and also for frames. The long-page format Ḳurʾān of Bāysunghur b. Shāhrukh b. Tīmūr (d. 837/1433), some pages of which have been preserved in Persian museums, is very famous. Djaʿfar-i Bāysunghurī (9th/15th century), ʿAbd Allāh Ṭabbākh-i Harawī (9th/15th century), and ʿAlāʾ al-Dīn Tabrīzī (10th/16th century) are the most important calligraphers after Bāysunghur. *Muḥaḳḳaḳ* yielded place to *thuluth* after the end of the 11th/17th century.

Riḥān, *riḥānī*, *rayḥān*, *rayḥānī* ("the aromatic plant basil", "having a fragrance") is a smaller version of *muḥaḳḳaḳ*, i.e. when *muḥaḳḳaḳ* is written in the size of *naskh* it is called *riḥān*. This script was also used for copying Ḳurʾāns, and like *muḥaḳḳaḳ*, started to go out of circulation after the 11th/17th century in favour of *naskh*.

Thuluth ("one-third") is generally said to have derived its name from being based on the principle of a third of each letter being sloping. This is the script from amongst the *Aḳlām-i sitta* which has survived longest. It was and still is used for every kind of frame and for book titles in all Muslim countries. The most able calligraphers in this script are: Bāysunghur (d. 837/1433), Asad Allāh-i Kirmānī (d. 892/1486), Kamāl al-Dīn Ḥāfiẓ Harawī (d. 974/1566), ʿAbd al-Bāḳī-i Tabrīzī (10th/16th century), ʿAlī Ḳulī-i Shīrāzī (10th/16th century), ʿAlī Riḍā ʿAbbāsī (11th/17th century).

Naskh ("act of cancellation, abrogation"). Here, the Persians, just like in *thuluth*, followed the style of Yāḳūt al-Mustaʿṣimī. There are some Persian manuscripts in *naskh* of the 5th/11th century which already show a gradual transition from *kūfī*. The most clear example of this is a manuscript of Abū Manṣūr Muwaffaḳ b. ʿAlī al-Harawī's pharmacological book, the *Kitāb al-abniya ʿan ḥaḳāʾiḳ al-adwiya*, now in Vienna; this was written in 447/1055 by a Persian scribe called Asadī-i Ṭūsī (see Flügel, *Die arabischen, persischen und türkischen Handschriften der kaiserlich-königlichen Hof-Bibliothek zu Wien*, 1865, ii, 534).

After a period of temporary decline, *naskh*, during the Mongol period, regained its beauty during the Tīmūrid period, but receded again in the 18th and 19th centuries. Persian *naskh* had a flavour of the *riḥān* script until the 18th century. Aḥmad Nayrīzī gave to it in the 12th/18th century a new style and liveliness, until it almost acquired a *nastaʿlīḳ* character; it had an angular look and the verticals of the letters became relatively finer, giving this script a particular beauty and fineness. ʿAbd Allāh Ṣayrafi (8th/14th century), Bāysunghur, ʿAbd Allāh Ṭabbākh-i Harawī, Asad Allāh-i Kirmānī, Muḥammad Hādī-i Iṣfahānī (d. 1135/1722), Zayn al-ʿĀbidīn-i Iṣfahānī (d. 1300/1882), Mīrzā Ṭāhir-i Tabrīzī (20th century) are the most powerful exponents of this script. Modern Persian calligraphers follow the example of Aḥmad Nayrīzī in *thuluth* and *naskh* calligraphy.

Tawḳīʿ is a variety of *thuluth*, with its letters somewhat more compressed and rounded. Another special feature of it is that the letters like و ل ژ ز ر ذ د ا are joined to the letters following them. Sometimes, however, one may come across examples of *tawḳīʿ* in which all the letters are almost joined together; sometimes the final letter of a word would be joined to the first letter of the following word. This script was used in Persia for the final page, sc. that with the colophon showing the date and place of copying and the scribe's name, of elongated format Ḳurʾāns.

Riḳāʿ is a smaller version of *tawḳīʿ* and has the same rules. *Riḳāʿ*, which was formerly used for writing letters, epics and stories, later came to be used for writing the final pages of Ḳurʾāns and especially those of learned books. The Ottoman calligraphers called this script *idjāza* or *khaṭṭ al-idjāza*.

Djalī, *djalīl* was a name given to every large type of script, but was more specifically used for the large type of *thuluth*. The *djalī* variety of *thuluth*, which was little developed during the Saldjūḳ period, gradually started to become more beautiful by the 9th/15th century, and reached its utmost beauty during the Tīmūrid and especially Ṣafawid periods. This script was used for large-sized frames and also for public buildings and their inscriptions.

Its foremost exponents included ʿAbd Allāh Ṣayrafī, Baysunghur, ʿAlī Riḍā ʿAbbāsī-i Tabrīzī and Muḥammad Riḍā Imāmī-i Iṣfahānī (11th/17th century). Amongst their works, Bāysunghur's inscription on the Gawharshād mosque in Mashhad and ʿAlī Riḍā ʿAbbāsī's inscriptions on the Masdjid-i Shāh and the Luṭf Allāh mosque in Iṣfahān are the most beautiful examples in Persian *djalī* script.

Ghubār, *ghubārī* ("dust", "dust-like") is a term for every type of very small script difficult to read with the naked eye, but is often found in the *naskh* script; some very small-sized Ḳur'āns were written in *ghubārī* script.

Musalsal ("strung together") is a term for the letters of *thuluth* script when joined to each other, rather than a special type of script. It was sometimes practised by calligraphers to show off their skill.

Siyāḳat, *siyāḳ*, a script considered to have been used from the Umayyad period onwards, has no artistic appearance and was used in financial registers and suchlike. The question whether it was used during the Sāsānid period has been put forward. See Aḥmad Gulčin Maʿānī, *Risāla dar ʿilm-i siyāḳ*, in *Madjalla-yi Dānishkade-yi Adabiyyāt*, Tehran 1344/1965.

Taʿlīḳ ("suspension, hanging together") is said to have got this name from its letters being connected to each other, and is in fact a compound of *tawḳīʿ*, *riḳāʿ* and *naskh* scripts, according to Persian scholars, and it is alleged that the sinuous style of the letters of the Pahlevi and Avestan alphabets played a rôle in its formation. *Taʿlīḳ* was used for writing books and letters and also in the *dīwān*s for official correspondence; it apparently started to be formed perhaps in the 5th/11th or following centuries, and by the 7th/13th century it emerged in its definite form. It was not used very much until the 8th/14th century, but then started to slowly lose its importance, and give place to *shikasta taʿlīḳ*; the works on calligraphy call the *taʿlīḳ* either *taʿlīḳ-i ḳadīm* or *taʿlīḳ-i aṣl*. The invention of this script is attributed either to one Khwādja Abu'l-ʿĀl (of whom nothing is known) or to Ḥasan b. Ḥusayn ʿĀlī Fārisī Kātib (4th/10th century). Aḥmad b. ʿAlī b. Aḥmad-i Shīrāzī (8th/14th century) was one of the great exponents of this script. The letters of *taʿlīḳ* are joined to each other, and letters like و ل ژ ز ر ذ د ا would be joined to the letters following them, and the script simpler than *shikasta taʿlīḳ*.

Shikasta taʿlīḳ ("broken *taʿlīḳ*) is the result of writing *taʿlīḳ* rapidly. The letters are written in a more intricate style, which makes *shikasta taʿlīḳ* difficult to read. It started to appear in the 8th/14th century, and was developed by Khwādja Tādj Salmānīyi Iṣfahānī (d. 897/1491). *Shikasta taʿlīḳ* declined in use when *nastaʿlīḳ* started to spread everywhere in the 10th/16th century, and was used decreasingly after the 19th century. Nowadays it is used in Persia for artistic display and for variety. Khwādja Ikhtiyār al-Dīn Munshī (10th/16th century) was especially famed for this script. Persians customarily call this script simply *taʿlīḳ* without the prefix *shikasta*.

Tarassul ("correspondence") is a name given by the *dīwān* secretaries to a plainer form of *shikasta taʿlīḳ*.

Naskh-i taʿlīḳ, *naskh-taʿlīḳ*, *nastaʿlīḳ*, is said in the works on calligraphy to have been formed by joining *naskh* and *taʿlīḳ*, and this compound gradually came to be pronounced as *nastaʿlīḳ*. Although it is said that it was invented by Mīr ʿAlī Tabrīzī (d. 850/1446), the existing manuscripts contradict this view and show that the invention of this script goes back as far as the 7th/13th century. In Turkey and in Arabic countries it is erroneously called *taʿlīḳ*.

Nastaʿlīḳ, after its emergence, became divided into two styles: (a) that of Mīrzā Djaʿfar-i Tabrīzī (9th/15th century) and Aẓhar-i Tabrīzī; (b) that of ʿAbd al-Raḥmān-i Khwārazmī (9th/15th century). The first style, developed in Khurāsān, was accepted as being particularly suitable to Persian taste, whereas the second style, developed in Western Persia, was gradually forgotten. The first style, later called the "Khurāsānian style", flourished under such able masters as Sulṭān ʿAlī-yi Mashhadī (d. 926/1519), Mīr ʿAlī Harawī (d. 951/1544) and Bābā Shāh-i Iṣfahānī (d. 996/1587), and reached its highest point of beauty with Mīr ʿImād-i Ḥasanī-i Sayfī (d. 1024/1615 or 1027/1617), modern Persian calligraphers follow his path.

Shikasta nastaʿlīḳ, *khaṭṭ-i shikasta*, came into existence at the beginning of the 11th/17th century under the Ṣafawids, as a result of writing *nastaʿlīḳ* rapidly and of the calligraphers being under the influence of *shikasta taʿlīḳ*. Official correspondence had been done in *shikasta taʿlīḳ* until then, but was now replaced by *shikasta nastaʿlīḳ*. Murtaḍā Ḳulī Khān Shāmlū (d. 1100/1688), Shafīʿa (d. 1081/1670) and Darwīsh ʿAbd al-Madjīd-i Ṭālḳānī (d. 1185/1771) are the great masters of this script. *Nastaʿlīḳ* was used in writing literary works, whereas *shikasta nastaʿlīḳ* was used mostly in writing letters and sometimes for official correspondence. Nowadays it is sometimes used in writing poetry in an artistic fashion. The Turks, however, showed very little interest in this particular script.

Taḥrīrī ("epistolary") is a more simple form of *shikasta nastaʿlīḳ*, used for writing letters and taking notes.

Muthannā, *khaṭṭ-i muthannā* ("facing each other"), is not a special script. Although it is possible to apply *muthannā* to any type of script, this was especially done with *thuluth* and *kūfī*.

iii. — IN TURKEY

The Turks also followed the path of Yāḳūt al-Mustaʿṣimī in the *aḳlām-i sitta* until the conquest of Istanbul in 857/1452. But with refinements of mathematical and dimensional precision introduced by Shaykh Ḥamd Allāh (840-926/1436-1520), the famous calligrapher of Sultān Meḥemmed II and Bāyezīd II's reigns, these scripts reached a peak of beauty, and as a result of this a Turkish style emerged. After the conquest, other types of script came into existence, and gradually Istanbul became a centre for the calligraphic art.

The Turks elevated the main Islamic scripts, the *Aḳlām-i sitta*, to the highest point of beauty; hence the expression became current, "the Ḳurʾān was revealed in Mecca, recited in Egypt, and written in Istanbul".

Kūfī. The Saldjūḳs if Anatolia inherited the use of this script from the Great Saldjūḳs of Persia. The best examples of its ornamental use on buildings are on the Karatay *madrasa* (built in 649/1251) and Indje Mināre *madrasa* (built in 662/1264 at Ḳonya.

The Ottomans did not favour the *kūfī* script much, though it had a restricted use during the first two centuries of the empire on buildings in Bursa, Edirne and Istanbul, e.g. the Fātiḥ mosque in Istanbul.

Muḥaḳḳaḳ and *rīḥān*. *Muḥaḳḳaḳ* was especially used for writing inscriptions within frames, and *rīḥān* for writing Ḳurʾāns. These two scripts reached their artistic peak in the 9th/15th century, but from the 10th/17th gave place to *thuluth*. Notable calligraphers here were Shaykh Ḥamd Allāh (840-926/1436-1520), Aḥmad-i Ḳarāḥiṣārī (874-963/1469-1556), Ḥasan Čelebi (d. 1002/1594) and Ḥāfiẓ ʿOthmān (1052-1110/1642-1698).

Thuluth and *naskh*. These two scripts had special forms among the Saldjūḳs of Persia, being called Saldjūḳ *thuluth* and *naskh*, and these continued to flourish in Anatolia, especially with the influence of Shaykh Ḥamd Allāh and his school; subsequently Ḥāfiẓ ʿOthmān raised these two scripts to an aesthetic climax. Modern Turkish calligraphers follow the "school of Ḥāfiẓ ʿOthmān". Some of the important masters of this school are Yediḳuleli ʿAbd Allāh (d. 1144/1731), Küčük Darwīsh ʿAlī (d. 1128/1716), Meḥmed Shawḳī (d. 1306/1888), Naẓīf Bey (d. 1332/1913), Kāmil Aḳdiḳ (d. 1941), Muṣṭafā Ḥalīm Özyazīdjī (d. 1964). The difference between the schools of Shaykh Ḥamd Allah and Ḥāfiẓ ʿOthmān is, in fact, only in minor and superficial details.

Tawḳīʿ and *riḳāʿ*. During the Ottoman period, when a student received his diploma (*idjāzat-nāma*) in *thuluth* and *naskh* calligraphy, his teacher would authorise and sign it using *riḳāʿ* script; hence this last was called *idjāza* or *khaṭṭ-i idjāza*. The calligraphers mentioned under *thuluth* and *naskh* also used these two scripts very beautifully (see album of Shaykh Ḥamd Allāh, Topkapı Sarayi Library, E.H. no. 2084, 2086, and also album of Ḥāfiẓ ʿOthmān, Aḥmed III, no. 3655).

Djalī. The most typical and beautiful examples of *djalī* in the period of the Anatolian Saldjūḳs, although they lack any dynamic quality, are on the portals of Indje Mināre *madrasa* and the Ṣāḥib ʿAṭāʾ *külliyye* in Ḳonya. The first change in *djalī* made by the Ottomans dates from the 9th/15th century, so that a distinctive Ottoman *djalī* starts to emerge. The pioneer here was the calligrapher ʿAlī b. Yaḥyā al-Ṣūfī, writer of the inscription on the Fātiḥ mosque and the Bāb-i Humāyūn in Istanbul. *Djalī* acquired an especially vigorous character in the 19th century through the works of Muṣṭafā Rāḳim (1171-1241/1757-1825), and thus an "Ottoman *djalī* school" was established. Maḥmūd Djalāl al-Dīn (d. 1253/1837) also founded a school of *djalī* reminiscent of Aḥmad Ḳarāḥiṣārī's style of three centuries previously, but it was only followed by a few; Turkish calligraphers today follow the way of Muṣṭafā Rāḳim. Shafīḳ Bey (d. 1297/1880), Sāmī Efendi (d. 1330/1912), Kāmil Aḳdiḳ, Ḥalīm Özyazīdjī and Ḥamīd Aytač (b. 1309/1891) are the eminent masters of this school. *Djalī* script especially was used in inscriptions.

Ghubār, *ghubārī*. Some very small-size Ḳurʾāns were written in this script, meant for carrying on the tips of banners during battle; some examples of these may be seen in the museums.

Musalsal. It appears that the *musalsal* method of writing was followed for some of the texts done in *riḳāʿ* during the period of the Anatolian Saldjūḳs. But this method was most generally applied to *thuluth*. Ahmad Ḳarāḥiṣārī sometimes used the *musalsal* style.

Siyāḳat, *siyāḳ*. We already know that *siyāḳat* was used in the financial land register and *awḳāf* offices by the Saldjūḳs of Anatolia (see Houtsma, *Recueil de textes, Histoire des Seldjoucides d'Asie Mineure*, ii, Leiden 1902, 253). We do not much know about the situation of *siyāḳat* during the first period of the Ottoman Empire, i.e. up to the reign of Meḥemmed II, since very few official registers of this period have survived. We do, however, come across the use of *siyāḳat* in the documents of that Sultan's reign.

Taʿlīḳ. Although we find some simple patterns in this script in the documents of Meḥemmed II's reign, it was little-used in the later periods, and was not favoured to any great extent by the Ottomans. (For examples, see: *Fatḥ-nāma-i Agriboz*. Topkapı Sarayı Arşivi no. E. 10822, and Tahsin Öz, *Topkapı Sarayında Fatih Sultan Mehmed devrine ait vesikalar*, in *Belleten*, xiv (1950) 49. *Shikasta taʿlīḳ* and *tarassul*, like *taʿlīḳ*, were not used in Turkey.

Dīwānī. Although the script, according to the Turkish sources, was allegedly invented for writing official documents and registers of the *Dīwān-ı-Humāyūn* founded by Meḥemmed II after the conquest of Istanbul, there is no doubt that it must have existed before then, probably evolving through the inspiration of *taʿlīḳ*. Reading *dīwānī* depends on a knowledge of its rules, since in this script letters like و ژ ز ر ذ د ا are joined to following letters like ش س ا ل ك following them. *Dīwānī* written contrary to the rules is called *dīwānī ḳırması* "broken *dīwānī*".

This is also a result of writing *dīwānī* rapidly. We do not know the names of the *dīwānī* calligraphers until those of the end of the 19th century, since it was not customary to sign the documents issued by the *Dīwān*. *Dīwānī* reached its peak of perfection in the 19th century. Some of the *dīwānī* calligraphers, famous at the beginning of the 20th century, are Sāmī Efendi, Kāmil Aḳdiḳ, Ismāʿīl Ḥaḳḳī Altunbezer (d. 1946), Ḥalīm Özyazīdjī and the still-living Ḥāmid Aytač. The use of *dīwānī* passed to the Arab lands through the Ottoman influence, and is still used in those countries.

Djalī dīwānī. This is a variant type of *dīwānī* with the letters written within each other, and used for writing *fermāns* and *berāts*. It was written, like *dīwānī*, from the top-right hand of the sheet to bottom-left hand in an oblique direction and with every line rising upwards at its end. The same vowel points used in *thuluth* ar used in this script, and empty spaces are filled with small dots. *Djalī dīwānī* flourished from the 9th/15th century onwards, its perfection being in the 19th century. The calligraphers of *dīwānī* also wrote in this script.

Nastaʿlīḳ. We come across the first examples of this script in Turkey during the reign of Meḥemmed II. It was brought to Turkey by calligraphers coming to the Ottoman court from Persia, and flourished under Darwīsh ʿAbdī (d. 1057/1647) and Kātibzāde Meḥmed Refīʿ (12th/18th century), and reached as high a standard of beauty as in Persia. It was Yasārīzāde Muṣṭafā ʿIzzet (d. 1265/1849) who freed Turkish *nastaʿlīḳ* from Persian stylistic influence, and thus a distinctive Turkish *nastaʿlīḳ* style came into existence. This last has unchanging geometrical and mathematical measurements, and the letters are slightly wider and longer than in Persian *nastaʿlīḳ*. Sāmī, Khulūṣī and Nedjm al-Dīn (d. 1976), are the great masters of this style. Although the Turks called the type of *nastaʿlīḳ* written rapidly and contrary to the rules *taʿlīḳ ḳīrmasī*, it is more correct to call it *nastaʿlīḳ ḳīrmasī*. *Nastaʿlīḳ*, used for writing poety and for inscriptions, was also used in the office of *Shaykh al-Islām*.

Shikasta nastaʿlīḳ. This was very little used in Turkey, though the official papers of the *Shaykh al-Islām*'s office were sometimes written in this script. Turkish *shikasta nastaʿlīḳ* is less complicated than that of Persia.

Rīḳʿa, rīḳʿī. This was probably invented during the second half of the 12th/18th century by simplifying *dīwānī* script, on the evidence of the archival sources. The main characteristics of this script are that its letters are less rounded and more straight. *Rīḳʿa* was used along with *dīwānī* in the *Dīwān-i Humāyūn*, and just like Persian *shikasta nastaʿlīḳ*, it also became a standard form of hand-writing amongst Turks, used for letters and every kind of correspondence.

The type of *rīḳʿa* used in the *Bāb-ī ʿAlī* was an improved form devised by Mumtāz Efendi (d. 1287/1871), and hence was called either *Mumtāz Efendi rīḳʿasī* or *Bāb-ī ʿĀlī rīḳʿasī*. A second change in *rīḳʿa* was made by ʿIzzet Efendi (d. 1320/1902), hence is called *ʿIzzet Efendi rīḳʿasī*; this has softer lines than the previous type. *Rīḳʿa* written rapidly and without adhering to the rules is called *rīḳʿa ḳīrmasī*.

Khaṭṭ-i muthannā. Much importance was originally attached to this script. There are very beautiful patterns of it in the Ulu Cami in Bursa, but use of it decreased after the 10th/16th century. It was also called *ʿaynalī yazī* ",mirror-like writing".

Appendix. Artificial scripts used in both Persia and Turkey.

These are the scripts which have been invented by distorting other scripts.

Resim yazī. This means drawing pictures with script. Although this could have some attractive aspects, the first-class Persian and Turkish calligraphers did not attach great importance to this practice.

Khaṭṭ-i muʿammāʾī. This can be applied to any script, and is the re-arrangement of a *ḥadīth* or some other important saying in a way which is difficult to read.

Khaṭṭ-i shadjarī ("tree-like writing"). In this script, so-called by western scholars, the letters bear a resemblance to the branches of a tree. It was applied to *thuluth*, and was sometimes used in both Persia and Turkey for writing book titles.

Khaṭṭ-i sünbülī ("hyacinth script"). The letters of this script, invented by the Turkish calligrapher ʿĀrif Ḥikmet (d. 1337/1918), resemble a hyacinth, and are also reminiscent of the letters of *dīwānī*.

Ālev yazīsī ("flame-like writing"). The letters of this script, which was invented by the Turkish calligrapher Ismāʿīl Ḥaḳḳī Baltadjīoghlu (still alive), resemble a flame. This style may be also applied to *thuluth*.

(ALĪ ALPARSLAN)

iv. — IN MUSLIM INDIA

The earliest extant Arabic writing in the form of

an inscription is found in South India at Trivandrum. This is in an old mosque at Koelum and has been written in a very crude form of *naskhī* style of writing: Ismāʿīl—109 [727]—b. Malik Dīnār, in three lines (*Majalla Ṭilsānīn*, Hyderabad. Dn, i, 51. However, the Pakistan Archaeological Department has recently discovered near Thaṭṭa at Bhanbhore two inscriptions written in *kūfī* script, on marble slabs and dated 290/902 and 294/906 (M. A. Ghaffur, *The calligraphers of Thatta*, Karachi 1968, 49, 63). The conquests in Sind of Muḥammad b. Ḳāsim in the Umayyad period (93/711) had extended beyond Daybul to Multān, and he had built mosques in the conquered area; this doubtless implied the official introduction of Arabic script into the Indian sub-continent. There are two old inscriptions in Sind, one at Rohri on an old mosque of Khʷādja Khiḍr dated 341/952, and the other at Sakhhar showing the date of death of one Saʿd al-Dīn in 483/994. Both are in ordinary *naskhī* characters (*Epigraphia Indo-Moslemica*, Calcutta 1912, 54, 120).

In the early 5th/11th century, the Ghaznawids [*q.v.*] under Sultan Maḥmūd began raiding into Northern India and established military headquarters at Lahore. Maḥmūd had struck at Lahore his *tankas*, which bore both Arabic and Sanskrit versions on their two sides, and the town also became a centre for literary activity. There is extant in the Panjab University Library, Lahore, an Arabic ms. of the *Bahdjat al-nufūs wa'l-asrār fī ta'rīkh al-hidjrat al-mukhtār* by ʿAbd Allāh b. Mālik which was transcribed at Lahore in 436/1044 in a very ordinary *naskhī* script. The present writer has also discovered an Arabic inscription on the rear wall of the Katčh Masdjid in Aḥmadābād which is dated 24 Rabīʿ I 445/14 July 1053. It is in an ordinary *naskhī* script, and may be read as: "This Mosque was built on 24 Rabīʿ I, year 445". Its authenticity is guaranteed by two Persian separate later inscriptions fixed on its right and left sides, which show that it came from the foundation of the present mosque (*The earliest Muslim inscription in India from Aḥmadābād*, in *Proceedings of the Indian History Congress*, iii, Calcutta 1939, 647-9).

The Ghaznawid régime was replaced in 586/1190 by the Ghūrids [*q.v.*], whose commanders subsequently established their capital at Dihlī [*q.v.*]. The congregational mosque was built there in 587/1191 of red stone by Ḳuṭb al-Dīn Aybak, the so-called *Ḳuwwat al-Islām*. It was finally inaugurated by the Sultan Muʿizz al-Dīn Muḥammad b. Sām Ghūrī in 594/1198. This mosque's arches and façade bear inscriptions in several varieties of Islamic script, such as *ṭughrā, kūfī, naskhī and thulth*.

Also, during the period of the Slave Kings of Dihlī and after, the copying of manuscripts flourished, the *naskhī* script being especially popular. It is recorded that Shihāb al-Dīn, the calligrapher, was made Ṣadr-i Djahān during the Khaldjī period (*Ta'rīkh-i Fīrūzshāhī*, Calcutta 1862, 353; Farishta, ed. Lucknow, 129, 133, 322, 335, etc.).

The introduction of the *nastaʿlīḳ* script into the sub-continent was mostly due to the Mughals, Mīr ʿAlī Tabrīzī being generally regarded as its originator, who wrote one manuscript of the *Kulliyyāt* of Khʷādjū Kirmānī in 798/1395-6 (B.M. Add. 18.113) at the court of Sultan Aḥmad Djalāyir at Baghdād. There exists an illustrated manuscript of the *Memoirs* of Bābur in this script which was copied by ʿAlī al-Kātib in 937/1530-1 in Alwar state in India, and many calligraphers seem to have used this style of writing. In the mausoleum of Akbar at Āgra, the Emperor's sarcophagus on top of the mausoleum was adorned in inscriptions this style of writing, written by the scribe ʿAbd al-Ḥaḳḳ.

In the pre-Mughal period, when use of the *naskhī* script flourished, special attention was devoted to the writing of the Ḳur'ān, and a special style arose within the sub-continent for the Ḳur'ān, generally called *Bāhar*, referring to a special type of paste which was applied to paper to be used for writing the text of the Ḳur'ān; hence the script used on this paper came to be called the *khaṭṭ-i bāhar* (Wadjīd ʿAlī, *Maṭlaʿ al-ʿulūm wa-madjmaʿ al-funūn*, Lucknow 1913, 331; Cl. Huart, *Les calligraphes et les miniatures de l'Orient Musulman*, Paris 1908, 51). There exists in the Kābul Museum a Ḳur'ān which was transcribed in this style by *ḳāḍī* Abū Bakr Yaʿḳūb b. Nāṣir al-Dīn at Lahri (Sind) on Friday, 17 Rabīʿ I 776/26 August 1374. One manuscript of a commentary on the Ḳur'ān in the library of the Panjab University at Lahore has the text of the Ḳur'ān in this *Bāhar* script and the commentary in ordinary *naskhī*.

During the absence of the Emperor Humāyūn in Persia, Shēr Shāh Sūrī built in stone the grand mosque in the old fort of Dihlī, with its arches and façade adorned with Ḳur'ānic inscriptions, including *Sūrat Yāsīn* on the central part of the façade in *thulth* characters, perhaps the finest example of *thulth* from those days.

Abu 'l-Faḍl ʿAllāmī [*q.v.*] devoted a full chapter of his *Ā'īn-i Akbarī* to calligraphers and miniaturists, reflecting Akbar's patronage of outstanding artists. *Nastaʿlīḳ* was especially favoured; its exponents included Mullā Muḥammad Ḥusayn of Kashmīr, ʿAbd al-Raḥīm, Muḥammad Bāḳir, Mīr Husayn Kalingī and others. Special mention should be made of Sulṭān Bāyazīd Dūrī, who came at Humāyūn's court during the last years of his reign, and wrote one copy of the *Dewāl Rānī Khiḍr Khān* of Amīr Khusraw in 967/1559-60 during the early years of Akbar's reign (see *Oriental College Magazine*, Lahore 1934); also, there exists an inscription on the wall of a mosque in Nagawr (Rajputana) composed and written by Kātib al-Mulk Dūrī in 976/1568-9 (*Epigraphia Indo-Moslemica*, 1950, 38-9; Badāūnī, *Muntakhab al-tawārīkh*, Calcutta 1869, iii, 227-9). There were many other calligraphers at Akbar's court employing various styles; the calligrapher Bāḳī Muḥammad of Bukhārā, who wrote the decorative inscriptions on the tomb of ʿĀtiḳa Khān in the compound of Ḥaḍrat Niẓām al-Dīn Awliyā' at Dihlī, should be mentioned here.

At Akbar's court, Ashraf Khān (d. 980/1572) was the *Mīr Munshī* [see KĀTIB, iii. In India], and also a poet; his duties included the inditing of *farmāns* (*Muntakhab al-tawārīkh*, iii, 181). The calligraphy used for these *farmāns* was the *khaṭṭ dīwānī*, one defined by Anand Ram Mukhliṣ (d. 1164/1750) as a variety of writing which could not be immediately read by everyone (*Bahār-i ʿAdjam*, i, 376). This style for writing *farmāns* was used only at the Mughal court in India.

Akbar died in 1014/1605, and his son Djahāngīr [*q.v.*] who succeeded him especially encouraged the fine arts. During this period, ʿAbd al-Raḥīm, Muḥammad Ḥusayn of Kashmīr and ʿAbd Allāh, were given the titles of ʿAnbarīn Ḳalam, Zarrīn Raḳm and Mushkīn Ḳalam. He was the lover of the Persian master Mīr ʿAlī of Harāt, and it is recorded that once he was given a special present by Khān-i Khānān ʿAbd al-Raḥīm of Īrānayn of an illustrated manuscript of the *Khamsa* of Niẓāmī (*Tūzuk-i Dja-*

hāngīrī, Lucknow 1914, 351). During the reign of S̲h̲āh D̲j̲ahān, who succeeded his father D̲j̲ahāngīr in 1037/1628, two great calligraphers came to his court from Persia, sc. Rukna, who wrote the manuscript of the *Gulistān* of Saʿdī in 1048/1638, and who was also a poet, and ʿAbd al-Ras̲h̲īd Daylamī, who was related to the famous calligrapher Mīr ʿImād of Persia and was made the royal librarian. Muḥammad Ṣāliḥ Kanbū has a special chapter dealing with the calligraphers, in his *Amal-i ṣāliḥ* (Calcutta 1939, iii, 443-6). It contains mention of Muḥammad Murād of Kas̲h̲mīr, Āḳā Ras̲h̲īd Daylamī, Mīr Muḥammad Ṣāliḥ and Muḥammad Muʾmin, the sons of Mīr ʿAbd Allāh Mus̲h̲kīn Raḳam, S̲h̲araf al-Dīn ʿAbd Allāh, Mīr Sayyid ʿAlī Tabrīzī and Mīrzā Muḥammad D̲j̲aʿfar K̲h̲ān, called Kifāyat K̲h̲ān and inventor of the *s̲h̲ikasta* style of writing, and D̲j̲amāl al-Dīn Yūsuf, who also used the *s̲h̲ikasta* hand (see *Ars Islamica*, xi, 423-5).

This interwoven *s̲h̲ikasta* script is defined by Anand Ram Muk̲h̲liṣ in his *Miʾrāt al-iṣṭilāḥ*. One manuscript of the *Gulistān* of Saʿdi transcribed by D̲j̲aʿfar K̲h̲ān Kifāyat K̲h̲ān in 1086/1675-6 is preserved in the National Museum of Pakistan at Karāčī, written for his son ʿAbd Allāh, called Darāyat K̲h̲ān; this style was accordingly called *Darāyat k̲h̲ānī*. Finally, it may be recalled that the Emperor Awrangzīb [*q.v.*] used to write out copies of the Ḳurʾān and send them to the Holy Cities of Arabia, but he never signed these; he was the pupil in calligraphy of Sayyid ʿAlī K̲h̲ān D̲j̲awhar Raḳam, who died in 1097/1686 (*Tad̲h̲kirat-i k̲h̲ūs̲h̲nuvīsān*, Calcutta 1910, 56-7).

Bibliography: given in the article.

(M. Abdullah Chaghatai)

v. — In South-East Asia

Here the Arabic script was, until *ca.* 1500, almost exclusively used for writing Arabic, the Trĕngganu stone inscription, dated probably 726/1326 or 788/1386 and written in Old Malay, being a noticeable exception. At the beginning of the 16th century the Arabic script became one of the most common scripts for Malay and other Indonesian languages. One of the oldest known texts in Arabic script in South Asia is the Arabic inscription of Leran on the northern coast of East Java, probably to be dated 475/1082. This tomb stone of "the daughter of Maymūn" may have been imported, together with its inscription. In any case, it remains so far an isolated testimony to the use of the Arabic script in Indonesia, since the next example, the tomb stone of Sultan Malik al-Ṣāliḥ of Tarai in northern Sumatra, is dated 691/1292. This was followed by a number of other tomb stones, all but one written in ornamental Arabic script of Persian type and probably imported from Gud̲j̲arāt. The exception is the inscription from Minye Tujuh in Atjeh, dated 782/1380 and written in a type of Malayan script, but apparently influenced by the style of Arabic writing. A few other Arabic tomb stones in the Malay peninsula are dated in the 9th/15th century. In Java, the most important are found on Muslim tomb stones (*maeʿsan*) in Troloyo, near Tronnlan. They have a quotation from the Ḳurʾān or other sacred texts in Arabic on one side, and a date expressed in Old Javanese numerals on the other. The script, fully discussed by Damais (*Études Javanaises*, i. *Les Tombes Musulmanes datées de Trâlâyâ*, in *BEFEO*, xlviii/2 (1957), 351-415), corresponds to that of contemporary Arabic inscriptions elsewhere in the Muslim world. The best known Arabic inscription in Java of this period is that on the tomb of Malik Ibrāhīm at Grĕsik, north-east of Surabaya, dated 822/1419 and beautifully written in an ornamental Arabic which is similar to the contemporary inscriptions of Tasai and Gud̲j̲arat.

Bibliography: J. G. de Casparis, *Indonesian palaeography*, in *Handbuch der Orientalistik*, vi, section I, 70-2 and literature quoted there. (Ed.)

K̲H̲AṬṬ, more precisely *al-k̲h̲aṭṭ bi-raml*, the original name for Arab geomancy. In the Islamic era, *raml* (or *ʿilm al-raml*) was dominant, but with the growing influence of astrology on the occult sciences, the term *s̲h̲akl* (pl. *as̲h̲kāl*), "figure" was used (see below, the expression *as̲h̲kāl al-raml*, *as̲h̲kāl al-turāb*, *ḥulūl al-as̲h̲kāl*), From *s̲h̲akl* are derived "squill" a figure in geomancy, and "to squill", to practise divination by sand, cf. G. Ferrand, in *JA*, 10th Series, vi (1905), 195. In Madagascar, the words *sikili* and *skidy* also denote geomantic figures, cf. G. Ferrand and M. Steinschneider, in *ZDMG*, xxxi (1877), 762-5.

The development from *k̲h̲aṭṭ* to *raml* began with the juxtaposition of the two terms. Indeed, *k̲h̲aṭṭ al-raml* is frequently used to denote geomancy (cf. for example, Ibn K̲h̲aldūn, *Muḳaddima*, i, 203-9, tr. by Slane, i, 232-40, tr. Rosenthal, i, 226-34, Leiden ms., Cat. de Jong and de Goeje, iii, 184). Instead of *k̲h̲aṭṭ*, *ḍarb* began to be used especially in dialect; *ḍarb* is in fact the modern substitute for *ṭarḳ*, which was used originally to denote lithomancy, so we find that *k̲h̲aṭṭ* = *ṭarḳ* = *ḍarb* as terms for geomancy.

At first sight, *k̲h̲aṭṭ* is the line which the geomancer traces on the sand when, strictly speaking, he is practising psammomancy. This is the meaning of *raml* also, but, as well as the sand, *raml* and *k̲h̲aṭṭ* mean the black or white lines on the hooves of wild cattle or on the flanks and the backs of stags (cf. *TA*, vii, 351, l. 29; details in T. Fahd, *La divination arabe*, Leiden 1966, 197 f.). Lexicographers have shown that *ṭarḳ*, *ʿilm al-k̲h̲aṭṭ* and *ʿilm al-raml* (cf. *TA*, v, 129, l. 4) are perfectly synonymous.

Ṭarḳ and *ḍarb* are also synonymous and originally denoted the "casting of pebbles", that is, lithomancy (*al-ṭarḳ* or *al-ḍarb bi'l-ḥaṣā*). The technicalities of this cleromantic rite are unknown to us, but is supposed to have consisted of casting pebbles on the sand and of interpreting the patterns they made. In a recent source, al-Alūsī, *Bulūg̲h̲ al-arab*, iii, 323, the following definition is found: the *ṭarḳ bi 'l-ḥaṣā* consists of finding the answer to a question, which has been posed by a questioner, from the signs which are given by the way pebbles have fallen on top of each other. Instead of pebbles, grain or nuts could be used (cf. Ibn Khaldūn, *op. cit.*, i, 191; ii, 177; tr. de Slane, i, 191; ii, 205 f; tr. Rosenthal, i, 214, ii, 201).

From the marks made by the pebbles on the ground lines were traced in the sand, and from this idea there has been a gradual development which ultimately results in making *ṭarḳ* (or *ḍarb*) *bi 'l-ḥaṣā* the synonym of *k̲h̲aṭṭ bi 'l-raml*. This development occurred very early; Ibn al-ʿArābī (died *ca.* 230/844), following Abū Zayd al-Anṣārī (died 215/830), defined the *ṭarḳ bi 'l-ḥaṣā* as the act of tracing marks on the ground (for details, see *Divination arabe*, 196 ff.).

Thus *al-ṭarḳ bi 'l-ḥaṣā* and *al-k̲h̲aṭṭ bi 'l-raml*, two different divinatory practices, became progressively confused in the Islamic era and denoted geomancy in general; this may be explained by the great variety of geomantic procedures. *Ṭarḳ* was the observation of the fall of pebbles on sand; the marks they made were joined by other marks (*k̲h̲uṭūṭ*) in order to complete a figure (*s̲h̲akl*). When these figures became

stylised at a particular place, a board was used, which was covered with sand or even flour, and the finger was drawn over it at random; the shapes formed in this way were then examined. A sheet of paper could be substituted for the board, and on it pencil dots were marked at random or, according to Ibn Khaldūn, on four lines (cf. ref. in Doutté, *Magie et religion*, 3789; compare R. Jaulin, *La géomancie*, 17, n. 1).

Behind this popular, primitive practice lay a divinatory art of extreme complexity. Indeed, since the introduction of astrological and mathematical speculation into the science of geomancy, we must deal with a theory as esoteric as that of the *djafr* [*q.v.*]. As in the *djafr*, one is successful in the study of geomancy by being able to isolate numerous speculations and determining laws from them. The *Analyse formelle* by R. Jaulin, with contributions by R. Ferry, F. Djean and B. Jaulin, achieves this aim. It is not possible to give a complete picture in an article of restricted size. But it should be said that the sixteen shapes, which are obtained by the permutation of the four basic lines and their eight joins, giving rise to four even and four uneven symmetrical shapes, reduce the basic geomantic values by assigning to them agreeable or contrary meanings; they are also associated with the "external" and "internal" elements concerned with more or less reassuring or dangerous, favourable or ill-omened ideas (cf. Jalin, *op. cit.*, 53-71).

In this mathematical analysis, arithmomantic and geomantic considerations have had their part to play, but they do not in themselves make a geomancer. In geomancy, two other components must be represented, astrology and a predisposition to "perceive hidden meanings" (*idrāk al-ghayb*). Ibn Khaldūn emphasises these two aspects in a long paragraph devoted to this art of divination (*Muḳaddima*, i, 203-9, tr. de Slane, 232-42, tr. Rosenthal, 226-34, with references and figures in the notes).

After a description of the sixteen geomantic combinations, each named and classified into favourable and unfavourable, Ibn Khaldūn explains this classification by the astral influences which are brought to bear on each of them. Indeed, the sixteen geomantic combinations are set under the domination of the twelve signs of the zodiac and of the four cardinal points. From then onwards the geomancers, called by him *munadjdjimūn*, "astrologers", have derived meanings to provide geomantic figures from astrological speculations. The author contests the validity of this method, disagreeing with the fact that the astrological deductions have natural signs as their basis while geomantic deductions rest on conventions.

Even more aberrant, Ibn Khaldūn thinks, is the pretension of certain geomancers to succeed in perceiving the unknown by applying their minds to the geomantic figures and then abstracting a complete understanding of the human sphere and penetrating the spiritual realm, in the manner of the soothsayers and, particularly of those among them who practise omoplatoscopy, hydromancy and lecanomancy. Ibn Khaldūn thus concludes: "The truth that you must present to the mind is that the supernatural cannot be revealed by any technique; it cannot be perceived by an élite class of men naturally predisposed to pass from the conscious world into the spiritual". Concerning the doctrine of Ibn Khaldūn relating to divination, cf. *La divination arabe*, 45-50. According to him, the astrologers qualify as the type of men called "Venusians" because of the influence which Venus exerts on them on the day of their birth, by which they are fitted to perceive supernatural phenomena.

Because of a verse in the Ḳurʾān (XLVI, 4), interpreted by some as alluding to geomancy (cf. Ṭabarī, *Tafsīr*, xxvi, 3, l. 3 ff.) and a *ḥadīth* noted by ʿAṭāʾ b. Yasār (Wensinck *et al.*, *Concordance*, i, 40), which speaks of a prophet who practised geomancy excellently, some licence has been given to this art and it has been allowed to experience an amazing expansion across the Islamic world. Like oneiromancy, Arab geomantic science extends beyond the frontiers of the Muslim empire, both to the Indian coasts and the coasts of Byzantium, and to the Latin West and Black Africa and Madagascar (cf. C. H. Becker, *Neue Literatur zur Geschichte Afrikas*, in *Isl.*, iv (1913), 305; B. Carra de Vaux, *La géomancie chez les Arabes*, *ap.* Paul Tannery, *Mémoires scientifiques*, iv (1920), 299-317; A. and L. Delatte in *Mélanges F. Cumont*, Brussels 1936, 575-658).

This expansion has led to a great number of manuals and treatises, examples of which can be found in almost all the Arab collections in the East and the West. Many are anonymous works like: *Risāla fī 'l-raml* (Aya Sofya, 4785 (1), *risāla* 34); *Rasāʾil fī ʿilm al-raml* (*ibid.*, 4860 (64), 1-9, cf. also *ibid.*, 2052 (36), 14); *al-Muntakhab fī ʿilm al-raml* (Asir Ef. 1164, 6 = Reisülkuttâb Mustafa Ef., 11646, ff. 107b-112b); *Kitāb al-raml* (Beşir Ağa, 430; *al-Kawkab al-azhar fī ʿilm al-athar wa 'l-raml* (*ibid.*, 433); *Risalā fi 'l-raml*, in Turkish (Fatiḥ, 3430); *Fi 'l-raml wa 'l-nudjūm* (Ḥamīdiyye, 189, 6); *Fī ʿilm al-raml* (*ibid.*, 1468, 7); *Kitāb fī ʿilm al-raml* (Nuruosmaniye, 3639); *Kutub ʿilm al-raml* (Bağdatlı Vehbi Ef., 920-6; Saray, Ahmet III, 3475 ff.); *ʿIlm al-raml* (Leiden, Cat. de Jong and de Goeje, iii, 184; Gotha, *Cat. Pertsch*, iii, 487 f.); *Ashkāl al-raml* (Cambridge, Trinity College, *Cat. Palmer*, p. 29, the page describes several geomantic figures); several geomantic mss. in Karshūnī at Oxford (Bodleian vi, col. 596 f., no. 180, 3 and 4; col. 598, no. 181, 2, 4, 6); *Kitāb ʿadjīb fī 'l-raml* (Aleppo, Sbath, 58, 5; 580, 1 (abridged) and 2: *K. al-Shadjara wa 'l-thamara wa 'l-nuḳta*, attributed to Daniel, 1180, 1 and 81); Vatican, *Cat. Levi Della Vida*, index, 299-300; Berlin, *Cat. Ahlwardt*, 4200-12; *Kanz al-muḥīṭ* (Copenhagen, xxiii, in Turkish); etc.

Among the best known authors of geomantic works are Abū ʿAbd Allāh Muḥammad al-Zanātī, who founded a school in this field. His followers are called al-Zanātiyya, and in fact a ms. from the collection Ismail Saib Sincer (Ankara), I, 2111, not foliated, 24.5 × 17.5 × 1, *naskhī*, no date, entitled *K. fī ʿilm al-raml ʿalā tartīb al-Zanātiyya* ... (the same collection, under No. 1, 1970, contains a *madjmūʿa* with two geomantic drawings; *Bayān fī ḍarb al-raml*, pp. 1-38, attributed to al-Zanātī, and *Risāla min ʿilm al-raml fī 'stikhrādj al-ḍamīr*, pp. 39-61, anonymous); the work which is attributed to him bears different titles: *K. Fatḥ al-aḳfāl fī ʿilm al-ashkāl* (Saray, Ahmet III, 1603, 120 ff., 28 × 20, *naskhī*, very fine illustrated copy, no date); *Ḥulūl al-ashkāl* (Nuruosmaniye, 3638, 28 fol., 25.5 × 17, fine *naskhī*, no date); lithographed in Cairo in 1280/1863 under the title *K. al-Faṣl fī uṣūl ʿilm al-raml*, and also edited in Cairo in 1316/1908 under the title *al-Aḳwāl al-marḍiyya fi 'l-aḥkām al-ramliyya*. There is also *Lubāb al-lubāb fī ʿilm al-khaṭṭ wa-ashkāl al-turāb* (Cairo ms. 7622). The geomancy of al-Zanātī was translated from Persian into Greek verse by the monk Arsenius in 1266 (cf. M. Steinschneider, *Europ. Übersetz.* 7, No. 22).

Next in order of fame comes ʿAbd Allāh b. Maḥfūf

al-Munadjdjim, who, according to the colophons of the mss. Esat Ef. and Rağip Paşa, died before 664/1265. His work is entitled *Muthallathāt Ibn Maḥfūf fi'l-raml* (Râgip P., 964, 72 fols. 21.5 × 16). It is a fine copy made by Aḥmad ʿĪsā from an exemplar dated from 664/1265, *naskhī*; another copy made from the same original but bearing the title *Risālat raml* is found in the collection Esat Ef., 1988 (83 fols., 21.5 × 16, *naskhī*) and was made by Aḥmad ʿIyâd at al-Madrasa al-Ẓāhiriyya. The Berlin ms. 4200 (2), pp. 12-67, has some Berber glosses and contains some tables, and the one at Manchester, 373, is entitled *K. fi'l-raml*. His work was translated into Latin (cf. M. Steinschneider, *op. cit.*, II, 1, No. 125; Thorndike, *A catalogue of incipits of mediaeval scientific writings in Latin* (revised and augmented by Lynn Thorndike and Pearl Kibre, London 1963, 452, 1281, 1553). The title *Liber de tribus figuris spiritum*, placed under the name of Candas the astrologer (Thorndike, *op. cit.*, 1481) recalls the *muthallathāt*.

Several other geomantic writings are known which are enumerated in *La divination arabe*, 202-4. It should be noted that two of them have been translated into Latin, the one of Aḥmad b. ʿAlī b. Zunbul al-Maḥallī, surnamed al-Rammāl (died after 960/1653) entitled *K. al-Maḳālāt wa-ḥall al-mushkilāt fī ʿilm al-raml* (ms. Üsküdar, Selim Ağa, 547 bis, 168 fols., 29 × 20, *naskhī*, no date), an excellent and well-illustrated treatise with an introduction and thirty chapters (cf. F. Klein-Franke, *The Geomancy of Aḥmad b. ʿAlī Zunbul: a study of the Arabic Corpus hermeticum*, in *Ambix* xx (1973), 26-35) and that of Abū Saʿīd Khalīfa b. Farḥūn al-Ṭarābulsī entitled *Thamarat al-fu'ād al-muḥaddith ʿan al-murād fi'l bawāṭin wa'l-akbād* (ms. Paris 5834, 2; reworked by Abū ʿAbd Allāh b. Hārūn al-Sūsī, ms. Algiers 1531; Bayezit Umumî 4652, 23 fols., 19 × 14 *taʿlīḳ*, in Turkish). It was translated into Latin by Hugo Sanctallensis (M. Steinschneider, *op. cit.*, 36, No. 541; P. Tannery, in *CRAIBL* xxv (1897), 519; partially edited *ap.* Tannery, *Mémoires scientifiques*, iv (1920), 373-402; tr. *ibid.*, 405-9).

Other Arabic geomantic writings have been translated into Latin, such as *Alfakini arabici filii Quaestiones Geomantiae a Platone* (= Plato of Tivoli) *in latinum translatae ex antiquo mss. ..., Fasciculus Geomanticus*, Verona 1687, 2nd. ed. 1704 (Steinschneider, *op. cit.*, 64b); similarly, Gerard of Cremona translated an Arabic geomantic work under the title *Liber geomantiae de artibus divinentibus* (Steinschneider, *op. cit.*, 30, No. 84); Bernardinus or Bernardus Silvestris translated a geomancy established according to the twenty-eight mansions of the moon under the title *Experimentarius oder liber fortunae* and many mss. of this survive (cf. *ZDMG*, xxv (1871), 338-90; other references in Steinschneider, *op. cit.*, i, No. 27). An *Astrologia terrestris* attributed to one ʿAlī b. ʿUmar has been translated from Arabic into Italian and German (Steinschneider, *op. cit.*, ii, 3, No. 133; Nic. Catani, *Geomantischer Schöpfungsstuhl*, Freystadt 1716). It is concerned with the treatise of Ibn Maḥfūf (see above).

In addition to the authors cited in *La divination arabe*, the following should be mentioned: Abu ʿImrān al-Zanātī, probably from the Zanātiyya school, *Dhakhīra fi l-khaṭṭ* (ms. Paris, 2758, 9; *GAL*, S II, 1040); Zayn al-Dīn ʿUmar al-Khiṭā'ī, *al-Djadāwil al-zuhrawiyya fī īḍāḥ ʿilm al-raml wa 'l-zā'irdja al-khafiyya* (ms. Gotha, 1317; *GAL* S II, 1041); Muḥammad b. Ḥasan b. ʿAlī Abū ʿAbd Allāh al-Andalusī, *al-Durr al-muḥīṭ bi-ṣifat al-ʿamal bi-ḥukm al-basīṭ fī ʿilm al-raml* (Berlin Oct., 2467; *GAL* S II, 1040); ʿAlī b. Ḥasan al-Djazā'irī, *al-Ḥāshiya al-ikhtiṣāriyya al-ramliyya al-falakiyya* (*GAL* S II, 1039); Yaḥyā b. ʿAbd Allāh b. Saʿīd al-Manānī, *Rafʿ al-ishkāl ʿan waḍʿ al-ashkāl* (Alexandria, *Ḥurūf* 17, 9; *GAL* S II, 1042); Saḥnūn b. ʿUthmān b. Saʿīd b. Aḥmad b. Abī Bakr al-Wansharīshī (wrote before 1167/1753), *Sihām al-rabṭ fi 'l-mukhammas al-khālī al-wasṭ* (Leiden 1233; Algiers 1535; *GAL* S III, 715); Sharaf al-Dīn b. Ṣalāḥ al-Dīn b. al-Ḳāsim b. Muḥammad al-Kawkabānī, a South Arabian writing in 1111/1699, *Sahm al-gharīb fī 'stikhrādj al-ḍamīr bi-lā rayb* (Berlin 4227; *GAL* S II, 567).

Despite its length, this list is far from being exhaustive; the subject deserves a monograph, for geomancy follows only oneiromancy in the prestige it has enjoyed in Islamic lands. Its claim to fame lies in a saying attributed to Muḥammad: "Among the prophets there was one who practised *khaṭṭ*; whoever succeeds in doing it according to his example will know what that prophet knew" (see above).

(T. FAHD)

AL-**KHAṬṬ**, a strip of coast on the Persian Gulf. The Arab geographers are not agreed as to its exact extent. While Yāḳūt limits the name to the coast of al-Baḥrayn and ʿUmān, which is also apparent from the mention of al-Ḳaṭīf, al-ʿUḳayr and Ḳaṭar, al-Bakrī says definitely that al-Khaṭṭ is the whole coast between ʿUmān and al-Baṣra on the one side and Kāẓima and al-Shiḥr on the other. This difference of opinion is probably the result of the variation in extent of ʿUmān and al-Baḥrayn in the wider sense of these terms in course of time.

There are in any case authors who allot al-Khaṭṭ to either the one or the other territory. Al-Khaṭṭ according to Aḥmad b. Muḥammad al-Harawī, for example, is simply a collective name for the villages in ʿUmān, while Ibn al-Anbārī uses al-Khaṭṭ as the name for the coast of al-Baḥrayn. In contrast to

these wide applications of a fairly general term there is a narrow one, according to which al-Khaṭṭ was a particular settlement on the coast which belonged to the ʿAbd al-Ḳays. A. Sprenger has adopted this view, which was held by al-Balādhurī amongst others, and there is much in favour of locating al-Khaṭṭ preferably in the Gulf of al-Baḥrayn. The place was in any case noted as a market for the famous Khaṭṭī lance-shafts imported from India and sold to the Bedouins. The name al-Khaṭṭ seems to be old. If A. Sprenger is right in connecting it with "regio Attene" and "Chateni" in Pliny, *Nat. Hist.*, vi. 28, 147, and the "Atta vicus" in Ptolemy, the name dates back to long before the Islamic period.

KHAṬṬ-Ī HUMĀYŪN and **KHAṬṬ-Ī SHERĪF**, the terms used for the decrees and rescripts of the Ottoman sultans, and written by them personally; the former term is the more usual one. A few surviving examples announcing appointments and decrees date from the reign of Selīm I. However until the end of the 10th/16th century, that is till the reign of Murād III, the sultans wrote the *khaṭṭ-ī humāyūn*s sparingly. From the reign of Murād III onwards, the decrease in the power of the Grand Viziers to act independently in state affairs led to a system of obtaining from the sovereign a *khaṭṭ-ī humāyūn* for almost anything except trivial matters. Because of this reluctance to act on their own responsibility, the Grand Viziers customarily made clear their intentions by drawing up a résumé of every proposed official action and submitting it to the sultan for observation and additions; these brief remarks are the sultan's "sublime observations", that is, his *khaṭṭ-ī humāyūn* (Orhonlu, *Osmanli tarihine ait belgeler: telhisler (1597-1605)*, Istanbul 1970, xxii, and *passim*). After this, the surviving *khaṭṭ-ī humāyūns* became commoner, and we have extant those of Murād IV (Aḥmed Refīḳ, *IV. Murād'ln khaṭṭ-ī humāyūnlarī*, in *TOEM*, xxxix (1332), 129-41) and Ibrāhīm (Çagatay Uluçay), *Sultan Ibrahim deli mi idi, hasta mi idi*, in *Tarih Dünyasi*, i-ii (Istanbul 1950), iii (Istanbul 1951), either in the form of independent judgements and decrees or their remarks on the condensed reports drawn up and presented by the Grand Viziers. After the writing of *khaṭṭ-ī humāyūns* by the sultans became customary, there appeared in certain administrative manuals instructions and advice for their drawing up on various matters. Despite this, it should be pointed out that all the *khaṭṭ-ī humāyūns* announcing a decree, did not come directly from the sultan's pen, but rather, the originals were drafts made into fair copies by the ruler's private secretary (Ḳoču Bey, *Risāla*, ed. Ali Kemali Aksüt, Istanbul 1939, 96-7).

*Khaṭṭ-ī humāyūn*s can be classified under several headings: (1) The very brief personal remarks of the sultan on the condensed reports or memoranda sent to him by the Grand Vizier; (2) Decrees concerning appointments and transfers; (3) Documents containing the direct command of the sultan to the Grand Vizier on an important state affair and requesting his remarks. There was also a type of *firmān* or imperial edict, where the sultan gave his own comments on the contents of the *firmān*, in his own hand; the *firmān* was then drawn up by the *Dīwān* and called a "*firmān* adorned with the *khaṭṭ-ī humāyūn*". After the reign of ʿAbd al-Ḥamīd I (1187-1203/1774-89) the sultans issued *khaṭṭ-ī humāyūn*s or *khaṭṭ-ī sherīf*s in the form of general instructions written on the memoranda presented for remarks by the Grand Viziers. These instructions might be either written by the sultan personally or by his private secretaries. There was no official person addressed nor date on these *khaṭṭ-ī humāyūns*, though it is possible, from their context, to determine when some of them were written. It appears that during the reign of Maḥmūd II (1223-55/1808-39) because of his centralising and reforming policies, the *khaṭṭ-ī humāyūns* assumed an increased importance. However, from 1248/1832 onwards the system of the sultans expressing their opinions in their own *khaṭṭ-ī humāyūn*s declined, and it became customary for the Grand Vizier to instruct the chief intermediary secretary (*mabeyn bash kātibi*) about what they wished to do, and then have the latter pass it to the sultan for oral commands, which were later put into writing. Thus the "imperial act of will" (*irāde*) took the place of the *khaṭṭ-ī humāyūn*. Nevertheless, the system of the sultans expressing their opinions in a personal *khaṭṭ-ī humāyūn* continued, at the side of the *irāde* system, until the middle of the 19th century. After reaching this stage, even the *firmān*s published by the order and will of the sultan about important affairs and decisions, were called *khaṭṭ-ī humāyūn*; thus the *Tanẓīmāt* decree of 1839 was known as the "*khaṭṭ-ī humāyūn* of Gülhāne", and the imperial decree of 1856 concerning reforms within the empire was likewise called a *khaṭṭ-ī humāyūn*. Henceforth *khaṭṭ-ī humāyūn* came to be regarded as the equivalent of *firmān* (for examples of these types of *khaṭṭ-ī humāyūn* between 1831 and 1860, see Meḥmed Süreyyā, *Nukhbetü'l-weḳāyiʿ*, Istanbul n.d., i, *passim*).

KHAṬṬ AL-ISTIWĀʾ [see ISTIWĀʾ].

KHAṬṬ-Ī SHARĪF [see KHAṬṬ-Ī HUMĀYŪN].

AL-**KHAṬṬĀBĪ**, ḤAMD (> AḤMAD) B. MUḤAMMAD B. IBRĀHĪM B. AL-KHAṬṬĀB ABŪ SULAYMĀN AL-KHAṬṬĀBĪ AL-BUSTĪ, traditionist of SHĀFIʿĪ tendencies and poet, who is said to have been a descendant of Zayd b. al-Khaṭṭāb, brother of ʿUmar, but this genealogy has been questioned. Born at Bust in 319/931, he travelled throughout the Muslim world, from Khurāsān and Transoxania to ʿIrāḳ and the Ḥidjāz, "in search of learning" and also engaged in trade; he studied, particularly in Baghdād, with famous teachers and had in his turn a number of pupils. He died at Bust in either 386/996 or 388/998, according to Yāḳūt, who prefers the latter date. Al-

Thaʿālibī, who reproduces a selection of poems by al-Khaṭṭābī, compares him with Abū ʿUbayd [*q.v.*] al-Ḳāsim b. Sallām for his learning and his piety, and even considered him superior to him because he wrote poetry.

Of the twelve or so works which are attributed to him, one only, so far as we have been able to ascertain, has been published, the *Bayān iʿdjāz al-Ḳurʾān*, ed. ʿAbd al-ʿAlīm, Aligarh 1953; ed. ʿAbd Allāh Ṣiddīḳ (?); ed. M. Khalafallāh and M. Zaghlūl Sallām, in *Thalāth rasāʾil fī iʿdjāz al-Ḳurʾān*, Cairo 1955, 17-66. Several others exist in manuscript (see Brockelmann, I, 165, S I, 275): *Maʿālim al-sunna* (*al-sunan*), commentary on the *Sunan* of Abū Dāwūd (see Brockelmann, S I, 267, adding the manuscripts mentioned by ʿAbd al-ʿAlīm, p. *wāw*); *K. Gharīb al-Ḥadīth*; *Shaʾn al-adʿiya al-maʾthūra*; *Iʿlām al-muḥaddith fī sharḥ Ṣaḥīḥ al-Bukhārī* (see Brockelmann, S I, 261); *K. al-ʿUzla* (or *al-Iʿtiṣām*); *Iṣlāḥ ghalaṭ al-muḥaddithīn*; *ʿIlm al-ḥadīth*. The other titles mentioned are: *K. Tafsīr asāmī 'l-Rabb* (or *sharḥ al-asmāʾ al-ḥusnā*); *K. al-ʿArūs*; *Kitāb al-Ghunya ʿan al-kalām wa-ahlih*; *Sharḥ daʿawāt li-Abī* (= *Ibn*) *Khuzayma*.

Bibliography: Whereas his contemporary Ibn al-Nadīm does not mention him in the *Fihrist*, his friend Thaʿālibī considers him worthy to appear among the poets mentioned in the *Yatīma* (iv, 321). Main notices: Samʿānī, *Ansāb*, 222b; Subkī, *Ṭabaḳāt al-Shāfiʿiyya*, ii, 218-22; Ibn al-ʿImād, *Shadharāt*, iii, 127; Dhahabī, *Tadhkira*, iii, 209; Ibn al-Djawzī, *Muntaẓam*; Ibn Khallikān, i, 153-5; Baghdādī, *Khizāna*, ed. Ṣāwī, 1934, iv, 301-13; Yāḳūt devotes to him two notices, the first under Aḥmad, *Irshād*, ii, 81-7 = *Udabāʾ*, vi, 246-60, and the second under Ḥamd, *Irshād*, iv, 141-3 = *Udabāʾ*, x, 268-72; Suyūṭī, *Bughya*, 239; F. Bustānī, *Dāʾirat al-maʿārif*, ii, 494; Goldziher, *Muh. St.*, ii, 256 (where Ceuta should be corrected to Bust, thus in *Muslim Studies*, tr. Barber and Stern, ii, 235 n. 6); Brockelmann, I, 165, S I, 275.

(Ed.)

KHAṬṬĀBIYYA, extremist Shīʿī sect in al-Kūfa founded by Abu 'l-Khaṭṭāb al-Asadī [*q.v.*] (killed *ca.* 138/755). Abu 'l-Khaṭṭāb claimed that the Imām Djaʿfar al-Ṣādiḳ [*q.v.*] had appointed him as his deputy and legatee (*waṣī*) and taught him the Greatest Name of God. He was at first encouraged by the Imām, but later, probably still before 130/748, was repudiated and cursed by Djaʿfar. As a result, his followers split up into several subsects. The reports of the heresiographers about these early sects are based on two accounts which are partially complementary and partially contradictory, and which can be traced back to the contemporary Hishām b. al-Ḥakam [*q.v.*] and to Abū ʿIsā al-Warrāḳ (writing after 270/883), whose ultimate source is unknown. The former account is reproduced by al-Nawbakhtī and Saʿd b. ʿAbd Allāh, while the latter is quoted most extensively by al-Ashʿarī. The following summary combines the two accounts with additional information from other sources.

One group continued to accept Abu 'l-Khaṭṭāb as their leader and asserted that he was a messenger prophet sent by Djaʿfar, who was God. They held that there must be at all times two prophets, one speaking (*nāṭiḳ*) and the other silent (*ṣāmit*). In the time of Muḥammad, he had been the speaking prophet and ʿAlī the silent one, and now Djaʿfar was the speaking prophet and Abu 'l-Khaṭṭāb the silent one. They considered all *imām*-prophets, including Abu 'l-Khaṭṭāb, as God. This doctrine is to be related to the belief ascribed to the Khaṭṭābiyya in general, that the divine Light or Spirit inhered in the bodies of the *imāms*. They held that Abu 'l-Khaṭṭāb had lifted the fetters of the religious law from them, considered false testimony in favour of their sectarian brethren as licit, and interpreted the religious duties and sins mentioned in the Ḳurʾān as referring to certain specific persons.

A second group, the Bazīghiyya, were the followers of Bazīgh b. Mūsā the weaver, who was killed during the lifetime of the Imām Djaʿfar. They considered Bazīgh, like Abu 'l-Khaṭṭāb, as a prophet sent by Djaʿfar. While they testified to the prophethood of Abu 'l-Khaṭṭāb, the latter repudiated Bazīgh's claim. They asserted that every one of them was inspired (*yūḥā ilayhi*), that they would not die but be raised to heaven when their worship reached perfection, and that they were able daily to see their "dead". Their claim of immortality was repudiated by the ʿUmayriyya, followers of ʿUmayr b. Bayān al-ʿIdjlī. Like the Bazīghiyya, however, the ʿUmayriyya claimed that they were all *imām*-prophets and that Djaʿfar was God. When they assembled in al-Kūfa to worship Djaʿfar, ʿUmayr was seized and killed by Yazīd b. ʿUmar b. Hubayra (governor 129-31/747-9).

Another group were the followers of al-Sarī al-Aqṣam who claimed that Djaʿfar had sent him as a prophet, calling him Mūsā, the Strong and Trustworthy. They worshipped Djaʿfar, saying that he was Islām and that they were the Sons of Islām (*abnāʾ al-islām*) in accordance with the statement of the Prophet: "Salmān is the Son of Islām".

The Muʿammariyya, followers of Muʿammar b. al-Aḥmar the corn dealer, affirmed that the divine Light had been transferred from ʿAbd al-Muṭṭalib through Abū Ṭālib, Muḥammad, ʿAlī and the *imāms* to Djaʿfar, Abu 'l-Khaṭṭāb and finally to Muʿammar. With the passing of the Light from the bodies of Djaʿfar and Abu 'l-Khaṭṭāb, the latter had become angels, while the persons now claiming to be Djaʿfar and Abu 'l-Khaṭṭāb were in fact impostors. Muʿammar was the God on earth who was obedient to the Greatest God in heaven. The Muʿammariyya denied that the world would come to an end and held that the bliss of paradise and the punishment of hell took place on earth. They claimed that they would be raised to heaven alive with their bodies, and also taught libertinism.

The account of al-Warrāḳ enumerates as a further subsect of the Khaṭṭābiyya the Mufaḍḍaliyya, followers of al-Mufaḍḍal b. ʿUmar al-Djuʿfī the money-changer. They agreed with the other Khaṭṭābiyya sects in deifying Djaʿfar and claiming prophethood for themselves, but diverged from them by repudiating Abu 'l-Khaṭṭāb. According to an Imāmi report, al-Mufaḍḍal was appointed by the Imām Djaʿfar to guide the followers of Abu 'l-Khaṭṭāb after the condemnation of the latter. Although some negative statements of Djaʿfar are reported about him, al-Mufaḍḍal, unlike the other Khaṭṭābī leaders, was never excommunicated. He became a trusted agent of the Imām Mūsā b. Djaʿfar (148-83/765-99), during whose lifetime he died.

Statements attributed to the Imām Djaʿfar accent the lowly social status of the followers of Abu 'l-Khaṭṭāb and al-Mufaḍḍal, characterising them as scum (*safila*) and outcasts (*shuṭṭār*). Some sources identify the Khaṭṭābiyya with the Mukhammisa sect [*q.v.*]. This identification does not appear valid for the early Khaṭṭābiyya sects described above, but must refer to a later stage which may, however, have begun still in the time of the Imām Djaʿfar.

The assertions of some Imāmī sources broadly identifying the nascent Ismāʿīliyya [*q.v.*] with the Khaṭṭābiyya, must be viewed with caution. More specifically, it is reported that a group of supporters of Abu 'l-Khaṭṭāb after the latter's death joined the followers of Muḥammad b. Ismāʿīl b. Djaʿfar, claiming that the spirit of Djaʿfar had devolved on Abu 'l-Khaṭṭāb, and from him, on Muḥammad b. Ismāʿīl. There are also reports associating al-Mufaḍḍal with Ismāʿīl b. Djaʿfar. After the death of Djaʿfar, however, al-Mufaḍḍal supported the imāmate of Mūsā. although he evidently did not approve of the condemnation of Ismāʿīl pronounced in other Imāmī circles. The doctrine of the Ismāʿīlī movement emerging out of obscurity about the middle of the 3rd/9th century shows little affinity with the specific doctrines of either the early Khaṭṭābiyya or the Mukhammisa and generally repudiates Abu 'l-Khaṭṭāb. Mukhammisa texts which eventually were adopted into Ismāʿīlī literature, like the *Umm al-Kitāb*, are secondary importations. The bulk of the Khaṭṭābiyya-Mukhammisa evidently remained within the extremist fringe of the Imāmiyya. Mukhammisa doctrine formed the basis of the beliefs of the Nuṣayriyya [*q.v.*], who revere Abu 'l-Khaṭṭāb, al-Mufaḍḍal and his son Muḥammad as the *bāb*s [*q.v.*] of the *imām*s Djaʿfar, Mūsā and ʿAlī al-Riḍā.

KHAṬṬĀRA [see ḳanāt].

KHĀTŪN, a title of Soghdian origin borne by the wives and female relations of the Tʿu-chüeh and subsequent Turkish rulers. It was employed by the Saldjuks and Khwārazm-Shāhs and even by the various Čingizid dynasties. It was displaced in Central Asia in the Tīmūrid period by *begüm*, which passed into India and is still used in Pakistan as the title of a lady of rank.

Bibliography: G. Doerfer: *Türkische und mongolische Elemente im Neupersischen*, iii, 132-41 (No. 1159); Sir Gerard Clauson, *An etymological dictionary of pre-thirteenth century Turkish*, Oxford 1972, 602-3. (J. A. Boyle)

KHĀWA, a colloquial variant of the classical *ikhāwa* ("brotherliness"), is a term formerly used in the Arabian Peninsula for payments made in return for the right to enter alien territory and for protection while staying there. Whenever there was no central authority strong enough to guarantee freedom of transit for all, travellers or wanderers coming into the *dīra* or range of a powerful tribe would hand over *khāwa*, which usually consisted of livestock such as *ghanam*, or foodstuffs such as ghee, in amounts determined by negotiations. Refusal by merchant caravans to pay *khāwa* could lead to trouble between the nomads demanding it and the towns from which the caravans hailed or for which they were bound. Similar payments made by pilgrim caravans on the way to the Holy Cities were called *ṣurra* ("bag" or "purse"), which is not to be confused with *ṣurrat al-Ḥaramayn*, the sum once sent by Islamic countries such as Egypt and Tunisia for distribution to the poor of Mecca and Medina in the days of the pilgrimage.

As ʿAbd al-ʿAzīz Ibn Suʿūd [see al-ikhwān.] extended his control over the larger part of the Peninsula, he outlawed the paying of *khāwa*. While *khāwa* may have been extorted clandestinely for a time thereafter, Ibn Suʿūd's crushing of the revolt of the Ikhwān [*q.v.*] by 1348/1930 and the ensuing decline of tribalism, along with the spread of modern communications, brought an end at last to this outmoded practice.

KHAWAND [see akhund].

KHAWĀRIDJ [see khāridjites].

KHAWĀRIZM, KHAWĀRIZMĪ, etc. [see khwārazm, khwārazmī].

al-**KHAWARNAḲ**, a place situated about a mile east of Nadjaf [*q.v.*] in ʿIrāḳ. Inhabited at first by the tribe of Iyād, a palace was built in it by the Lakhmid chief Nuʿmān (d. after 418 A.D.) for his Sāsānian suzerain. It was there that Parwīz heard the news of the defeat of Dhū Ḳār [*q.v.*]. The palace was enlarged and used by the early ʿAbbāsids. It was in ruins in the 8th/14th century. The pre-Islamic Arab poets frequently quote al-Khawarnaḳ as one of the "30 wonders of the world", along with the neighbouring castle of Sadīr (perhaps Ukhayḍir [*q.v.*]). Al-Khawarnaḳ is also celebrated for having given rise to the proverbial expression "the reward of Sinimmār", the Greek architect who had built it and who was executed by Nuʿmān. The name Khawarnaḳ seems to be of Iranian origin (*Huvarna* "with a beautiful roof" according to Andreas, or *Khawarnar*, "place of feasting" according to Vulers), although Ibn Djinnī connected it with the Arabic *Khirniḳ* and Nöldeke with a Rabbinical Hebrew word meaning "arbour, plantation".

KHAWĀṢṢ [see khāṣṣa].

KHAWĀṢṢ al-ḲUR'ĀN, the art of drawing prognostications from verses of the Ḳur'ān to which beneficial effects are attributed. The sacred text is used here in the same spirit as in rhapsodomancy (*ʿilm al-ḳurʿa*) and onomatomancy [see djafr and ḥurūf.] But it is here more particularly a case of the "natural properties" (φυσικά) which certain formulae of a magical and superstitious nature can have, based upon suitable Ḳur'ānic verses, letters drawn from these verse, words, names of angels, prophets or God, prayers bearing celebrated names and poems (*e.g.* the *Burda*). Hence these varied elements are treated just as the "science of properties" treats animals, plants and minerals, by calling attention to the sympathy and antipathy which exists between them (on this science, extensively developed in Islam, cf. P. Kraus, *Jābir ibn Ḥayyān*, ii, 61 ff.; M. Ullmann, *Die Natur- und Geheimwissenschaften im Islam*, Leiden 1972, 393 ff.).

Two series of results are sought from this practice, prognostications and beneficial effects (*manāfiʿ*). Medical prognostications are the most sought-after,

and the treatises of popular medicine are crammed with them (*e.g.* see *al-Dā' wa'l-dawā'* of Ibn Ḳayyim al-Djawziyya, which deals more specifically with the medical properties of the Fātiḥa; the *K. Khawāṣṣ al-Fātiḥa al-sharīfa* of ʿAbd al-Ḳādir al-Djīlī; and the literature on al-*Ṭibb al-nabawī*).

There is an abundant literature on these properties, and a large number of them are treated in compilations like the *Durrat al-ghawwāṣ wa-kanz al-ikhtiṣāṣ fī ʿilm al-khawāṣṣ* of al-Djildakī (d. 743/1342) or the *Tadhkirat ūlī 'l-albāb* of al-Anṭākī (d. 1008/1599). There exist also some monographs, of which the most famous is the *K. Manāfiʿ al-Ḳur'ān* of Abū ʿAbd Allāh al-Tamīmī, who wrote at the end of the 4th/10th century (Istanbul Univ. Libr. A 2243, ff. 48, 18 × 13 cm, *naskhī*, N.D. but fairly old). This includes a large number of superstitious uses of the Ḳur'ān aimed at arriving at a knowledge of hidden things. Abū 'l-ʿAbbās al-Būnī (d. 627/1225) wrote both a *K. Manāfiʿ al-Ḳur'ān* (*ibid.*, A 5582, ff. 132, 23 × 14 cm, very fine *naskhī*) and a *K. Sirr al-maktūm min al-ʿilm al-maknūn wa-khawāṣṣ al-Ḳur'ān* (*ibid.*, A 4514, ff. 71, incomplete, 15 × 9,5 cm, *naskhī*). A *K. Manāfiʿ ṣuwar al-Ḳur'ān* and a *K. Khawāṣṣ al-Ḳur'ān al-ʿaẓīm* are attributed to Djaʿfar al-Ṣādiḳ (see Sezgin, *GAS*, i, 530). One should also mention the *Khawāṣṣ al-Burda fī bur' al-dā'* of Ibn ʿAbd al-Salām b. Idrīs al-Marrākushī, which divides up the famous *ḳaṣīda* of al-Būṣīrī into several sections and describes the beneficial effects residing in each (see Ullmann, *op. cit.*, 415-16).

Bibliography: For other works and for fuller details, see T. Fahd, *La divination arabe*, 214-45, esp. 241-3. One can also find in Ahlwardt's Berlin mss. catalogue, under no. 4153, the titles of works on the *khawāṣṣ al-Ḳur'ān* and under no. 4176, six works on the *aḥzāb* or *adʿiya* reputed to have special properties. The magical character of such prayers has been demonstrated by Goldziher, *Zauberelemente im islamischen Gebet*, in *Orientalische Studien zu Th. Nöldeke gewidmet*, Giessen 1906, i, 303 ff. (T. FAHD)

KHAWBAR [see KHŌBAR].

KHAWLĀN. 1. The name of a South Arabian tribe, of great antiquity and now divided into two branches. The larger section, which al-Hamdānī calls *Khawlān al-ʿāliya*, is now known as *Khawlān al-ṭiyāl* and dwells south-east of Ṣanʿā' on the upper reaches of the Wādī Dhana, with the lands of Murād to the south-east and Nihm, in the highlands proper, to the north-west. The tribe now belongs to Bakīl. Their territory, which was described by Carsten Niebuhr in 1763 and visited by Eduard Glaser in 1885-6, is a very mountainous region, bisected by numerous tributaries of the Wādī Dhana, and with a widely scattered population. It is noted for the cultivation of cereals and grapes. The chief town is Djahāna, and of lesser import are Bayt al-Kibsī and Tanʿim. The latter was formerly renowned as a centre of the Yemenī Jews and possessed many synagogues. The Khawlān consist of many independent clans and families, rarely under a single ruler, dispersed throughout innumerable fortified villages, and have always been loyal Zaydīs. Their savagely fanatical temperament and warlike disposition have given them a reputation for feuding and division. The Arab genealogists give as their eponymous ancestor Khawlān b. ʿAmr b. Mālik b. al-Ḥārith b. Murra b. Udad b. Zayd b. ʿAmr b. ʿArīb b. Zayd b. Kahlān b. Saba'.

The other branch of Khawlān, variously known as Khawlān al-Shām, Khawlān b. ʿĀmir, or Khawlān Ḳuḍāʿa, lives just south of the Ḥidjāz border, in the mountains north-west of Ṣaʿda, on the Ṣanʿā'-Mecca road, four days' journey from the port of Ḥalī. They too are described by Niebuhr, who mentions a number of their villages but no large towns. Since it is alleged that gold used to be mined in the region at Ḳufāʿa, some authorities, most recently von Wissmann, have identified Khawlān al-Shām with the Biblical Ḥawīla. The district is fertile and produces grapes, wheat, and coffee in abundance. The Khawlān al-Shām are also Zaydīs and have their own *shaykh*, but maintain no contact with the southern Khawlān. Their genealogy may be seen in the variant given for Khawlān by some Arab writers, notably Yāḳūt: Khawlān b. ʿAmr b. al-Ḥāf b. Ḳuḍāʿa b. Mālik b. ʿAmr b. Murra. Since, however, Nashwān states that the Khawlān al-ʿāliya also belonged to Ḳuḍāʿa, the distinction between the two tribes may be taken as regional rather than genealogical. Von Wissmann has suggested that originally the tribe of Khawlān occupied the entire area between Ṣaʿda and Ṣirwāḥ, but was split in antiquity into the two branches by which we now recognise them by the invasion of Ḥāshid and Bakīl, who now occupy the intervening territory, and in whose lands it is interesting to find the village of Bayt Khawlān on Djabal Ḥāḍūr Nabī Shuʿayb [*q.v.*] and the mountain ʿUrr Khawlān.

The two-fold division into a northern and a southern Khawlān is reflected in the ancient inscriptions where the tribe is frequently mentioned. The earliest reference, in *RES* 3022 (Minaean), is probably to the southern branch. The inscription may be dated at the latest to the late 3rd century B.C. and tells how Saba' and Khawlān attacked a Minaean caravan en route from Maʿīn to RGMT (in or near Nadjrān). Later references, which belong for the most part to the time of the Sabaeo-Ḥimyarite wars of the 3rd century A.D., are more explicit in drawing a distinction between HWLN HDL*m*, with which are associated the towns of ṢRWḤ and TNʿM and probably the tribe KBSY*m*, and HWLN GDD*m* (also GDDN, ḏGDDTN, and 'GDDN), which possessed the city of ṢʿDT*m* (*e.g.*, Jamme 577, 601, 616, 629, 649, 658, *CIH* 308). There can be no doubt that the former were Khawlān al-ʿāliya and the latter Khawlān al-Shām.

In Shaʿbān 10/Nov. 631, envoys of Khawlān appeared before Muḥammad in Medina and professed Islam on behalf of their tribe. They were instructed in the teaching of Islam by the Prophet himself, and promised to destroy their idol ʿAmm Anas; they then received the usual gift of honour of 12½ ounces of silver and returned home. After the death of the Prophet they at first joined the general movement of apostasy, but Yaʿlā b. Munya, whom the Caliph Abū Bakr sent against them with an expeditionary force, succeeded in regaining them for Islam in the course of the year 11/632. Politically they were on closer terms with the government in Medina than the other tribes of the Yemen, which was probably the result of their relations with the Persian rulers in Ṣanʿā'. They afforded shelter to the two Persian princes Djushaysh and Fayrūz who were driven out of Ṣanʿā' by the rebellion of the Arabs under Ḳays b. ʿAbd Yaghūth b. Makshūh and supported them till help came from Medina.

Members of the tribe of Khawlān, after their lands were finally opened to Islam upon the subjection of the Yemen in 13/634 or 14/635, played an important part among the southern Arabs who participated in the conquest of Egypt and settled there. We frequently find Khawlānīs in important positions in Egypt; in Old Cairo (al-Fusṭāṭ) they gave their

name to a quarter, and the name generally is not rare in the papyri and on Arab tombstones in Egypt.

2. The name of a village near Damascus. One of the most distinguished of the companions of the Prophet is buried there, ʿAbd al-Raḥmān b. Mis̲h̲kam Abū Muslim al-K̲h̲awlānī.

AL-**K̲H̲AWLĀNĪ**, ABŪ IDRĪS ʿĀʾID̲H̲ ALLĀH B. ʿABD ALLĀH, a Successor who lived from 8/629-30 until 80/699. Apart from Abū Muslim al-K̲h̲awlānī [*q.v.*], with whom he often seems to have been confused, he was the only one of his tribe among the early settlers in Syria, according to K̲h̲alīfa b. K̲h̲ayyāṭ's *K. al-Ṭabaḳāt*, Baghdad 1967, 307 f. During the last years of his life, he was *ḳāḍī* of Damascus under ʿAbd al-Malik. He was considered to be one of the *ʿubbād* (pious devotees) and one of the *ḳurrāʾ* [*q.v.*] of Syria. Before he was appointed *ḳāḍī*, he held the function of story-teller (*ḳāṣṣ*) [*q.v.*] or preacher (*wāʿiẓ*) [*q.v.*] in the mosque. Apparently he took his function very seriously, instructing the people in the *aḥkām*, *ḥalāl* and *ḥarām*, in which he allegedly was an expert. He was also described as a reliable transmitter of traditions, many of which were eventually recorded in the "six books". The most extensive collection of his own sayings is preserved in Abū Nuʿaym's *Ḥilyat al-awliyāʾ*. A few of these sayings can be traced in the canonical *ḥadīt̲h̲* collections provided with complete *isnād*s to Muḥammad. Like Abū Muslim al-K̲h̲awlānī, Abū Idrīs is reputed to have transmitted some *ḥadīt̲h̲ qudsī* [*q.v.*] which smack of Christian influence (cf. Muḥammad al-Madanī, *K. al-Itḥāfāt al-sunniyya fi 'l-aḥādīt̲h̲ al-ḳudsiyya*, Hyderabad 1323, 20, no. 110 and Muslim, *birr*, 55).

Bibliography: Abū Nuʿaym, *Ḥilyat al-awliyāʾ*, v, 122-9; Ibn Ḥajar, *Tahd̲h̲īb al-tahd̲h̲īb*, v, 85-7; S̲h̲ams al-Dīn Ibn Ṭūlūn, *Ḳuḍāt Dimas̲h̲ḳ*, ed. Ṣ. al-Munad̲j̲d̲j̲id, Damascus 1956, 5; D̲h̲ahabī, *Tad̲h̲kirat al-ḥuffāẓ*, Hyderabad 1955, i, 56 f.; Samʿānī, *Ansāb*, Hyderabad edn., v, 235; Ibn Ḥanbal, *Musnad*, Cairo 1313, vi, 441. (G. H. A. JUYNBOLL)

AL-**K̲H̲AWLĀNĪ**, ABŪ MUSLIM ʿABD ALLĀH B. T̲H̲UWAB, one of the eight Successors allegedly famous for their asceticism (*zuhd* [*q.v.*]). He was born of the tribe K̲h̲awlān in the Yaman. One report (Abū Nuʿaym, *Ḥilya*, ii, 125) has it that he only became a Muslim in Syria during the caliphate of Muʿāwiya, but other reports say that he had already been converted to Islam during the prophet's lifetime while still in the Yaman. When al-Aswad b. Ḳays (cf. Ibn Ḥad̲j̲ar, *Tahd̲h̲īb*, xii, 236 and Abū Nuʿaym, *Ḥilya*, ii, 128; or: b. Kaʿb, cf. Ṭabarī, i, 1795) al-ʿAnsī D̲h̲u 'l-Ḥimār [*q.v.*] summoned him to embrace his cause, Abū Muslim refused and was consequently thrown into a fire which did not harm him. He was then given leave to travel to Medina, where he arrived a short time after the Prophet's death. Abū Bakr and ʿUmar are reported to have given Abū Muslim a warm welcome, the rumour of his ordeal having preceded him. He eventually settled in Syria. It is also said that he participated in a campaign into Byzantine territory. The sources have preserved various reports in which Abū Muslim boldly criticised Muʿāwiya. Furthermore, it is alleged that he offered Muʿāwiya his services as messenger in an endeavour to appease the latter's attitude towards ʿAlī. He died in 62/682.

Although Abū Muslim is considered as one of the forerunners of Islamic asceticism, reports about his ascetic behaviour are on the whole very few in number. The most extensive account of his habits and the miracles ascribed to him is preserved in Abū Nuʿaym's *Ḥilyat al-awliyāʾ*, in which also a few sayings attributed to him can be found. This information is, on the whole, insignificant. It seems, moreover, that he was not only claimed by Muslim ascetics. It is also suggested in several reports that he had affiliations with Jewish as well as Christian circles.

On the one hand, Abū Muslim's suffering at the hands of al-Aswad reminds one of Abraham and Nimrod. Besides, Kaʿb al-Aḥbār [*q.v.*] called him the sage (*ḥakīm*) of the community, although he had to admit to Kaʿb on one occasion that the Torah was right where he himself had been wrong (*Ḥilya*, ii, 128). On the other hand, a Christian monk once asserted that in his books Abū Muslim was mentioned as a companion of ʿĪsā b. Maryam (*ibid.*). Furthermore, cf. the *ḥadīt̲h̲ ḳudsī* discussed below, which smacks of Christian influence.

Although generally recognised as a reliable transmitter of traditions, Abū Muslim is credited in the canonical collections with the transmission of only a few. The best known of these is a *ḥadīt̲h̲ ḳudsī* [*q.v.*]: "My love will be realised for those people who love one another because of me, my love will be realised for those people who visit one another because of me", etc. (cf. Muḥ. al-Madanī, *K. al-Itḥāfāt al-sunniyya fi 'l-aḥādīt̲h̲ al-ḳudsiyya*, Hyderabad 1323, 10, no. 47 and Aḥmad b. Ḥanbal, *Musnad*, Cairo 1313, v, 236, 237, 239 and 328). In several *isnād*s of this tradition (cf. Mālik b. Anas, *Muwaṭṭaʾ*,

ed. ʿAbd al-Bāḳī, ii, 953 f., Aḥmad b. Ḥanbal, *Musnad*, v, 229, 233, 247) his name seems to be confused with that of another transmitter called al-Khawlānī, namely ʿĀʾidh Allāh b. ʿAbd Allāh Abū Idrīs, one time *ḳāḍī* of Damascus. Since Abū Idrīs is considered as really too young (born in A.H. 8, he died in 80/699, cf. *Tahdhīb*, v, 86 f.) to have transmitted this *ḥadīth ḳudsī* from the Companion Muʿādh b. Djabal, Abū Muslim's name may have been inserted to bridge the gap in an otherwise imperfect *isnād*. Confusion of the two Khawlānīs seems to be also apparent elsewhere (cf. Balādhurī, *Ansāb al-ashrāf*, iv/b, ed. M. Schloessinger, Jerusalem 1938, 60).

Bibliography: Abū Nuʿaym, *Ḥilyat al-awliyāʾ*, ii, 122-31, v, 120-2; Nasr b. Muzāḥim, *Waḳʿat Ṣiffīn*, ed. Hārūn, Cairo 1382/1962-3, 85 f.; Ibn Saʿd, *Ṭabaḳāt*, ed. Sachau, vii/2, 157 (in this source it is alleged that he came from Baṣra, which is most probably an apocryphal statement not borne out by evidence found elsewhere); Dārimī, *Sunan*, *muḳaddima*, 34; Ibn Ḳutayba, *Maʿārif*, ed. ʿUkkāsha, 439; Dīnawarī, *al-Akhbār al-ṭiwāl*, ed. KHAYĀL, the most important song form in the classical repertoire of north Indian music, is regarded by some to have been invented by Amīr Khusraw (651-725/1253-1325) and attributed by others to Ḥusayn Shāh Sharḳī (862-934/1458-1528), the ruler of Djawnpūr, who was dispossessed by Buhlūl Lodī in *ca.* 1476. Whatever its genesis, there is little doubt that it saw its greatest development during the Muslim period of Indian history and that its major exponents have generally been Muslims. It arose as a reaction to the traditional composition *dhrupad*, whose rigid and austere character seemed to inhibit improvisation and technical virtuosity. In contrast, *khayāl*, as its name implies, was intended to afford greater freedom to the musician's imagination. The two forms continued to exist in competition with one another, their advocates rivalling among themselves and claiming superiority for their respective styles. In the 12th/18th century, *khayāl* received a tremendous impetus as a result of the efforts of Muḥammad Shāh (d. 1161/1748) and that of his court singers Adā Rang and Sadā Rang. It now leads all musical compositions and is regarded as the most significant contribution to the development of music. Its content deals primarily with religious and amorous themes, and consists of a relatively short set piece employed as the basis for improvisation.

KHAYĀL, MĪR MUḤAMMAD TAḲĪ, of Aḥmadābād in Gudjarāt (d. 1173/1759-60), author of a collection of tales in 15 volumes entitled *Bustān-i Khayāl*, composed in Persian prose between 1155/1742 and 1169/1756, at the request of his patron Nawwāb Rashīd Khān, or, according to one manuscript, for the two brothers Nawwāb Rashīd Khān and Nawwāb Muḥammad Isḥāḳ Khān, sons of Djaʿfar ʿAlī Khān (Nawwāb of Bengal 1170-4/1757-61 and 1176-8/1763-5); an account of the contents of this work, which is made up partly of historical legends and partly of fantastic fairy tales, is given by Ethé, *Cat. of Persian Mss. of the Bodleian Library*, No. 480.

Bibliography: Ethé, in *Gr. I. Ph.* ii, 342. (ED.)

KHAYĀL AL-ẒILL ("Shadow fantasy"), popular Arabic name for the shadow-play, possibly brought over from South-East Asia or India and performed in Muslim lands from the 12th century A.D. to the 20th one. Although occasionally presented during the long evenings of the Ramaḍān fast, it has now virtually disappeared with the spread of education, the cinema and television.

The only extant texts of medieval Arabic shadow-plays were composed in the 7th/13th century A.D. by an Egyptian ophthalmologist, Ibn Dāniyāl [*q.v.*], and consist of a humorous pageant of Egyptian life under the Mamlūk ruler Baybars I [*q.v.*]. More frequently, however, the text of a shadow-play amounted to no more than general guidelines for the performers. In the Ottoman period the shadow-play spread through North Africa and other Arabic-speaking countries, as the Ottoman Turks popularised the *Ḳaragöz* [*q.v.*], in which several stereotyped characters amused an unsophisticated audience. The *Ḳaragöz* also penetrated Anatolia, the Arab countries, Greece and Roumania. Iran had its own form of shadow-play, as had Muslim communities in Central Asia, but they did not attain the same popularity.

After Ibn Dāniyāl's time, one finds scattered references to Arabic shadow-plays; however, only from the 12th/18th century onwards is relatively more known. In Syria and in most of North Africa a *Ḳaragöz*-type prevailed, but Egypt held to its own tradition of shadow-play, which usually presented the adventures and misadventures of characters in the market-place or on Nile boats (*e.g. liʿb al-markib, liʿb al-timsāḥ*).

A standard *khayāl al-ẓill* performance in the 18th and 19th centuries was usually constructed on the following lines: a large sheet was hung as a screen on an improvised stage in the open air, in a coffee-house, or, more rarely, in a public hall, and a bright lamp placed behind it. Between the two, small (often 30 cm. high) two-dimensional figurines, of thin coloured translucent leather, were manipulated by the shadow-play master, who was called the *muḳaddim*. He used several sticks to move the head and limbs of the figurines, through holes specially pierced into the figurines; the shadows thus cast on the screen were both lifesize and lifelike. One or more persons assisted the *muḳaddim* in this task and in the recitations of the different characters.

The texts recited were memorised, rather than read, but often seemed also to bear the mark of improvisation, not unlike the *commedia dell'arte*. The *liʿb* ("play") started with a *maṭlaʿ* ("prologue") and was divided into *fuṣūl* ("acts"), although some plays were of one *faṣl* only. Songs and music were interspersed as needed, prose alternating with verse. The vernacular predominated and the contents and style were geared to a familiar background, *e.g.* the bath-house or the market-place. The plot was simple enough, usually based on misadventures and misunderstandings. Slapstick—including severe thrash-

ings and teratological elements—was common, as was an obscenely erotic element bordering on pornography.

Historical shadow-plays were performed, too, but more rarely. The farces, more frequent, were humorous rather than satirical, but had important socio-economic and political undertones. In what amounted to a "comedy of character", many shadow-plays ridiculed the upper classes and denounced the exploitation of the poor, while in North Africa the shadow-play sometimes criticised French rule. In fact, the shadow-play, by its social and political commentary, to some extent anticipated the local press.

Bibliography: The earlier literature on *Khayāl al-ẓill* may be consulted in the pioneer study of this field—Georg Jacob, *Geschichte des Schattentheaters*², Hanover 1925. To this one should add the following: O. Spies, *Tunesisches Schattentheater*, in *Public. d'hommage offerte au P. W. Schmidt*, Vienna 1928, 693-702; N. N. (J. M. LANDAU)

KHAYĀLĪ, also known as KHAYĀLĪ BEY or KHAYĀLĪ MEḤMED BEY, nicknamed Bekār Memi as he was never married, Ottoman Turkish poet (d. 964/1556). He was born in Vardar Yenidjesi (modern Giannitsa), near Salonica in Macedonia. He did not go through the usual *medrese* training, but taught himself most of the knowledge expected in an educated man of his time, and began, as a very young man, to write poetry. The poets Uṣūlī and Ḥayretī were among his friends. According to ᶜĀshıḳ Čelebi, his closest friend and whose *Tedhkire* is a main source for his biography, he came at an early age under the influence of the Ḥaydarī dervish Baba ᶜAlī Mest-i ᶜAdjemī, who called at Vardar Yenidjesi during his travels, and Khayālī soon joined his party of wandering Ḥaydarī and Ḳalenderī dervishes, roaming from place to place and sharing their free-and-easy way of life. Eventually he ended up in Istanbul, where his poetical talent, intelligence and refinement attracted the attention of the Ḳāḍī Ṣarī Gürz Nūr al-Dīn, who ordered Uzun ᶜAlī, the city *muḥtesib*, to save Khayālī from this vagrant life (ᶜĀshıḳ Čelebi, *Meshā'ir al-shuᶜarā'*, ed. G. M. Meredith-Owens, London 1971, 271a). ᶜĀlī says, however, that Baba ᶜAlī Mest treated Khayālī like his own son and helped him with his further education (*Künh al-akhbār*, biographical section, Topkapı Sarayı, Revan no. 117, f. 494b). ᶜĀshıḳ Čelebi himself came to Istanbul in 942/1536 as a young boy, where he met Khayālī, and their friendship lasted more than twenty years, during which time ᶜĀshıḳ was able to follow the poet's private life and his successful career and, as a scholar and poet himself, advised him occasionally on grammatical problems in his writing. In the capital, Khayālī soon won the favour of Süleymān the Magnificent, to whom he was introduced by the Grand Vizier Maḳbūl (Maḳtūl) İbrāhīm Pasha [*q.v.*], who had patronised the poet on the Defterdār İskender Čelebi's recommendation. Almost all his *ḳasīde*s, which have no particular literary distinction, are dedicated to Süleymān. The over-generous favours of the Sultan aroused the jealousy of most of his fellow-poets, particularly of Dhātī (ᶜĀlī, *ibid.*, f. 495a) and Tashlıdjalı Yaḥyā [*q.v.*] who frequently attacked him with his pungent satires, to which Khayālī did not fail to retort. Following the execution of Iskender Čelebi and İbrāhīm Pasha in 942/1535 and 943/1536 respectively, Khayālī lost two powerful protectors. Although ᶜĀshıḳ Čelebi says unconvincingly that the Sultan's favours never diminished (ᶜĀshıḳ Čelebi, *ibid.*, f. 271b), it seems that Khayālī began to feel uncomfortable at the court during the grand vizierate of Rüstem Pasha [*q.v.*], who was not particularly inclined to the arts. He must have hinted to the poet that his presence in the capital was no longer desirable, for we see Khayālī pressing for a post outside Istanbul, more exactly, to become *Rumeli Ketkhüdāsı* or *Sandjaḳ Beyi*, the latter of which he seems to have obtained. Khayālī's public life after this period is somewhat obscure. His meeting with Fuḍūlī in Baghdād, which must have taken place during Süleymān's sojourn in 941/1534, is mentioned only by ᶜĀlī (*ibid.*, f. 506b) without further comment. He died in Edirne, where he is buried (for the present state of his burial place, see A. N. Tarlan, *Hayâli Bey divanı*, Istanbul 1945, XI).

Khayālī is an outstanding and original *Dīwān* poet of his time. He wrote a few dozen brilliant lyrics which are lost, to the casual reader, in the mass of mediocre *ghazal*s of the most conventional type. His reputation is thus disproportionate to his poetical achievement. It may be that the circumstances in which he left the court after the disappearance of his powerful protectors, and the fact of his apparently being an ᶜAlawī in an environment where orthodox Islam was predominant, were important factors for his comparatively secondary position among his more celebrated colleagues. Although his superiority to Bāḳī [*q.v.*], as claimed by A. N. Tarlan (*Hayali-Baki*, in *Edebiyat Fakültesi Türk Dili ve Edebiyat Dergisi*, No. 1 (1946), 26-38), may be debated, since Khayālī is far from having the mastery of form and the flow of style of the "Sultan of Poets", there can be no doubt that some of Khayālī's lyrics are more heart-felt and are more imbued with pervasive mystic passion than is the case with Bāḳī and with the two prominent followers of his school, Sheykh ül-Islām Yaḥyā and Nedīm.

Khayālī's *Dīwān* has been edited by Ali Nihad Tarlan (*Hayali Bey Divanı*, Istanbul 1945); this is based on manuscripts available in Istanbul libraries.

Bibliography: see the *tedhkire*s of Sehī, Laṭīfī and ᶜĀshıḳ Čelebī, and the biographical section of ᶜĀlī's *Künh al-akhbār*, s.v.; Muᶜallim Nādjī, *Esāmī*, Istanbul 1308/1892, 137; Gibb, *Hist. of Ottoman poetry*, iii, 58; Fahir İz, *Eski Türk edebiyatında nazım*, i/1, Istanbul 1966, 272-80 (selections from his *ghazels*). (FAHİR İZ)

KHAYBAR, the name of a famous oasis, and of its principal settlement, about 95 miles/150 km. from Medina; the district owes its renown to events which took place there in the years 7 and 20 A.H., not to natural features which distinguish it from other oases in the region. For this reason the

ancient Arab geographers, although they do mention it, provide only the briefest of information about it, giving special praise to the abundance of its palm trees.

1.—*Geographical information.*

Only al-Bakrī and Yāķūt have devoted to Khaybar as much as two pages in their *Muʿdjams*: the former is concerned primarily with the details of certain places in the interior in the light of their historical importance, the latter informs us that the place-name Khaybar encompassed the entire *wilāya* and that this *wilāya* comprised 7 *ḥiṣns* whose names were: Ḥiṣn Naʿīm, al-Ķamūs (= Ḥiṣn Abī 'l-Ḥuķayķ), Ḥiṣn al-Shiķķ, Ḥiṣn (al-)Naṭāt, Ḥiṣn ʾl-Sulālim (*sic*), Ḥiṣn al-Waṭīḥ and Ḥiṣn al-Katība. All these place-names are found in the historical Arab sources and are listed alphabetically in the *Muʿdjam* of Yāķūt. Wüstenfeld (*Die von Medina auslaufenden Hauptstrassen* ... 15) adds to them two other names, al-Yaʿķūbī, ii, 56, another two, al-Bakrī, 331, one other.

Yāķūt states in addition that Khaybar was the equivalent of *ḥiṣn* in the dialect of the Jews and since there were several of these in the region, the locality was also designated by the plural form Khayābir. He quotes some verses where mention is made of the fever which was endemic in the oasis, and of the abundance of its date-palms.

From the texts of modern geographers we can glean some supplementary information: distance from Medina: 60 *mīls*; altitude: 2,800 feet (thus Doughty ii, 211; Twitchell, 12: 2,200); site: in a *ḥarra* [*q.v.*]; principal settlement: in the main *wādī*, called Wādī Zaydiyya; administrative district: at present, one of the four *imāra*s of Djabal Shammar (see C. A. Nallino, 73); several villages, swampy soil and unhealthy air; 3,000 inhabitants, most of them mulattoes, descendants of negro slaves imported in ancient times to cultivate the oasis (see below). The only satisfying description of the locality is that of Doughty, who stayed at Khaybar from Nov. 1877 to March 1878. The impression given by his notes is that the entire *ḥarra*, despite the fertility of the soil, has a depressing and desolate atmosphere because of its stagnant waters, the salt encrustation of its *wādī*s and above all because of the blackish colour of its basalt rocks. Doughty said on arrival: "all is horror at Kheibar" (ii, 79; cf. 76, 81, 215, etc.). Recently, many changes have taken place at Khaybar. Twitchell informs us that a large dam has been constructed not far from the principal settlement, that other dams are planned and that a road suitable for vehicles now connects the oasis to Medina.

2.—*History*

The earliest mention of Khaybar figures in the bilingual inscription of Ḥarrān in the Ladja: it bears the date "the year 463, one year after the Khaybar expedition" referring therefore to the year 568 A.D. (see E. Littmann, *Osservazioni sulle iscrizioni di Harran e di Zebed* in *RSO*, iv (1911-12), 193 ff.). Ibn Ķutayba (*Maʿārif*, ed. Wüstenfeld, 313) states furthermore that this expedition took place under the king al-Ḥārith b. Abī Shamir (= b. Djabala) who reigned 528 to 569-70 A.D.

In the time of the Prophet, the population of Khaybar was made up of Jewish tribes and of Hebraised tribes. The time of the arrival of the Jews is not known, but one may assume that their departure from Palestine and emigration to Khaybar were part of a considerable migratory movement which took a large number of Jews towards the more fertile regions of North Arabia; that the displacement of such large numbers of people must have had very serious motives, otherwise, it is difficult to understand why it should have consisted of a movement from fertile regions towards the desert; and that the emigration began probably after the destruction of Jerusalem in 70 A.D., but proceeded steadily on account of the persecutions which the Jews continued to suffer in Palestine. Also, in our opinion, a factor would have been invitations sent to relatives and friends by those who, having settled in Arabia, were satisfied with their new situation. How did this satisfaction come about? In our opinion, the Jews found in Arabia conditions favourable to their spirit of initiative and appropriate to their customs. We believe that sufficient attention has not been paid to the following circumstances: (1) The traffic in precious merchandise from India and the Far East, diverted from Mesopotamia to Arabia following a series of grave events, had brought to the inhabitants of the peninsular a certain prosperity; (2) The Arabs were not at that time capable of producing for themselves the tools, the weapons, the textiles, and the jewelry which they needed or coveted, and the Jews, being skilful artisans and drawn by nature towards commerce, were in a position to supply these objects because they understood the art of manufacturing them or the means of importing them; and (3) Arabia was a vast country with a sizable population which offered, now that economic conditions were much improved, considerable opportunities for commerce.

In our opinion, the Jews in Arabia, besides their activity in agriculture (they were the pioneers in the cultivation of the oasis) and their commercial activities in their capacity as craftsmen, bankers and money-lenders, probably carried these on in collaboration with the Arabs. They provided the capital, while the Arabs acted as intermediaries between them and the tribes of the interior. The Jews possessed considerable wealth and it would seem difficult to suppose that this was due solely to the work of farmers and artisans whose production was for local consumption only. In fact, despite the absence of precise information, we possess certain indications. Some objects found by the Muslims in a redoubt at Khaybar (Caetani, 7 a.H., § 6) seem to us significant: a siege-engine, 20 bales of Yemenī cloth and 500 cloaks. Wellhausen, apparently struck by the singularity of the existence of such a machine among the Jews, attempted to explain it, suggesting (tr. of al-Wāķidī, 269, n. 1) that these were used for settling quarrels among the families of the community. It would seem more logical to suppose that it was being stored in a depôt for future sale, in the same way that swords, lances, shields, etc. had been sold by the Jews. Equally, the 20 bales of cloth and the 500 cloaks must have been intended for sale, as it is not conceivable that such a quantity of luxury goods was kept for the exclusive use of the Jews. If one accepts the idea of commercial activities undertaken especially by the Jews of Medina (cf. moreover M. A. Shaban, *Islamic history, a new interpretation (600-750)*, Cambridge 1971, 10, 13), one understands better the reasons for which Muḥammad attacked them in particular. His hostility towards the Jews would have had economic causes similar to those which have brought about persecutions and pogroms in so many countries during the course of history.

According to Caetani (7 a.H., § 7) Muḥammad was moved to attack Khaybar by motives of political opportunism: on the one hand, the pact concluded with Ķuraysh at Ḥudaybiyya gave him the assurance of not being attacked by them during the expedition; on the other hand, if he conquered Khaybar he would

be able to satisfy with ample booty those of his companions who, having hoped to capture Mecca, were disappointed and discontented.

Montgomery Watt has drawn attention to the fact that the Banu 'l-Naḍīr, driven out of Medina, had taken refuge in Khaybar and that their chieftains and the chieftains of other Jewish groups, eager for revenge, were intriguing against Muḥammad along with the Arabs tribes of the neighbourhood. So Muḥammad had not only a just motive for attacking them, but there was also the positive necessity to destroy these enemies, more formidable even than the Ḳuraysh because of their adherence to their own religion, their intelligence and their superior culture. Muḥammad Ḥusayn Haykal (385-6) maintains that the Prophet did not feel sure of the northern fringes of the peninsular: he was afraid lest the Jews established in the oases of Northern Arabia betray him, and lest Heraclius and Kisrā seek help from them against him. The sources give support to the view of Montgomery Watt, showing that the Jews, already responsible for the coalition which had laid siege to Medina in 5 A.H. and worried by the growing power of the Prophet, continued to stir up the Arabs against him. Haykal's opinion, however, is to be rejected in that it is inappropriate to consider an event in the light of subsequent developments. In the year 7 A.H. Muḥammad was not yet a figure to be reckoned with in the estimation of the rulers of the empires to the north of the peninsular. While giving full credit to the opinion of Montgomery Watt, one should not overlook the fact that the Prophet was in great need of arms and money to accomplish his objectives and he knew that he could find these among the Jews at Khaybar (the sources give precise details of the number and type of arms captured by the Muslims from the Jews at Medina and at Khaybar; Caetani, 4 a.H., § 13; 5 a.H., § 49; 7 a.H., § 31).

Muḥammad marched against Khaybar with 1,800 or 1,600 men and 100 horses (according to al-Masʿūdī, *Tanbīh*, 256, with 1,400 men and 200 horses). The date of departure indicated by Ibn Hishām, sc. Muḥarram 7/May-June 628, is to be preferred to those of the other sources (see Caetani, 7 a.H., § 7 and n. 2). The march of the Muslims was secret and rapid, and the Jews only became aware of their arrival when they went out to their work in the fields. Alarmed, the inhabitants of the oasis took refuge in their homes, confident of their ability to defend themselves there, and from that time onwards each family or group held defensive positions in its own redoubt.

The attack by Muḥammad had been foreseen, but no serious preparations for withstanding it had been made; at Khaybar there was no political authority which could have imposed a communal defence policy, and it seems moreover that discord reigned there (Caetani, 7 a.H., § 9, and 8). Their defensive policy was limited to seeking, with promises of reward, the support of the neighbouring Arab tribes. In fact, several thousands of the Ghaṭafān, pressed by the insistence of and the rewards offered by the Jews, came to Khaybar to offer their aid, but they withdrew at the very moment when their aid was needed. The sources explain their departure, describing how they had left their women, children and livestock in an encampment in the middle of the desert and, hearing great uproar from that place, they believed that the Muslims were attacking it and they rushed to defend their families (another version attributes their departure to a mysterious voice which warned them of danger [Caetani, 7 a.H., § 12]). Now, the Ghaṭafān embraced Islam immediately after the conquest of Khaybar and they did not return to Khaybar until after the successful completion of the operation; Muḥammed conceded to them a hill in the oasis and one may suppose that this concession was the price of their withdrawal.

The process of the military operation has not been clearly described in the sources, and for purposes of reconstruction, the historian cannot base himself on the topography of the oasis, nor on a survey of the remains of ancient constructions in the *ḥarra*, nor on the local tradition which indicates the sites where Muslims and Jews fought one another. The actual place-names, which Doughty collected, differ entirely from those mentioned in the sources (Caetani, 7 a.H., § 6); one site alone can be identified, the place where ʿAlī gave proof of his valour, and this only because there is a mosque bearing his name. We restrict ourselves here to drawing out from the detailed accounts of the sources those aspects which characterised the hostilities and the more famous of the episodes. Two facts should be noted. First, in the oasis there were three regions: al-Naṭāt, al-Shiḳḳ and al-Katība, probably separated by natural diversions (*wādīs*, lava-drifts, swamps). Second, each of these regions contained several *ḥiṣns*. Those which Muḥammad besieged and which provided for the Jews homes, storehouses and stables (Caetani, 7 a.H., §§ 26, 28) could probably be described as "farm-strongholds", the term applied by Ph. Lippens in his *Expédition en Arabie centrale*, Paris 1956, 37, to the buildings in another oasis, also called Khaybar, situated to the south of Mecca on the Bīsha-Abhā road (cf. Fuʾād Ḥamza, *Bilād*, 263); "farm" because after the fashion of the buildings described by Lippens, the *ḥiṣns* of our Khaybar were surrounded by cultivated fields and palm-groves (Muḥammad ordered the felling of 400 palms around one *ḥiṣn* to force the defenders to capitulate; Caetani, 7 a.H., § 17); "strongholds" because they were raised up on the hills or on the basalt rocks of the oasis as to be more defensible, such as the *ḥiṣn* of the principal settlement which stands on a long, basalt crag (Doughty, ii, 76) and the *ḥiṣn* of al-Zubayr which, we are told by the sources, stood on the summit of a cliff (Caetani, 7 a.H., § 27).

The situation following the retreat of the inhabitants into their redoubts was as follows. The Jews, after a rather bloody skirmish in front of one of the *ḥiṣns*, avoided combat in the open country and Muḥammad, having none but the most primitive means of assaulting the fortifications, found himself obliged to invest one *ḥiṣn* after another, and to wait until the capitulation of the defenders should become inevitable through lack of water and food. This did not prevent those besieged from transferring, under cover of darkness, women, children and treasures from one *ḥiṣn* to another as the situation demanded; sometimes the warriors themselves, to make their resistance more effective, passed from one region to another, from al-Naṭāt to al-Shiḳḳ and from al-Shiḳḳ to al-Katība.

There were, during these sieges a number of skirmishes preceeded by duels, a number of sorties by the defenders, some attacks by the Muslims and exchanges of arrow-shots between the two sides (Caetani, 7 a.H., §§ 15, 20, 21, 22, 27, 28, 29, 31); among the Jews there were spies and traitors who, in order to save their own skins, gave useful information to the enemy, in particular, concerning the use of certain machines of war which the Muslims learned to use at this time (Caetani, 7 a.H., § 28). All these episodes are recounted in great detail by the Arab chroniclers; there were others which had much greater

repercussions and consequences for Islamic history and law.

As those besieged in one of the *ḥiṣns* defended themselves stubbornly (Caetani, 7 a.H., §§ 20-3), first Abū Bakr, then ʿUmar, took up the standard in the hope of breaking down their resistance, by putting themselves at the head of the attacks; but they still failed. Muḥammad then declared that the next day he would entrust the standard to "a man who loves God and his Prophet and whom God and His Prophet love"; he then called to ʿAlī (this tradition, reported by Ibn Hishām, 1579 and 1580), shows a Shīʿī tendency) and ʿAlī, cured of his opthalmia after the Prophet had spit into his eyes, killed a valiant Jewish chieftain with a sword-stroke which split in two the helmet, the head and the body of the unfortunate victim. He then gave another proof of his exceptional physical strength. Having lost his shield, he lifted one of the doors of the *ḥiṣn* from its hinges and defended himself with it, then used it to make a bridge whereby the attackers gained access to the redoubt. The door was so heavy that later, when it was put back in place, eight men were needed for the purpose. ʿAlī had showed his prowess at Badr, at Uḥud and elsewhere, but this fact astounded the Muslims (al-Ṭabarī devotes a page and a half to it, 1579-81); it was greatly exaggerated (see Doughty, ii, 126), and finally became one of the reasons for which the *futuwwa* [*q.v.*] made of ʿAlī the prototype of heroes.

At the start of hostilities, the Muslims suffered from lack of provisions (Caetani, 7 a.H., § 24, and cf. 9 a.H., § 41). Their need drove them to kill, dismember and cook a score of asses which had escaped from one of the *ḥiṣns*. Muḥammad declared that the meat of horses, mules and asses was forbidden and the cauldrons in which the ass-meat was being cooked were overturned. This judgement was nevertheless mitigated: it is permissible to eat even forbidden foods when one is forced by necessity (Ḳurʾān, II, 168/173, VI, 119/118, XVI, 116/114).

One of the women taken prisoner in one of the *ḥiṣns*, Ṣafiyya, who was married to a Jewish chieftain, caught the attention of the Prophet (Caetani, 7 a.H., §§ 27, 30, 36 and n. 2, § 48 and n. 4); he threw his mantle over her, a sign that he had chosen her for himself; then Ṣafiyya's husband was put to death because, in disobedience to the orders of the Prophet, he had hidden the treasure of the Banu 'l-Naḍīr. Muḥammad set free his captive and took her in marriage, whence a problem was to arise later for the jurists—to know whether the enfranchisement of the slave could replace the nuptial gift (*mahr*, an essential condition for the legitimacy of marriage), or if the enfranchisement of Ṣafiyya was to be considered as a *jus singulare*, that is to say, one of the *khaṣāʾiṣ* or special privileges of the Prophet (see e.g. al-Masʿūdī, *Tanbīh*, 256).

A Jewess laid before Muḥammad, who was dining with his Companions, a roast sheep (Caetani, 7 a.H., § 37). Muḥammad took from it his favourite part, the shoulder, but putting it to his mouth he noticed that it had a strange taste and spat it out (according to one tradition the sheep spoke to him to warn him). One of his fellow-diners who had tasted the dish fell ill and died some time later. The woman confessed her crime (during the hostilities at Khaybar she had lost her husband and other close relatives), but it is not known whether Muḥammad had her executed or pardoned her (al-Ṭabarī, i, 1584, says that he did not punish her, *tadjāwaza ʿanhā*).

The Prophet ordered the restitution to the Jews of the books containing the holy Scriptures (Caetani, 7 a.H., § 38). It was at Khaybar that he laid down instructions concerning the sale and exchange of precious metals (Caetani, 7 a.H., § 38).

After about a month and a half of hostilities which cost the Muslims very few casualities (a score of dead; Caetani 7 a.H., § 43), the Jews asked the Prophet to offer them an agreement and they capitulated, accepting his conditions (thus Ibn Khaldūn, ii, App. 39, and his version is preferable, in its details, to those of the other sources: Caetani, 7 a.H., § 15 nn. 1 and 2, and § 33). Under the terms of the agreement, the Jews were to remain in the oasis on their land and were to cultivate it, but in future were to hand over one-half of the produce to the Muslims. From a legal point of view, the pact was defective, since it did not define the situation of the Jews and did not say whether they were to remain the owners of the soil which they were to cultivate (Caetani, 7 a.H., § 34); it must be assumed that the problem was not even envisaged by the Prophet, whose sole concern at this time was that the oasis should continue to be cultivated, and by the Jews, since Arabs did not like working on the land. The Prophet limited himself to subjecting the Jews to a perpetual servitude, reducing them to the status of land-serfs.

For this reason, in later years when an interest in legal matters developed among cultivated Muslims, the jurists wondered under what terms the Prophet had left the lands of Khaybar to the Jews, and they defined his settlement as a *muzāraʿa* or a *musāḳāt*, that is to say, according to our terminology, a métayage, land tenure with rent paid in produce.

The decision taken by Muḥammad at Khaybar to leave the lands to the Jewish cultivators was different from those which he had taken at Medina where, in the year 4, he had handed over part of the lands of al-Naḍīr to Meccan emigrants and reserved a part for himself; in the year 5 he had divided 4/5 of the lands of Ḳurayẓa among four family groups (Caetani, 4 a.H., § 13; 5 a.H., § 52). Even at Fadak [*q.v.*] he was later to take a completely different decision. The explanation which he gave for his conduct, when he disposed of the lands of the Banu 'l-Naḍīr as he pleased, was that he had become master of them without the Muslims having had to fight for them; according to the terms of the Ḳurʾān, LIX, 6, they were "what God has given back to his Messenger from them (i.e. from the Banu 'l-Naḍīr), and you spurred neither horse nor camel to capture them", *mā afāʾā Allāh ʿalā rasūlihi minhum fa-mā awdjaftum ʿalayhi min khaylin wa-lā rikābin*. Under the terms of this declaration, goods obtained *ʿanwatan* (by force) were to be divided among the warriors who had taken part in their capture; as to those taken *ṣulḥan* (by treaty), the soldiers had no rights. But the caliph ʿUmar, when he conquered the Sawād—and he conquered it *ʿanwatan*—did not follow the precedent of the Prophet. Far from dividing up the land, he made it a source of future revenues for the Muslim community as a whole; in this he justified himself on the grounds that he would have divided up all the conquered villages "had he not feared lest nothing would be left for the last man" (Yaḥyā b. Ādam, cited in the bibliography, §§ 106, 107, 121). In short, ʿUmar placed the interests of the state above those of individuals, but by his decision he caused discontent among the troops and gave a strong motive for grievance to the opposition which was unleashed against the caliph ʿUthmān and which finally brought about the civil war under the caliphate of ʿAlī. Both the defenders of the policy of ʿUmar on this point and his opponents sought justification in the conduct of the Prophet, and the tradi-

tionists came to their aid—with material suiting the interests of one or the other party, as will be seen below when we shall deal with some of the traditions collected by Yaḥyā b. Ādam (d. 203/810) in his *Kitāb al-Kharādj*, on the nature and the distribution of booty and the spoils of war.

The goods of the Jews (Caetani, 7 a.H., §§ 39, 41-42), of which Muḥammad took possession by his conquest of Khaybar, consisted of movable and immovable property. The former posed no problem; all the objects would have been piled up to await distribution, and anyone who took anything out of turn was compelled to return it. As for the land, the sources are not clear, either what was the kind of property to be divided, or on the manner by which the distribution was effected. Caetani maintains that the Prophet divided solely the produce of the lands of Khaybar; on this point he is categorical (7 a.H., §§ 33, 41 n. 2 218; 10 a.H., §§ 100-102; 20 a.H., § 237; 23 a.H., § 559) and Montgomery Watt, 250, is in agreement with him; Caetani criticises (10 a.H., § 100 n. 1) Baron von Tornauw and M. van Berchem, who did not doubt but that in 7 a.H. the Prophet divided up the property, the former in *Das Eigenthumsrecht nach moslemischen Rechte*, in *ZDMG*, xxxvi (1882), 298, the latter in *La propriété territoriale et l'impôt foncier sous les premiers Califes*, Geneva 1886, 8-9. Caetani bases his conclusion on a passage of al-Balādhurī according to which it was ʿUmar who in the year 20 (see below) attended to the division of the *raḳabat al-arḍ*, an expression to be translated as "the ownership of the land" (cf. Glossary to al-Balādhurī). But some details of the distribution of the goods of Khaybar could also serve as a basis for the arguments of Caetani, for example: ʿUmar in undertaking a new division of the oasis, invited the widows of the Prophet to choose between the guarantee that they would receive their annual share of the produce and [the possession of] the land (*al-arḍ*: Yaḥyā b. Ādam, text 24; another version, the price or the estate (*al-ḍayʿa*), *ibid.*, text 25).

If some scholars have asserted that Muḥammad at Khaybar distributed the lands, it is because Muḥammad, instead of amassing the half of the products of the oasis after each harvest for distribution to those Muslims entitled to them, gave to each Muslim beneficiary of a plot of land (see below how he divided the land of the oasis in plots and how he designated the beneficiaries) the right to exact directly from the Jewish cultivator the half of the products which that plot of land had yielded. In short, he established a relation between such and such a piece of land and a beneficiary, and ʿUmar, when he divided the land, took account of this relation.

The manner adopted for the effecting of these measures was as follows. Muḥammad first detached the share of the fifth which belonged by right to him as the leader of the expedition—he chose the region of al-Katība—and then he divided the territory into 18 major parts, and each of these into 100 plots having the same productive capacity. (Previously, an evaluation had been made of the products which each plot of land and palm-grove could be expected to provide). Lots were drawn for the major parts, and since these subsequently bear names, the list of which has survived, and since these names are sometimes those of eminent Companions, such as ʿUmar and Ṭalḥa, and sometimes those of tribal groups, we may deduce that the responsibility for allocating the 100 plots contained in each major part was entrusted to reliable men, some of them chosen by the Prophet, the others, probably later on, chosen by the tribal groups.

What makes the distribution of goods at Khaybar interesting to the historian is a variant account, presented as a tradition by al-Balādhurī (26) and confirmed by other traditions in the collection of Yaḥyā b. Ādam (§§ 90, 91, 94, 95). These traditions change substantially the account given above of the assessment and distribution of the lands at Khaybar, and change it in such a manner that one is tempted to suppose that all these traditions were invented, in spite of their number (we consider them to be authentic), in order to justify the decision of ʿUmar about the lands of Sawād—a decision which was certainly judged politically correct, if not necessary, by most of the people, but which, to be rendered legitimate in the eyes of all, had to be supported by the precedents of the Prophet refered to in traditions. According to the variant account, the land of Khaybar was divided into 36 parts (instead of 18) and Muḥammad divided half of this amount among the troops (Yaḥyā b. Ādam, § 90); of this half he also received a share for himself (*ibid.*, §§ 91, 94); the other half he reserved to provide funds against administrative needs and matters in hand (*ibid.*, §§ 90, 91), against expenses of his guests, and of delegations coming to him from the interior of the peninsula, and against any other eventuality (*ibid.*, §§ 91, 94, 95). Thus the Prophet, well in advance of the time of ʿUmar, was concerned with the interests of the state.

But let us examine the traditions collected by Yaḥyā b. Ādam which reveal the efforts made by the traditionists to interpret the conduct of the Prophet at Khaybar. First of all, they draw a distinction between *ghanīma* (that which is taken by force, *ʿanwatan* and *fay*ʾ (that which is obtained by treaty, *ṣulḥan*) (Yaḥyā b. Ādam, §§ 1, 2, 11); since it could not be denied that Khaybar had been captured *ʿanwatan* (see e.g. *ibid.*, 18), and since it would have been difficult to expunge traditions according to which the Prophet had reserved for himself part of the lands of Khaybar (see the variant version of al-Balādhurī and Yaḥyā b. Ādam, § 9), there were traditionists who settled the question declaring that the fifth part of the *ghanīma* having first been detached—this part belongs to God and it is "given back" by God to those whom He has named (Ḳurʾān, VIII, 42/41: His Messenger, the Messenger's relatives, the orphans, the needy, the wayfarer—the rest belongs to the Muslims who have captured it, and must be divided among them equitably (Yaḥyā b. Ādam, §§ 4, 11, and cf. 18, 12, end), one part for each warrior and two for his horse, if he has brought a horse with him (the question becomes controversial if he has two, *ibid.*, 5-7). Others (*ibid.*, and 8) declared that the lands are excluded from the *ghanīma*: these (*ibid.*, and § 101) are *fay*ʾ and (*ibid.*, and § 48) belong to the Muslims, that is to say, to the Muslim community (al-Ṭabarī, i, 1583⁹, is explicit: Khaybar was a *fay*ʾ). Others again, resorting to subtelty, claim that the *Imām* after having taken the fifth part and thus having made of the lands a *ghanīma*, may distributed the remaining 4/5 between the warriors who had capture it, or hand over the whole to the Muslims in perpetuity as a *fay*ʾ (Yaḥyā b. Ādam, §§ 9, 10, 12, 101; in the *fay*ʾ there is no fifth share, *ibid.*, § 12, and cf. §§ 11 and 101).

The *Imām* may abstain from the distribution to the warriors, because the Prophet at Khaybar kept for himself a portion of the lands (*ibid.*, § 9; on the significance of the word *waḳafa* in this text, see translator's note on p. 112 no. 9), and other parts were distributed (*ibid.*, § 9). Muḥammed assigned some shares of the produce of al-Katība (his fifth) to his wives and to

certain members of his family. Calculations have been made of the quantity of dates and grain which this fifth would have provided (Caetani, 7 a.H., § 42), and there have been attempts to assess the amount of the rents accruing to the Prophet from the oasis cultivated by the Jews; they were certainly considerable, but Sprenger's idea, that Muḥammad could have maintained with these revenues an army of 4,000 or 5,000 men, is an exaggeration (Caetani, 7 a.H., § 46).

The caliph Abū Bakr made no changes in the situation established by the Prophet at Khaybar; ʿUmar made no change during the first years of his government, but in 20 A.H. he modified it completely. That year (Caetani, 20 a.H., § 234-237) he announced in a speech delivered in the mosque of Medina that he had decided to expel the Jews from Arabia. To justify this decision, which reversed the pact concluded with them by the Prophet, he claimed to have learnt, and to have acquired positive verification, that Muḥammad had declared before his death that two religions could not co-exist in Arabia. According to Caetani, the traditions which report this phrase of the dying Prophet and those which accuse the Jews of misconduct and of crimes were invented; equally, one should doubt the veracity of the suggestion that Muḥammad warned the Jews that he was reserving the right to expel them at a later date, and that he was leaving them their lands only in so far as it was pleasing to God, all land being the property of Muslims. These traditions tend evidently to absolve ʿUmar from the charge of having acted against the will of the Prophet in his decision regarding the land of the Sawād.

Caetani claims that the true motive for the new assessment made by the caliph was contingent and local: the oases could henceforth be cultivated by slaves, whose numbers had been greatly swollen through military campaigns outside Arabia (al-Balādhurī in a way confirms this motive, saying that the Muslims, having become powerful, were now in a position to expel the Jews). Having removed the Jews far away from the oases of Arabia, giving them lands in Syria, ʿUmar proceeded to a new partition of Khaybar, in the sense that he assigned to the beneficiaries of the produce the ownership of the land from which they were receiving their rents.

The success of the Prophet at Khaybar had as an immediate effect an increase in his power, for several tribes, enemies until that moment, embraced Islam and recognised the hegemony of Medina (Caetani, 7 a.H., § 45); another consequence of great importance lay in the economic advantages which Muḥammad and the Muslims, particularly the *Muhādjirūn*, gained from the conquest of the oasis: Muḥammad because from now on he could rely on fixed revenues, the Muslims because it was not only ʿĀʾisha who could cry out "Now we can have our fill of dates". Many had cause to rejoice in the change in their economic situation. However, the historical importance of the event lies not in the facts above indicated, but in the pact concluded between Muḥammad and the Jews which set more or less directly the style for relations between the Muslims, conquering vast territories beyond the confines of Arabia and the non-Muslim peoples who fall under their domination. (For a juridical interpretation of this pact, the relevant traditions and the additions which were made to them, see Santillana, i, 359-62 and n. 235).

The history of Khaybar during the succeeding centuries is bound up with that of the Ḥidjāz and of the Nadjd, and offers nothing of interest.

It may be noted that some Jews either stayed in the oasis or returned there (al-Muḳaddasī, 95: Caetani, 20 a.H., § 220); Varthema, who travelled in Arabia during the early years of the 16th century, noted that in a locality between Damascus and Medina (Khaybar?) lived between 4,000 and 5,000 Jews (but Pirenne doubts this, pp. 215-16). Towards the mid-19th century, the Jews were in considerable numbers there (Pirenne, 76). In the mid-19th century, Khaybar was part of the amīrate of the Āl Rashīd, whose capital was at Ḥāʾil, and it stayed under the domination of this dynasty until its collapse following the death of ʿAbd al-ʿAzīz b. Rashīd (1906). It then belonged to the Sharīf al-Ḥusayn of Mecca until 1922, when it was captured by Ṭalāl, son of ʿAbd al-ʿAzīz Ibn Saʿūd (in 1918 he had defeated the troops of the Ḥidjāz near al-Ṭāʾif) (*OM*, iv (1924), 599). On these events, see in particular, H. St. John Philby, *Saʿudi Arabia*.

KHAYBAR or Khyber Pass, one of the principal passes (together with the Kurram, Tochi, Gomal and Bolan Passes) through the mountain barrier separating the Indus valley plains from Afghānistān. The pass runs northwestwards for *ca.* 33 miles/50 km. from the Shadi Bagiar opening 3 miles/5 km. beyond Fort Jamrud, itself 7 miles/12 km. from Peshawar, to the barren plain of Loi Dakka, which then stretches to the Kābul River banks. The highest point of the pass is at Landi Kotal (3,518 ft./1,280 m.), an important market centre for the region, after which the road descends to the beginning of Afghān territory and Landi Khana. The surrounding country, now falling mainly within Pakistan, is controlled by Afridi Pathans, with Mohmands to the north.

The pass has been of great strategic importance all through history as a gateway for invading armies to debouch on the plains of northern India. It was probably used by Alexander the Great's generals, and in Islamic times, was used at least once by Maḥmūd of Ghazna and on various occasions by Bābur, and more recently, by Nādir Shāh Afshār and Aḥmad Shāh Durrānī. In the 19th century, it became especially valuable as the most direct channel for the Government of British India to exert pressure on the Kings of Kābul, being little blocked by snow during the winter months. During the First Afghan War (1839-42) there were various skirmishes between British troops and the Afridis. A Khyber Agency was created by the Government of India, with a special officer in charge of it, during the Second Afghan War (1878-80), the guiding policy being non-interference with the Pathans, who were given subsidies, provided that the route through the pass remained unmolested.

After 1881, there were formed the Khyber Rifles, a force of *jezailchis* or tribal levies, who were paid by the Government of India and who guarded the pass until the risings of the Afridis and Orakzais under Mullah Sayyid Akbar in 1897-8. Thereafter, the Khyber Rifles were supported by a mobile British army column in Peshawar, and the British became responsible for the safe passage of caravans through the pass. After the Third Afghan War of 1919 showed the undependable nature of the Khyber Rifles, they were disbanded and their place taken by regular British troops, by Khassadars (local tribesmen enrolled for escort and simular duties, paid by the government but supplying their own arms and equipment), by the Scouts and by the Frontier Constabulary. Under the viceroyalty of Lord Curzon (1899-1905), an extension of broad-gauge railway had been made to Fort Jamrud and a road to Landi Kotal, and in 1925 a narrow-gauge railway was constructed as far as Landi Khana.

After 1947, Pakistan became responsible for the Khyber Agency, which was attached to the Peshawar division of the North-West Frontier region of West Pakistan.

(C. E. Bosworth)

KHAYL (a.), a fem. sing. noun with a collective meaning denoting the equine species. The term has no singular and, like *ibil* "camels" and *ghanam* "sheep", it is to be included in the category of collectives for domestic animals forming the basis of nomadic life (see Ch. Pellat, *Sur quelques noms d'animaux en arabe classique*, in *GLECS*, viii, 95-9); however, the plurals *khuyūl* and *akhyāl* are found for it. The extent of the concept of *khayl* covers the whole range of terms comprising, in Islamic society, the activities based upon use of the horse, such as, *inter alia*, the nouns *barīd*, *djaysh*, *djarīd*, *djihād*, *djund*, *faras*, *furūsiyya*, *ḥalḳa*, *isṭabl*, *ṣawladjān*/*čawgān*, *maydān*, *ṣayd* and *sibāḳ* [*q.vv.*]. According to the Arab philologists, *khayl* "horses", from the double radicals *kh. w. l*/*kh. y. l*, is supposed to refer to the "haughty gait" of these proud animals (*li-khtiyāl mishyatihā*); but this ingenious explanation is, even in the eyes of Ibn Sīduh himself, somewhat subject to caution (*Mukhaṣṣas*, vi, 165). One might well ask whether *khayl* is not from a substratum of terms inherited from the languages preceding Arabic, which may be confirmed by the parallel usage of preciser terms, like *faras* "riding horse", *djawād* "excellent runner", *ḥidjr* "mare", *ḥiṣān* "stallion of noble blood", *ramaka* "non-thoroughbred mare", *birdhawn* "nag of non-Arab stock", which all have plurals. In the same way, Latin had, at the side of the classical *equus*, the vulgar *caballus* of Gaulish origin.

Starting from its metonymous sense of "mounted troop", *khayl* furnished, by the process of derivation, some exact denotations, such as *khayāla* "equitation" and *khayyāl* "horseman", but without the knightly connotation of *fāris* or the military one of the old Persian term *suwār* (pls. *aswār*, *asāwir*, *asāwira*); it was also said of the Turanian peoples that they were a *ḳawm khayyāla* "mounted race".

In Arabia, at the outset of Islam, horses were very few in numbers and, thanks to the *kutub al-khayl*, the names and pedigrees are even known for the most famous of them (see G. Levi della Vida, *Les «Livres des chevaux» d'Ibn al-Kalbī et d'Ibn al-Aʿrābī*, Leiden 1928). To possess a horse was a mark of superiority and riches. The only horse-dealers were some horse-breeders plying their trade in Nadjd, and zealously preserving the purity of the Arab breed with small herds left in semi-liberty but keenly watched. In distinction to the camel, which was universally at home in semi-desert terrains and could live adequately off spiny shrubs and saline and acid pasturage (*ḥamḍ*), at horse requires each day water and a sweet nourishing on graminaceous and herbaceous vegetation (*khulla*). Hence it was only possible to rear horses in the zone of steppe vegetation, such as that part of Nadjd watered by the Wādī 'l-Rumah. The horse appeared amongst the nomadic tribes of this region hardly more than a century or two before Islam, and the Banū Taghlib [*q.v.*] boasted of being the first to ride this noble animal (al-Bakrī, *Muʿdjam*, 54; according to the legend, the ancestor of the horses of Taghlib and then of those of other tribes was none other than Zād al-Rākib, offered by Solomon to the Azd of ʿUmān, *Les «Livres de chevaux»*, 5-6). Without giving too much credence to these pretensions, it is undeniable that the nomads of Nadjd took the initiative in adopting the institution of the *ḥimā* [*q.v.*] or "natural reserve for stockbreeding", into which no tribe, except the owners, could enter and where the animals lived and bred completely freely. This method of stockbreeding was the only feasible one in a land of such deprivation, and it was this which the Ghassānids [see ghassān] had followed with success, furnishing horses to the Byzantines, and likewise the Lakhmids [*q.v.*], benefiting from the bloodstock of Persia. It

was doubtless following these examples that the great confederation of Ghaṭafān [q.v.], spread over Nadjd, utilised the system of the *ḥimā*, favoured by having at their disposal relatively rich pasture lands on the fringes and slopes of the great plateau, with drainage from running streams. The results of this well-thought out stockraising policy showed positive results, since in the 6th century, several tribes, including the Banū ʿAbs, were each able to fit out nearly a thousand riders; it is at this time that the *sayyid* assumes the name of *fāris* and the *ra'īs* that of *ḳā'id al-khayl*. One of the oldest-established and most famous of these reserves for breeding horses was the vast *ḥimā Ḍariyya* [q.v.], which in the time of the caliph ʿUthmān had several tens of thousands of beasts, horses as well as camels. Equally flourishing was the *ḥimā* of al-Baḳīʿ near Medina, which had a permanent water supply for the whole year. Correspondingly, the great caravan centres of the Ḥidjāz had near them their own *ḥimā*s forming a protective zone against the depredations of nomads.

The Prophet Muḥammad, conscious of the supreme value of the horse for the success of Islam, was skilfully able to appropriate the resources of the existing *ḥimā*s for the benefit of the new community, at the same time strengthening their inviolate character by their integration of function into the Islamic *ḥaram*. Consequently, the warriors for the faith benefited considerably from these reinforcements for their campaigns of razzias. Admittedly, there was a need at first to cope with the incredulousness and indiscipline of the Bedouin plunderers, but some severe reprisals soon instilled into them a respect for "enclosed tracts belonging only to God and His Messenger" (*lā ḥimā illā li-llāh wa-li-rasūlihi*). The effects of this policy of utilising horses were immediate, and thus one sees the Banū Sulaym, at the time of the conquest of Mecca, bringing to the Prophet the support of some 800 horses. The *ḥaram* territories were enlarged and new ones created.

The Orthodox caliphs, and ʿUmar especially, concentrated their efforts on building up the potential force of horses for Islam; the establishment of the reserves of al-Rabadha, which was several hundred square km. in extent, and of al-Naḳīʿ, showed this tangibly. Following them, the Umayyad caliphs accelerated the expansion of the breeding stud in the Ḥidjāz, and there was added to this already considerable stock those of Syria and Iraq. After the conquest of the Maghrib, there was gained the support of inexhaustible contingents of mounted Berbers, whose Barbary stallions brought an invigorating element into the Arab stock's blood, putting the Muslim cavalry in the forefront compared to that of the western world and gaining for the "Arabs" or "Saracens" the reputation of being essentially a mounted people; thanks to the horse, Islam was able to extend from Spain to the Indus. But by turning their backs on Arabia, the ʿAbbāsids—who had vast resources of Persian and Central Asian horses—doomed the stockbreeding of the Nadjd and Ḥidjāz *ḥimā*s to an ineluctable decline from which it was never able to recover. The tracts left for stockbreeding *in natura*, gradually allowed to run down, gave place to the "garrison settlements" (*ʿaskar*, *muʿaskar*, *maʿaskar*), stables and military stud-farms founded in the vicinity of the capital, the caliphal residences and the great urban centres of Mesopotamia and Syria in the East and of Egypt and the Maghrib in the West. Later on, each local dynasty, once freed from the control of Baghdād, would set up its own policy regarding cavalry remounts and its military potential; the history of each of these powers is essentially contained in this.

The very wide sense given to the term *khayl* could not indicate distinctions in groups of mounts from the numerical point of view. There were ancient terms of the nomadic stockbreeders, like *miḳnab*, *mansir/minsar*, *raʿīl* and *ḳanbal* for herds of up to 50, and *kurdūs*, *djahfal* and *faylaḳ* for 100 and above into the thousands, and in the Islamic period, these passed into military terminology at the side of *katība* "squadron", *khamīs/khums* "fifth part of the army", *ṭalīʿa* "vanguard", *djarrār* "army corps", etc.; but it would be futile to try to find an exact numerical equivalent for each of these, given the widely varying evaluations of the historians and chroniclers.

From a study of numerous mediaeval treatises in Arabic on *furūsiyya* and on the *djihād*, there emerges, in regard to the individual or collective horse-driving, that the majority, if not all, of these texts are of non-Arabic origin, the reason for this being that "les véritables Arabes n'ont jamais constitué de vrais corps de cavalerie susceptibles de devenir des écoles d'équitation, des centres d'émulation, pour mieux dire. Il n'y a d'équitation arabe pure que celles des Bédouins nomades ... qui ont toujours fourni des contingents de cavaliers irréguliers aux autorités dont ils dépendaient, mais pour un temps limité ... Il n'a jamais été dans leur tempérament de se plier à la discipline, à la contrainte continue d'une troupe régulière" (L. Mercier, *Parure* ..., 385-6). In the light of this state of affairs, and after the Islamisation of western Asia had been completed, the caliphs used for their regular cavalry the recently-converted mounted peoples of Iran and Turan, sc. Persians, Turks, Mongols and Türkmens. All Muslim sovereigns continued to draw on this inexhaustible mine of men and horses until the 9th/15th century, and it was from this mine that the masters of real schools of equitation and the authors of treatises on this art, considered now purely as a military art, arose. The handling of horses is only approached with a view to individual combat and the manoeuvres of groups as in tournaments, polo, the *djarīd*, "the gourd-shooting" (*ḳabaḳ*), jousting and arms-play on horseback; at the present time, only the Afghān *buz-kashī* "goat-dragging" can give any idea of the spirit of competition and the enthusiasm animating these equestrian sports, in which virtuosity and brutality existed side-by-side. Far from equalling these feats, the Arabian Bedouins only used their horses for occasional straightforward charges over short distances, getting the maximum from the animal's resources. Hence their method of riding was of the simplest. Not knowing the use of saddles, stirrups and bits, they rode bareback or with a saddle-felt (*mirshaḥa*) strapped on, and with some padding attached in the rough semblance of a saddle. The bridle (*lidjām*, from Persian *likām*) was only a rudimentary cavesson or snaffle-bit, whose snaffle was usually of cord or of wood (see *LA*, root *l. dj. m*). Such a primitive method of harnassing could not permit a tradition of equitation which might become a school. Moreover, shoeing horses with nails (*tasmīr*), a Gallo-Roman invention in the 6th century, being unknown, some Nadjdī tribes used, on hard and pebbly terrains, a sandal of iron or leather (*naʿl*), as is attested in a verse of al-Ḳuḥayf al-ʿUḳaylī (see *Aghānī*, xxi, 250), which must have considerably restricted the horse's speed when ridden fast.

The method of riding used by the Arabs of ʿIrāḳ and Syria was quite different and much more elegant. Amongst the Lakhmids, heirs of the Parthian-Sāsānid

method, and amongst the Ghassānids formed in a similar tradition of the Greeks, the tribes were much more habituated to use of the horse than their brethren in Arabia. They used at that time a method of harnessing perfected long before, and from antiquity till the 8th/14th century, hardly changed. The saddle shaped like a cradle, built upon a wooden saddle-bow (*ḳayḳab*) and shaping both the cantle and the pommel, resembled somewhat the modern type said to be "for rapid riding". Held in place by a single or a double saddle-girth, it generally had also a breaststrap and a buttocks-strap to prevent it sliding either forwards or backwards. For display purposes, a large cloth over the hindquarters, richly decorated (the *kunbūsh*), was added, as many Persian miniatures on equestrian themes show; the saddlery of persons of high rank showed a luxury sometimes excessive, in which applied work in precious metals and encrustations of precious stones competed in display. At a time when the Mamlūks had levelled down the saddle-cantle so that they could shoot backwards in the ancient Parthian method, the Persians conceived the idea in the 8th/14th century of a saddle with a high back, not very compatible with a rational method of riding, but suitable for shooting with the arbalist or cross-bow, which had become a common weapon of war. The soldier thus armed had in fact to rear up in the stirrups and wedge himself against the cantle. This kind of saddle-cum-chair has persisted till the present day, above all in the Maghrib, but was strongly criticised by the Mamlūk Muḥammad Ibn Manglī, in his treatise on hunting written in 773/1371 (*K. Uns al-mala*ʾ . . . , Paris 1880, 13-14), who found in it seven major faults which militated against good riding technique (see F. Viré, review of *Saracen archery* by J. D. Latham and W. F. Paterson, London 1970, in *JSS*, xvi (1971), 260).

As for the bridle and its bit, these remained unchanged from the time of the great civilisations which evolved them. The ensemble comprised essentially a bridoon with a curb-bit (*lazma*), whose slender lower parts, curved inwards in an S-shape (whence the name *nāziki*, from Persian *nāzik* "stylised"), operate as a lever. The beams could be more or less severe in degree, with or without allowing freedom for the tongue, according to the hardness of the mount's mouth. The deplorable invention of the curb-bit, called—perhaps wrongly—"the Arab curb-bit" and a real instrument of torture going contrary to all the natural principles of the horse's handling, seems to have come from a need to reduce the animal to a simple machine, at a time when there had been formed regular corps of mounted cavalry, mounted on entire horses or stallions which were hard to control and with which co-ordinated mass movements required absolute discipline and perfect execution. It is nevertheless true that, from the viewpoint of modern equestrian art, the backed saddle, the Arab curb-bit and the heavy stirrups with soles, all of which make up the image of the perfect "Arab knight" and the Maghribī spahi, show a total ignorance of a rational method of riding based on the mount's accord with his rider's desires. The addition to the bridle of a fixed martingale (Persian *sarafsār* "headrope", Maghribī *djabbādha*, classical *ḥakama*), Persian in origin, appears *ca.* the 5th/11th century in miniature paintings.

Stirrups, used in China from the 2nd century B.C. onwards, were probably known at the time of the Lakhmids, but not very widespread. In the likeness of the stirrups of Mexican gauchos and of the Mongols, these were made of wood, and according to al-Mubarrad (*Kāmil*, ii, 228, and in Ibn Khallikān, Cairo 1299/1882, ii, 192, tr. de Slane, iii, 510), it was allegedly al-Muhallab b. Abī Ṣufra, governor of Khurāsān in 79/699 and leading figure in the suppression of the Khāridjīs of al-Djazīra, who was the first to equip his cavalry units with forged iron stirrups, since the wooden ones then in general usage broke too frequently in the course of military engagements.

Spurs (*mihmāz*, pl. *mahāmiz*; *kullāb*, pl. *kalālīb*; Maghribī, *shabūr*/*shābīr*) were much more in vogue in the Muslim West than the East, this being from the Hispano-Moorish influence; the equipment of the Muslim rider of al-Andalus and that of the Spanish rider hardly differed at all. Moreover, the heavy stirrup with a tread mentioned above, which was a replica in metal of the wooden stirrup-shoes of the "gardians" (cow-boys) of corrida-fighting bulls, came also from Spain. From its being made of iron, there was added to its function of being a foot-rest that of spur, by the use of the heel pressing the sharpened edge of the tread against the horses's flank. Most of the Barbary horses of the Maghrib, having been thus ridden, show on their bellies the marks of a too severe application of this use of this type of stirrup.

These schematic details about the harnessing of horse in Islam cannot be regarded as absolutely authentic for all space and time, since each land and each period had its own usages and customs in regard to equipment, according to its own special resources. Differences of detail appear when one compares, on one hand, the information of western authors like the Andalusī Ibn Hudhayl [*q.v.*] with that of easterners like Ibn al-Mundhir [*q.v.*], and on the other hand, places them alongside the documentation provided by iconography. Riders and horses were indeed one of the most-used themes in the minor arts; miniatures, ceramics, textiles, carved ivories and engraved copperware objects depict a great variety of types of harnessing and accoutrements in sense of princely court-life. The richness which these objets d'art endeavour to depict confirms the description given in the 6th/12th century by the chronicler Ibn al-Ṭuwayr (525-617/1131-1220) of Fāṭimid ceremonial at the festival of the New Year (see M. Canard, *La procession du Nouvel An chez les Fāṭimides*, in *AIEO* Algiers, x (1952), 374-9). He speaks there in fact of saddles worked with gold, silver and enamelling, hung with brocade and siglaton; the 70 mounts of the caliph himself bore necklaces of gold and amber collars round their necks, and anklets plated with precious metals round their feet. An animal equipped was estimated to be worth a thousand *dīnārs*.

With the help of all the Arabic texts dealing with horses and, especially, the two mentioned above plus the "Book of agriculture" (*K. al-Filāḥa*) of the Andalusī Ibn al-ʿAwwām [*q.v.*], one can get an idea of the level of horsemanship practiced by the Muslim cavalryman in the Middles Ages, apart from the Arab Bedouin. The authors, whoever they may be, were never able to disentangle the three concepts of hippiatry, hippology and equestrianism, any more than they were able to observe the mechanism and movement of the horses at its various paces; hence there was no question for them of passages, changes of pace, jumping over obstacles or any of the exercises which make up a fairly advanced equestrianism. The recommended technique was fairly simple, advising a bearing and a seating identical to that taught in Europe to the straightforward military cavalryman right up to the time of mechanisation. This method could be resumed in the formula "legs without reins and reins without legs". Long stirrups and legs held

forward in the so-called "French" manner gave an adequate amount of stability. The insistence of the authors on an indispensable equal length of reins and on the synchronisation of the use of the two spurs brings out clearly the absence of any predominant action of a rein or a leg.

In contrast to all the other treatises, an acephalous manuscript of the Paris Bibliothèque Nationale (Ar. No. 2815) puts forward a more thoughtful method based on constant exercise in a circular training-routine (*nāward*), at all the varying paces and with two hands. Without being described completely and explicitly, it envisages the change of pace and the correct backing, with release of the bit, followed by a period of the grand trot, and describes this perfectly. Nevertheless, this documentation is a late one, and one may well think that it has been inspired by western techniques; one accordingly wonders whether in this method of riding, the average Muslim rider ever, one day, rose to this degree of perfection. Whatever the truth, it must be admitted that over a long period of time, equitation amongst the Muslims regressed, whereas amongst Christendom, it improved progressively up to the methods of the great school of horsemanship.

It can easily be imagined how important, in the economic life of the Islamic world up to the modern period, was the upkeep of cavalry units, with all that they needed of furnishings and equipment. Because of these exigencies, a number of specialist artisans, connected with farriery, saddlery and harness-making, had an era of prosperity, and there are hardly any Islamic settlements without their *sūḳ al-sarrādjīn* or their *bāb al-ḥaddādīn*. A good amount of the basic equipment required for these activities were imported into Baghdād. Saddle-seats came from China; from Berbera [*q.v.*] via the Red Sea and from Ifrīḳiya via Ḳayrawān and Barḳa, where they were tanned, there came luxurious panther skins, the saddle-carpets preferred by the Mamlūks and whose use was spread by the Turks to the cavalry forces of Central Europe. The saddle felts (*misḥ*, pls. *amsāḥ*, *musūḥ*) were sought from Armenia, Adharbāydjān, Ḳūmis and Mawṣil, as well as pack-saddles for beasts of burden, whilst Susa furnished expensive sumpter-cloths. Imports were not limited to these materials and manufactures, but extended also to lively nags (*birdhawn*, pl. *barādhīn*) from the Mongol and Byzantine worlds, equally good as mounts and as beasts of burden; they formed a lively element of trade at markets and fairs set up at the gates of towns. As for mounts of Arab stock, these were most often the objects of direct trade between breeders and purchasers (see the *K. al-Tabaṣṣur* attributed to al-Djāḥiẓ, tr. Ch. Pellat, in *Arabica*, i (1954), 158-60; J. Sauvaget, *Historiens arabes*, Paris 1946, 10-12; M. Lombard, *La chasse et les produits de la chasse dans le monde musulman* (*VIIIe-XIe siècle*), in *Annales*, xxiv/3 (1969), 577-8). Despite all the speculations in horsedealing and trading which this lively commerce in horses engendered within Islam, one can be certain that no-one ever thought of speculating financially in regard to the semen (*ʿasb*) of stallions, since the Prophet had formally proscribed making money out of breeding. According to certain traditions, the mating of mares and asses was allegedly forbidden, but the importance attached to mule-breeding studs [see BAGHL] by people in the Islamic world proves that such a prohibition was never in fact put into force; even so, the mules of the Caucasus, and especially of Bardhaʿa [*q.v.*], were imported and prized for their speed and endurance.

But if the Muslims freely imported horses, their sale outside the *Dār al-Islām* [*q.v.*] was, in the first Islamic century, absolutely prohibited and considered as an illegal act by the majority of jurists, who based themselves, in the interests of the legal requirement of *djihād*, on the divine words "Prepare against them whatever force and cavalry you are able to get together, of those held ready (*min ribāṭ al-khayl*), to overawe thereby the enemy of God and your own . . ." (Ḳurʾān, VIII, 62/60). The horse was thus elevated to the rank of fighter for the faith and received two shares in the plunder if it were of Arab stock, whereas its rider had only one. The horse-potential thus revealing itself, for the new community, as the nerve-centre of warfare and the secret of victory, it was further forbidden for Dhimmīs [see DHIMMA] to ride horses. Later on, when the Islamic frontiers had reached their maximum extension, these rigours were relaxed and applied only then to horses of pure Arab stock, to which Abū Ḥanīfa added valuable mules. However, in Morocco right up to the eve of the Protectorate, the prohibition of riding horses was applied to the Jews, at a time when elsewhere, and for a long time back, this law no longer bore down on non-Muslims. The latter, all through the Ottoman empire, only had the bother of obtaining a special authorisation from the sultan in order to export horses to foreign lands. Since then, all restrictions were abandoned in all Muslim states. Certain lands relaxed these at quite an early date; a proof of this is the felicitous introduction, in the 18th century, into the British studs, of the famous stallions Darley-Arabian and Godolphin-Arabian which inaugurated the Stud-Book and were the origin of the present pure-blooded English stock. From this last and by breeding with new Arab stocks, M. Gayot obtained in 1833, in the Pompadour studs, the perfected type of Anglo-Arab horse, which now holds the top rank in international racing. At the side of that, the Maghribī Barbary horse has continued to restock the numerous stables for training horses and equestrian centres of France, after having built up over a century and more, the glory of the splendid squadrons of North African spahis.

KHAYMA (A.) "tent". When the ancient poets and the writers of the Middle Ages spoke of a nomad's tent they generally described it by the very widely-known Semitic term *bayt* [*q.v.*], which refers to a dwelling of some kind, either permanent or temporary, and so is not without ambiguity. A more precise term is *bayt shaʿar*, lit. "dwelling of hair". But this word can also cause confusion since the *ductus* is the same as in *bayt shiʿr*, "verse of poetry". There is, however, less confusion in the spoken language and the expression has a typically bedouin air; it is still current among nomadic and semi-nomadic tribes from North Africa to the Near East where, beside the normal name for tent, *bayt/bēt*, *b. shaʿar*, there occurs no less frequently, in the speech of rural peoples, town dwellers and even transhumants, the term *khayma/khēma*. This word has followed a curious semantic evolution (see below) and has come to acquire the general meaning of a mobile dwelling made of animal hair, wool or any other material except leather. To-day, among many rural people and even town dwellers, the memory of a former nomadic way of life is preserved by their actually using *khayma/khēma* to denote a house, and it has totally replaced *bayt/bēt*. For a number of reasons, therefore, it seems conve-

nient to record under this heading a general exposition of the use of the tent among the tribes of the Muslim world including the nomadic, semi-nomadic and those becoming sedentary.

i. — Ancient Arabia

Arab philologists of the earliest periods of Islam have collected the vocabulary of the tents that were used in pre-Islamic Arabia; in particular al-Aṣmaʿī, author of a *Kitāb al-Akhbiya wa'l-buyūt* (quoted in the *Fihrist*, Cairo ed., 82). Mediaeval commentators on archaic poetry and lexicographers have widely exploited the documentation which they repeat in their work, and from this material ancient terminology may be reconstructed, even though there is no hope of answering all the questions that arise from it. Given that ancestral practices tend to be maintained, it may be possible to infer from the present-day situation, to a certain degree at least, what obtained before and immediately after the birth of Islam.

According to the author of the *Lisān*, the *miẓalla/maẓalla*, made of goat's hair, was the most spacious tent. Although the term has several meanings it does not appear to have been used frequently; one occurrence of it is found in the *Naḳā'iḍ* of Djarīr and al-Farazdaḳ, ed. Bevan, 806, for example.

Next in size came the *wasūṭ*, which was also made of hair according to Abū Zayd al-Anṣārī (in *LA*). This word would seem not to have been widely used, for the lexicographers are not agreed about its meaning and some even take the *wasūṭ* as the smallest tent.

The *bayt* or *bayt shaʿar* was also of goat's hair and of average size. It served as a dwelling for breeders of small livestock (that is to say, of numerous bedouin) and the term takes on a type of generic significance.

The *khibā'* was probably similar to the *bayt* in size, but was distinguished from it by the camel hair (*wabar*) or wool (*ṣūf*) that was used to make the awning. Apparently it was the usual dwelling of the cameleer nomads, who were called *ahl al-wabar* in contrast to *ahl al-madar*, the sedentary peoples. Although the influence of alliteration may have played its part in the formation of these expressions, their literal meaning must have some significance. Even so, it is impossible to be certain whether the distinction between *bayt* and *khibā'*, which are both equally frequent in ancient texts, corresponds to a different geographical distribution, to a contrast between two large categories of nomads in Arabia [see BADW], or simply to different levels of life within one tribe.

Surādiḳ denotes a cloth tent of quite large dimensions; a *fusṭāṭ* was a smaller hair tent used by travellers; the *miḍrab*, described as a "royal *fusṭāṭ*", was likewise a tent under which important people camped when travelling (today the word occurs in military vocabulary); and *ḳubba* was applied to a hide tent (*adīm*).

Finally, there is the term *khayma*. It does not figure in the lists of various tents that can be gathered from classical lexicographical works, but it seems to be approximately synonymous with *ẓulla*, *ʿarīsh* and *ʿarsh*, all of which denote simple shelters. Originally a *khayma* was erected on three or four stakes (*aʿwād*, *āl*) driven into the ground with supporting cross-members (*ʿawāriḍ*) covered with branches (*shadjar*) or grass (*thumān*, one of the *Graminacea*). It was essentially a rudimentary shelter, circular in construction, which the nomads would erect especially near wells and watering-places. Its welcome coolness would have provided shelter from the rays of the sun and they must have also erected frames around their tents to benefit more completely from the slightest breeze. There is, therefore, nothing surprising in the fact that in the Ḳur'ān, LV, 72, the plural *khiyām* denotes the tents in which were the houris. *Ẓulla* (Ḳur'ān, VII, 170/171) means a sort of canopy and these two terms are the only ones of those under discussion which are attested in the Holy Book—except *bayt*, which is very frequent but which never denotes a nomad's tent there.

The meaning of *khayma* given by the dictionaries is found again in classical poetry (e.g. *Naḳā'iḍ*, 173, 333-4, 395, 1004), and just when this meaning evolved —an evolution which is being maintained today—is not known. The extension of the meaning (for which the reason is not clear) had arisen at a fairly ancient period, since the mediaeval lexicographers use *khayma* or one of its plurals to define a tent of any type whatever (e.g. *Lisān*, s.v. *ḳ.b.b.*: *al-ḳubba, min al-khiyām*). Given that in ancient Arabia there does not seem to have been a specific term to denote the awning, it is not impossible that before it was applied to the entire tent, the word had a more restricted meaning; the roof of a *khayma* implies the idea of stretching it over something and it may follow also from a passage of *al-Barḳ al-shāmī* by ʿImād al-Dīn al-Iṣfahānī (ms. Oxford, Marsh 425, f. 64b), where it is stated that among the main products of the town of Āmid appeared *busuṭ*, *furush* and *khiyām*, all woven products.

Whether the material used was hair or wool, the awning of the Arab tent was made of bands (*falīdja*, *shuḳḳa*) sewn side-by-side and forming a rectangle. The length and number of these bands would vary according to the desired dimensions, but their width had to be of the order of 50-80 cm., so that they would be more easily manageable and replaceable. Those that were placed at the two edges, that is, those that form the larger side of the rectangle, were called *kisr* or *kasr*. Inside the awning, one or several bands of hair or wool (*ṭarīḳa*), about twenty cm. wide at the most, were attached to the sewing of the *falīdja*s and ended perpendicularly at the large sides with two *kisr*s. Each *ṭarīḳa* was equipped at each of its extremities with a device for anchoring it called *ḥatār*, and it was to this that the ropes (*ṭunub*, pl. *aṭnāb*) were attached and tied to pegs (*watid*, pl. *awtād*) driven into the ground some distance away with a mallet (*mīṭad* or *mīṭada*). The anchoring of the tent was completed on the small sides of the awning by cords (*iṣār*, pl. *uṣur*/*āṣira*), shorter than the *aṭnāb*, but similarly joined to pegs (also called *iṣār*). The words *ḥatār* and *ḥitr*/*ḥutra* both denoted a band placed vertically around the awning to fill the space which separated it from the ground.

In a *bayt*, so the dictionaries say, the main ridge piece, which was of considerable importance, was called *djā'iz*, but Arab tents do not seem to have used a ridge pole, since the central *ṭarīḳa* takes its place. It is said that this *ṭarīḳa* rested on vertical posts (*ʿamūd*, *diʿāma*, *biwān*/*buwān*) and that there were pads of felt (*libd*, pl. *albād*) on which the chamfered ends of the posts were cushioned to prevent it from being pierced. The same precaution was probably taken for the side *ṭarīḳa*s, which in the big tents leaned on slanting poles, shorter than the others, in order to diminish any sag in the awning. The same construction may still be seen in the East (see below) and it is worthy of note that in North Africa, where the ridge pole is used, it is the only part of the tent, *mutatis mutandis*, not to have a name which is attested in ancient Arabia.

Finally, to prevent water from penetrating underneath the tent it was surrounded by a drain (*nuʾy/niʾy/naʾy/nuʾa*) edged with mounded earth (*iyād*).

Inside, the lay-out scarcely differed from what can be seen today (see below). The section reserved for women, like the palanquin, was generally called *khidr*, pl. *khudūr*, from the name of the curtain which separated it from the rest of the tent; poets frequently hymned the *rabbāt al-khudūr*.

Bibliography: Apart from the dictionaries, see especially G. Jacob, *Altarabisches Beduinleben nach den Quellen geschildert*, Berlin 1897.

(CH. PELLAT)

ii. — IN THE NEAR EAST

The noun *khayma* belongs primarily to the city-dwellers' vocabulary. It is applied to various kinds of tents, whatever their form and whatever they may be made from. The desert peoples are aware of this, but for preference they use the term *bayt shaʿr* for their portable home, often abbreviated simply to *bayt*.

Apart from the question of size, bedouin tents vary very little from one region to another. Essentially, the *bayt* is always rectangular and never circular; it is made out of a roof covering of the hairy skin of a black goat, sometimes mixed with camel's wool (*ṣūf*, *wabar*), walls of the same material, poles and cords. The technical terms used to designate the different parts of the bedouin tent are not always identical in all tribes.

The roof is called *saḳf al-bayt* by the Tiyāha of Biʾr al-Sabʿ. It is made up of several oblong bands or panels, *shiḳḳa* (pron. *shegga*), pl. *shiḳaḳ* (*shegag*) sewn together, their number depending upon the importance which one wishes to accord to the tent. The dimensions of a *shiḳḳa* vary. The length generally fluctuates between 8 and 12 m., and the width, which is limited by the weaver's technical skills, is rarely more than 70 cm.

The roof covering is supported by several tent-poles (*ʿamūd*, pl. *ʿumdān*) placed in parallel rows, one of which, in the centre, forms the ridge-pole. Since there is a danger of its being torn through tension and especially through its own weight where it is stretched over the poles, it is reinforced by transverse strips called *biṭāna*, *ṭariga*, etc. These are sewn together on the internal surface in such a way as to hold together between themselves the *shiḳaḳ*. These strips are 10-15 cm. wide, and they extend beyond the dimensions of the tent, from one side to the other, by some 15 cm. After being folded over and sewn, a loop is thereby made at each extremity, through which a small stick can be placed. Thanks to an attachment contrivance which has a V-shape, the connection between these sticks and the tent-pegs (*watad*, pl. *awtād*) can be effected. The pegs are fixed into the ground and held by cords (*ḥabl*, pl. *ḥibāl*, or *ṭunb*, pl. *aṭnāb*), which secure the tent and make the roof covering taut and in place.

The number of poles supporting the roof varies, and it is according to this variation that the different types of tent are classified. However, in this calculation, only the poles of the central row are taken into account, and not those at the two extremities. Hence we have a tent whose ridge-pole rests on a row of three poles, but is nevertheless called *ʿudiya* (Tiyāha) or *gotba* (Sbāʿ), sc. having a single tent-pole. One with two tent-poles is called *fāza* by the Tiyāha, and *mgawren* or *garneyn* by the Sbāʿ. From three tent-poles onwards, the terminology tends to be a general one; with some variations in pronunciation: *muthawlath* (three poles), *murawbaʿ* (four poles), *mukhawmas* (five poles), *musawdas* (six poles). A *bayt musawbaʿ* (seven poles) is of considerable size, some 50 metres long, and bears witness to its owner's power, he being generally a great chief. However, tents of this size are sometimes occupied by Bedouins of only middling status who have newly adopted sedentary life, since they no longer have to make big upheavals and migrations.

The names of the tent-poles vary according to position. In an *ʿudiya* tent, the central pole is called *ʿamūd al-wāsiṭ*, or *ʿamūd al-ʿāmir*; the front one is called *ʿamūd yad al-bayt*; and the rear one, *ʿamūd al-ridjl*, according to the terminology of the Tiyāha.

The tent is open at the side opposite the direction of the wind, and the other three sides are closed by the tent-walls. The rear wall, placed against the direction of the wind, is called *rwag*. A narrow band, about 25 cm. wide, is sewn on to the top edge, and this reinforces it and is attached to the roof covering. The lower edge has sewn on to it another band, the lower (*sufli*) one, some 60 cm. wide, and this trails on the ground, where it is held down by the pegs and by stones. When the wind changes direction, the *rwag* is moved and the opposite side opened up. In summer and weather permitting, the tent is opened as far as possible; even the side-walls are rolled up, thus making the *bayt* into an enormous parasol. At this time, the *bayt* changes its colour; the heavy goat's hair roof covering is replaced by a cotton cloth. Often, old jute sacks are used, on which can still be seen imprinted the exporter's trade-mark.

The *bayt* is divided into two parts, separated by a curtain hooked on to the internal tent-poles, which has sufficient height for the people in one compartment not to be able to see what is happening in the other. One of these two compartments is reserved for receiving menfolk and is called the *rabāʿa* or *magʿad al-ridjāl*. In the middle, a hearth is scraped out and used for making coffee. The other one is reserved for the womenfolk, and is called the *maḥrem* or *mḥarram*. Here, the cooking is done and the provisions stored.

The womenfolk are responsible for preparing the materials and sewing up the various components of the *bayt*, their erection and dismantling. This is an essentially feminine activity, for the men must always be ready to ward off a possible attack.

Despite its apparent frailty, a bedouin tent is hard-wearing and often lasts for a whole generation. The erection, *bināʾ*, of a tent often means that a new hearth has come into being. The master of the new dwelling must, at the moment of taking possession, offer a blood-sacrifice to appease the spirit of the place where the tent has been raised up. The central pole (*al-wāsiṭ*) is then smeared with the sacrificial blood; sometimes the *rwag* is also sprinkled with it. A further sacrifice is necessary if the tent is significantly enlarged. Finally, when the *rwag* is worn out and has to be replaced, a blood-sacrifice often accompanies this operation.

However humble it may be, a Bedouin tent is above all a dwelling-place. It has accordingly certain strictly-defined rights, and contravening them can have extremely serious consequences for the offender. When a stranger comes into a Bedouin's tent, he is considered to be a guest. Any attack on his person, physical or moral, whilst he is there, is felt not only as an insult to the host but equally to his dwelling. In the customary law, reparation for the tent's honour is as severe as the penalty attracted by someone guilty of an involuntary homicide. In his turn, the guest must show great respect for the dwelling

which has received him. If he shows himself unworthy of the confidence shown to him, the tent's master brands him as a traitor to the rules of hospitality; he may then be liable to corporal punishment, abhorrent to the Bedouin, and be perpetually dishonoured.

The right of asylum also inheres in the *bayt*. A murderer who manages to escape his pursuers and to take shelter in any dwelling which is not his own or that of a close relative, has secured refuge from danger. Moreover, it is not necessary, for his security, actually to enter the tent; he may merely touch the ropes or even reach the protective zone around the tent, sc. the inviolable area called by the Bedouin *maḥārim* or *madārik al-bayt*. In order to delimit this, a strong and vigorous man stands at the entrance of the tent and hurls a large stick straight in front of himself. The spot where it falls marks the extreme edge of the zone within which the rights of the tent operate. This idea of inviolability is not dissimilar to that of the sacred area of pre-Islamic times, like the *ḥaram*, the *ḥimā* and the *ḥawṭa*.

Bibliography: This is rich and varied. See Doughty, *Arabia deserta*, London 1926, i, 221 ff. and index, s.v. "tent", etc.; A. Jaussen, *Coutumes des Arabes au pays de Moab*[2], Paris 1948, 199-200, 340-1; A. Musil, *The manners and customs of the Rwala Bedouins*, New York 1928, 61-2; V. iii. — North Africa

The nomads and semi-nomads of North Africa and the Sahara live in several different types of tent, but these are basically similar, and the differences can most often be explained by economic and geographical features. Besides *bēt* and *bēt sha'r*, the usage of which has now spread to the major nomadic groups, the word *khēma* is the one most current in Arab speech. In Berber three main terms appear: *ehen* and variations among the Touareg, *ibergen* and variations in the east and south-east of the Berber area, *akham* and variations in the central and western areas. The first two terms are Berber, while the third could be derived from the Arabic, although a convincing etymology has not been established. In the different northern Berber languages, words denoting the main parts of a tent are borrowed from Arabic, treated in different ways and not of major interest. Those belonging to Berber are extremely varied, and could give rise to an interesting study in linguistic geography, but it would be too much to cite in the present article, which must be restricted to discussing essentially Arabic (and Touareg) terminology.

As elsewhere, the rectangular awning is made of bands (*flīj*, pl. *feljha*), 70-100 cm. wide and varying in length up to 18 m. They are black or brown in colour and sometimes have a white border (in Libya). In some regions, the wool and goat or camel hair which make up the main material are sometimes mixed with palm flock (*līf*) or vegetable fibres. A more rudimentary awning can equally well be made with long plaits of dwarf palm leaves (*dūm*), or *drīn* (*stipa barbata*) or of alfa grass (*ḥalfā'* [*q.v.*]). Among the Touareg, the awning is made from the skins of goat, sheep, moufflon (less and less) or even ox, coarsely cut and sewn one after the other to form equal bands (*taghde*). The whole is supported either by a single vertical pole (*tamankayt*) about 2 m. long, surmounted by a little wooden ridge-pole, or by two arches (*agegu*) of tamarisk wood aligned 1.5 m. apart and linked by a cross-bar. In the first type, the vertical pole is used especially in the rainy season so that the awning has a sufficient fall for water to drain away. At other times it is replaced by two poles supporting a cross-bar, but this second type is becoming less common.

In the rest of North Africa, only the first type of frame is used and there are some significant variations in it. In the east the ridge pole is a broad square stay-block (Tripolitania: *ḳerṭās*) which becomes longer and narrower in the Tunisian South (*gorṭās*) and the Algerian South-East (*genṭās*); in Morocco, longer ones are seen, called *ḥammār*, and reaching a length of 2 m. The ridge-pole may be supported by a single vertical pole (*rkīza*), as in the Sahara, Libya and Tunisia, or by two slanting poles as in the large tents of Tripolitania (except the Djabal Nafūsa), or by two intersecting poles, which may be quite short as in Tunisia and Awrās, or simply by vertical poles, more widely spaced as the tent becomes longer.

The *ṭrīga*, the descendant of the classical *ṭarīḳa*, is everywhere to be seen but it is supported by a ridge-pole. Often secondary *ṭrīgas* are added to the main one; they are supported by slanting poles which raise the awning to drain off rain water and to maintain a convenient height inside. The awning is secured with small cords (*ḥbel*, *ṭārfa*, *mezhbed*) which are fastened to the *ṭrīgas* and to the *flījs* on the small sides with wooden hooks; at the other ends they are fixed to pegs (*uted*, *melzem*). Among the Touareg these pegs (*tasdest* in the east and west sides, *unnus* in the north one, *madragh* in the south one) generally number twelve, equally spaced around the cardinal points and fastened directly to the edges of the awning, which they support. On the south side the central peg (*igem*) is longer than the others and is used to raise the awning to provide an entrance. Nowhere does the awning touch the ground, and the empty space is filled according to the climate with brushwood, rush matting or special long narrow covers (*reffa*, *rfāfa*). In North Africa the place where the *ṭrīga* ends on one of the long sides is directed towards the centre of the encampment or the *dawār* [*q.v.*], and access is gained by lifting the edge of the awning; this forms a door during the daytime. Finally, the tent is surrounded by a trench (*ūnī*/*wanī*; cf. above, *nu'y*) for draining away any rain-water.

The classical *ḳayṭūn* "room in a *bayt*" survives as *gīṭūn* (Fr. guitoune), the name given to shelters made of sackcloth or pieces of material or of canvas produced in Europe (South Tunisian: *gāṭūn*). In Morocco, the official tent of state authorities is made of unbleached cloth decorated with black patterns and is of conical design; it is called a *khzāna*.

The nomads load the dismantled tents on to asses. When they arrive at the camping ground the task of erecting them (verb: *bnā*) is reserved for the women. Once the frame and awning have been stretched out on the ground and the pegs put into position—by guesswork but generally exactly spaced—the woman calls her neighbours to help her. She creeps under the awning to lift it over the poles, and then the tent is anchored and the usual furniture put back into place.

Among the Touareg, the left side on entering is reserved for the man and there are placed his seat, his arms, his saddle-bags and also his water-skin. The woman uses the right side where she puts her possessions as well as the bags of food, the kitchen utensils and dishes, which are rudimentary. Two fires are built in front of the tent, one for warming oneself and the other for cooking. Each tent is occupied by a family. The boys sleep with their father, the girls with their mother on sheep skins stretched on the ground; the richer families have carpets.

Elsewhere the interior arrangement of the tent may vary, but it shows some common features. The kitchen utensils usually include a cooking pot, a couscous pan, a dish on which to bake bread, a water jug, platters and winnowing baskets of esparto grass, wooden spoons, leather water bottles—which are also used for churning butter—a sieve, skin bags for dry food, and woollen or hair bags for grain. The fire is kindled in a hollow in the ground, which is surrounded by three large stones or topped by an iron tripod. In some tents an opening is made in the awning above the fire to allow the smoke to escape. A pottery stove is used especially for the preparation of coffee and tea and it is fed with charcoal. The mill is generally shared between several tents. The simplest type consists of two semi-spherical millstones. The upper one is pierced by two holes, one hole in the centre is to receive the grain to be milled and the axle mounted in the nether millstone; the other is set at an angle to hold the wooden crank, which sets it working, and often requires the efforts of two women. In addition to all this equipment, there is a loom for the *flīḏj*s and a second loom for weaving carpets, covers and woollen garments etc. The nomads sleep on mats and wrap themselves in covers. The area kept for the women (*ḵẖālfa*) is sometimes separated by a curtain (*ḥāyl*) hung between the poles, but often carpets, covers, clothes and miscellaneous possessions are piled on nets mounted on legs to provide an adequate separation.

It is the men's responsibility when the *flīḏjs* have to be sewn to make a new awning (they rarely last more than five years) or to replace a damaged band; of course, they also prepare the wooden pieces for the frame.

Each operation is accompanied by prophylactic rites intended to protect men and beasts. The ornamentation of the ridge pole, which has a symbolic value since it supports the whole construction, includes drawings which originally had a magical significance. Finally, various objects and amulets are supposed to ward off the djinn and to assure the prosperity of the tent's inhabitants.

iv. — In Central Asia

A light, prefabricated yet rigid tent has until modern times been the standard domicile of the Inner Asian steppe nomads, being usually loaded on the backs of camels for transportation. In order to present the minimum resistance to the keen steppe winds, it has usually been circular in shape. From the western steppes, the domed, felt-covered tents of Turkmen nomads, known as *yurts*, were spread by the migrations of the O̲g̲h̲uz as far west as Anatolia, although the more southerly and westerly Türkmens, such as the Avs̲h̲ar and Ḳas̲h̲ḳāʾī, and the Anatolian Yörüks, gradually took over the use of the black tents made from goat hair, which are apparently more suitable for the damper climate of the more mountainous regions (see on this latter type of tent, C. G. Feilberg, *La tente noire*, Copenhagen 1944). In fact, the word *yurt* seems originally to have meant "homeland, encampment or camping place", and in Orḵẖon and early Turkish, even "an abandoned campsite", cf. Kās̲h̲g̲h̲arī's definition *al-ṭilal wa 'l-rabʿ wa 'l-diman* (Sir Gerard Clauson, *An etymological dictionary of pre-thirteenth century Turkish*, Oxford 1972, 958); the basic Turkish word for "tent" seems to be *ev* and its cognates (Orḵẖon Turkish *äv, äb*). The term *alačiḳ* and its cognates "temporary, nomadic home", as opposed to *ev* "permanent home, centre of the household or group", is also widely used throughout the Turkish world, appearing in mediaeval Persian (e.g. in the verses of Niẓāmī and of D̲j̲alāl al-Dīn Rūmī) as *alāčuḳ* (see Ulla Johansen, *Alačyq*, in *Reşid Rahmeti Arat için*, Ankara 1966, 286-99).

The tent used in recent times and at the present day by the Türkmens on northeastern Persia, northern Afg̲h̲ānistān and the Turkmenistan SSR has been described in detail by P. A. Andrews, *The White House of Khurasan: the felt tents of the Iranian Yomut and Göklen*, in *Iran. Jnal. of the British Institute of Persian Studies*, xi (1973), 93-110, with especial reference to the two Türkmen tribes named in the title. These possess two main types of tent (1) The *aḳ öy* "white house" (taken from the colour of the covering felts when new) or *ḳara öy* "black house" (from the colour of the felts when old and blackened by smoke). This has a trellis wall, with a doorway in it, circular in plan, with a roof wheel supported by struts from the top of the trellis wall. The size of the tent is referred to by the number of these roof struts, which might go up to 128, yielding a tent of *ca.* 12 m. diameter, though 62 or 64 struts is the average; the large size of tent favoured is to accommodate an extended family. (2) The *göt-tikme*, essentially an *öy* but without the trellis walls, and regarded as an inferior form of the *öy*, though more portable. The wooden frames for the tent were made by a specialist class of carpenters (called *uššāt*, < *ustād*?) of the more agricultural and semi-settled Türkmens.

The Islamic historical sources on the Turkish migrations into the Iranian world and beyond are inexplicit on the technical details of Turkish tents in the mediaeval period, and we can only find odd gleanings, such as the information in Gardīzī, *Zayn al-aḵẖbār*, ed. M. Nāẓim, Berlin 1928, 81-2, cf. Barthold, *Turkestan down to the Mongol invasion*, 282, that when Maḥmūd of G̲h̲azna and the Ḳarā-Ḵẖānid Ḳadir Ḵẖān Yūsuf met at Samarḳand in 415/1025, the Sultan had a personal tent of ruby-coloured S̲h̲us̲h̲tarī brocade, with a canopy and roof of woven brocade (the tent, *sarāy-parda*, which allegedly held 10,000 horsemen, must have been in fact a whole series of tents forming an encampment for Maḥmūd's forces).

The early habitat of the Mongols probably com-

prised both the forest zone of northern Mongolia and the Lake Baikal region and also the steppelands. The characteristic modern Mongol felt tent or *ger* is essentially similar to the Türkmen *öy*, i.e. it has trellis walls, and the roof of light poles, also felt-covered, is born upon a roof-ring, though the shape is usually conical rather than domed. Thus a great deal of wood is required for its construction, a commodity scarce in the steppes and one which often has to be brought from a considerable distance. The Mongols do, however, have another type of tent, the *maykhan*, which is a low tent requiring much less wood and in recent times covered with cotton cloth purchased from Chinese traders; this is taken on Mongol caravans, with the *ger* used for camping at the regular pasture grounds (see O. Lattimore, *The geographical factor in Mongol history*, in *Geogr. Jnal.*, xci/1 (Jan. 1938), 9-10, also in *Studies in frontier history, collected papers 1928-1958*, London 1962, 250-1). It seems accordingly probable that the Mongol *ger* evolved in the prehistoric (sc. pre-13th century) past of this people from the tents of the forest peoples, perhaps from an origin like the tepee or wigwam of the Tuva forest tribe of northern Mongolia, of Turkish peoples of this region like those dwelling in proximity to Mongol tribes around Lake Khubsugul, and of the reindeer-herding Tungus, which is a conical frame covered either with skins or birch-bark (Turkish *uruča*, Mongol *obughaḳay*, cf. A. Róna-Tas, *Preliminary report on a study of the dwellings of the Altaic peoples*, in *Aspects of Altaic civilization, Proceedings of the Fifth Meeting of the PIAC*, ed. D. Sinor, Bloomington-The Hague 1963, 50). Certainly, the Mongol epics of recent times, of the Oirot of north-western Mongolia, describe the hero's tent as made with a framework not of wood but of animal bones, and as covered not with felts (since forest dwellers have no sheep) but with animal pelts (B. Vladimirtsov, *Le régime social des Mongols, le feodalisme nomade*, Paris 1948, 49). In regard to the fittings and furnishings of the *ger*, the central fireplace or hearth has always been the focal point; amongst the Kazak Turks of western Mongolia, this is now usually a four-legged iron fireplace, and it is gradually replacing the old stoves (see Róna-Tas, *Notes on the Kazak yurt of West Mongolia*, in *Acta orientalia Hung.*, xii (1961), 84).

The earliest Mongol sources, such as the *Secret history* and the accounts of the Mongol expansion of the 13th century, both Islamic and European (the latter including e.g. the travel narratives of William of Rubruck and John of Plano Carpini) state that, at that time, the steppe peoples, Turks and Mongols, often transported their tents in ox carts (see Vladimirtsov, *op. cit.*, 50-1, and also ʿARABA and ḲANGHLÎ); these last were not only highly-mobile within the steppes, but could be very quickly loaded up with the tents and the whole encampment (Mongol *küriyän/güriyän* "circle") quickly broken up.

Bibliography: given in the article, essentially, but note that Part A of *Aspects of Altaic civilization* (see above) is devoted to "The dwellings of the Altaic peoples". (C. E. BOSWORTH)

KHAYR (A.), charity, gifts in money or kind from individuals or voluntary associations to needy persons. The religious significance of *khayr* in Islam is still quite clear, although assistance to the needy is nowadays extended mainly by secular governmental agencies; such assistance is regarded as "public welfare" rather than "charity". A public benefit is indeed implied in *khayr*. The word has the sense of freely choosing something, *i.e.* virtue or goodness, a service to others beyond one's kin. It also means goods such as property or things that have material value (H. Wehr, *A Dictionary of Modern Written Arabic*, Wiesbaden 1961, s.v.). There are few studies of *khayr* in earlier or modern times, though there are brief references scattered through the literature on the Ottoman Empire, Khedivial Egypt and the Indian subcontinent.

Khayr must be considered in relation to *zakāt* and *ṣadaḳa* [*qq.v.*]. *Ṣadaḳa* is practically synonymous with *khayr* in the sense of charity. *Zakāt* refers to an obligatory tax collected by Islamic governmental agencies and prescribed in the Ḳurʾān and Sunna. *Zakāt* in its traditional and precise form has almost disappeared, but *khayr*, as a broader and more informal quality and activity, continues. *Khayr* occurs in the Ḳurʾān in its general sense of virtue and good works in obedience to God and religious law (*e.g.* III, 103, XXII, 77, IV, 113) as well as material wealth (*e.g.* C, 8). In interpretations of Ḳurʾān and in philosophical works the term is used similarly.

Private charity and public welfare are extended out of mixed motives: humanitarian, to relieve misery, and political, to reduce instability. On the part of the private donor, moreover, there is the motive of doing good in accordance with religious precepts. This motive operates strongly in *khayr* among Muslims as well as non-Muslims minorities living in larger Islamic communities. Christian and Jewish charities were an important function of the millets under the Ottoman rule and continued after it, often with help from co-religionists in Western countries.

Today charity by individual Muslims to less fortunate members of their religious communities is still widespread. Parallel to these donations are those made by voluntary associations which stand between the individual and the government and disburse larger sums more widely. A United Nations survey made in the mid-1960s found several hundred such associations in Lebanon, Jordan and Syria, and a beginning even in Kuwait, where the government, with vast oil revenues, was already the main distributor of funds going to the needy (U.N. Economic and Social Office in Beirut, *Studies on Social Development in the Middle East, 1969*, New York 1970, 10). The activities of these associations, though significant, have been seldom studied in detail, though published reports and observations yield some details on several countries.

In Egypt in 1960 there were about 3,200 voluntary charitable associations (*djamʿiyyāt dīniyya* or *khayriyya*) with a religious basis, with 700,000 members, a total income of £ E 6 million (coming from members' dues, modest fees paid by the needy, and governmental subsidies), extending a variety of services to several million people at a total cost of £ E 4 million (M. Berger, *Islam in Egypt Today*, Cambridge 1970, ch. 4).

In Iran the structure of voluntary associations seems to be looser. As in other Muslim communities, however, in Iran individual donations are made to local *imāms* for formal institutions such as clinics, schools and scholarships, as well as directly to the needy. Donations to poor families occur mainly on the anniversaries of the deaths of Fāṭima and the *imāms* venerated by Shīʿīs. They are also made in times of threat or danger, even in connection with "modern" activities. For example, in 1974 a businessman started to construct an air-conditioned building, with the help of several architects and engineers trained in the U.S.A., in the most expensive and

modern area of Tehran. Before the first column went up, the foreman told the builder he must sacrifice a sheep for the workers to eat and protect them: the blood of the sacrificial sheep would avert the shedding of the workers' blood on the job. Very little is known about the distribution of funds by the local *imāms*, nor are they taken into account in governmental calculations of need. Donors to these *imāms* do not have a formal role in the distribution of these funds, although they are duly registered by accountants who keep records of income and disbursements (source: personal observation and interviews).

Khayr and *wakf* [*q.v.*] overlap, for example in public conveniences such as water fountains [see SABĪL] and soup kitchens (*ʿimāret*) erected in Ottoman times. Somewhat similar to *khayr*, also, is the largesse often distributed by rulers, especially on accession to power. Such largesse is, in turn, a forerunner of the welfare programme of modern states.

Although women in Islamic countries have not traditionally been active in public affairs, their recent emergence into public roles has been associated with private charity and governmental welfare programmes. Among the earliest employments outside the home which became socially approved for women are teaching, nursing and social work. These professions are regarded as extensions of the Islamic ideal of women as the guardians of home and family. In several countries it has been customary in recent decades for the women members of the families of heads of state (in republics as well as monarchies) to be active in promoting education and the care of the needy. Thus in 1973 the Shāh-Bānū of Iran opened the first national seminar on social welfare by reviewing the development of private philanthropy, defining current social needs, and indicating the need for governmental coordination of the means of meeting these needs (Plan and Budget Organization of Iran, *Nakhustīn siminār-i millī-yi rifāh-i idjtimāʿī*, Isfand 1352 (February 1973), Tehran, n.d. and no pagination). This seminar, indeed, was the prelude to the creation of a new Ministry of Social Affairs a year later. Such ministries had already been established in other countries, for example in Egypt as early as 1939. The first woman to become a member of an Iranian cabinet, Farrukhrū Parsay, was Minister of Education from 1968 to 1974. Similarly, the first woman to join a cabinet in Egypt, Ḥikmat Abū Zayd, became Minister of Social Affairs in 1962.

The state has always assumed some of the burden of assisting the needy. Its role increased as modern industry and urbanisation developed, while public needs grew and the capacity of individuals and voluntary associations to meet the growing expectations declined. The state's assumption of the responsibility for public welfare was a demonstration also of the concentration and expansion of governmental power, which further discouraged private welfare agencies. Under these new arrangements, the public increasingly regards governmental relief of need as a right of the recipient; on the side of the "donor", the public regards aid to the needy as a secular, involuntary obligation performed through the machinery of government.

This development in many Islamic countries is reflected in the currency of the Arabic term for welfare state, *dawlat al-khayr al-ʿāmm*, which did not appear under *khayr* in H. Wehr's first German edition (Leipzig 1952), but did appear in the English edition of 1961 (*Arabisches Wörterbuch für die Schriftsprache der Gegenwart*, and *A Dictionary of Modern Written Arabic*). Appropriations for social welfare grew considerably in the 1960s and 1970s, following the establishment of specialised welfare ministries several decades earlier (United Nations Economic and Social Council, *1974 Report on the World Social Situation. Part One: Regional Developments. I. Social Trends in Developing Countries. Western Asia*, New York 1974, 23-5). Iran, for example, allocated about 10% of the total budget of the year 1354 (1975-6) for "social affairs" (Iran, Plan and Budget Organization, *The Budget 1345 and Amended 1353, 1974-75, 1975-76. A Summary*, Tehran n.d., Part 2, p. 7). Increasingly, also, governmental welfare programs are tied to national planning (United Nations Department of Economic and Social Affairs, *Social Welfare Planning in the Context of National Development Plans*, New York 1970, 6, 34).

In Islamic countries where socialist ideas and rhetoric have recently made headway, welfare has been tied to ideology and to the religious tradition of mutual social responsibility among Muslims, or *al-takāful al-idjtimāʿī* as developed by several writers, especially in Egypt (Sami A. Hanna and George H. Gardner, eds., *Arab Socialism. A Documentary Survey*, Leiden 1969, 147-200). The increasing role of government has led to widespread exaggeration of achievements, for example a claim by an official Egyptian agency reporting to the United Nations in 1967 that: "After the revolution of 1952, equal opportunities were eventually granted to the people" (United Nations Department of Economic and Social Affairs, *Organization and Administration of Social Welfare Programs. A Series of Country Studies. United Arab Republic*, New York 1967, 1). A U.N. evaluation of state programmes only two years later described them as still rather weak in concept, administration and effect (United Nations Economic and Social Office in Beirut, *Studies on Social Development in the Middle East, 1969*, New York 1970, 1, 11-13).

On top of the increasing role of the state came, after World War Two, an increasing role for the organisation of states, the United Nations. Through publications, surveys, seminars and conferences, various U.N. agencies encouraged the "developing" (or formerly "underdeveloped") countries to expand and systematise their welfare programmes. The U.N. also spread the new conceptions of welfare, going beyond traditional "remedial" care of the needy to "preventive" policies to enable the needy to maintain themselves and even further to "developmental" programmes which would enable the people of all classes to play a greater part in national growth based upon broad planning (United Nations Department of Economic and Social Affairs, *Proceedings of the International Conference of Ministers Responsible for Social Welfare, 3-12 September* 1968, New York 1969, 76, and *Training for Social Welfare, Fifth International Survey. New Approaches in Meeting Manpower Needs*, New York 1971, 2, 64-5). Special United Nations seminars for the Arab states have been held since 1949 (see, for example, *Fourth United Nations Social Welfare, Seminar for Arab States in the Middle East, Baghdad, 6-21 March 1954*, New York 1955).

These governmental and inter-governmental influences and discussions have all but removed *khayr* by individuals and voluntary associations from public consideration in Islamic countries. *Khayr*, however, continues, and even *zakāt* has been men-

tioned noticeably in one of the aforementioned U.N. seminars. In preparation for it, the U.N. Secretariat sent a questionnaire to seven Arab states, which elicited reports that in most of them this tax was still being collected and spent "in accordance with Islamic principles" (*Third United Nations Social Welfare Seminar for Arab States in the Middle East, Damascus, 8-20 December 1952*, New York 1953, 60). It is possible that the welfare programmes of governments are overestimated through the tendency of states and international agencies to issue many reports, while traditional *khayr* is underestimated because individual donors and voluntary associations are scattered and not given to public reporting.

For a treatment of charity in Turkey see the Supplement, s.v. KHAYR.

Bibliography: given in the article.

(M. BERGER)

KHAYR ALLĀH EFENDI, Ottoman physician, historian and administrator; born in Istanbul *ca.* 1235/1819-1820 of a family which had provided chief physicians for the Empire. He followed in the profession of his father ʿAbd al-Ḥaḳḳ Mollā (d. 1270/1853-1854) and after completing the *medrese* education he became the *mollā* of Izmir in 1256/1840-1841, to be promoted in the following year to the rank of *ḳāḍī* of Mecca. Meanwhile, he studied medicine at the *Mekteb-i Ṭibbiyye* and graduated in 1260/1844. Appointed *ders nāẓīri* (director of studies) at the *Ṭibbiyye* School, he transferred from the *ʿilmiyye* (religious) to the *mülkiyye* (civil) branch of administration. Thus in Radjab 1265/May-June 1849 he was appointed a member of the Council of Education. On 25 Radjab 1267/26 May 1851 he was also entrusted with the vice-presidency of the *Endjümen-i Dānish* (Academy of Arts and Sciences) and in Shawwāl 1268/ July-August 1852 he became a member of the *Medjlis-i Wālāy-i Aḥkām-i ʿAdliyye* (High Council for Judicial Ordinances). Nominated *Mekātib-i ʿUmūmiyye nāẓīri* (Minister of Public Schools) on 22 June 1854, he returned to the field of education. Upon the establishment of the Ministry of Education in March 1857 he was charged with the function of *müsteshār* (undersecretary) and on 7 Ṣafar 1275/16 September 1858 he assumed responsibility as deputy minister. On 21 May 1859 he became the administrator of the *Mekteb-i Ṭibbiyye*. In Radjab 1278/ January 1862 he was moved to the directorship of the 6th sector of the Istanbul Municipality [see BALADIYYA]. He was again appointed a member of the *Medjlis-i Wālāy-i Aḥkām-i ʿAdliyye* on Ṣafar 1281/July-August 1864, and in the same year he visited Europe to take a cure. Back in Istanbul, he went to Tehran on 3 May 1865 as Ottoman minister to the Persian court, and died there in Shawwāl 1282/ December 1865-January 1866. His younger son is the well-known poet ʿAbd al-Ḥaḳḳ Ḥāmid [*q.v.*].

Khayr Allāh Efendi contributed much to the modernisation of Turkey through his publications. He undertook to write a general history of the Ottoman Empire, but could not go further than the year 1026/ 1617. This work was published under the title *Dewlet-i ʿaliyye-i ʿothmāniyye taʾrīkhi* (Istanbul 1271-81, 15 vols.), and was later continued by ʿAlī Shewkī, who took it up to the year 1058/1648 (Istanbul, vols. xvi-xviii, 1289-92). The author abandoned the annalistic method of Ottoman chroniclers and adopted the modern systematic treatment of history. He also made use of Western sources written in French. He seems to be the first Ottoman playwright, with his *Ḥikāyet-i Ibrāhīm Pāshā be Ibrāhīm-i Gulshenī* written *ca.* 1260/1844 (first printed in *Türklük*, no. 8 (1939), 77-91, for the second time by Aytekin Yakar, *Hikâye-i ...*, Ankara 1964). His publications also include translations from the French on subjects ranging from medicine to agriculture. Among his printed works are *Maḳālāt-i ṭibbiyye* (Istanbul 1258), a collection of medical articles, *Beyt-i dehkānī* (Istanbul 1264), a treatise on agriculture, *Ḳiṭʿa-i Afrīḳā* (Istanbul 1268), Malte-Brun's work on geography, and *Mesāʾil-i ḥikmet* (Istanbul 1270), a textbook on physics prepared for *rüshdiyye* (secondary) schools. His *Avrūpā siyāḥat-nāmesi*, a narrative of his European tour in 1864, still remains unpublished (Ms., Library of the Faculty of Language, History and Geography, Ankara).

(E. KURAN)

KHAYR AL-DĪN PASHA, Tunisian and Ottoman statesman of the 19th century. He was born in 1822 or 1823 into the Caucasian tribe of the Abkhāz [*q.v.*]. He lost his father in a Russian attack, and subsequently was taken as a *mamlūk* to Istanbul, and brought up in the palace of Taḥsīn Bey, *naḳīb al-ashrāf* and *ḳāḍī-ʿasker* of Anatolia. In 1839 a Tunisian envoy brought him to the court of Aḥmad Bey [*q.v.*], and he soon rose in the favour of the Bey himself and his chief minister Muṣṭafā Khaznadār [*q.v.*]. He entered the army and became commander of the cavalry. As a soldier, he had contacts with the French officers attached to the *maktab ḥarbī* founded in 1840 at Bardo by the Bey in order to train a modern-type army. He also met Maḥmūd Ḳābādū [*q.v.*], poet and teacher, who was the first Tunisian to advocate the introduction of the modern sciences into education.

His first direct contacts with Europe dated from 1846, when he accompanied Aḥmad Bey on his visit to Paris. Between 1853 and 1856 he acquired a profound knowledge of modern civilisation through his residence in Paris as the Tunisian government representative in the legal suit against Maḥmūd ʿAyyād, the former farmer-general of taxes in Tunis, who had fled to France bearing large sums of money. Having been victorious in this legal process, Khayr al-Dīn was rewarded by the office of Minister of Marine (January 1857), and he married a daughter of Muṣṭafā Khaznadār. As minister, he showed himself as a competent and restrained administrator, making the best of the ageing fleet and endeavouring to introduce a better administration.

He was one of the most enthusiastic and vigorous proponents of the modernisation of the Tunisian political system. He greeted with approval the proclamation in 1857 of the *ʿAhd al-amān* and in 1861 that of the Constitution [see DUSTŪR], and he was a member of various commissions set up to implement the promises made in 1857 and 1861, including a law on conscription. He was also a member of the

beylical *madjlis al-khāṣṣ*, and a member, and then president, of the *madjlis al-akbar* or Parliament set up in 1861. In these positions, he worked for reform of the judicial system (which, of course, did not affect personal law, which remained within the sphere of competence of the *sharīʿa* courts, but was confined to criminal law and to commercial and agricultural practices).

In November 1862, Khayr al-Dīn gave up his posts as Minister of Marine and president of the *madjlis al-akbar*, whilst remaining a member of the latter and of the *madjlis al-khāṣṣ*. Behind this partial retirement, which lasted till 1869, was his opposition to a Tunisian loan raised in Europe; the agreement for this was nevertheless made, and it opened the country to bankruptcy. In 1864 a revolt sounded the knell of the period of reforms begun in 1857. During these years, he acted as the Bey's envoy to Istanbul and other European capitals.

When he returned to politics in 1869, Tunisia had to accept, because of Muṣṭafā Khaznadār's maladministration, a financial commission to direct the country's finances, in which French and British influence was paramount; Khayr al-Dīn now became president of this. Till July 1877, he endeavoured—at first, as *wazīr mubāshir*, and then, after Muṣṭafā Khaznadār's fall on 21 October 1873, as *wazīr akbar*—to reform the Tunisian administration and to introduce a sound financial programme which would enable a debt which swallowed up about half of the country's annual revenue to be reduced. Amongst the measures which he adopted during this time was an agricultural regulation defining the rights and obligations of all those concerned with agriculture, including the *khammās* [see MUZĀRAʿA]. He also set up a mixed tribunal for cases between Tunisians and foreigners involving less than 1,000 piastres. He tried to improve the economy by decreasing export dues and increasing import ones. To help corn exports, he planned to build a railway line between Jendouba and Tunis. One of his most valued collaborators at this time was Muḥammad Bayram al-Khāmis [*q.v.*], who became president of the *djamʿiyyat al-awḳāf* and was able considerably to increase the income from these charitable foundations. The sums confiscated from Muṣṭafā Khaznadār were used to finance a new modern school as successor to the *maktab ḥarbī*, *al-madrasa al-ṣādiḳiyya*, opened in 1875 as a place where the Tunisian élite could receive an adequate education.

Khayr al-Dīn wanted above all to fulfil Tunis's financial obligations to the foreign creditors of the financial commission, in the hope of preserving the country's political independence. This involved necessarily a careful and economical policy, precluding the adoption of large-scale reforms. Moreover, the Tunisian people had a greater need, psychologically, for a period of peace and of just government than for reforms, since the memory on the period 1857-64, when taxes had risen and there had been a culmination in the rebellion of 1864, was still very fresh. Nevertheless, Khayr al-Dīn made an effort in 1877 to inject fresh life into the constitution and to re-open the Parliament, at the time when the Turkish constitutionalists had achieved temporary power in Istanbul; but Muḥammad al-Ṣādiḳ Bey [*q.v.*] firmly opposed this.

On the international plane, Khayr al-Dīn was always a firm supporter of close links between the Bey's official suzerain, the Ottoman Sultan, and Tunis. It was, in his view, the best safeguard against an increasingly burdensome European influence; whilst the Ottoman empire continued in existence, the Regency of Tunis could retain a *de facto* political independence. During the Balkan War, in 1876, he showed his support by sending considerable material aid to the Porte, whilst refraining from sending troops in order not to incur French displeasure.

His departure from office on 21 July 1877 was due to various reasons. The Bey, under the influence of persons like Muṣṭafā b. Ismāʿīl, preferred a more pliant and less economy-minded prime minister; because of two consecutive bad harvests, the treasury was empty, and the instalment of debt had to be paid. As for France and Britain, the twin pillars of the financial commission, the latter had never supported Khayr al-Dīn, and France abandoned him above all because of his help to the Porte and his refusal to let the Jendouba-Tunis railway line be linked with the Algerian network.

On his leaving office, Khayr al-Dīn fell into disgrace, and even feared lest his property be confiscated. But in August 1878, thanks to the mediation of Muḥammad al-Ẓāfir, head of the Madaniyya religious order [*q.v.*], he received an invitation from ʿAbd al-Ḥamīd II [*q.v.*] to come to Istanbul, where on 4 December 1878 he was made Grand Vizier. The sultan, who had just managed to throw off the Young Ottomans, hoped to find in him an efficient servant in the *Tanẓīmāt* [*q.v.*] style. During the eight months when he was at the head of the Sublime Porte, he was concerned with the deposition of the Egyptian Khedive Ismāʿīl, among other things. The main motive behind his dismissal, on 28 July 1879, was that his personal experience at Istanbul had turned him into a belated Young Ottoman, advocate of a parliamentary system and of ministerial responsibility. Until his death on 30 January 1890, he lived in retirement at Istanbul.

Khayr al-Dīn, as well as being a politician, was one of the first Muslims to be concerned with the causes of the decadence of the *umma* [*q.v.*]. In 1868 he published his study *Aḳwam al-masālik fi maʿrifat aḥwāl al-mamālik*, the greater part of which gave a review of the countries of Europe from the economic, political, etc. points of view. More interesting is the introduction (2-89), in which Khayr al-Dīn sets forth his ideas on the possibility of the Muslims regaining their former grandeur. A good government which inspires the people's confidence is the best means of achieving this. Khayr al-Dīn avers that Europe has not become strong thanks to Christianity, but rather to a good system of government in which the monarch has had to delegate some of his powers. Then he notes that it is permissible for the Muslims to borrow from the Europeans their technical inventions and their political system. It ought not to be difficult for the *umma* to re-introduce good government, since the *sharīʿa* prescribes it, and in the past, it had been shown as perfectly attainable, always bringing with it a period of glory for the Muslims. It should be further noted that, for Khayr al-Dīn, the modern European parliament is nothing but the institution of the *ahl al-ḥall wa 'l-ʿaḳd* [*q.v.*] adapted to modern needs and conditions. He claimed to remain within the tradition of classical Islamic political thought, and this explains why he considered his ideas as valid for the whole of the *umma* and why he was especially concerned with the position of the Ottoman empire, at the time the main Muslim power, and with the *tanẓīmāt*. His opinion on these last was favourable. Although he favoured an Ottoman parliament, he did not consider it indispensable for the realisation of his ideal of a good government.

This explains why at the same time he paid so much attention to the *ʿulamāʾ* and the role which they ought to play in helping modernisation of the *umma*, since they comprised the greater part of the élite and could pronounce on whether the desired reforms were consonant with the *sharīʿa* or not. In this regard, Khayr al-Dīn had an influence on the thought of Rifāʿa Rāfiʿ al-Ṭahṭāwī [*q.v.*]. Concerning Europe, Khayr al-Dīn adopted a suspicious attitude, for he feared that some day or other the Muslim world would fall an easy prey to the expansionist continent.

In the person of Khayr al-Dīn, statesman and theorist were combined in a happy manner, since the politician was himself always faithful to the principles set forth in his *Akwam al-masālik*.

(G. S. van Krieken)

KHAYR AL-DĪN (KHIḌIR) PASHA, Barbarossa (?870-953/?1466-1546), famous Turkish corsair and Grand Admiral of the Ottoman fleet. He was born at Metellin, where his father Yaʿḳūb, *sipāhī* of Vardar Yenidjesi (*Ghazawāt*, fol. 5b; *Lüdjdjat al-abrār*, in *Künh al-akhbār*, fol. 254a; Ḥādjdji Khalīfa, *Tuḥfat al-kibār*, 25: of Edjeova), had settled after the Turkish conquest of 866/1462; according to Cómara, *Crónica*, 351, his mother Catalina was the widow of a Greek priest. The date of his birth may be fixed in *ca.* 1466, according to the notice of Ḥādjdjī Khalīfa, who makes him over 80 at death (for Sandoval, ii, 208, he had likewise *más de ochenta años*, and for Guglielmotti, *Storia della marina pontificia*, iv, 117, he was 77 in 1543). The assertion of Haëdo, that he died aged 63 (*Topografia*, i, 261) and the information contained in a report of 3 June 1534 to the Venetian Senate, where he is described as *di cinquanta e più anni* (Albèri, iii/1, 30), deserve less credence.

Khiḍir began his activities by carrying merchandise to Saros, Salonica and Negroponte in a ship of his. After Selīm I forbade sailing on the Aegean Sea without his authorisation, since he wished to prevent his brother and rival Ḳorḳud's flight (1513; cf. İ. H. Uzunçarşılı, *II.inci Bayezid oğullarından Sultan Korkud*, in *Belleten*, xxx (1966), 583-90), he fitted out a second boat at Metellin, carried corn from the north to Africa, purchased 95 black slaves, sold them in Rumelia, and from there, with his two ships, rejoined his elder brother ʿArūdj [*q.v.*] at Djarba (*Ghazawāt*, fols. 23b-24a). (The date of ʿArūdj's arrival in North Africa is corrected by S. Souček, *Remarks on some Western and Turkish sources dealing with the Barbarossa brothers*, in *Güneydoğu Avrupa araştırmaları dergisi*, i (Istanbul 1972), 63-76 = *The rise of the Barbarossas in North Africa*, in *Archivum ottomanicum*, iii, 1971, 238-50). He achieved numerous exploits by land and sea, but in general remained in the shadow of ʿArūdj, first at Tunis and then at Algiers.

After ʿArūdj's death in 1518, Khiḍir, now controlling only Algiers, had to face the expedition led by Hugo of Moncada, viceroy of Sicily, of 80 sail and 6,000 men (Manfroni, 260, based on Spanish documents; *Ghazawāt*, fol. 68a: 170 ships and 20,000 men; Grammont, 32: 40 ships and 5,000 men). Towards the middle of August, the enemy landed at the mouth of al-Ḥarrāsh and seized a position on the eminence of Kudyat al-Ṣābūn; Khiḍir, with 600 Turks and 20,000 local troops, took the Spanish from the rear and forced them to re-embark. A storm sent a great proportion of the ships to the bottom of the sea, and Khiḍir took numerous prisoners, including 36 officers of high rank (*Ghazawāt*, fols. 69a-71b). Immediately afterwards, he put the sultan of Tlemcen to flight, since this last had allied with the Spanish and had marched on Miliana. In the spring of the next year (1520), he retook Ténès, which had rebelled, whilst his squadron of 18 ships put to flight 15 Spanish ships which had been sent to reinforce the town (*Ghazawāt*, fols. 72a-73a). From this time onwards, according to the *Ghazawāt*, the Christians gave Khiḍir the name of Barbarossa, because of the colour of his beard (see also Charrière, i, 264).

Like his brother, Khiḍir divided the Algerian territories into two provinces, under two local chiefs as governors: Ahmad b. al-Ḳāḍī in the east (where he himself had already been governor), and Muḥammad b. ʿAlī in the west. He assumed the honorific or *laḳab* of Khayr al-Dīn (Ariadeno) and the title of *sulṭān*, according to an inscription of the mosque of Algiers built by him, dated in the first ten days of Djumādā 1 926/19-28 April 1520: *al-sulṭān al-mudjāhid mawlānā Khayr al-Dīn ibn al-amīr al-shahīr al-mudjāhid Abī Yūsuf Yaʿḳūb al-Turkī* (cf. A. Devoulx, *Épigraphie indigène du Musée archéologique d'Alger*, Algiers 1874, 54-5; see also P. Giovio, *Delle historie del suo tempo*, ii, Venice 1557, 315).

In this period Khayr al-Dīn sought help from the

Ottoman sultan, sending an embassy with four ships and with 40 slaves for Selīm I and an equal number for the *pas̲h̲as* of the *Dīwān*, together with a petition of the Algerian people, during the first ten days of D̲h̲u 'l-Ḳaʿda 925/25 October 3- November 1519, whose text has survived in a Turkish translation (in Topkapı Sarayı, publ. by A. Temimi, in *Revue d'histoire maghrebine*, v (1976), 95-101). The envoys were very well received by the sultan (who died on 9 S̲h̲awwāl 926/22 September 1520), and Selīm accepted the overlordship of the kingdom of Algiers and sent via Ḥād̲j̲d̲j̲i Hüseyin an investiture decree (*k̲h̲aṭṭ-i s̲h̲erīf*) and a flag (*sand̲j̲aḳ*). Moreover, he sent to him 2,000 Janissaries and some artillery, and authorised him to enroll volunteers, to whom he promised the rights and privileges enjoyed by the Janissaries (Haëdo, i, 249). The Turkish squadron coming from Istanbul was greeted on 20 September 1520 off Cerigo (see M. Sanudo, xxix, 284). From that moment, the name of the Ottoman sultan was inscribed on coins minted at Algiers and his name placed in the *k̲h̲uṭba*, thus affirming his suzerainty (*G̲h̲azawāt*, fol. 88b; for the coins struck at Algiers from 926/1520, see İ. Artuk, *Kanunî Sultan Süleyman adına basılan sikkeler*, Ankara 1972, 29-31).

Soon afterwards, whilst his fleet was seizing Mostaghanem, K̲h̲ayr al-Dīn helped ʿAbd Allāh unseat Masʿūd in Tlemcen, receiving payment of an annual tribute of 10,000 gold pieces (*G̲h̲azawāt*, fols. 93b-102a).

K̲h̲ayr al-Dīn's domination in Algiers was temporarily interrupted through an attack of the sultan of Tunis, Muḥammad, who had allied with Ibn al-Ḳāḍī and Ḳara Ḥasan, head of the Turkish garrison in Cherchell. Defeated on the lands of the Flissat Umm al-Līl (Grammont, 32), and besieged in the town of Algiers with only limited supplies of food and munitions, K̲h̲ayr al-Dīn was forced to flee with nine ships of Djidjelli, after the population of Algiers itself (divided into eight quarters under eight *s̲h̲ayk̲h̲s*) had risen in rebellion against him.

After having secured the help of the head of the Banū ʿAbbās of Little Kabylia, ʿAbd al-ʿAzīz, K̲h̲ayr al-Dīn from Djidjelli seized Collo (1521), Bône and Constantine (1522: Haëdo, i, 250-1). He also took up privateering in the Mediterranean. Sailing with seven ships, he captured nine ships loaded with corn, which he divided amongst the population then afflicted by famine. He then had built a galley of 27 banks of rowers, and in the spring of 1523 seized some ships in the Gulf of Genoa and five vessels loaded with corn off the coast of Rome. From there, he set sail for D̲j̲arba, and soon secured control of it, and it was there that the most famous corsairs of the age, like Sinān Reʾīs (Ebreo) and Aydīn Reʾīs (Cacciadiavolo) joined him. With a fleet of 41 ships, K̲h̲ayr al-Dīn and his corsairs ravaged the coasts of the western Mediterranean, seizing large amounts of booty (*G̲h̲azawāt*, fols. 123a-126b; Gomara, 393-5). Now feeling that he was strong, he decided in 1525 to march from Djidjelli on Algiers, invited thither by the populace, who were suffering hardship because of the loss of revenue from the corsair spoils. The occasion for this was Ibn al-Ḳāḍī's prohibition of some ships of K̲h̲ayr al-Dīn's loaded with Moriscoes from mooring in the port of Algiers. Ibn al-Ḳāḍī went forth with 20,000 men to engage K̲h̲ayr al-Dīn, but was beaten at Wādī Bugdura, and then at the hill of the Banū ʿAbbās, where he was beheaded by his own men (*G̲h̲azawāt*, fols. 127a-136b; Grammont, 33). From 1526 till 1528, K̲h̲ayr al-Dīn strengthened his position by retaking Cherchell, where Ḳara Ḥasan had 500 men, at the same time forcing ʿAbd Allāh, sultan of Tlemcen, to pay the tribute for the past six years and to pay in the future 20,000 pieces of gold per annum; he also took Ténès and Constantine again, where the people had rebelled (Grammont, 34), and forced Ḥusayn, brother and successor of Ibn al-Ḳāḍī in Great Kabylia to pay tribute of 30 loads (*yük*) of silver (1528: *G̲h̲azawāt*, fols. 138b-146a).

The Spanish still controlled the island of Peñon, which faced Algiers at a distance of some 300 metres only, but they were poorly-armed and poorly-provisioned. At the opening of May 1529, K̲h̲ayr al-Dīn attacked the fortress and took it on the 27th. With the débris, he built a causeway linking the islet with dry land, and thus secured a roadstead to protect his ships against the winds (*G̲h̲azawāt*, fols. 148a-152b); Grammont, 35). A few days later, an Algerian squadron seized nine Spanish ships which had come to the relief of Peñon (*G̲h̲azawāt*, fols. 154b-156a).

In summer of the same year, K̲h̲ayr al-Dīn sent a detachment of fifteen ships under Aydīn Reʾīs to the vicinity of Oliva in Spain, in order to help the Moriscoes who were in revolt. Aydīn Reʾīs, having loaded his ships with as many Moriscoes as possible, put to flight off Formentera a Spanish squadron commanded by Rodrigo Portundo; of the eight ships here, one was sunk and the rest brought back to Algiers (Gomara, 397-9; Haëdo, i, 253-3; *G̲h̲azawāt* fols. 160b-162a: fifteen ships, of which three were burnt and three sunk). K̲h̲ayr al-Dīn sent two galleys to Istanbul to proclaim this victory to Süleymān. The *čāwus̲h̲* Muṣṭafā told him about the negotiations with the King of France. (*G̲h̲azawāt*, fols. 163a-164b).

In May 1531, news reached K̲h̲ayr al-Dīn that Andrea Doria was sailing towards Cherchell with a fleet of 40 ships, including 20 French ones (*G̲h̲azawāt*, fol. 167a-b), according to the terms of the Treaty of Cambray of 5 August 1529 (Manfroni, 291, assures us that there were 30 ships, including 13 French ones). K̲h̲ayr al-Dīn planned to go out and engage him with 48 ships, but had to delay his departure through lack of supplies (*G̲h̲azawāt*, fol. 172a; Giovio ii, 129-30); he was in the vicinity of the Balearics when Andrea Doria had already attacked the fortress and after being repelled, had fled to Cadix, leaving on the ground 1,400 dead and 646 prisoners (*G̲h̲azawāt*, fol. 175a-b). K̲h̲ayr al-Dīn then ravaged the coasts of Liguria and Spain, capturing abundant plunder.

In 1532, he attacked the sultan of Tlemcen, who had the support of 14 Spanish ships based on Oran, and forced him to pay an increased tribute of 30,000 gold pieces. He then sent five ships to plunder the Spanish coasts, capturing *inter alia* 14 out of the 15 ships responsible for the defence of the coasts. Soon afterwards, he put down a revolt of 7,000 captive Christians, led by twenty Spanish nobles, for whom he had previously refused a ransom of 20,000 sequins (*G̲h̲azawāt*, fols. 215a-223a).

However, K̲h̲ayr al-Dīn assumed the role of intermediary between Francis I and Süleymān, receiving in 1533 a French ambassador making his way towards Aleppo (J. Ursu, *La politique orientale de François Ier* Paris 1908, 79-80). Having received an invitation in a *k̲h̲aṭṭ-i s̲h̲erīf* which Sinān Čāwus̲h̲ brought to him, he left Ḥasan Ag̲h̲a (Sardo) in charge at Algiers and left for Istanbul with seventeen of his ablest *reʾīs* and 44 ships, set on fire a squadron of 18 ships before Messina, sent 25 of his ships to

pursue the fleet of Andrea Doria, who had left Coron for the Adriatic, and finally reached the Ottoman capital at the end fo the year (*Ghazawāt*, fols. 224a-226b).

Shortly afterwards, he departed for Aleppo after an invitation from the Grand Vizier Ibrāhīm Pasha, who bestowed on him officially the office of Kapudan Pasha [*q.v.*], with the title of *Djezā'ir beglerbegi* (*Ghazawāt*, fol. 229a; State Archives of Venice, coll. Tkish. docs., dossier xv. 7, last ten days of Radjab 940/5-14 February 1534), which should be understood as "*Beglerbeg* of the Islands" (i.e. *Djezā'ir-i baḥr-i sefīd*), and not of Algiers (cf. Albèri, iii: 1. 30, narrative of Daniello de' Ludovisi of 3 June 1534: "beilerbei del mare"; Ramperti, *Libri tre delle cosei die Turchi*, Venice 1939, c. 22: "beglerbey del mare").

Some months later, Khayr al-Dīn set sail with a fleet of 84 ships, of which 18 were his own, five belonging to corsairs and 61 newly-built. The mission entrusted to him was the conquest of Tunis, whose throne had been claimed by Rashīd, brother of Mawlāy al-Ḥasan. After pillaging Reggio, San Lucido, Cetraro, the Gulf of Naples with the adjacent islands, Sperlonga, Fondi (on the flight of Giulia Gonzaga, see B. Nicolini, *Giulia Gonzaga e la crisi del Valdesianesimo*, in *Atti dell'Accademia Pontaniana*, N.S., v (Naples 1942), 204-8) and Terracina, and then taking on supplies of water and wood at the Tiber mouth (Guglielmotti, iii, 384-5) and capturing Bizerta, he seized La Goletta (*Khalḳ al-Wādī*) on 16 August and then on the 18th, Tunis, which had been abandoned by Mawlāy al-Ḥasan. The whole of Tunisia fell into his hands after Mawlāy al-Ḥasan had been defeated at al-Kayrawān by an army of 10,000 men (*Ghazawāt*, fols. 235a-241a). He then pacified a revolt of the Arabs calling for Rashīd, who had remained in Istanbul, where he died shortly afterwards (Ḥādjdjī Khalīfa, 44; Pečewī, *Ta'rīkh*, i, 492).

In April 1535, a new French ambassador, La Forest, visited Barbarossa in Tunis and from there, left for Istanbul; he had the task of preparing a joint expedition of the French and the Ottomans to plunder Corsica and conquer Sardinia and Sicily, then under Spanish control (D. C. Rouillard, *The Turk in French history, thought and literature (1520-1660)*, Paris 1938, 111-12). Charles V decided to take action, and assembled an armada of 300 ships and about 30,000 men. He reconquered La Goletta on 14 June and on the 20th attacked Tunis with the support of the Arabs and over 4,000 Christian captives, who had broken their fetters and now threw the Turkish ranks into disarray (these Turkish forces amounting to 9,700 men). Khayr al-Dīn was hurled out of Tunis and headed for Bône, whence, with 15 ships, he went to Algiers. He set off with 32 ships for the Balearics, burnt and sacked Port Mahon in Minorca (P. Estamislao - K. Aguilo, *Documentos relativos al sitio y saqueo de Mahon por Barbarroja*, in *Revista de Menorca* (1898), 137-56; (1909), 261-80; *non vidi*) and Palma in Majorca, and returned on 15 October to Istanbul (*Ghazawāt*, fols. 257b-272a). In the following spring, he went with 30 ships to the coasts of Calabria, where he sacked La Castella (*Ghazawāt*, fol. 272a-b; G. B. Moscato, *Cronaca dei musulmani in Calabria*, Cosenza 1963, 102).

Till spring 1537, Khayr al-Dīn was busy getting ready the fleet which Süleymān had promised Francis I for supporting his Italian expedition. During this period, Süleymān took up a position with his army at Valona, and the fleet, comprising 280 ships, concentrated along the Albanian coast. Whilst the greater part of the ships under the Third Vizier Luṭfī Pasha headed for the coast of Apulia, Khayr al-Dīn went with 60 galleys to escort 20 ships loaded with provisions from Egypt. He then took part in the unsuccessful siege of Corfu. From there, and after the main part of the fleet had returned to Istanbul, he went with 60 ships and seized Nio, Zea and Naxos. In the next year, 1538, he attacked and occupied Skiatos, Skiros, Tinos, Andros, Karpatos, Kandeleusa and other islands of the Venetians in the Aegean. Also, Crete was plundered for a week and over 15,000 captives taken (*Ghazawāt*, fols. 278a-282b).

On 27 September, the Turkish fleet of 120 ships commanded by Khayr al-Dīn clashed before Prevese with a Christian fleet of 138 galleys and 70 ships (Manfroni, 337), which had been got together by the Emperor, the Pope and Venice, under the command of Andrea Doria; the engagement ended in the retreat of Doria's Imperial forces after some skirmishing by the vanguards (for the battle, seen now A. Büyük-Tuğrul, *Preveze deniz muharebesine ilişkin gerçekler*, in *Belleten*, xxxvii (1973), 51-85). The existence of secret negotiations between Doria and Barbarossa, shown in numerous published documents (see Manfroni, 332 f.; C. Capasso, *Barbarossa e Carlo V*, in *Archivio Storico Italiano*, lxix (1932), 169-209, 304-48) explains why the two admirals never provoked each other and why they both adopted an extremely prudent attitude towards each other. Barbarossa, without hurrying overmuch, pursued the Christian fleet and forced it to retreat to Ste. Maure.

In the next year, Khayr al-Dīn went with 150 ships and reconquered Castelnuovo, taken in the preceding year by the Christian fleet after the battle of Prevese.

Khayr al-Dīn's last appearance on the sea was in 1543, when, after the agreements reached between Süleymān and Francis I, he was given the task of co-operating with the French fleet in the western Mediterranean. After ravaging the Italian coasts, staying three days at Reggio and terrorising Rome by a halt at the Tiber (Guglielmotti, iv, 117-18), he joined the Duc d'Enghien, commander of the French fleet, at Marseilles. The two united fleets sacked Villefrance and unsuccessfully besieged Nice, Khayr al-Dīn attributing this check to the shortcomings of the French fleet (cf. Charrière, i, 578-9). The arrival of Andrea Doria's fleet and the Marquis del Vasto's army compelled Khayr al-Dīn to retreat and to spend the winter at Toulon, which was evacuated on this occasion by its inhabitants. However, he sent 25 galleys under Ṣāliḥ Re'īs and Ḥasan Čelebi to plunder the Gulf of Lyons and the Spanish coasts (J. Laroche, *L'expedition en Provence de l'armée de mer du Sultan Suleyman sous le commandement de l'Amiral Hayreddin Pacha dit Barberousse (1543-1544)*, in *Turcica*, i (1969), 161-211; *Ghazawāt*, second part, ms. 1186 of the B. N., Paris). The Peace of Crépy in 1544 ended the war between Charles V and Francis I, and Khayr al-Dīn sailed back to Istanbul after pillaging the coasts of Tuscany and the kingdom of Naples (ms. 1186, fols. 41a-45a; Guglielmotti, iv, 123-5).

Khayr al-Dīn spent the rest of his life in pious works, amongst other things, having a *medrese* and a mosque built at Beşiktaş, of which however no traces remain (see T. Öz, *Istanbul camileri*, ii, Ankara 1965, 30). He died on 4 July 1546, and was buried at Beşiktaş, with the chronogram مات رئيس البحر [=953/1546] engraved on his tomb. The mausoleum was

built by the architect Sinān (Öz, *op. cit.*, ii, 10), and became the place for the ceremony of investiture for new *ḳapudan pashas* (note at end of ms. 2639 of Istanbul Univ. Library, fol. 392a-b). The Turkish fleet, before leaving on an expedition, would go there and fire a salvo in greeting (Uzunçarşılı, *Osmanlı devletinin merkez ve bahriye teşkilâtı*, Ankara 1948, 439; A. Bombaci, *Le fonti turche della battaglia delle Gerbe (1560)*, in *RSO*, xx (1942), 279).

Very little is known of Khayr al-Dīn's private life. He was twice married: once, at Algiers, with a local woman, who bore him a son Ḥasan [*q.v.*], who was on several occasions *beglerbegi* of Algiers; and a second time, at the age of 77, with the 18-year old daughter of the governor of Reggio (pillaged in 1543, see above), Flavia or Maria Gaetani (Haëdo, i, 272; Guglielmotti, iv, 117). He also had a daughter who is buried near his *türbe* (Öz, *loc. cit.*).

Khayr al-Dīn gave the Ottoman empire a well-organised North African province. As Grand Admiral, he strengthened the Ottoman maritime presence, assuring it of a total domination which lasted for over 30 years. He has remained in the Turkish memory as a national hero. His name struck terror in the Mediterranean, but he also had a reputation for generosity and prudence (see the letter written to him by Pietro Aretino, beginning "Salve, o re inclito, bassà degno, capitano invitto e uomo egregio ... poiché la tua generosità, la tua altezza, il tuo valore e la tua prodenza ti sostengono..." (*Il secondo libro delle lettere*, ed. F. Nicolini, Bari 1916, 54-5). Barbarossa replied to him thus: "Certo tu hai più presto cera di capitano che di scrittore" (B. Croce, *Poesia popolare e poesia d'arte*, Bari 1933, 252).

Bibliography: Sources. The most important contemporary source is the *Ghazawāt-i Khayr al-Dīn Pasha* by Sayyid Murād, composed on the basis of directly-communicated reports from Barbarossa and his travelling-companions, and also on the basis of what he himself had personally witnessed; two redactions of the original exist, one in prose and one in verse, and there are other, second-hand redactions. It is preserved in several manuscripts but still unedited, and is divided into two parts; the first narrates Khayr al-Dīn's adventures from his birth till 1541, whilst the second, concerned with the French expedition of 1543-4, has only come down to us in ms. 1186 of the B. N. in Paris. Scholars have used it basically through the intermediary of a bad French translation of an Arabic résumé of the Turkish text (the Arabic text was published at Algiers in 1934 by Nūr al-Dīn ʿAbd al-Ḳādir; on this is based *al-Zuhra al-nāʾira*, ed. S. Baba ʿUmar in *Jnal. d'histoire et de civilisation du Maghreb*, iii (Algiers 1967), 1-18 of the Arabic section). The French tr. was published in two vols. at Paris in 1837 by S. Rang and F. Denis as *Fondation de la Régence d'Alger. Histoire de Barberousse.* On the other hand, the Italian tr. made from a Spanish version of the Turkish text (ms. 1663 of the Escorial, to which the citations in this article refer), made by Giovan Luigi Alçamora in 1578, has been little used. This Italian tr. was published at Palermo by E. Peleaz in *Archivio Storico Siciliano* between 1880 and 1887 and as a monograph in 1887 with the title *La vita e la storia di Ariadeno Barbarossa* (see A. Gallotta, *Le ġazavāt di Ḫayreddīn Barbarossa*, in *Studi Magrebini*, iii (Naples 1970), 79-160).

Another contemporary work on Barbarossa is the *Lüdjdjat al-abrār* or *Lüdjdjat al-akhyār* of Yetīm ʿAlī Čelebi, d. 959/1552 (see A. S. Levend, *Ġazavāt-nāmeler ve Mihaloğlu Ali Bey'in Ġazavāt-nāmesi*, Ankara 1956, 74), of which only one manuscript is known, that in the private library of İ. H. Uzunçarsili. There is an extract from this work in ʿĀlī, *Künh al-akhbār*, 4th section, 3rd part, still unedited; this has been used *apud* Istanbul Univ. Library ms. 5959, fols. 253a-256b. Ḥadjdjī Khalīfa, *Tuḥfat al-kibār fī asfār al-biḥār*, Istanbul 1329, 25-59, is based on the *Ghazawāt*, with some variations. A contemporary Spanish source, written in 1545, is the *Crónica de los Barbarrojas* of F. Lopez de Gómara, published in *Memorial historico español*, vi, Madrid 1853, 327-439. There are also notices on Barbarossa in the *Historia de la vida y hechos del Emperador Carlos V* by Prudencio de Sandoval, written at the end of the 16th century, of which an edition was published at Madrid in 1955 (*Biblioteca de autores españoles*, lxxx-lxxxii), and in the *Topografia et historia general de Argel* by Diego de Haëdo, written towards the end of the 16th century (Valladolid 1612 and Madrid 1927-9, in 3 vols.). The citations in this article refer to this last edition.

Collections of documents: *Colleción de documentos ineditos para la historia de España*, 112 vols., Madrid 1842-95, for which there is a catalogue raisonné by J. Paz, *Catalogo de la colleción...*, 2 vols., Madrid 1930-1; E. Charrière, *Négociations de la France dans le Levant*, i, Paris 1848; E. de la Primaudaie, *Documents inédits sur l'histoire de l'occupation espagnole en Afrique*, in *Rev. Afr.*, xix-xxi (1875-7); M. Sanudo, *I diarii*, 58 vols., Venice 1879-1902; E. Albèri, *Le relazioni degli ambasciatori veneti al Senato*, Ser. 3, vol. i, Florence 1840; M. T. Gökbilgin, *Venedik devlet arşivindeki vesikalar külliyatında Kanunî Sultan Süleyman devri belgeleri*, in *Belgeler: Türk tarih belgeleri dergisi*, i (Ankara 1964), 119-20 (nos. 27-8, 34, 40-1, 61, 82; the document xv. 7 is not included in this collection); idem, *Venedik devlet arşivindeki türkçe belgeler kolleksiyonu ve bizimle ilgili diğer belgeler*, in *Belgeler*, v-viii (1968-71), 1-151 (nos. 131, 188).

Khayr al-Dīn's life is included, from the historical point of view, in H. D. de Grammont, *Histoire d'Alger sous la domination turque (1515-1830)*, Paris 1887; C. Manfroni, *Storia della marina italiana dalla caduta di Constantinopoli alla battaglia di Lepanto*, Rome 1897; A. Samih Ilter, *Şimali Afrikada Türkler*, i, Istanbul 1937.

There are several more or less recent works, the last of which being E. Bradford's *The Sultan's Admiral, the life of Barbarossa*, London and New York 1968, of little worth. (A. GALOTTA)

KHAYR AL-DĪN PASHA [see DJANDARLĪ].

USTĀD **KHAYR AL-DĪN**, Ottoman architect, popularly considered as the founder of Turkish architecture. We have very little certain knowledge of his life, and do not even know when he was born and died, but his father Ustād Murād is known to have restored the Galata Tower after the earthquake of 913/1509. His name is not included in a list of architects in a *defter* from the first years of Sultan Süleymān's reign (Topkapi Sarayı Arşivi, D 7843), indicating that he may no longer have been alive then. In Ayvānsarāyī Ḥüseyin Efendi's *Ḥadīḳat al-Djawāmiʿ*, written in 1193/1779, the following information is given about him: "Khayr al-Dīn, the architect—who was the builder of the Miʿmār Khayr al-Dīn mosque opposite the mausoleum of Sinān Pasha in Dīwān Yolu—was the architect of

Sultan Bāyezīd. He is buried outside the Sinān Pasha mausoleum. There is a quarter bearing his name". This mosque, according to its inscription, was burnt down in 1316/1898 and rebuilt by Sultan ʿAbd al-Ḥamīd II. Ṭayyār-zāde Aḥmed ʿAṭāʾ Enderūnī, in *ʿAṭāʾ Taʾrīkhi*, Istanbul 1291, i, 76, attributes to him buildings in Edirne, Amasya and Istanbul during the reign of Bāyezīd II (886-918/1481-1512), and his information is repeated in Meḥmed Thüreyyā, *Sidjill-i ʿOthmānī*, ii, 314.

Khayr al-Dīn seems to have begun his career outside Istanbul. The *külliyye* or complex of religious and educational buildings in Amasya of Sultan Bāyezīd, founded by the prince Aḥmed, governor of Amasya, in his father's name, was his first major work, and was completed in 891/1486. In this project, on the banks of the Kızılırmak River (of which only the *medrese*, mosque, *ʿimāret*, *türbe* and fountain survive today), the architect tried to give unity to the whole site by the plan chosen, which included two large domes, one after the other, and then three smaller domes at their sides.

The second and larger *külliyye* of Sultan Bāyezīd was built by Khayr al-Dīn in Edirne between the years 889/1484 and 893/1488. With its mosque, *ʿimāret*, hospital, *medrese*, baths, kitchen and provision depots, this is one of the biggest social-religious foundations of the 9th/15th century. The mosque, with its many tombs, dominates the architectural complex; it has a lofty dome, 21 m in diameter, mounted on four walls 19 m high. The low, nine-domed, small *tābkhānas* are adjacent to the mosque. At the outer corners of the fountain courtyard, in front of the *tābkhānas*, are two minarets with galleries.

More controversial is Khayr al-Dīn's role in the construction of the mosque of Sultan Bāyezīd in Istanbul, which was designed as a *külliyye* and completed in five years between 906/1501 and 911/1506. In this, the first plan of the single half-domed Fātiḥ mosque is taken up and developed further by the addition of a second half-dome to the north and one small dome on each side. The central dome is 18 m in diameter; the fountain courtyard has two rows of windows, and the two minarets, with single galleries and 87 m apart from each other, are at the outer corners. The various domes and arches of the mosque were restored by Sinān after the 915/1509 earthquake, according to the *Tuḥfat al-miʿmārīn*.

Now Muṣṭafā Nūrī Pasha, in his *Netāʾidj al-wuḳūʿāt* (Istanbul 1327), put forward the name of Kemāl al-Dīn as the architect of the Bāyezīd mosque, whilst more recently, Rıfkı Melûl Meric has suggested the name of Yaʿḳūb b. Sulṭān Shāh as the architect, basing this on records in Istanbul Belediye Library manuscripts; see his *Bayezid camii mimarı*, in *Ilâhiyat Fakültesi, Yıllık Araştırmalar Dergisi*, ii (Ankara 1958), 4-77, and *L'architecte de la mosquée Bayezid d'Istanbul*, in *Procs. First ICTA* (Ankara 1961). There are certainly many obscurities and chronological difficulties about the dating of the building process, but according to the mosque's inscription, work started on it at the end of 906/1501 and was completed in 911/1506; the dome was completed in the third week of Rabīʿ I 910, and in the next month, the outer courtyard of the mosque in the garden of the Old Palace and its boundaries were marked out and enclosed with walls. There does not seem to be any specific information about Yaʿḳūb's hand in it; Khayr al-Dīn had become architect-in-chief previously, and the sources indicate that Khayr al-Dīn was alive after Yaʿḳūb's death. It is also known that he was in charge of construction at the caravanserai, later known as the Pirindj Khān, at Bursa, built by the Sultan as a *wakf* to provide income for his mosque in Istanbul (Bursa Müzesi arşivi, Sharīʿa register-*defters*, No. 20, entry No. 67; Kâmil Kepeci, *Bursa Hanları*, Bursa 1935).

Mayer, *Islamic architects and their works*, Geneva 1956; B. Ünsal, *Turkish Islamic architecture in Seljuk and Ottoman times 1071-1923*, London 1959; G. Goodwin, *A history of Ottoman architecture*, London 1971, 143, 150-1, 155, 168; O. Aslanapa, *Turkish art and architecture*, London 1971, 210-14.

(O. Aslanapa)

KHAYRĀBĀD.

i. — A small town in Uttar Pradēsh, India, 27° 32′ N., 80° 45′ E., 75 km. north of Lakhnaʾū (Lucknow) on the Barēlī road, now of small importance but in Mughal times the headquarters of one of the five *sarkārs* of the *sūba* of Awadh (Abu 'l-Faḍl ʿAllāmī, *Āʾīn-i Akbarī*, Eng. tr. Jarrett, Bibl. Ind., ii, 93, 176). Under the kingdom of Awadh [*q.v.*] it became the headquarters town of a *niẓāmat*; but after the British annexation of Awadh its importance declined with the rise of Sītāpur 8 km. to the north. Before the partition of the Indian subcontinent, the population of the town and surrounding district was about 60 % Muslim. Except for the Djāmiʿ masdjid, of the time of Shāhdjahān, its buildings are undistinguished; Abu 'l-Faḍl's lists show it as possessing a brick fort.

Bibliography: Abu 'l-Faḍl, *loc. cit.*; H. R. Nevill, *Sitapur: a gazetteer* (= *District Gazetteers of the United Provinces* ..., xl), Allahabad 1905, s.v. Khairabad.

ii. — A settlement on the west bank of the river Indus opposite Aṭak [*q.v.*] (Attock). Whether or not the name was deliberately given for its assonance with Kaṭak at the south-eastern extremity of Akbar's dominions, as Abu 'l-Faḍl asserts (*Akbar-nāma*, ed. Bibl. Ind., iii, 355), the name certainly means "obstacle". A popular legend (not in the *Akbar-nāma*) has it that Khayrābād is the "habitation of well-being" attained after the "obstacle" has been successfully passed, and was named by Akbar after the successful bridging of the Indus at a notoriously treacherous point. The *sarāʾī* of Khayrābād is frequently referred to in accounts of of Akbar's operations in the north-west after 989/1581.

Bibliography: *Akbar-nāma*, iii, index s.v. Aṭak; and see Bibliography to Aṭak.

(J. Burton-Page)

KHAYRPŪR.

1. A former native state of the province of Sind in British India, now in Pakistan, lying to the east of the lower-middle Indus River between lat. 27°46′ and 26°10′ N. and between long. 68°20′ and 70°14′ E., and with an area of 6,018 sq. miles; it is also the name of a town, formerly the capital of the state, lying some 25 miles south-west of Sukkur and Rohri.

The southeastern part of what was Khayrpūr state is largely desert, but the alluvial plains in the north and west, adjacent to the Indus, are fertile and are irrigated by canals from the Indus valley, so that such crops as cereals, cotton, sugar cane, tobacco, oilseed and indigo can be cultivated.

The separate historical existence of the state

dates only from the late 18th century. In 1783 the Balūč chief Mīr Fatḥ ʿAlī Khān Tālpūr overthrew the Kalhoras of Sind and secured a *sanad* from the Durrānī ruler in Ḳandahār as titular ruler of Sind. His nephew Mīr Suhrāb Khān (d. 1830) asserted his power in Khayrpūr town, and founded a state of his own, whilst continuing to acknowledge the supremacy of the Tālpūr Mīr of Sind at Ḥaydarābād. By conquest and intrigue he enlarged his possessions beyond the environs of Khayrpūr town southwards and eastwards to the Great Indian Desert fringes and westwards to the Indus. During the internal convulsions in Afghānistān which led to the supersession of the Sadōzāy line by the Bārakzāy line of Dūst Muḥammad [see AFGHĀNISTĀN. v. History], the Mīrs of Sind withheld tribute, and by *ca.* 1813 the province had become virtually independent; in 1832 the independent existence of Sind was acknowledged by Britain. The Mīrs of Sind attempted to impede the passage northwards of British troops during the First Afghan War (1839-42), but one of the sons of Mīr Suhrāb Khān in Khayrpūr, ʿAlī Murād, was more co-operative, and after the operations in Sind by Sir Charles Napier and its annexation in 1843, ʿAlī Murād became Mīr of Khayrpūr and also honorary *Raʾīs* of Upper Sind.

However, internal disputes in Khayrpūr and friction with the Government of India—Sir Bartle Frere had in 1851 commented on the wretched state of the populace of Khayrpūr—led to ʿAlī Murād being in 1852 deprived of this office as *Raʾīs* and his territories being reduced to his patrimonal possessions of Khayrpūr. The confiscated territories, amounting to some 5,412 sq. miles, were now incorporated into what was at the time the Shikarpūr District. Subsequently, a *wazīr* on loan from British service was placed at the Mīr's side as chief executive with the powers of a District Magistrate, and the Collector of Sukkur acted as British Political Agent in Khayrpūr. Khayrpūr thus subsisted as the only remaining native state in Sind, and in 1866 a *sanad* was granted to Mīr ʿAlī Murād in which the Government of India promised to recognise the succession of any Mīr ascending the throne according to Islamic law. ʿAlī Murād did not die till 1894, and was then succeeded by his son Fāʾiz Muḥammad.

In 1947 Khayrpūr state acceded to Pakistan, but after the administrative reorganisation of 1955 it was merged into the province of West Pakistan, and is now a District, under a Deputy Commissioner, sub-divided into six revenue *taʿlūḳas* (Khayrpūr, Gambat, Kōt Dīdjī, Mīr Wah, Fāʾiz Gandj and Nāra). In 1961 the population of the District was 472,137, this being overwhelmingly rural and 83 % Sindi speaking. The town of Khayrpūr, which is today an important textile centre, had 34,144 inhabitants in 1961.

Aitkens, *Gazeteer of the province of Sind*, Karachi 1907, 121-8, 150-1, 510-19; *Imperial gazeteer of India* [2], xv, 210-16; H. T. Lambrick, *Sir Charles Napier and the conquest of Sind*, Oxford 1952 (Genealogical Table 2 at p. 387, "The ruling house of Khairpur"); H. T. Sorely, *The gazeteer of West Pakistan, including Khairpur State*, Karachi 1968; *Population census of Pakistan 1961. District census report, Khairpur*, Karachi N.D.

2. A town and *taḥṣīl* of the former Bahāwalpūr State [*q.v.*] in West Panjab, now in Pakistan; the town is situated in lat. 29°35′ N. and long. 72°18′ E., 38 miles to the north-east of Bahāwalpūr town. See *Imperial gazeteer of India* [2], xv, 216.

3. A town in the ʿAlīpur *taḥṣīl* of the Muẓaffargaṙh District of West Panjab, now in Pakistan. It is situated in lat. 29°20′ N. and long. 70°49′ E., 57 miles to the south of Muẓaffargaṙh town, and near the junction of the Indus and Chenab Rivers. It was founded in the early 19th century by the Bukhārī Sayyid Khayr Shāh, from whom it derives its name. See *Imperial gazeteer of India* [2], xv, 216-17. (C. E. Bosworth)

KHAYSH (A.; pl. *khuyūsh*, *akhyāsh*, n. of unity, *khaysha*), a coarse, loose linen made with flax of poor quality and used in the manufacture of sacks, wrappings and rudimentary tents. The Arabic dictionaries only mention, in its literal sense, this meaning; Dozy (*Suppl.*, s.v.) renders it by "canevas; linon; serpillière; treillis", and de Goeje (*BGA*, iv, 355) remarks that this linen is manufactured in Ṭabaristān. Sometimes, the expression *ʿArab al-khaysh* is used to designate the Bedouins (Quatremère, *Mém. géogr. ethi st. sur l'Égypte*, Paris 1811, il, 218).

However, this term clearly designates a means of obtaining a certain freshness of air, without the texts in which it appears being always explicit, for example when Ibn al-Faḳīh (*Buldān*, 88; tr. Massé, 108) says that the Cordovans have no need of *khaysh* in summer. In a certain number of mentions, the use of the expressions *fī khaysh* or, better still, *bayt khaysh* (al-Djāḥiẓ, *Bukhalāʾ*, 187; idem, *Rasāʾil*, ed. Hārūn, i, 393) leads one to think that it has the meaning of a summer room. Ṭ. al-Ḥādjirī (the editor of *Kitāb al-Bukhalāʾ*, 322) puts forward the view that *khaysh*, in this sense, is the Persian *kāshān* "a summer room" and it is probable that the usage comes in fact from Persia. Al-Muḳaddasī (449) says that he saw at Shīrāz some *buyūt al-khaysh* "where water runs constantly, brought by pipes which encircle the room, reaching it from high up". Perhaps the walls were bare, but they may also have been covered with *khaysh*; in any case, al-Ṭabarī (iii, 418) recounts that al-Manṣūr had a pavilion hung with *khaysh* "that was constantly moistened; his successors preferred mats of palm leaves" (Gaudefroy-Demombynes and Platonov, *Monde musulman*, 381; cf. Mez, *Renaissance*, 354-60: *ḳubbat al-khaysh*).

Finally, the word *khaysh* designates another process that can be identified with certainty when it is used in connection with the verb *ʿallaḳa* "to hang up" (al-Djāḥiẓ, *Ḥayawān*, i, 82; al-Bayhaḳī, *Maḥāsin*, 394): in this case, it means a kind of fan, of which a detailed description will be found in Dozy (*Suppl.*, s.v.); al-Sharīshī, (*Sharḥ*, ii, 313; cf. al-Ghuzūlī, *Maṭāliʿ*, i, 65; Miskawayh, i, 167; Mez, *loc. cit.*; M. Canard, in *AIEO Alger*, vi (1942-7), 177, n. 79) speaks in the same way of a *mirwaḥat al-khaysh* and says of this apparatus that it "has the form of a ship's sail; it is hung from the ceiling and a cord is attached to it to set it in motion; it is moistened with water and sprinkled with rosewater. When anyone wishes to take a siesta or sleep at night, he pulls the cord and the apparatus moves back and forth the whole length of the house, directing a fresh, perfumed breeze on to the sleeper". In fact, young slaves were appointed to work the *khaysh*, whose use, which seems to have made its first appearance in ʿIrāḳ from the 1st/7th century, has not disappeared in that country, where it is, however, designated by the Indian name *pānka* (see *Lughat al-ʿArab*, ix (1931), 621-3).

Bibliography: Given in the article.

(Ch. Pellat)

KHAYYĀM [see ʿUMAR KHAYYĀM].

KHAYYĀṬ (A.) "tailor", "dressmaker". In classical Arabic literature, tailors formed a group of skilled artisans who made the clothing for all social classes in the Near East. A maxim attributed to the Prophet runs *ʿamal al-abrār min al-ridjāl al-khiyāṭa wa-ʿamal al-abrār min al-nisāʾ al-ghazal* "the occupation of pious men is tailoring, and that of pious women is spinning. Though this saying is of dubious authenticity, it does establish a division of labour between men and women, and it furthermore links piety with the tailor's craft. It is accordingly not surprising to note that, in the ancient history of the Islamic community, there were numerous Muslim jurists who worked as tailors for their daily bread; and it might well be concluded that it was these very men who ensured for this saying a wide circulation in order to create a favourable image of their profession.

Numerous tailors and other skilled workers were employed by the caliphs and their viziers in the state workshops (*dar al-ṭirāz* [see ṬIRĀZ], whilst independently-employed tailors usually worked in little workshops in a particular street or in the markets of Islamic towns. Some pious but poor tailors worked inside mosques (cf. al-Makkī, *Ḳūt al-ḳulūb*, Cairo 1961, ii, 562; Ibn al-Djawzī, *al-Muntaẓam*, Hyderabad 1357, v, 132). The proverbial expression *abnāʾ al-daraza* (lit. "sons of sewing"), current in the ʿAbbāsid period, referred to the tailors of Kūfa, who had taken part in the revolt of Zayd b. ʿAlī, great-grandson of ʿAlī b. Abī Ṭālib, against the Umayyads (120-2/738-40). According to al-Thaʿālibī, it was applied to the lowest classes (*sifal*) and the dregs of the population (*suḳḳāṭ*), and this is evidently the oldest literary mention about the introduction of Shīʿism amongst the artisanal population of ʿIrāḳ.

We have no authentic information enabling us to state that there existed guilds of tailors in the early Islamic Near East. However, some proofs do exist, at least in theory, which allow one to conclude that certain of the urban *khayyāṭūn* formed associations (*sharika*) with their colleagues living in the same area. Some associations of artisans (*sharikat al-ṣanāʾiʿ*) existed amongst other groups of workers, such as the dyers (*ṣabbāghūn*), the fullers (*ḳaṣṣārūn*) and the goldsmiths (*ṣāgha*); this must have been a case of the usual type of grouping-together amongst artisans. The only proof which we have comes from a solitary nomination of a tailor to the office of *raʾīs ʿalā 'l-khayyāṭīn* made by the ʿAbbāsid vizier Ibn al-Furāt (d. Rabīʿ II 312/July 324); this must relate to the tailors employed in the Baghdād *dār al-ṭirāz*.

Tailors, whether free men or slaves, were well-paid. According to al-ʿAbbās b. al-Ḥasan, vizier to al-Muktafī (289-95/902-8) and to al-Muḳtadir (295-320/908-32), "when an artisan like a tailor (*khayyāṭ*) works with silk brocade (*dībādj*), he earns a thousand *dīnār*s a day, but when he works only with *kūhī* (cloth of inferior value), he gets then *dirhams*"; even allowing for exaggeration, this assertion permits us to see how much certain tailors might earn. According to some sources, a slave tailor paid over to his master as *ḍarībat al-ʿabd* (payment for securing manumission), a payment which was handed over in instalments, two *dirhams* out of his daily wage; hence this was clearly quite a high one. A comparative study of workmen's wages in the Umayyad and ʿAbbāsid periods leads one to think that tailors enjoyed a good standard of living and had considerable resources, and this is confirmed by a tale of the *Thousand and one nights*. In addition to his normal wages, a tailor could supplement his income by hiring out clothing, e.g. *ṭaylasāns*, to specific people.

The literary sources of the ʿAbbāsid and Mamlūk periods also combine to show that the social status of the *khayyāṭūn* was higher than that of all other groups of artisans. We find further proof of this in the fact that the customary law of *kafāʾa* requiring social compatibility in marriage was applied with less strictness in regard to them than for any other groups or workers.

The manuals of *ḥisba* [*q.v.*] enumerate certain fraudulent practices current amongst tailors and lay down the requisite measures for stopping them and for protecting the public interest. They require, for instance, that these artisans should weigh precious materials at the moment at which they are handed over to them, and that the left-overs and off-cuts should be returned to the original owner when the garment is completed, at the same time as they exhort them to fulfil the orders as quickly as possible, thus leading one to think that these orders were not always done expeditiously within the corporation of tailors. The Syrian Ibn Ṭūlūn (880-953/1473-1546), writing at the end of the Mamlūk period and beginning of the Ottoman one in Syria, stresses the basic theological principle that tailors should not use silk for men's garments, although this is permissible for women and children. This echoes a tradition based on the authority of ʿAlī b. Ṭālib, which Ibn Ṭūlūn thought fit to recall in connection with the professional responsibilities of tailors, and leads one to think, amongst other things, that there was a distinct and strong Shīʿī influence discernible amongst the Arab tailors of the Near East.

AL-KHAYYĀṬ, Abū ʿAlī Yaḥyā b. Ghālib, astrologer and pupil of Māshallāh [*q.v.*], died *ca.* 220/835. He was known to mediaeval Christendom as Albohali (vars. Alghihac, Albenahait, etc.), and should not be confused with the Andalusian astronomer Abū Bakr Yaḥyā b. Aḥmad b. al-Khayyāṭ. The *Fihrist*, 276 (Cairo edn., 385-6) attributes to him a *K. al-Masāʾil* [*fī aḥkām al-nudjūm*] and a *K. al-Mawālīd*, which are both extant, together with the following works, now lost: *K. al-Madkhal*, *K. al-Maʿānī*, *K. al-Duwal*, *K. Taḥwīl sinī 'l-mawālīd*, *K. al-Manthūr*, *K. Ḳaḍīb al-dhahab*, *K. Taḥāwīl sinī 'l-ʿālam* and *K. al-Nukat*. A *K. Sirr al-ʿamal* and *Fawāʾid falakiyya* have further been preserved. Al-Khayyāṭ's fame in mediaeval Europe stems from the *K. al-Mawālīd*, a work on judicial astrology which also contains horoscopes for illness, frequent citations from Ptolemy and Hermes on the pars fortunae, etc. Two Latin translations were made of it, one by Plato of Tivoli (Plato Tiburtinus) at Barcelona in 1136, and the other by John of Seville (Iohannes Hispalensis) in 1153; the latter translation was printed at Nuremberg (1546, 1459) under the title *Albohali de iudiciis nativitatum liber unus* and probably retranslated into French. Al-Khayyāt is often cited as a secondary authority by the European schoolmen, and he seems to have been used, through John of Seville's version, by Leopold of Austria (floruit *ca.* 1271), for his *Compilatio de astrorum scientia*.

(H. Suter — [J. Samsó])

AL-KHAYYĀṬ, Abu 'l-Ḥusayn ʿAbd al-Raḥīm b. Muḥammad b. ʿUthmān, theologian and jurist, *ca.* 220/835—*ca.* 300/913, foremost representative of the Baghdād school of the Muʿtazila at his time. He still remembered Djaʿfar b. Mubashshir (died 234/849), whom he had asked certain questions on a much-debated exegetical problem (cf. Ibn al-Murtaḍā, *Ṭabaḳāt al-Muʿtazila*, 76, ll. 5 ff.), but he seems to have received his main theological training from two members of the following generation about whom we know little, sc. ʿĪsā b. al-Haytham al-Ṣūfī and Abā Mudjālid Aḥmad b. al-Ḥusayn al-Ḍarīr al-Baghdādī, an influential *mawlā* of the caliph al-Muʿtaṣim (d. 268/882 or Dhu 'l-Ḳaʿda 269/May 883), both of them pupils of Murdār and Djaʿfar b. Ḥarb (d. 236/850-1), Abū Mudjālid being also a pupil of Djaʿfar b. Mubashshir (cf. *Taʾrīkh Baghdād*, iv, 95 f.; Kaʿbī, *Maḳālāt al-Islāmiyyīn*, ed. Fuʾād Sayyid, 74 l. 22). To Abū Mudjālid he seems to have owed his interest in and his relatively tolerant attitude towards *ḥadīth*. His juridical knowledge procured him the discipleship of members of different *madhāhib*, among them the famous Shāfiʿī Ibn Suraydj (d. 306/918; cf. Ibn al-Murtaḍā, 129, ll. 16 f. and Ḳāḍī ʿAbd al-Djabbār, *Faḍl al-iʿtizāl*, ed. F. Sayyid 301, ll. 1 ff., here together with a Mālikī and a Ẓāhirī). His theological activity was determined by problems inside his own Baghdādī school (see below), above all by the shock caused through the books of Ibn al-Rāwandī, a co-disciple of his in the school of ʿĪsā b. al-Haytham al-Ṣūfī. He was very well informed about the history and the doxographical tradition of early Islamic, and especially about Muʿtazilī *kalām*. His authority seems to have been relatively unquestioned (cf. the remarks by Ibn al-Nadīm and by Abū Zayd al-Balkhī in Ibn Ḥadjar, *Lisān al-Mīzān*, iv, 8, apu. ff.); only Djubbāʾī, who simultaneously tried in Baṣra to restructure the Muʿtazilī system by going back to the ideas of Abu 'l-Hudhayl, attacked him in a book against his doctrine of the pre-existence of the body (see below; cf. Baghdādī, *al-Farḳ bayn al-firaḳ*, 165, ll. 3 ff. and Dāwūdī, *Ṭabaḳāt al-mufassirīn* [ed. ʿAlī Muḥammad ʿUmar], ii, 190, l. 4). His main disciples were Muḥammad b. ʿUmar al-Ṣaymarī and especially Abu 'l-Ḳāsim al-Kaʿbī al-Balkhī (d. 317/929 or 319/931), who through their antagonism towards Djubbāʾī's son Abū Hāshim, both stressed their difference from the Baṣrī school.

Works: (a) Eight books against Ibn al-Rāwandī, namely refutations of his *K. al-Tādj*, his *K. al-Dāmigh*, his *K. al-Zumurrudh*, his *K. Naʿt al-ḥikma*, his *K. al-Farīd*, his *K. Ḳaḍīb al-dhahab* and his *K. Imāmat al-mafḍūl*, none of which are preserved (cf. Ibn al-Nadīm in *WZKM*, iv (1890), 223 apu. ff., and *ZDMG*, xc (1936), 302 [without explicit reference to al-Khayyāṭ]; Ibn al-Ḳāriḥ, in al-Maʿarrī, *Risālat al-Ghufrān*, ed. Bint al-Shāṭiʾ 35, ll. 4 ff.; Ibn al-Djawzī, *Muntaẓam*, vi, 100 l. 1), and a refutation of his K. *Faḍīḥat al-Muʿtazila*, known under the title of *K. al-Intiṣār* and probably finished shortly after 269/822 (ed. H. S. Nyberg, Cairo 1927; re-edited with a translation by A. N. Nader, Beirut 1957; for the date of composition, cf. Madelung in *Le Shīʿisme imâmite*, 14). (b) Refutation of the *K. al-Djārūf* by Abū Ḥafṣ al-Ḥaddād (cf. *Fihrist*, ed. Fück in *Muh. Shafi Pres. Volume*, 71, ll. 10 f.; for the contents, cf. Van Ess, *Erkenntnislehre des Īcī*, 223). (c) *K. al-Radd ʿalā man athbata khabar al-wāḥid* (cf. *Fihrist*, quoted by Ibn Ḥadjar, *Lisān al-mīzān*, iv, 9, l. 3), mentioned and corrected by Kaʿbī in his *K. Ḳabūl al-akhbār* (cf. ms. Cairo, Dār al-kutub, *Muṣṭalaḥ* 14 m, p. 2, ll. 5 f.). (d) Refutation of the *K. al-ʿAks* by ʿAbbād b. Sulaymān (cf. *Fihrist*, in *ZDMG*, xc (1936), 302). (e) Refutation of a *K. al-Burhān* (= Aristotle's *Posterior Analytics*?; cf. *Fihrist*, *loc. cit.* [both (d) and (e) only under the assumption that Fück's identification of the passage is valid]). (f) A book on *al-istidlāl bi 'l-shāhid ʿalā 'l-ghāʾib*, mentioned by Ḳāḍī ʿAbd al-Djabbār in his *Muḥīṭ* (167, l. 14 ʿAzmī = 165, l. 4 Houben). Identical with (d) or (e)? (g) A vast amount of doxographical and biographical material taken up by Kaʿbī in his *K. al-Maḳālāt* and in his *Balkhiyyāt*, partly through oral transmission during his courses with Khayyāṭ in Baghdād, partly through a series of *quaestiones* (*masāʾil*) which he sent to his teacher from Balkh and which were further treated by Ḳāḍī ʿAbd al-Djabbār (cf. Ḥākim al-Djushamī, *Ṭabaḳāt*, ed. F. Sayyid, 368, ll. 12 f.).

Doctrines: In Khayyāṭ's time, the main accent of theological discussion in the Baghdādī school had shifted from problems like the relation between God's essence and his attributes, the status of the believer and the nature of the Ḳurʾān (taboo since the time of the *miḥna*), to the question of God's relation to the world, of creation and annihilation. Khayyāṭ

tries to preserve a certain self-determinedness of the created world in relation to God's almightyness: God cannot interfere with the laws of nature (cf. Ash͟ʿarī, *Maḳālāt*, 314, ll. 3 ff.), perhaps even not by a *kh͟arḳ al-ʿāda* as the Baṣrī school believed. The qualifying momentum (*mukh͟aṣṣiṣ*) for an action lies in the action itself, not in the agent (cf. Ṣāliḥ al-Maḳbalī, *al-ʿĀlam al-sh͟āmikh͟*, Cairo 1328, 21 ff.). The order of causality is guaranteed through *tawallud* (cf. *Intiṣār*, ed. Nader, 60, ll. 11 ff.). Similarly, God has no power to do injustice (cf. *Intiṣār*, 22, l. 4). For the same reason, Kh͟ayyāṭ is able to hold an extreme position concerning the much-debated thesis brought up by the Baṣrī Muʿtazilī al-Sh͟aḥḥām that "the possible in the state of its non-presence in the world, has some reality" (cf. R. M. Frank, in *Atti del III Congresso di Studi Arabi e Islamici*, Ravello 1966, 324 ff.). The potentially existent (*maʿdūm*) is, insofar it is known by God and comprised by His power, not only "something" (*sh͟ayʾ* = ὄν), but also "body" (*d̲j̲ism*), *i.e.* it is *maʿlūm* and *maḳdūr ʿalayh* in its corporeality as composed of substance and accidents. Through its accidents it possesses already in its pre-existence all qualities, with the exception of createdness (*makh͟lūḳ* or *muḥdath͟*, which are added through the fact of creation) and movement (because a body is not moving in the moment of its coming-into-existence; cf. Ibn Ḥazm, *Fiṣal*, v, 42, ll. 12 ff.; Bagh͟dādī, *al-Farḳ bayn al-firaḳ*, 164, ll. 13 f.; Rāzī, *Muḥaṣṣal*, 38, ll. 14 f.). Incompatible with the possible as not-yet-existent is also the quality of permanence (*baḳā*). In this case, however, Kh͟ayyāṭ concluded that *baḳāʾ* is no separate quality or accident at all, but only an expression for the continuance of being. This meant that annihilation, too, does not result from God's withdrawing the quality of *baḳāʾ* and subsequent disintegration of the different parts of the body, as it was frequently believed, but through direct conversion into non-existence (*iʿdām*; cf. Abū Rash͟īd an-Nīsābūrī, *al-Masāʾil fī 'l-kh͟ilāf*, in A. Biram, *Die atomistische Substanzenlehre aus dem Buch der Streitfragen zwischen Basrensern und Bagdadensern*, Berlin 1902, text, 58, apu. ff., and 69, l. 4 f.; also al-Malāḥimī, *al-Fāʾiḳ fī uṣūl al-dīn*, fol. 154b. with special reference to the death of human beings).

The theory seems not yet to be fully developed in *Intiṣār*, § 79, and is passed over in silence in *Intiṣār*, 23, ll. 2 ff.; on the other hand, it is not easy to differentiate it from the ideas of Sh͟aḥḥām (cf. Ash͟ʿarī, *Maḳālāt*, 504, ll. 16 ff.). D̲j̲ubbāʾī attacked it on the basis that it implies the eternity of bodies (and matter, because bodies are material, whereas atoms and accidents are not, as long as they are not put together?; cf. Bagh͟dādī, *Farḳ*, 165, ll. 3 ff.). Kh͟ayyāṭ, however, did not apparently react against D̲j̲ubbāʾī, but against the older Baṣrī Muʿtazilī Abu 'l-Ḥusayn Muḥammad b. Muslim al-Ṣāliḥī, an adherent of Ṣāliḥ Ḳubba (from whom he seems to have got his *nisba*). Ṣāliḥī rejected the *maʿdūm*-theory (cf. Ash͟ʿarī, *Maḳālāt*, 501, ll. 8 ff. and Bagh͟dādī, *Farḳ*, 163, apu. ff.) as well as *tawallud* (cf. Ash͟ʿarī, 233, ll. 3 f.); he stressed God's power to interfere with the laws of nature (cf. Ash͟ʿarī, 309, ll. 12 ff., and esp. 310, ll. 9 ff.; also 570, ll. 7 ff.).

Kh͟ayyāṭ differed from Ṣāliḥī in yet another point about which his discussions with him are expressly attested (cf. Ibn al-Murtaḍā, 72, ll. 16 f.), sc. concerning *ird̲j̲āʾ*, *i.e.*, the definition of belief and the eternity of punishment for the grave sinner. Kh͟ayyāṭ upheld the intransigent and moralistic outlook of *al-waʿd wa 'l-waʿīd* which he may have inherited from the ascetics among the Bagh͟dādī Muʿtazilīs (*ṣūfiyyat al-Muʿtazila*), in whose circle he had grown up, and which remained the view of the majority of the school; it is for this reason that he rejects, *e.g.* the intercession of the Prophet (*sh͟afāʿa*; cf. Mufīd, *al-Fuṣūl al-mukh͟tāra* [8] i, 47, ll. 7 ff.). The contrary attitude, centering around the idea of final remission for Muslim sinners or at least for some of them, according to God's free decision, was, however, quite frequent at this time. It seems to have had its roots in the theology of the influential "D̲j̲ahmī" theologian Bish͟r al-Marīsī (d. 218/833), and was taken over also by another Muʿtazilī contemporary of Kh͟ayyāṭ, al-Nāsh͟iʾ al-akbar (d. 293/906; cf. Van Ess, *Frühe muʿtazilitische Häresiographie*, 144).

Kh͟ayyāṭ considered the caliphate (*imāma*) as necessary by reason, not only by revelation (cf. Ibn ʿArafa, in *Ḥawliyyāt D̲j̲āmiʿat Tūnis*, ix (1972), 190). The sovereign may act freely according to his *id̲j̲tihād* as long as he thinks to serve the benefit (*ṣalāḥ*) of the community. This is how some irregularities of ʿUth͟mān may be explained (cf. Ibn Abī l-Ḥadīd, *Sh͟arḥ Nahd̲j̲ al-balāgh͟a*, iii, 34, ll. 6 ff.). ʿAlī had the highest qualities among the *Ṣaḥāba*, but as he did not object to the caliphate of his predecessors, the *Ṣaḥāba* must have been right in not electing him then. The reasons for his and for their behaviour are unknown (cf. Ibn al-Murtaḍā, 86, ll. 12 ff., and *Sh͟arḥ Nahd̲j̲ al-balāgh͟a*, i, 7, ll. 6 ff.). In the first civil war, ʿAlī acted in legitimate performance of *d̲j̲ihād*, but the *Ṣaḥāba* among his opponents, sc. ʿĀʾish͟a, Ṭalḥa and al-Zubayr, will be exempt from divine punishment because they repented (cf. al-Sh͟aykh͟ al-Mufīd, *al-D̲j̲amal*, Nad̲j̲af 1382/1963, 28, ll. 3 ff.). There is, however, no excuse for his other enemies, especially Muʿāwiya and ʿAmr b. al-ʿĀṣ (cf. *Intiṣār*, 74, ll. 8 ff.). The agreement of the contemporaries (*ahl al-ʿaṣr*) may be considered a convincing argument (*ḥud̲j̲d̲j̲a*) even if a few of them dissent (cf. Abu 'l-Ḥusayn al-Baṣrī, *al-Muʿtamad*, 486, ll. 14 ff., a reflection of the situation of the Muʿtazila after the *miḥna*). The community is infallible when it transmits *ḥadīth͟* from the Prophet (cf. *Intiṣār*, 72, ll. 3 f.), but isolated traditions (*āḥād*) have to be rejected (cf. Bagh͟dādī, *Farḳ*, 165, ll. 10 f.). The Prophet is infallible when he speaks as a lawgiver, because God demands obedience towards his commandments; in other cases, he may commit light sins which do not entail eternal punishment and do not cost him the solidarity of his adherents (cf. *Intiṣār*, 71, ll. 16 ff.). In *kalām*, only the Muʿtazilī are competent (cf. *ibid.*, 43, ll. 6 ff.); in spite of numerous disagreements in minor details (cf. *ibid.*, 79, ll. 5 ff., 106, ll. 1 ff. etc.), they are held together through the *uṣūl al-kh͟amsa* (cf. *ibid.*, 93, ll. 2 ff.).

ledge has no predetermining effect); Maḳdisī, *al-Badʾ wa ʾl-taʾrīkh*, ii, 121, ll. 12 ff. (definition of man). (J. van Ess)

AL-KHAYZURĀN bint **ʿAṬĀʾ** al-**DJURASHIYYA**, a former slave of Yemenī origin (on the Djurash, see Ibn al-Kalbī-Caskel, Tab. 278), who was freed, and then was married to al-Mahdī, to whom she bore three children, Mūsā (al-Hādī), Hārūn (al-Rashīd) and a daughter called al-Bānūḳa (Ibn Ḳutayba, *Maʿārif*, 380). According to a tradition given in particular by al-Djahshiyārī (*Wuzarāʾ*, 136), she suckled al-Faḍl b. Yaḥyā b. Khālid al-Barmakī, whilst al-Faḍl's mother provided milk for Hārūn; this kind of alliance through co-lactation would accordingly explain the devotion shown to her by Yaḥyā b. Khālid, together with whom she ended up doing the work of government during the first three years of al-Rashīd's reign, i.e. until her death in 173/789.

During the caliphate of al-Mahdī (158-69/775-85) she played a more obscure part but, even so, the strong influence which she held over him can be seen from his designation of Mūsā as the heir presumptive from 159/775-6 and then of Hārūn in 166/782-3; furthermore he excluded from the succession all other sons, especially those borne by his Hāshimī bride Rayṭa, daughter of al-Saffāḥ (Ibn Kuṭayba, *ibid.*). Although Mūsā seems to have submissive to his mother during his childhood, traditions agree in stressing that Hārūn was the preferred son. Al-Khayzurān accordingly schemed to exclude the older son from the caliphate, and al-Mahdī may even have decided to change the order of succession in favour of Hārūn before he died suddenly in Muḥarram 169/August 785.

Immediately after the caliph's death an army mutiny broke out in Baghdād. Al-Khayzurān is accused of having started this disturbance in order to put Hārūn on the throne, but it does not seem to have had a political nature, for the troops were complaining simply of not having received their salary. It rests on no more than the fact that she, with al-Rabīʿ b. Yūnus, made the arrangements to appease the mutineers (al-Ṭabarī, iii, 544-7). When Mūsā became caliph under the name of al-Hādī she tried to dominate him, or at least to involve herself in state affairs and to assume a political role, but her older son gave her no scope to work. He told her sharply that she would have to stop receiving the dignitaries who made state visits to her, he threatened to take severe measures against her visitors, and he ordered her to mind her own business. According to one tradition, he even tried to poison her (al-Ṭabarī, iii, 570; Ibn Ṭiḳṭaḳā, *Fakhrī*, ed. Dérenbourg, 262). The young caliph resorted to extreme measures; he imprisoned Hārūn and Yaḥyā and even gave orders to put them to death but, thanks to the intervention of al-Khayzurān with the appointed executioners, the two condemned men were saved. In such circumstances, the sudden death of al-Hādī in Rabīʿ I 170/September 786 could not have failed to arouse suspicion, and there was no hesitation in accusing the queen-mother of having had him suffocated by her minions (*Fakhrī*, 261; Ibn al-Athīr, vi, 68) in order to ensure the success of the faction over which she had become the leader and to rid herself of a son who refused to be manipulated. According to al-Masʿūdī (*Murūdj*, vi, 282 = § 2486), al-Hādī called his mother to his bedside and drew his last breath while holding her hand, not without first having declared that Hārūn should rise to the throne immediately. Even this if scene really occurred, there was no witness present and probably the declaration attributed to al-Hādī is a complete fabrication. He had in fact provided enough proof to show that he wanted to remove his brother from the succession and to replace him by his son Djaʿfar for such words to be regarded with suspicion. Djaʿfar, who could have been no more than ten years old, was put in a safe place and forced to recognise his uncle (al-Ṭabarī, iii, 569). Historians naturally see the hand of al-Khayzurān in this event, but she was after all only following the wishes of al-Mahdī.

After the accession of her favourite son to the throne of Baghdād, it is conceivable that she may have envisaged executing the dignitaries who had supported al-Hādī (al-Yaʿḳūbī, *Historiae*, ii, 490). However, she did not complete the scheme and was content to exercise effective power with the help of Yaḥyā al-Barmakī, though not without thwarting the wishes of al-Rashīd when the opportunity came.

Chroniclers vie in stressing the enormous fortune amassed by al-Khayzurān, and she engaged in some undertakings of public interest. It is particularly noted that she bought the house in Mecca in which the Prophet was thought to have been born, had it restored and turned it into a mosque. She is frequently cited in *adab* literature and it must also be mentioned that ʿUtba, the beloved of Abu ʾl-ʿAtāhiya, was one of her slaves.

KHAZAF (a.), ceramics. The radical transformation of ceramics under the rule of Islam took place chiefly in areas where their production had long been established, such as near the vital river beds of Mesopotamia, Egypt and Transoxiana, as well as on the banks of ancient inland seas, lakes and the shorter rivers of Syria and Iran. Pre-Pharaonic beakers, bowls from Jericho, jugs from Eridu, ewers from Sialk, all point to early skills in shaping and painting. By the 20th century B.C. in Egypt, the glassy potential of certain minerals led to the firing of a ceramic body, often called Egyptian faience, made from a mixture of natron or plant ash and powered quartz from pebbles. A glaze of similar composition, but previously pulverised, and often coloured turquoise, was added to the shaped body and might be painted with a black pigment. In Assyria, glazing started as early as the 12th century B.C., rhytons from Ziwiheh probably go back to the 8th century B.C. and the glazed friezes from Babylon and Susa are well-known examples. Under Parthian and Sasanian rule, the same area and adjacent lands produced a large series of vessels, including coffins, with a coarse sandy body and an alkaline glaze often coloured turquoise with copper oxide. Coloured lead glazing became standard in the Eastern part of the Roman world from the 1st century B.C., probably at about the same time as in China, but with neither influencing the other at that stage. The moulded shape, as well as the dark copper green colour, tended to imitate metalwork. It is difficult, prior to the zenith of the ʿAbbāsid caliphate in the 3rd/9th century, to distinguish any new ceramic production. At Khirbat al-Mafdjar [*q.v.*], the Umayyad complex near Jericho, pre-Islamic and lead glazed shapes are found in the undisturbed level

below the rubble caused by the earthquake of 128/746.

Problems of archaeology, classification and technique. Although archaeological missions have long worked in Western Asia, it is only recently that the Islamic levels have been examined scientifically, rather than being discarded before reaching the classical and prehistoric levels. Since the Islamic levels are the most easily accessible, they are often found disturbed either by more recent buildings or by unofficial excavations. Most of the ceramic finds belong to pit and sewer fillings and only rarely to sealed levels. Too few excavations have yet been fully published to permit anyone without an intimate knowledge of the material to gain a clear understanding of the development of Islamic pottery. Thus the crucial publication of the finds from Sāmarrā in 1925 has conditioned most subsequent studies. Although other Islamic towns are as important from the ceramic point of view, they lack proper archaeological records. Apart from the Ḳalʿat Banī Ḥammād (1913 and 1965), Baalbek (1925), Susa (1928 and 1974), Miletus (1935), al-Minā (1938), Antioch (1948), Ḥamāt (1958), Lashkari Bāzār (1963), Apamea (1972), and Nīshāpūr (1974), the specialist must be content with preliminary reports such as those of Baṣra, Wāsiṭ, Ctesiphon, Ki<u>sh</u>, Iṣṭa<u>kh</u>r, Rayy, Sīrāf, Ta<u>kh</u>t-i Sulaymān, Kangavār, Iznik and Tarsus. In order to reduce considerably the time lag between excavation and publication, the whole study of the ceramics is best done in the field; photographs, profiles, descriptions of bodies with Munsell chart number and basic tests with chemical and microscopical examination should thus be included.

In such a vast area as the Islamic world, there has been a tendency in ceramic studies to rely on historical, and more particularly, dynastic classifications, with names of towns used in a rather arbitrary manner and subdivisions based on colours and decorative motifs. As a result it has been found more convenient to restrict such terminology and to bear in mind the wide spread of a technique at one given time, while concentrating on terminology and technical problems. When seen in the context of world ceramics, the Islamic potter has contributed fundamental glazing techniques in the field which, in turn, have made certain European developments possible. The compulsion to create a white background for decorative motifs led the craftman to evolve various formulae in glazing which would allow for whiteness, firm outline to the colour decoration and substitutes for the precious metalwares forbidden by the Faith. Chronologically, three methods of producing whiteness exist in early Islamic pottery: first, an opaque white glaze on a yellowish body; second, a white slip under a transparent and clear lead glaze, usually on a pink body; and third, a composite white body called soft paste and not unlike the Egyptian Faience, with a transparent clear glaze. Lustre painting, chiefly with copper oxide, can be added in a possible second firing at a lower temperature and in a reducing atmosphere in the first and third cases. The origins of lustre painting on ceramics are still unclear; the earliest glass painted in this manner is datable to 183/779 and was excavated in Fusṭāṭ. It is as well to remember that the glass blower and the potter often work in neighbouring areas of the bazar. Subdued minai colours may also be added using the muffle kiln. Standard variations in the decoration are produced by mechanical devices: moulding, combing, incising of the leather-hard body as well as incising through a white slip before glazing, a technique usually referred to as *sgraffiato*. The colour effects rely on the use of certain metalic oxides which fuse at similar temperatures as those required for the glazes: green and turquoise from copper, purple from manganese, blue from cobalt, all shades of brown from iron, and yellow from antimony or arsenic. Finally, the last technical step in Islamic pottery, is the controlled use of underglaze painting, which came into its own in the 7th/13th century and has been the dominant decorative technique ever since. A large variety of vessels and pottery bodies were made throughout Islam, as well as wall and dome revetments of baked bricks, glazed tile mosaics and tiles.

Early development of Islamic pottery. By the middle of the 3rd/9th century, a striking departure from the pre-Islamic shapes takes place in the creation of a visual reproduction of the plain porcelain from China datable to the 3rd—early 4th/9th—early 10th century. Numerous sherds of original bowls have been found in Mesopotamia with everted, straight or lobed rims and narrow or broad base rings. They are first mentioned in the *Taʾrī<u>kh</u>-i Masʿūdī* of Abu 'l-Faḍl Bayhaḳī [*q.v.*] as gifts by the governor of <u>Kh</u>urāsān to the caliph Hārūn al-Ra<u>sh</u>īd. Most of the Islamic copies are decorated with sparse, often spongy-looking cobalt-blue motifs: they consist of palmettes, loose calligraphy and stylised leaves, sometimes with added copper-green runs on an opaque white glaze. At times, the glaze, which might be an underfired alkaline one, is made grey by the addition of minute specks of manganese oxide. In other cases, dense compositions, not unlike the patterns of Byzantine mosaics, fill the cavetto of the short-lived polychrome lustre painted bowls and dishes; dashes and circles or both and even plain *sang-de-bœuf* lustre, decorate the outside. The 139 square tiles around the *miḥrāb* of the Sidi ʿOḳba mosque in Ḳayrawān, *ca.* 248/862, provide a fascinating pattern book; the tiles with more complex designs in polychrome lustre were imported from Mesopotamia, whereas the simpler ones with bichrome designs could well have been made in the area. Monochrome lustre decoration on bowls, usually with simple compositions of animals, birds and even human beings silhouetted against a stippled background, have been found from one end of the Islamic world to the other throughout the 4th/10th century, including at Madīnat al-Zahrāʾ. The shape is usually that of the porcelain bowls already mentioned.

A monochrome lustre painted bowl in Cairo with traditional palmette and tree design bears an inscription in the name of <u>Gh</u>aban, the commander-in-chief of al-Ḥākim, who died in 403/1013; it seems to mark the end of a fairly abstract style. After this period, more freely-handled lustre painting, often incised through the lustre on to the tin-opacified white background, points to the traditional realism of the local Egyptian Christians with fish patterns, or representations of a priest, as well as a definite revival of Hellenism in the arts of Eastern Mediterranean with scenes of banquets or dancers, often painted in reserve. Such a new departure coincides with a change of body and shape away from earlier imitations of Chinese porcelain and formal designs of palmettes or animals. The simple flairing walls of bowls with either straight rims or everted, flattened ones have a coarser, gritty body; the glazed base ring remains narrow and occasionally the base bears the signature of a potter or pottery workshops. Earlier signatures are found inside the cavetto, such as that of Ibrāhīm, or inside the base ring in the case of Muslim. In Romanesque churches during the early period of

Italian commercial activities before and during the time of the Crusades in Syria, Fāṭimid lustre bowls had been embedded in the outer fabric of walls to adorn the structure of new churches in Lombardy and in the republic of Pisa. Excavations at the Ḳalʿat Banī Ḥammād in the Maghrib have brought to light cross-shaped tiles painted in monochrome lustre of the 5th/11th century.

Besides vessels with cobalt or lustre painting, early moulded wares have been found on various Mesopotamian sites, at Fusṭāṭ, and also below the collapsed structures abandoned by the last Zoroastrians in Takht-i Sulaymān, dated 331/943. Details, not unlike those of *terra sigillata*, and beaded geometric band compositions on the larger surfaces, are all covered with lead glaze, often coloured green or yellow; shapes vary from flat dishes, some with small feet, to bowls with vertical walls, and small cups. Other vessels of the same shapes, but not moulded, have a similar fine pinkish body with a vivid yellow and green colour scheme. Contrary to Sarre's theory, life continued in Sāmarrā after the return of the ʿAbbāsid caliphs to Baghdād in 278/892. The mint worked until as late as the middle of the 4th/10th century, while the potters continued even beyond that time. Their production, although less spectacular, emphasises technical research in the use of metal oxides for runs, splashes and spots, with an increasing proportion of lead in the closer fitting glaze; the body colour changes from pale salmon to pink, the potting becomes thicker and the profiles less graceful. Such production is also common to Susa, Iṣṭakhr, Rayy and Nīshāpūr amongst other places. In Egypt, wares of the Fayyūm indicate a better control of the runs; excavations of Aghlabid and Zīrid towns of the Maghrib have brought to light deep bowls with straight vertical rims and simple animal decoration inside in yellow, green and manganese; the latter two colours are found in Umayyad Spain on an opaque background starting in the 4th/10th century.

The uses of slip. By the 5th/11th century, true Islamic shapes had evolved on the Iranian plateau and in Transoxiana: large dishes with flattened rims, and at the earlier stage, bowls with a wide inside across the bottom and flaring walls. At this point, the second method of producing whiteness appears in the use of a white clay slip which hides the pink body. According to the visual impact required, the potter would paint the slip with plain metallic oxides in order to obtain variegated runs of colour, or else he would thicken the oxides with slip in order to prevent running under the transparent lead glaze. The first group has often been equated with T'ang three-colour funerary ceramics. It has now been proved that such a luxurious production in China virtually ceased after the An Lu-shan rebellion in 756 A.D., and in any case, could not have been the object of international trade. A more likely parallel could be found in the production of Northern kilns under the Liao dynasty in Southern Manchuria (907-1124 A.D.).

A second group, making full use of the slip technique, has been in turn labelled Nīshāpūr or Samarḳand wares according to the quality of design and execution. Recent publications have made it difficult to be so definite, since similar wares appear in Khurāsān, Transoxiana as far as Frunze and Sīstān throughout the Sāmānid, Ghaznawid and Ghūrid periods, by which latter time the production had become rather simplified and mechanical. It in fact exists to this day in the Uzbekistan SSR. Early on, superb examples of calligraphy, such as blessings and prove.bs, elaborate palmettes and textile designs, stand out against a white or colour slip background. A particular instance is the use of human representations on simpler bowl shapes from the area of Nīshāpūr. The Zoroastrian survival with the *Gabri* or fire worshippers, has long been overstressed at the expense of the thriving Nestorian and Syrian Christian communities of the region. This could partly explain the appearance of concrete scenes, the falconer on horseback and the more prosaic birds and horned quadruped compositions. Later, abstract and heraldic slip painting of a rather coarse kind also decorated bowls and cups under the Mamlūks and the Ottomans before the fall of Constantinople. A more refined type of slip decoration was occasionally used on Ṣafawid and Ottoman ceramic shapes in the 10th/16th and 11th/17th centuries.

A third group, that of *sgrafiatto* wares, technically runs parallel in time with the two previous ones. The incised pattern through the slip into the pink body is designed either visually to counterbalance a splashed decoration, or later, it seems, to stand out as the sole ornament under a clear lead glaze, with the occasional green run, or with the glaze sometimes coloured green with copper oxide. In the latter case, the incision can be narrow as in metalware, or broader not unlike *champlevé*, in which case large areas of slip are lifted out; the contrasting shade of the naked body is often made even darker by painting in black or brown. The potters of Ādharbāydjān seem to have produced the best specimens of *sgraffiato*, as emphasised by the excavations of Takht-i Sulaymān, and finds from the area of Garrūs, Aghkand, Riḍāʾiyya and Āmul in Māzandarān. Less inspired animal designs with narrow incisions, have come from Rayy, Nīshāpūr, Iṣṭakhr, Sīrāf and western Afghanistan. There has been a tendency to date *sgraffiato* wares rather early, whereas it seems now more likely that if one is to relate the best of slip painted wares to the latter part of the Sāmānid rule, then *sgraffiato*, technically speaking, has to be placed later during the rule and more specifically the decline of the Great Saldjūḳs (429-590/1038-1194), in particular under Toghrïl III in Hamadān and the thriving regencies of Atabegs such as the Ildegizids (531-622/1147-1225) [*q.v.*], both courts providing suitable conditions for a renewal of original ceramic production under their realm.

Although it was at its best in north-west Persia and was only used for a relatively short period, *sgraffiato* technique was subsequently produced throughout the Caucasus and Eastern Turkey as shown in the excavations of Ānī and Dvin. On the whole, the incised designs of diaper patterns or fanciful birds and animals, and also of figures, convey an impression of haste rather than of skill, although the latter do not lack humour. Either the lead glaze is colourless or made green with copper, or else the typical scheme of purple, yellow and green is used in an uncontrolled way. The technique seems to have spread to Cilicia, known at the time as Lesser Armenia, and to areas ruled over, if intermittently, by the Crusaders in the twelfth and thirteenth centuries A.D. The better-known production is that of Cyprus, with high-footed deep bowls or drinking cups; human décor, usually incised through the white slip under a colourless lead glaze, is unlike the heraldic Mamlūk cups of the 7th/13th century and onwards, although the shapes belong to the same répertoire. It is not yet clear when and where *sgraffiato* started in Byzantium, but it certainly reached Europe in the late Middle Ages and flourished in Renaissance Italy.

Soft paste. It could be suggested that the second

half of the 6th/12th century was the very period which must also have witnessed the last of the three methods of producing whiteness. It is described by Abu ʾl-Ḳāsim in his by now famous treatise of 700/1301, and consists of a man-made body; the ratio of ingredients between body and glaze is such that they adhere closely together. This fine white soft paste (also called frit) proved to be the ideal material to reproduce local metal and glass shapes, as well as the delicate Chinese northern white wares and the Ch'ing-pai (Ying Ching) porcelain of the south in the 6th/12th century. Never again were beakers and bowls to be so light and elegant; the shapes, when moulded or carved, remain pure white or might have a coloured glaze. A short-lived group of pitchers and bowls, called silhouette wares, is sparsely decorated with single animal or human figure at the centre; the thick design in black sharply contrasts with the white background; occasionally the transparent glaze is coloured turquoise. *Lakabi* (painted) wares are also shaped out of the same hard composite body with raised outlines for the broad designs of animals, so as to prevent the colour from running. On vertical shapes the result is less satisfactory. It is likely that these latter wares were produced in northern Mesopotamia as well as in north-west Iran.

On-glaze painting: *Mīnāʾī*. In the last resort, it is the paint brush which lends itself to the most fluent and versatile decoration; on the new white body of various shapes, from low stands to moulded vessels, the potter paints either in lustre or *mīnāʾī* (enamel) on the glaze, or in black and blue under a transparent glaze. Both *mīnāʾī* and lustre techniques require a second firing in a muffle kiln at a lower temperature. The more intricate manner of *mīnāʾī* painting, although varied and subtle in colour, failed to survive beyond the 7th/13th century. The best two examples are an undated slender beaker with scenes from the story of Bid̲j̲en and Manīd̲j̲a in the *S̲h̲āhnāma* of Firdawsī, and a large dish with a vivid battle scene datable to the early 1230s A.D. on the basis of the names written alongside the main figures. A simpler bowl, with a seated figure and two attendants on a turquoise background, is dated 640/1242. Soon after this, the colour scheme deteriorates and the body, at times, reverts to earthenware. Only echoes of the best *mīnāʾī* survive in the 8th/14th century.

Lustre painting. A fragment of a lustre painted ewer in the British Museum, the earliest dated Persian piece so far known (575/1179), has a large band of seated figures, separated from a lower arabesque by a frieze of racing quadrupeds. Although Persian lustre painting has been traditionally divided into two main schools, Rayy and Kās̲h̲ān, it might be that after the great feud in Rayy between Sunnī and S̲h̲īʿī communities in 582/1186-7, the latter group fled to the more congenial atmosphere of Kās̲h̲ān. All other dated lustre pieces so far known are subsequent to that event, and a number of them, whether vessels or tiles, emphasise with relevant calligraphy and Kās̲h̲ānī signatures of whole dynasties of potters, the significant S̲h̲īʿī trend of the town, whence the name of Kās̲h̲ī [*q.v.*] for tiles. The Kās̲h̲ān style evolves from large figures and single fantastic animals to more crowded garden scenes and to dishes with radiating panels, often with cobalt outside and the odd spot inside, no more than a kiln mishap. The most controlled composition in lustre painting occurs on a *miḥrāb* dated 623/1226, once in Kās̲h̲ān and now in the Staatliche Museen of Berlin; it is made up of large moulded tiles.

Not too great importance should be attached to the Mongol invasions with regard to a possible interterruption of ceramic production. That there was a slowing down, as may be noticed from less frequent dating on lustre star tiles, is undeniable, but production of such a basic item, as well as luxury wares, soon picked up, in particular under the firm rule of the Il-k̲h̲ānid Abaḳa (663-80/1265-82). The star and cross tile decoration and moulded frieze of his palace in Tak̲h̲t-i Sulaymān and similar wall coverings in holy places, often within easy reach of Kās̲h̲ān, point to a slow transformation, if not degradation, in the brushwork and colour scheme through the 8th/14th century. Moreover, lustre painting still enhanced vessels with a new type of décor shared with the tiles: fabulous birds, dragons and gazelles, as in the bowl dated 668/1269, or stylised blossoms in the cavetto of a dish dated 676/1277. Quotations from the Ḳurʾān or the *S̲h̲āhnamā* often frame the central theme, regardless of the function; cobalt lines may be used for emphasis of geometric compositions, so are gold leaf and red and white outlines on a turquoise or dark blue (*lād̲j̲vard*) glazed background.

Although the more versatile production of lustre undoubtedly comes from Kās̲h̲ān, including the group of vessels found buried in large jars in Gurgān, the so-called Raḳḳa wares extending up to 656/1258 make up a typical group of Syrian ceramics; blue and lustre combine in décors of calligraphy, stylised leaves, arabesques and the occasional figure or animal on basins, shallow dishes with everted flattened rims, globular jars and small hollow rectangular stands. Lustre was still occasionally used under the Mamlūks, especially on handsome drug jars from which sprang the Italian albarello. A late specimen of a lustre tile from Persia bears the date of 891/1486. From the mid-12th century A.D. onwards, the Spanish potter developed an original lustre production which culminated in the 15th century in large dishes and grand ewers with intense patterning; it was exported all round the Mediterranean. Fragments from Malaga and Manises workshops have been found in Fusṭāṭ. Technically, some of the best lustre pieces were to be found in 16th century A.D. Gubbio, the work of Maestro Giorgio. A short revival of lustre painting on ceramics in Persia under the Ṣafawids is known from a series of bowls and bottles of soft paste with bold branch and flower decoration in a reddish tint of lustre.

Tile mosaics and cuerda seca. At first, turquoise glazed bricks often made up inscriptions in the 6th/12th century through K̲h̲urāsān and Ād̲h̲arbāyd̲j̲ān; tile mosaics (faience mosaic) came into their own in 7th/13th century Anatolia. One of the earliest uses of more than one colour appears on the entrance to Kay-Kāʾūs I's tomb in his hospital of Sīvas (614/1217-18). The inner dome of the Karatay *madrasa* in Konya (650/1251-2) illustrates the technique at its best, with a colour scheme of blue, turquoise and dark purple-black. In the Sirçali *madrasa* (640/1242) the glazed work is signed by a craftsman with a *nisba* from Ṭūs. Although Tabrīz buildings of the Mongol period no longer exist, tile mosaics do cover part of Öld̲j̲eytü's mausoleum in Sulṭāniyya. The final phase starts with the Muẓaffarids, especially in Yazd and Iṣfahān, with the introduction of green and brown colours with the addition of white. The patterning of unglazed bricks with glazed ones to simulate courses of bricks (*bināʾī* technique) also increases the visual effects as well as the use of various insets of mosaics or *terra cotta* in panel compositions. The bulk of the production was sponsored by the Tīmūrids, seen at its best in Harāt and Samarḳand. Later examples

are those of the Aḳ Ḳoyunlu in the so-called blue mosque in Tabrīz (870/1465) and at Iṣfahān, followed by the early buildings of the Ṣafawid era in Ardabīl, Iṣfahān and Kirmān. The Çinili Kösk in Istanbul (877/1472-3) relates to the *bināʾī* revetments in Harāt. Some of the best tile mosaic works of North Africa and Spain are datable to the late 7th/13th and 8th/14th centuries A.D. Spasmodic attempts at glaze tiling and tile mosaics were made in the first half of the 9th/15th century in Cairo. In the Indian subcontinent also, five colourful tombs in Multān bear dates from 547/1152 to 724/1324, and glazed bricks were used in the Bahmanī complex of buildings at Bīdar; tile panellings were included in Rajput buildings of the 18th century A.D.

A Sevillian document of 1558 A.D. mentions *cuerda seca* for the first time; however, it is now used to describe a technique which prevents the glaze colours flooding into each other during the firing; the barrier consists of a purple line of paint with an added greasy substance which vanishes in the firing. The technique was already used in Achaemenian Susa; there are some examples at Madīnat al-Zahrāʾ; it came into full use in 8th/14th century Persia in order to imitate tile mosaics at a smaller cost. Examples are known from Tīmurīd Samarḳand, the Yeşil mosque and tomb in Bursa, the Selimiye (928/1521) and the Ahmet Paşa mosque (*ca.* 961/1554) in Istanbul. Ṣafawid buildings from the 11th/17th century onwards used the technique extensively, as did those of the Ḳādjārs. There are a few examples in Lahore in conjunction with tile mosaics. The best-known remain those of Spain.

Underglaze painting. When the mediaeval potter discovers, often by accident, a new technique, it spreads rapidly in an already mature form. It is difficult to determine where underglaze painting came into being either on earthenware or soft paste, but by the first half of the 7th/13th century this last and major break-through was well-mastered; it gradually superseded earlier methods of decoration and became established over the centuries through a series of changing styles. Prior to the *Pax mongolica*, Persian underglaze painting in black or blue or in both under a transparent glaze, often coloured turquoise, either recalls the arabesques and figures scene from the lustre répertoire or reveals new motifs of flowing water weeds, fish or sharply contrasted striations. Both genres are well illustrated in the so-called Gurgān material. Some soft paste bowls recall similar shapes in glass with the same slender splayed foot, although the T-shaped rim only occurs in ceramics. Other shapes include double-shell pitchers, one dated 612/1215, the ewers with phoenix heads, sweet-meat dishes, globular jars and a series of small figurines, including birds, animals, musicians, riders and mothers suckling their babies. In the so-called Raḳḳa wares, the Syrian potter developed during the same period a less contrived style of painting on dishes with flattened everted rims: typical court figures, riders, aquatic birds, compositions of arabesques, dragons' heads and palm tree leaves. Similar treatment of motifs exists on the eight-pointed star tiles in the palace of Ḳubādābād in Anatolia *ca.* 633/1236, as well as on simpler cross and star tiling under a turquoise glaze in other official buildings of the sulṭāns of Rūm in Kayseri, Aspendos, Alarā and Alanya.

The Pax mongolica. In the same way as the final extension of ʿAbbāsid rule filled a political vacuum early in the 3rd/9th century and thus made possible the creation of one area of influence, so, after a period of strife and weakening foreign influences in cosmopolitan Syria, the Mongol era was one of stability and brought about decided contacts with China along both sea and land routes, even as far west as Europe, as is proved by the Chinese silk dalmatic of Pope Benedict XI dated before 1304 A.D. Through the rich Kārimī and other seagoing merchants, and many of the sinicised retinue of the Ilkhānid court of Tabrīz, alien decorative themes, drawn at first from large quantities of celadons, textiles and no doubt commercial paintings and block prints, triggered off the new Islamic style in the most recent technique of underglaze painting from Cairo to Sarāy Berke. The transition from two-dimensional textiles to three-dimensional vessels implied skilful adaptation of the foreign motifs to a totally Islamic system of distribution. Two motifs new to ceramics stand out: the spiky lotus and leaf already picked up in miniature painting and enamelled glass, and the ogee panels, well-known from Islamic carved stone, stucco and metalwares. An intense leafy background, a general impression of grey, and the stylised imitation of the petal design on the outside of celadons, characterise the so-called Sulṭānābād types. At their best, the main themes under a clear glaze are set in relief by a thickness of white clay also outlined in a greenish brushstroke on a pale manganese slip. Fillings of pale cobalt may warm the compositions of phoenixes or cranes in flight, cantering gazelles and sedate geese or Mongol courtiers. The earlier and later wares rely more on a white background, with greater emphasis on traditional geometric divisions, radiating panels filled with crosshatching, groups of four dots, dotted circles, zigzag patterns or calligraphy.

Transition. By the middle of the 8th/14th century, the new blue and white Chinese porcelain of the Yüan period had started to reach the Islamic world in as great a quantity as the long-favoured Lung-ch'üan celadons (also called Ghūrī or Martabani). In the same way as the latter was faithfully imitated, including the saucer base, so the potter took over the new bi-chrome treatment, without appreciating, it seems, that it was in fact the product of imported cobalt from Persia as well as a new experiment in export wares especially designed for the Islamic market by the Chinese potters, in shapes and in a style totally alien to their own taste. Traditional motifs were reorganised on the larger surfaces of dishes in concentric circles and lobed panels possibly akin to early so-called Sulṭānābād panelled bowls and certainly to metalwares easily available in the large colonies of Muslim merchants established from the 3rd/9th century onwards in South China ports. Not only in Persia, but also—and perhaps even more—in the Mamlūk territories, variations on the Chinese lotus pond were produced in quantity, as gradually the running of the cobalt was controlled by the introduction of an added layer of frit over the soft paste body.

In the first half of the 9th/15th century, Chinese export blue and white compositions, although still preserving a certain geometric quality, gradually reverted to a more delicate and restrained treatment of the surface. The Islamic potter, prior to his Iznik follower in the 10th/16th century, picked up the trend and adapted the arabesque of flowers and the peony blossoms, dragons and waves to his own taste, using in turn, classic scroll, meander band or diaper pattern, with petal panels on the outside of bowls and dishes. He seems to have been undaunted by the raids of Tīmūr and the internal strife in both Mamlūk and Ottoman lands at the turn of the century. It
should be emphasised that throughout the 9th/15th century, from Sīstān and Farghāna to the Mediterranean, this imitative production never overtook the more traditional decorative approach of radiating motifs and panels, either in blue and white or when black was added on the mediocre soft paste body. Such an approach is apparent on early so-called Kubači wares, dated to the second half of the century: the well-controlled panels or circular compositions are painted in black under a turquoise coloured glaze. So-called Miletus wares are now known to have prevailed in the early stages of the Ottoman rule in Iznik, among other sites, as well as at Miletus. They differ in that the body is red earthenware, but the visual impact often remains geometric with little of the white slip left undecorated. More background is visible when debased Chinese motifs of flowers or birds appear on a field of scattered shapeless leaves. Only the more elaborate Mamlūk wares carry a signature such as that of Ghāʾibī or his atelier.

To this period also belong several series of tiles, also under-glaze painted and hexagonal in shape. The decoration recalls either elements of the early 9th/15th century A.D. Chinese blue and white dishes which display geometric blossom compositions or a bunch of flowers, or else the geometric of the transition period. The tiles in Murād II's mosque in Edirne (*ca.* 843/1440) could have been made in Iznik like related ones a century later; they are neatly finished and the largest in dimension of the series. The Damascus group, including the tiles of the mausoleum of Tawrīzī (*ca.* 833/1430), is more freely painted with occasional purple and a turquoise border. Egyptian examples, hardly recalling Chinese themes, draw on architecture and bold vegetal motifs.

Ottoman rule. On the whole, the Ottoman potters of Asia Minor produced soft paste vessels with a fine white slip under a transparent lead glaze for the metropolis; and to a lesser extent, those of Syria, Egypt and North Africa also drew on the same technique and on a fund of designs from the *nakkāsh khāne*, the special studio of court designers. Around the turn of the 9th/15th century, they borrowed from book-bindings and illuminations for the controlled, if austere, dark blue and white arabesque variations of stylised flowers and palmettes on dishes and deep bowls with a splayed foot. The lay-out of the ewer signed by Ibrāhīm of Kütahya (916/1510) is already less dense in design. By 923/1517, the final conquests of Selīm I had made available a large booty of Chinese stonewares and blue and white procelains. The last crucial impact of Chinese (*Khatāyī*) wares in the area, resulted in the close imitations of early 15th century A.D. Ming dishes, such as blossom and vine compositions. Strictly speaking, the word *chinoiserie* applies only to the 18th century A.D. European stylistic interpretation of Chinese motifs. For the Ottoman potter, rim borders could be either 8th/14th or 9th/15th century wave pattern. The so-called Golden Horn group also belongs to this first period and was presumably inspired by the flimsy spirals of official *tughrā*s; sherds first found in Istanbul gave it the label; more have now been excavated in Iznik. A broken bottle in this style bears an Armenian dating which corresponds to 1529 A.D. The long-vexed problem of Armenian craftsmanship has now been resolved by the study of archives which indicate participation and production of the non-Muslim minorities at most stages of Ottoman history. The mosque lamp from the Dome of the Rock (956/1549) is the only dated piece of Iznik; it could well be one of the last examples of the first group, also known as the Ibrāhīm of Kütahya group; pale turquoise and black relieve the blue shades.

The tile restoration on the Dome of the Rock ordered by Sulaymān I in 952/1545 constituted a new point of departure for Ottoman ceramics as well as for the building programme pursued by the Sultan, his entourage and his successors. *Cuerda seca* was totally replaced by underglaze painted tiles, approximately 24 cm. square. The colour palette, also applied to dishes and jugs, reached daring tones of blue, green and occasionally purple, with at its best, contrasting pure white and luscious red in relief made of Armenian bole (a red local clay) well-mastered under the transparent lead glaze of unfailing quality. Such technical development was combined with a renewed répertoire of available blossoms from the Anatolian plateau, and thus forms a completely new second group. At first pale green was used as well as the blue, and the compositions on the dishes were still enclosed in panels and roundels; however, the plants soon burst out of their frames into the cavetto, often to the exclusion of borders of debased waves (often called ammonites) or earlier clusters of small tulips on the rim. A considerable number of large tile panels are dated by the new mosque into which they were built: the Sulaymāniyya (965/1557), the Rustam Pasha mosque (968/1561), the Sokollu mosque (979/1571), the Piyāle mosque (981/1574) and various parts of the Saray. In a short-lived group of dishes and pots, the potter experimented also with dark slip background and sparse light-coloured decoration. In Syria and Egypt, a number of monuments bear witness to the active part played by the local potteries, although the colour scheme of both vessels and tiles did not include the famous sealing-wax red.

International trading with Italy, in particular, allowed for exchanges in shapes and patterns: *tondini* with large rims and tankards. By the 18th century A.D., figures, and buildings with dates and boats, increased the vocabulary of a less elegant production, and these make up the third group of Ottoman ceramics, also known as Rhodes pottery. These dishes and jugs were intended to be traded in public places such as the international silk market of Bursa, rather than to meet the special orders of high-ranking officials or foreign ambassadors except in the case of a few examples of dated pieces. The decline in prosperity, and therefore that of orders, affected the production of Iznik. A new factory was started in the Tekfur Saray of Istanbul in 1136/1724 and this resurrected, for a while, some of the past achievements of Iznik, including the famous red. Kütahya survived better and its 18th century A.D. production is well known by a series of dated pieces ranging in fact from 1716 to 1843. A most important group of tiles dated 1718-19, intended for restoration work in the Holy Sepulchre, are now in the Convent of Saint James in Jerusalem. The vivacity of the colour treatment on cups and saucers, bowls and incense burners, bottles and eggs, contrast with the remarkably simplified brush work of the potters from Çanakkale in the middle of the 18th century A.D. Sailing boats and buildings, giraffes, fish and fowl, briskly fill the shallow dishes and bowls (*čanaks*); later, complicated shapes restricted the painting. From 1893 to 1920, a porcelain factory was sponsored by the Porte, but could not compete with European china. Iznik production has now become fully industrialised.

Later Persian treatment. After the collapse of the Ak Koyunlus, it took some time for the Ṣafawid rule to become established, since it had to resist pressures from both the east and the west. In the 10th/

16th century, the capital was moved first to Tabrīz, then to Ḳazwīn and finally to Iṣfahān in 1006/1597-8, by which time the frontiers were more secure, the new sea route by the Cape had proved itself and the European East India companies felt strong enough to open new markets. It is difficult to locate precisely the ceramic production of the time, despite some indications given by foreign embassies, travellers and merchants; Mas̲h̲had, Kirmān, S̲h̲īrāz and Yazd are mentioned. Iṣfahān must have been a great centre, too, although there is no reference other than to the tiled monuments. Be this what it may, the Persian potter of the 10th/16th century A.D. reacted to the impact of Chinese celadon and blue and white porcelain much the same way as his Ottoman counterpart; a substantial amount must have been available to provide inspiration, besides the specimens looted by the Ottomans and those in the collection of S̲h̲āh ʿAbbās I which he donated to the shrine of Ardabīl in 1015-16/1607-8. The blue and white blossom compositions and the wave border were re-interpreted on a soft paste body, as well as the polychrome Anatolian flower compositions down to the bent branches and the *saz*. Yet the zodiac dish of 971/1563 illustrates the regular recurrence of the geometric division of surface. Eventually a stylised répertoire of impressionistic vegetal and animal designs was developed on jars, bowls and dishes, the shape of which owed little to the outside world. The less dramatic visual impact was probably due to a reduced contrast in the colours and relative control of the firing and the irregular quality of the glaze.

Although a few examples of so-called Kubači wares were found in that remote town of the Caucasus, it is not clear where in fact they were made; the early fortunes of the Ṣafawī capitals eventually led them to Iṣfahān. The unusual compositions break away from controlled geometric; sketches of human busts verging on caricature, are more usual than animals or unidentifiable plants. Turbaned youths, foreign merchants and sailors, suitable females, enliven the répertoire. Large tiles show more delicate brush work on a white or beige background not unlike that of the mosque of S̲h̲ayk̲h̲ Luṭf Allāh in Iṣfahān (1028/1618); on the smaller tiles and dishes, the yellowish transparent lead glaze tends to crackle and the clay used for red colouring is never as effective as the Armenian bole. The same red is also found in patterns and outlining devices on vessels attributed to Kirmān in the 11th/17th century.

Besides emulating large export celadons and Chinese monochrome bowls and ewers, with moulded or carved designs, the Persian potter remained, in essence, faithful to his predilection for blue and white, contrary to his Ottoman counterpart who abandoned it fairly soon. Patterns of the Chia-ching (1522-66) and Wan-li (1573-1619) reigns were swiftly adapted, with a partiality for wild birds and animals, ludicrous landscapes and garden genre scenes, totally misunderstood. A few dates and potter's marks have been recorded such as the tassel mark. In most of the painting a black outline holds in the various shades of cobalt wash. At its best and most original, the production takes the shape of a large dish with a very white soft paste body; a carved arabesque in the cavetto surrounds a medallion densely filled with wild beasts or birds and foliage. A possible added reason for the continued production of Persian blue and white was the greed of the European market for the export porcelain, all the more so when the Chinese ports closed from 1659 to 1682 and replacements had to be found. Kirmān within reasonable distance of Bandar ʿAbbās (Gombrun) on the Gulf certainly rose to the occasion and imitated *Kraak porselein* with its panelling in the cavetto and central themes of flowers or bird on a rock. A number of 11th/17th and 12th/18th centuries dated pieces show the gradual deterioration in the decorative treatment with a few exceptional pierced wares, imitation of celadons, humouristic *kalyāns* and slip-painted wares on a dark background, often called Gombrun wares, the Persian version of similar Ottoman specimens, in both cases, copies of Chinese originals.

Some of the best underglaze painting remains that of the continuous tile programme undertaken in Iṣfahān, and later under the Zands and the Ḳād̲j̲ārs in S̲h̲īrāz, Kirmān, Tehran and Simnān. The introduction of *famille rose* colours brought a new flavour to flower compositions in mosque and *madrasa* tile panels from the end of the 18th century. It is also reflected in bowls of the 19th century, in which attempts to imitate European porcelain only preserve a certain Persian flavour. To this day, ceramics are a living tradition in Iran and all Islamic lands, more for practical purposes than as a distinctive part of the artistic production of the period.

Unglazed wares. Undaunted by the passage of time, the large storage jar with lid, and the jug which allows its water content to keep cool through slow evaporation, are a permanent product of the potter's workshop. It would require more systematic studies to appreciate their various shapes, volumes of content and ornament. Although decoration can be produced by incising or by painting on the leatherhard body, the best visual effects come from the use of dies and moulds, either as a complete half of a flask, two identical halves being luted together by a central band with the addition of handles and neck device, or in the shape of stamps. The best examples seem to have been produced from the 4th/10th to the 8th/14th century from the Mediterranean to Afg̲h̲ānistān and Transoxiana. Specifically Egyptian is a large series of surviving filters where the pierced area is made to represent calligraphy, animals or geometric patterns. From northern Mesopotamia come some of the best applied, incisal and stamped large jars for storage. Aeolipiles, spheroconical shapes, still remain a puzzle; about 10 cm. long, they are heavy for their size, not very porous and with a small opening; their shape prevents them from spilling over; some have incised patterns, calligraphy or even turquoise glaze inlays. Earthenware stands were early made in the shape of an hourglass or of a square with a circular recess in the centre for holding a large tray; later, these were made of metal, but were never higher than 20 to 30 cm. Various shapes of lamps, lampstands and candle sticks would complete the household requirements.

KHAZʿAL KHĀN, IBN ḤĀDJDJĪ DJĀBIR KHĀN, Shaykh of Muḥammara, born *ca.* 1860, died 27 May 1936. On the death of Shaykh Ḥādjdjī Djābir Khān in 1881, leadership of the Muḥasayn tribe, the great bulk of which resided in Persian territory, passed to Mizʿal Khān, Shaykh Djābir's fifth son. His rule became unpopular on account of his meanness and avarice and on June 2 1897 Mizʿal and his nephew ʿAbd al-Djalīl were shot dead, as they were disembarking from a boat at Fallāḥiyya, by three negro slaves. A large number of Arabs under Salmān b. Manṣūr, a cousin of Khazʿal, were, however, on hand to give further support if necessary in the assassination attempt. It seems that Khazʿal approved the murder, even if he did not actually instigate it. (A. T. Wilson: *A précis of the relations of the British Government with the tribes and sheiks of Arabistan*, Calcutta 1912, ch. iv). Mizʿal left no sons. Khazʿal quickly took charge of affairs and was later confirmed as Shaykh by tribal election. The Persian Governor General of ʿArabistān, Sardār Akram, opposed Khazʿal's candidacy and endeavoured to have a cousin of Khazʿal's called ʿAbūd appointed as Shaykh. He failed in this attempt and Khazʿal's position was confirmed by the Shāh in April 1898 when the *laḳab* of Muʿizz al-Salṭana, which had also been held by his predecessor, was conferred upon him (J. G. Lorimer, *Gazetteer of the Persian Gulf, ʾOmān and Central Arabia*, Calcutta 1915, i/2, 1744-1754).

Khazʿal followed with great success his brother's policy of endeavouring to extend the area over which the Muḥasayn held sway. The subjugation of the Kaʿb (Čaʿb) tribe was completed during 1897 and in the autumn of 1898 Khazʿal mounted a successful expedition against the Bāwiyya tribe in the area between the Kārūn and Djarrāḥī rivers. By 1904 the Shaykh had the *de facto* power to nominate the governors of Ahwāz and Mʿashūr and the central government was reported to exercise little authority south of Band-i Ḳīr (Major E. B. Burton to Government of India, Rawalpindi Feb. 28 1904, in F.O. 416/17). The weakness of the central government was also revealed by the fact that the collection of arrears of taxation from the Banī Ṭuruf could be undertaken in 1903, and again in 1905, only with the support of Khazʿal and his armed followers.

When the Persian government proposed to introduce Belgian customs officials into ʿArabistān in 1902, Khazʿal objected strongly, fearing that his power over his followers would be weakened as the degree of central government control increased. Wilson agreed that any attempt to impose new taxes on the Arab tribes of the area would have caused serious unrest and could have resulted in the deposition of Khazʿal unless he was successful in defending the tribes' traditional rights. (Wilson, *op. cit.*, ch. v). One of Khazʿal's advantages in the subsequent negotiations was the fact that he owned a large area of land in Turkish ʿIrāḳ, and could realistically threaten to leave Persian territory together with his followers. More important reasons for Khazʿal's success in the negotiations over the introduction of the Belgians were, however, the degree of support which he received from the British diplomatic mission in Tehran and the number of armed followers which he could call upon. A. H. Hardinge, the British Minister in Tehran, estimated that he could put 20,000 armed men into action against the central government if he so wished. (Hardinge to Lansdowne No. 57, 12 April 1901, marked confidential, in F.O. 60/636). In May 1902 the authorities in Tehran agreed that the Shaykh should receive a salary as the Director-General of Customs in ʿArabistān and that the Belgian official who was to be appointed should accept the Shaykh's orders with regard to the dues to be paid by the local Arab inhabitants (see H. J. Whigham, *The Persian problem*, London 1903). In 1903 the Shaykh received three important *farmāns* confirming his land holdings and proprietary rights in ʿArabistān from Muẓaffar al-Dīn Shāh.

It was because Khazʿal possessed such local power, because he was suspicious of Russian designs in the Persian Gulf, and because he made serious endeavours to reduce the level of piracy in the waters under his control, that his friendship was regarded highly by local British officials (see the despatch by Major E. B. Burton cited above). After the discovery of oil at Masdjid-i Sulaymān in 1908, Khazʿal's friendship became even more important, for the pipeline that was necessary to carry the oil to a deep water port had to cross his territory as well as that of the Bakhtiyārī. Khazʿal granted the necessary wayleaves in 1909 and also leased land for the building of a refinery and loading jetties at Ābādān (see S. H.

Longrigg, *Oil in the Middle East*, London 1961, 19-20). The Shaykh also assisted the British after Turkey joined the First World War. In 1910 the Shaykh had been made Knight Commander of the Order of the Indian Empire (K.C.I.E.) in recognition of his friendliness towards British interests.

After the end of the war and with the rise to power of Riḍā Khān, the situation began to change. The official British promises of support for Khazᶜal had been made dependent on his recognition of his obligations towards the Persian government. While that government was weak the issue was largely academic, but when Riḍā Khān began to extend the power of the central government the problem became a pressing one. Khazᶜal probably expected greater British support than he received. He was encouraged by London to seek an agreement with Riḍā Khān (see G. Waterfield, *Professional diplomat: Sir Percy Loraine of Kirkharle Bt.*, London 1973, chs. 6-9 for details and further references to the British diplomatic archives on this complex issue). In Nov. 1923 Khazᶜal came to an arrangement with the central government over the payment of taxes (A. C. Millspaugh, *The American task in Persia*, New York 1925, 216-36), but Riḍā Khān's expedition in the spring of 1924 against the Lurs to the north alarmed Khazᶜal. He refused, with good reason, to go voluntarily to Tehran and in August he stated that he would resist Riḍā Khān by force if necessary. British intervention failed to bring about a reconciliation. The *farmāns* of 1903 were revoked by the Shāh and in September Khazᶜal accused Riḍā Khān of violating the laws of Persia and of acting as a usurper. This outburst lost Khazᶜal the sympathy of the British government which had begun to realise that British interests lay in the creation of a strong central government in Persia (R. M. Burrell, *Britain, Iran and the Persian Gulf: some aspects of the situation in the 1940s and 1930s*, in D. Hopwood (ed.), *The Arabian Peninsula: society and politics*, London 1972). Khazᶜal offered an apology for his statement in Dec. 1924, but Riḍā Khān was by now determined to extinguish the Shaykh's power. Military preparations were made by the Persian army during the winter of 1924, and on 19 April 1925, Khazᶜal was arrested on board a boat at Muḥammara. He was transferred to Tehran and kept there under virtual house arrest until his death.

(R. M. Burrell)

KHAZAR, a nomadic people in the South Russian steppes who flourished in the early Islamic period. The Khazar tribal union emerged in the course of the 6th century A.D. in the aftermath of a series of migrations of nomadic peoples from Inner and Central Asia. With the collapse of the European Hun state in 454 A.D., some of the nomadic elements of Attila's horde withdrew to the Pontic steppe zone. They were joined here, *ca.* 463 A.D., by waves of Oghur tribes which had been driven from Western Siberia and the Kazakh steppe by the Sabirs who, in turn, had been forced to migrate to the Kazakh steppe from their Central Asian homeland by the expansion of the Avar (Juan-juan, Uar-Hun) tribal confederation (on the history of these migrations, see K. Czeglédy, *A nomád népek vándorlása napkelettöl napnyugatig* ("The Migrations of nomadic peoples from East to West"), Budapest 1969). The Sabirs themselves arrived in the North Caucasian steppelands and Volga region in the opening decades of the 6th century. When Avar (Juan-juan) hegemony in Mongolia was overthrown by the Türks (Türküt, Kök Türks) in 552 A.D., elements of the Avars (or perhaps the Hephthalites, whose tribal union was composed of kindred Uar-Hun tribes) migrated westward and entered the Volga-Pontic steppe zone after 557 A.D. where they subjugated some of the Oghur tribes. Avar dominion in this region was short-lived, for they were soon forced to migrate, together with some of their Oghur subjects, to Pannonia (*ca.* 567 A.D.), by the advent of their enemies, the Türks.

Although there are indications in Armenian sources (see *The History of the Caucasian Albanians by Movsēs Dasχuranḉi*, tr. C. J. F. Dowsett, Oxford 1961, 70) and Arab sources (al-Balādhurī, *Futūḥ al-buldān*, ed. De Goeje, 194; al-Yaᶜḳūbī, *Historiae*, ed. Houtsma, i, 200-4) that would appear to give evidence of a Khazar presence in the Volga delta and in the Caucasus prior to the middle of the 6th century (see D. M. Dunlop, *The History of the Jewish Khazars*, Princeton 1954, 20-22, and M. I. Artamonov *Istoriya Khazar*, Leningrad 1962, 116-7, for an evaluation of these sources. The Khazars have nothing to do with the *Akatzir/Akatir*, *Khotzir* etc. who figure in Byzantine and Syriac sources during this period, see O. Maenchen-Helfen, *The World of the Huns*, Berkeley 1973, 427 ff.); it is only under the aegis of the Türks that the Khazar tribal confederation (most probably an amalgamation, by this time, of Hunnic, Sabir, Oghur, Türk and other nomadic, Altaic elements) fully emerges on to the historical scene. It cannot be determined, at present, whether a tribe named "Khazar" actually existed prior to the conquest and organisation of the Volga-North Caucasian-Pontic steppe nomads by the Türks. It may well be that the Khazar tribal union was a creation of the Türks and the name of this new tribal grouping was then anachronistically ascribed, by our early sources via local, oral historical tradition, to those earlier tribes which ultimately came to compose it. In many of our early accounts, the ethnonyms Khazar and Türk are interchangeable. In any event, it is under Türk leadership (the *Djebu Khakᶜan* of Movsēs Daskhurantsᶜi, the *Djibgha* of the *Kᶜartᶜlis Tsᶜkhovreba*, Ζιέβηλ of the Byzantine writers, perhaps to be identified with the *T'ong Yabghu* of the Western Türks, see J. Marquart, *Osteuropäische und ostasiatische Streifzüge*, Leipzig 1903, 394, 498) that the Khazars figure prominently in the Perso-Byzantine wars of the first third of the 7th century. The Khazars, acting as allies of Byzantium, relieved the Sāsānid pressure on Heraclius (610-41) by devastating Persian holdings in Transcaucasia. In 626, the *Djabghu Ḳaghan* and his nephew, the *Shad* (Shatᶜ in the Armenian sources) ravaged Caucasian Albania and in the following year turned on Georgia whose capital, Tᶜbilisi, fell to them in 628 (Daskhurantsᶜi, tr. Dowsett, 81-8, *Kᶜartᶜlis Ts'khovreba*, ed. S. Ḳaukhčᶜishvili, Tᶜbilisi 1955, i, 225, 374-5). The Khazar-Byzantine alliance cemented during these wars remained, although subject to occasional buffetings, the cornerstone of the Byzantine defence network against the nomads of the Eurasian steppes until the 10th century.

Türk overlordship in the western half of their

realm had been steadily weakening during the first half of the 7th century as the result of internecine strife. With the submission of the Western Türk (On Oḳ) to the Chinese in 659, it came to an end. Two Türk successor states emerged in the western sector of the Eurasian steppes, the Khazar Ḳaghanate (perhaps under a scion of the ruling clan of the On Oḳ, the Nu-shih-pi as suggested by Artamonov, *op. cit.*, 170-1) and the Bulghar-Onoghur/Onoghundur state (a tribal union composed largely of Oghur elements led by the Dulo, the rivals of the Nu-shih-pi in the On Oḳ confederacy. The Bulghar ruling clan may also have had Attilid affiliations, see O. Pritsak, *Die Bulgarische Fürstenliste und die Sprache der Protobulgaren*, Wiesbaden 1955, 36-8). The inevitable conflict that broke out between the two (reported, with mythic overtones, in Theophanes, Nicephorus Patriarchus and the Letter of the Khazar ruler, Joseph) ended with the defeat of Pontic (Magna) Bulgaria (Παλαιὰ Βουλγαρία) in the 670s. In the course of this struggle, and perhaps even earlier, some Bulghar (the name may be etymologised in Turkic as meaning "the mixed ones", see Gy. Németh, *A honfoglaló magyarság kialakulása* ("The Formation of the Hungarians of the Conquest Period"), Budapest 1930, 95-6) elements migrated to the Volga-Kama region founding Volga Bulgharia. Another horde, under Asperukh, made its way to Byzantine Moesia and established Danubian Bulgharia there *ca.* 679. Other Bulghar tribes remained in the eastern Pontic steppe zone under Khazar rule.

The Khazars were now undisputed masters of the western Eurasian steppelands. Their hold over the North Caucasus, however, was contested by the Arabs who had begun to penetrate this region by 21/641-2. This was the first thrust in a series of wars that spanned a century. Much of the campaigning centered on gaining possession of Bāb al-Abwāb (Derbend) [*q.v.*], a strategically-important town guarding the approaches from the steppe zone to Transcaucasia, and the Khazar cities Balandjar (Balangar, probably of ethnonymic origin, cf. the "Barandjār" mentioned in Ibn Faḍlān, *Kniga Akhmeda ibn Fadlana o ego puteshestvii na Volgu v 921-922 gg.* ("The Book of Ibn Faḍlān on his Journey to the Volga"), tr. and facs. ed. A. P. Kovalevskiy, Kharkov 1956, 323 (f. 207b), or Z. V. Togan, *Ibn Faḍlān's Reisebericht*, in *Abh. KM*, xxiv/3 (1939), Arabic text, 30, or tr. M. Canard, in *AIEO Alger*, xvi (1950), 107, who were found in his day in Volga Bulgharia) and Samandar. Al-Masʿūdī (*Tanbīh*, ed. de Goeje, 62) states that Balandjar was at one time the Khazar capital. He contradicts this statement in the *Murūdj* (ii, 7, ed. Pellat, i, 211-2) where he makes Samandar the early Khazar capital. These cities may have been the winter and summer quarters of the Khazar ruling clan, hence the confusion in al-Masʿūdī. The Khazar capital was later removed to the less exposed (to Arab raids) Volga delta where the city of Atīl [*q.v.*] developed. The exact location of the Khazar North Caucasian cities has yet to be determined. T. Lewicki, *Ludy Daghestanu i północnego Kaukazu w oczach średniowiecznych pisarzy arabskich* ("The Peoples of Daghestan and the North Caucasus in the eyes of Mediaeval Arab Writers") in *Przegląd Orientalistyczny*, No. 2 (46) (1963), 93, and Z. V. Togan, *Umumî Türk tarihine giriş*, Istanbul, repr. 1970, i, 57, place Balandjar west of the Sulaḳ river, at the ruins of Endere. Togan identifies Samandar with present day Kizlyar. V. F. Minorsky, *A History of Sharvān and Darband*, Cambridge 1958, 106, however, believes it was located at or near Tarḳu in the North-Eastern Caucasus, not far from present-day Makhač-ḳala. Like Balandjar, the name Samandar may be of ethnonymic origin.

Balandjar was first attacked in 22/642 (al-Ṭabarī, i, 2667-8; ed. Cairo 1963-70, iv, 158), in the course of which the Arabs may even have penetrated into the Khazar hinterland. Minor Arab raiding continued until 32/652 when ʿAbd al-Raḥmān b. Rabīʿa al-Bāhilī, disregarding a standing caliphal order to the contrary, led a large force on Balandjar where he was defeated and killed (al-Ṭabarī, i, 2889-91, ed. Cairo, iv, 304-5; for a full discussion of this and other Arabo-Khazar campaigns, see the detailed treatment in Dunlop, *op. cit.*, chs. iii-iv, and also ḲABḲ).

While the Arabs were caught up with domestic affairs, the Khazars raided Caucasian Albania several times in the period *ca.* 661-664 and again in the 680s (as reported in the Armenian historians Daskhurantsʿi, Asołig and Łewond). In 681-2, the ruler of Albania, Varaz-Trdat, sent the bishop Israyēl to Varačʿan, the capital of the North Caucasian "Huns", who were, at this time, ruled by "Alpʿ Ilitʿuēr" (* Alp Il-teber/tever), a Khazar vassal (or perhaps a representative of the royal clan; this is implied in the Turkic title *il-teber* and was a practice common in the nomadic world). The detailed description of North Caucasian "Hunnic" shamanism given in Daskhurantsʿi's account of Israyēl's mission is extremely valuable as it sheds some light on the religious practices that were, undoubtedly, present amongst the Khazars as well. The worship by these "Huns" of "Tʿangri Khan", the cult of the sacred forest, worship of fire, thunder and lightning and the funeral practices described in Daskhurantsʿi (tr. Dowsett, 155-6, 161) all conform in general and in many of their specific traits to the descriptions of Türk shamanism in Chinese sources and later accounts of Turkic shamanism as practised up to the present century. The Islamic geographers (cf. Ibn Rusta, 139; for a discussion of these sources, see B. N. Zakhoder, *Kaspiyskiy svod svedenii o vostočnoi evrope*, Moscow 1962, i, 146-7) note that the Khazar pagans practise a religion "similar to that of the Turks" (Gardīzī specifically states that it resembles that of the Oghuz/Ghuzz, *i.e.* shamanism).

During this same period, the Khazars apparently came into possession of most of the Crimea, except for Kherson which remained under a Byzantine administration. From here, they began to play an important rôle in the domestic politics of the Byzantine empire in connection with the ill-fated reign of Justinian II (685-95, 705-11).

In the opening years of the 2nd/8th century, the Arab-Khazar struggle for hegemony in the North Caucasus quickened in pace. In 95/713-4, Maslama b. ʿAbd al-Malik retook Bāb al-Abwāb which had, apparently, changed hands several times in the preceding years, and drove deep into Khazar-North Caucasian "Hunnic" territory. Difficult but indecisive fighting continued until 112/730 when Djarrāḥ b. al-Ḥakamī, who alternated command of this important theatre of operations with Maslama when the latter's services were needed elsewhere, was defeated and killed by the Khazars under the command of "Bārdjīk (so Balʿamī, Ibn Aʿtham al-Kūfī, *Kitāb al-Futūḥ*, Ms. Topkapî, Aḥmed III, 2959, ii, ff. 180a-188b, has *Bārsbīk*. The relationship of Bārdjīk/Bārsbīk to *Pʿarsbitʿ* (in Łewond, *Patmutʿiwn*, ed. Ezeantsʿ St. Petersburg 1887, 101) noted

as the "mother of the Ḳaghan", is unclear), son of the Khāḳān", at Ardabīl. Perhaps with a view towards strengthening the resolve of the Khazars, a Byzantine-Khazar marriage alliance was arranged in which Constantine (later Constantine IV Copronymous), son of Leo the Isaurian, married Čiček, the daughter of the Ḳaghan, *ca.* 732-733. Their son, Leo IV (775-780), was known as "the Khazar".

The decisive campaign came in 119/737, when Marwān b. Muḥammad (called *Murvan Ḳru*, "Marwān the Deaf", in Georgian sources), through a clever ruse was able to advance deep into Khazar territory, by-pass the Khazar capital, Atīl, on the lower Volga and catching the Ḳaghan unawares pursue him into the land of the Finno-Ugric Burṭās, a subject people of the Khazars. Here, the defeated Ḳaghan agreed to become a Muslim and a subject of the caliph (the campaign is described in Ibn Aʿtham al-Kūfī, al-Balādhurī, Balʿamī and Ibn al-Athīr). Al-Balādhurī, 208, reports that Marwān settled 20,000 Ṣaḳāliba families from Khazar territory in Khākhīṭ and had Khazars transplanted to the steppe zone in the province of al-Lakz between Samūr and Shābirān. Continued Khazar submission, however, was contingent on a strong Arab presence (*i.e.* an army of occupation). This was an impossibility and consequently, the conversion and submission of the Khazar Ḳaghan was short-lived. Leo III's victory over the Arabs some three years later, at Acroinon, in addition to further weakening the Umayyads, undoubtedly enabled the Ḳaghan (if he had not already done so) to break free of Arab overlordship.

Thus, despite Marwān's brilliant generalship, Arab rule was not and never would be firmly established on the Volga or even in the somewhat more accessible Dāghistān where, in the 4th/10th century, Khazar rule reached almost up to the wall of Derbend [see DĀGHISTĀN]. In effect, the Khazars and Arabs had fought each other to a standstill in the Caucasus. Although the campaign of 119/737, unlike the Arab advance defeated by Charles Martel at Tours several years earlier, was successful, the results were similar. The Caucasus and the Pyrenees became the border zone between the Arab world and Europe.

The Khazars, whose raiding was resumed by the second half of the century and was combined with the frequent revolts of the Christian peoples of Transcaucasia, gave little peace to the Arabs in that region; never again, however, did they constitute a serious threat to the Arab possession of Transcaucasia.

The caliph al-Manṣūr (136-58/754-75), undoubtedly in an attempt to better relations with the Khazars, *ca.* 760 ordered Yazīd b. Usayd al-Sulamī, the governor of Armenia, to marry a daughter of the Khazar Ḳaghan (her name is given only as *Khātūn*, a title; the name of the Ḳaghan appears to have been **Baghātur*, cf. Ibn Aʿtham al-Kūfī, ii, f. 241b). The marriage was arranged (the bride bringing a dowry of 10,000 dirhams) but her death in childbirth and that of her child shortly after (Balādhurī, 210) perhaps served as the cause for two large-scale Khazar raids into Transcaucasia in 145/762-3 and 147/764-5. The name of the commander of the Khazar forces is given in al-Ṭabarī, iii, 328, Cairo ed., viii, 7, as "As Tarkhān al-Khwarazmī" and in al-Yaʿḳūbī as "Ras" (*Historiae*, ii, 446; John Rylands, Arabic Ms. 231 (801), f. 152a) or "Rāsh" (Cambridge QQ10, f. 192a) Tarkhān. Łewond (*Patmutʿiwn*, ed. Ezeantsʿ, 132) has "Raž Tʿarkhan". These names and the *nisba* "al-Khwārazmī" point to an Iranian origin. Following Minorsky, *Hist. of Sharvān and Darband*, 147, we may conclude that this commander was drawn from the As/Aorsi (cf. "al-Arsiyya", the Muslim bodyguards of the Khazar Ḳaghans "from the region of Khwārazm" who were long-time residents of Khazaria, having settled there not long after the rise of Islam, al-Masʿūdī, *Murūdj*, ii, 10, ed. Pellat, i, 213) who were part of the mass of Iranian (Alan-As-Aorsi) nomads living east of the Caspian sea in territories subject to the Khazars. The "Arsiyya", as Muslims, were granted the right to remain neutral whenever the Khazars were engaged in warfare with Islamic peoples.

In 780 A.D., the Georgian prince, Nerse, attempted to enlist the aid of the Khazars in his continued struggle with the Arabs. He was, on this occasion, politely refused. This refusal probably stemmed from a brief anti-Byzantine shift in Khazar policy. This is clearly evident in 786 when the Khazars aided Leon II, the ruler of Abkhazia (Apʿkhazetʿi), and a grandson of the Khazar Ḳaghan, to secure the independence of Apʿkhazetʿi and Egrisi (= mediaeval Western Georgia) from Byzantine suzerainty (*Kʿartʿlis Tsʿkhovreba*, i, 251). This re-orientation may have been the product of Khazar-Byzantine disputes in the Crimea (perhaps associated with the anti-Khazar revolt of John of Gothia, see Artamonov, *op. cit.*, 252-5). The last major Khazar incursion into Arab holdings in Transcaucasia occurred in 183/799 (detailed discussion in Dunlop, *op. cit.*, 183 ff.,) Georgia proper (*Kʿartʿli*) being the principal victim. This invasion, according to al-Ṭabarī, ii, 647 ff., was brought about by the failure of a proposed matrimonial alliance between the daughter of the Khazar king and the Barmakid al-Faḍl b. Yaḥyā (cf. above i, 1034 and ii, 732). It may also have been a diversionary tactic to relieve the Byzantines (presuming that Khazar-Byzantine relations had returned to their normal state of co-operation in the face of a common foe), who were then able to induce the caliphate to make peace.

The conversion of the Khazars to Judaism has been the subject of a sizable literature, often of a conjectural or polemical nature. The date of the conversion—if, indeed, there is one specific date that marked the acceptance of Judaism by large numbers of Khazars—has not yet been firmly established (cf. the exhaustive discussion of this question and a critical evaluation of the Islamic and Hebrew sources, including the much debated "Letter of King Joseph" and the Cambridge Document, in Dunlop, *op. cit.*, chs. v-vi). It is most probable, that, following al-Masʿūdī (*Murūdj*, ii, 8; ed. Pellat i, 212), the Khazar king, "his entourage and the Khazars of his tribe" (*i.e.* the ruling clan or tribe or the ethnic Khazars, if such indeed existed, as opposed to the non-Khazar tribes who were under Khazar overlordship), had become Jews during the reign of Hārūn al-Rashīd (170-93/786-809). The comments of Ibn al-Faḳīh, *Kitāb al-Buldān*, ed. de Goeje, 298, writing *ca.* 290/903, that "all of the Khazars are Jews, for they have recently converted" is undoubtedly based on earlier tradition (Dunlop, *op. cit.*, 109; T. Lewicki, *Żródła arabskie do dziejów słowiańszczyzny*, Wrocław 1969, ii/1, 121). Al-Iṣṭakhrī, ed. de Goeje, 220, 224, notes that the Khazars are Muslims, Christians and Jews, the latter forming the smallest group but including the king and his court, *i.e.* the royal clan. He also reports that the Ḳaghanate resided in a certain family (this is in keeping with Türk tradition) and could be passed on only to Judaised members of this family. This latter claim and his story of the young Muslim Khazar barred from the throne because of his religion is not typical of the religious

indifference usually manifested by the Altaic, nomadic peoples of this time, and may well be a pious fabrication.

The extent of Khazar Judaism and the degree to which it may have influenced the subject peoples and neighbours of the Ḳaghanate (cf. the rather Judaic names of the sons of Seldjuk) is the subject of some speculation. The view, originating with Firkovič and advanced in one modified form or another by L. Rásonyi, *Tarihte türklük*, Ankara 1971, 115-6, and A. Zajaczkowski, *Ze studiów nad zagadnieniem chazarskim* ("Studies on the Khazar Problem"), Cracow 1947, 61-6; idem, *Karaims in Poland*, Warsow-The Hague-Paris 1961, 16 ff., amongst others, that the Khazars adopted Karaite rather than Rabbinic Judaism has been forcefully countered by Z. Ankori, *The Karaites in Byzantium*, New York-Jerusalem 1959, 64-79.

At some time in 861, Constantine (later St. Cyril, the "Apostle to the Slavs") led a Byzantine mission to Khazaria, the ostensible purpose of which was to participate in a religious debate at the court of the Ḳaghan. The real motivation behind the embassy undoubtedly had to do with the 860-1 Rus' raid on Constantinople and questions of joint Khazar-Byzantine cooperation against this new foe. According to the *Life of Constantine* (*Constantinus et Methodius Thessalonicenses, Fontes*, ed. F. Grivec, F. Tomšić, Zagreb 1960), some Khazars asked to convert to Christianity and were allowed to do so.

The later reports of the conversion of the Khazar Ḳaghan to Islam after the collapse of the Khazar state in 354/965 (Ibn al-Athīr, viii, 418; Ibn Miskawayh, ed. and tr. Amedroz-Margolioulh, text, ii, 203, v, 223, and al-Muḳaddasī, ed. de Goeje, 361). In the latter the adoption of Islam as the result of the campaigns of al-Maʾmūn (Abu 'l-Abbās Maʾmūn b. Muḥammad) ruler of Gurgāndj and later (after 995) of all Khwārazm [see KHWĀRAZM-SHĀHS] may well be historical. Prior to 354/965, Islam had adherents not only amongst subject peoples (cf. in particular the Volga Bulghars) but amongst the Khazars as well. Atīl, according to al-Iṣṭakhrī, 220, had 10,000 Muslim inhabitants. Al-Balādhurī, 203, tells of the Khazars who were settled by Bugha the Türk in 240/854-5 in Shamkūr (Shankʿor) because of their interest in Islam and security. Confirmation of Bugha's activities in this area (warfare against the Khazars and Alans) is found in Münedjdjim bāshī (Minorsky, *Hist. of Sharvān and Darband*, Arabic text, 3, tr. 25) and in the *Kʿartʿlis Tsʿkhovreba* (i, 256-7) which further notes that he settled 300 Khazar families in "Shankʿor" (no mention is made of their Islamic affiliations), but then came under the suspicion of the caliph who feared he "was taking council with the Khazars, his tribesmen" (*tomtʿa mistʿa*, which can also be translated as "his kinsmen") and relieved him of his post. Bugha's campaign about this time, against the Georgian mountaineers, the Ṣanariyya (in Georgian *Tsanar*) which led to an unsuccessful attempt on their part to enlist the aid of the Byzantines, Khazars and Ṣaḳāliba, should be viewed in light of the above.

The conversion of the Khazars to Judaism was no obstacle to continuing Khazar-Byzantine cooperation, especially in view of the unstable situation that was developing in the steppes. In 838 (for the dating, see I. Sorlin, *Le problème des Khazares et les historiens soviétiques dans les vingt dernières années*, in *Travaux et Mémoires*, iii (1968), 436 n. 51), the Byzantines assisted in the construction of the fortress Sarkel/Sharkil on the Don which was built as a defence (probably for Byzantine Crimea) against the Hungarian tribal union, or elements of it, and the Pečenegs who were beginning to cause problems for the Khazars and ultimately the Byzantines (Ibn Rusta, 143; Constantine Porphyrogenitus, *De Administrando Imperii*, ed. and tr. Gy. Moravcsik - R. Jenkins, Washington 1967, ch. 42; Theophanes Continuatus, ed. Bonn, 122 ff.; Scylitzes, ed. Bonn ii, 129-30; for a full discussion of this question see P. B. Golden, *The migrations of the Oğuz*, in *Archivum Ottomanicum*, iv, 1972).

During the caliphate of al-Wāthiḳ (227-32/842-7), two Arab embassies were sent to Khazaria, one led by Muḥammad b. Mūsā al-Khwārazmī and the other that of Sallām the Interpreter (al-Muḳaddasī, 362; Ibn Khurradādhbih, 162 ff.; Ibn Rusta, 149).

Khazar-Arab hostilities in the North Caucasus continued during the course of the 3rd/9th century on a reduced scale. Münedjdjim bāshī (in Minorsky, *Hist. of Sharvān and Darband*, text, 4, 17, tr. 26, 46) speaks of warfare that, apparently, persisted from Radjab 288/August 901 to *ca.* 300/912. The name of the Khazar ruler who figured in these campaigns is given as *K-sā* (or *T-n/z K-sā*) *b. B-ldjān* (cf. *Blučʿan*, the name of a Khazar commander mentioned in the *Kʿartʿlis Tsʿkhovreba*, i, 249-50).

Khazar power was now on the decline. As with all nomadic tribal unions, there were continual centrifugal tendencies on the part of individual clans or tribes to break away from the power of the Ḳaghan. The first signs of serious internal difficulties of this nature may be seen in the revolt of the Kabars (whose name may be etymologised in Turkic as "rebel", see Németh, *op. cit.*, 236-7) some time in the second half of the 9th century (Const. Porphyrogenitus, *op. cit.*, 174). The Hungarian tribal union (to which the Kabars attached themselves), which had, in the early 9th century, been hostile and had later become an ally (the Árpád dynasty came to power under Khazar auspices, Const. Porph., 172) had now been replaced in the Pontic steppes by the Pečenegs. Moreover, elements of the turbulent Oghuz tribal union which had been allies of the Khazars against the Pečenegs were now under pressure from tribes to their east. They began to push towards the Volga, occasionally crossing it in search of winter pasturage (al-Masʿūdī, *Murūdj*, ii, 19; ed. Pellat i, 218) and skirmishing with Khazar patrols. Another new factor was the unification, *ca.* 885, of the Eastern Slavic tribes, some of whom had been tributaries of the Khazars, under the Rus' who were drawn to the Volga because of the lucrative trade that passed through Atīl. A series of daring Rus' raids into the Caspian lands of Islam began in the last quarter of the 9th century. Two large-scale raids took place in 298/910 and 299/911-2 (on the dating, see S. Aliev, *O datirovke nabega rusov, upomyanutikh ibn Isfandiyarom i Amoli*, in *Vostočnïe Istočniki po istorii narodov iugo-vostočnoi i tsentralʿnoi evropy* ("Eastern Sources on the History of the Peoples of South-Eastern and Central Europe"), ed. S. Tveritinova, Moscow 1967, ii, 316-21). Al-Masʿūdī reports another raid after the year 300/912-3 (Aliev, *op. cit.*, places this raid after 310/922).

Khazar willingness to allow the Rus' access to the Volga route in order to carry out these raids may perhaps be related to the hostilities between the Arabs and the Khazars in the Caucasus recorded in Münedjdjim bāshī (see above). In the raid reported by al-Masʿūdī, the Ḳaghan is said to have given his assent on the condition that the Rus' give him half of the booty. The Ḳaghan was unable, however, to prevent the slaughter of the returning Rus' by

Khazar Muslims who were enraged at the activities of the former against their co-religionists (*Murūdj*, ii, 10, 18-23; ed. Pellat i, 213, 218-21). The devastating Rus' raid on Bardhaʿa/Partaw [see BARDHAʿA], in Ādharbāydjān in 332/943-4 (Daskhurantsʿi, tr. Dowsett, 224; Ibn Miskawayh, ed. Amedroz-Margoliouth, ii, 62-7; al-Maḳdisī, *K. al-Badʾ wa'-taʾrīkh*, ed. Huart, iv, 66-7; Ibn al-Athīr, viii, 134-5) undoubtedly played a rôle in the ensuing reorientation of Khazar policy with regard to the Rus'. In his letter (written probably in the 960s) to Ḥasday b. Shaprūt, the Khazar ruler Joseph remarks that he is no longer willing to give the Rus' passage down to the Volga, adding "I war with them. If I left them (in peace) for one hour, they would destroy the entire land of the Ishmaelites up to Baghdād" (P. K. Kokovtsov, *Evreysko-Khazarskaya perepiska v X veke* ("The Jewish-Khazar Correspondence in the 10th Century") Leningrad 1932, 102).

Khazar exclusion of the Rus' from the Volga route was probably one of the causes of the war of 354/965 recorded in the Rus' chronicles (*Polnoe Sobranie Russkikh Letopisei*, i, 65, ix, 31). According to this very laconic account, the Rus' ruler, Svyatoslav, "overcame the Khazars and took their city and Běla Veža" (= Sarkel). Ibn Ḥawḳal, ed. Kramers, ii, 392-3, who heard of this several years after the event and places it in 358/967, states that the Rus' sacked Bulghar and Khazarān (a section of Atīl). Both of these accounts ignore the role of the Oghuz (Ghuzz). Ibn Miskawayh, text, ii, 209, tr. v, 223, and Ibn al-Athīr, viii, 418, report that in 354/965, the "Turks" attacked Khazaria. These "Turks" could only have been the Oghuz (the *Torki* of the Rus' chronicles and *Ṭurḳ* of the Anonymous Hebrew Khazar Cambridge Document) who undoubtedly entered into an alliance with Svyatoslav, just as they would later do with his son and successor, Vladimir I, in 985 against Volga Bulgharia. According to Islamic sources, the Ḳaghan appealed to the Khʷārazmians for aid and the latter drove off the "Turks" Khʷārazmian-Oghuz hostility at this time is reported in al-Bīrūnī, *al-Āthār al-bāḳiya*, ed. Sachau, 236, and confirmed by archaeological evidence, cf. S. P. Tolstov, *Po sledam drevnekhorezmiyskoy tsivilizatsii* ("On the Tracks of Ancient Khʷārizmian Civilization"), Moscow-Leningrad 1948, 249), in return for which they demanded the conversion of the Ḳaghan to Islam (see above). Although the destruction, according to Ibn Ḥawḳal, was considerable, it is not clear just what the Rus' gained. Sarkel probably came into their possession, but Atīl, and hence control over the Volga, probably remained in the hands of the Khazars who had now become a Khʷārazmian protectorate (this might explain why Svyatoslav, apparently blocked here, was willing, in 968, to embark on a campaign in the Balkans to gain possession of Bulgaria and the Danubian trade routes). Ultimately, it did become an Oghuz holding (they appear to be there in strength in the 12th century, cf. the "40 tribes of the Ghuzz" mentioned there by Abū Ḥāmid al-Gharnāṭī (*Abū Ḥāmid al-Granadino y su relación de viaje por tierras eurasiáticas*, ed. and tr. C. E. Dubler, Madrid 1953, 5).

Khazar Jews are mentioned as coming to the court of Vladimir I in 986 in connection with the religious debates that are alleged to have preceded his conversion to Christianity. The account, however, rather suspiciously parallels the story of a religious debate which preceded the conversion of the Khazars to Judaism, see Marquart, *Streifzüge*, 7 ff. Indeed, it may have been inserted in the Rus' chronicle to support Rus' claims to succession to the Ḳaghanate. The tradition of a Rus' Ḳaghan is already known in the 9th century (cf. the "Chacanus Rus" of the *Annales Bertiniani* and the "Rūs Khākān" of Ibn Rusta), and repeated in the 11th century *Slovo o zakone i blagodati* of Ilarion who pointedly refers to Vladimir I and the then reigning Yaroslav (d. 1054) as "kagans".

In January, 1016, a territory called "Khazaria" in Scylitzes (ed. Bonn, ii, 464) which was ruled by a certain Georgius (presumably a Christianised Khazar) "the Tzoulé" (this form Τζουλῆ, found in the 12th century Vienna Ms., Nationalbibliothek, Cod. Hist. Gr. 35, f. 132a and in the 13th century Vatican ms. 977, f. 287a, is to be preferred to the "Tzoulus" of the Bonn ed.) was attacked and conquered by a joint Rus'-Byzantine force in which "Sphengus, the brother of Vladimir, who was the brother-in-law of the Emperor" (Basil II, cf. γαμβροῦ τοῦ βασιλέοη of the mss. cited above and not "brother" as in the Bonn ed.) led the Rus' forces. The identity of "Sphengus" and the location of "Khazaria" have not been convincingly demonstrated thus far (it has variously been suggested that Sphengus is Mstislav, a son of Vladimir I, see G. Vernadsky, *Kievan Russia*, New Haven 1948, 75 and that "Khazaria" is to be found in the Crimean peninsula, Tmutorokan' or in the North Caucasus. Mstislav was, indeed, in the Tmutorokan' region *ca.* 1022 and, according to the Rus' chronicle, he led a force of Khazars and Kasogians in 1023 against his brother Yaroslav).

Ibn al-Athīr, ix, 279, notes that the Kurd Faḍlūn, ruler of Gandja, attacked the "Khazars" in 421/1030 but was defeated and slain by them. This was Faḍl b. Muḥammad of the Shaddādid dynasty, cf. above i, 660 and ii, 975 and V. F. Minorsky, *Studies in Caucasian History*, London 1953, 40 ff. The "Khazars" mentioned here are probably a misprint for either the Abkhaz or Djurz (Georgians), both of whom had hostile relations with the Amīrs of Gandja. Münedjdjim bāshī, in Minorsky, *Studies*, text. 11, tr. 17, states that the Abkhaz attacked Arrān and were beaten off by Faḍl of Gandja in 417/1026. The *Kʿartʿlis Tsʿkhovreba*, i, 296, tells of Georgian warfare with the rulers of Gandja in the early 1030s. Finally, a raid from Gandja against the Khazars is very improbable on geographical grounds.

Münedjdjim bāshī, in Minorsky, *Hist. of Sharvān and Darband*, text. 24, tr. 51, reports that in 456/1064 "the remnants of the Khazars, consisting of three thousand households, arrived in Ḳahtan (which Minorsky, *Hist.* 107, identifies with Khaydaḳ, lands now occupied by the Turkic Ḳumuḳs in Dāghistān) from the Khazar territory. They rebuilt it and settled in it".

In 1079 and 1083 A.D., the Khazars are again mentioned in the Rus' chronicles in connection with events in the principality of Tmutorokan' where they appear to have wielded some power (*PRSL* i, 204-5). Individual Khazars took service with the various Rus' princes. Thus, *s.a.* 1106 A.D. we read of an Ivan Kozarin ("the Khazar"), the *voevoda* of Kiev who drove off a Polovtsian (Coman) attack (*PRSL*, ix, 140). A Hungaro-Latin source (Thuroczi, cap. 500) mentions a "princeps Bissenorum (= Hung. *Besenyö* "Pečeneg") nomine Kazar", which would indicate that Khazar elements had joined the Pečeneg union. Documents from the Cairo Geniza purport to tell of messianic movements in "Khazaria" in the 11th and 12th centuries. The reference, here, however, was probably to events in the Jewish communities in the Crimea which was regularly called "Khazaria" or "Gazaria" in later Greek and Latin

sources (see Dunlop, *op. cit.*, 254-6, and Artamonov, *op. cit.*, 444).

As with many steppe empires, Khazaria did not suddenly vanish, although it appeared to, but rather it gradually melted back into the steppe. The nomadic elements were undoubtedly incorporated into the Pečeneg, Oghuz and ultimately Coman-Ḳïpčaḳ tribal confederations (this would probably explain the presence of the Hebrew loanword *Shabbat* in Coman-Ḳïpčaḳ: *Shabat kün*, Ḳaračay-Balḳar: *Shabat K'ün*, cf. also Čuvash: *Shâmat*). The collapse of Khazar power after 345/965 had severe consequences for Byzantium which—as the orientation of Constantine Porphyrogenitus' *De Adm. Imp.* would indicate—was already seeking to establish a new balance of power in the steppe zone in the 940s-950s. With Khazaria now unable to blunt the thrusts of oncoming nomadic invaders, Byzantium's Balkan borders and, even more crucial, the Crimea, Constantinople's eye into the steppe, were extremely vulnerable. The volatile Oghuz tribal union in the steppes to the east of Khazaria which had hitherto been held in check by the Khazars (cf. the Oghuz prisoners held by the Khazars as reported in Ibn Faḍlān, ed. Togan, text 16, tr. 31) or allied with them (in joint operations against the Pečenegs, cf. Constantine Porphyrogenitus, *De Adm. Imp.*, 166), now began to break up. Some elements entered the Pontic steppe and ultimately caused disturbances in the Balkans. Another faction, led by Seldjuk set off, in the decades following 354/965, that chain of events that led to the Turkish conquest of Anatolia.

The Khazar Ḳaghanate at its zenith was a vast, multi-religious, multi-national state (Ibn Faḍlān, ed. Kovalevskiy, 313, ed. Togan, 44, reports that there were 25 subject peoples who sent hostages to the Ḳaghan's court) which, in addition to the tribes that formed the Khazar union, included the Volga and Pontic Bulghars, the Burṭās and other Finno-Ugrians (including at one time the Hungarians), the "Huns" of the North Caucasus as well as the aboriginals of that region, the Iranian Alan/As of the Caspian steppes and North Caucasus and various Eastern Slavic tribes. Its borders extended to Kiev in the west, the Volga Bulghar realm in the north (near present-day Kazan'), the steppes of Khʷārazm in the east and the Crimea and the northern Caucasus in the south. The Ḳaghanate, in its political and economic organisation, evidences all of the characteristics of other, Altaic, nomadic tribal empires of the period. It was presided over by a ceremonial Ḳaghan (probably of Türk-Ashina origin, descent from the Türk royal clan being one of the main criteria for the assumption of the Ḳaghanal title), while the actual governance of affairs was in the hands of the *shad* (the *ishā/ishād* of the Ibn Rusta-Gardīzī tradition) or the *Beg* (cf. the πέχ of Constantine Porphyrogenitus, *De Adm. Imp.*, 182, the *Bek-Yilik* of the al-Iṣṭakhrī, - Ibn Ḥawḳal, ed. Kramers, ii, 390, tradition). Ibn Faḍlān (ed. Togan, text. 43-4) calls him the "Khāḳān B-h" who he notes, was assisted by the "K-nd-r Khāḳān" and Djāwshīgh-r". This system is a variant of the well-known Turkic dual kingship. The ceremonial Ḳaghanate, described by the Islamic geographers (who regularly distinguish between the Khāḳān and the "king"), has parallels in the Turkic world. The earliest precedent for this particular evolution of the Ḳaghanate may be seen in the institution of the *I K'e-han* (**eb Ḳaghan* "House Ḳaghan" of the Türks themselves) noted in Chinese sources. Seen in this light, Artamonov's speculations (*op. cit.*, 275 ff.) associating this institution with the judaicisation of Khazaria and the alleged *coup d'état* of Obadiah in the early 9th century, are to be dismissed. Many of the ancient Türk traditions which underscored the shamanic aspects of the Ḳaghanal office, were preserved by the Khazars. Thus, the ritual of the ceremonial strangling of the Ḳaghan at his investiture (al-Iṣṭakhrī, 224), during which the new Ḳaghan on the verge of losing consciousness is asked to state the length of his rule (should he exceed it, he is killed; Ibn Faḍlān notes that the Khāḳān may rule no more than forty years) is identical to the ritual practised by the Türks as described in Chinese sources (Liu Mau-Tsai, *Die Chinesischen Nachrichten zur Geschichte der Ost-Türken (T'u-küe)*, Wiesbaden 1958, i, 8).

The Khazars, or at least the "royal" or core tribes, continued to practice a modified form of nomadism, wintering in their cities (which were large conglomerations of nomadic yurts, hence little archaeological evidence has survived) and passing the summer in the steppes (al-Maḳdisī, iv, 66). Agriculture and fishing were also practised. (On the nomadism of Western Eurasia, see Gy. Gyorffy, *A honfoglaló magyarok települési rendjéröl* ("On the Settlement Pattern of the Conquest Period Hungarians"), in *Archaeologiai Értesitö*, xcvii (1970), for a description of this system as practised by the Ārpádid Hungarians. On the material culture of the Western Eurasian nomads, see S. A. Pletneva, *Ot kočeviy k gorodam* ("From nomadic encampments to cities"), Moscow 1967). The importance of fishing in Khazaria is confirmed by al-Iṣṭakhrī who notes that isinglass was the only product made by the Khazars themselves. Khazaria exported to Byzantium and the lands of Islam large quantities of furs, obtained as tribute from subject peoples, but imported the material for clothing from Gurgān, Ṭabaristān, Ādharbāydjān and Rūm. The *Ḥudūd al-ʿĀlam*, tr. Minorsky, 161, indicates that livestock breeding, as might be expected, was practised and was one of the numerous exports of Khazaria. But, unanimously with our other sources, the *Ḥudūd*, 162, notes that "the well-being and wealth of the King of the Khazars are mostly from the maritime customs". Khazaria took ample advantage of its favourable geographical position lying astride the great commercial arteries between east and west, north and south. The Ḳaghans of Atīl, like the Volga Bulghar ruler, took a tithe on all trade passing through their territory. Nomadic empires (cf. the Türks and their relationship with the Soghdians) regularly encouraged trade because of this lucrative source of revenue. According to al-Masʿūdī, *Murūdj*, ii, 22, ed. Pellat, i, 220, the Khazars had no sea-going vessels; yet according to Hilāl al-Ṣābī (ed. Amedroz, 217, below), the dams built at Derbend were intended as a defence against the ships (*marākib*) of the Khazars. There is some evidence to indicate that the Khazars minted their own coins. These were imitations of contemporary Arabic coins with many mistakes. Some, apparently, bore Turkic runic inscriptions; see A. A. Bïkov, *O Khazarskom čekane VIII-IXvv.* ("On Khazar Minting"), in *Trudi gosudarstvennogo ermitaža*, xii (1971).

With regard to Khazar urban sites, our sources present a number of Khazar toponyms, few of which can be located or given etymologies with absolute certainty. In addition to Balandjar and Samandar (see above), we may note Atīl, the name of the Volga and the Khazar capital located in its delta. L. N. Gumilyov, *Otkrïtie Khazarii*, Moscow 1966, has recently advanced the thesis that the Khazar capital

was submerged by a rise in the level of the Caspian and consequently hopes of finding this largely "tent" city are slim. The al-Iṣṭakhrī - Ibn Ḥawḳal tradition reports that it was divided into two parts (al-Masʿūdī, *Murūdj*, ii, 7, ed. Pellat, i, 212, and the Letter of Joseph, Kokovtsov, *op. cit.*, 74-5, 102, say it was divided into three parts), a western (called "Khazarān" in Ibn Ḥawḳal and in Ibn Rusta, 165, who elsewhere, see below, reports a different tradition) in which the king lived (al-Iṣṭakhrī, 220, Ibn Ḥawḳal, ed. Kramers, ii, 389) and an eastern part. Another tradition, that of Ibn Rusta - Gardīzī - al-Bakrī and al-Marwazī, going back to al-Djarmī via al-Djayhanī, calls the Khazar capital **Sarïghshin* (*Sarïgh* = common Turk. "yellow") whose relationship to "al-Bayḍāʾ" ("the White City"; *Sharïgh* in some Bulgharo-Oghuric dialects denotes "white") is unclear. It should be borne in mind that "white" cities and fortresses in this region are not toponymical rarities and may have taken their name from the coloration of the bricks used in their construction. The later *Saḳsïn* may be a garbling of this name. Within *Sarïghshin* is another city: *H-bn-l-ʿ* or *Khamlīkh* (Ibn Rusta, 139; al-Muḳaddasī, 51, 355; Yāḳūt, *Muʿdjam al-Buldān*, i, 730, 793, ii, 471; *Ḥudūd*, Tumanskiy ms. f. 38b (*Ḥ-m-dj*), Ibn Khurdādhbih, 124, 154-5), all of which may be corruptions of **Khan Balïḳ* "The Khan's City" (cf. "Cambaluc" of Marco Polo for Peking). The relationship of this form to the city **Ḳutlugh*, Turk. "blessed, fortunate" (Gardīzī, Oxford, Bodl. Ouseley 240, p. 474; *Ḥudūd*, Tumanskiy ms. f. 38b; cf. also the *Ḥ-thl-gh*, *Ḥ---l-gh* of al-Bakrī and al-Marwazī), which may be either a separate and distinct city or the same city repeated in the not-always-critical compilations that form the bulk of our sources for the Khazars, is not clear. Marquart (*Streifzüge*, 18), Lewicki (*Źródła arabskie*, i, 29, 115) Zajączkowski (*Ze studiów*, 50) and Minorsky (*Ḥudūd*, 454) have suggested that *Khamlīkh* was the eastern part of Atïl. The anonymous *Risāla fī 'l-Aḳālīm* (Köprülü Ms. 1623, f. 209b) notes that Sarïghshin was located "in the plain". The Khazar fortress Sarkel/Sharkil which appears only in Byzantine and Hebrew sources and is curiously absent in the Arabo-Persian accounts, has occasioned a considerable literature. The *kel/kil* of Sarkel is probably from Iranian *gil* ("house, dwelling", see J. Harmatta and K. Czeglédy in *Magyar Nyelv*, xlix (1953), 178-83, 177 respectively). *Sar* may be viewed as either common Turkic *Sarïgh/Sarï* ("yellow") or Bulgharo-Oghuric *Sharïgh/Sharï* ("white" in some dialects). Byzantine sources (Theophanes Continuatus and Constantine Porphyrogenitus) translate it as "White Dwelling". It may well have been the Rus' "Bĕla Veža" ("White Fort") and perhaps the Arabic al-Bayḍāʾ, but there are numerous problems associated with this (see above). It was located on the Don river, near the Tsimlyanskaya stanitsa (and is now submerged); since this lay in Pontic Bulghar lands it may well have borne a Bulgharic name. This does not imply, as some have claimed, that the Khazars necessarily spoke Bulgharic. Other toponyms associated with Khazaria (although not necessarily having a Khazar population) are *Varačʿan* in the lands of the north Caucasian "Huns" (it is, perhaps, to be connected with the *Warthān* of al-Yaʿḳūbī, *Historiae*, ii, 381. The mss. Cambridge, QQ10, f. 175b and John Rylands, Arabic 231 (801), f. 139b, have *W-r-ān*; the Letter of Joseph, Oxford, Christ Church 193, f. 18a has *V-rsān/V-rshān*. Minorsky, *Hist. of Sharvān and Darband*, 93-4, emends al-Yaʿḳūbī's form to **Warshan* and connects this with Varačʿan), *Suwār* (in the north Caucasus and Volga Bulghar lands, undoubtedly from the ethnonym *Sabir*), *Ḳïshūī* (?) and *B-gh-nd*.

The religious situation in Khazaria was quite complex. In addition to Jews (whose numbers grew due to the migration of their co-religionists from Byzantium as the result of the persecutions of Romanus Lecapenus (919-44) reported in al-Masʿūdī, *Murūdj*, ii, 8, ed. Pellat, i, 212, and the Khazar Cambridge Document, Kokovtsov, *op. cit.*, 35, as well as from the Islamic lands) and Khazar converts, there were large numbers of Muslims and Christians as well as pagans of various types (Turkic, Slavic and Finno-Ugrian). In Atïl there was a principal mosque with a lofty minaret and 30 mosques. In the year 310/922-3, the Khazar ruler received a report that in a Muslim country a synagogue had been destroyed (the name given in Yāḳūt, *Muʿdjam*, ii, 440 is not clear; cf. Marquart, *Streifzüge*, 4, 477 ff.). He therefore had the minaret destroyed and the *muʾadhdhin* killed. He left the mosque unharmed for fear that all the synagogues in Muslim lands would be destroyed.

The question of Khazar ethnic affiliations remains one of the most difficult aspects of Khazar studies. Given the context in which the Khazar state came into being, we may properly look to the Altaic, or more specifically, perhaps, to the Turkic world for an answer (al-Masʿūdī's comment, *Tanbīh*, ed. de Goeje, 83, that the name *Khazar* is Iranian and in Turkic is *Sabīr* is undoubtedly a garbling of the fact that elements of the Sabirs formed one of the constituent tribes of the Khazar confederation. Both names may be explained in Turkic with the meaning "nomad", "wanderer", see Németh, *A honfoglaló*..., 37. This might also account for al-Masʿūdī's confusion). Unfortunately, we do not, as yet, possess any texts in the Khazar language (a recently discussed Hebrew document from the Cairo Geniza, see Cambridge, ms. T-S 12.122, which may have been written by Khazar Jews in Kiev, has an inscription in a variant of the Türk runic script which was used by many of the nomadic tribes of Central Asia and Eurasia. It has yet to be satisfactorily deciphered. Moreover, it consists of one word and hence can hardly be considered decisive). It is generally accepted that Khazar must have been, broadly speaking, Altaic; whether this was common Turkic or a form of Bulgharo-Oghuric is still the subject of polemics. Our sources provide little guidance here. Thus, al-Iṣṭakhrī, ed. de Goeje, 222, in one passage, remarks that Khazar does not resemble Turkic, Persian or any other language. Elsewhere (p. 225), he states that it is similar to Bulgharic. Al-Bīrūnī (*al-Āthār al-bāḳiya*, ed. Sachau, 42) remarks that the Bulghar and Suwār speak a language which is a mixture of Turkic and Khazar. This would seem to contrast Turkic and Khazar and perhaps place Khazar in the Bulgharo-Oghuric grouping. But one must bear in mind the compilatory nature of our sources, which undoubtedly compounded the complexities of the linguistic situation in Khazaria where common Turkic, Bulgharo-Oghuric, Finno-Ugric, Iranian and Slavic were spoken. Individual Khazar words, names, titles, hydronyms and toponyms scattered in Arabic, Persian, Hebrew, Byzantine, Rus', Armenian and Georgian sources cannot fully answer this question because of the obvious difficulties of interpretation and the paucity of their number (depending on what one is willing to consider Khazar, there are, roughly, some fifty known Khazar words). Khazar titles are invariably Turkic or an-

cient Inner Asian loanwords long associated with Turkic: *Ḳaghan*, *Khatun*, *Alp* (both a name and title, as is true of many names in Turkic), *Baghatur*, *Beg*, *Tegin* (*Ir-tigin*), *Djabghu*, *Il-teber*, *Shad*, *Tarkhan*, *Tarmač* (*Tolmač*), *Tudun* and *Yilik* (*Ilik*). Other titles (or perhaps names) are problematic, cf.: *Balgitzes* (*Belgiči*? *Balïḳčï*), *B-l-shtsī* (*Bolushčï*?), *Tzoulē* (*Čulï*?), *Djāwshīgh-r*, *K-nd-r*, *Salīfān*. Similarly, some Khazar personal names are clearly Turkic, cf.: *Avči* (*Awč'i*), *Bulan*, *Čiček*, *Čorpan*, *Ḳadhïr* (*Khatᶜir*), *Barsbek*/*Pᶜarsbitᶜ*), while others pose numerous difficulties of interpretation: *Bārdjïk* (if it is not a corruption of *Barsbek*, see above), *Bāshtwā*, *Blučᶜan*/*Buldjān*, *Čᶜatᶜ Kasar*, *Čᶜat'n*, *Ibuz(s)er Gliaban(r)*, *(T-n)K-sā*, *Papatzys*, **Yazïr Bulāsh*, *Ziebēl*. A few names show Iranian influence (cf. *Hazār Tarkhan* and perhaps *Kundādjïḳ*, with the Turkic dimunitive suffix *-djïḳ*). Of the tribal names, we know only *Khazar* (*Kᶜazar*), *Kara Khazar* and *Kabar*/*Kavar*. The clan name *Ānsā* (*Ḥudūd*, ms. Tumanskiy, f. 38b), if it is not a corruption of Ishā/Ishād, may well be a garbling of the Türk *Ashina*. Of the nomina, we know only the obviously Arabised *al-djdāda* (Ibn Aᶜtham al-Kūfī, Topḳapï, Aḥmed III 2956/ii, f. 192b), a kind of tent-cart. With the possible exception of Sarkel (if it is to be read as Sharkil), none of these forms shows specific Bulgharo-Oghuric characteristics (*i.e.* *Turun* for *Tudun*).

Another major question of Khazar studies, for which there is as yet no ready answer, is the relationship of the Khazars to the origins of Eastern European Jewry.

Bibliography: Partial bibliographies of the Khazar question are found in: A. Yarmolinsky, *The Khazars; A Bibliography*, in *Bulletin of the New York Public Library*, xlii (1939); and his later *The Khazars: (an annotated) Bibliography*, in *ibid.*, lxiii (1959); B. D. Weinryb, *The Khazars, an annotated Bibliography*, in *Studies in Bibliography and Booklore, Library of Hebrew Union College-Jewish Institute of Religion*, vi (1963); Gy. Moravcsik, *Byzantinoturcica*, Berlin 1958, i, 83 ff.

The major works on the Khazars are M. I. Artamonov, *Očerk drevneyshey istorii* ("Outline of the Most Ancient History of the Khazars"), Leningrad 1936 and his later *Istoriya Khazar*, Leningrad 1962 which is useful from the archaeological standpoint. A. Zajączkowski, *Ze Studiów nad zagadnieniem chazarskim* ("Studies on the Khazar Question"), Cracow 1947, is important from the Turcological viewpoint, but rather weighted in favour of Khazar-Karaim ties. D. M. Dunlop, *The History of the Jewish Khazars*, Princeton 1954, an excellent outline of Khazar history with detailed treatment of Arabic, Hebrew and Byzantine sources. P. B. Golden, *Q'azar Studies, An historico-philological Inquiry into the Origins of the Q'azars*, in *Monographs on Medieval Eurasia*, i, Lisse-Budapest, forthcoming, is a detailed treatment of the Khazar "Sprachreste" with emphasis on the Turcological aspects of the Khazar question. Z. V. Togan's "Hazarlar" in *İA* is fanciful and at times uncritical.

The major Arabic sources for the Khazars are, in addition to the geographers of the *BGA* series; al-Balādhurī, *Kitāb Futūḥ al-Buldān*; al-Dimashḳī, *Cosmographie*, ed. F. Mehrens, St. Pb. 1866, Ibn Aᶜtham al-Kūfī, *Kitāb al-Futūḥ*, Istanbul, Topḳapï, Aḥmed III 2956 (extracts can be found in Togan, *Ibn Faḍlān's Reisebericht* and A. N. Kurat, *Muhammad bin A'sam al-Kûfî'nin Kitāb al-Futūḥ'u*, in *Ank. Üniv. Dil ve Tarih-Coğrafya Fakültesi Dergisi*, vii (1949); Ibn al-Athīr, *al-Kāmil fī 'l-Ta'rīkh*, 1851-76; Ibn Faḍlān (see the Kovalevskiy and Togan editions cited in the text); al-Idrīsī, *Géographie d'Édrisi*, tr. A. Jaubert, Paris 1836-40; al-Maḳdisī, *Kitāb al-Bad' wa'l-Ta'rīkh*, ed. C. Huart, Paris 1899-1919; al-Ḳazwīnī, *Kosmographie*, ed. Wüstenfeld, Göttingen 1848; *Sharaf al-Zamān Ṭāhir Marvazī on China, the Turks and India*, ed. and tr. V. Minorsky, London 1942; Münedjdjim bāshï (excerpts in Minorsky, *Studies*, and *Hist. of Sharvān and Darband* cited in text; mss. are Istanbul, Nūr-i ᶜOthmāniyya 3171-2, Topḳapï, Aḥmed III 1954, i-ii, Bāyazīd ᶜUmūmī Kütüphanesi, Veliyüddīn 5019-20, Süleymāniyye, Esᶜad Efendi 2101-2103; al-Ṭabarī, *Kitāb Akhbār al-Rasūl wa 'l-Mulūk*; al-Yaᶜḳūbī, *Historiae*; Yāḳūt, *Muᶜdjam al-Buldān*, and the Judaeo-Arabic work of Yehuda hal-Levi, *Book of Kuzari* (*Kitāb al-Khazar*), tr. H. Hirschfeld, New York 1946. The Armenian sources are extremely important: Łewond, *Patmutᶜiwn*, ed. I. Ezeantsᶜ, St. Petersburg 1887, tr. as Ghévond, *Histoire des guerres et des conquêtes des Arabs en Arménie*, by V. Chahnazarian, Paris 1856; Movsês Daskhurantsᶜi (Kałankatuatsᶜi), *Patmutᶜiwn Ałuanitsᶜ*, ed. M. Emin, Moscow 1860, now available in the excellent translation of C. Dowsett (see text above). Movsês Khorenatsᶜi, *Histoire d'Arménie*, ed. and tr. P. E. Le Vaillant de Florival, Venice 1841 and the *Geography* ascribed to him, *Géographie de Moïse de Corène*, ed. and tr. A. Soukry, Venice 1881. The most important Byzantine sources for the Khazars are Constantine Porphyrogenitus, *De Administrando Imperio* (see text above), which gives a detailed analysis of the situation in the steppes in the mid-10th century; Nicephorus Patriarchus, *Breviarium*, ed. J. Bekker, Bonn 1837; *Georgius Cedrenus, Ioannis Scylitzae ope*, ed. J. Bekker, Bonn 1839; Theophanes, *Chronographia*, ed. C. de Boor, Leipzig 1883; Theophanus Continuatus, *Historiae*, ed. J. Bekker, Bonn 1838. The Georgian compilation, the *Kᶜartᶜlis Tsᶜkhovreba* (see text above), contains valuable supplementary material on Khazar activities in the Caucasus, but is generally unconcerned with events outside of Georgia proper. P. K. Kokovtsov's *Evreysko-Khazarskaya Perepiska* (see text above) contains critical editions of the Khazar Hebrew Correspondence and the Cambridge Document with an exhaustive commentary. Of Persian works, Balᶜamī's translation and re-working of al-Ṭabarī is extremely useful as he adds many details missing in the Arabic original. The work is available (in full) only in H. Zotenberg's translation, Paris 1867-74. The ms. of M. Minovi's facsimile edition, Āstān-i Ḳuds 7481 (*Ta'rīkh-i Ṭabarī*, Tehran 1345/1926-7). unfortunately has lacunae in many important passages relating to the Khazars. The mss. in the Bodleian at Oxford (Elliot 376, Fraser 131, Ouseley 249, Ouseley 360) and the Bibliothèque Nationale in Paris (Pers. 63, Pers. 162, Pers. Suppl. 162A, Pers. 163, Pers 164) should be consulted. Important excerpts from Gardīzī are found in V. Bartol'd, *Otčet o poezdke v srednyuyu aziyu s naučnoy tsel'yu*, in *Zapiski Imp. Akad. Nauk* vii/4 (1897), and in the collection *A magyar honfoglalás kútfői* ("Sources on the Hungarians of the Conquest Period), ed. and tr. Gy. Pauler, S. Szilágy, Budapest 1900. The Khazar section of the Cambridge Ms. (King's College 213) of Gardīzī

is, regrettably, damaged and difficult to read; the Oxford Ms. (Bodleian, Ouseley 240), is probably derived from it and should be used. The Rus' chronicles (*Polnoe Sobranie Russkikh Letopisey*, i, *Lavrent'evskaya letopis'*, Moscow, reprint 1962, and ix, *Nikonovskaya Letopis'*, Moscow, reprint 1965) make occasional references to the Khazars.

Important collection of sources (texts, translations and commentaries are: Ch. Fraehn, *Ibn Foszlan's und anderer Araber Berichte über die Russen älter Zeit*, St. Petersburg 1823; A. Ya. Garkavi (Harkavi), *Skazaniya musul'manskikh pisateley o slavyanakh i russkikh* ("The Accounts of Muslim Writers on the Slavs and Russians"), St. Petersburg 1870, and his *Skazaniya evreyskikh pisateley o khozarakh i khozarskom tsarstvě* ("The Accounts of Jewish Writers on the Khazars and the Khazar Kingdom"), St. Petersburg 1874; A. Kunik - V. Rosen, *Izvěstiya al-Bekri i drugikh avtorov o Rusi i slavyanakh*, St. Petersburg 1878-1903, and the more recent F. Kupfer - T. Lewicki, *Źródła hebrajskie do dziejów Słowian i niektórych innych ludów środkowej i wschodniej Europy* ("Hebrew Sources on the Hist. of the Slavs and some other Peoples of Central and Eastern Europe"), Wrocław-Warsaw 1956, and T. Lewicki, *Źródła arabskie do dziejów Słowiańszczyzny*, ("Arabic Sources for the Hist. of the Slavs"), i-ii/1, Wrocław-Cracow 1956-69; the latter is still in progress. An interesting discussion of the sources of the "Caspian Codex" can be found in B. N. Zakhoder's two-volume study *Kaspiyskiy svod svedeniy o vostočnoy evrope* (cited in text above). Analyses of specific problems of Arabic sources relating to Eastern Europe in general and Khazar problems can be found in J. Marquart, *Ein Arabischer Bericht über die arktischen Länder aus dem 10 Jh.*, in *Ungarische Jahrbücher*, iv (1924); idem, *Kultur- und sprachgeschichtliche Analekten*, in *Ungarische Jahrbücher*, ix (1929); T. Lewicki, *Ecrivains arabes du IX^e au XVI^e siècle traitant de l'ambre jaune de la Baltique et de son importation en pays arabes*, in *Folia Orientalia*, iv (1962-3). S. G. Klyashtornïy, *Drevneyshee upominanie slavyan v nižnem povolžě* ("The Oldest Mention of the Slavs in the Lower Volga Region"), in *Vostočnïe Istočniki*, ed. Tveritinova (1964), i; A. P. Novosel'tsev, *Vostočnïe istočniki o vostočnïkh slavyanakh i Rusi VI-IX vv* ("Eastern Sources on the Eastern Slavs and Rus' VI-IX cents."), in *Drevnerusskoe gosudarstvo i ego meždunarodnoe značenie* ("The Ancient Russian State and its International Significance"), ed. A. P. Novosel'tsev, V. T. Pashuto *et al.*, Moscow 1965; F. Kmietowicz, *The Term Rāḏānīya in the Work of Ibn Ḫurdāḏbeh*, in *Folia Orientalia*, xi (1969).

The Hungarian scholar, K. Czeglédy, in addition to his important monograph (cited in the text) has contributed a number of very useful articles on various aspects of Khazar history and culture: *Egy bolgar török yiltavar méltóságnév* ("The Bulghar Turkic title Yiltavar"), in *Magyar Nyelv*, xl (1944); *Egy kazár méltóságnév* ("A Khazar title"), in *Magyar Nyelv*, xliii (1947); *A kazár kil-kel eredete* ("The Origin of Khazar kil-kel"), in *Magyar Nyelv*, xlix (1953); *Herakleios török szövetségesei* ("The Turkic Allies of Heraclius"), in *Magyar Nyelv*, xlix (1953); *Nyugati türk eredetü méltóságnevek* ("Titles of Western Türk Origin"), in *Névtudományi vizsgálatok* ("Onomastic Studies"), ed. S. Mikesy, Budapest 1955; *Khazar Raids in Transcaucasia in A.D. 762-764*, in *Acta Orientalia Hungarica*, xi (1960); *A korai kazár történelem forrásainak kritikájához* ("A Critique of Contemporary Sources for the History of the Khazars"), in *A Magyar Tudományos Akademia, nyelv-és irodalomtudományi osztályának közleményei* (Communications of the Linguistic and History of Literature Section of the Hung. Acad. of Sci.), xv (1960); *Bemerkungen zur Geschichte der Chazaren*, in *Acta Orientalia Hungarica*, xiii (1961); ΤΕΡΜΑΤΖΟΥΣ, in *Acta Antiqua Academiae Scientarum Hungaricae*, x (1962). Hungarian interest in Khazar history, which was so intimately intertwined with their early history, has always been strong. Most major works dealing with early Hungarian history (*i.e.* prior to their occupation of Pannonia) have something to say regarding the Khazars. The collection of articles under the heading *A Magyarság östörténte* ("Hungarian Proto-History"), ed. L. Ligeti, Budapest 1943, contains valuable contributions dealing with Khazar and Hungaro-Khazar problems from Czeglédy and T. Halasi-Kun.

The Khazar problem has engendered a rather large specialised literature. Some of the more important articles are: H. H. Howorth, *The Khazars, were they Ugrians or Turks?*, in *Travaux de la troisième session du Congrès International des Orientalistes*, St. Petersburg 1876; S. Patkanov, *Über das Volk der Sabiren*, in *Keleti Szemle*, i (1900); J. Thúry, *A Khazar isa méltóságnév* ("The Khazar title Isha"), in *Keleti Szemle* iii (1903); J. (Gy.) Moravcsik, *Proiskhoždenie slova* Tzitzakion ("The Origin of the word Tzitzakion), in *Seminarium Kondakovianum*, iv (1913); V. Minorsky, *The Khazars and the Turks in the Ākām al-Marjān*, in *BSOS*, ix (1937-9); Gy. Németh, *A magyar népnév, a magyar törzsnevek, a kazár népnév* ("The ethnonym Hungarian, Hungarian tribal names, the ethnonym Khazar"), in *Magyar Nyelv*, xxxiv (1938); Z. V. Togan, *Völkerschaften des Chazarenreiches im neunten Jahrhundert*, in *Korösi Csoma Archivum*, iii (1940); M. I. Artamonov, *Belaya Veža*, in *Sovetskaya Arkheologiya*, xvi (1952); H. Schönebaum, *Zur Kabarenfrage*, in *Aus der byzantinistischen Arbeit der Deutschen Demokratischen Republik* (*BBA* 5, 1957); M. I. Artamonov, *Sarkel-Belaya Veža*, in *Trudï volgo-donskoy arkheologičeskoy ekspeditsii, Materialï i Issledovaniya po Arkheologii SSSR*, lxii (1958) (Works of the Volga-Don Archaeological Expedition, Materials and Researches on the Archaeology of the USSR); see also there the article of I. I. Lyapushkin, *Pamyatniki saltovo-mayatskoy kul'turï v basseyne r. Dona* ("Monuments of the Saltovo-Mayats Culture in the Don river basin"); N. Ya. Polovoy, *O marshrute pokhoda russkikh na Berdaa i russko-Khazarskikh otnosheniyakh v 934 g.* ("On the Route of the Russian Campaign on Bardhaʿa and Russo-Khazar relations in 943"), in *Vizantiyskiy Vremennik*, xxv (1961); T. Lewicki, *ʿArïsuʾ, Un nom de tribu énigmatique cité dans le lettre du roi Khazar Joseph* (*X^e siècle*), in *Cahiers du Monde Russe et Soviétique*, iii/1 (1962); O. Pritsak, يوار *Yowár und* Καβαρ *Kāwar*, in *Ural-Altaische Jahrbücher*, xxxvi (1965); P. B. Golden, *The Q'azaro-Hungarian Title* ∽ *Personal name* يلك ∼ 'Ιέλεχ in *Archivum Eurasiae Medii Aevi*, i (1975); *idem, The People* نوكرده, in *ibid.*

On the Turkic runic script and inscriptions that

may have Khazar connections, see: A. M. Shčerbak, *Neskol'ko slov o priyomakh čteniya runičeskikh nadpisey, naydennîkh na Donu* ("A Few Words about the Methods of Reading the Runic Inscriptions Found on the Don"), in *Sovetskaya Arkheologiya*, xix (1954); idem, *Znaki na keramike i kirpičakh iz Sarkela-Beloy Veži* ("Signs on the Ceramics and Bricks from Sarkel-Bela Veza"), in *Materialî i Issledovaniya po Arkheologi SSSR* ("Materials and Researches on the Archaeology of the USSR"), lxxv (1959); idem, *Les inscriptions inconnues sur pierres de Khoumara (au Caucase du Nord) et le problem de l'alphabet runique des Turcs Occidentaux*, in *Acta Orientalia Hungarica*, xv (1962); Gy. Németh, *The Runiform Inscriptions from Nagy-Szent-Miklós and the Runiform Scripts of Eastern Europe*, in *Acta Linguistica*, xxi (1971).

In addition to some of the works cited in the text, there is a relatively large body of literature dealing with the history of the peoples and cultures of the Eurasian steppes which has a bearing on a number of problems of Khazar studies. The following is by no means exhaustive, but should provide a good guide to the study of the area as a whole: N. I. Ashmarin, *Bolgarî i Čuvashi* ("The Bulgars and the Chuvash"), Kazan' 1902; Z. Gombocz, *Die Bulgarisch-Türkischen Lehnwörter in der ungarischen Sprache*, in *Mémoires de la Société Finno-Ougrienne*, xxx (1912) (extremely important); J. Marquart, *Über das Volkstum der Komanen*, in W. Bang and J. Marquart, *Osttürkische Dialektstudien*, which appeared in the *Âbh. der Königl. Gesell. der Wiss. zu Göttingen* (Phil.-hist. Kl.), N.F., xiii (1914); Z. Gombocz, *Arpádkori török személyneveink* ("Our Turkic Personal names of the Árpád Period"), in *Magyar Nyelv*, xi (1915); I. Berlin, *Istoričeskie sud'bî evreyskago naroda na territorii russkago gosudarstva* ("The historical Fate of the Jewish People in the Territory of the Russian State"), Petrograd 1920; V. V. Bartol'd (Barthold), *Mesto prikaspiyskikh oblastey v istorii musul'manskogo mira* ("The Place of the Caspian Region in the History of the Muslim World"), first appeared in Baku 1925, now republished in V. V. Bartol'd, *Sočineniya* ("Works"), ii/1, Moscow 1963; J. Moravcsik, *Zur Geschichte der Onoguren*, in *Ungarische Jahrbücher* x (1930) (important); C. A. Macartney, *The Magyars in the Ninth Century*, Cambridge 1930 (useful); F. László, *A kagán és családja* ("The Ḳaghan and his Family"), in *Kőrösi Csoma Archivum*, iii (1940) (important for understanding of the structure of Turkic states); P. Pelliot, *Quelques noms turcs d'hommes et de peuples finissant en -ar*, in *Œuvres Posthumes*, ii, Paris 1949; O. Pritsak, *Stammesnamen und Titulaturen der Altaischen Völker*, in *Ural-Altaische Jahrbücher*, xxiv (1952) (very important); H. W. Haussig, *Theophylakts Exkurs über dir Skythischen Völker*, in *Byzantion*, xxiii (1953); G. Vernadsky, M. de Ferdinandy, *Studien zur ungarischen Frühgeschichte*, Munich 1957; G. Fehér, *Zur Geschichte der Steppenvölker von Südrussland 9-10 Jhr.*, in *Studia Slavia*, v (1959); K. V. Trever, *Ocerki po istorii i kul'ture kavkazskoy Albanii* ("Essays on the History and Culture of Caucasian Albania"), Moscow-Leningrad 1959; B. A. Vasil'ev, *Problema burtasov i mordva* ("The Problem of the Burtas and the Mordva"), in *Voprosî etničeskoy istorii mordovskogo naroda, Trudî instituta etnografii* ("Questions of the Ethnic History of the Mordvin people, Works of the Institute of Ethnography"), lxiii (1960); A. P. Smirnov, *Železniy vek čuvashskogo povolž'ya*, in *Materialî i Issledovaniya po Arkheologii SSSR* ("The Iron Age in the Chuvash Volga region, Materials and Researches on the Archaeology of the USSR"), xcv (1961); B. Ögel, *Islâmiyetten önce Türk kültür tarihi*, Ankara 1962 (useful survey of the archaeological material); V. F. Gening, A. Kh. Khalikov, *Rannie bolgarî na Volge* ("The Early Bulgars on the Volga"), Moscow 1964 (important); G. Doerfer, *Türkische und Mongolische Elemente im Neupersischen*, ii, Wiesbaden 1965 (important study, contains detailed discussion of a number of Khazar words that appear in Persian sources); T. Halasi-Kun, *The Caucasus, an Ethno-Linguistic Survey*, in *Studia Caucasica*, i (1967); L. N. Gumilyov, *Drevnie Tyurki* ("The Ancient Türks"), Moscow 1967 (useful, but often fanciful study); Gy. Németh, *A Baskir földi magyar öshazáról* ("On the Ancient Hungarian Homeland in the Bashkir Country"), in *Élet és Tudomány*, xiii (1966) (brief, but very important); I. Boba, *Nomads, Northmen and Slavs*, The Hague-Wiesbaden 1967 (important, iconoclastic, but not always convincing); J. Wiesner, J. V. Farkas *et al.*, *Die Kulturen der eurasischen Völker*, Frankfurt-am-Main 1968; A. Kollautz, H. Miyakawa, *Geschichte und Kultur eines völkerwanderungszeitlichen Nomadenvolkes (Die Jou-jan der Mongolei und die Awaren in Mitteleuropa)*, Klagenfurt 1970 (important); A. N. Kurat, *IV-XVIII yüzyıllarda karadeniz kuzeyindeki Türk kavimleri ve devletleri*, Ankara 1972 (brief, not always critical).

(W. Barthold — P. B. Golden)

KHĀZIN (a.), usual pl. *khuzzān* (the pl. *khazana* is found in the Ḳur'ān in XXXIX, 71, 73, etc. for the angels who guard Paradise and Hell), literally, "he who keeps safe, stores something away", a term of mediaeval Islamic administration for certain members of the financial departments (on which see bayt al-māl and, for Ottoman times, also khazîne) and also of the chancery. It was used in ʿAbbāsid times, for there was prominent in the early 4th/10th century Mu'nis al-Khāzin (so-called in the sources to distinguish him from the commander of the guard Mu'nis al-Muẓaffar [*q.v.*], an associate of the vizier Ibn al-Furāt's in a kind of regency council, *al-sādāt*, set up when al-Muḳtadir regained the throne in 296/908 after the failure of Ibn al-Muʿtazzi's putsch; Sourdel has suggested that Mu'nis may have been the treasurer of the personal revenues (*māl al-khaṣṣ*) of the caliph (*Le vizirat ʿabbāside*, ii, 387-8, 742). But the term *khāzin* could equally be used at this time for quite menial and lowly members of the caliphal household; in his detailing of the budget for 306/918-19, Hilāl al-Ṣābi' enumerates the wages of such servants as those who kept the stores of bedding (*khuzzān al-farash*) and the one who kept the supply of candles (*khāzin al-shamʿ*), these being classed with the attendants of the private chambers and the audience hall, the porters, etc. (*Wuzarā'*, ed. ʿAbd al-Sattār Farādj, Cairo 1958, 23).

We have some information from treatises on finance and administration in Egypt about the term's usage there under the Fāṭimids, Ayyūbids and Mamlūks. According to Ibn al-Mammātī (d. 606/1209 [*q.v.*]), the *khāzin* was a secretary in the *Dīwān al-Māl* who collected the taxes paid in kind (*ghallāt*) and stored them in the state granaries and warehouses, giving out receipts (*barā'āt* [see barā'a.

i]) for these, and also securing the repayment (*murtadji*ʿ) of advances to the cultivators of seed (*taḳāwī*); he kept an inventory of the holdings, for which he was strictly accountable, and then issued the produce when required (A.S. Cooper, *Ibn Mammati's rules for the ministries: translation with commentary of* Qawanin al-Dawawin, Univ. of California, Berkeley, Ph.D. thesis 1973, unpublished, 238, 244; Cl. Cahen, *Contribution à l'étude des impôts dans L'Égypte médiévale*, in *JESHO*, v (1962), 269-70 (citing Makhzūmī); Hassanein Rabie, *The financial system of Egypt, A.H. 564-741/A.D. 1169-1341*, London 1972, 160-1). An extension of this function of storekeeper is that of keeper of books or librarian (*khāzin al-kutub*), whose duties included the careful guarding of books and their issue only against pledges of the equivalent value (Subkī, *Muʿid al-niʿam wa-mubīd al-niḳam*, ed. Muḥ. ʿAli al-Nadjdjār *et alii*, Cairo 1367/ 1948, 111, and see further, KHIZĀNA).

However, the term was also used simultaneously in Egyptian administration for an official in the chancery or *Dīwān al-Inshā*ʾ who acted as registry clerk and archivist in the department. According to the *Ḳānūn dīwān al-rasāʾil* of Ibn al-Ṣayrafī (died 542/1147 [*q.v.*]), the head of the *Dīwān* had under him seven secretaries for various specialist jobs plus two non-specialists, the *khāzin* and the *ḥādjib* or doorkeeper of the office. Whilst not required to possess the encyclopaedic knowledge of *adab* and of administrative procedures required of the *kātib*, the *khāzin* had to be a man of intelligence and the highest probity, for he kept the record of all incoming and outgoing chancery documents, placing copies of all letters sent out plus the originals of those received in a file or portfolio (*iḍbāra*, pl. *aḍābīr*) for each separate month. Hence if he was susceptible to corruption, he coud easily abstract confidential documents, and Ibn al-Ṣayrafī accordingly states that "the guiding reins of the whole *dīwān* are in his hands" (cited in Ḳalḳashandī, *Ṣubḥ al-aʿshā*, i, 135-6, cf. W. Björkman, *Beiträge zur Geschichte der Staatskanzlei im islamischen Ägypten*, Hamburg 1928, 22, 39, 89).

Bibliography: Given in the article.

(C. E. BOSWORTH)

AL-**KHĀZIN**, ABŪ DJAʿFAR MUḤAMMAD B. MUḤAMMAD B. AL-ḤUSAYN AL-KHURĀSĀNĪ, astronomer and mathematician, originally from Khurāsān (not to be confused with al-Khāzinī [*q.v.*]). He was a protégé of Abu 'l-Faḍl Ibn al-ʿAmīd (d. 359/ 969-70), minister in Rayy of the Buwayhid Rukn al-Dawla (326-66/937-76), and died between 350/961 and 360/971.

Amongst his purely mathematical works, the *Fihrist*, 282, ed. Cairo 393, and Ibn al-Ḳifṭī, 396, ed. Cairo 259, cite a *Kitāb al-Masāʾil al-ʿadadiyya* (now lost), whilst Naṣīr al-Dīn al-Ṭūsī, *K. Shakl al-ḳaṭṭā*ʾ Istanbul 1891, 148-51, mentions the *Maṭālib djuzʾiyya, mayl al-muyūl al-djuzʾiyya wa 'l-maṭāliʿ fi 'l-kūra al-mustaḳīma*, which contained a demonstration of the theorem of the sine for right-angled spherical triangles. According to the *Fihrist*, 266, ed. Cairo 371, he wrote a commentary on the *Elements* of Euclid, but the only part of this which survives, in several manuscripts, is the commentary on the opening of Book X. Abū Naṣr Manṣūr, *Risāla fī taṣḥīḥ ma waḳaʿa li-Abī Djaʿfar al-Khāzin min al-sahw fī zīdj al-ṣafāʾiḥ*, in *Rasāʾil Abī Naṣr ilā 'l-Bīrūnī*, Hyderabad 1948, 3, speaks of "his book on the *Elements* of geometry", and we know that he set forth a defective proof of the fifth postulate of Euclid; ms. 1014 Leiden contains the reply of Abu 'l-Djūd Muḥammad b. al-Layth to a geometrical problem set out by al-Khāzin. Moreover, it was possibly our al-Khāzin who demonstrated, with a method closely connected with Hero's procedure in his *Dioptra*, the formula of this latter author for finding out the surface of a triangle as a function of its sides. By using conic sections, he resolved the so-called equation of al-Māhānī ($x^3 + a^2b = c\,x^2$).

One of his best-known atronomical works is the *Zīdj al-ṣafāʾiḥ* (table of the plates of the astrolabe?), which he wrote for Ibn al-ʿAmīd (al-Bīrūnī, *Taḥdīd nihāyat al-amākin*, in *RIMA*, viii (1962), 119-20); two brief chapters concerning astronomical instruments in ms. Berlin 5857 may conceivably belong to this work, which Ibn al-Ḳifṭī considered as the finest and most splendid on the subject. According to al-Bīrūnī, *Āthār*, 326, in this work the author adequately sets forth the theory of the trepidation of the equinoxes along an 8° arc. The same author, in an obscure passage of the *Tamhīd al-mustaḳarr li-taḥḳīḳ maʿnā 'l-mamarr* when he deals with the question of the transit in depth (comparison of the vector radii of two consecutive planets, each in relationship to its own maximum and minimum distance), states that al-Khāzinī dealt correctly with the problem in his *Zīdj al-ṣafāʾiḥ*, although he was mistaken in another, unspecified work; he also sets forth the criticisms levelled by al-Khāzin against Abū Maʿshar on this topic (*On transits*, tr. M. Saffouri and A. Ifram, comm. by E. S. Kennedy, Beirut 1959, 85-7, 172). Abu 'l-Djūd Muḥammad b. al-Layth reproduces (ms. Leiden Or. 168 (4)) al-Khāzin's assertion in the *zīdj al-ṣafāʾiḥ* rhat he could calculate the chord of an angle of 1° provided that it were possible to trisect the angle. Abū Naṣr Manṣūr devotes the *risāla* mentioned above to the correction of certain errors made by al-Khāzin in this work. It can accordingly be deduced that the *Zīdj al-ṣafāʾiḥ* included at least two *maḳāla*s, together with a third one in which the author dealt with the following topics: a method for determining the ascendant, when the degree of the "midpoint of the heavens" was known but the oblique ascension was unknown (*R. fī taṣḥīḥ...*, 4-14); the way of determining the meridian when the degree of the sun is known (15-33); the determining of the azimut of the *ḳibla* "by means of the instrument" (*bi 'l-āla* = astrolabe?, 33-9); the movement of the apogees (39-42); and in a spherical triangle, if the sides are known, the angles are also known, and vice-versa. This last topic was one of those about which he corresponded with Ibrāhīm b. Sinān (42-9).

Al-Khāzin also wrote a commentary on the *Almagest* in which he gave information about the value of the obliquity of the ecliptic (23°35′) obtained by the Banū Mūsā at Baghdād in 254/868 (al-Bīrūnī, *Taḥdīd*, 95), and also about the observations, likewise made at Baghdād in the year 212 of the Yazdigirdī era/844 A.D. by Khālid al-Marwarrūdhī, ʿAlī b. ʿIsā al-Ḥarrānī and Sanad b. ʿAlī, in the course of which the length of the spring and summer was determined (al-Bīrūnī, *al-Ḳānūn al-masʿūdī*, Hyderabad 1954, ii, 653; on this work, see also al-Ṭūsī, *Shakl al-ḳaṭṭā*ʾ, 123). In another work, now lost and which had the title *Sirr al-ʿālamīn*, al-Khāzin probably set forth his theory according to which the heavenly spheres are solid, and developed the earlier ideas of Ptolemy's *Planetary hypotheses*; this latter theory was later set forth by Ibn al-Haytham and al-Kharaḳī [*qq.v.*]. Al-Khāzin was furthermore the author of a *al-Madkhal al-kabīr ilā ʿilm al-nudjūm*,

in which were set forth two methods of determining the *ʿalāmat Muḥarram* (sc. the day of the week corresponding to the 1st Muḥarram in any given year, cf. al-Bīrūnī, *Āthār*, 202-3). In an unspecified work, he tried to pin down exactly the date of the Jewish Passover in the year of Jesus's crucifixion (idem, *Ḳānūn*, i, 332). Finally, we know that in a *Kitāb fī 'l-abʿād wa 'l-adjrām*, he gave the diameters of stars between the first and the sixth magnitudes, but without specifying whether these calculations were his own personal ones or how he had arrived at then (*ibid.*, iii, 1312).

Al-Khāzin seems to have been an astronomer who made practical observations. He is associated with one or more determinations of the obliquity of the ecliptic; according to al-Bīrūnī, *Taḥdīd*, 98, he was present when Abu 'l-Faḍl al-Harawī made his observations in 348/959, which gave the value $\varepsilon = 23°40'$. ʿAlī b. Aḥmad al-Nasawī also speaks of the determining of ε made by al-Khāzin and a certain number of colleagues, by means of a circle *ca.* 4 m. (in diameter?), but does not mention any date or place; according to yet another source, al-Khāzin measured ε at Edessa in 359/970. At all events, al-Khāzin and Ibrāhīm b. Sinān were both advocates of the idea of a progressive diminution of the obliquity of the ecliptic caused by the movement of its poles round "a point" (al-Bīrūnī, *Taḥdīd*, 101). It is also of interest to mention that according to al-Bīrūnī, *Āthar*, 258-9, *Taḥdīd*, 57-8, and *Ḳānūn*, 630-2, al-Khāzin wrote a *maḳāla* in which he put forward the idea of a solar model different from that of Ptolemy, and without having recourse to eccentrics or epicycles: viz., the sun goes round the centre of the universe in a path which is circular but moving with irregular speed, and a point situated on the line of the apsides and different from the centre of the universe is the centre of the uniform movement of the sun. This system finds its justification in the fact that, according to al-Khāzin, Ptolemy failed to observe any change in the apparent diameter of the sun in the course of the year. The same system was set forth by Henry of Hesse (1325-97) in his *De reprobatione ecentricorum et epiciclorum* (cf. Claudia Kren, in *Isis*, lix (1968), 269-81), but it is not easy to see any possible connection between the two authors. Finally, one may note that Ibn Khaldūn in his *Prolegomena*, tr. de Slane, i, 111, tr. Rosenthal, i, 115, tr. Monteil, i, 114, gives al-Khāzin's determination of the latitudes corresponding to the seven climates.

KHAZÎNE (a. *Khazīna*), state treasury.

In Turkish, the word *khazīne* acquired a meaning close to this at least in the 7th/13th century (*Taniklarile tarama sözlüğü*, Ankara 1967, iii, 1907) and it was widely used from the 9th/15th century onwards to mean "a place where official and/or private money, jewels and various valuables were kept" (Muṣṭafā ʿAlī, *Mewāʾid ül-nefāʾis fī ḳawāʾid ül-medjālis*, Istanbul 1956, 117; Ö. L. Barkan, *Osmanlı imperatorluğunda ziraî ekonominin hukuki ve mali esasları*, i, *Kanunlar*, Istanbul 1943, 370). The word in popular usage gradually took the form of *khazne*, and came to be used as a place for storing any kind of goods or for storing water (Aḥmed Wefīḳ, *Lehdje-i ʿOthmānī*, Istanbul 1293, i, 547).

In Ottoman government organisation, the *khazīne* was the place where the state's cash and resources were kept; hence there could be only one *khazīne* in existence at the time the state organisation first developed. However, at a later stage of development, there were two treasuries, an inner (*enderūn*) treasury and an outer (*bīrūn, tashna*) treasury. The inner treasury was kept in the Harem section of the Palace, and was a reserve treasury; it was guarded by the Treasury Wardens (*khazīne ḳoghusu*) inaugurated by Sultan Meḥemmed Fātiḥ and comprised at that time three officers (Aḥmed Refīḳ, *Fātiḥ devrine ʿāʾid wethīḳalar*, in *TOEM* (1339), 5); their number was increased to sixty at the end of the 10th/16th century. Both the inner and the outer treasuries were maintained by the body of treasurers, who were directed by a Head Treasurer (*Bash Khazīnedār*). Between the years 933-4/1527-8 there were 10 officers, including the Head Treasurer, working in the inner treasury, and 9 people, including the head treasurer, employed in the outer treasury (Ö. L. Barkan, *H.933-934 (M. 1527-1528) mali yılına ait bütče örneği*, in *İktisat Fakültesi Mecmuası*, xv (Istanbul 1956), 309, 322). In the official and other documents of this time the term *khazīne-i ʿāmire* denoted the principal, *i.e.* outer, state treasury (Barkan, *Kanunlar*, 359-61, 363, 399).

The Inner Treasury was located near the guard room in the palace; during the middle years of the 11th/17th century it was managed by a group of about 110 officials, with a Head Treasurer and a Superintendent of the Treasury (*Khazīnedār ketkhüdası*) as his assistant (Hezārfen Hüseyin Čelebi, *Telkhīṣ al-beyān fī Ḳawānin-i Āl-i ʿOthmān*, ms. Bibliothèque Nationale, f. 18 b). In 1185/1772 there were 157 people with a Head Treasurer and an assistant Superintendent of the Treasury at their head (İsmail Hakkı Uzunçarşılı, *Osmanlı devletinin saray teşkilâtı*, Ankara 1945, 316), whereas at the end of the 12th/18th century the Treasury was supervised by the Superintendent of the Treasury, with the head clerk of the Treasury under him; the seal of the Treasury was kept by the Superintendent of the Treasury and its key with the head clerk. When it was required to extract something from the Treasury, the Sultan's permission was obtained and it was opened in the presence of a number of clerks, the operation being registered on the spot and an entry being made in the main register. The officials working in the Treasury were under strict control, and could not fill their own pockets while working.

Thus at this time the supervision of the Treasury was done by the Superintendent and the *aghas* of the Treasury, whilst the requisitions upon and the stocks contained in the Treasury were recorded by the clerks of the Treasury (*Taʾrīkh-i ʿAṭāʾ*, i, 198, 199; for the stocks and a description of the Inner Treasury, see J. B. Tavernier, *Nouvelle Relation de l'Intérieur Sérail du Grand Seigneur*, Paris 1675, 109 ff.). After an Ottoman sultan came to the throne, he would go to the Treasury and inspect the deposits personally. This was an important ceremony, in which the interior palace personnel would take part, and the head clerk of the Treasury would present a register, showing details of the Treasury deposits, to the sultan before he entered the Treasury (Čelebizāde ʿĀṣim, *Dhayl-i Rāshid*, Istanbul 1282, 19; *Taʾrīkh-i ʿAṭā*, i, 254-6).

The Outer Treasury was under the management of the Head Treasurer, as a member of the Exchequer or *Khazīne-yi ʿĀmire*, who was directly responsible to the *Defterdār* or Minister of Finance. The actual expenditure of the State was made from this Treasury. In 933-4/1527-8 there were in the *Khazīne-yi ʿĀmire* 9 treasurers, under the *Defterdār*, 32 clerk and 23 apprentices, comprising respectively the *djamāʾat-i kātibān-i Khazīne-yi ʿāmire* and the *djamāʿat-i shāgirdān-i Khazīne-yi ʿāmire*, and who were attached to the various offices, such as those of the *rūznāmedji* (the office in charge of financial transactions), the accounts office of Rumelia and that of Anatolia, etc. (Barkan, *op. cit.*, 324-6). In 975/1567-8 the clerks of the Exchequer numbered 30 (Barkan, *H. 954-955 (M. 1547-1548) mali yılına ait bir osmanlı bütčesi*, in *İktisat Fakültesi Mecmuası*, xix (Istanbul 1960), 330). However, not all of the state's wealth in cash was in the Treasury; for example the records of the 955/1548 budget show that the cash amounted to 36,021,027 *aḳčes*, of which 25,021,027 *aḳčes* were kept in the Treasury, and 11,000,000 *aḳčes* were kept in the cellars of Yedikule; the silver and gold coins were mostly in purses, and other things were kept loose (Barkan, *ibid.*, 235); for the stocks of the Treasury in 975/1567-8, see 291). From the end of the 10th/16th century onwards, it became difficult for the Exchequer or *Khazīne-yi ʿāmire*, that is the Exterior Treasury, to meet expenses, and it was therefore strengthened by transfers from the Inner Treasury. Such situations occurred at the time of military campaigns, and a memorandum was drawn up during the reign of Meḥemmed III (1003-12/1595-1603) showing that the practice of reinforcing the Outer Treasury from the Inner Treasury when there was difficulty in paying the troops dated from the time of Süleymān the Magnificent. However, Meḥemmed III came strongly to criticise his *Defterdār*, because there was not only cash being paid out from the Outer Treasury, but also, as was the case with the Inner Treasury the money intended for presents, such as robes of honour and ceremonial swords; these latter were if necessary also taken from the Inner Treasury (Orhonlu, *Osmanlı tarihine ait belgeler; Telhisler (1597-1607)*, Istanbul 1970, 33-4, 109). These financial subsidies from the Inner to the Outer Treasury at times of crisis had to be returned later. In actual fact, the Inner Treasury had come into existence from the surplus of the Outer Treasury; in other words, the surplus income of the Outer Treasury was placed in reserve as an income from the Inner Treasury, and it was in turn obliged to meet the expenses of the Outer Treasury. For instance, the surplus of the annual income from Egypt formed the income of the Inner Treasury; likewise when there was surplus money in the Outer Treasury, it was transferred to the Inner Treasury in order to prevent excessive expenditure. The other sources for the income of the Inner Treasury came from the customs of Baghdād and the estates of those dying without heirs. (Rāshid, *Taʾrīkh*, Istanbul 1282, i, 359-60; Fīndīklīlī Meḥmed Agha, *Silaḥdār Taʾrīkhi*, ed. Aḥmed Refīḳ, Istanbul 1928, ii, 306; *Taʾrīkhi Sāmī Shākir Ṣubḥī*, Istanbul 1198, 43a; also see Halil Sahillioğlu, Siviş *year crises in the Ottoman Empire*, in *Studies in the economic history of the Middle East*, ed. M. A. Cook, London 1970, 242 ff.).

The annual income of a province sent to the capital was also called *Khazīne*. For example, the money sent from Egypt was called the *Irsāliyye Khazīnesi* or Forwarding Treasury (see S. J. Shaw, *The Budget of Ottoman Egypt 1005-1006/1596-1597*, 1968, 13-14). The various provinces of Rumelia and Anatolia also sent the surplus of local income to the capital, and the amount sent was termed *Khazīne*, such as the Treasury of Baghdād, the Treasury of Erzurum, etc. However, when the budget of a province was overstrained by political disturbance or war, with more troops under arms than the province could support, the deficit would be met by a supplementary *Khazīne* sent out from Istanbul or from the neighbouring provinces (Sahillioğlu, *Osmanlı idaresinde Kıbrıs'ın ilk yılı bütçesi*, in *TTK, Belgeler*, iv (Ankara 1969), 2-4; for the subsidies sent from Istanbul to certain provinces, and from the provinces to Istanbul in 1213/1798, see Halis Cinlioğlu, *Osmanlılar zamanında Tokat*, Tokat 1951, 16). Moreover, the taxes collected in a province were also called a "treasury"; at the same time, the financial office which assumed the responsibility for this was termed "the provincial treasury" (*wilāyet khazīnesi*). The use of the word "treasury" in this way indicates that it was used as the equivalent of "finance" in general or of the financial department (*defterdārlīḳ*). For example, tax policy in Aleppo was determined according to the registers kept in "the treasury of Aleppo", that is, in the finance office (Barkan, *Kanunlar*, 142, 209).

The money brought to the *Khazīne-i ʿāmire* was examined by the official in charge of weighing and assaying (*wezzān, weznedār*), who decided whether there was any spurious coinage and whether the total was correct. The money put into or taken out of the treasury was registered and recorded by the clerks sitting in a row behind the *defterdārs*, and at their side were the weighers and assayers, who would count and fix the value of the money. The equipment of the latter included braziers and an iron oven, as well as scales and balances. After being weighed, the money would be put into bags and these bags would be taken to the treasury which was beside the assembling room before the *Dīwān-ī Humāyūn* (J. Chesneau, *Le Voyage de Monsieur d'Araman*, ed. Ch. Schefer, Paris 1887, 237-8; Uzunçarşılı, *Osmanlı devletinin merkez ve bahriye teşkilâtı*, Ankara 1948, 369-70).

The word "treasury" gradually came to be used from the end of the 10th/16th century onwards with a more diffused meaning in Ottoman usage. Thus the collected monies set apart for the supplying of a fortress garrison (*e.g.* that of Egri in 1011/1602) was called a "treasury" (see Orhonlu, *op. cit.*, 39-41, 43, 52). In time of war, the money required for every kind of the soldiers' needs, and the state treasury containing the treasury registers were sent along with the army under the title of the "army treasury" (*Ordu Khazīnesi*). The army treasury was transported

in chests on camels, and was kept under the guard of Janissary cavalrymen in the Treasury tent at halting places. It was therefore necessary that the *defterdārs* should accompany the Sultan and the Grand Vizier on campaigns, taking with them the treasury registers in order to record the daily expenditure in detail. The treasury registers, together with the army treasury, were kept in the Treasury tent (Ferīdūn Bey, *Münshe'āt al-selāṭīn*, Istanbul 1274, i, 589-90; Naʿīmā, *Ta'rīkh*, Istanbul 1280, i, 94; cf. Fīndīklīlī Meḥmed Agha, *Nuṣret-nāme*, simplified version by İsmet Parmaksızoğlu, Istanbul 1962-4, i, 171, 281, 294, 299-300). In order to give an idea of the size of the army treasury, one may note that there were 26 trains of camels assigned to carry the treasury for the army commanded by the Vizier Lālā Muṣṭafā Pasha during the Persian campaign of 986/1578 (Başbakanlık Arşiv Genel Müdürlüğü, Kâmil Kepeci tasnifi, Ruus defteri, no 232, p. 397).

The Interior Treasury was still richer in money and goods than the *Khazīne-i ʿĀmire* at the end of the 12th/18th century. Even at this period, there was very little aid given from the inner treasury to the *Khazīne-i ʿĀmire* or Outer Treasury, except in time of wars and financial crises. Nevertheless, these subsidies were credits and were returnable, as was the case in earlier times. In times of crisis, confiscation was often resorted to whenever the state treasury was in financial straits; these confiscations were usually of the wealth of officials, see Cavid Baysun, *İA*, art. *Müsadere*.

The losses of territory by the state during the various wars necessitated a reorganisation of the inner and outer treasuries. The need to find a new source of income led to the foundation of the "new receipts treasury", *īrād-i djedīd khazīnesi*. Some sources of income were assigned to the new treasury, and whenever there was an annual surplus of more than 10 purses from the income of the state lands and the Ḥaramayn, it was also transferred to this treasury. The "new receipts treasury" consequently grew richer than the state treasury, which was deprived of some of its income, so that further reorganisation became necessary (Djewdet, *Ta'rīkh*, Istanbul 1309, vi, 272-3; ʿĀṣīm, *Ta'rīkh*, ii, 356). The "new receipts treasury" continued its existence, despite its ups and downs, during the reign of Selīm III (see Enver Ziya Karal, *III. Selimin Hatt-ı Humayunları*, Ankara 1946, 89, 92-3), but it was abolished after he was deposed (Başbakanlık Arşiv Genel Müdürlüğü, Hattı Humayun Vesikaları, no. 19418). As a result, part of the "new receipts treasury" 's income was stopped and the rest transferred to the treasury of the mint, the *ḍarbkhāne-yi ʿāmire khazīnesi*, which was a branch of the inner treasury. Thus state expenditure was met, as before, from the state treasury, and the surplus income was transferred to the inner treasury, the latter once more serving as a reserve treasury giving subsidies to the outer treasury in times of war or crisis. In the 19th century, changes began to be made in the Ottoman financial system. From 1820 onwards, about 15 of the Anatolian *sandjaḳ*s began to be governed by lieutenant-governors or *mütesellim*s, without the appointment of provincial governors or *wālī*s, and of *mutaṣarrīf*s in the *sandjaḳ*s, and the income assigned to the *wālī*s and *mutaṣarrīf*s was registered as income to the *muḳāṭaʿa* treasury, which was the treasury for the *niẓāmiyye* or new army. After the abolition of the Janissary corps and the *tīmār* system, the financial department was in 1834 divided into two, the *khazīne-yi ʿāmire*, and the *manṣūra khazīnesi*, which supervised the income and expenditure of the Imperial army (*mühimme-yi ʿaskeriyye*). At the death of Maḥmūd II in 1255/1839, there were the *khazīne-yi ʿāmire* and exchequers for the *muḳāṭaʿa*, the munitions manufacture (*bārūd-khāne*) the *awḳāf*, the *Ḥaramayn* and the *ẓahīre* in existence. With the establishment of separate ministries and government offices, it appears that branches of the treasury such as the dockyard, the arsenal, the kitchen, the *ẓahīre* and the *Ḥaramayn* acquired a more definite shape. Each one of these branches of the treasury had an *emīn* or superintendent, and a treasury assistant (*ketkhüdā*) (Muṣṭafā Nūrī Pasha, *Netāyidj ül-wuḳūʿāt*, Istanbul 1329, iv, 114-5, 118).

Formerly there was a special imperial treasury (*djeyb-i humāyūn khazīnesi*) for the private expenditure of the sovereign, and then in 1839 the office of the Sultan's privy purse (*Khazīne-yi khāṣṣa dā'iresi*), in charge of the palace income and expenditure, was established. Because the property owned by the ruler was at this time all transferred to the state treasury, this office, which was made into a ministry, looked after the part of the estates and property left to the sovereign on condition of paying tax. The ministry of the *Khazīne-yi Khāṣṣa* continued in existence until 1908.

The Ministry of Finance was founded on 28th February 1838 and the financial matters, which were then in chaos, were more centralised. During the first months of ʿAbd al-Medjīd's reign, the Finance Ministry was abolished and divided into the financial department of the exchequer (*neẓāret-i khazīne-yi ʿāmire defterdārlighī*) and that of the *muḳāṭaʿa* treasury, but the Ministry of Finance was re-established in 1840 (Meḥmed Thüriyyā, *Nukhbet ül-weḳāyiʿ*, Istanbul 1298, i, 48-9, 63, 72).

In 1871 it was decided to divide the ongoing expenditure into two headings for the annual budget (*devletiñ muwāzane defteri*), the first was for specified and private expenditure for every government office, and the other was for the general expenditure incurred in the Ministry of Finance. For the first heading, there were included the Sultan's privy purse, the military treasury, the treasury of the dockyards for naval expenditure, the appropriation for the salaries of judges and *Sharīʿa* matters, the *awḳāf* treasury, the appropriation for internal domestic affairs, the appropriation for foreign affairs, the financial appropriation for the finance organisation abroad, the appropriation for trade and public works, and the appropriation for public education. Apart from the privy purse treasury or *khazīne-yi khāṣṣa*, every ministry and office was required to submit a register in the following year showing its annual expenditure and the payments for unexpected outlays which had been taken from the financial treasury (*māliyye khazīnesi*) for details, see *Dustūr*, 1st Series, Istanbul 1289), ii, 70 ff.); the provinces were also to submit a budget and send the registers of balance, which they had pepared, to the financial treasury.

See also K̲h̲ıḍır Ilyās, *Leṭā'if-i Enderūn*, Istanbul 1276; the author was educated in the palace and worked in the treasury, and in his book mentions occasionally the workings of the *enderūn* treasury during the period 1812-30. (C. Orhonlu)

al-K̲H̲ĀZINĪ, Abu 'l-Fatḥ ʿAbd al-Raḥmān (or Abū Manṣūr ʿAbd al-Raḥmān or Abū ʿAbd al-Raḥmān Manṣūr), astronomer and physician who lived in Persia at the opening of the 6th/12th century. He is occasionally confused with Ibn al-Hayt̲h̲am, al-K̲h̲āzinī and other authors bearing similar names and writing on the same topics. He was in origin a young Greek slave of ʿAlī b. Muḥammad, treasurer of the court in Marw; his master took it upon himself to give him the best possible education, but we have virtually no biographical details, and we merely know that he was a man of austere morality, that he had some pupils and that he enjoyed the patronage of the Sald̲j̲ūḳ sultan Sand̲j̲ar b. Malik-S̲h̲āh (511-52/1117-57).

He wrote the following works: (1) *al-Zīd̲j̲ al-muʿtabar al-sand̲j̲ari al-sulṭānī*, astronomical tables dedicated to Sand̲j̲ar and based on his personal observations, of which he made a résumé in 525/1130. These were utilised, either directly or indirectly, by the Byzantine scholars George Chrysococces (in Trebizond, *ca.* 1335-46) and Theodore Meliteniotes (in Constantinople, *ca.* 1360-88). In the contents of these works one always finds the ephemerides of the pseudo-planet Kayd. (2) *Risāla fī 'l-ālāt* (or *al-ālāt al-ʿad̲j̲ība al-raṣadiyya*) on astronomical instruments. (3) *K. Mīzān al-ḥikma*, written in 515/1121. This is a basic work on the hydrostatic balance, whose varieties are classified here according to the number of scales or pans; there is a defective but useful edition of Hyderabad 1359/1940. It comprises eight discourses (*maḳālas*) divided into chapters (*bābs*) and subdivided into sections (*faṣls*), and contains a series of theorems deriving from the classic works of Archimedes, Euclid and Menelaus; it describes the areometer of Pappus; it uses frequently the works of Muslim predecessors like T̲h̲ābit b. Ḳurra, Abū Sahl al-Ḳūhī, al-Asfizārī, al-Rāzī, ʿUmar K̲h̲ayyām, and above all, al-Bīrūnī, whose picnometer it describes; it touches upon traditional problems, like the determining of the law of alloys or the well-known one of the chess-board (calculation of a geometrical progression); and it explains the use of proportions and above all describes al-K̲h̲āzinī's hydrostatic balance [see mīzān] which was superior in its accuracy to all those constructed by his predecessors. The concept of weight which emerges from his work stems clearly from Archimedes, and according to his definition (1, l. 1) it is the force inherent in solid bodies which causes them to move, of their own accord, in a straight line towards the centre of the earth and towards this centre alone; this force, in turn, depends upon the density of the body. Al-K̲h̲āzinī also has some idea of the influence of temperature on density, and his tables of specific weights are in general correct.

Hall, in *Dictionary of scientific biography*, vii, New York 1973, 335-51, s.v. Amongst the works mentioned above, only the *Mīzān al-ḥikma* has been edited (Hyderabad 1359/1940 and Cairo 1947); see on it N. Khanikoff, *Analysis and extracts of* Kitāb mīzān al-ḥikma... *by al-Khāzinī in the twelfth century*, in *JAOS*, vi (1859), 1-128, and E. Wiedemann, *Aufsätze zur arabischen Wissenschaftsgeschichte*, Hildesheim 1970, indices. (J. Vernet)

al-K̲H̲ĀZIR, a right-bank affluent of the Greater Zāb river [see Zāb], which drains the *kūra* of Nak̲h̲la, to the east of Mawṣil; locally, it is called Barrīs̲h̲ū. It was on the banks of this river that there took place, on 10 Muḥarram 67/6 August 686, a decisive battle between Ibrāhīm b. Mālik al-As̲h̲tar [*q.v.*] and ʿUbayd Allāh b. Ziyād [*q.v.*]. After having suffered a defeat at ʿAyn Warda [*q.v.*], ʿUbayd Allāh made for ʿIrāḳ with his army, but was intercepted by the forces of Ibn al-As̲h̲tar, who was fighting in the name of al-Mūk̲h̲tār [*q.v.*]. According to tradition, ʿUmayr b. al-Ḥubāb al-Sulamī, who commanded the right (or left?) wing of Ibn Ziyad's army, wished to get vengeance for the defeat suffered at Mard̲j̲ Rāhiṭ [*q.v.*] by the tribes of Muḍar. Since he had formerly been Ibn al-As̲h̲tar's secretary, he met the latter secretly and betrayed his own leader. Thanks to this act of treachery, Ibn al-As̲h̲tar defeated Ibn Ziyād, who was killed in the fighting together with several other Syrian leading figures. Another battle of very minor importance took place at Maʿrūba on the banks of the K̲h̲āzir in 293/905-6, see Canard, *H'amdanides*, 342.

K̲H̲AZNADĀR, K̲H̲ĀZINDĀR, variants of *k̲h̲izānadār*, "Keeper of the treasury" in Mamlūk usage. It is a compound of Arabic *k̲h̲izāna*, meaning treasury, and Persian *dār*, meaning keeper; according to Ḳalḳas̲h̲andī (*Ṣubḥ*, v, 463) "fast-talking scribes" transferred the *alif* from the second to the first syllable and dropped the *tā' marbūṭa* from *k̲h̲izāna*, thereby producing *k̲h̲āzindār*, which is the form found most frequently in Mamlūk texts.

According to Ibn Tag̲h̲rībirdī (*Nud̲j̲ūm*, Cairo, vii, 183-4) the *k̲h̲izānadār* was one of several offices that Sultan Baybars al-Bunduḳdārī either introduced or transformed, assigning them to military personnel. In addition to the *k̲h̲āzindār*, these included the *dawādār*, *amīr āk̲h̲ūr*, *sarāk̲h̲ūr*, *suḳāt*, *d̲j̲āmadāriyya*, *ḥud̲j̲d̲j̲āb*, *ru'ūs al-nuwab*, *amīr silāḥ*, *amīr mad̲j̲lis* and *amīr s̲h̲ikār*. The context in which this passage occurs would suggest that Baybars made these innovations under the influence of Mongol practice. During the Fāṭimid period this official was called *ṣāḥib bayt al-māl*, according to Ḳalḳas̲h̲andī (iii, 481).

Although the term was used in Mamlūk times for any person who served as keeper of treasuries—to the caliph, for example, or to an *amīr*—it refers in par-

ticular to the officer who acted in this capacity for the Mamlūk sultan in Cairo. Originally the office was given to an *amīr* of forty, but later was upgraded and was filled by an *amīr* of one hundred. The office ranks as twelfth among the twenty-five positions listed by Ḳalḳashandī as reserved for military personnel in attendance on the sultan. Furthermore, the *khāzindār* was almost certainly overshadowed by the civilian *nāẓir al-khāṣṣ*, who, during his heyday in the Baḥrī period, often exercised almost complete control over the sultan's financial affairs. The primary duties of the *khazindār* were custodianship of the sultan's treasuries (cash and otherwise) and distribution of gifts on certain ceremonial occasions. These duties were at times divided among three keepers. The *khāzindār al-ṣinf* was responsible for the sultan's precious fabrics (brocades, embroideries, silks), gold saddlery, and furs; this official worked in conjunction with the *nāẓir al-khāṣṣ*. The *khāzindār al-ʿayn* had custody of the sultan's jewels; since these were kept in the harem, this functionary was a eunuch. The *khāzindār al-kīs* was responsible for distributing alms to the needy during royal processionals and to the sultan's guests on ceremonial occasions. In Damascus the viceroy appointed four eunuch *amīr*s as *khizāndāriyya*; they were responsible for the royal robes of honour and other gifts stored there.

In Ottoman Egypt, the *khazīnedār* was in charge of the Imperial Treasury, and variants of this title were given to similar officials elsewhere in the Ottoman empire. *Khazānadār* and *khazīnadār* were also used as titles for officials in India under the Dihlī sultans and the Mughals.

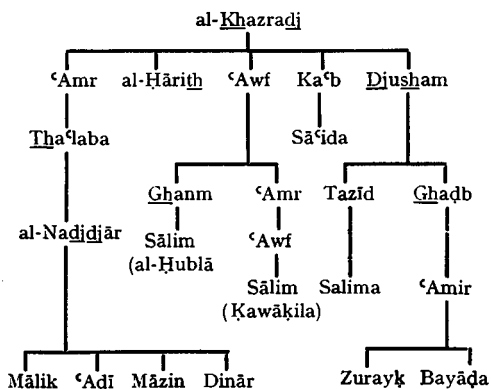
KHAZNADĀR, MUṢṬAFĀ [see MUṢṬAFĀ KHAZNADĀR].

AL-**KHAZRADJ**, one of the two main Arab tribes in Medina. With the other tribe, al-Aws [*q.v.*], it formed the Banū Ḳayla in pre-Islamic times and the Anṣār [*q.v.*] or "helpers" (sc. of Muḥammad) under Islam. The ancestors of al-Khazradj are given under al-Aws. The following are the main subdivisions of the tribe:

- al-Khazradj
  - ʿAmr
    - Thaʿlaba
      - al-Nadjdjār
        - Mālik
        - ʿAdī
        - Māzin
        - Dīnār
  - al-Ḥārith
  - ʿAwf
    - Ghanm
      - Sālim (al-Ḥublā
    - ʿAmr
      - ʿAwf
        - Sālim (Ḳawāḳila)
  - Kaʿb
    - Sāʿida
  - Djusham
    - Tazīd
      - Salima
    - Ghaḍb
      - ʿAmir
        - Zurayḳ
        - Bayāḍa


Al-Khazradj and al-Aws settled together in Yathrib or Medina after leaving the Yemen, and for a time were subordinate to the Jews there. The leader in gaining independence from the Jews was Mālik b. al-ʿAdjlān of the clan of Sālim (Ḳawāḳila) of al-Khazradj. It is doubtful, however, whether at this time al-Khazradj was thought of as a unity, for the effective units seem to have been certain subdivisions, which may be called "clans". It was groups of these which were involved in the feuds in Medina before the *hidjra*. In the Constitution of Medina (Ibn Hishām, 341-4) there is no mention of al-Khazradj but only of its five clans: al-Nadjdjār, al-Ḥārith, ʿAwf, Sāʿida and Djusham.

In the period before the *hidjra*, one of the prominent men among al-Khazradj was ʿAmr b. al-Nuʿmān of Bayāḍa. He gained some advantages over the neighbouring clan of Zurayḳ, and later appears to have been involved along with al-Ḥārith in fighting against some clans of al-Aws. Hostilities increased until about 617 there took place the battle of Buʿāth [*q.v.*] in which ʿAmr b. al-Nuʿmān with support from al-Nadjdjār and some nomads defeated various groups of Awsīs and others under Ḥuḍayr b. Simāk. Both leaders were killed. Two important Khazradjīs, ʿAbd Allāh b. Ubayy of B. al-Ḥublā and ʿAmr b. Djamūḥ of Salima, were neutral at this period. ʿAbd Allāh b. Ubayy [*q.v.*] hoped, before the coming of Muḥammad, that he might have become "king" of Medina.

The Khazradjīs seem to have been more numerous and more enthusiastic Muslims than the Awsīs; 10 at the first ʿAḳaba agreement as against 2; 62 at the second ʿAḳaba agreement as against 11; 9 *nuḳabā'* as against 3; 175 men at Badr as against 63; 228 women named by Ibn Saʿd as against 121.

Khazradjī poets included Ḥassān b. Thābit of Maghāla of al-Nadjdjār [*q.v.*], Kaʿb b. Mālik of Salima [*q.v.*] and ʿAbd Allāh b. Rawāḥa of al-Ḥārith [*q.v.*]. Many descendants of the last were later found in Spain. During the Umayyad period, the Khazradjīs mostly supported the ruling dynasty, but al-Nuʿmān b. Bashīr, governor of Ḥims, threw in his lot with ʿAbd Allāh b. Zubayr.

(W. MONTGOMERY WATT)

AL-**KHAZRADJĪ**, ḌIYĀ' AL-DĪN ABŪ MUḤAMMAD ʿABD ALLĀH B. ʿUTHMĀN AL-MĀLIKĪ AL-ANDALUSĪ, the author of a long poem which contains a versified treatise on Arabic metrics. This poem, entitled *al-Rāmiza al-Shāfiya fī ʿilmay al-ʿarūd wa 'l-ḳāfiya*, is popularly known as *al-Kaṣīda al-Khazradjiyya*.

The *Khazradjiyya* is a didactic poem of 96 verses composed in *ṭawīl* metre containing the essence of al-Khalīl b. Aḥmad's theory of metrics, and was thus originally meant to be learnt by heart. Many manuscript versions of this work have been preserved, but nevertheless almost nothing is known about the author. He is mentioned by Ḥādjdjī Khalīfa (see bibliography), who gives no information however concerning his life, but he appears to have been active during the 7th/13th century in the western regions of Islam. His work became widely known in the East as a result of numerous commentaries which appeared subsequently.

In the West, the interest of orientalists in the *Khazradjiyya* seems not to be justified by the rather

small intrinsic value of the poem concerned, it being only one of many similar compilations of the theory of Arabic metrics (see the list of similar works from the 4th/10th until the 12th/18th century in ʿARŪḌ). The acquaintance of western orientalists with the *Khazradjiyya* can be ascribed to the early text edition by Ph. Guadagnoli in his *Breves Arabicae linguae institutiones* (Rome 1642), 286-329, and the much later edition an translation by R. Basset in his *La Khazradjyah* (Algiers 1902), which unfortunately contains many inaccuracies and printing errors which are not always corrected. Basset in the Introduction to his edition (*La Khazradjyah*, VII) wrongly assumes the author of the *Khazradjiyya* to be identical with a certain Ḍiyāʾ al-Dīn al-Khazradjī al-Sāʿidī mentioned by al-Makkarī (*Analectes*, Leiden 1871, i, 590).

Concerning the contents of the poem one may observe the following. If one compares one of the earliest known versified treatises dealing with metrics, for example that of Ibn ʿAbd Rabbihi (d. 328/940) in his *al-ʿIkd al-farīd* (Cairo 1305, iii, 146 ff.) with al-Khazradjī's poem, then it becomes clear that there is no essential difference in the subjects treated, which together form the theory of Arabic metrics (*ʿarūḍ*). However, apart from this general identity in subjects treated, the *Khazradjiyya* is distinguished by its extensive use of separate Arabic letters, these either serving as abbreviations to denote various rhythmic feet (represented by mnemonic words, like *faʿūlun, mafāʿīlun* etc.), or—in their numerical values—as numbers indicating the different metres (*ṭawīl, madīd*, etc.). Accordingly, this method of treating the theory of metrics made the use of commentaries indispensable for a better understanding of the text.

The contents of the *Khazradjiyya* can be summarised as follows: Vv. 1-2 definitions of metres and rhythmic feet; 3-9 the syllables as formative elements in a rhythmic foot; 10-12 the circles which al-Khalīl b. Aḥmad invented for his graphic representation of the Arabic metres, and the 16 metres contained in al-Khalīl's circles; 13-17 general definitions; 18-24 simple and complex elision (*ziḥāf*); 25-51 exhaustive treatment of all possible changes in rhythmic feet; 52-79 application of the rules given in vv. 25-51 to certain well known verses in particular; 80-96 a discussion on rhyme (*kāfiya*) and all possible deficiencies of rhyme.

In conclusion, some commentaries on the *Khazradjiyya* are mentioned below in chronological order: Abu 'l-Kāsim al-Sharīf al-Andalusī al-Sabtī al-Gharnāṭī, d. 760/1359 (Brockelmann I, 312, S I, 545); Abū ʿAbd Allāh b. Abī Bakr b. Marzūk al-Khaṭīb al-Tilimsānī, d. 781/1379 (Brockelmann, II, 239, S II, 335); Abu 'l-Kāsim al-Fattūḥ al-Ṣanhādjī al-Zammūrī, his commentary finished in 816/1413 (Brockelmann, I, 312, S I, 545); Muḥammad b. Abī Bakr al-Damāmīnī, d. 827/1424 (Brockelmann, II, 26, S II, 21); Abu 'l-Ḥasan ʿAlī b. Muḥammad al-Kurashī al-Basṭī al-Kalaṣādī, d. 891/1486 (Brockelmann, II, 266, S II, 378, does not mention his commentary, but al-Makkarī, *Analectes*, i, 936 does); Abū Djaʿfar Aḥmad b. Dāwūd al-Balawī al-Gharnāṭī, his commentary finished in 908/1502 (neither he himself nor his work mentioned by Brockelmann, but mentioned in Ḥādjdjī Khalīfa ed. Flügel, iv, 203); and Zayn al-Dīn Zakariyāʾ al-Anṣārī al-Samaykī al-Shāfiʿī, d. 926/1520 (Brockelmann II, 100, S II, 117). In addition to the above-mentioned works, other commentaries exist: see lists in Brockelmann, I, 312, S I, 545. Bibliographical details of editions of commentaries can be found in the Introduction of Basset's *La Khazradjiyyah*.

Bibliography: Ḥādjdjī Khalīfa, ed. Flügel, iii, 340, iv, 201, 203, 536; G. W. Freytag, *Darstellung der arabischen Verskunst*, Bonn 1830, 37-38. Editions of the *Khazradjiyya* (in addition to the works by Guadagnoli and Basset mentioned in the article): *Madjmūʿ min muhimmāt al-mutūn*, Cairo 1328/1910, 505-13; edition and commentary by al-Damāmīnī, with a second commentary added in the margin by Zakariyāʾ al-Anṣārī, Cairo 1323/1905. (P. SMOOR)

AL-KHAZRADJĪ, MUWAFFAK AL-DĪN ABŪ 'L-ḤASAN ʿALĪ B. AL-ḤASAN AL-KHAZRADJĪ AL-ZABĪDĪ, called IBN WAHHĀS, South Arabian historian who wrote under the Turkish Rasūlid dynasty [*q.v.*] in the Yaman, d. late 812/early 1410 aged over 70.

The biographical dictionaries give virtually nothing on his life, except that Sakhāwī states that he met him in Zabīd and that his ancestor Ibn Wahhās had been praised for his learning by the commentator Zamakhsharī. According to Ḥādjdjī Khalīfa, Khazradjī wrote three histories of the Yaman, impelled, so he says, by the prevailing disregard for the study of history. One was in annalistic form, apparently *al-ʿAsdjad al-masbūk wa'l-zabardjad al-maḥkūk fī man waliya al-Yaman min al-mulūk*. One dealt with events dynasty by dynasty, *al-Kifāya wa'l-iʿlām fī man waliya al-Yaman wa-sakanahā fī 'l-Islām*, of which the best-known part is *al-ʿUkūd al-luʾluʾiyya fī akhbār al-dawla al-rasūliyya* (ed. and tr. Sir J. W. Redhouse and Shaykh Muḥ. ʿAsal, *GMS*, iii, Leiden-London 1906-18). This is for earlier times very much a compilation, drawing on authors like Bahāʾ al-Dīn al-Djanadī and his *K. al-Sulūk*. The fulsome eulogies in it of the Rasūlids, and its comparatively late date, have led G. R. Smith to compare it unfavourably as a source for Rasūlid history with the earlier historian of the Yaman Badr al-Dīn Muḥammad b. Ḥātim al-Hamdānī, who wrote *ca.* 694/1295 the *K. al-Simṭ al-ghālī al-thaman fī akhbār al-mulūk min al-Ghuzz bi 'l-Yaman* (see *GAL* I, 394). A further point of significance is the virtual identity of Khazradjī's *al-ʿUkūd al-luʾluʾiyya* with the *Fākihat al-zaman... fī akhbār man malaka al-Yaman* of the Rasūlid monarch al-Malik al-Ashraf Ismāʿīl b. al-ʿAbbās (778-803/1377-1400); it is difficult to tell which of the two was written first, see Mingana, *Catalogue of the Arabic manuscripts in the John Rylands Library, Manchester*, cols. 406-10, and *GAL* S II, 236-7. The third one was in biographical dictionary form, complementing Djanadī's work, compiled at the behest of al-Malik al-Ashraf, and called *Ṭirāz aʿlām al-zaman fī ṭabakāt aʿyān al-Yaman* or *al-ʿIkd al-fākhir al-ḥasan fī ṭabakāt akābir ahl al-Yaman*. Kaḥḥāla further mentions a local history of Zabīd and Aden, the *Mirʾāt al-zaman fī taʾrīkh Zabīd wa-ʿAdan*, and Khazradjī's poetry was also collected into a *dīwān*.
